O'Con'nell, DANIEL, a distinguished Irish patriot and orator, styled *The Liberator of Ireland*, and the *Great Agitator*, b. of an ancient family in co. Kerry, 1775. (See Fig. 1403.) After receiving his education at the Roman Catholic College of St. Omer, and at the Irish seminary at Douay, O'C. became a student of Lincoln's Inn, London, in 1794, was admitted to the bar in 1798, and speedily rose to a large and lucrative practice as a special pleader. In 1809, he became popularly known by his fervent advocacy of Catholic Emancipation, which he carried so far as to several times involve himself in personal rencounters. In 1815, having in one of his diatribes stigmatized the corporation of Dublin as "beggarly," he was challenged by Alderman D'Este, and a hostile meeting took place, in which the latter fell. In 1828, O'C. was returned to the British House of Commons as member for Clare co.; in 1830 for Waterford co., and, in 1831, for his native county, Kerry. From 1832 till 1836, he represented the city of Dublin in Parliament, and in the last-named year was unseated on petition. He next sat for the city of Kilkenny, and, in 1837, was once more returned for Dublin. In 1841, the great county of Cork chose him as their representative, and in the same year he was elected Lord Mayor of Dublin. The return of the Conservatives to power in that year was the signal for re-

Fig. 1979. — DERRYNANE ABBEY.
(The country-seat of O'Connell.)

newed political agitation in Ireland. Repeal of the Union was the object sought, and O'C. placed himself at the head of the movement. A monster meeting to be held at Clontarf, 8th Oct., 1843, was estopped by the government, and O'C. sentenced to pay a fine of \$10,000, and to be imprisoned one year. This judgment was shortly after reversed by the House of Lords, and O'C. set at liberty. The return of the Whigs to power in 1836, and O'C.'s avowed adherence to that party, brought him into unpopularity with the "Irish" national party, which he had swayed for half a century, and his health also failing him, he retired from public life, and, while taking a journey to Rome, d. at Genoa, in 1847. To great abilities, native wit, unrivalled activity and energy, and a marvellous gift of popular eloquence, O'C. united a thorough knowledge of, and identification with, the Irish character. By these qualities, and by long service on behalf of the rights of his Roman Catholic countrymen, he achieved, and retained, nearly to the last, an almost despotic power over the great body of the Irish people. The only substantial literary performance connected with his name is the *Memoirs of Ireland*. A statue of O'C., by Foley, has been erected in Dublin, and another is to be erected in the Central Park of New York.
Oconom'ewoc, or **Oconom'owoc**, in *Wisconsin*, a creek rising in Waukesha county, and flowing W. into Rock River, in Jefferson co.
—A city of Waukesha co., on the C. M. & St. P. R. R., 31 m. N.W. of Milwaukee. *Pop.* (1895) 3,172.
Ocon'to, in *Wisconsin*, a small river flowing into Green bay, of Lake Michigan, from Oconto co.

Ocon'to, in *Wisconsin*, a N. E. co., washed on the E. by Green Bay, of Lake Michigan; *area*, abt. 1,127 sq. m. *Rivers*, Menomouee, Pine, Pishtego, and Oconto rivers. *Surface*, diversified; *soil*, not very fertile. *Cap.* Oconto. *Pop.* (1895) 18,339.

—A thriving city, *cap.* of the above co., on Green Bay and the C. & N. W. and C. M. & St. P. R. Rs., 28 m. N. by E. of Green Bay City. Has very extensive manuufs. and large shipments of lumber, fish, &c. *Pop.* (1895) 6,017.

Ocopil'co Creek, in *Georgia*, enters the Withlacoochee River from Lowndes co.

Ocosingo, (*o-ko-sing'-go*), a ruined city of Mexico, abt. 65 m. S.E. of Ciudad Real.

Oco'ya, in *Illinois*, a post-village of Livingston co., abt. 23 m. N.E. of Bloomington.

O'cracoke, in *N. Carolina*, an island and light-house of Hyde co., in the Atlantic Ocean. It exhibits a revolving light 75 ft. high; *Lat.* 35° 5' 30" N., *Lon.* 75° 5' W.

—A post-village and port of entry of Hyde co., on the above island, abt. 35 m. W.S.W. of Cape Hatteras. It has an active coast trade.

O'created, *a.* Supplied with, or wearing a boot, bandage, or legging.

Octachord, (*ok'ta-kord*), *n.* [Fr. *octachorde*, from Gr. *oktō*, eight, and *chordē*, chord.] (*Mus.*) An instrument, or system of eight sounds.

Oc'tagon, (*ok-*), *n.* [Gr. *oktō*, eight, and *gōnia*, angle.] (*Geom.*) A figure of eight sides and as many angles; when all the sides and all the angles are equal, the figure is called a *regular octagon*.

Octag'onal, *a.* Having eight angles and eight sides.

Octag'ynous, **Octog'ynous**, *a.* [Gr. *oktō*, eight, and *gynē*, wife.] (*Bot.*) Having eight pistils or styles.

Octah'e'dral, *a.* Having eight equal faces or sides.

Octah'e'drite, *n.* (*Min.*) An oxide of titanium, which occurs in octahedral crystals; also called *anatase*.

Octah'e'dron, *n.* [Gr. *oktō*, eight, and *hedra*, a side.] (*Geom.*) One of the five regular bodies (Fig. 1980) consisting of eight equal and equilateral triangles.

Octam'eros, *a.* [Gr. *oktō*, and *meros*, part.] (*Bot.*) Having the parts in eights.

Octan'dria, *n.* [Gr. *oktō*, eight, and *andros*, man.] (*Bot.*) The eighth class of plants in the Linnean system, distinguished by having eight stamens.

Octan'drian, **Octan'drons**, *a.* (*Bot.*) Having eight distinct stamens, like the class *Octandria*.

Octan'gular, *a.* [Lat. *octo*, and Eng. *angular*.] Eight-angled.

Octan'gularness, *n.* State or quality of having eight angles.

Oct'ant, *n.* [Fr.; Lat. *octans*, from *octo*, eight.] (*Geom.*) The eighth part of a circle. (Also written *octile*.)

(*Astron. and Naut.*) A name given to the nautical instrument known as *Halley's Quadrant*, the arc of which is one-eighth of a circle, or 45 degrees.—(*Astron.*) A word denoting position or aspect; thus the moon is in her *octant* when she is in the positions intermediate between her syzygies and quarters, or at 45°, 135°, 225°, and 315° from her conjunction.

Octapla, *n.* A polyglot Bible printed in eight languages.

Oct'archy, *n.* [Gr. *oktō*, and *archē*, a sovereignty.] Government by eight persons. (*R.*)

Octaroon, *n.* See **OTOROON**.

Oct'astyle, *n.* See **OCTOSTYLE**.

Oct'ateuch, (*-tūk*), *n.* [Gr. *oktō*, and *teuchos*, book.] A collection of eight books; particularly, the first eight books of the Old Testament. (*R.*)

Oct'ave, *n.* [Fr.; Lat. *octavus*, the eighth.] (*Mus.*) The eighth note of the scale, an harmonical interval consisting of seven degrees or twelve semitones, containing the whole diatonic scale; thus forming a complete system or series of sounds, which can only be extended by repeating the same order in a second *octave*, and again in a third, and so on, as high or as low as the compass of the voice or instrument will allow.

(*Eccl.*) The eighth day after a feast, the feast-day itself included. Thus, the first Sunday after Easter is the octave of Easter; and the Circumcision (Jan. 1) is the *octava natalis Domini*, the octave of Christmas.

Octave flute. (*Mus.*) Same as **PICCOLO**, *q. v.*

Octavia, (*ok-tai'-re-a*), sister of Augustus, renowned for her beauty and purity of character, and practical wisdom. She was first married to Marcellus, a noble Roman of consular dignity, and soon after his death, B. C. 40, to Mark Antony. This marriage, it was hoped, would strengthen the new alliance between Octavius, her brother, and Antony, her husband; and her influence more than once prevented fresh civil war, and alleviated the sufferings of its victims. But Antony had seen Cleopatra: his passion for her had only slumbered; and he treated his wife with a contempt and cruelty which Octavius could not forgive, and which became the occasion of renewed war. When Antony set out for the East again, O. was not allowed to accompany him. She mourned sincerely his miserable end, and brought up all his children as her own. To all her bitter trials was added, B. C. 23, that of the death of the young Marcellus, her son by her first husband, and the destined successor of Augustus. She never rose above this sorrow, nor would hear the name of her son mentioned. She D. B. C. 11.

Octa'via, a daughter of the emperor Claudius by Messalina. She was the sister of Britannicus, and, at the age of sixteen, became the wife of Nero. The latter

divorced her and married Poppæa, at whose instance she was put to death in the twentieth year of her age, A. D. 62.

Octa'vins. See **AUGUSTUS**.

Octa'vo, *n.* [Fr.; Lat. *octavus*.] A book in which a sheet is folded into eight leaves.—The size of a book of this character;—generally noted thus: 8vo., or 8o.

Octen'rial, *a.* [Lat. *octo*, and *ennis*, year.] Happening every eighth year.—Lasting eight years.

Octen'rially, *adv.* Once in eight years.

Oct'et, *n.* (*Mus.*) A musical composition containing eight parts.

Oct'ile, *n.* (*Astron.*) Same as **OCTANT**, *q. v.*

Octillion, (*-tīl'yūn*), *n.* (*Arith.*) According to English numeration, the power expressed by a unit with 48 ciphers annexed. According to the French method, the number denoted by a unit with 27 ciphers annexed.

Octo'ber, *n.* [Lat. from *octo*, eighth.] The eighth month of the primitive Roman year; the tenth month of the Julian year in our calendar, containing 31 days.—A kind of strong ale;—so called from being brewed in the month of October.

Octodec'imal, (*-dēs'tī-mal*), *a.* [Fr. from Lat. *octodecim*, eighteen.] (*Crystallurgy*.) Presenting eighteen faces;—said of a crystal.

Octodec'imo, *a.* [Lat. *octodecim*, eighteen—*octo*, eight, and *decim*, ten.] Having or consisting of 18 leaves to a sheet; as, an *octodecimo* book.

—*n.*; *pl.* **OCTODECIMOS**. A book composed of sheets folded into 18 leaves.—The size of such book;—generally noted thus: 18mo, 18o.

Octoden'tate, *n.* [Lat. *octo*, and *dens*, *dentis*, tooth.] Eight-toothed.

Oct'ofid, *a.* [Lat. *octo*, and *findere*, *fidi*, to split.] (*Bot.*) Split or divided into eight segments, as a calyx.

Octog'am'y, *n.* [Gr. *oktō*, and *gamein*, to marry.] The marrying eight times.

Octogena'rian, **Octogenary**, *n.* A person who is eighty years of age.

Octogenary, *a.* [Lat. *octogenarius*, from *octogeni*, eighty each.] Of eighty years of age.

Oct'ogenary, *n.* An instrument having eight strings.

Oct'ogild, *n.* [Lat. *octo*, eight, and A. S. *gild*, payment, money.] (*O. Eng. Law*.) A pecuniary compensation, exacted for an injury, of eight times the value of the thing.

Octog'ynous, *a.* (*Bot.*) Same as **OCTAGYNOUS**, *q. v.*

Octoh'e'dron, *n.* See **OCTAHEDRON**.

Octoloc'ular, *a.* [Lat. *octo*, and *loculus*—*locus*, place.] (*Bot.*) Eight-celled, said of certain plants.

Oct'onary, *a.* [Lat. *octonarius*.] Pertaining or having reference to the number eight.

Octonoc'ular, *n.* [From Lat. *oktō*, and *oculus*, eye.] Eight-eyed. (*R.*)

Octopet'alous, *a.* [Gr. *okto*, and *petalon*, leaf; Fr. *octopétale*.] Possessing eight petals, as certain flowers.

Oct'opod, *n.* [Gr. *oktō*, and *pous*, *podos*, foot.] (*Zoöl.*) An insect or mollusc having eight feet or legs.

Octora'diated, *a.* [Lat. *octo*, and *radius*, ray.] Possessing eight rays.

Octora'ra, in *Pennsylvania*, a creek flowing into the Susquehanna from Lancaster co.

Octoroon, **Octaroon**, *n.* [From Lat. *octo*.] The offspring of a white person and a quadroon.

Octosperm'ous, *a.* [Gr. *okto*, and *sperma*, seed.] (*Bot.*) Having eight seeds.

Oct'ostyle, *n.* [Gr. *okto*, and *stylos*, column.] (*Arch.*) A portico having eight columns in front.

Octosyllab'ic, **Octosyllab'ical**, **Octosyll'able**, *a.* [Lat. *octo*, and *syllabo*, syllable.] Eight-syllabled.

Octosyll'able, *n.* A word containing eight syllables.

Octroi, (*ok-truoi'*), *n.* [Fr., from Lat. *auctor*, maker.] This word implied originally a right, such as a franchise, a charter, or a monopoly, granted to some individual by the monarch. In modern times it has been used almost exclusively to represent the taxes levied by the corporations of towns in France, on all articles of consumption introduced within the barriers. These taxes form great part of the revenue of the principal towns.

Oct'nor. (*Mus.*) Same as **OCTET**, *q. v.*

Octuple, *a.* [Lat. *octuplus*, from Gr. *oktō*, and *aplous*, single.] Eight-fold.

Oct'ular, *a.* [Fr. *oculaire*; Lat. *ocularis*, from *oculus* = Sansk. *akhsa*, the eye.] Pertaining to the eye or the faculty of vision; depending on, or known by, the eye; received by actual sight; as, "Give me the *ocular* proof."—*Shaks.*

—*n.* The eye-piece of an optical instrument.

Oct'ularly, *adv.* By the eye, vision, or actual view.

Oct'ulary, *a.* Relating, or pertaining, to the eye; as, an *octulary* medicine.

Oct'ulate, **Oct'ulated**, *a.* Having eyes; knowing by the eye.—Having spots resembling eyes.

Oct'iform, *a.* [From Lat. *oculus*, and *forma*, form.] In the form of an eye; presenting the appearance or form of an eye.

Oct'ulist, *n.* [Fr. *oculiste*, from Lat. *oculus*.] One who is skilled in diseases of the eye, or one who professes to cure them.

Oct'ypoda, *n.* [Gr. *okys*, speedy, and *pous*, *podos*, foot.] (*Zoöl.*) Agents of brachyural Crustaceans, inhabiting the sea-shores of warm climates in both hemispheres. They derive their name from the rapidity of their motions; those who have observed these animals in their native haunts declaring that they run so fast that a man can hardly overtake them. They form holes for themselves in the sand immediately above the level of the wash of the sea, and in these they reside during the summer, but they pass the winter in a state of hiberna-

tion. There are several species, differing but little from each other. The one here figured is *Ocypoda arenaria*, or **SAND-CRAB**; length about 2 inches; color yellowish. In the summer their general time of quitting the burrow to seek their food is the night; but towards the end of October they retire inland to hibernate in the earth; and when they have found a suitable place, they dig a hole like that which they had occupied on the edge of the sea, enter it, and close up the entrance so thoroughly that no trace of it can be seen. There they remain till the warm weather brings them forth, when their instinct again teaches them to repair to their marine residences.

Fig. 1981. — AMERICAN SAND-CRAB. (*Ocypoda arenaria*.)

Oczakov, or **OTCHAKOV**, (*otch-ak'-ov*), a town of European Russia, gov't. of Kherson, on the Dnieper, at its mouth in the Black Sea, 40 m. E.N.E. of Odessa; *pop.* 3,500.

Od, (*ōd*), *n.* [From *Odin*, the omniscent deity of Scandinavian mythology.] The name given by Baron Von Reichenbach to a supposed all-pervading force in nature, which he claims to have discovered in 1844, but in which few, if any, really scientific men have any belief. According to the discoverer, the *Od* force, also called *Odyle*, *Odic* force, or *Odyllic* force, pervades all nature, and is akin to electricity, magnetism, light, &c. It has two poles, like electricity and magnetism,—a positive and a negative,—which appear in all organic substances; the human body, for example, being positive on the left side and negative on the right. Its rays pass through all kinds of matter, and can be felt and seen by certain persons called *sensitives*, who have a peculiar nervous sensibility; but the majority of mankind are *non-sensitives*, and insensible to odic influences. The meeting of like odic poles causes a disagreeable sensation to the sensitive, while an agreeable sensation follows the pairing of unlike poles. The odic emanation is felt by the touch, as though it were a breath, and it is also seen in the dark, like a luminous vapor, by the sensitive. *Od* is the agent or force by which mesmerism or animal magnetism operates, and is also that by which the flowing of water underground is discovered by the sensitive; hence the secret of the water-finders and their divining-rods. The earth is strongly od-negative in the northern hemisphere and od-positive in the southern; and this is said to be the reason why many persons in the northern hemisphere cannot sleep on their left sides. It must be said that no other experimenter has succeeded in obtaining the results claimed by Reichenbach, and no belief is now entertained by science in the existence of such a substance.

Odalisque, (*ō'dal-isk*), *n.* [Turk. *ōdalik*, a room-mate.] In Turkey and other parts of the East, a female inmate of a harem or seraglio; a female slave or concubine.

Odd, *a.* [Dan. *øde*, Icel. *auðr*, wanting, without; Goth. *ulde*, uneven, dissimilar.] Standing by itself; unmatched; not paired with another.—Singular; fantastic; peculiar; unique; as, an *odd* thing or affair, he is remarkably *odd* in his manner.—Left or remaining after the union, estimate, or use of even numbers, or remaining after round numbers or any numbers specified; not taken into the account; hence, of trifling value, worth, or account; fractional; fragmentary; insignificant.

"Sixteen hundred and *odd* years after the earth was made."—*Burnet*.

—Not even; not divisible into two equal whole numbers, as three, five, &c.

"There's 'luck in *odd* numbers, said Rory O'More."—*Lover*.

—Queer; strange; inappropriate or unusual; as an *odd* book or subject.

Odd-Fellows, (**Independent Order of**.) The name of a secret charitable society existing chiefly in Great Britain and the U. S. Although *Odd Fellows'* Lodges exist in many parts of Europe, South America, Australia, and other countries, yet it is chiefly in England and the U. S. where they are numerous. It sprang from certain lodges or societies of mechanics and laborers existing in London in the latter part of the 18th century, and calling themselves the *Ancient and Honorable Loyal Odd-Fellows*. Their meetings were for convivial purposes, and were usually held in taverns; but it became the custom for each member among them to contribute a penny a week to form a fund for the relief of the poor among them, and especially to defray burial expenses and to provide for widows and orphans. On the extension of the order to Liverpool and other parts, the lodges united in a general system, under the title of the *Union Order of Odd-Fellows*, having its seat of government in London. In 1809 attempts were made to reform the order, and to abolish its convivial character; but these were opposed by the majority, and at length, in 1813, a convention of the friends of reform was held at Manchester, when several lodges seceded from the Union Order, and formed the *Independent Order of Odd-Fellows*. In 1825, a central standing committee was established in Manchester to govern the order in the interim between the sessions of the grand lodge, or national movable committee, as it is termed. Dissensions arose which led to secessions; but the *Manchester Unity* remains to this day the main body of British *Odd-Fellows*, and numbers about 500,000 members in its lodges. The organization of the order bears a general resemblance to that of the *Freemasons*. The

primary body is the Subordinate Lodge, which derives its power from a charter granted by the Grand Lodge, and must comprise at least five members, who must be males of at least twenty-one years of age. They make their own laws, and manage their own pecuniary affairs, collecting certain fixed dues from their members, paying a weekly allowance to the sick, and granting a stated sum for the burial expenses of a member, or a member's wife. After initiation, a member may apply for and receive certain degrees, by the paying of certain sums. These degrees, in the order in which they are conferred, are: 1, the white degree; 2, the covenant degree; 3, the royal blue degree; 4, the remembrance degree; 5, the scarlet degree. The officers of a subordinate lodge are the noble-grand (who presides), the vice-grand, the treasurer, and the permanent and recording secretaries. A person who has filled for six months the office of noble-grand is styled *past-grand*. The grand lodge of a State is formed of past-guards, not less than five in number. It derives a revenue from fees for charters, dispensations, and a percentage of the revenues of subordinate lodges. Its presiding officer is the grand-master, who is elected annually. In 1909 there were in the United States nearly 1,500,000 members. The first lodge was founded in Baltimore in 1819. The grand lodge of the U. S. is composed of representatives, elected biennially by the State grand lodges. It is presided over by the *grand-sire*. The annual disbursements in the U. S. are nearly \$3,000,000. In every State there exists a separate institution called encampments, whose members, called patriarchs, are chosen from the Odd-Fellows who have received the scarlet degree. Above these encampments, there exists a grand encampment. The elective officers of an encampment are a chief-patriarch (who presides), a high-priest, a senior warden, a scribe, a treasurer, and a junior warden. The elective officers of a grand encampment are the most worthy grand-patriarch, most excellent grand high-priest, right worthy grand senior warden, grand-scribe, grand-treasurer, and grand-representative.

Odd'ity, *n.* Singularity; strangeness; queeriness; state or quality of being odd; as, *oddity* of dress, manner, language.—That which is odd; also, a person of odd or peculiar manner.

Odd-looking, *a.* Having a strange or unusual appearance; as, an *odd-looking* person.

Odd'ly, *adv.* Singularly; strangely; unusually; peculiarly; irregularly; uncouthly.

Odd'ness, *n.* The state of being odd or not even.—Singularity; strangeness; particularity; uncouthness; peculiarity; irregularity.

"This habitual concern puts an *oddness* into his looks."—*Collier*.

Odds, *n. sing. and pl.* Inequality; excess of either, compared with the other; difference in favor of one and against another; advantage; superiority; as, to fight against *odds*.—Quarrel; strife; dispute; debate; controversy.

"I can't speak any beginning to this peevish *odds*."—*Shaks.*
At *odds*. At variance; at daggers-drawing; in dispute.

"One gross crime or other sets us all at *odds*."—*Shaks.*
It is *odds*. It is likely or probable.

"It is *odds* they are already encumbered with a numerous family."—*Swift*.

Odds and ends. Scraps; fragments; debris; refuse; remnants.

"My brain is filled with all sorts of *odds and ends*."—*Irving*.

Ode, *n.* [Lat.; Gr. *ōdē*, from *aeidō*, to sing; probably akin to Ir. *laoid*, a song.] (Lit.) A short, stately poem; a lyric song; a poetical composition proper to be set to music and sung; as, the *Odes* of Horace.

Ode-factor, *n.* One who makes odes; a dabbler in odes;—applied in a contemptuous sense.

Odelet, *n.* A little ode.

Odel', in Illinois, a post-village and township of Livingston co., about 10 m. N. E. of Pontiac. Pop. of village (1897) 910.

O'den, in Arkansas, a township of Chicot co. Pop. (1897) 2,115.

Odensee', a town of Deumark, capital of the island of Funen, on a small river, 2 m. from Stegestrand Bay, 88 m. S.W. of Copenhagen. Manuf. Woollens, gloves, leather, soap. Pop. (1897) 31,350.

Odenwald, a mountainous, wooded region of West Germany, extending between the Neckar and Main rivers. Ext. 45 m. long, culminating in the summit of Katzenbuckel, 2,300 feet above the sea.

Odeon, *Odeum*, *n.* [Lat. *odeum*; Gr. *ōdeion*.] Among the ancients, a small theatre for the recitation of musical compositions, generally in the neighborhood of a larger theatre. The odeon at Athens was contiguous to the theatre of Bacchus; that at Pompeii also adjoined the theatre.—In modern parlance, a minor theatre, or a hall or chamber for the performance of musical or dramatic compositions.

Oder, a large river of Germany, rising in Moravia, abt. 15 m. E. of Olmütz; Lat. 49° 35' N., Lon. 17° 35' E.; and after a N. course of 500 m., falling into the Great Haaff, an inlet of the Baltic, by numerous mouths, near Steettin. It is navigable for small vessels as far as Ratisbon, and for barges of 40 or 50 tons as high as Breslau.

O'deran, a town of Saxony, 32 m. from Zwickau; pop. 5,500.

Odes'sa, a city and seaport of South Russia, gov't. of Kherson, on the N.W. coast of the Black Sea, half-way between the mouths of the Dniester and Bug. The bay is open and easy of access, with sufficient depth of water to float the largest ships near the town. The harbor, which is artificial, is formed of two moles, and is capable of accommodating over 200 vessels. It is defended

by two batteries towards the sea; and on the E. side is a citadel, which commands the town and port. The principal buildings are the cathedral of St. Nicholas,

Fig. 1982.—VIEW OF ODESSA FROM THE COMMERCIAL QUAY.

the Admiralty, Custom-house, and Exchange. In the centre of the esplanade facing the port is a large statue in bronze, in honor of the Duke de Richelieu. A great drawback is the scarcity of wood and water, and the intensity of the heat, which frequently reaches 120°, and destroys the vegetation of the vicinity. O is the emporium for the produce of S. Russia, and owes its rapid growth to its being declared a free port. O is much frequented in the summer months by the Russian and Polish aristocracy, for the facilities afforded for sea-bathing. The great trade of the town, and its principal export, is corn, which, garnered here from the adjacent Ukraine and Moldavia, is shipped to almost every part of Europe. O was founded by Catharine II., in 1794. Pop. (1897) 304,450.

Odes'sa, in Delaware, a post-town of New Castle co., about 24 m. N. by W. of Dover. Pop. (1897) 715.

Odes'sa, in Michigan, a township of Ionia co.

Odes'sa, in Minnesota, a village of Fillmore co., abt. 11 m. S. of Preston.

Odeypoor, or **Oudepore**, (*o-de-poor'*) capital of a rajahship of same name, in the province of Rajpootana, Hindostan, 135 m. S.S.W. of Ajmere, and 165 m. N.W. of Oojein; Lat. 24° 35' N., Lon. 75° 44' E.

Od'ic, *a.* Relating or pertaining to *od*; as, *od'ic* force.

Od'ic, Od'ical, *a.* Pertaining or relating to an *ode*.

Od'ically, *adv.* In the manner or by means of *od'ic* force.

O'din, *n.* [Icel. *Odinn*; O. H. Ger. *Wotan*; Saxon, *Wodan* or *Woden*—whence *Wednesday*.] (*Teutonic Myth.*) The principal deity of the German and Scandinavian mythologies, common to all Teutonic peoples, and, in a measure, corresponding to the Zeus of the Greeks. Odin, while not the creator, is the ruler of heaven and earth, an omiscient being, the king of the deities. His celestial residence is the palace Heidskialf, in Asgard, from whence his two black ravens, Hugin (Thought) and Munin (Memory), are sent forth daily to gather and bring in tidings of all that is taking place in earth and heaven. He is also the god of war, holding his court in Valhalla, whither brave warriors pass after death to revel in joys of battle and the hunt, such as they loved best upon earth. Odin became the wisest of the gods by the aid of a draught from Mimir's fountain, though in doing so he lost the sight of one eye. Like Zeus, he added to his queen, Frigga, various other wives and favorites, and had a numerous progeny of sons and daughters. According to Rhys, Odin, or Woden, the sky god of the Teutons, may have had a Celtic origin, and been synonymous with the Celtic Gwydion.

O'din, in Illinois, a post-village of Marion co., about 9 m. N. N. E. of Centralia. Pop. (1897) 915.

Odin'ic, *a.* Relating or pertaining to Odin.

O'dious, *a.* [Fr. *odieux*; Lat. *odiosus*—*odium*, hatred—*odi*, *odisso*, to hate.] Hatred; meriting hatred; detestable; abominable; as, an *odious* crime.—Offensive to the senses; disagreeable; disgusting; noxious; as, an *odious* smell.—Causing hate; invidious.—Exposed to hatred or extreme aversion; hated; as, he had rendered himself *odious* to the people.

O'diously, *adv.* In an odious manner; hatefully; invidiously; in a manner to deserve or excite hatred; so as to cause hatred or extreme aversion.

O'diousness, *n.* Quality of being hated; hatefulness; that quality which merits or may excite hatred or intense aversion; as, the *odiousness* of a sin.—State of being hated. (R.)

O'dium, *n.* [Lat.] Hatred; dislike; enmity; extreme aversion.—The quality that excites or provokes hatred; invidiousness; offensiveness.

"New taxes seldom fail of bringing *odium* upon their projector."—*Davenant*.

Odium theologicum, the class of enmity peculiar to controversialists or polemical disputants.

Odoacer, (*o-do'a-sar*), first barbarian king of Italy, was son of one of Attila's officers. He entered into the Imperial guards, in which he rose to an honorable rank. In 476 he was chosen chief of a confederate army, and was saluted by them king of Italy. He defeated the patrician Orestes at Pavia, banished his son, Romulus Augustus, last Roman emperor, and made Ravenna the seat of his kingdom. He obtained the title of *Patrician* from Zeno, emperor of the East, and did not assume the imperial ensigns. By his wise and honorable administration, he showed himself worthy of the dignity to which he was raised; but misery, desolation, and gradual depopulation were the prominent features of the condition of his kingdom. In 489, Theodoric, king of the Ostrogoths, invaded Italy, and O. was three times defeated by him: first near Aquileia, then near Verona, and lastly near Ravenna. He was then besieged three years in Ravenna, and at length, compelled by famine and the clamors of the people, he made a treaty with

Theodoric, by which they were to rule jointly. But after a few days, O. was assassinated by his conqueror, March, 493.

Odom'eter, *n.* [Gr. *odos*, way, and *metron*, measure.] An instrument attached to the wheel of a carriage, to measure distance in travelling. See SECTION II.

Odomet'rical, *a.* [Fr. *odometrique*.] Belonging or having reference to an odometer, or to the measurements effected by it.

Odom'etrous, *a.* Serving to measure distance on a road.

Odon'a'ta, *n.* (*Zoöl.*) The Dragon-fly, a family of insects, comprising neuroptera which are known as the Devil's Darning-needles, and are distinguished by their long body, large, lustrous, gauze-like wings, large head, large, lateral, compound eyes, and three ocelli. They are among the most conspicuous of insects, and at once arrest the attention by their size, light and graceful figure, variegated colors, and the great velocity with which they speed their way over fields and meadows, or skim the surfaces of the pools or ponds in search of flies, mosquitoes, and other insects, which constitute their food. In the larva and pupa states they live in the water, and when the time comes for the last change, they crawl up the stems of plants, and, having withdrawn from the pupa-skin, which remains clinging to the plant, and dried themselves a little, they spread their wings and dart swiftly away. Though they bite fiercely with their jaws, they are without any sort of sting, and are perfectly harmless to man.

O'Don'nell, LÉOPOLD, Count of Lucena, and Duke of Tetuan, a Spanish marshal, of Irish descent, b. 1808, entered the military service at an early age, and attained the rank of colonel before he was twenty-five. When Don Carlos commenced that struggle which proved so disastrous to Spain, O'Donnell fought courageously for Queen Isabella, became, in 1838, chief of the staff, and was placed in command of the Army of the Centre. At the close of the Carlist war, he was nominated general of brigade, and created Count of Lucena; in 1840 he embraced the cause of the Queen-mother Christina against the people and the army, and emigrated with her to France. In 1841 he demanded permission to return to Spain as a friend to the established government, and Espartero granted his request; but having raised a formidable, though unsuccessful, insurrection against the regent's government, he made his escape into France. In 1843, Espartero fell, and O'Donnell, for his share in the intrigue that led to his fall, was rewarded with the governor-generalship of Cuba. He returned to Spain when Narvaez was in power, and became Minister of War and the Colonies, and President of the Council, July 1, 1858. In 1859, Spain declared war against Morocco, and Gen. O'Donnell was intrusted with the command of an invading army, and for his services in bringing the war to a successful conclusion, received the title of Duke of Tetuan. He continued in office until Feb., 1863, when he resigned, in consequence of the queen's refusal to dissolve the Chambers, and was succeeded as war minister by Gen. Concha. He returned to power at the head of another ministry, June 21, 1865, and was replaced by Narvaez in 1866. D. 1867.

Odontal'gia, *n.* [Gr. *odontos*, a tooth, and *algos*, pain.] (*Med.*) The TOOTHACHE, *q. v.*

Odontalgie, (*-täl'jik*), *a.* [Fr. *odontalgique*.] Pertaining or relating to the toothache.

—*n.* (*Med.*) A remedy for the toothache.

Odontal'gy, *n.* (*Med.*) Odontalgia; pain in the teeth or gums.

Odon'to, *n.* [Gr. *odontos*, tooth.] A specific for cleansing and purifying the teeth; a dentifrice; tooth-powder.

Odontog'eny, *n.* [Gr. *odontos*, *odontos*, tooth, and *genesis*, to produce.] (*Med.*) Generation of the teeth.

Odon'tograph, *n.* [Gr. *odontos*, *odontos*, and *graphein*, to describe.] (*Civ. Eng.*) An instrument used in designing the teeth of wheels, invented by Prof. Willis, of Cambridge, England.

Odontog'raphy, *n.* A description of teeth.

Odontoid, *n.* [Gr. *odontos*, *odontos*, and *eidos*, form, shape.] Tooth-like.

Odontolite, *n.* [Gr. *odontos*, *odontos*, and *lithos*, stone.] (*Pal.*) A fossilized tooth.

Odontol'ogy, *n.* [Gr. *odontos*, *odontos*, and *logos*, treatise.] (*Anat.*) That branch of anatomical science which relates to the teeth; a treatise on the teeth.

O'dor, **O'dour**, *n.* [Lat. *odor*, a pleasant smell; allied to Gr. *oû*, to smell.] Any smell, whether agreeable or offensive; scent; perfume.

To be in bad odor, to be in disrepute, or out of favor.

O'dorant, *a.* Diffusing odors; as, *odorant* herbs.

O'dorate, *a.* Having a strong smell, fetid or fragrant; scented; odorous; as, *odorate* vapor.

O'dorating, *a.* Odorant; fragrant; diffusing scent.

O'doriferous, *a.* [Lat. *odoriferus*—*odor*, and *fero*, to bear.] Bringing or bearing odors; as, *odoriferous* gales. (*Millon.*)—Diffusing fragrance; perfumed; yielding scent; odorous; usually, sweet-smelling; as, *odoriferous* flowers.

O'doriferously, *adv.* In an odoriferous manner.

O'doriferousness, *n.* State or quality of being odoriferous, or scent-bearing.

O'dorine, *n.* (*Chem.*) A product of the redistillation of the volatile oil obtained by distilling bone.

O'dorless, **O'dourless**, *a.* Without odor; free from odor.

O'dorous, *a.* [Lat. *odorus*, from *odor*.] Emitting a scent or odor; usually, sweet-smelling; fragrant; as, an *odorous* substance.

O'dorously, *adv.* In an odorous manner; fragrantly.

O'dorousness, *n.* Quality of being odorous, or effective of the sensation of smell.

Odyle, (*ô'dil*), *n.* See OD.

Odyssey and Iliad (*od'is-se, il'e-äd*). [Gr. *Odysseus*, Ulysses, and *Ilias*.] (*Lit.*) The name of two admirable poems of high antiquity, attributed to the earliest known Greek poet Homer (*q. v.*). The *Iliad* is the first complete epic poem in existence and the first of the two Homeric poems. Its subject is the siege of Ilium, or Troy, or, more properly speaking, the quarrel between Achilles and Agamemnon, the general of the Grecian army before that city. It consists of 24 books, the first of which relates the origin of the quarrel, and the residue contain an account of the efforts made by Agamemnon and his chiefs to conquer the Trojans without the coöperation of Achilles, and his resumption of arms in favor of the sons of Hellas, and the death of Hector, the Trojan champion, by his hands. The *Odyssey*, on the other hand, relates the wanderings of Ulysses, and his return to his native land, Ithaca. The characteristics of Homer's poetry, as the culmination of ballad poetry and the grand model of the minstrel epos, may be expressed in a very few words. In the first place, the materials are national in character, and if not properly considered historical, they grew, like all ballad poetry, out of the real life of the people, and may perhaps rest upon some degree of historical substratum. However this be, these poems possess great importance in the knowledge they give us of the habits and customs of the early Greeks. Though the Greeks of the historical period looked upon them as descriptive of actual historical events, modern research has thrown great doubt on their historical value, and they are now valued, from this point of view, mainly as an important record of an early stage of human society, similar to those we possess in the early Hebrew and Hindu literatures. It may be confidently asserted that the first germs of almost all arts and sciences afterwards cultivated by the Greeks and Romans are to be found in the *Iliad* or *Odyssey*. In this view, they were to the Greeks themselves an encyclopædia of their national culture; and as embodying the grand features of their polytheistic faith, they are also constantly quoted by their great writers with all the deference due to a Bible.

Æcolampadius, (*e-kol-am-pai'di-us*.) One of the German reformers, b. in Franconia, 1482. His original name, JOHANN HAUSSCHEIN, was, according to the fashion of the time, turned into its Greek equivalent. He studied chiefly at the university of Heidelberg, became acquainted with Ruchlin, Capito, and Erasmus, assisted the latter in his edition of the Greek Testament, and afterwards adopted the views of Luther. About 1519 he retired to a monastery, where he spent two years; his opinions becoming more decided, he quitted it, and found an asylum, like other reformers, with the knight Franz von Sickingen. He soon after settled at Basle, as pastor and professor of theology. He took the same view of the eucharist as Zwinglius, attended several theological conferences, and d. 1531.

Æcumenical Council, *n.* [Gr. *oikoumenike*, of, or belonging to, *oikoumene*, the world.] (*Ecc. Hist.*) A council of the entire Church, or general council. A council is said to be æcumenical by the Roman Catholic Church in three different ways, viz.: in convocation, in celebration, and in acceptance. For the first, the summons of the Pope, direct or indirect, is held to be necessary; this summons must be addressed to all the bishops of the entire Church. To the second, it is necessary that bishops from all parts of the world should be present, and in sufficient numbers to constitute a really representative assembly; they must be presided over by the Pope, or a delegate or delegates of the Pope; and they must enjoy liberty of discussion and of speech. For the third, the decrees of the council must be accepted by the Pope, and by the body of the bishops throughout the Church, at least tacitly. The last of these conditions is absolutely required to entitle the decrees of a council to the character of *Æ.*; and even the decrees of provincial or national councils so accepted, may acquire all the weight of infallible decisions. In the doctrine of the Roman Catholic Church, the decrees of an *Æ. C.* are necessarily exempt from error or infallibility. The infallibility claimed by that Church is of two kinds, *passive* and *active*,—the first (*Matt.* xvi. 18), in virtue of which the Church never can receive or embrace any erroneous doctrine, no matter by whom proposed; the second, in virtue of which she is charged with the function (*Matt.* xxviii. 19; *Mark* xvi. 15; *Ephes.* iv. 11–16) of permanently teaching to the world the essential truths of God, of actively resisting every access of error, and of authoritatively deciding every controversy by which the oneness of belief among the faithful may be endangered. Catholics regard this gift as a natural and necessary accompaniment of the authority in matters of faith with which they believe the Church to be invested, and which, if not guided in its exercise by such infallible assistance, would be but a false light, and an attractive but dangerous instrument of delusion.—Twenty *Æ. C.* are recognized in the Roman Catholic Church—9 Eastern and 11 Western:—1. The Synod of Apostles in Jerusalem, wherein the relation of the Christian doctrine to the Mosaic law was determined. (See *Acts* c. xv.) 2. The first *C. of Nice*, held 325 A.D., to assert the Catholic doctrine respecting the Son of God in opposition to the opinions of Arius. 3. The first *C. of Constantinople*, convoked under the Emperor Theodosius the Great (381 A.D.), to determine the Catholic doctrine regarding the Holy Ghost. 4. The first *C. of Ephesus*, convoked under Theodosius the Younger (431 A.D.), to condemn the Nestorian heresy. 5. The *C. of Chalcedon*, under the Emperor Marcian (451 A.D.), which asserted the doctrine of the union of the divine with the human nature in Christ, and condemned the heresies of

Eutyches and the Monophysites. 6. The second *C. of Constantinople*, under Justinian (553 A.D.), which condemned the doctrines of Origen, Arius, Macedonius, and others. 7. The third *C. of Constantinople*, convoked under the Emperor Constantine V., Pogonatus (681 A.D.), for the condemnation of the Monothelite heresy. 8. The second *C. of Nice*, held in the reign of the Empress Irene and her son Constantine (787 A.D.), to establish the worship of images. Against this *C.*, Charlemagne convened a counter-synod at Frankfort, (794 A.D.) 9. The fourth *C. of Constantinople*, under Basilus and Adrian (869 A.D.), the principal business of which was the deposition of Photius, who had intruded himself into the see of Constantinople, and the restoration of Ignatius, who had been unjustly expelled. 10. The first Lateran *C.*, held in Rome under the Emperor Henry V., and convoked by the Pope Calixtus II. (1123 A.D.), to settle the dispute on investiture (*q. v.*) 11. The second Lateran *C.*, under the Emperor Conrad III. and Pope Innocent II. (1139 A.D.), condemned the errors of Arnold of Brescia and others. 12. The third Lateran *C.*, convened by Pope Alexander III. (1179 A.D.), in the reign of Frederick I. of Germany, condemned the "errors and impieties" of the Waldenses and Albigenses. 13. The fourth Lateran *C.*, held under Innocent III. (1215 A.D.), among other matters asserted and confirmed the dogma of transubstantiation and necessity for the reformation of abuses and the extirpation of heresy. 14. The first Ecumenical Synod of Lyons, held during the pontificate of Innocent IV. (1245 A.D.), had for its object the promotion of the Crusades, the restoration of ecclesiastical discipline, &c. 15. The second Ecumenical Synod of Lyons, was held during the pontificate of Gregory X. (1274 A.D.). Its principal object was the re-union of the Greek and Latin churches. 16. The Synod of Vienne in Gaul, under Clemens V. (1311 A.D.), was convoked to suppress the Knights Templars, &c. 17. The *C. of Constance* was convoked at the request of the Emperor Sigismund (1414 A.D.), and sat for 4 years. It asserted the authority of an Ecumenical *C.* over the Pope, and condemned the doctrines of John Huss and Jerome of Prague. 18. The *C. of Basle* was convoked by Pope Martin V. (1430 A.D.). It sat for nearly 10 years, and purposed to introduce a reformation in the discipline, and even the constitution of the Roman Catholic Church. All acts passed in this *C.*, after it had been formally dissolved by the Pope, are regarded by the Roman Catholic Church as null and void. 19. The celebrated *C. of Trent*, held 1545–1563 A.D. It was opened by Paul III., and brought to a close under the pontificate of Paul IV. 20. The Council of Rome convoked by Pope Pius IX., 1869, which, in July, 1870, decreed the personal infallibility of the Pope, in matters of faith and morals, to be a dogma of the Church.

Ædema, *n.* [Gr. *oideō*, I swell.] (*Surg.*) A tumor or swelling, but, more strictly speaking, a diffused, puffy distention of a part or limb, white, soft, and insensible, proceeding from an effusion of water, as in the case of dropsy. *Æ.* of a limb or membrane may occur from debility as well as from disease in the organ, from a simple loss of power in circulation, or from pressure on some important vessel. *Æ.* is generally characterized by a white, shining appearance of the distended cuticle, loss of heat in the part, the absence of pain, and by the swelling *pitting* when pressed with the finger. *Æ.* when the result of weakness or inaction, should be treated by tonics, blue pill, and repeated friction.

Ædenburg, a free town of Hungary, cap. of the co. of Ædenburg, near the S.W. border of Neusiedl Lake, 49 m. W. of Raab, and 37 S.S.E. of Vienna. *Manuf.* Cotton and woollen goods, potash, nitre, tobacco, and refined sugar.

Æderan, (*æ'deh-ran*), a town of N. Germany, in Saxony, 32 m. N.E. of Zwickau. *Manuf.* Woollens and cottons. *Pop.* 5,000.

Ædipus, (*æ'di-pus*.) (*Myth. Hist.*) The son of Laius, king of Thebes, who, after being married to Jocasta, consulted the oracle, which informed him that he was doomed to die by the hand of his own son. To prevent so fearful an accident, he ordered his wife, as soon as Ædipus, the child she was then pregnant with, was born, to destroy him. The affection of the mother, however, prevailed over the duty and obedience of the wife; and she secretly sent the child away, by a confidential servant, with a command to expose it in some place where it would meet with a protector—instead of which, he cruelly bored the feet of the child and hung him on a tree, suspended by his heels, on Mount Cithæron. In this situation he was discovered by a shepherd in the service of Polybius, king of Corinth, who carried him home and adopted him as his own son. As he grew up, the talent he displayed, even with the imperfect education they were able to give him, soon enabled him to outstrip all his companions and acquire with avidity all the accomplishments of the age, which so excited their envy, that they taunted him with the baseness of his birth. Doubting the truth of the information as to his being illegitimate, Ædipus, so called on account of the deformity of his feet, resolved to proceed to Delphi to consult the oracle, and was told that if he returned to his home he would become his father's murderer. Knowing no father but the man who had adopted him, he turned from Corinth and proceeded towards Phocis, on the road to which, in a narrow pathway, he met his father Laius, who was in his chariot, accompanied by his armor-bearer. Being insolently ordered to make way, and refusing to comply, a contest ensued, in which the decree of the oracle was verified by Ædipus slaying both Laius and his attendant. Proceeding to Thebes, he was attracted by the enigma proposed by the Sphinx, and which he determined to solve—as Creon,

who had succeeded Laius, promised any one who should succeed in doing so the crown of Thebes as a reward. The enigma was this: "What animal in the morning walks upon four feet, at noon upon two, and in the evening upon three?"—which Ædipus explained by saying it was Man, who, in his infancy, or the morning of his life, crawls on his hands and feet; in his manhood, or the noon of his age, he stands erect and goes on two feet; and in old age, or the evening of his days, he supports his trembling limbs with a staff. This, being the true explanation, resulted in the death of the Sphinx (who destroyed herself, as the fable goes), and the accession of Ædipus to the throne of Thebes. In his endeavors to find the murderer of Laius, he first became aware that the stranger he had encountered and killed was his father, upon the knowledge of which his remorse was so great that he voluntarily deprived himself of sight and banished himself from his kingdom. He is said to have perished in a singular manner, the earth opening and engulfing him in its depths. The more revolting part of this story we have purposely suppressed, but it will be found referred to under LAIUS and JOCASTA.

Æhlenschläger, ADAM GOTTLIEB, (*æ(r)'len-shla'ger*.) the greatest dramatic poet of the Scandinavian North, b. 1777. He commenced his career on the stage, but abandoned the profession for literature, and finally became professor of æsthetics in his native city. Among his greatest works may be mentioned—1. *The Death of Balder*; 2. *The Gods of the North*; 3. *Aladdin*; 4. *Stærhodder*; 5. *Hakem-Jarl*; 6. *Palnatoke*; 7. *Azel and Valborg*; 8. *The Admiral Fordens Kjøld*; and many others. D. 1850.

Æil de Bœuf, *n.* [Fr., bull's eye.] (*Arch.*) A small light formed in a roof for the purpose of lighting an attic, or a story in it. The small openings in a dome are also called by this name.

Æiliad, (*æ-il'yad*.) *n.* [Fr. *œillade*, from Lat. *oculus*, eye.] A side-glance; an ogle; a wink; a sly or arch look. (*R.*)

Æiras, (*o-a'e-ras*), in Brazil, a city in the prov. of Piauh, abt. Lat. 7° 5' S., Lon. 42° 40' W.; *pop.* 6,000.—A village abt. 140 m. W.S.W. of Para.

Æland, an island of the Baltic, belonging to Sweden, prov. of Calmar, from which it is separated by the Straits of Calmar; Lat. between 56° 13' and 57° 22' N., Lon. 16° 20' and 17° 10' E.; *area*, 300 sq. m. *Chief town*, Berg-holm. *Pop.* 33,140.

Æland, (*Little*), an island of Denmark, duchy of Schleswig, between the island of Fohr and the mainland. **Æls**, (*æ(r)'ls*), a town of Prussian Silesia, dist. of Breslau, on the river Æls, a tributary of the Oder, 17 m. N.E. of Breslau. *Manuf.* Woollen and linen fabrics. *Pop.* 7,520.

Ælsnitz, (*æls'nits*), a town of N. Germany, in Saxony, on the Elster, 6 m. S.E. of Plauen. *Manuf.* Woollens, cottons, and leather. *Pop.* 4,500.

Ænanthe, *n.* [Lat., from Gr. *ainē*, the vine, and *anthos*—*anthos*, flower.] (*Bot.*) A genus of European plants, order *Apiaceæ*. The species *Æ. crocata*, the Dropwort or Dead-tongue, and *Æ. phellandrium*, the fine-leaved Water-dropwort, are intensely poisonous in most localities. The roots of *Æ. pimpinelloides* are said to be wholesome. These species are often improperly called hemlock.

Ænanthic Acid, *n.* (*Chem.*) An acid obtained by the destructive distillation of castor-oil.

Ænanthic Ether, *n.* (*Chem.*) A peculiar compound, upon which the fragrant and persistent odor of certain wines depend. It remains in the form of an oily liquid, when large quantities of wine are distilled.

Ænanthole, or **ÆNANTHIC ALDEHYDE**, *n.* (*Chem.*) A product of the destructive distillation of castor-oil. When purified, it is a clear liquid, of a peculiar pungent smell and taste.

Ænothe'ra, *n.* (*Bot.*) A genus of plants, order *Onagraceæ*. The roots of *Æ. biennis* and other species are

Fig. 1983. — EVENING PRIMROSE, (*Enothera biennis*.)

a, Flower divested of calyx and corolla to show the parts of fructification; b, tuberous root.

edible. The yellow flower of several species expand in the evening; and hence they have been called the evening primrose.

Oenamel, *n.* [Gr. *oinos*, wine, and *meli*, honey.] Mead; methueglic.

Enometer, *n.* [Gr. *oinos*, wine, and *metron*, measure. Same as ALCOHOLMETER, *q. v.*

O'er, *prep.* and *adv.* A contraction for OVER, *q. v.*

Ersted, HANS CHRISTIERN, a Danish natural philosopher, b. 1777. When 12 years of age he became assistant to his father, who was an apothecary; but in 1794 he entered the university of Copenhagen, where he soon distinguished himself. In 1801 he left Copenhagen on a lengthened tour through Germany, France, and Holland; and, in 1806, he was appointed to the chair of natural philosophy in Copenhagen, where he labored assiduously till his death. It would far exceed our limits to mention the numerous works which Ersted gave to the world, during his long and brilliant career. In 1819, his labors were crowned by his grand discovery of electro-magnetism. Renown and honorable testimonials streamed in upon him from every side. Many learned societies elected him as their member; the Royal Society of England sent him the Copley Medal, and the Institute of France, as an extraordinary acknowledgment, presented him with one of the mathematical class-prizes worth 3,000 francs. His *Soul of Nature* has been translated into English. D. 1851.

Esel, or ESEL, an island in the Baltic, belonging to Russia, gov't of Livonia or Riga, off the mouth of the Gulf of Riga; Lat. between 58° and 59° 40' N., Lon. 24° 40' and 23° E.; area, 1,150 sq. m. Its surface is level, and the soil moderately fertile. *Chief town*, Arensburg. Pop. 1,800.

Œsophagotomy, *n.* [Gr. *oisophagos*, the gullet, and *temnein*, to cut.] (*Surg.*) The operation of cutting into the œsophagus to remove any foreign body, which, too large to pass farther, or arrested by a spasm of the muscles of the gullet in the passage, causes the mass to press on the windpipe before it, and thereby endanger the person's life. The substances that most frequently lodge in the gullet, and require the operation of œsophagotomy, are new potatoes, pieces of meat, or lumps of apple, all of them unmanicured, and most frequently swallowed with gluttonous haste.

Œsophagus, (*ê-sof'a-gus*), *n.* [Gr. *oisophagos*, from *oid*, to carry, and *phago*, to eat.] (*Anat.*) The gullet, a long muscular tube, the continuation of the pharynx, or back of the mouth, and descending with a slight curve to terminate on the left side of the stomach, at the cardiac opening of that organ.

Es'tride, *n. pl.* [Gr. *oistros*, a gad-fly.] (*Zoöl.*) A family of insects comprising diptera which have their antennæ very short and inserted in two little holes upon the forehead; head large, eyes small, with a large space between them; wings large, covering the balancers, and the hind body of the females with a conical tube bent under the body, and with which they deposit their eggs while flying. The larvæ inhabit various parts of the body of herbivorous animals. They are thick, fleshy, without feet, tapering towards the head, which in most cases is armed with two hooks, and the segments of the body are also armed with hooks or prickles. (*Tenney*).—The Large Bot-fly, *Gasterophilus equi*, the Ox Bot-fly, *Estus bovis*, the Sheep Bot-fly, *Cephalgia ovis*, and other species, are found in this country. See GAD-FLY.

Es'trum, *n.* (*Zoöl.*) One of the ESTRIDÆ, *q. v.*

Eta, (*Monnt.*) (*et'la*), a mountain of Greece, nomarchy of Phthiotis, 9 m. W. of Thermopylæ. Its principal summits are Ainos and Katabothra, abt. 7,000 ft. above the sea.

Of, (*ôv*), *prep.* [A. S.; Ger. *ab*; Lat. *ab*; Gr. *apo*; Sansk. *ava*, and *apa*.] From, or out of; belonging, pertaining, or relating to; concerning;—employed in various applications, as noting the relation of source, cause, origin, or motive; specifying that from which anything proceeds; as, a man *of* good family.—Expressing the relation of subject to attribute; marking possession, holding, or proprietorship.

"Peace, of all worldly blessings, is the most valuable."—*Small*.

—Specifying the material substance, or constituent properties of anything; as, a dress of linen, a shower of rain.—Implying portion of an aggregate, or appendage to a whole or a number specified.

"Lo, all that's left of him, thy husband's ghost."—*Dryden*.

—Denoting causative power or impelling force.

"It was not of my own choice I undertook this work."—*Dryden*.

—Marking congruity, propriety, consequential effect, or that which is fit or appropriate.

"It is of the Lord's mercies that we are not consumed." *Lam.* iii. 27.

—Betokening reference to, or connection with, a thing;—corresponding with *concerning*, *about*; as, to tell tales of another.

"The quarrel is now of fame and tribute."—*Ben Jonson*.

—Denoting distance from; equivalent to *from*; as, within a mile *of* the village.—Denoting propinquity or distance in point of time; as, it yet wants half an hour *of* the stated time.—Expressing identity or equivalence;—employed with a name or appellation, and corresponding with the relation of opposition; as, the city *of* Philadelphia, the continent *of* Europe.—Denoting agency, or person by whom, or thing by which, anything is, or is performed.

"A blow whose violence grew *of* fury, not of strength."—*Sidney*.

—Describing relation to place or time; as, the architecture of the Middle Ages, the people of China, in the days *of* our forefathers.

Of late, in later days; recently; in time not long gone by; as, he has changed *of late*.—*Of old*, remotely in time past; formerly; anciently; in days of yore.

"The brave days *of old*."—*Macaulay*.

O'Fallon, in Missouri, a post-village of St. Charles co., abt. 34 m. W.N.W. of St. Louis.

O'Fallon Depot, in Illinois, a post-village of St. Clair co., abt. 18 m. E. of St. Louis, Missouri.

Ofanto, a river of S. Italy, rising in the province of Principato Ulteriore, 6 m. E. of Monte Marano, and after an E.N.E. course of 75 m., flowing into the Adriatic 4 m. N.W. of Barletta. Near its mouth was fought the famous battle of Cannæ, in which the Romans were defeated by Hannibal.

Off, *a.* [The same word as *of*, differently applied.] Most distant; on the opposite or further side;—opposed to *near* or *nearest*; as, the *off* leader in a team of horses.

Off side, the right hand in driving. In England the rule is reversed.

Off, *adv.* From, noting distance; as, the place is far *off*. From, with the action of removing or separating; as, to fly *off*, to cut *off*, to tear *off*, to march *off*.—From, denoting departure, abatement, remission, &c.; as, the skin came *off*, the fever goes *off*, to take discount *off*.—From; away; not toward;—implying a different direction. "Neither she could look *off*, nor would look *off*." (*Sidney*).—The opposite side of a question or argument.

"The questions in no way touch upon Puritanism, either *off* or *on*." *Sanderson*.

From off, *off*; *off* from.—*Off-hand*, spontaneous; without study or preparation; extempore; as, to write an epigram *off-hand*.—*Off and on*, at one time active and engaged, then inert and absent.

"Competitions intermit and go *off and on* as it happens." *L'Estrange*. (*Naut.*) Fetching the land on different tacks, now going toward, and now receding from.—*To be off*, to depart; to recede from an intended agreement or design. (*Colloq.*)

To come off, to escape, or to fare in so doing; as, he narrowly came *off* with his life.—*To take place*; to occur, as a public performance; as, when does the affair come *off*?

To get off, to effect escape; as, he got *off* with difficulty.—*To alight*; to come down; as, to get *off* one's horse.—*To go off*, to depart; to desert; to abandon, to leave; as, he has gone *off* without ceremony.—*To be discharged*; to become ignited, as a gun.—*To take off*, to remove; to take away; as, she quickly took herself *off*.—*To personate*; to portray; to mimic; to assume the character of; as, to take *off* a person's peculiarities of manner.—*Well off*, *badly off*, *ill off*, having good or ill fortune or success.

Off, *prep.* Not out; as, "I was never *off* my legs a day." *Temple*.

Off, *interj.* Hence; away; begone;—a command to depart, usually implying some degree of impatience, contempt, or aversion.

Offal, *n.* [D. *afval*; Ger. *abfall*.] Waste meat; the parts of the carcass of an animal which are rejected as unfit for food.—*Carion*; putrid flesh.

"I should have fatted all the kites with this slave's offal."—*Shaks*.—Refuse; that which is thrown away as of no value; rubbish; scraps.

"What trash is Rome; what rubbish and what offal."—*Shaks*.

Offent, *n.* (*Printing*.) That part of a printed sheet which cuts off, and which when folded is inserted in the middle of the other part, forming together a regular and orderly succession of all the pages in the signature.

Offenbach, (*ôf'f'n-bakh*), JACQUES, a popular musical composer, b. at Cologne, 1819, studied in Paris, and became famous for his light and sparkling "musical buffoneries." The best of these burlesque operas are:—*La Grande Duchesse*, *Orphée aux Enfers*, and *La Belle Hélène*. D. 1880. His posthumous opera *Les Contes d'Hoffman* was given with success in New York in 1882.

Offenbach, a city of Central Germany, grand-duchy of Hesse-Darmstadt, on the Main, 5 m. S.E. of Frankfurt, and 17 N.E. of Darmstadt. *Manuf.* Silk and cotton stockings, cotton fabrics, carriages, iron-ware, jewelry, carpets, tobacco, sunff, &c.

Offenburg, a town of Germany, grand-duchy of Baden, circle of the Middle Rhine, on the Kinzig, 17 m. S.S.W. of Carlsruhe; pop. 4,200.

Offense, (sometimes written OFFENSE.) *n.* [Fr. *ffense*; Lat. *offensio*, from *offendo*, to offend. See OFFEND.] Act of striking against; act of offending or of exciting displeasure; injury.

—Any violation of law, divine or human; act of wickedness, or of omission or dereliction of duty; a crime; a sin; a fault; a transgression.

"O my offense is rank. . . a brother's murder."—*Shaks*.

—That which excites anger; that which offends.

"What dire offense from amorous causes springs."—*Pope*.

—Cause of stumbling; cause of being offended or angered; displeasure.

"The pains of the touch are greater than the offenses of other senses."—*Bacon*.—Anger; displeasure; state of being offended; as, he gave no just cause *of offense*.

(*Law*.) The doing that which a penal law forbids to be done; or omitting to do what it commands. In this sense, it is nearly synonymous with crime. In a more confined sense, it may be considered as having the same meaning with misdemeanor; but it differs from it in this, that it is not indictable, but punishable summarily for the forfeiture of a penalty.

Offenseless, *a.* Unoffending; inoffensive; giving no ground for offense or displeasure.

Offend, *v. a.* [Lat. *offendo*—*ob*, and *obol.* *fendo*.] To affront; to make angry; to displease; as, I regret that I have offended her.—To pain; to shock; to wound; to annoy; to injure; as, a bad smell *offends* the nose.—To transgress; to violate; as, many fear to offend the

law.—To disturb, annoy, molest, or cause to fall, halt, or stumble.—To cause to sin, or ignore or neglect duty; to allure to evil; to obstruct in obedience.

"If thy right eye offend thee, pluck it out."—*Matt.* v. 29.

—*v. n.* To sin; to transgress or violate the moral or divine law; to commit a crime or misdemeanor.—To excite or occasion dislike, anger, or dissatisfaction.—To be made to stumble or blunder; to be outraged or scandalized.

To offend against, to act offensively or injuriously toward.—To commit an offence against.

"Our language, in many instances, *offends against every part* of grammar."—*Swift*.

Offend'ant, *n.* An offender; one who offends. (*R.*)

Offend'er, *n.* One who gives offence; one who transgresses any law, divine or human; one who commits a crime or injury; a delinquent; a misdemeanant; a transgressor.

Offensive, *a.* [Fr. *offensif*, from Lat. *offendo*, *offensus*.] Causing offence; exciting displeasure or some degree of anger; displeasing; as, *offensive* words or actions.—Causing pain or disagreeable sensations; obnoxious; repugnant; as, an *offensive* sight, taste, or smell.—Occasioning ill or injury; injurious; mischievous; as, bile is *offensive* to the stomach.—Assailant; used in attack;—opposed to *defensive*; as, an *offensive* weapon.—Making the initiatory attack; invading; aggressive;—correlative to *defensive*; as, an *offensive* war.

League offensive and defensive, a league or confederacy necessitating both or all parties to act in concert together against a common enemy, whether in attacking or in defending the other in the event of being attacked.

—*n.* The part of attacking; state or posture of attack;—opposed to *defensive*; as, our troops assumed the *offensive*.

To act on the offensive, to be the party which attacks.

Offensively, *adv.* In a manner to cause anger, displeasure, or umbrage; injuriously; mischievously; disagreeably; by way of invasion or first attack.

Offensiveness, *n.* The quality that offends or displeases; injuriousness; mischief; cause of disgust.

Offer, *v. a.* [Fr. *offrir*; Lat. *offero*—*ob*, and *fero*, to bear, carry, bring. See BEAR.] To bring to or before; to present for acceptance or rejection; to show; to furnish; to give.—To propose; to tender; to proffer; to make a proposal to.—To sacrifice; to immolate; to present in prayer or devotion.—To bid, as a price, reward, or wages.

—*v. n.* To present itself; to be at hand.—To present verbally; to declare willingness.

—*n.* [Fr. *offre*.] A proposal to be accepted or rejected; presentation to choice; first advance; act of bidding a price, or the sum bid.

Offerable, *a.* That is worthy of being offered.

Offered, *p. a.* Presented for acceptance or rejection.—Presented in worship or devotion; immolated.—*Bid*.—Presented to the eye or the mind.

Offerer, *n.* One who offers; one who sacrifices or dedicates in worship.

Offering, *n.* Act of one who offers; that which is offered or presented.

(*Ecdl.*) A gift presented to the deity. A principal part of the religious service of all the nations of antiquity consisted in offerings to a divine being, from a feeling of dependence upon him and a desire to propitiate his favor. Such offerings took their character from the mode of life of those who presented them. Herdsmen and hunters offered beasts, husbandmen fruits of the earth; each selecting the choicest of what he possessed. Prisoners taken in war, slaves, and even their own children, were frequently offered by rude and cruel nations to their idols. Among the ancient Hebrews, offerings were of several kinds, some being free-will, others by obligation. The first-fruits, the tithes, the sin-offerings, were of obligation; the peace-offerings, vows, offerings of wine, oil, bread, and other things made to the Temple or to the ministers of Jehovah, were offerings of devotion. Sacrifices were not commonly included under the name of offerings. In a modern sense, the term *offering* is applied to certain ecclesiastical dues payable by custom. This latter custom has obtained from the first period of Christianity, when, as in our days in this country, those who officiated at the altar had no other maintenance or allowance than the free gifts or offerings (*oblaciones*) of the people.

Offertory, *n.* [Fr. *offertoire*; L. Lat. *offertorium*, from Lat. *offero*.] (*Ecdl.*) In the Roman Catholic Church, the first part of the Mass, in which the priest prepares the elements for consecration. In the office of the Church of England communion, it denotes the sentences which are recited by the officiating priest while the people are making their oblations or offerings.

Off-hand, *a.* [*Off* and *hand*.] Speedily sent from the hand; done without study or hesitation; unpremeditated; done or said at a moment; done or said without hesitation or previous preparation.

—*adv.* On the spur of the moment; promptly; without premeditation or delay.

Office, *n.* [Fr.; Lat. *officium*—*ob*, and *facio*, to make, to do. See FACT.] That which one does or ought to do for another; a service; a particular duty, charge, or trust conferred by public authority and for a public purpose; an employment undertaken by commission or authority from government, or those who administer it; a duty, charge, or trust of a sacred nature conferred by God himself; duty or employment of a private nature; that which is performed, intended, or assigned to be done by a particular thing, or that which anything is fitted to perform; function; business; particular employment; act of good or ill voluntarily tendered; a service; a kindness, favor, or courtesy.—*Formula*

of devotion. — A house, apartment, or place in which business is transacted.

Office-bearer, n. One who holds or discharges an office.

Officer, n. A person invested with an office, either civil or military; a person commissioned or authorized to perform any public duty; one who holds a command in the army or navy; one authorized to take into legal custody.

— *v. a.* To furnish with officers; to appoint officers over.

Official, (of-fish'yal), a. [Fr. *officiel*; Lat. *officialis*, from *officium*. See OFFICE.] Pertaining to an office or public trust; derived from the proper office or officer, or from proper authority; made or communicated by virtue of authority.

— *n.* [Fr.] An ecclesiastical judge appointed by a bishop, chapter, archdeacon, &c., with charge of the spiritual jurisdiction.

Officially, adv. By the proper officer; by virtue of the proper authority; in pursuance of the special powers vested.

Officialty, n. (Common Law.) The court of an official.

Officiary, a. That relates to an officer; official.

Officiate, v. n. [Fr. *officier*, to read divine service.] To transact the appropriate business of an office or public trust. — To perform the appropriate official duties of another.

Officiating, p. a. Performing the appropriate duties of an office; performing the office of another.

Officiator, n. One who officiates.

Officina, a. [Fr., from Lat. *officina*, contracted from *officina*, a workshop, from *opifex*, *opifex*, an artificer, a workman — *opus*, a work, and *facio*, to make, to do.] Pertaining to those medicines which are directed in the pharmacopoeia to be kept in apothecaries' shops.

Officious, a. [Fr. *officieux*; Lat. *officiosus*, from *officium*. See OFFICE.] Kind; obliging; doing kind offices; ready to serve; excessively forward in kindness. — Importunately interposing services; busy; intermeddling in affairs in which one has no concern.

Officiously, adv. Kindly; with solicitous care. — With importunate or excessive forwardness; in a busy or meddling way.

Officiousness, n. Quality of being officious: eagerness to serve; — usually, an excess of zeal to serve others, or improper forwardness.

Offing, n. (Naut.) A part of the sea at a considerable distance from the shore where there is deep water. Thus, if a ship from shore be seen sailing out towards the sea, they say, "she stands for the offing."

Offscour'ing, n. [Off and scour.] That which is scoured off; — hence, refuse; rejected matter; that which is vile or despised; scum.

Offscum, n. Refuse; offscouring.

Offset, n. [Off and set.] (Book-keeping.) A sum, account, or value set off against another sum or account as an equivalent.

(Surveying.) A narrow, irregular slip of ground, on the outside of lines which include the main portion; also, a perpendicular let fall from the stationary lines to the hedge, fence, or extremity of an inclosure.

(Gardening.) A young radical bulb when separated or taken off from the parent roots; also, short lateral shoots bearing clustering leaves at the extremity. One of the chief methods of propagating plants is by means of offsets.

(Arch.) See SET-OFF.

— *v. a.* To set off, as one account against another; to make the account of one party pay the demand of another.

Offset-staff, n. (Surveying.) A rod, usually 10 links in length, for measuring offsets.

Offshoot, n. An offset or shoot of a plant; applied also to anything arising from or growing out of another.

Off-side, n. The right, or right-hand side.

Offskip, n. The part of a landscape which recedes from the spectator into distance.

Offspring, n. That which springs from. — A child or children; a descendant or descendants; propagation; generation; issue; progeny; posterity. — Production of any kind.

Offuscate, v. a. [Fr. *offusquer*.] To cloud; to obfuscate.

Offuscation, n. [Lat. *offuscatio*.] The act of darkening; obfuscating.

Offward, a. (Naut.) Inclining with the side to the water, as a ship when aground.

Off, adv. [A. S. and Ger. *oft*, often, oftener, oftenest.] Often; frequently; not rarely.

Often, (of'n), adv. [A. S. *oft*.] Frequently; many times; not seldom.

— *a.* Frequent. (R.)

Often-bearing, a. (Bot.) Producing more than twice in one season.

Oftenness, n. Frequency. (R.)

Offentimes, Off'times, adv. Many times; frequently; often.

Off'times, adv. Frequently; often.

Og, (Script.) A giant Amorite king of Bashan east of the Jordan, defeated and slain by the Israelites under Moses.

Og'den, in Indiana, a post-village of Henry co., abt. 42 m. E. of Indianapolis.

Og'den, in Iowa, a post-town of Boone co., 54 m. N.W. of Des Moines. Pop. (1895) 897.

Og'den, in Kansas, a post-village of Riley co., about 12 m. S.W. of Manhattan.

Og'den, in Michigan, a post-township of Lenawee co.

Og'den, in Missouri, a village of New Madrid co., about 140 m. S.S.E. of St. Louis.

Og'den, in New York, a post-township of Monroe co. Pop. (1897) 2,642.

Og'den, in Utah, a city and R. R. center, cap. of Weber co., 37 m. N. of Salt Lake City. Pop. (1895) 15,828.

Og'densburg, in Minnesota, a village of Winona co., about 13 m. N.W. of Winona.

Og'densburg, in New Jersey, a post-village of Sussex co., about 22 m. N.N.W. of Morristown.

Og'densburg, in New York, a city, port of entry of St. Lawrence co., on the St. Lawrence river, at the mouth of the Oswegatchie, and on the site of Fort Oswegatchie, about 200 m. N.N.W. of Albany. The chief imports are grain, flour, beef, pork, iron, and coal. Pop. (1897) 12,750.

Og'densburg, in Wisconsin, a post-village of Wau-pacca co., abt. 45 m. N.W. of Oshkosh.

Ogee, n. (Arch.) See CYMA.

Ogeechie, or LITTLE OGEECHEE, in Georgia, a river rising in Taliaferro co., and after a general S.E. course of abt. 250 m. enters the Atlantic Ocean between Chatham and Bryan cos.

Ogive, (ô'jiv), n. [Fr.] (Arch.) A name applied to arches or branches of a Gothic vault, which, instead of being circular, pass diagonally from one angle to another, and form a cross with the other arches, which make the side of the square of which the ogives are diagonals. The centre, where the ogives cross each other, is called the *key*, and is sometimes carved in the form of a rose or a *cul-de-lampe*.

Ogle, v. a. [Ger. *äugeln*, to twinkle, to open and shut the eyes; Du. *ogen*, the eye, to have an eye upon one, from *oog*, the eye; Lat. *oculus*. See EYE.] To eye; to view with side glances, as in fondness, or with a design to attract notice.

— *n.* A side glance or look.

Ogle, in Illinois, a N. co.; area, about 780 sq. m. Rivers. Rock and Leaf rivers, and Elkhorn and Pine creeks. Surface, nearly level; soil, very fertile. Products. Grain, hay, butter, &c. Intersected by three railroads. Cap. Oregon. Pop. (1890) 28,710.

— A village of the above co.

O'gler, n. One who ogles.

Oglethorpe (ô'gl-thorp), in Georgia, a N.E. co.; area, about 528 sq. m. Rivers. Broad and Oconee rivers, and Beavertown, Cloud's, Millstone, and Long creeks. Surface, hilly; soil, generally fertile. Min. Iron, jasper, agate, and granite. Cap. Lexington. Pop. (1890) 16,951.

— A post-village, cap. of Macon co.

Oglethorpe, JAMES EDWARD, B. at London, Dec. 21, 1698. In 1732 he obtained a charter and a grant for the founding of Georgia. Savannah was founded the following year. During the war between Great Britain and Spain, he commanded the Georgia and South Carolina forces in an invasion of Florida. He returned to England in 1743, and in 1745 served against the Pretender. He was retired from the army in 1765, as a general, upon half pay. Died at Cranham Hall, Essex, Jan. 30, 1785.

Ogling, n. The act of viewing with side glances.

Oglio, or Ollio, (ô'yo), a river of N. Italy, rising in the Rhaetian Alps, and after a S. course of 130 m. joining the Po at Terre d'Oglio, 10 m. S.W. of Mantua.

Ogre, (ô'ger), n. [A. S. *orc*, hell, a goblin; Fr. *ogre*; It. *orco*, a hobgoblin, from Lat. *Orcus*, Gr. *Horkos*, a divinity who punishes the false and perjured; or from the *Ogurs*, or *Onogurs*, a savage Asiatic horde, which overran part of Europe about the middle of the 5th century.] An imaginary monster or hideous giant in fairy tales, who lived on human beings.

Ogress, n. A female ogre.

Ogyes, (ô'j-ees), said to have been the first king of Attica and Boeotia, in the 18th century B. C. In his reign occurred the great deluge that covered the whole of Greece. According to some, the name belongs not to a king, but to the deluge above mentioned.

Oh, O, exclam. A word denoting surprise, pain, sorrow, or anxiety. See O.

Ohio, (La Belle Rivière of the French), a large river of the U. States, formed by the junction, at Pittsburg, of the Alleghany and Monongahela. Its level at this point is stated to be about 830 ft. above the Atlantic; its width somewhat exceeds 600 yards; and it immediately assumes that broad, placid, and beautiful aspect which it maintains, except at the rapids of Louisville, all the way to its confluence with the Mississippi. Its valleys are of great depth and fertility, generally high, dry, and healthy; and the country on both sides presents a variety of scenery not elsewhere to be found in the Mississippi valley. The O. varies in breadth from 400 to 1,400 yards. At Cincinnati it is nearly 600 yards, which may be taken as its mean breadth. At Louisville, at the rapids, the descent of the river, in 2 m., is 22½ ft.; but the current is not so broken but that boats have, in many instances, ascended the falls. A canal, however, 2 m. in length, and 200 ft. wide, with a depth sufficient for large steam-boats, was completed in 1831, by which the rapids are avoided. The rise of the river, during the floods, which occur between March and July, varies from 45 to 60 ft.; but in the dry season it may be forded, in several places, near Louisville. Its higher parts are annually frozen over, and the navigation is usually suspended 8 or 10 weeks, during winter, by floating ice. Its current, when at mean height, is estimated at 3 m., and, when very low, at 2 m. per hour. It has many islands; but there are none between the States of Ohio and Kentucky. The principal cities and towns on the O., below Pittsburg, are Wheeling, Gallipolis, Cincinnati, Louisville, and Jeffersonville. The length of the river, from Pittsburg to the Mississippi, including its windings, is abt. 950 m. It enters that river nearly in a S.E. direction. The O. separates Virginia and Kentucky on the S., from Ohio, Indiana, and Illinois, on the N. Its N. affluents are the Big Beaver, Muskingum, Scioto, and Wabash, the last of which is navigable for 400 m. from its mouth; the S. tributaries are, the Ken-

hawa, Sandy, Green, Cumberland, and Tennessee, all rising on the W. side of the Alleghanes, and flowing, by very tortuous courses, through some of the richest districts of the U. States. The last two rivers are navigable for steamers, during spring, upwards of 200 m. from their mouths; and the O., with its feeders, cannot have less than 5,000 m. of navigable waters. It is traversed, in all directions, by an immense number of steamers; and taking all circumstances into account, few rivers can vie with it, either in utility or beauty.

Ohio, a large and important State of the American Union, between Lat. 38° 30' and 42° N., and Lon. 80° 28' and 84° 42' W., and deriving its name from the magnificent river Ohio, which forms the whole of its S.E. and S. boundary, separating it from West Virginia and Kentucky; on the E. it has Pennsylvania; W., Indiana; and N., Michigan and Lake Erie. Length, N. to S., 200 m.; breadth, E. to W., 195 m.; area, 89,962 sq. m., or 25,576,960 acres. — *Gen. Desc.* This State comprises about one-third of the region sloping from the Alleghanes in Pennsylvania down to the Mississippi. It possesses no very elevated hill ranges, but consists almost wholly of a table-land elevated from 600 to 1,000 ft. above sea-level, the central position of the State being the highest. This, also, which is its least fertile portion, is in parts interspersed with swamps and marshes. The declivity toward Lake Erie is much more abrupt than the S. slope of the State, and the country is here also in parts marshy; that portion of the surface which declines towards the Ohio, and is the most extensive, is diversified with hills and valleys, and, on the whole, fully nine-tenths of the surface are susceptible of cultivation, nearly three-fourths being preeminently fertile. The hills are generally cultivable to their summits, and the river bottoms are exuberantly productive. The surface of the central and N. and W. parts is level and moderately rolling, consisting of forest and prairie. The E. and S.E. are somewhat hilly, becoming rather rough and broken on the banks of the Ohio. A ridge of highlands is found crossing the N. half of the State from E. to W., forming the watershed between the streams flowing into Lake Erie and those emptying into the Ohio. Extensive timber tracts, in former times denominated the "barrens," were found between the Scioto and Great Miami rivers, many of which, by the prevention of fires, are again covered with forest growth, and in this section of the State timber is becoming more abundant than it was half a century ago. — *Rivers.* The State is amply watered; besides the Ohio, with its affluents, the Scioto, and Great and Little Miami, there are the Muskingum, the Maumee, Sandusky, Huron, and Cuyahoga rivers, all having their outlet in Lake Erie, and draining the N. part of the State. Lake Erie extends along two-thirds of the N. frontier, with a shore-line of 200 m., including Maumee and Sandusky bays, forming fine harbors within the limits of the State. — *Geol. and Min.* The geological formations are nearly all secondary, comprising limestone, lias, saliferous and feriferous rocks, sandstone, greywacke, &c., in horizontal strata. The great bituminous coal-field of Pennsylvania and Virginia projects into the E. and S.E. parts of the State, among the western foothills proper of the Alleghany mountain system, its W. boundary extending from the N.E. corner of Trumbull co., through the cos. of Portage, Wayne, Knox, Licking, and Fairfield, to the mouth of the Scioto. The coal-fields cover, in the aggregate, an estimated superficies of 12,000 sq. m., extending through 20 cos., and embrace nearly one-third of the area of the entire State. There are numerous seams, varying from a few inches to 13 feet in thickness, and estimated to contain 20,000,000,000 tons. More than 32,000,000 tons of bituminous coal were mined in the State in one year. To the N.W. of the coal measures is found a very narrow belt of the underlying coal conglomerate, forming the rim of the coal basin. To this succeed the Chemung and Portage groups, and other formations in the downward series of the Devonian and Silurian systems. Salt springs are numerous within the carboniferous limits, and large quantities of this mineral are manufactured for market, being obtained by evaporating the brine. Iron is found in abundance between the Licking and Muskingum rivers, near Zanesville, and in the Ohio near the S.W. corner of Adams co., and more particularly in the cos. of Lawrence, Gallia, Jackson, Meigs, Vinton, Athens, Hocking, Perry, and Licking. The ore obtained in some of these counties is of very superior quality, being suited to the finer class of castings; it is computed to cover an area of 1,200 sq. m., and has laid the foundation of a very extensive iron interest in the S. part of the State. In the N. the furnaces are supplied with the raw material from the Lake Superior mines. Petroleum also forms an important mineral product of the State. The first well was sunk in 1859, and in 1873 the natural gas which accompanies the oil was first turned to practical use. This important substance is now largely employed for manufacturing purposes, especially in glass-making. A deep well bored in Find-

Fig. 1984. — SEAL OF THE STATE.

way, in 1884, showed that the Trenton limestone of the Lower Silurian is a prolific source of oil and gas—an unlooked for result. The Upper Silurian also holds large deposits of oil and gas. In 1901 the product of petroleum reached 21,648,083 bbls., being a considerable percentage of the yield of the whole country. Clay, in all its forms, is found in vast quantities, as also, carbonate of lime. Hydraulic cement, in large deposits, is known to exist, though it has as yet not been made developable. Large quantities of building-stone and grindstones are quarried in the N. part of the State, and contribute pretty largely to the industrial economy of the commonwealth.—*Clim. and Veg.* The climate of N. Ohio is, of course, colder in winter than the southern and central divisions, yet even here severe weather is not usual. In the last-named regions the ground is seldom covered with snow more than a few days, the thermometer not usually sinking as low as zero. The summers in all parts of the State are warm and well adapted to the growth and maturation of Indian corn; the fall season is remarkable for its genial features. The rain-fall is generally sufficient for the most successful husbandry—droughts, although sometimes occurring, being not more frequent than in the adjoining States. In point of salubrity, the State will favorably compare with any in the Union. Meteorological observations have been kept up with commendable regularity in some 20 different localities in the State for a number of years. From these it is would appear that the north winds of Lake Erie reduce the mean temperature of the State almost to an equality with the northern boundary. The timber growth of the State includes white and black oak, jack oak, and several other quercine varieties; the black, blue, gray, and swamp ash, several kinds of poplar, sycamore, pawpaw, dogwood, buckeye, elm, cherry, and hornbeam, besides beech, iron-wood, basswood, walnut, and a few evergreen trees.—*Soil and Agric.* The soil of this State is, generally speaking, of the highest fertility, free from rock or stone, and readily cultivated. There is but a small proportion of the surface unavailable for agricultural production of some sort, or absolutely unfitted for tillage. The valleys of the rivers, and, particularly, of the two Miamis, the Scioto, the Maumee, and their feeders, contain the most fertile and valuable soils. Indeed, it might be difficult to find anywhere lands equalling these in extent, surpassing them in the elements of fertility, or in agricultural capacity. The Scioto and Miami bottoms contain each an area of about 3,300,000 acres, and together comprise more than one-fourth of the superficies of the whole State. The basin of the Muskingum, though less in extent, has much excellent land, while the Maumee bottoms in the N.W., when once thoroughly drained, will be found equal to any in fecundity, being for the most part deep, black mould, with just sufficient sand intermixed to constitute soils of the very highest fertility. Of such a character is the "Black Swamp," in the N.W. of the State, tracts of which have of late years become sufficiently dry for cultivation, and it is claimed, are the best corn and grass lands. The lake-shores of Erie are of superior adaptation to the growth of fruits, on account of their exemption from pernicious frosts. The peach, so liable to fail in most of the N. States, finds here a congenial atmosphere, while the culture of the grape is, perhaps, more successful than in any other part of the State; in fact, some of the islands of the lake are becoming celebrated for their vinous produce. In an agricultural point of view, O. takes a front rank. Wheat, maize, barley, oats, buckwheat, rye, bay, grass-seeds, Irish and sweet potatoes; the various kinds of pulse, with flax, hemp, and other fibrous growths; hops, tobacco; the principal hardy fruits and cucurbitaceous varieties, with nearly every kind of garden-vegetables, are extensively cultivated; maple and sorghum syrup, and sugar, honey, wine, butter, and cheese in considerable quantities; and horses, cattle, sheep, and hogs are reared in large numbers.—*Manuf.* O. holds a high rank among the manufacturing States of the Union, leading all others in certain important lines of production, such as farming implements, carriages and wagons, &c. It possesses also great rolling mills and iron works, extensive glass factories, potteries, and oil-works. The abundance and excellence of hardwood timber invites wood-working of all kinds, and the plentiful supply of cheap fuel offers an active incitement to manufacturing industries in general. In the last census year the total product of manufactures in this State was valued at \$832,438,113, an output surpassed only by New York, Pennsylvania, Illinois, and Massachusetts.—*Canals, &c.* O. is abundantly provided with means of communication. The Ohio river and Lake Erie afford splendid channels for external commerce, while its railroads, over 8,000 m. in length, traverse the State in every direction. Internal communication is also aided by 4 canals, built and operated by the State, and 697 m. in total length. Two of these traverse the State from Lake Erie to the Ohio, the Ohio canal extending from Cleveland to Portsmouth, and the Miami and Erie canal from Toledo to Cincinnati. The others are the Hocking, a branch of the Ohio, 56 m., and the Walhonding, 25 m., in length. It may be appropriate to speak here of the archaeological importance of O., it being richer in the relics of ancient man than any other State in the Union. Nowhere else have the early inhabitants of America left so many traces of their presence in mounds and earthworks, and in implements of stone, bone, copper, and other materials. See MOUND BUILDERS.—*Quarries.* This State is noted for its ample supply of excellent building-stone. The Dayton stone is famous for its beauty as well as its strength. It has so good a name that it has found its way to markets hundreds of

miles distant. In strength it equals good granite. It resists a crushing power of more than 15,000 pounds to the cubic inch. But the limestones, however available for these purposes, and however valuable to the localities where they occur, become insignificant when considered by the side of the great sandstone quarries of the State. Of these the Berea grit leads the list. This wonderful stratum stretches entirely across the State from north to south, and supplies the best building-stone, all things considered, found in the United States. As Ohio stone, it is known and esteemed from the remote seaboard to the Rocky Mountains, and it is now exported to England in considerable quantity.—*Public lands, &c.* Within the limits of the State, the public land system was inaugurated under the ordinance of 1785, passed by the Continental Congress. The earlier operations of the system in O. were singularly complicated by reservations in the claims of the States ceding the territory. Virginia reserved 4,204,800 acres between the Scioto and Little Miami rivers, nearly one-sixth of the area of the State, to satisfy the claims of the officers and soldiers of her Continental line. Connecticut retained 3,800,000 acres bordering on Lake Erie, and surrendered her claims under her colonial charter to the zone between the 41st and 42d parallels westward. Of this reservation, she retained only the title to the soil, the right of eminent domain being resigned to the general government. Some 500,000 acres of the W. part of this reserve were granted, in 1792, to certain of her citizens whose property had been burned during the inroads of the British troops under General Arnold and others during the Revolutionary War. These latter donations are commonly known as "fire-lands." The United States Military Lands constituted a separate tract W. of the first 7 tiers of townships surveyed under the ordinance of March 20, 1785, to the Scioto river. These lands, embracing 2,500,000 acres, were appropriated by Act of June 1, 1796, to satisfy certain claims of officers and soldiers of the War of Independence. Land-warrants granted by the U. S. for war services during the Revolutionary period were locatable in that district up to July 3, 1832, when, by statute to that date, the vacant lands in the U. S. military district were laid open to sale; and the scrip principle in satisfying warrants was adopted. The Ohio Company's Purchase, lying along the Ohio river in the S. E. corner of the State, originally absorbed 1,500,000 acres, of which, however, less than 1,000,000 were paid for and patented. Symmes' Purchase, including 311,682 acres, extended from the Ohio river N. between the Miami and Little Miami rivers, with a breadth averaging 27 miles. The two tracts last mentioned were subject to the school reservation of the 16th section in every township, and of section 29 for the support of religious worship. Several small tracts, reserved for special purposes, present anomalies in the earlier land operations which subsequent legislation has happily removed. The substitution of military bounty land-warrants for meeting the claims of our veterans has very greatly simplified this branch of the public service. The public land operations in this State may be regarded as practically closed, only a very few isolated tracts remaining, if in fact there be any, at the disposal of the general government.—*Pol. Div.* The State is divided into 88 counties, as follows:

Adams,	Fairfield,	Licking,	Portage,
Allen,	Fayette,	Logan,	Preble,
Ashland,	Franklin,	Lorain,	Putnam,
Ashtabula,	Fulton,	Lucas,	Richland,

Defiance,	Knox,	Perry,	Williams,
Delaware,	Lake,	Pickaway,	Wood,
Erie,	Lawrence,	Pike,	Wyandot.

Cities and towns. The principal are Cincinnati, Columbus (State cap.), Cleveland, Dayton, Toledo, Zanesville, Hamilton, Springfield, Chillicothe, Steubenville, Sandusky, Portsmouth, Akron, Marietta, Gallipolis, Ironton, Urbana, Wooster, Bellair, Yonngstown, Xenia, Piqua, Delaware, Lancaster, Lima, Mount Vernon, &c.—*Govt., &c.* The existing Constitution of the State was adopted in 1851. The right of suffrage is vested in every male citizen who has resided in the State one year next preceding the election, and who has paid a State or county tax. The general elections are held biennially on the second Tuesday of October. The general assembly consists of a Senate of 37 members, and a House of Representatives of 112 members, both chosen in districts for 2 years. The executive consists of a governor (also elected for 2 years), a lieutenant-governor, secretary of State, State auditor, State treasurer, comptroller of the treasury, attorney-general, commissioner of schools, clerk of the Supreme Court, and a board of public works, composed of 3 members. The judiciary is represented by a Supreme Court, presided over by a chief justice in conjunction with 4 puisne judges, or justices, chosen by popular vote for 7 years, by a joint ballot of the general assembly, and exercising original jurisdiction in causes of *quo warranto*, *mandamus*, *habeas corpus*, and *procedendo*, and appellate jurisdiction in other cases; and 43 judges of common pleas, also

elected for 7 years. The State is divided into 9 judiciary districts, each possessing its superior or district court, besides being further divided into 88 sub-districts, coming under the jurisdiction of courts of common pleas, and presided over by 44 justices. A probate judge is also allotted to each county, together with a clerk of court, auditor, and treasurer.—*Education.* The fund from the sale of public lands set aside for school purposes yields an annual income of over \$200,000. The unsold portion of these lands is leased. This source of income is added to by the proceeds of a tax of one mill, laid on all taxable property for public school purposes. The number of children enrolled in the schools is over 800,000, with an average attendance of about 600,000, and over 25,000 teachers. For higher instruction the State provides several institutions, including the Ohio University, at Athens; the Ohio State University, at Columbus, and the Miami University, at Oxford. It outranks any other State in the number of its colleges, there being 40 of these as compared with 31 in Illinois, the second in rank. These have a corps of over 900 instructors and more than 12,000 students. Among them may be named Adelbert, Kenyon, Marietta, Oberlin, Cincinnati, &c. As regards library facilities, O. possesses nearly 200 of more than 1,000 volumes each, having a total of more than 1,400,000 volumes.—*Institutions.* Of other than educational institutions there is a satisfactory provision, including 6 State hospitals for the insane, institutes for the feeble-minded, the blind, and the deaf and dumb, a working-home for the blind, soldiers and sailors' home, and soldiers' and sailors' orphans' home, industrial homes for boys and girls, with children's homes in 40 counties, and infirmaries in every co. of the State.—*Finances.* At the end of 1901 the funded debt of the State aggregated \$451,665. The assessed value of real estate in the State was \$1,377,253,183; personal property, \$591,026,817; making a total of taxable property of \$1,968,280,000. The rate of taxation was \$2.89 per \$100. Of the principal cities the debt was as follows: Cincinnati, \$25,086,252; Cleveland, \$18,468,546; Columbus, \$3,667,956; Toledo, \$5,634,118; Dayton, \$2,777,000.—*History.* The first exploration of the territory now constituting the State of Ohio was made by the French explorer La Salle, in 1680. About the middle of the following century the English laid claim to the region, and their effort to make good their claim brought on the French and Indian War. In 1763, the whole region was ceded by France to England, and after the Revolutionary War it became part of the territory of the U. S. The cession of this territory by the States claiming it, and the reservations held by them, have been already treated of in this article. The Ohio Company, organized in New England, in 1787, composed of men who had served in the Revolutionary War, purchased from the government a large tract N. of the Ohio, paying for it in Continental currency. This was the first sale of public lands made by the U. S. government. The first permanent settlement was made at Marietta in 1788. Cincinnati was soon after founded, and the settlement of the southern section of the territory went on with considerable rapidity. In 1791, the Indians became stirred up by the encroachments of the whites, and a war ensued, which at first proved disastrous to the U. S. troops, but was finally ended in victory by General Wayne, in 1794. In the treaty of peace that followed, the Indians ceded a large section of territory, in which several new towns were quickly established. O. formed part of the N. W. Territory until 1800, when it was organized as a separate Territory, Chillicothe being made the seat of government. In 1802 a Constitution was adopted for the "Eastern Division of the Territory N.W. of the Ohio," under the name of Ohio, and it was formally admitted into the Union on February 19, 1803. The population reached 230,760 by the census of 1810, and rapidly increased from that time forward. Steamboat navigation on the Ohio began in 1812; excavation of the State canals began in 1825, and was completed by 1844; and the first railroad, begun in 1837, was opened to traffic in 1842. O. took an active part in the Civil War, and since the war has given four Presidents to the Union—Grant, Hayes, Garfield, and Harrison, all born in this State, though not all residents of it when elected. *Pop.* (1870) 2,665,260; (1880) 3,198,062; (1890) 3,666,719; (1900) 4,157,545.

—A township of Clermont co.

—A township of Gallia co.

—A township of Monroe co.

Ohio, in Indiana, a S.E. co., adjoining Kentucky; area, about 90 sq. m. *Rivers.* Ohio, and Laughery creek. *Surface*, diversified; *soil*, very fertile. *Cap.* Rising Sun. *Pop.* (1890) 4,955.

—A township of Bartholomew co.

—A township of Crawford co.

—A township of Spencer co.

—A township of Warwick co.

Ohio, in Iowa, a township of Madison co.

Ohio, in Kansas, a township of Franklin co.

Ohio, in Kentucky, a W. central co.; area, about 610 sq. m. *Rivers.* Green river, Rough creek, and several smaller streams. *Surface*, level; *soil*, fertile. *Min.* Coal and iron. *Cap.* Hartford. *Pop.* (1890) 22,946.

Ohio, in New York, a post-township of Herkimer co.

Ohio, in Pennsylvania, a township of Allegheny co.

Ohio, in West Virginia, a N. co., adjoining Pennsylvania on the E., and Ohio on the W.; area, about 120 sq. m. *Rivers.* Ohio river, Wheeling creek, and some smaller streams. *Surface*, hilly; *soil*, fertile, producing large quantities of wheat, Indian corn, oats, hay, butter, and wool. Glass is largely manufactured. *Min.* coal. *Cap.* Wheeling. *Pop.* (1890) 41,557.

Ohio City, in *Kansas*, a village, former cap. of Franklin co., about 35 m. S. of Lawrence.

Ohio City, in *Missouri*, a village of Mississippi co., about 170 m. S. E. of St. Louis.

Ohio Farm, in *Illinois*, a village of Kendall co., about 50 m. S. W. of Chicago.

Ohio Grove, in *Illinois*, a village of De Kalb co., about 55 m. W. by N. of Chicago.

Ohiopele Falls, in *Pennsylvania*, a cataract of the Youghiogheny river, in Fayette co., about 60 m. above its mouth.

Ohio State University. (*Educ.*) In 1862 Congress granted each State public lands for the endowment of a State institution of higher learning. Ohio accepted its grant, but took no action on it until 1872, when this institution was organized at Columbus, and has since been liberally supported. It is co-educational and non-sectarian. In 1896 it had 79 instructors and 969 students, with 20,000 volumes in its library. Its income in that year was \$176,000.

Ohio University. (*Educ.*) In 1787 the Ohio Company of Associates was organized in New England by those who had served in the war of the Revolution, and under their auspices a large tract of land was purchased from the U. S. government in the territory northwest of the Ohio river, payment being made in Continental certificates issued to the soldiers for their services. In connection with the sale was passed the famous "Ordinance of 1787," providing for the government of the territory N. W. of the Ohio. In the contract of sale it was provided that two townships should be set apart for an institution of learning to be maintained by the legislature when Ohio should be admitted as a State. Ohio was so admitted in 1803, and the Ohio University was established at Athens in 1804, in compliance with the terms of the contract. Owing to adverse legislation, the original endowment has been very much reduced and the income from that source has consequently been small. For several years past, however, the legislature has appropriated for the institution sums varying from \$5,000 to \$20,000. The trustees are appointed by the governor of the State. In 1896, the institution had 25 instructors and 320 students, with 14,500 volumes in its library. Its income in that year was \$42,000.

Ohioville, in *Pennsylvania*, a post-village of Beaver co., about 11 m. W. S. W. of Beaver.

Ohio Wesleyan University. (*Educ.*) A co-educational institution at Delaware, O., organized under the auspices of the Methodist Episcopal Church, in 1844. In addition to the regular collegiate courses, instruction is given in music, art, and commercial studies. It has an endowment estimated at \$550,000 in 1896, when its income was \$110,000. In that year it had 98 instructors, 1,402 students, and 18,000 volumes in its library.

Ohm's Law. (*Elec.*) The numerical estimation of the value of any arrangement for the generation of an electric current is a matter of high practical importance, and the means of doing this is furnished by the celebrated Law of Ohm given in 1827. The problem is the following: Given any number of electromotors, of specified kind and dimensions, such as a number of Bunsen's or of Daniell's cells, and any number of specified conductors, through which the electric current is sent, to find the strength (or intensity) of the current, that is, the quantity of electricity which flows through any section of the circuit in a given time, and the Law of Ohm states that the strength of the current is directly proportional to the whole electromotive force in operation, and inversely proportional to the sum of the resistance in the circuit. Ohm deduced this law from theoretical considerations.

Ohoopee, in *Georgia*, a river flowing into the Altamaha from Tatnall co.

Ohdruff, (*or'drooff*), a town of Germany, duchy of Saxe-Coburg, 8 m. S. of Gotha. *Manuf.* Woollens, linen, and porcelain. In the vicinity are iron and copper mines. *Pop.* 4,500.

Oich, (*Loch*), (*lok-oik'*) a lake of Scotland, co. of Inverness, which receives the Glengarry River, and discharges itself into Loch Ness by the river Oich. It is 6 m. long, with an average breadth of 1 m.

Oidium, *n.* [*Gr. oideo*, to swell.] The vine-mildew, a pest to which grapes, both in vineyards and hot-houses, have in recent times been subject in Europe, and which has been traced to the attacks of a species of fungus, *Oidium tuckeri*. This plant is one of the naked-spored moulds. Berkeley, however, thinks that the *O.* is an early stage of some *Erysiphe*. Sulphur is the only remedy which has, as yet, been discovered.

Oignon, or **Ognou**, (*wan-yong'*) a river of France, between the depts. of Haute-Saone and Doubs, which, after a W. S. W. course of 80 m., joins the Saone 9 m. N. of Auxonne.

Oil, *n.* [*A. S. ele, æl*; *Fr. huile*; *Lat. oleum* = *Gr. elaion*, olive-oil, oil.] (*Chem.*) A name given to three different classes of bodies:—1. The *Fixed oils*, such as olive, linseed, sperm, and castor-oil; 2. The *Essential oils*, as oil of lavender, of rue, of nutmeg, &c.; 3. The *Mineral oils*, which are hydrocarbons, more or less impure.

Fixed Oils. The fixed oils and fats constitute an important group of organic compounds, found abundantly and in great variety in both the animal and vegetable kingdoms, through which they are very widely distributed. They are not simple compounds, but mixtures of such compounds, or *glycerides*, whose mixture in various proportions forms the many oils and fats—the latter distinguished from the former by being solid at ordinary temperatures. The glycerides involved are usually those of stearic, oleic, and palmitic acids, and more rarely other fatty acids, such as butyric, caproic,

caprylic, and capric acids, which occur in butter, myristic acid, found in coconut oil, &c. These mixtures vary in consistency, being hard and solid, like suet; semi-solid, like butter and lard; or fluid, like the oils. The most solid of them are readily fusible, and assume the fluid or oily state at less than the boiling point of water. They nearly all boil at a temperature between 500° and 600° F., being at the same decomposed and giving off acrolein and other compounds. The term *fixed oils*, by which these substances are known, refers to this property, which distinguishes them from the *volatile oils*, so called from their bearing distillation without chemical change. The latter are also known as *essential oils*, and are derived from plants, being the substances on which the odoriferous properties of plants depend. The fats and oils are all lighter than water, upon which they float, and in which they are insoluble. They may be dissolved, however, by ether, oil of turpentine (one of the volatile class), benzol, and partly by alcohol, while they are capable of dissolving phosphorus, sulphur, and other substances. They penetrate paper, textile materials, &c., causing a persistent stain, and in paper a degree of translucency. When pure and fresh they are free from odor and taste, but on exposure become oxidized, change color, grow acrid in taste and disagreeable in odor. In this state they are said to be *rancid*. They are not very readily inflammable, but when drawn up through a wick they burn with a bright flame. Oils are found in all animals and nearly all parts of the animal frame, while in plants there is scarcely a tissue in which they do not occur. They are particularly abundant in seeds, this being especially the case with the *Crucifere*, whose seeds are rich in oil. Linseed yields 20 per cent. and rape seed about 40 per cent. of oil, while such fruits as the olive and the oil palm yield it abundantly. The seed of the cotton plant is also rich in oil, and is an abundant source of this valuable material.—*Animal Fats*. The chief solid fats of animal origin are the suet or tallow of beef and mutton, the lard of swine, butter, goose grease, &c., while among the liquids may be named whale, spermi, and fish oils, cod-liver and neatsfoot oils. To the lists of solid fats may be added spermaceti and beeswax, which have similar properties. The fats and oils differ in that the former have a preponderance of stearin and palmitin, which are solid at ordinary temperatures, and the latter of olein, which is a liquid at 32° F. All these substances will combine with the hydrated alkalies to form what is known as soap, while the sweet, viscid liquid called glycerin is at the same time formed. We cannot here speak at length of the vast production of these oils, alike those obtained from domesticated animals, and from whales and fishes, those subjects being already dealt with under separate headings. It will suffice to say that lard and tallow, and the oleins obtained by pressure from the fats, and known as lard oil and by other names, are very abundantly produced in the U. S. and other pastoral countries. Of the olein obtained from beef-suet thousands of tons are employed in the manufacture of the substitute for butter, known as oleomargarin (*q. v.*). Horse grease is exported largely from the Rio Plata region, where there are millions of horses. Neatsfoot oil is obtained by boiling the feet of cattle, and from raw wool is obtained a large percentage of a fat known as suint. The whale fishery has been largely abandoned, but seal fishing is still actively pursued, and yields large quantities of oil annually. Fish oil is also produced in immense quantities. It is usually thick and of a strong odor, and the former considerable use of this and whale oil for illumination has been largely superseded by petroleum and other modern illuminants. The tunny of the Mediterranean yields a large quantity of oil of a pale amber color and an agreeable flavor.—*Vegetable Oils*. Among the principal solid fats extracted from plants are coconut oil, nutmeg-butter, cocoa-butter, and palm-oil. The fluid oils are numerous, being obtained from a great variety of plants, each of which impresses some specialty upon its derivative. Some of the more important of them are olive oil, cotton-seed oil, linseed oil, castor-oil, croton-oil, and rape-seed oil. The chief vegetable oils are divided into two classes—the *drying* and the *non-drying* oils, the former becoming dry and solid, through oxygenation, when exposed in thin layers to the air, while the latter continue fluid. Some of the drying oils, when mixed with cotton, wool, or tow, absorb oxygen so rapidly, and in consequence become so heated, as to take fire, and cause what is known as spontaneous combustion. Many conflagrations have probably been due to carelessness in the disposal of oily waste that has been used in cleaning machinery. The most important of the drying oils are those of linseed, hemp, poppy, and walnut; of the non-drying oils, olive, almond, and colza; while castor-oil is intermediate in its properties, drying with long exposure to the air. Of the important vegetable oils not here named may be instanced that of the ground-nut, which is produced largely at Marseilles from nuts grown in Africa, the fats of the butter-tree and of what are known as candle-nut plants, and the oil of the cotton-seed, so largely produced in the United States.—*Uses*. Oils and fats are employed for a great variety of purposes, and rank among the most valuable of organic products. They are used extensively as medicines and lubricants, and in the manufacture of soaps, varnishes, ointments, pigments, in leather dressing, and as illuminating agents in lamps and candles. They are indispensable for use in machine shops and factories, and for machinery of all kinds in the prevention of friction, heavy or light oils being used in accordance with the speed of the machinery. For watches and sewing-machines very fine light oils are employed. Mineral oils are often mixed

with those of organic origin for lubrication, the effect being to keep them more fluid and thus aid in diminishing friction. A use for oil now frequently employed is to throw it on the waters of the sea in stormy weather, the oil spreading in a thin film with great rapidity, and having a remarkable effect in smoothing and subduing the force of the waves. A few gallons may serve to save a vessel from wreck. Another suggested use, not without interest and importance, is to spread it over the surface of stagnant waters, and thus prevent the development of the mosquito larvæ, this being the only available means known of checking the increase of this pest. In Africa, Asia, and the Pacific islands oils and fats are much used for anointing the body and smearing the hair as a protection against heat and insects, and to check undue perspiration. The practice is healthful, and gives a smoothness and softness to the skin.—*Essential Oils*. The essential oils, or volatile oils, agree with those named in being hydrocarbons, or compounds of hydrogen, carbon, and oxygen, in which the hydrogen and oxygen occur in different proportions from those necessary to form water. In chemical character, however, there is a considerable difference. They are themselves diverse in chemical constitution, but are invariably rich in carbon. They form an extremely numerous class, existing usually as constituent elements of plants, whose odorous principles they are believed to constitute. At ordinary temperatures they are nearly all limpid liquids, though some are viscid, and the essential oil, or otto, of roses is solid. Many of them, on exposure to low temperatures, separate into two portions—a solid one called *stearoptene* and a liquid one called *elæoptene*. Some are yellow or brown in color, and in some few cases green or blue colors appear. Oxygen acts powerfully on them all, affecting their color, odor, consistency, and constitution. With the hydrocarbons of which they are composed are generally associated oxygenated compounds, due sometimes to oxidation of the hydrocarbons. A limited class of them have sulphur for one of their constituents. Of the hydrocarbons which compose these oils, *terpene*, $C_{10}H_{16}$, is the most important. It is the chief constituent of oil of turpentine, and is also found in the oils of bergamot, orange, and, with some difference in chemical composition, in a great number of others. The most common of the oxygenated compounds in essential oils are the camphors, whose type is common in Japan camphor, $C_{10}H_{16}O$. Similar compounds are found in many essential oils, such as those of wormwood, mint, and chamomile; while camphors of different chemical composition are found in the oils of coriander, peppermint, eucalyptus, patchouli, &c. The essential oils which contain sulphur, typified by oil of garlic, $C_6H_{10}S$, have generally a penetrating, pungent, and disagreeable odor.—*Mineral Oils*. For a description of these, see PETROLEUM; PARAFFIN; NAPHTHA; and OIL WELLS.

Manufacture of Oils. The simplest of these varied manufactures is that of animal oils, such as whale-oil. Soon after being taken from the whale, the *blubber* is cut into small pieces, and packed in casks. When it arrives at home, it is in a half putrid state, and is then emptied into a large receiver. After being allowed to settle for some time, the decomposing fat is conducted into a copper boiler, in which it is subjected to heat. From the boiler the melted oil flows through a sort of filter into coolers, from which, when cold, it can be drawn off into casks. In the South Sea whale-fishery the blubber is boiled on board the ships. In the manufacture of most vegetable oils, the oils are generally procured from the seeds. Olive-oil, however, is an exception, being extracted from the soft fleshy pericarp of the fruit. The manufacture is very simple. The finest oil is obtained by crushing the olives in a mill, the stones of which are so constructed as not to break the stones of the fruit, but merely crush the pulp. The bruised mass is then put into bags made of bulrush matting, or of coarse canvas, and subjected to gradual compression in a screw-press. The extracted oil flows into casks, or stone cisterns, partly filled with water, on the surface of which it floats, so that it can readily be collected by skimming; this is the pure virgin oil. When the oil ceases to flow from the press, the mass of pulp is taken out of the bags, mixed with hot water, and subjected to an increase of pressure. The second quality of oil thus obtained is fit for the table when used fresh, but is apt to turn rancid with keeping. A still coarser kind of oil is lastly obtained by crushing the solid residue in a mill, so as to break the stones of the fruit. The manufacture of linseed-oil from the seeds of the flax-plant is an illustration of the manufacture of oils from seeds. Formerly, linseed, rape-seed, poppy-seed, and other oleiferous seeds, were pounded in hard wooden mortars with pestles shod with iron, and afterwards wrapped up in hair-cloth and subjected to pressure. These mortars and presses constitute what are called Dutch mills, and are still in use in some parts of this country and the continent. On account of the extreme hardness and smoothness of the seeds of flax and hemp, very powerful presses are required in order to extract the whole of the oil. For this reason the wedge-press and Bramah's hydraulic press have been introduced for the purpose. The seeds are first crushed in a powerful mill, sometimes called an *edge-mill*, consisting of a pair of stones, technically called *running-stones*, or *runners*, generally made of granite, resembling grindstones in shape, and from five to seven feet in diameter, so mounted as to roll round in a circular bed of stone or iron. These millstones roll around the bed thirty or thirty-six times per minute, and soon convert the seeds, through the partial expression of the oil, into a pasty mass, from which a small quantity of very

One cold-drawn oil can be obtained by the simple action of the press. In order, however, to obtain the principal supply of oil, heat is necessary before pressing. The processes differ in various manufactories. In this country *lard-oil* is largely manufactured from the fat of hogs. The essential oils are obtained from their source in four ways—by distillation, by expression, by influence or absorption, and by maceration. Of these the process of distillation is the most important, from the fact that these oils distil with ease, unchanged. The odoriferous materials are placed in a small still with a little water, whose steam carries over the vapor of the oil. This, being insoluble in water, is easily separated from the condensed distillate. For the other processes see **ESSENTIAL OILS**.

Oil, v. a. To lubricate, or to anoint with oil.

Oil, in Indiana, a township of Perry co.

Oil-bag, n. A bag, cyst, or gland in animals, containing oil.

Oil City, in Pennsylvania, a city of Venango co., about 36 m. S.E. of Meadville. Previous to 1860, *O. C.* was a hamlet scarcely known outside the co., but the immense yield of petroleum in the vicinity caused it to increase rapidly in population and importance. *Pop.* (1897) 11,250.

Oil-cloth, n. A cloth or canvas having on one side a thick coat of oil-paint. (See **FLOOR-CL. TA.**)

Oil-color, n. A pigment ground and diluted in oil.

Oil Creek, in Indiana, enters the Ohio River from Perry co.

Oil Creek, in Pennsylvania, enters the Alleghany River in Venango co.

—A post-township of Crawford co.

Oil-dried, a. Exhausted of oil.

Oiled, p. a. Smeared or anointed with oil.

Oil'er, n. One who oils. — A trader in oils, but rare in this sense.

Oil'ery, n. The goods of an oilman.

Oil Gas, n. (Chem.) The inflammable gases and vapors (chiefly *hydrocarbons*) obtained by passing fixed oils through red-hot tubes, and which may be used as coal-gas, for the purpose of illumination. They yield a brilliant light, but are too expensive to be generally adopted.

Oil'iness, n. Quality of being oily; unctuousness; greasiness; a quality approaching that of oil.

Oil'man, n.; pl. OILMEN. A dealer in oils only, or in oils and pickles.

Oil-nut, n. A name applied to any nut or seed which yields oil.

(*Bot.*) See **PIRULARIA**.

Oil of Vitriol, n. (Chem.) See **SULPHURIC ACID**.

Oil-painting, n. Painting in which the medium for using the colors consists partly of oil. Mere decorative work was often executed with oil-color in the early Middle Ages; but Hubert and John Van Eyck, early in the 15th century, were the first to substitute oil or varnish painting for *tempera*, in the execution of pictures. Oil-painting has the advantages, above all other modes, of affording great delicacy of execution, a union and insensible blending of the colors, and, above all, that of imparting great force to its effects. The principal oils used are those extracted from the poppy, nut, and linseed. With the latter driers are introduced. A small quantity of oil only is necessary, the colors being tempered with turpentine, and with mastic or copal varnish. In restoring old oil-pictures no oil should be used, as it darkens after a little time. The dry colors should be mixed with pure mastic varnish, and tempered in their application with turpentine. See **PAINTING**.

Oil-palm, n. See **ELAIS**.

Oil-press, n. A mill or machine for squeezing out oil from seeds or pulp.

Oil-seed, n. The seed of the castor-oil plant, *Ricinis communis*.

Oil-shop, n. The shop of an oilman.

Oil-skin, n. Leather or linen prepared for making water-proof garments.

Oil-stone, n. A name applied to two varieties of black or white house-slate, imported from Turkey.

Oil-tree, n. (Bot.) See **RICINUS**.

Oily, a. Consisting of oil; having the qualities of oil; containing oil; resembling oil; fatty; greasy.

Oily-grain, n. (Bot.) See **SESAMUM**.

Oil y-palm, n. (Bot.) Same as **OIL-TREE**. See **ELAIS**.

Oinomania, or Dipsomania, n. [*Gr. oinos, wine, dipsa, thirst, mania, madness.*] (*Med.*) An inordinate or insane craving for alcoholic stimulants. Lately, English medical men have come to the opinion that an inveterate drunkard is to be regarded as habitually under the influence of an insane impulse, which it is impossible for him to resist, and which, therefore, renders him a fit subject for confinement or restraint.

Oint, v. a. See **ANOINT**.

Oint'ment, n. [*Lat. unguentum, from unguo, unctum, to smear, anoint; Sans. auj, to anoint.*] An unguent; any soft unctuous substance or compound, used for smearing, particularly the body, or a diseased part thereof.

Oise, a river of France, dept. of Oise, rises in the Belgian prov. of Hainault, near the frontiers of Ardennes, and after a S.W. course of 190 m., joins the Seine at Conflans St. Honorien, 12 m. N.W. of Paris. It is navigable from Channy, in the dept. of Aisne, to its mouth, a distance of 75 m.

Oise, (woise,) a dept. of the N. of France, formerly comprised in the Isle of France, between Lat. 49° 3' and 49° 45' N., Lon. 1° 40' and 3° 10' E.; having N. the dept. of Somme, E. Aisne, S. Seine-et-Marne and Seine-et-Oise, and W. Eure and Seine-Inferieure. *Area*, 2,280 sq. m. *Desc.* The surface is undulating, the soil fertile, and agriculture far advanced. *Rivers.* Oise, Terrein, and Epte. *Prod.* Corn, wheat, oats, vegetables, and fruits.

Numerous cattle are reared. *Manuf.* Table-linen, woolen and cotton fabrics, yarn, hosiery, lace, metallic and glass wares, and horn, wooden, and ivory articles. *Chief towns.* Beauvais (the cap.), Clermont, Compiègne, and Senlis. *Pop.* 401,274.

Ojib'beways, a tribe of N. American Indians. See **CHIPPÉWAS**.

O'ku, a river of European Russia, rising in the govt. of Orel, and after a N.E. course of 837 m., joining the Volga, at the town of Nijni-Novgorod.

Oka'mon, in Minnesota, a village of Waseca co., about 20 m. E. of Mankato.

Okanagon (or OKINAGAN) River, rises in British Columbia, and flowing S. into Washington, enters the Columbia river about Lat. 48° N. *Length*, about 200 miles.

O'kaw, in Illinois, a township of Shelby co.

Okaw'ville, in Illinois, a post-village of Washington co., about 14 m. W.N.W. of Nashville.

Oke, n. In Turkey, a weight of about 2¾ pounds. In Hungary and Wallachia, a measure of the capacity of about 2¼ pints.

O'keana, in Ohio, a post-village of Butler co., abt. 14 m. W.S.W. of Hamilton.

Okecho'bee, in Florida, a lake in the S. part of the peninsula, being surrounded by Brevard, Dade, Monroe, and Hillsborough cos. It covers an area of abt. 400 sq. m., is nearly circular in outline, and contains many islands.

Oke'che Creek, in Alabama, enters the Tombigbee River from Sumter co.

Oke'finoke Swamp, in Georgia, an extensive marsh or swamp in the S. part of Wake co., having a circumference of abt. 180 m.

O'kemos, in Michigan, a post-village of Ingham co., abt. 7 m. E. of Lansing.

O'ken, LAWRENCE, an eminent Swiss naturalist, b. at Offenburg, 1779, studied medicine and natural history at Göttingen, and was afterwards professor of medicine in the universities of Jena and Zurich. The aim of all his writings might be summarily said to be an attempt at applying the principles of transcendental philosophy to the facts of natural history. He produced his first work in 1802, with the title *Elements of Natural Philosophy, the Theory of the Senses, and the Classification of Animals founded thereon*. *O.* was the first to suggest that all animals are built up of vesicles or cells, in his work on generation, published in 1805. His remarkable essay *On the Signification of the Bones of the Skull* attracted little attention at the time of its publication, but was, nevertheless, the forerunner of the investigations of Carus, Geoffroy St. Hilaire, and Professor Owen, upon the laws of homology in the vertebrate skeleton. In 1847, his work called *Elements of Physio-Philosophy* was translated into English; and although, like the other efforts of this writer, it is beyond the grasp of the general reader, it would seem to be of the deepest importance to the man of science. *D.* at Zurich, 1847.

Oke'nite, n. [After Prof. Oken.] (*Min.*) A hydrated bisilicate of lime, composed of 28 per cent. of lime, silica 62, and water 18. It generally occurs in delicately fibrous, and sometimes in radiating masses, of a snow-white color, with a tinge of yellow or blue. It is very tough. It is found in Disco Island and other places.

Okewal'kee Creek, in Georgia, enters the Oconee River in Montgomery co.

Okhotsk, or Ochotsk, (o-hot'sk.) a prov. of Asiatic Russia, in E. Siberia, bordering on the Sea of Okhotsk, between Lat. 37° and 66° N., Lon. 135° 30' and 166° E., having E. Kamtschatka and the Tchouktchee country, and W. and N. the govt. of Yakoutsk. *Ext.* 1,100 m. long, with an average breadth of 150 m. It is traversed by the Stanovoi mountains. The climate is severe. The principal river is the Okhota. *Prod.* Fur and timber. *Cap.* Okhotsk. *Pop.* Unknown.

OKHOTSK, cap. of the above prov., is a seaport-town, on the Sea of Okhotsk; Lat. 59° 20' N., Lon. 143° 14' E.

Okobo'ji, in Iowa, a post-township of Dickinson co.

Okolo'na, in Mississippi, a post-town, semi-cap. of Chickasaw co., on the Mobile & Ohio R. R., 68 m. S. by W. of Corinth; in a corn and cotton growing region. *Pop.* (1897) 2,230.

O'kra, or O'kro, n. (Bot.) A species of plant, genus *Hibiscus*, yielding green pods, which abound in nutritious uncillage, and are used for pickles, or served up with butter.

Oktib'beha, in Mississippi, a river flowing into the Chickasawha from Clarke co.

—A small river flowing into the Tombigbee river in Lowndes co.

—A N. E. central co.; *area*, about 460 sq. m. *Rivers.* Noxubee and Oktibbeha rivers. *Surface*, generally level; soil, fertile. *Products*, corn, cotton, butter, sweet potatoes; some live stock. *Cap.* Starkville. *Pop.* (1890) 17,694.

O'la, in Iowa, a village of Tama co., about 48 m. N. of Oskaloosa.

Olac'ceae, n. (Bot.) The Olacac family, an order of plants, alliance *Berberales*. *DIAG.* Regular symmetrical flowers, axile placentae, stamens alternate with the petals, pendulous ovules, and valvate corolla. They are trees or shrubs, often spiny. Leaves simple, alternate, entire, without stipules; occasionally altogether wanting (rarely compound). Flowers small, axillary, often fragrant. The plants of this order are natives of tropical or nearly tropical climates, and are chiefly found in the East Indies, New Holland, and Africa. One only is known in the West Indies. The order includes 23 genera.

O'laf I., king of Denmark, perished in 814, in combat with the Porks.

OLAF II., succeeded his brother, Canute IV., in 1086. *D.* 1095.

O'laf I., king of Norway, ascended the throne in 991. He introduced Christianity into Norway, Iceland, and Greenland. Having been defeated by the kings of Sweden and Denmark in 1000, he threw himself into the sea.

OLAF II., (St.) king of Norway, energetically propagated Christianity throughout his dominions; but was driven from his throne by Canute, in 1030. Two years afterwards, he was killed by the people of Drontheim.

OLAF III., surnamed the *Pacific*, reigned, in conjunction with his brother Magnus II., from 1066 until 1068, and singly for nineteen years afterwards.

OLAF IV., son of Magnus III., reigned, in conjunction with his two brothers, between the years 1103-1116.

OLAF V., son of Haco VII., succeeded to the throne of Denmark in 1376, and to that of Norway in 1380. After his death, in 1387, his mother, Margaret de Waldemar, united the three kingdoms of Denmark, Sweden, and Norway under one crown.

Ol'amon, in Maine, a post-village of Penobscot co., about 80 m. N.E. of Augusta.

Ol'athe (o-la'the), in Kansas, a city, cap. of Johnson co., about 21 m. S.W. of Kansas City. *Pop.* (1895) 3,456.

Ol'bers, HEINRICH WILHELM MATHIAS, a celebrated German physician and astronomer, b. near Bremen, 1758, is chiefly known for his discovery of two planets, Pallas in 1802, and Vesta in 1807. In 1815 he discovered a comet, and subsequently wrote a treatise on the probability that a comet may come into collision with the earth. Among other useful works of his was a proposal to revise the nomenclature of the stars, and a reformation of the constellations. *D.* 1840.

Ol'cott, in New York, a post-village of Niagara co.

Old, a. [*A. S. eald, old; D. oud; Ger. alt.*] Grown up to strength and maturity; far advanced in years, or life; aged; having lived beyond the middle period, or rather toward the close of life, or toward the end of the ordinary term of living; having passed the grand climacteric of human existence; — opposed to *young*; as, an *old man*, *old age*. — Being of long duration or continuance; having been long made or used; not new or fresh; as, an *old city*.

"Old wine is wholesomest, old soldiers are surest, and old lovers are soudest." — *John Webster*.

—That existed in former ages; preëxisting or preceding; as, an *old law*, an *old custom*, an *old fashion*. — Of any indefinite duration; advanced in existence or development; as, a child ten years *old*. — Skilled; experienced; versed; adept by long practice; as, an *old offender*, an *old humpback*, an *old hand* at the business. — Long cultivated or tilled; matured; as, *old land*. — Long existing or surviving; — hence, decayed; threadbare; impaired; good for nothing; as, *old garments*. — Ancient; antique; of venerable age; as, an *old relic*, an *old family*, an *old manuscript*. — Shrewd; astute; sagacious; crafty; cunning; smart; as, he carries an *old head* on young shoulders. (Used colloquially). — Aged; antiquated; servile; used up; — hence, deficient in the natural powers pertaining to youth and vigor; poor; paltry; mean; — used in a sense of contempt, derision, or disparagement. — Old-fashioned; in a former mode or style; as, of *old*; that once was wont; as, the good *old times*; — hence, by analogy, jolly; festive; hearty; merry; glad-some.

Of old, long ago; from ancient times.

"The monks of old, what a jovial race they were." — *Procter*.

Old Age, n. The decline of life; advanced years.

Old Bridge, in New Jersey, a post-village of Middlesex co., abt. 6 m. S.E. of New Brunswick.

Old Cath'olics. (*Ecclesiastical History.*) See **SECTION II.**

Old'en, a. Old; ancient; as, the *olden times*.

Oldenland'ia, n. [From H. B. Oldenland, a Danish botanist.] (*Bot.*) A genus of perennial herbaceous plants, order *Cinchonaceae*. The root of the species *O. umbellata* forms the so-called *clay* or *che root*, which is occasionally imported from India, and used for dyeing red, purple, and orange-brown.

Oldenburg, (Grand-Duchy of.) a state of N. Germany, between Lat. 52° 30' and 53° 43' N., Lon. 7° 35' and 8° 50' E., having N. the North Sea, E. the territory of Bremen, S. and W. Hanover; *area*, 2,417 sq. m. The surface is level, and so low on the coast as to render necessary the formation of dykes, as in Holland, to prevent inundations of the sea. The soil is rich on the banks of the rivers, but in other parts sandy or marshy. *Rivers.* Weser, Huute, Haase, Leda, and Jahde. *Lakes.* Drummersee is the principal. *Prod.* Flax, hemp, hops, rape-seed, corn and potatoes. Horses and cattle of superior breed, and sheep, are extensively reared. *Min.* Iron. *Manuf.* Linen and woollen stuffs. Its commerce is principally carried on in small vessels of from 20 to 40 tons, along the coast with Denmark, Holland, Hanover, &c. *Exp.* Horses, cattle, lineus, thread, hides, &c. *Imp.* The ordinary colonial goods, and manufactures. *Govt.* *O.* is governed by a Grand-Duke, the power of whom is limited by an hereditary constitution common to *O.*, and the principalities of Lubeck and Birkenfeld, which are represented in one joint chamber composed of 47 members, chosen by free voters. Each principality has, however, its own provincial council, the members of which are likewise elected by votes. *Hist.* The Duchy of *O.* was formed in 1773 by Joseph II., of the cos. of *O.* and Delmenhorst. It joined the Confederation of the Rhine in 1805, incorporated with the French empire by Napoleon I. in 1810, and was restored to the duke in 1814. Augustus first assumed the title of Grand-Duke in 1829. Kniphausen was added to the grand-duchy in 1854. *O.* entered into an alliance with Hanover against Prussia in 1865, and after the defeat of the Austrians, submitted to Prussia, with which it signed a treaty of alliance in 1866. *Cap.* Oldenburg.

Oldenburg, cap. of the preceding grand-duchy, on the River Huute, a tributary of the Weser, 24 m. W.N.W. of

Fig. 1986.—OLDENBURG.

Bremen. Its principal public buildings are the ducal castle, the church of St. Lambert, and the public library of 24,000 volumes. Pop. (1897) 13,330.

Oldenburg, in Indiana, a post-town of Franklin co., abt. 12 m. S.W. of Brookville.

Old-faced, *a.* Having an old aspect.

Old-fashioned, (*fāsh'und*), *a.* Formed according to antiquated fashion or custom.

Oldfield Point Lighthouse, in New York, on the N. coast of Long Island, opposite Stratford, Connecticut. It exhibits a fixed light 67 ft. high; Lat. 40° 58' 30" N., Lon. 73° 7' 30" W.

Old Fort, in Pennsylvania, a village of Centre co.

Old-gentlemanly, **Old-gentlemanlike**, *a.* Pertaining to an old gentleman, or resembling one.

Oldham, a town of England, co. of Lancaster, on the Medlock, 6 m. N.E. of Manchester. It owes its rapid increase in pop. and wealth to the extensive coal-mines in the vicinity, and to its cotton manufactures. Pop. 82,333.

Oldham, in Arkansas, a village of Crittenden co., on the Mississippi River, abt. 18 m. above Memphis, Tenn.

Oldham, in Kentucky, a N. co., adjoining Indiana; area, abt. 220 sq. m. Rivers, Ohio River, and several less important streams. Surface, diversified; soil, fertile. Cap. La Grange.

Oldish, *a.* Somewhat old.

Old Jefferson, in Missouri, a village of Saline co.

Old-lang-syne, *n.* The same as AULD-LANG-SYNE, *q.v.*

Old Lycoming, in Pennsylvania, a township of Lycoming co.

Old Man's Creek, in Iowa, enters Iowa River in Johnson co.

Old Man's Creek, in New Jersey, enters the Delaware River between Gloucester and Salem cos.

Old Mines, in Missouri, a post-village of Washington co., abt. 100 m. S.E. by E. of Jefferson City.

Oldness, *n.* Old age; an advanced state of life or existence.

—State of being of long continuance; antiquity.

Old Point Comfort, in Virginia, a village of Elizabeth City co., on Hampton Roads, about 12 m. N. of Norfolk. Its post-office is FORTRESS MONROE.

Old Providence, an island of the Republic of Colombia, in the Caribbean Sea; Lat. 13° 21' N., Lon. 80° 22' W.; area, about 10 sq. m. Surface, hilly; soil, fertile. Chief town, Isabel, on the N. coast. Pop. 500.

Old Red Sandstone, *n.* (*Geol.*) The old red sandstone, or *Devonian system*, may be considered as embracing the whole series of strata which lies between the Silurian and Carboniferous systems. Certain portions of the formation were first distinguished in Devonshire, from which it derives its second name. The lower margin of the system is characterized by strata containing the fossil remains of fishes, and forming a line of separation between it and the Silurian system. On its upper margin it is distinguished by the rarity of the vegetation which so remarkably distinguishes the overlying carboniferous rocks. The great bulk of the system consists of a succession of sandstones, alternating with subordinate layers of sandy shale, and beds of a concretionary limestone. The sandstones pass in fineness from close-grained fissile flags to thick beds of coarse conglomerate, and the shales from sandy, laminated clay, to soft flaky sandstone. Oxide of iron often tinges the whole of the system more or less with a color varying from a dull rusty gray to bright red, and from red to a fawn or cream-colored yellow. In the Devonian system, properly so called, the middle and upper portions exhibit an abundance of fossiliferous limestones and calcareous shales, or dark bituminous-looking schists. The Devonian formation is nowhere found so largely developed as in the U. States. In the New York system of rocks it includes (see Fig. 1142) the following rocks:

Names.	Approximate thickness in N. York.
Catskill group, or old red sandstone	2,000 feet.
Chemung	1,500 "
Portage, and Genesee	1,000 "
Hamilton	1,000 "
Marcellas	50 "
Upper Helderberg	50 "
Schoharie, and Canda-galli	10 "
Oriskany sandstone	5 to 30 ft.

Old Saybrook, in Connecticut, a township of Middlesex co.

Old School, *n.* A school, party, or class of society

belonging to a past age, or presenting the characteristic qualities peculiar to former times; as, a gentleman of the old school; — used also adjectively, as, old-school religionists.

Old-style, *n.* See STYLE.

Old-style, JONATHAN, a pseudonym of WASHINGTON IRVING, *q.v.*

Old Testament, *n.* (*Script.*) That part of the Bible which contains the collected works of the inspired writers previous to Christ.

Old Town, in Illinois, a township of McLean county.

Old Town, in Maine, a post-village and township of Penobscot co., abt. 70 m. N.E. of Augusta. It has extensive water power and large lumber mills.

Old Town, in Maryland, a village of Alleghany co.

Old Town, in Tennessee, a post-village of Claiborne co.

Old Town Creek, in Mississippi, enters Tombigbee River in Monroe co.

Old Town Island, in Maine, an Indian settlement on an island of the same name in the Penobscot River, abt. 1 m. N. of the village Old Town.

Old Washington, in Alabama, a village, former cap. of Washington co., abt. 70 m. N.N.W. of Mobile.

Old-wife, *n.*; *pl.* OLD-WIVES. A contemptuous name for a prating old woman.

Olea, *n.* [*Gr. olia, oil.*] (*Bot.*) The typical genus of the order Oleaceæ. The species *O. europæa* is the olive-tree, one of the most celebrated and useful of plants. It is usually a small tree, with ever-green but dull-looking leaves. The ripe fruit has a very fleshy pericarp, which yields, when pressed, a fixed oil, called *olive-oil*. This valuable product is used for diatetical purposes, in the arts, and in medicine. The finest sorts are produced near Aix, Montpellier, Nice, Genoa, Lucca, and Florence.

Fig. 1987.—COMMON OLIVE.

(*Olea Europæa*.)

Olive-oil is also largely produced in the state of Naples, and exported from Gallipoli; hence it is often called *Gallipoli oil*. In medicine, the oil is principally employed externally, either by itself or mixed with other materials, in cerates, ointments, and plasters. When administered internally, it is nutrient, emollient, demulcent, and laxative. The fruit of the olive is esteemed as an article for dessert, being supposed to be particularly valuable for preparing the palate for choice wines. Olives for dessert are gathered when unripe, soaked in water to get rid of their excessive bitterness, and then preserved in salt and water, slightly aromatized. The wood of the olive is much employed for cabinet-work, being remarkable for its hardness. The leaves and barks have been highly extolled by some medical writers for their tonic and febrifugal properties. The substance called *olive gum*, or *olivile*, is a resinous exudation from the tree.

Oleaceæ, *n.* (*Bot.*) The Oliveworts, an order of plants, alliance *Solanales*. DIAG. Two or four free stamens. — They are trees or shrubs, with opposite leaves; flowers usually perfect, or rarely unisexual; calyx persistent, 4-cleft, sometimes obsolete, inferior; corolla regular 4-cleft, or of 4 distinct petals — sometimes absent æstivation valvate; ovary 2-celled, with 2 suspended ovules in each cell; fruit fleshy or dry, often 1-seeded; seeds with abundant fleshy albumen; embryo straight. Most of the plants of this order flourish in temperate regions, but a few occur in the tropics. The barks of many are tonic and febrifugal. The mild purgative called *manna* is obtained from several species. The wood of some is hard and durable. The most valuable product of the order is olive-oil. (See OLEA.) The order contains 24 genera and 130 species.

Oleaginous, (*ô-le-aj'i-nus*), *a.* [*Lat. oleaginus*, from *olea*, an olive, *Fr. oléagineux*.] Oily; unctuous.

Oleamen, *n.* [*Lat.*] (*Med.*) Any soft ointment prepared of oil.

Olean (*ô-le-an'*), in New York, an important railroad town of Cattaraugus co., on the Allegheny river, the Genesee Valley canal, and the Erie R.R. *O.* has immense oil storage tanks, with a total capacity of many million barrels. It is the N.E. terminus of the United Pipe Lines. Pop. (1897) about 9,500.

Oleander, *n.* (*Bot.*) See NERIUM.

Oleaster, *n.* (*Bot.*) See ELEAGNACEÆ.

Oleate, *n.* (*Chem.*) A salt formed of oleic acid and a

Olecranon, *n.* [*Gr. olekranon*, from *olene*, elbow, and *kranion*, *kranion*, the head.] (*Anat.*) The projecting process of the *ulna*, the sharp, uncovered projection at the elbow, over which the ulnar nerve passing, and only protected by the cuticle, exposes it to the numbing sensation experienced in the hand and forearm when the part is accidentally bruised or hit.

Olefiant Gas, *n.* [*Fr.*, from *Lat. oleum*, and *facere*, to make.] (*Chem.*) A hydrocarbon obtained by reacting on alcohol with an excess of sulphuric acid, in a retort (Fig. 1988) capable of holding three or four times the bulk of the liquid. On heat being applied, the mixture froths up and gives off a transparent, colorless, inflammable gas, which has a faint, sweetish odor, and dissolves in twelve times its bulk of water. It was liquefied by Faraday under great pressure. When mixed with chlorine, it forms an oily body, first discovered in Holland, and thence known as *Dutch liquid*.

Fig. 1988.—PREPARATION OF OLEFIANT GAS.

From this circumstance, it has received its name of *olefiant gas*. Mixed with oxygen, it forms a highly explosive mixture. It burns with a brilliant white flame, depositing a large amount of carbon on cold surfaces, and is a more or less large constituent of ordinary coal-gas. It is the type of a series of homologous bodies known as the olefiant gas series of hydrocarbons, which progress, in regular increments of two equivalents of hydrogen and carbon, from methylene (C_2H_2) to paraffylene ($C_{20}H_{40}$). It is also known in organic chemistry as ethylene; and its oxide, in the hands of M. Wurtz, an eminent French chemist, has produced a series of compounds of great interest and importance. M. Wurtz looks on it as the connecting link between organic and inorganic compounds.

Oleggio, (*ô-led'jo*), a town of N. Italy, Piedmont, 10 m. N. of Novara; pop. 7,500.

Oleic Acid, *n.* (*Chem.*) An acid obtained by saponifying almond-oil with potash, and decomposing the soap by hydrochloric acid, which separates a mixture of oleic acid and margaric acid. This, by digestion with oxide of lead, is converted into oleate and margarate of lead; and by digesting these in ether, an acid oleate of lead is dissolved. The ethereal solution is mixed with its bulk of water, and decomposed by hydrochloric acid which throws down chloride of lead, and leaves the oleic acid in solution, from which it is obtained by evaporation. The crude oleic acid produced by pressure in the manufacture of stearine candles may be similarly purified. Oleic acid is colorless, concretes at about 50°, and reddens litmus. It is insoluble in water, but abundantly soluble in alcohol. The neutral oleates have little tendency to crystallize. The soluble alkaline oleates are soft, fusible compounds, more soluble in alcohol than in water, and are decomposed, by excess of water, into free alkali and acid compounds.

Oleiferous, *a.* [*Lat. oleum*, and *ferre*, to bear.] Oil-producing; as, *oleiferous seeds*.

Oleine, *n.* [*Fr. oleine*.] (*Chem.*) The principal ingredient in the fat oils which remain fluid at common temperatures. It is procured by separating the palmitin and stearin from a fat oil by cold and pressure, dissolving the liquid portion in ether, evaporating, and digesting the residue in cold alcohol, which dissolves the oleine, and leaves palmitin and stearine undissolved. Oleine is colorless, inodorous, and tasteless. Its specific gravity is about 0.9. It is insoluble in water, but abundantly soluble in alcohol and in ether. It remains fluid at 32°.

Olekma, a river of Asiatic Russia, in Siberia, gov. of Yakoutsk, which, after a N. course of 400 m., joins the Lena opposite the village Olekninsk.

Olema, in California, a post-village of Marin co., abt. 18 m. W.N.W. of San Rafael.

Olena, in Illinois, a post-village and township of Henderson co., about 120 m. N.W. of Springfield, and 10 m. E. of Burlington, Iowa.

Olena, in Ohio, a post-village of Huron co., about 8 m. S.E. of Norwalk.

Olentogy (or WHETSTONE) **River**, in Ohio, enters the Scioto River in Franklin co.

Oleometer, *n.* [*From Lat. oleum*, and *Gr. metron*, measure.] An instrument to determine the weight and purity of oil.

Oleo-saccharum, *n.* [*Lat. oleum*, and *Gr. sakcharon*, sugar.] (*Pharmacy*.) A mixture of oil and sugar.

Oleose, **Oleous**, *a.* Oily; as, an *oleose substance*. (*R.*)

Oleraceous, (*ol-e-rā'shus*), *a.* [*From Lat. oleris*, pot

herbs.] (*Bot.*) Belonging or having reference to pot-herbs; consisting of herbs for cookery.

Oleron, (Isle of.) (*o-lai-ravng.*) an island off the W. coast of France, dept. Charente-Inférieure, opposite the mouth of the Charente; Lat. 46° N., Lon. 0° 20' W.; 7 m. S. of the Isle of Ré. Area, 99 sq. m. Cap. Château d'Oleron. Pop. 18,178.

Oley, in *Pennsylvania*, a post-township of Berks co.; pop. abt. 2,500.

Olfact', v. a. To smell; — used in burlesque.

Olfaction, n. (*Physiol.*) The sense by which we perceive the impressions made on the olfactory nerves by the odorous particles suspended in the atmosphere. The olfactory nerve, or first pair, has usually been considered the great nerve of smell; and it is probably the nerve of special sensibility, general sensibility being communicated by the branches of the fifth pair, distributed on the pituitary membrane of the nose and sinuses.

Olfactive, Olfactory, a. Pertaining to smelling; having the sense of smelling; as, the *olfactory* organs.

Olfactor, n. A nose; an organ of smelling.

Olfactory, a. Pertaining to the sense of smell.

O. nerves. (*Anat.*) The nerves of smell; the first pair of nerves. They arise from the part of the brain called the *corpora striata*, and, perforating the ethmoid bone, are distributed over the mucous membrane of the nose.

Oлга, a woman of obscure birth, who became the wife of Igor, grand-duke of Russia, and after the death of her husband, in 945, governed the country for ten years as regent. Having become a Christian, and contributed to the spread of the faith, she is regarded as a saint in the Greek Church. D. 968.

Olibanum, n. [*Fr. oliban*; *Lat. olibanum*, from *Gr. libanos*.] A fragrant gum-resin, chiefly used as a fumigation. Indian olibanum is the produce of *Boswellia thurifera*; but African or Arabian olibanum appears to be derived chiefly from another species, *B. floribunda*, according to Royle. This resin is the *lebouah* of the Hebrews, and the incense or frankincense of the Bible. See *BOSWELLIA*.

Oliant's River, or ELEPHANT'S RIVER, in S. Africa, Cape Colony, enters the Atlantic Ocean in Lat. 31° 38' S., Lon. 18° 12' W.; length, abt. 150 m.

Oligarch, (-gark, n.) One of the rulers in an oligarchical government.

Oligarch'al, Oligarch'ic, Oligarch'ical, a. Pertaining to oligarchy.

Oligarch'ist, n. An upholder or supporter of oligarchical rule.

Oligarchy, n. [*Fr. oligarchie*; *Gr. oligarchia*, from *oligos*, few, and *arche*, rule.] A form of government in which the supreme power is placed in a few hands; a species of limited aristocracy, possessing autocratical powers.

Oligist, n. (Min.) A variety of specular iron ore.

Oligist, Oligis'tic, a. Pertaining or relating to, or consisting of, specular iron ore.

Oligoclase, n. [*Gr. oligos*, few, and *klasis*, fracture.] (*Min.*) A soda-felspar. It is a silicate of soda and alumina, composed of 62.3 per cent. of silica, alumina 23.5, and soda 14.2. It is white, with a tinge of gray, green, yellow, or red, and is more or less translucent. The crystals, which often occur in twins, resemble those of albite.

Olin'da, a city of Brazil, about 4 m. N. of Recife; pop. 5,000.

Olio, in Alabama, a village of St. Clair co. Its post-office is GREENPORT.

Olio, in Iowa, a vill. of Union co., abt. 10 m. S.E. of Afton.

Olio, n. [*It. olla*, a pot; *Sp. olla*, an earthen pot.] A dish of meat boiled or stewed. — A mixture; a medley; a pot-ponrri; a jumble.

"I have such an olio of affairs, I know not what to do." *Congreve*. (*Mus.*) A miscellany of various pieces.

Oliphant, MARGARET, (née WILSON,) a popular English novelist, b. at Liverpool, 1820. Of her very numerous contributions to the world of prose-fiction, the following may be mentioned as enjoying a wide popularity: — *Passages in the Life of Mrs. Margaret Maitland of Sunnyside*, a graphic picture of Scottish domestic life (1849); *Adam Græme of Mossgray* (1852); *Lilliesleaf* (1855); *Katie Stewart*; *The Quiet Heart*; *Chronicles of Carlingford*, &c. The latter is generally esteemed her *chef d'œuvre*. In 1870, *Memoirs of the Comte de Montalambert* appeared; in 1876, *Dante*; and in 1882, the *Literary Hist. of England in the end of the eighteenth and beginning of the nineteenth century*. 3 vols. Died 1897.

Olitry, a. Belonging to the kitchen garden; as, *olitory* seeds.

Oli'va, n. (Zool.) A genus of Mollusca, of the Baccinidae or "Whelk" family, common in the seas of warm climates. The species are very numerous; some of the shells being large, and ornamented with a great variety of rich markings and brilliant colors. The animal has a small head, terminated by a proboscis; 2 tentacula enlarged at the base, and having the eyes situated in the middle; foot very large, as is also the mantle. The shell is oblong, cylindrical, smooth, and shining; spire short, with sutures distinctly grooved;

Fig. 1989. — OLIVA PORPHYZIA.

aperture narrow and long, and notched at both extremities; outer lip generally thick; columella obliquely striated; operculum horny and small in some species, in others not existing. They are brought principally from Asia, but some are also met with on the coasts of Africa and South America.

Oli'va, a town of Spain, prov. of Valencia, 39 m. S.E. of Valencia, and 28 m. S.E. of Madrid. Manuf. Linen and hempen cloths. Pop. 7,000.

Olivaceous, (-va'shus, a.) Olive-green; green mixed with brown.

Olivarez, GASPARD GUZMAN, (o-le-va'rais,) COUNT, and DUKE D', an eminent Spanish statesman, was b. abt. 1587, at Rome, whither his father had been sent on an embassy to Pope Sixtus V. When Philip IV. succeeded to the crown, the management of public affairs was intrusted wholly to O., and he enjoyed, during the period of 22 years, almost unbounded authority. The domestic affairs of the kingdom he conducted with much success; but in foreign affairs he was constantly thwarted by the bolder genius of the French minister, Richelieu, and had the mortification to witness the separation of Portugal from the crown of Spain, and the loss of Brazil and other foreign colonies, which fell into the hands of the Dutch. In consequence of these misfortunes the king was reluctantly forced to dismiss him in 1643, and he d. soon after.

Olivaster, a. Tawny; of the color of the olive; darkly brown.

Olive, n. [Fr.; Lat. oliva; Gr. oleia.] (Bot.) See OLIVA. — The hue or color of the olive, being a combination of violet and green mixed proportionately; as, an *olive* complexion.

Olive, in Indiana, a township of Elkhart co. — A town-ship of St. Joseph co.

Olive, in Iowa, a township of Clinton co.

Olive, in Michigan, a township of Clinton co. — A town-ship of Ottawa co.

Olive, in New York, a post-township of Ulster county.

Olive, in Ohio, a township of Meigs co.

— A village and township of Noble co., abt. 26 m. N. of Marietta.

Olive City, in Arizona, a village of Yuma co., about 150 m. W. S. W. of Prescott.

Oliveira, (o-le-va'e-ra,) a town of Brazil, abt. 40 m. S. of Tamandua; pop. 2,000.

Olive'ra, or OLIVENZA, a town of Brazil, abt. 130 m. S.S.W. of Bahia.

Olivinite, n. (Min.) A mineral, consisting chiefly of arsenic acid and protoxide of copper, with a little phosphoric acid and a little water. It is generally of some dark shade of green, sometimes brown or yellow. It is found, along with different ores of copper, in Cornwall and elsewhere. It is often crystallized in oblique four-sided prisms, of which the extremities are acutely bevelled, and the obtuse lateral edges sometimes truncated, or in acute double four-sided pyramids; it is sometimes also spherical, kidney-shaped, columnar, or fibrous.

Olive'za, (o-le-vain'tha,) a town of Spain, prov. of Estremadura, 14 m. S.S.W. of Badajoso. Pop. 5,917.

Olive Oil. (Agric.) See SECTION II.

Oli'ver, in Ohio, a township of Adams co.

Oli'ver, in Pennsylvania, a township of Mifflin co. Pop. (1897) 1,140. — A township of Perry co.

Oli've'rian River, in New Hampshire, enters the Connecticut River, in Grafton co.

Oli'ver's Prairie, in Missouri, a village of Newton co., abt. 12 m. E. by N. of Neosho.

Oli'vesburg, in Ohio, a post-village of Richland co., abt. 76 m. N.N.E. of Columbus.

Oli'ves, (Mount of,) or MOUNT OLIVET, a ridge running N. and S. on the E. side of Jerusalem, its summit about half a mile from the city wall, and separated from it by the valley of the Kidron. It is composed of a chalky limestone, the rocks everywhere showing themselves. The olive-trees that formerly covered it, and gave it its name, are now represented by a few trees and clumps of trees which ages of desolation have not eradicated. There are three prominent summits on the ridge; of these the southernmost, which is lower than the other two, is now known as the "Mount of Offence," originally the "Mount of Corruption," because Solomon defiled it by idolatrous worship. Over this ridge passes the road to Bethany, the most frequented road to Jericho and the Jordan. The central summit (See Fig. 1151.) rises 200 feet above Jerusalem, and presents a fine view of the city, and indeed of the whole region, including the mountains of Ephraim on the N., the valley of the Jordan on the E., a part of the Dead Sea, on the S.E., and, beyond it, Kerak in the mountains of Moab. Perhaps no spot on earth unites so fine a view, with so many memorials of the most solemn and important events. Over this hill Christ often climbed in his journeys to and from the holy city. Gethsemane lay at its foot on the west, and Bethany on its eastern slope. From the summit, three days before his death, Christ beheld Jerusalem, and wept over it, recalling the long ages of his more than parental care, and grieving over its approaching ruin.

Olivine, n. (Min.) The name applied to varieties of *Chrysolite* of inferior color and clearness. It occurs in yellowish-green or olive-colored masses and grains embedded in basalt and lava, as in the basalt of the Giant's Causeway in Ireland, the lava of Unkel on the Rhine, &c. O. is an anhydrous silicate of magnesia and protoxide of iron, and is very difficult of fusion.

Oli'a, n. [Hind.] The leaf of a palm prepared for writing on by means of a sharp stick, &c.

Oli'a, n. [Sp.] An OLIO, *q. v.*

Olla-podrida, (o-la-pod-re'e'da, n.) [*Sp.*, putrid mixture.] (*Cookery.*) A favorite dish among the Spaniards,

forming a kind of stew of meat and vegetables, seasoned with garlic and hot peppers. The epithet *podrida* is applied to this dish, in consequence of the poorer classes being obliged to serve it up so often that the odor arising from long keeping is far from agreeable.

— An olio; a pot-pourri; a melange; any curious mixture or medley; any bizarre or incongruous collection.

"Quite an olla-podrida of people, I declare." — *Marryat.*

Oliv'ier, EMILE, a French advocate and statesman, b. at Marseille, 1825. He became a member of the Paris bar in 1847; and in 1848 was Commissary-General of the Republic at Marseilles; next Préfet at Langres; and returned to the bar in 1849. Elected as "Opposition" candidate for the third circumscription of the Seine in 1857, he took part in several important discussions; among which may be mentioned those relating to the laws respecting public safety, the expedition to Italy, and regulation of the press. During the session of 1860 he was one of the most distinguished members of a small group of opposition deputies, known by the name of "The Five." In the meantime he undertook the defence of M. Vacherot, indicted for his work entitled *La Démocratie*, and in consequence of the style he adopted in pleading, was suspended for three months, an appeal against this judgment failing. In 1863 he was re-elected for Paris, and in the first session he distinguished himself by his report on the law relating to coalitions, and showed such moderation in his relations with the government as to cause a coldness between himself and his old political friends. A feeling which was increased during the session of 1865, in which year he was elected a member of the Council-General of Var. In July of the same year he received the appointment of Judicial Counsel and Commissary-General to the Viceroy of Egypt in Paris, and retired from the Paris bar. In Jan., 1870, Napoleon III. selected him as prime minister, and his nomination was favorably received by the French nation, as the initiative of a more liberal system of government. But his administration did not answer public expectations, and it soon became evident that he was not strong enough to resist the personal will of the Emperor. As the head of a responsible ministry, O. incurred the grave responsibility of declaring war with Prussia, without being ready to maintain it, and at the first news of the Prussian invasion, his administration fell, making way for a stronger cabinet.

Olm'sted, in Iowa, a village of Harrison co., abt. 44 m. N.N.E. of Council Bluffs.

Olm'sted, in Minnesota, a S.E. co.; area, abt. 610 sq. m. Rivers, Zumbro, Root, and Minnesota rivers. Surface, nearly level; soil, very fertile; prod., wheat, oats, hay, corn, cattle, and butter. County-seat, Rochester.

Olm'sted in Ohio, a post-township of Cuyahoga county.

Olmütz, (ol'me(r)tz,) a city of Austria, in Moravia, on the March, 40 m. N.E. of Brünn. It is one of the strongest fortresses of Austria. The principal public buildings are the cathedral, town-hall, theatre, and military hospital; also a public library of 50,000 vols. Manuf. Woollen, linen, and cotton fabrics, earthenware, and leather. Pop. 15,000.

Ol'ney, in Illinois, a thriving city and township, cap. of Richland co., on Balt. & Ohio S. W. and P., D. & E. R. Rs., 53 m. S. of Mattoon. Pop. (1897) 4,560.

Ol'ney, in Pennsylvania, a former village of Philadelphia co., now included within the chartered limits of the city of Philadelphia, abt. 7 m. N.E. of the State-house.

Ol'neyville, in Rhode Island, a post-village of Providence co., abt. 1 m. W. of Providence.

Olograph, n. See HIOLOGRAPH.

Oli'ona, a river of N. Italy, falling into the canal Naviglio Grande, near Milan.

Oloron, (o-lo-ravng,') a town of France, dept. of Basses-Pyrénées, on the Oloron, 13 m. S.W. of Pau. Manuf. Woollen cloth, yarn, hosiery, paper, and leather. Pop. 9,362.

Olot, (o'lot,) a town of Spain, prov. of Gerona, on the Fluvia, 53 m. N.N.E. of Barcelona. Manuf. Cotton cloth, and woollen caps, paper, and soap. Pop. 12,000.

Olus'tee, or OLUSTEE STATION, in Florida, a post-village of Baker co., about 20 m. E. of Lake City. Here in Feb., 1864, a Union force numbering about 5,000 men, under Gen. Seymour, encountered a body of about 3,000 Confederates, under Gen. Finnegan, and after a severe conflict of several hours, the Nationals were defeated, with a loss of over 2,000 men, besides artillery, ammunition, and wagon trains. Confederate loss, about 1,000 men.

Olym'pia, in Washington, a thriving city, port of entry, cap. of Thurston co., and also the State capital; at the head of steam navigation of Puget Sound, about 150 m. from the Pacific Ocean. It is pleasantly situated, and is increasing somewhat in population and importance.

Olympia, (o-lim'pe-a,) a celebrated valley of Elis, in Greece, on the right bank of the Alpheus, and the seat of the Olympic games. The Sacred Grove (called the *Altis*) of O., enclosed a level space about 4,000 ft. long by nearly 2,000 broad, containing both the spot appropriated to the games and the sanctuaries connected with them. It was finely wooded, and in its centre stood a clump of sycamores. The Altis was crossed from W. to E. by a road called the "Pompic Way," along which all the processions passed. The Alpheus bounded it on the S., the Cladeus, a tributary of the former, on the W., and rocky but gently swelling hills on the N.; W. it looked towards the Ionian Sea. The most celebrated building was the *Olympieum*, or *Olympium*, dedicated to Olympian Zeus. It was designed by the architect Libon of Elis in the 6th century B. C., but was not completed for more than a century. It contained a colossal statue of the god, the master-piece of the sculptor Phidias, and

many other splendid figures. In the immediate neighborhood were numerous other public buildings, called, collectively, like the plain, *Olympia*. Their temple of Zeus, in wonderful preservation, was brought to light

Fig. 1990.—JUPITER OLYMPUS.

by the German explorers in 1876, together with many statues in marble and bronze, also numerous articles in terra cotta.

Olympia, daughter of Neoptolemus, king of Epirus, was the wife of Philip, king of Macedonia, and mother of Alexander the Great. She was repudiated by Philip about 336 B. C. Olympia, in revenge, is presumed to have instigated the murder of Philip. After the death of Alexander, she seized the government of Macedonia, and put to death a number of the leading personages of the kingdom; but Cassander at length besieged her in Pydna, and obliged her to surrender. Cassander promised to spare her life, but she was soon afterwards killed by the relatives of those whom she had put to death.

Olympiad, (*o-lim'pe-ād*), *n.* [Gr. *Olympias*.] (*Chronology*.) The period of four years which elapsed between the celebration of the Olympic games was called an Olympiad, and gradually became a celebrated era among the Greeks, who computed their time by it. The custom of reckoning by Olympiads was first established, it is supposed, with reference to the Olympic games, which were celebrated 776 years before the Christian era, and the computations by them ceased after the 304th, in the year 440 of the Christian era. History has derived much advantage from the Olympiads, as they have served to fix the time of many important events; but they were not an altogether convenient measure of time; for as the games were celebrated at the time of the full moon next after the summer solstice, and as the time of the full moon differs eleven days every year, the Olympiads were of unequal lengths, sometimes beginning the next day after solstice, and sometimes four weeks afterward.

Olympian, **Olympic**, *a.* Pertaining to Olympus, or to Olympia, in Greece; relating to the Greek games celebrated at Olympia.

Olympic Games. See GAMES (PUBLIC).

Olympic Mountains, a coast-range of mountains in the northwest peninsula of Washington, between Hood's Canal and the Pacific Ocean. Mount Olympus, with an altitude of 8,138 feet, as estimated by Wilkes, is a snow-capped peak, and may be seen far out to sea. It gives identity to the chain; and the name *Olympic* is now generally applied to this range. This sierra, for it consists of several peaks, was first seen by Perez, in 1774, who named it *La Sierra Santa Rosalia*. Meares saw it in 1788, and describes it under the name which he gave it, of Mount Olympus. Around and from the base of this main sierra, the numerous mountains descend to hills and spurs, and abruptly terminate on the sandy beach of the ocean in low perpendicular bluffs.

Olympionice, *a.* [Gr. *Olympionikes*.] Among the ancients, an ode or triumphal song in honor of a victor in the Olympic games.

Olympus. [Gr. *Olympos*.] A celebrated mountain of Thessaly, on the border of Macedonia, 30 miles N. of Larissa; Lat. 40° 4' 32" N., Lon. 22° 25' E. Its highest peak is 9,745 feet above the sea, and is covered with snow during two-thirds of the year. The E. side, which fronts the sea, is composed of a line of precipices, while a profusion of oak, beech, chestnut, and other trees are scattered at its base, and higher up are immense forests of pine, giving it in parts a majestic and again a sombre appearance; hence, the appellations of the ancient writers; as, the *frowning Olympus*, the *majestic Olympus*, &c. It was regarded by the ancient Greeks as the abode of the gods; and the palace of Jupiter was supposed to be on the summit. According to the Greek legend, it was formerly connected with Ossa, but was separated from it by an earthquake, allowing a passage

for the Peneus through the narrow vale of Tempe to the sea. The philosophers afterwards transferred the abode of the gods to the planetary spheres, to which they also transferred the name of Olympus. *O.* is also the ancient name of several mountains, viz.: the N.W. range of Taurus, in Mysia; a mountain in the island of Cyprus; one in Lycia; one in Elis; and one on the borders of Laconia and Arcadia.

Olympus, in Tennessee, a post-village of Overton co.

Omaha, in Missouri, a post-village of Putnam co., about 75 m. W. by N. of Keokuk, Iowa.

Omaha, in Nebraska, the chief commercial city of the State, cap. of Douglas co., and one of the most important in the West, located on the right bank of the Missouri river, opposite Council Bluffs, Iowa; Lat. 41° 16' N., Lon. 96° W. *O.* is a great R. R. center, and the principal shops of the Union Pacific R. R. are here located. There are several immense packing houses (also in South Omaha, adjoining), extensive breweries, foundries, brick works, machine shops, &c., and one of the largest silver smelting works in America. The principal streets are from 100 to 200 feet wide, with smooth pavements, and the city is, on the whole, well built and attractive in appearance. Pop. (1900) 162,555.

Oman, (anc. *Omana*), an extensive division of S.E. Arabia, between the Persian Gulf and Arabian Sea, or Sea of Oman, and forming the central part of the Muscat dominions. It is a kind of desert, studded with oases, and having fertile valleys among its mountains. Chief towns. Bostak, Muscat, and Minnah. The latter has copper mines. Pop. Unknown.

Omaney, (Cape), in Alaska, the most S. point of King George III. Archipelago, at the entrance to Chatham Sound; Lat. 56° 10' N., Lon. 134° 34' W.

Omar I., caliph of the Mussulmans, was the successor of Abu-Bekr, and father-in-law of Mohammed. He began his reign A. D. 634, and is conspicuous among the conquerors who chiefly contributed to the spread of Islamism. His generals, Khaled and Abu-Obeidah, drove the Greeks out of Syria and Phoenicia; and the caliph himself took possession of Jerusalem in 638, which city remained in the hands of the infidels till it was reconquered by Godfrey of Bouillon, at the end of the 11th century. Amru, one of his generals, defeated the troops of Heraclius, near Antioch, in 641. Memphis and Alexandria surrendered; all Egypt and a part of Libya were conquered from the Romans; and the famous library, which had been founded at Alexandria by Ptolemy Philadelphus, is said to have been burnt by the express order of *O.* Having fixed his residence at Medina, he was there assassinated by a Persian slave, in the 10th year of his reign, A. D. 643. He refused to appoint a successor; and thus the caliphate became elective. The era of the Hegira was established in the time of this caliph, who also introduced the system of standing armies, and a police force. *O.* was highly distinguished for his impartial administration of justice.

OMAR II., the eighth caliph of the Omniades, was great grandson of the preceding, and succeeded Solymán in 717. He laid siege to Constantinople, but was forced to raise it, on account of a violent storm, which destroyed a great part of his fleet. Poisoned, 720.

Omar, in New York, a post-village of Jefferson co., abt. 160 m. N.W. of Albany.

Omar, in Ohio, a village of Seneca co., abt. 18 m. E. of Tiffin.

Oma'sum, *n.* [Lat.] (*Anat.*) The third stomach of ruminant animals.

Om'bay, MALOEWA, or MALUWA, an island between Celebes and the N.W. coast of Australia, lies to the N. of Timor, from which it is separated by the Strait of Om'bay, Lat. 8° 8'—8° 28' S., Lon. 124° 17'—125° 7' E.; area, 961 sq. m. The hills of *O.* are volcanic, and the coasts steep and difficult to approach. The inhabitants are dark brown, have thick lips, flat nose, and woolly hair; appearing to be of mixed Negro and Malay origin. They are armed with the bow, spear, and creese, and live on the produce of the chase, with fish, cocoa-nuts, rice, and honey. A portion of the island formerly belonged to the Portuguese, but since August 6, 1851, it has entirely become a Netherlands possession. Pop. abt. 200,000.

Ombre, (*öm'br*), *n.* [It. *ombre*; Fr. *hombre*, from Lat. *homo*, a man.] A game at cards, usually played by three persons.

Ombrom'eter, *n.* [Fr. *ombromètre*; Gr. *ombros*, rain, and *metron*, a measure.] An instrument to measure a rain-fall; a rain-gauge.

O'Meara, BARRY EDWARD, the confidential medical attendant of the Emperor Napoleon I. in his last days, and author of *A Voice from St. Helena*, was a native of Ireland, and b. 1778. He was originally a surgeon in the British navy, and was on board the "Bellerophon" in that capacity on the 7th of August, 1815, when Napoleon went on board. Napoleon having observed Dr. O'Meara's skill and his knowledge of Italian, made overtures to him, on being transferred to the "Northumberland," to accompany him to St. Helena as his surgeon. Having obtained Admiral Keith's permission, Dr. O'Meara assented, and remained with the ex-emperor till July, 1818, when he was recalled and deprived of his rank, for having accused Sir Hudson Lowe before the Admiralty of cruel and arbitrary conduct. He was latterly an active partisan of O'Connell, at one of whose agitation meetings he is said to have caught the illness which terminated fatally, June 3, 1836.

Ome'ga, *n.* [Gr. *ō mega*, the long *o*.] The last letter of the Greek alphabet; hence, the last of anything.

Alpha and *Omega*, the beginning and the ending.

Ome'ga, in California, a post-village of Nevada co., abt. 20 m. E.N.E. of Nevada City.

Om'elet, *n.* [Fr. *omelette*.] (*Cookery*.) A kind of pancake or fritter made with eggs and other ingredients mixed; as, an *omelet aux truffes*.

O'men, *n.* [Lat.] A sign believed to prognosticate a future event. Omens have been common among most nations, but were chiefly received in the ruder ages, and among the more ignorant of a people. Even in the present day, in many parts of England, a superstitious belief in omens exists. The howling of a dog by night is believed to presage a death in the neighborhood. The screeching of the owl and the croaking of the raven have, both in ancient and modern times, been regarded as omens of some dire calamity. It is regarded as unlucky to see first one magpie and then more; but two denote marriage or merriment; three, a successful journey; four, an unexpected piece of good news; five, that you will shortly be in a great company. To kill a magpie is to incur some terrible misfortune. When a person goes out on any important business, it is lucky to throw an old shoe after him. To present a knife, scissors, razor, or other sharp or cutting instrument to one's friend is unlucky, as they are apt to divide love and friendship. The falling of salt towards persons at table, the spilling of wine on their clothes, are evil omens. Breaking a looking-glass betokens the death of the best friend of the person to whom it belonged. The itching of the nose implied that a stranger was coming; the burning of the cheeks, or tingling of the ears, that others were talking of us; if of the left cheek or ear, ill—the right, well. The way in which fires, candles, or lamps burned suggested sundry omens. Divers presages concerning the weather are taken from the habits of birds, bees, gnats, &c. A sow crossing the road before a person going on a journey, is believed to indicate a disappointment, if not a bodily accident to such person; but if the sow be attended by her litter of pigs, it denotes a successful journey. To stumble is regarded as unlucky, except in going up stairs, when it is considered lucky. Fishermen and sailors are particularly influenced by omens, which they fancy they discover in the most trivial circumstances. To lose a bucket, or to throw a cat overboard, is believed to be very unlucky. Whistling is supposed to raise the wind. Sneezing, an involuntary tremor in the mind or body, or other nervous affection, particularly spots on the body, are among the circumstances from which good or evil is presaged. By a regard to these things, many persons add very considerably to their proper share of human misery without any countervailing amount of good.

Omen, *v. a.* To forbode; to indicate, as likely to happen or come to pass; as, to *omen* well of an undertaking—To *augur*; to divine; to foretell; to prognosticate.

Omened, (*o'mend*), *a.* Containing an omen or prognostic; as, an ill-omened occurrence.

O'mening, *n.* A prognostication; a divination. (*R.*)

Omen'tum, *n.* [Lat.] (*Anat.*) A prolongation of the peritonium, which floats above a portion of the intestines and is formed of two membranous layers, with vessels and fatty bands distributed through it.

O'mer, *n.* A Hebrew measure of capacity; the tenth part of an ephah, or a little more than 5 pints.

O'mer Pasha, or **Omar Pasha**, MICHEL LATTAS, Generalissimo of the Sultan's forces in Europe, and Grand Vizier, of Croat origin, born at Plaski, on the Adriatic, 1806; received his education at the high school at Thurm, in Transylvania, and distinguished himself, it is said, by proficiency in mathematics. He became a cadet in the border regiment of Ogulin, which he shortly left to become assistant surveyor of roads and bridges.

Fig. 1991.—OMAR PASHA.

Tiring of this drudgery, he deserted from the Austrian army, when, being in quest of a living, he was induced, as a means of qualifying himself for the position of tutor, in the house of a Turkish merchant, to adopt the creed of Islam, and thereupon took the name of Omer, applying himself with great assiduity to study the language, manners, and customs of his new countrymen. He became a master in the new military school at Constantinople, where Kosrew Pasha, then minister of war,

perceiving his talents and enterprise, appointed him officer in the regular army of the Sultan, and shortly afterwards made him adjutant on his personal staff. It was in quelling the insurgents in Syria and Albania that he first distinguished himself, and he was equally successful in Kurdistan. In 1848, having become a pasha, he kept the aggressive policy of the Russians in check in Wallachia, and in 1852 was sent to effect the reduction of the hardy and warlike Montenegrins, and he had advanced to within a day's march of Cetigne, when the Austrian special commissioner at Constantinople induced the Divan to recall him, and abandon the war. In June, 1853, the Russian troops having marched into Moldavia and Wallachia, O. P. was appointed Generalissimo of the Turkish army. The Sultan's declaration of war was dated Oct. 4, and the first important collision between the belligerents, in which the Russians were defeated with great loss, (as they were on subsequent occasions,) occurred Nov. 4. He joined General Canrobert and Lord Raglan, with a part of his army, before Sebastopol; and though his troops took no part in the siege, he made a diversion in Asia Minor, and forced the passage of the Ingour, Nov. 6, 1855. He was sent to restore order in Herzegovina, in May, 1861, and having performed various services, was employed in 1867 to subdue the Cretan insurrection. His personal and domestic habits were European, and, notwithstanding his change of creed, he became the protector of the Christian subjects of the Sultan, and the ameliorator of their lot. In later life he held the rank of commander of the Imperial Guard at Constantinople. Died in 1871.

Omer (*o-mair'*), **St.**, a fortified town of France, dept. Pas-de-Calais, on the Aa, 40 m. N.W. of Arras, and 29 m. N.E. of Boulogne. It is surrounded by strong fortifications. The principal public buildings are the cathedral of Notre Dame, the town-hall, the college, and the military hospital. *Manuf.* Woollen cloth, yarn, lace, basket-work, soap, glue, paper, and tobacco-pipes. *Pop.* 21,869.

Ometepe, or **OMETEPEC**, a volcanic island in Lake Nicaragua, Central America; *area*, abt. 150 sq. m. On it are two villages, Ometepe and Muyagalpa, and extensive ruins of Indian sepulchres and other ancient architecture.

Ominous, *a.* [Lat. *ominosus*, from *omen*, *ominis*.] Pertaining, or having reference to omens. — Containing or conveying an omen: as, prognosticating that which is propitious or happy; auspicious; — used in a good sense; as, a good *ominous* name. (*Bacon*). — Foreshadowing evil; adverse; inauspicious; — employed in an ill sense; as, an *ominous* warning.

Ominously, *adv.* With good or bad omens.

Ominousness, *n.* Quality of being ominous.

Omissible, *a.* That may be omitted or passed by.

Omission, (*o-mish'un*), *n.* [Fr.; Lat. *omissio*, from *omitto*.] The neglect or failure to do something which a person had power to do, or which duty required to be done; a leaving out; neglect or failure to insert or mention; as, acts of *omission* and commission. — That which is omitted, passed by, or left out; as, an *omission* that cannot be repaired.

Omissive, *a.* Leaving out; neglecting; omitting. (*R.*)

Omit, *v. a.* [Fr. *omettre*; Sp. *omitir*; Lat. *omitto*, from *ob*, and *mitto*, to let go.] To leave out; not to insert or mention; to let fall; to drop; not to name.

"Who can omit the Gracchi?" — *Dryden*.

— To pass by; to ignore; to neglect to perform or make use of; as, he *omitted* to pay the money he owed me.

Omitter, *n.* One who omits, ignores, or leaves out; a neglecter.

Omiades, *n. pl.* (*Hist.*) A dynasty founded in Arabia by Moawiyah, in 635 or 661. Merwan II., the fourteenth and last caliph of this race, was slain in a mosque on the banks of the Nile, Feb. 10, 750, when the Abbassides (*q. v.*) assumed the reins of power. Abderrahman, the only member of the Omiades who escaped the massacre at Damascus, founded a caliphate in Spain, in 755. Eighteen caliphs reigned, Hienem III., who resigned in 1031, being the last.

Omnibus, *n.* [Lat., for all; dative *pl.* of *omnis*.] A large carriage, with seats running lengthwise, drawn by horses, and used for conveying passengers a short distance in a city, or from a city to its environs.

Omnifety, *n.* The omniscient, or all-comprehensive spirit; — hence, the Great Creator.

Omnifarious, *a.* [L. Lat. *omnifarius*, from Lat. *omnis*, all, and *varius*, different, various.] Of all varieties, forms, degrees, or kinds; as, *omnifarious* learning, *omnifarious* drinks.

Omniferous, *a.* [Lat. *omnifer*, from *omnis*, and *fero*.] All-bearing; producing all kinds.

Omnific, *a.* [From Lat. *omnis*, all, and *facio*, *facere*, to make.] All-creating.

Omniform, *a.* [From Lat. *omnis*, and *forma*, form.] Having every shape or form.

Omniformity, *n.* Quality of having every shape or form.

Omnify, *v. a.* [Lat. *omnis*, and *facere*, to make.] To make universal, or of every form, degree, or kind.

Omnigenous, (*om-ni-jen-us*), *a.* [Lat. *omnigenus*.] Consisting of all kinds.

Omnigraph, *n.* [Lat. *omnis*, all, and *graphein*, to write.] Same as *PANTOGRAPH*, *q. v.*

Omniparient, *a.* [Lat. *omnis*, and *parere*, to produce.] All-producing.

Omniparity, *n.* [From Lat. *omnis*, and *paritas*.] General equality; common parity.

Omniparous, *a.* Omniparient; producing all things.

Omnipercipience, **Omnipercipieney**, *n.* [Lat. *omnis*, and *percipiens*, perceiving.] Power of universal perception.

Omnipereipient, *a.* All-perceiving.

Omnipotence, **Omnipoteney**, *n.* [Fr.; Lat. *omnipotentia*, from *omnis*, and *potens*.] Unlimited or infinite power; a word, in strictness, applicable only to God; — hence, sometimes used for God.

"Will Omnipotence neglect to save?" — *Pope*.

Omnipotent, *a.* [Lat. *omnipotens*.] Possessing unlimited power; all-powerful; almighty; as, the *Omnipotent* Being. — Having unlimited power of a particular kind; all-pervading; as, the *omnipotent* love of money.

Omnipotently, *adv.* With almighty power; in an omnipotent manner.

Omnipresence, *n.* [Fr. *omniprésence*; Lat. *omnis*, and *præsentia*.] Presence in every place at the same time; unbounded or universal presence; ubiquity; an attribute of the Almighty.

Omnipresent, *a.* Present in all places at the same time; ubiquitous.

Omnipresential, (*-sen'shal*), *a.* Implying universal presence. (*R.*)

Omniprev'alent, *a.* [Lat. *omnis*, and *prævalens*, prevalent.] All-prevalent.

Omniscience, (*om-nish'ens*), *n.* [Fr. *omniscience*; Lat. *omnis*, and *scientia*.] The quality of knowing all things at once; knowledge unbounded or infinite; — an attribute belonging to the Deity.

Omniscient, (*om-nish'ent*), *a.* [Lat. *omnisciens*.] Having universal knowledge, or knowledge of all things, past, present, and future; infinitely knowing; all-seeing; as, the *omniscient* eye of God.

Omnisciently, *adv.* By omniscience.

Omnispective, *a.* [Lat. *omnis*, and *specere*, to view.] All-seeing.

Omnium, *n.* [Lat., of all.] (*Finance*.) A term used on the English Stock Exchange, to denote the average par of valuation of the different stocks in which a government loan is funded.

Omnium-gatherum, *n.* [Lat. *omnium*, from *omnis*, and *gatherum*, from Eng. *gather*.] A confused mixture or varied assortment of things; an incongruous or miscellaneous collection or medley of persons; a jumble; a hutch-potch; an olio, olla-podrida, or melange; — used colloquially.

"Omnium-gatherum, or, in plain English, a mass of all sorts." — *Steele*.

Omniv'agant, *a.* [Lat. *omnis*, and *vagans*, wandering.] Wandering about anywhere and everywhere.

Omnivorous, *a.* [Lat. *omnivoras*, from *omnis*, and *vorare*, to eat greedily.] All-devouring; eating everything indiscriminately.

Omo'a, a village of Honduras, Central America, on the Bay of Honduras, abt. Lat. 15° 47' N., Lon. 88° 3' W.

Omo'plate, *n.* [Fr.; Gr. *omoplate*, from *omos*, the shoulder, and *plate*, *plata*, the broad surface of a body.] (*Anat.*) The scapula, or shoulder-blade. — *Danlison*.

Ompha'ine, (*om'fa-sin*), *a.* [Fr. *omphacin*; Gr. *omphaknos*.] Belonging to, or expressed from, green or unripe fruit.

Omphale, (*om'fä-le*), a queen of Lydia. She married Tmolus, who, at his death, left her mistress of her kingdom. She purchased Hercules, who had been sold as a slave for the recovery of his senses, after the murder of Eurystus. Omphale soon restored her slave to liberty, and the hero became enamored of his mistress. The queen favored his passion, and had a son by him. Hercules is represented by the poets as so desperately enamored of the queen, that, to conciliate her esteem, he spun by her side among her women, while she covered herself with the lion's skin, and armed herself with the club of the hero, often striking him with her sandals for the uncouth manner with which he held the distaff.

Ompha'lea, *n.* [Gr. *omphalos*, the navel, — from the remarkable umbilicated form of the seed-cases.] (*Bot.*) A genus of plants, order *Euphorbiaceæ*. The juice of *O. triandra* is sometimes employed in Guiana as a substitute for black ink.

Ompha'lie, *a.* [Gr. *omphalikos*.] (*Med.*) Pertaining to the navel.

Om'phalocèle, *n.* [Fr. *omphalocèle*.] (*Med.*) Hernia occurring at the navel.

Om'phalode, *n.* [Gr. *omphalos*.] (*Anat.*) Umbilicus; the navel.

Omphalot'omy, *n.* [Gr. *omphalotomia*.] (*Surg.*) The division of the navel-string.

Om'phazite, *n.* (*Min.*) A foliated leek-green variety of Pyroxene.

Om'ri. (*Script.*) A general of the army of Elah, king of Israel, who, being at the siege of Gibbethon, and hearing that his master Elah was assassinated by Zimri, who had usurped his kingdom, raised the siege, and being elected king by his army, marched against Zimri, attacked him at Tirzah, and forced him to burn himself and all his family in the palace in which he had shut himself up. After his death, half of Israel acknowledged Omri for king; the other half adhered to Tibni, son of Ginath, which division continued four years. When Tibni was dead, the people united in acknowledging Omri as king of all Israel, who reigned twelve years. Omri built the city of Samaria, which became the capital of the kingdom of the ten tribes. It appears under the name of Beth-Omri, on the stone tablets exhumed by Layard from the ruins of Nineveh.

Om'ro, in *Wisconsin*, a post-village and township of Winnebago co., abt. 11 m. W. of Oshkosh. *Manuf.* Lumber, machinery, glass, carriages, and cheese.

Omsk, a fortified town of Asiatic Russia, on the Irtysh, at its junction with the Om; Lat. 54° 57' N., Lon. 73° 40' E. *Pop.* 12,000. — A military school, in which the Kirghiz and Mongol languages are taught, is located here. *Manuf.* Military clothing.

On, *prep.* [A. S.; Ger. *an*; Sansk. *ana*, in. The A. S. *on* bears both meanings, *in* and *on*; and the difference between the two is probably the result of usage, with the intention to distinguish.] Denoting closeness, nearness, or contiguity; being in contact with the upper surface or upper part of a thing, and supported by it; placed or lying in contact with the surface; as, we lie *on* a bed; the house rests *on* a foundation. — Coming or falling to the surface of anything; — employed to denote the motion of a thing as descending to the surface of another; as, tears fell *on* her cheek. — Performing or acting by contact or collision with the surface, outside, or external part of anything; upon; hence, with; by means of; as, to play *on* the piano, to hit a person *on* the nose. — Noting augmentation; besides; in addition to; as, heaps *on* heaps of money. — At or near; — denoting situation, position, or location; as, *on* one hand or the other, *on* the Atlantic Ocean, Paris is situated *on* the Seine. — Indicating a resting or dependence for support; with confidence in; in reliance on; as, may I rely *on* your promise; hence, noting the ground or base of anything; as, I will do it *on* certain conditions. — At or in the time of; as, *on* the Fourth of July we take a holiday; — it is customary to say at the hour, *on* or *in* the day, week, month, or year. — At the time of; — implicative of some cause or motive; as, the joy of a lover *on* receipt of a letter from his mistress. — For; toward; — denoting the object of some passion or excitation; as, Lord have mercy *on* me. — At the peril of; for the well-being or safety of.

"Hence, *on* thy life; the captive maid is mine." — *Dryden*.

— Denoting a pledge, promise, or engagement; upon; as, he affirmed it *on* his honor as a gentleman.

— Noting invocation or imprecation, or coming to, or falling, or resting on; to the account of; as, *on* him be the blame. — In consequence of, or immediately after; following; as, peace was made *on* the proclamation of an armistice. — Noting part, distinction, or opposition; in reference or relation to.

"The Rhodians *on* the other side valiantly repulsed the enemy." — *Knolles*.

On a sudden, suddenly; unexpectedly; as, he flew into a rage *on a sudden*. — *On fire*, in a state of burning, heat, or inflammation; and, figuratively, in anger, passion, or excitement.

"Her beauty set his heart *on fire*." — *Croker*.

On high, in an elevated place or position; sublimely. — *On it*, *on't*, of it; — a colloquial vulgarism; as, I have had enough *on't*. — *On the alert*, in a state of activity or watchfulness; vigilant; on the "qui vive." — *On the way* or *road*, travelling; journeying; progressing; as, he is *on the road* to ruin. — *On the wing*, in flight; hence, taking departure; as, birds *on the wing*, travellers *on the wing* for home, &c.

On, *adv.* Forward; onward; in advance or progression; as, move *on*. — Forward; in succession; as, from father to son, and so *on*. — Without interruption or cessation; in continuance or sequence.

"Sing *on*, sing *on*, for I can ne'er be cloyed." — *Dryden*.

— Not off; adhering; as in the expression, "He is neither *on* nor off," that is, he is irresolute; his mind is not made up. — *To put on*, to fix or attach to the body; as, he *put* his hat *on*.

(NOTE. *On* is sometimes employed as an exclamation, and, more often, as a peremptory command to go or to advance, some verb being understood; as, "On, Stanley, on!" — *Scott*.)

On. (*Anc. Geog.*) See HELIOPOLIS.

On'ager, *n.* (*Zoöl.*) A name of the wild ass, *Equus asinus*. See ASS.

Onagraceæ, *n.* (*Bot.*) The Evening Primrose family, an order of plants, alliance *Myrtales*. DIAG. A pluri-locular ovary, polypetalous or apetalous flowers, valvate calyx, definite stamens, horizontal or ascending ovules, and flat cotyledons, much larger than the radicle. — They are herbs or shrubs, with simple, exstipulate, dotless leaves; calyx superior, 2- to 4-lobed, stamens inserted into the throat of the calyx with the petals; ovary inferior, 2- to 4-celled; style simple; stigma lobed or capitate; fruit dehiscent or indehiscent; seeds numerous, without albumen. The plants of this order are chiefly native of the temperate parts of N. America and Europe; many are found in India; but they are rare in Africa, except at the Cape. They are unimportant in an economical point of view. The genera *Fuchsia* and *Eriogonum* furnish the florist with many beautiful plants. The order includes 25 genera and 450 species.

Onalas'ka, in *Wisconsin*, a thriving city and township of La Crosse co., on three lines of R. R., 5 m. N.W. of La Crosse. *Pop.* (1895) 1,634.

Onar'cock, in *Virginia*, a post-village of Accomac co., about 100 m. E. by N. of Richmond.

O'nanism, *n.* [From *Onan*, *Gen.* xxxviii. 9.] Self-pollution; masturbation.

Onar'ga, in *Illinois*, a post-village and township of Iroquois co., about 86 m. S. by W. of Chicago. *Manuf.* Flour, flax, and wagons.

Onate (*o-nai'tai*), a town of Spain, prov. of Guipuscoa, 28 m. E.S.E. of Bilbao, and 194 m. N.N.E. of Madrid. *Manuf.* Nails. In the vicinity are iron mines. *Pop.* 5,000.

On'awa, in *Iowa*, a post-town cap. of Monona co., about 55 m. N. of Council Bluffs.

Once, (*wins*), *adv.* [From *one*; D. *eens*, from *een*, and Ger. *einst*, from *ein*, one.] At one time; on one occasion and no more.

"To be *once* in doubt, is *once* to be resolved." — *Shaks*.

— Formerly; at one former time.

"Such were the notes thy *once* loved poet sung." — *Pope*.

(NOTE. *Once* is used as a noun when following *this* or *that*; as, *this once*, *that once*.)

At once, immediately; on the moment; at the same point of time.

"Stand not upon the order of your going, but go at once."—*Shaks.*

—*At the same time*; as, they all moved off at once.

Once and again, time after time; repeatedly; at intervals.

"A dove, sent forth once and again to spy."—*Milton.*

Once, (*ōns*), *n.* (*Zoöl.*) The OUNCE, *q. v.*

Oneid'ium, *n.* (*Bot.*) A name of the gen. CALYPSO, *q. v.*

Oneot'omy, **Onkot'omy**, *n.* (*Surg.*) Act of operating on a tumor or abscess with a cutting instrument.

Ondaree', a small island of Hindostan, outside of the harbor of Bombay, 1 m. from the mainland.

On dit, (*ōng dē*), [*Fr.*] It is said; or, they say; hence, as a noun, a rumor flying about; as, *on dit* our friend Jack is about to be married.

One, (*wūn*), *a.* [*A. S.* *an*, *æn*, *ain*; *D.* *een*; *Ger.* *ein*; *Lat.* *unus*; *Fr.* *un*; *Gr.* *heis*, *hen*.] Single in number or kind; individual; being but a single unit, or entire being or thing, and no more;—used as a cardinal number, and often employed in a sense almost equivalent to the indefinite article *a* or *an*; as, *one* man.—Indicating a person conceived or alluded to indefinitely;—employed as an indefinite pronoun or adjective; as, "I am the sister of *one* Claudio." (*Shaks.*);—that is, of a certain individual named Claudio. It is also often used in this sense, with *some*, *any*, or *no*; as, *will no one* speak? and, also, sometimes employed in conjunction with *another*, to indicate a reciprocal relation.

"When they have enemies abroad, they do not contend with *one* another at home."—*Davenant.*

(In this use, as a pronoun, *one* may be in the plural; as, she went home with her little *ones*.)

—Different; diverse;—denoting a contrast or a particular thing opposed to some other specified thing;—applied as a correlative adjective.

"Ask from the *one* side of heaven unto the other."—*Deut.* iv. 32.

—Constituting a whole; closely allied; united; undivided; as, they are *one* in interest.—Common in kind; the same.

"I answer'd not again, but that's all *one*."—*Shaks.*

(NOTE. *One* forms the prefix of numerous compound words; the greater number are self-explanatory; as, *one-armed*, *one-eyed*, *one-headed*, *one-leaved*, *one-legged*, *one-masted*, *one-seeded*, and the like.)

All *one*, identical; just the same; not different; as, it is all *one* to me whether you go or stay.—At *one*, in accord or union; with agreement, concord, or consonance; as, he is not at *one* with himself.—In *one*, in unity; in one common stock or body.

"Join d in *one*, the good, the fair, the great."—*Granville.*

One-berry, *n.* (*Bot.*) A plant of the genus *PARIS*, *q. v.*

One'eo, in *Illinois*, a post-village and township of Stephenson co., abt. 222 m. N. of Springfield.

One day, on a certain or specified day;—referring to a time gone by.

"One day, he found a casket filled with gold."—*Harte.*

—At a future time; on some forthcoming day or occasion; as, I expect *one day* to be married and done for.

Oneehow, **Onihow**, or **Nihan**, (*o-nee-how*), one of the Sandwich Islands, Lat. 22° N., Lon. 160° 35' W. Ext. 18 m. long and 8 broad; pop. 1,000.

One'ga, in European Russia, a lake in the govt. of Olenetz, between Lat. 60° 50' and 62° 50' N., Lon. 34° 20' and 36° 20' E. Length, N.W. to S.E., 130 m.; breadth 40 m. Area, estimated 4,000 sq. m. It receives numerous rivers, the principal of which are the Migra, the Shooyna, the Vodla, and Vytegra, and discharges its waters by the river Soir into Lake Ladoga.

—A river which rises in the Lake Latcha, and after a N. course of 250 m. enters the White Sea.

—A gulf, embracing the most S. portion of the White Sea, between Lat. 63° 50' and 65° N., Lon. 34° 30' and 38° E. Ext. About 100 m. in length and breadth. It receives the rivers Onega and Kemi.

One'glia, (*o-nail'ya*), a town of N. Italy, prov. of Genoa, 41 m. E.N.E. of Nice; pop. 5,500.

One-horse, *a.* With one horse; drawn by one horse; as, a *one-horse* carriage.

Oneida, (*o-ni'da*), in *Illinois*, a post-village of Knox co., abt. 12 m. N.E. of Galesburg.

Onei'da, in *Iowa*, a township of Delaware co.—A township of Tama co.

Oneida, in *Michigan*, a twp. of Eaton co.; pop. abt. 2,000.

Oneida, in *New York*, a lake occupying portions of Oneida, Madison, Onondaga, and Oswego cos. It covers an area of abt. 100 m., abounds in fish of an excellent quality, receives many small streams, and empties its surplus waters into the Oswego River by Oneida River.

—A central co. Area, abt. 1,200 sq. m. Rivers, Mohawk and Black rivers, and Oneida and Oriskany creeks. The Oneida occupies the S.W. angle of the co. Surface, undulating or nearly level; soil, generally very fertile, producing immense quantities of grain, hay, butter, and cheese. Min. Iron ore, potters' clay, gypsum, marl, and water limestone. Caps. Rome and Utica. Pop. (1890) 122,922.

—A town of Madison co., abt. 120 m. W. by N. of Albany. It has railroad communication with New York city, Oswego, and the other large towns of the State, and is a place of much activity.

Oneida, in *Ohio*, a village of Carroll co., abt. 16 m. S. E. of Canton.

Onei'da Cas'tle, in *New York*, a post-village of Oneida co., abt. 20 m. W. of Utica.

Onei'da Creek, in *New York*, enters Oneida Lake between Madison and Oneida cos.

Oneida Dep'ot, in *New York*, a village of Oneida co., abt. 26 m. E. of Syracuse.

Oneirocrit'ic, *n.* [*Gr.* *oneiros*, a dream, and *kritikos*, one who can discern.] An interpreter of dreams.

Oneirocrit'ic, **Oneirocrit'ical**, *a.* [*Gr.* *oneiron*, dream, and *kritikos*, critical.] Pertaining or relating to the interpretation of dreams.

Oneirocrit'icism, *n.* The art or practice of interpreting dreams.

Oneirocrit'ics, *n. sing.* Same as ONEIROCRITICISM, *q. v.*

Oneirodyn'ia, *n.* [*Gr.* *oneiros*, dream, and *odynē*, pain.] (*Med.*) A painful dream, as incubus and somnambulism.

Onei'romancy, *n.* [*Gr.* *oneiros*, dream, and *manteia*, prophecy.] Divination or prophecy by dreams.

Oneiros'copist, *n.* An interpreter of dreams; a diviner by dreams.

Oneiros'copy, *n.* [*Gr.* *oneiros*, dream, and *skopein*, to view.] Interpretation of dreams.

One'ka, in *Minnesota*, a village of Washington co., abt. 20 m. N.N.E. of St. Paul.

Onekotan', or **ONAKUTAN'**, one of the Kurile Islands, off the S. extremity of Kamtschatka, between the Pacific Ocean and the Sea of Okhotsk; Lat. 49° 24' N., Lon. 155° E. Length 30 m., breadth 15 m.

Oneness, (*wūn'ness*), *n.* Singleness in number; individuality; unity.

Oneon'ta, in *New York*, a post-village and township of Otsego county, about 80 miles west south-west of Albany.

Oneo'ta, in *Minnesota*, a post-village and township of St. Louis county, on Lake Superior, and on the N. Pacific R. R., abt. 5 m. S.W. of Du Luth.

On'erary, *a.* [*Lat.* *onerarius*, from *onus*, *oneris*, a load, a burden.] Fitted for carriage or burdens; comprising a burden.

On'erous, *a.* [*Fr.* *onéreux*; *Lat.* *onerous*, from *onus*, *oneris*.] Burdensome; oppressive; heavy; as, an *onerous* duty.

On'erously, *adv.* In an onerous manner; so as to burden or oppress.

One-sided, (*wūn'-*) *a.* Having one side only;—hence, limited to one side; partial; as, to take a *one-sided* view of things.

(*Bot.*) Growing on one side of a stem only; as, *one-sided* flowers.

One-sidedness, *n.* State of being one-sided; partiality; prejudice.

On'-going, *n.* Procedure; act of advancing or eventuating; as, the *on-goings* of every-day life.

On'guent, *n.* A corrupt spelling of UNGUENT, *q. v.*

On'-hanger, *n.* One who hangs on or imitates another; a hanger-on; a toady.

Onion, (*un'yūn*), *n.* (*Bot.*) The common name of some species of the genus *Allium*, the most important of which is the *A. cepa*. It is a biennial plant, supposed to be native of Hungary. The root bears a tunicated bulb, compressed, or round, or oblong in figure. The scape, which appears the second year, is from 3 to 4 ft. high, straight, smooth, stout, bearing at top a large, round umbel of greenish-white flowers. It is universally cultivated for the kitchen, and its peculiar merits as a pot-herb are well known. Its culture has produced many varieties, and these have received numerous names, chiefly local. The European varieties Chibbal and Cibai are used as mild condiments; and *A. schenoprasum*, the Chives or Cives, whose leaves resemble rush-leaves, is much cultivated in this country for similar purposes.

On'ion-eyed, (*-id*), *a.* With the eyes full of tears, as if by the use of a raw onion; lachrymose.

Onion (or **Winooski**) **River**, (*un'yūn*), in *Vermont*, rises in Caledonia co., and flowing generally W., enters Lake Champlain from Chittenden co.

On'ion River, in *Wisconsin*, enters Sheboygan River in Sheboygan co.

On'ion Valley, in *California*, a post-village of Plumas co., abt. 17 m. S. by W. of Quincy.

Oneirocrit'ic, *a.* Same as ONEIROCRITIC, *q. v.*

Onis'bo, in *California*, a post-village of Sacramento co., abt. 18 m. S. of Sacramento.

Onis'eus, *n.* (*Zoöl.*) A genus of tetradecapodan crustacea, having four antennae, of which two are very short, and the other two long and slender. The tail is very short, but composed of six segments. To this genus belong the animals known as Sow-bug, Hog-louse, and Wood-louse, which are terrestrial and have the respiratory organs completely infolded by plates developed from the abdominal members, the anterior plates being perforated by a row of small holes, through which the air has access to the gills. They frequent damp situations, and are generally found under stones, in holes of walls, &c. They feed on decayed animal and vegetable matter.

On'-looker, *n.* A looker-on; a spectator.

On'-looking, *a.* Looking on or forward; observant; expectant.

Only, *a.* [*A. S.* *enlic*, *anlic*.] Single; one alone; as, he is the *only* good man they have among them.—By itself; having no counterpart; distinct from others of its class and kind; as, he is his mother's *only* son.—Preëminent; surpassing all others; as, patriotism is his *only* virtue.

adv. [*A. S.* *enlice*.] Solely; singly; separately; in one manner or for one object alone.

"He to be loved, needs *only* to be known."—*Dryden.*

—Completely; utterly; wholly; entirely; thoroughly.

"Every imagination of his heart was *only* evil continually."—*Gen.* vi. 5.

O'no, in *Illinois*, a village of Edgar co., abt. 120 m. E. of Springfield.

Onobry'chis, *n.* [*Gr.* *onos*, ass, and *brychien*, to devour.] (*Bot.*) A genus of plants, order *Fabaceæ*. *O. sativa*, the Sainfoin or Saintfoin, is a spreading perennial, resembling in many respects the French Honeysuckle (*Hedysarum*). It attains the height of 2 or 3 ft., with leaves of

from 9 to 15 smooth acute leaflets, and spikes of beautiful flesh-colored flowers, striated with rose-red, on long stalks. It is native of Europe, and much cultivated there as a fodder-plant.

On'oelea, *n.* [*Gr.* *onos*, a kind of vessel, *kleio*, to close; alluding to the contracted thecæ.] (*Bot.*) A genus of ferns, order *Polypodiaceæ*. *O. sensibilis*, the Sensitive Fern, is common in low grounds, having fronds abt. 1 foot high, the barren ones broad, and somewhat triangular in outline.

Onol'ogy, *n.* [*Gr.* *onos*, ass, and *logos*, speech.] Senseless talk; insipid discourse; bosh.

On'omancy, *n.* [*Gr.* *onoma*, a name, and *manteia*, divination.] Divination by the letters of a name; onomatech'ny.

Onoman'tic, **Onoman'tical**, *a.* Predicted by names, or by letters composing a name.

Onomast'ic, *a.* [*Gr.* *onoma*, name.] (*Law.*) Belonging or having reference to a name or signature.

Onomast'icon, *n.* [*Gr.* *onomastikon*.] An index of names or terms; a compendium of subjects with their names; a dictionary; a book of nomenclature.

Onomatech'ny, *n.* [*Gr.* *onoma*, a name, and *technē*, art.] Foretelling by the letters of a name.

Onomatologist, *n.* Same as ONOMANCY, *q. v.*

Onomatology, *n.* [*Fr.* *onomatologie*; from *Gr.* *onoma*, and *logos*, discourse.] A treatise on names, or the history of nomenclatures.

Onomatope, *n.* A word formed to resemble the sound made by the thing denoted.

Onomatopœia, (*-pe'ya*), *n.* [*Gr.* *onoma*, a name, and *pœo*, I make.] (*Gram. and Rhet.*) The construction of a word with similarity in sound to that made by the thing denoted, as in *buzz*, *crash*, *roar*.—An imitative word.

Onomatopœt'ic, *a.* Constructed to resemble the sound of the thing denoted.

Onomat'opy, *n.* Same as ONOMATOPŒIA, *q. v.*

Onom'omancy, *n.* Same as ONOMANCY, *q. v.*

Onondaga, (*on-on-daw'ga*), [*Indian*, swamp at the foot of the hill.] in *Michigan*, a post-township of Ingham co.; pop. abt. 1,900.

Onondaga, [*Indian*], in *New York*, a lake in the central part of Onondaga co., covering an area of abt. 6 sq. m. The waters are impure, owing to the numerous salt springs in the vicinity. Hence, also, it is sometimes called Salt Lake.

—A central county; area, about 800 sq. m. Rivers, Seneca river, Chittenango, Onondaga, and Oneida creeks, besides Croso, Oneida, Onondaga, Otisco, and Skaneateles lakes. Surface, uneven; soil, generally fertile. Min. Gypsum water-cement, and great quantities of salt. Cap. Syracuse. Pop. (1897) about 162,200.

—A post-town and township of Onondaga co., about 132 m. W. by N. of Albany. Pop. (1897) 5,350.

Onondaga Creek, in *New York*, enters Onondaga Lake from the S.

Onondaga Valley, in *New York*, a post-village of Onondaga co., abt. 5 m. S. of Syracuse.

Ono'nis, *n.* (*Bot.*) The Rest-harrow, or Cammock, a genus of plants, order *Fabaceæ*, having a 5-cleft bell-shaped calyx, the standard of the corolla large and striated, the keel beaked, the pod turgid and few-seeded. There are many species, chiefly natives of Europe, and generally herbaceous or half-shrubby.

On'owa, in *Iowa*, a village of Louisa co., abt. 12 m. S.W. of Muscatine.

Onop'ordum, or **ONOPORDON**, *n.* [*Gr.* *onos*, an ass, *perdo*, I break wind.] (*Bot.*) A genus of plants, order *Asteraceæ*. *O. acanthium*, the Cotton-thistle, is an European wayside weed, with broad, spring-edged leaves, white with cottony hairs, and large prickly flower-heads of a dull purple color.

On'set, *n.* A rushing or setting upon; a violent attack; an assault; a storming; the onslaught of an army upon an enemy; an attack of any kind.

On'setting, *n.* A rushing upon or assaulting; onset.

Onslaught, (*on'slawt*), *n.* [*A. S.* *onslagen*, to strike against, to destroy.] Attack; onset; aggressiou; assault.

"By storm and onslaught to proceed."—*Hudibras.*

Onslow, (*on'slo*), a seaport-town of Colchester co., Nova Scotia, abt. 55 m. N. of Halifax.

Onslow, in *North Carolina*, a S.E. co., bordering on the Atlantic Ocean; area, abt. 600 sq. m. Rivers, New and Whitlock rivers. Surface, level, and in many parts marshy; soil, not fertile. Cap. Jacksonville. Pop. (1890) 10,303.

Onslow Bay, in *North Carolina*, an inlet of the Atlantic Ocean, between Capes Fear and Lookout.

Onslow Court-House, in *North Carolina*, a vill., former cap. of Onslow co., abt. 145 m. S.E. of Raleigh.

Onstead (*on'sted*), *n.* A solitary farm-house; a home-stead. (*Prov. Eng.*)

Onta'rio, a S. central co., in province of Ontario, bordering on Lake Ontario; area, about 851 sq. m. Cap. Whitby. Pop. (1897) 59,990.

Ontario, in *Illinois*, a post-village and township of Knox co., abt. 13 m. N. of Knoxville, and 10 m. N.N.E. of Galesburg.

Ontario, in *Indiana*, a post-village of La Grange co., about 32 m. E. of Elkhart.

Ontario, in *New York*, a W. central co.; area, about 674 sq. m. Rivers, Canandaigua Outlet, Mud and Flint creeks, besides several smaller streams, and Seneca, Canandaigua, and Honeoye lakes. Surface, undulating or hilly; soil, generally fertile, producing, on an average, more butter and wool than any other county of the State. Min. Iron, gypsum, and water-limestone. Cap. Canandaigua. Pop. (1890) 48,453.

—A post-town of Wayne co.

Ontario, in *Ohio*, a post-village of Richland co., abt. 8 m. W. of Mansfield.

Ontario, (Lake,) the smallest and most E. of the five great lakes of N. America, in the St. Lawrence basin, partly belonging to Canada and partly to the State of New York; between Lat. 43° 10' and 44° N., and Lon. 76° and 80° W. It is of an elongated, oval shape, 172 m. in length, by a maximum breadth (in the centre) of 60 m.; covering an area of abt. 5,400 sq. m. Its surface-level is abt. 334 feet below that of Lake Erie, and 231 feet above the tide-level of the St. Lawrence. Its depth is said to average 490 feet; but in some places it is upwards of 600 feet in depth, and it is navigable throughout its whole extent for vessels of the largest size. The St. Lawrence (under the name of the Niagara River) enters it near its S.W. and leaves it at its N.E. extremity, where it is much encumbered with small islands. Lake Ontario has many good harbors; and as it never freezes, except at the sides, where the water is shallow, its navigation is not interrupted like that of Lake Erie. It is, however, subject to violent storms and heavy swells. Toronto, Kingston, Newcastle, and Niagara are the principal towns on the British side; and Oswego, Genesee, and Sackett's Harbor on the American bank. This lake receives numerous rivers, including the Trent and Humber on its N., and the Black, Genesee, and Oswego from its S. shores. It communicates by the Genesee River and Oswego Canal with the Erie Canal, and, consequently, with the Hudson River and New York city; the Niagara River and the Welland Canal at its S.E. extremity, unite it with Lake Erie, and the Rideau Canal connects it with the Ottawa at Ottawa city. Numerous sailing-vessels and steamers of large size navigate this lake, which is the centre of an extensive commerce. — A province of Canada, *q. v.*

Ontelaunee, in *Pennsylvania*, a township of Berks co.

Onteniente, (*on'te-ne-ain'tai*.) a town of Spain, prov. of Valencia, on the Clariano, 35 m. N.W. of Alicante, and 47 m. S.S.W. of Valencia. *Manuf.* Woollen and linen fabrics, and paper. *Pop.* 9,508.

On'to, *prep.* On the top of; upon; — used in England as a provincialism; in the U. States colloquially.

Ontolog'ic, Ontolog'ical, a. [*Fr. ontologique.*] Belonging or having reference to ontology, or the science of being in general.

Ontolog'ically, adv. In the manner of ontology.

Ontologist, n. [*Fr. ontologiste.*] One who considers the nature and qualities of being in general; a metaphysician.

Ontology, n. [*Fr. ontologie*, from *Gr. onta*, the things which exist, and *logos*, discourse.] That part of the science of metaphysics which investigates and explains the nature and essence of all beings.

Ontonagon, in *Michigan*, a river rising in Ontonagon co., and flowing N., empties into Lake Superior at the town of Ontonagon.

— An extreme W. co. of the upper peninsula, having Lake Superior on the N., and Wisconsin on the S. and W. Area, about 1,342 sq. m. *Rivers.* Ontonagon, Presque Isle, and Montreal rivers. *Surface*, hilly or mountainous; *soil*, in some parts fertile. *Min.* Copper in great abundance. *Cap.* Ontonagon. *Pop.* (1894) 6,873.

— A town and township, cap. of the above co., on Lake Superior, at the mouth of the Ontonagon river, about 45 m. W. S. W. of Houghton. It is the principal depot for the copper mines in that region. *Pop.* (1897) 2,250.

Onus, n. [*Lat.*] The burden; as, the *onus* of an obligation.

Onus probandi. [*Lat.*, burden of proving.] (*Law.*) The obligation of adducing evidence. The *onus probandi* is said to lie generally on that party who asserts the affirmative of the question in dispute, according to the rule, *ei incumbit probatio qui dicit, non qui negat*. It may be shifted, in many instances, from one litigant to another, by the establishment of a *prima facie* case against a party.

Ont'wa, in *Michigan*, a township of Cass co.

On'ward, in *Indiana*, a post-village of Cass co.

On'ward, On'wards, a. [*A.S. onweard*, from *on*, in, into, and *weard*, direction.] Advanced, or advancing; progressive: as, an *onward* career.

— Leading forward to perfection; increased; improved.

— *adv.* Progressively; in advance; in a state of advanced progression: as, Time moves *onward*.

Onych'ia, n. [*Gr. onychium*; *Lat. onyx.*] (*Surg.*) A painful abscess near the nail. See *WHITLOW*.

Onyx, (duks,) *n.* [*Lat.*] (*Min.*) A variety of chalcedony, somewhat resembling agate. It is composed of alternating parallel bands of different colors, and was the stone used by the ancients for making cameos, the figures being cut in the white layers, while the darker portion formed the background of the design. Large numbers of these stones are brought from Oberstein in Saxony, and from Yemen, in Arabia; it is also found in the Isle of Skye, and in the amygdaloid of the Giant's Causeway in Ireland.

(*Surg.*) A small collection of matter. A minute abscess, formed between the cornea of the eye and the aqueous humor, and so named from being of the color and diminished shape of a man's nail.

Oo, a village of France, dept. Haute Garonne. It stands 10,000 feet above the sea, at the foot of a pass of the Pyrénées called the Col d'Oo, celebrated for its lake and picturesque cascade. *Pop.* 500.

Ooch, (oatch,) a town of N.W. Hindostan, prov. of Mooltan, rajalship of Bhanpoo, near the junction of the Chenab and the Sutlej; Lat. 29° 11' N., Lon. 70° 50' E. *Pop.* 25,000.

Oojain, or Oojain, (oo'ja-in,) a city of Central India, prov. of Malwah, formerly cap. of Scindia's dominions,

on the Siprah, a tributary of the Chumbul, 34 m. N.W. of Indore; Lat. 23° 11' N., Lon. 75° 51' E. It is about 6 m. in circumference, and fortified with a stone wall and towers. *Pop.* Unknown.

Oölite, (o'o-lite,) *n.* [*Gr. oon*, an egg, and *lithos*, stone.] (*Geol.*) A variety of limestone, so called from its being composed of small rounded grains, resembling the eggs or roe of a fish. Each grain has generally some minute fragment of sand as a nucleus, round which concentric layers of calcareous matter have accumulated. The term *roe-stone* is applied to it when the grains are very distinct and well rounded; and *pisolite*, or pea-stone (from *Lat. pisum*, a pea), when the grains are large and pea-like. In certain of the secondary strata of England, the marked occurrence of these oörites, or roe-stones, has given the name to the oölitic system, as now extended by modern geologists.

Oölitic System, n. [Now usually termed *JURASSIC.*] (*Geol.*) A formation which derives its name from the limestones of an oölitic texture developed in England, or from the Jura range of mountains, as exhibited typically on the continent of Europe. This system comprehends, in England, the whole of those peculiar limestones, calcareous sandstones, marls, shales, and clays, which lie between the chalk formation and the new red sandstone beneath. Where the system is perfect and complete, the argillaceous laminated limestone and shales, called the *Lias*, constitute the lowest group; the yellowish granular limestones, calcareous sandstones, sands, and clays, called *Oölitic*, the middle group; and the grayish laminated clays, with subordinate layers of limestone, and flaggy, ferruginous sandstones, called the *Wealden*, the upper group. These three groups are so clearly defined, that they are sometimes treated as independent systems; and were it not for certain fossil as well as lithological resemblances which pervade them, this method would be preferable. Taking the three divisions, however, as constituting the *Oölitic system*, their subdivisions will be found exhibited in descending order in the following synopsis: — *WEALDEN*; consisting of: 1. *Weald Clay*. — Grayish laminated clays, containing concretions of iron-stone, thin layers of argillaceous limestone, and sandy ferruginous flags. 2. *Hastings Sands*. — Sands and sandstones, often ferruginous, with divisions of clay; beds of clay and sandy shale, more or less calcareous, with subordinate beds of limestone. *OÖLITE*; consisting of: 1. *Purbeck Beds*. — Estuary limestones alternating with sands and clays. 2. *Upper Oölite*. — Coarse and fine-grained oölitic limestones, with layers of calcareous sand and concretions; dark laminated clays, with gypsum and bituminous shale. 3. *Middle Oölite*. — Coarse-grained, shelly, and coralline oölite, with calcareous sands and grit; dark-blue clays, with subordinate clayey limestones and bituminous shale (*Oxford clay*); shelly calcareous grit, with blue clays underneath. 4. *Lower Oölite*. — Coarse shelly limestones; laminated shelly limestones and grits; sandy layers, and thick bedded blue clay (*Bradford clay*); thick-bedded oölite, more or less compact and sandy; flaggy grits and oörites; marls and clays, with soft marly limestone (*Faller's earth*); calcareous free-stone, irregularly oölitic, and yellow sand. *Lias*; consisting of: 1. *Upper Lias*. — Thick beds of dark bituminous shale; beds of pyritous clay and alum shale; indurated marl or marlstone. 2. *Lower Lias*. — Dark laminated limestones and clays; bands of iron-stone; layers of jet and lignite; beds of calcareous sandstone. The organic remains of the oölitic system are all *mesozoic*, that is, belonging to the genera and species differing from those found in the lower rocks; and differing also, though less in general aspect, from those of the tertiary and present epochs. With the exception of the higher mammalia, nearly every existing order is represented in the *fauna* of the oölite; but the forms all died out at the close of the Chalk era. The vegetation of the system is very varied; the highest orders, however, appear to be coniferous, no true example of an exogenous tree having yet been detected. The stems, fruits, and leaves of the *Cycadaceæ*, which are found in great abundance, form one of the most characteristic fossils of the system. The shells of the *Gryphææ*, so plentiful in the *lias*; innumerable species of *ammonites* and *belemnites*; the *insects* of the *lias* and *wealden*; the *ptero-dactyl*; the fresh and marine *turtles*; and, above all, *Ichthyosaurus*, *Plesiosaurus*, *Pliosaurus*, and other gigantic reptiles are the prominent features of life. The system is not largely developed in the United States, though true Jurassic strata exist in the Sierra Nevada and Rocky mountains, as in the Black Hills and the Laramie mountains and in other localities. It is notable in Colorado for its remarkable reptilian remains. The beds consist of impure limestone, with layers of marl, overlying the gypsiferous marls and sandstones.

Oölitiferous, a. [From *oölite*, and *Lat. ferre*, to bear.] Bearing or producing oölite.

Oölogist, n. One versed in oölogy.

Oölogy, n. [*Gr. oon*, egg, and *logos*, discourse.] Ovicular science.

Oolong (Go'long), n. (Written also *oulong*.) [*Chin.*, green dragon.] A variety of black tea, brought from China.

Ool'tawah, in *Tennessee*, a post-village, cap. of James co., 15 m. E. by N. of Chattanooga.

Oo'miac, Oo'miak, n. A kind of boat used by the Esquimaux.

Ooly'sis, n. [*Gr. oon*, an egg, and *lysis*, a setting free.] (*Bot.*) A term applied to monstrous ovular development.

Oonga, or Ounga, (oon'ga,) in *Alaska*, an island in the Pacific Ocean, off the S. extremity of the peninsula of Alaska; Lat. 55° 30' N., Lon. 160° to 161° W.

Oonalas'ka, UNALASHKA, or OONIMAKI, in *Alaska*, an island in the N. Pacific Ocean, and the largest of the Aleutian group, lying abt. 20 m. off the S.W. extremity of the peninsula of Alaska; Lat. 53° 52' N., Lon. 166° 32' W. Area, abt. 1,500 sq. m. It is of volcanic origin, and the surface is rocky and mountainous, a volcano in the centre of the island rising to an elevation of 5,491 feet. The soil is in general barren, and the inhabitants (which are few) subsist by fishing.

Oo'sima, a small but populous island of Japan, off the S. E. coast of Nippon, in the Pacific Ocean. — A town on the E. coast of this island.

Oost, (oöst,) *n.* See *OAST*.

Oostenau'la, in *Georgia*, rises in Gilmer co., and flowing S.W., joins the Etowah River in Floyd co. to form the Coosa River.

Oos'terhout, a town of Holland, prov. of N. Brabant, 5 m. N.E. of Breda; *pop.* 8,595.

Ooze, (oöz,) *v. n.* [*A.S. was*, water, *woos*, juice.] To flow or issue gently; to percolate, as a liquid through the pores of a substance, or through small openings.

— *v. a.* To cause to percolate, or flow gently, as a liquid through the pores or small openings.

— *n.* A soft flow or issue, as of water; a spring; as, it is beginning to *ooze*. (*Prior.*) — A soft mud or slime; earth so wet as to flow gently, or easily yield to pressure. — The liquor of a tanner's vat.

Ooz'ing, n. Ooze; that which issues or oozes.

Oozy, a. Miry; containing soft mud; as, the *oozy* bed of a river.

Opac'ity, (-päs-) *n.* [*Fr. opacité*; *Lat. opacitas.*] Opaqueness; the quality of a body which renders it impervious to the rays of light; want of transparency. — Darkness; gloom; obscurity.

Opac'ous, a. [*Lat. opacus.*] Dark; obscure; opaque; not transparent; as, *opacous* bodies.

Opah, n. (*Zoöl.*) The King-fish, *Lampris luna*, a large and beautiful fish, native of the Eastern seas, and weighing from 140 to 150 lbs. The body is of an oval form; the mouth small, without teeth; the dorsal, pectoral, and ventral fins very long, and falciform; and the shape of the tail lunate. The opah, whose colors are particularly rich and showy, is held sacred by the Japanese, who regard it as the peculiar emblem of happiness.

Opal, n. [*Fr. opale*; *Lat. opalus*; *Gr. opallios.*] (*Min.*) A precious stone, consisting principally of silica, with a small admixture of alumina; much valued as a gem, from the beautiful play of colors it exhibits, caused by an infinite number of minute pores or fissures existing in its mass.

Opalesce, (-pal-es',) *v. n.* To scintillate in variety of colors, like the opal.

Opales'cence, n. (*Min.*) The shining lustre of opal.

Opales'cent, a. Reflecting a pearly light from the interior.

Opaline, a. Pertaining to, or resembling opal.

Op'alize, v. a. To transmute into opal, or some substance resembling opal.

Op'al-jas'per, n. (*Min.*) A variety of opal, resembling jasper, but softer, and containing iron.

Opaque, (o-päk',) *a.* [*Fr.*; *Lat. opacus.*] Dark; obscure; gloomy. — Impervious to the rays of light; not transparent.

— *n.* Opacity; opaqueness.

Opaque'ness, n. The quality of being impervious to light; want of transparency; opacity.

Ope, a. [Abbreviated from *open*.] Open; as, "the door was *ope*." — *Dryden*.

— *v. a.* and *v. n.* To open; to uncloze: — used poetically. **Opel'ika**, in *Alabama*, a city, cap. of Lee co., 29 m. N. W. of Columbus. *Pop.* (1897) 4,020.

Opelousas (-o-pe-loo'sas), in *Louisiana*, a post-town, cap. of St. Landry parish, about 50 m. W. of Baton Rouge. *Pop.* (1897) 1,725.

Open, (öpn,) *a.* [*A.S. openian*, to open = *Du. open*; *Ger. offen*.] Not shut or closed; allowing access or admission; affording unimpeded ingress or egress; not obstructing motion; also, not locked up or covered over. — used in application to means of passage; as, an *open* door, window, path, &c. — Applied, also, to ways of communication or approach by land or water; as, an *open* port, an *open* sea, the *open* country. — Permissible to be read, used, enjoyed, visited, and the like; public; free to all comers; unrestricted in applicableness; exposed to the view or approach of any one; as, an *open* letter, an *open* prospect, an *open* court or meeting, or, to keep *open* house, that is, to exercise unbounded hospitality. — Expanded; not contracted, warped, or dwarfed; not drawn or shrunk together; as, an *open* flower, her arms were *open* to embrace him. — Frank; sincere; cordial; straightforward; candid; without reservation, duplicity, or disguise; applied to the manifestation of thought and feeling; as, an *open* heart. — Not concealed or hidden; clear; artless; undisguised; natural; apparent; prominent to view or observation; — applied to plans, methods, arrangements, devices, and the like.

"We are to lay open the treasures of the divine wisdom." — *Burnet*.

— Not obstructed; clear of ice; not frosty; mild; moderate; as, *open* weather, the harbor continues *open*, the *open* Polar Sea, &c.

"An *open* winter portendeth a dry summer." — *Bacon*.

— Not settled, arranged, or adjusted; not closed or balanced; as, an *open* policy of insurance, he has an account *open* at his bankers. — Not clouded; not blinded, hoodwinked, or obscured; attentive; not averse to seeing; as, my eyes are *open* to his faults. — Not deaf or unwilling to hear; listening; hearkening; as, he is always *open* to a pitiful tale. — Free to be debated or discussed; not settled, established, or cleared up by decision; as, an *open* question, an *open* argument. — Easily uttered or enunciated; as, an *open* vowel.

(Mus.) Applied to the string of a violin, guitar, &c., when not compressed with the finger; that is, when, without compression, it produces the very note to which it is tuned;—applied also to the note to be tuned.

Open, *n.* Clear space; unobstructed ground; as, the fox ran toward the *open*.

v. a. To make open; to unclose or unbar; to remove any fastening from; as, to *open* a door, drawer, &c. — To break the seal of and unfold; as, to *open* a letter. — To lift or remove a covering from; as, to *open* a box. — To cut through; to lance; to perforate; as, to *open* a vein. — To break, split, cleave, or rend; to divide; as, the ground is *opened* by heat. — To clear; to make by removing obstructions; to prepare for passage; as, to *open* a way. — To spread, enlarge, or expand; as, to *open* the hand. — To unstop; as, to *open* a bottle of wine. — To show; to make the first exhibition of; to interpret; to explain; to reveal; to disclose; as, to *open* a new country. — To communicate; to speak with reserve;—used reflexively; as, he *opened his mind* to me. — To enter upon or begin; to commence; as, to *open* the proceedings, to *open fire* upon the enemy, to *open* a correspondence.

"The cannon's opening roar."—Byron.

To *open up*, to lay open; to disclose; as, the controversy *opens up* a new field of thought.

v. n. To unclose; to be unclose or separated; as, the earth *opened*. — To come into view; to begin to appear; as, a fine prospect *opened* to our view. — To commence; to start; to begin; as, the Five-twenties *opened* at par.

(Sport.) To bark when sighting game; said of a dog.

Open-bill, *n.* (Zool.) A genus of birds belonging to the order of *Grallatores*, and allied to the *Storks* and *Jabirus*. The mandibles of their beak come in contact only at the base and tips, leaving a wide interval between their edges, at the medial portion; the fibres of the horny substance of the bill in this part appearing as if worn away. One species (*Anastomus oscitans*) is whitish, with black tail-feathers; another (*A. lamelliger*) is of a shining black, and remarkable for the stem of each of its feathers terminating in a narrow horny disc, which passes beyond the vane. They are natives of India.

Fig. 1992.
PONDICHERRY OPEN-BILL,
(*Anastomus oscitans*.)

Opener, (*Op'ner*), *n.* One who, or that which, opens.

Open-eyed, (*Op'n-id*), *a.* Watchful; vigilant.

Open-handed, *a.* Generous; liberal; munificent.

Open-hearted, *a.* Candid; frank; generous; impulsively cordial.

Open-heartedly, *adv.* Without reserve; with frankness or cordiality.

Open-heartedness, *n.* Liberality; frankness; sincerity; munificence; generosity.

Opening, *n.* A breach; an aperture; a hole or perforation; a place admitting entrance, as a bay or creek. — Beginning; commencement; first appearance.

Openly, *adv.* Publicly; not in private; without secrecy. — Plainly; evidently; without reserve or disguise.

Open-mouthed, *a.* Greedy; ravenous; clamorous.

Openness, *n.* State or quality of being open; freedom from covering or obstruction; plainness; clearness; freedom from obscurity or ambiguity; freedom from disguise; expression of frankness or candor; mildness, as of the weather.

Open-tide, *n.* Open-time;—said of Spring, &c.

Open-work, *n.* Work filled with interstices, openings, or perforations.

Opequan Creek, rises in Frederick co., Virginia, and flowing N.E. into W. Virginia, enters the Potomac River between Berkeley and Jefferson cos.

Opera, *n.* [It. Sp., and Fr., from Lat. *opera*, work.] (Mus.) A musical drama, in which music forms an essential part, and not a mere accessory accompaniment. As in the higher drama, poetry supersedes the prose of ordinary life, so in the opera, with perhaps as great artistic right, the language of music is introduced at a considerable sacrifice of probability. The libretto or words are, in the modern opera, a peg on which to hang the music, rather than the music an accessory to the written drama. The component parts of an *O.* are *recitatives*, *duets*, *trios*, *quartettes*, *choruses*, and *finales*, accompanied throughout by an orchestra, and the whole is preceded by an instrumental *overture*. Recitative is declamation, which, in its succession of musical sounds and rhythm, strives to assimilate itself as much as possible to the accents of speech, and therefore does not entirely conform to musical rhythm. The accessories of scenic representation are also present, and a ballet (*q. v.*) is also frequently introduced. In some of the German *O.*, and in the French *opéra comique*, spoken dialogue without music takes the place of recitative. Among the different varieties of the *O.* enumerated are the grand *O.* or *opera seria*, of a dignified character; the romantic *O.*, embracing an admixture of the grave and lively; and the comic *O.*, or *opera buffa*, as well as many intermediate varieties. See MUSIC.

Opera-glass, *n.* A short, single or double telescope used in theatres; a lorgnette.

Opera-hat, *n.* A compressible hat; a gibus; a crush-hat worn when attending the opera.

Op'era-house, *n.* A building for the performance of operas.

Operam'eter, *n.* [Lat. *opera*, works, and Gr. *metron*, measure.] A piece of machinery for registering the number of revolutions made by the shafts or wheels of mill-work.

Operance, **Op'erancy**, *n.* Act of operating; operation. (R.)

Operant, *n.* A person who operates; an operator. (R.)

Operate, *v. n.* [Fr. *opérer*; Lat. *operator*, *operatus*, from *opus*, *operis*, work, labor; akin to Ir. and Gael. *obair*; Armor. *ober*, work.] To work; to labor; to act; to exert power or strength, physical or mechanical. — To act or produce effect on the mind; to exert moral power or influence;—often preceding on.

"A plain convincing reason operates on the mind."—Swift.

(Med.) To take suitable or appropriate effect on the human system; as, aperient medicines *operate on* the stomach.

(Surg.) To perform some manual act in a systematic or methodical manner upon a human being, and usually with instruments, with a view to restore soundness or health; as an amputation, lithotomy, phlebotomy, and the like.

—To have agency; to produce any effect.

"Where causes operate freely, . . . the effect will be contingent."—Watts.

v. a. To act; to effect; to cause; to produce by agency. — To place or to continue in operation or action; to work; as, to *operate* a machine, to *operate* in the money-market.

Operat'ie, **Operat'ical**, *a.* Pertaining to the opera; resembling the opera.

Operation, (*-ā'shun*), *n.* [Fr.; Lat. *operatio*.] Act or process of operating; agency; action of power or force, physical, moral, or mechanical; as manual operation. — Process; manipulation; method of working; mode of action; as, "medicinal drugs of rare operation." — *Heytyn*.—Effect; series of acts produced by experiments; result brought about by a definite plan or method; as, military operations. — Eventuation; influence produced.

(Surg.) A methodical manipulative action, as of the hand with instruments.

(Math.) Something to be done;—generally some transformation to be made in quantities, which transformation is indicated either by rules or by symbols.

Operative, *a.* [Sp. *operativo*.] Having the power of acting; exerting force, physical or moral. — Having or exerting agency; active in the production of effects; efficacious.

n. A laboring man; a workman; an artisan; one employed in manufacturing establishments.

Operatively, *adv.* In an operative manner.

Operator, *n.* He or that which produces an effect.

(Surg.) The person who performs some act upon the human body by means of the hand, or with instruments.

Opercular, **Operculate**, **Operculated**, *n.* (Bot. and Zool.) Furnished with a lid or operculum, as the capsules of mosses, or the gills of fishes, and the shells of certain gasteropods.

Operculum, *n.* [Lat. *operio*, I cover.] (Bot.) The lid of anything. The term is applied to the cap of the pitcher of *Nepenthes*; to the loose apex of such fruits as that of *Lecythis*; to the conical limb of the calyx of *Eucalyptus*; and to the body which closes up the spore-case of a moss.

(Zool.) The apparatus supported by four bones which protects the gills of fishes; also the horny or calcareous plate which closes the aperture of univalve shells; and the four calcareous pieces which defend the entrance to the tube of *Balanites* or bell-barnacles.

Operetta, *n.* [It.] (Mus.) A short musical drama of a light character.

Operose, *a.* [Sp. *operoso*; Lat. *operosus*, from *opera*.] Laborious; attended with labor; tedious; troublesome; elaborate.

Operose'ly, *adv.* In a laborious manner.

Operose'ness, *n.* The state of being laborious or operose.

Ophe'lia, *n.* [Gr., useful.] (Bot.) Sometimes called *Agatholes*, a genus of plants, order *Gentianaceæ*. *O. chrysalis* is the medicinal herb known as chiretta or chiretta, which is used by the natives of India as gentian is employed in Europe. The dried plant and root possess great bitterness, and are used to some extent in this country for the sake of their tonic properties.

Ophib'olus, *n.* (Zool.) A genus of serpents, family *Colubidæ*, distinguished by having the body thick, tail and head short, and eyes very small; color black, brown, and red, crossed by lighter. Baird and Girard mention nine species found in the U. States. *O. boylii*, of California, is black, with more than 30 broad, ivory-white transverse bands; length about 30 inches. The King-snake, *O. sayi*, of the Gulf States, is black above, each scale with a large yellow spot in the centre; length about 40 inches. The Thunder-snake, or Chain-snake, *O. getulus*, from New York to Mississippi, is black, crossed above by about 30 narrow lines bifurcating on the flanks; length 30 to 40 inches or more.

Ophir, (*Ō'fer*), an ancient country celebrated for gold. The ships of Solomon and of Hiram, king of Tyre, brought 450 talents of gold to Jerusalem, B. C. 1000. (1 *Kings* ix. 26-28, x. 11, and 2 *Chron.* viii. 17, 18, and ix. 10 and 21.) Jehoshaphat built ships at Tarshish to go to Ophir for gold, about B. C. 913 (1 *Kings* xxii. 48, and 2 *Chron.* xx. 36, 37). Gold from Ophir is also mentioned *Job* xxii. 24, and xxviii. 16; *Psalms* xlv. 9; and *Isaiah* xlii. 12. Its position has not been ascertained, and Arabia, India, and Africa are contended for by different authorities. Josephus considers Malacca to be Ophir, and Sir Emerson Tennent supports this view. Purchas says Ceylon.

But the discoveries made in 1868 of gold deposits on the eastern coast of Africa, and the remains of the ancient workings, give additional force to the ideas entertained by many that thereabouts was the locality of Ophir.

O'phir, in *California*, a township of Butte co.

Ophir, in *Illinois*, a post-township of La Salle co.

Ophir, in *Nevada*, a post-village of Washoe co., abt. 3 m. S. of Washoe City.

Ophicleide, (*of'i-klid*), *n.* [Gr. *ophis*, a serpent, and *kleis*, *kleidos*, a key.] (Mus.) The largest brass wind-instrument of the trumpet species, and forming the bass to that class of instruments. It consists of a conical tube nearly nine feet long, terminating in a bell, like the horn; in this tube are ten holes, all of which are stopped by keys; it has a mouthpiece exactly like that of the serpent, and its compass is from B, the third space below, to C, the fifth additional space above the staff.

Ophid'ians, *n. pl.* [Gr. *ophis*, a serpent.] (Zool.) An order of reptiles which includes all the serpentine species of that class, corresponding to the *Amphibia serpentes* of Linnaeus.

Ophiocar'yon, *n.* [Gr. *ophis*, a serpent; *koryon*, a nut.] (Bot.) A genus of plants, order *Sapindaceæ*. *O. paradoxum* is the Snake-nut tree of Demerara, so called from the large embryo of its seed resembling, in a remarkable degree, a coiled-up snake.

Ophioglossa'ceæ, *n.* (Bot.) The Adder's-tongue, an order of plants, alliance *Tilicales*. DIAG. Ringlese.

distinct, 2-valved spore-cases, formed on the margin of a contracted leaf. They have erect or pendulous stems with a cavity in the middle, instead of pith, and two or three woody bundles placed round it in a ring. Below, the stalks of the leaves and the spike become blended together. Leaves with netted veins sometimes forked. Spores resembling fine powder. The plants of this order are most abundant in the islands of tropical Asia, occurring, however, in the W. Indies, and not uncommon in the temperate latitude of both worlds. *Ophioglossum vulgatum*, the common Adder's-tongue, has been used in medicine as a vulnerary, but it seems to possess that quality as little as the magical virtues once ascribed to it.

Ophiogloss'um, *n.*

[Gr. *ophis*, a serpent, *glossa*, a tongue.] (Bot.)

The typical genus of the order

Ophioglossaceæ, *q. v.*

Ophiol'ogy, *n.* [Gr.

ophis, a serpent, and *logos*,

a discourse.] (Zool.) That

part of the science which

treats of reptiles or serpents.

Ophiomor'phous, *a.* [Gr. *ophis*, and *morphe*, form.]

Having the form of a serpent.

O'phir, (Mount), an isolated mountain of the Malay peninsula, in Lat. 2° 30' N., Lon. 102° 28' E. Height, Nearly 6,000 ft. above the sea. Most of the gold obtained in the peninsula is found around its base.

Ophirville, in *California*, a village of Placer co., abt. 3 m. W. of Auburn.

Ophisian'rus, *n.* (Zool.) See GLASS-SNAKE.

O'phite, *n.* (Min.) A synonym for serpentine, in consequence of its spotted appearance, like the skin of a snake. The name is also sometimes applied to green speckled porphyry.

Ophi'tes, *n. pl.* (Eccl. Hist.) An early sect of Christian heretics, who emanated from the Gnostics, so called from their worshipping the serpent that tempted Eve. They considered the serpent as the father of all the sciences, which, but for the temptation of our first parents, would never have been known.

Ophinchus, *n.* [Gr. *ophinchos*, holding a serpent.] (Astron.) See SERPENTARIUS.

Ophi'rys, *n.* (Bot.) A genus of plants, order *Orchidaceæ*, including the species *O. spifera*, the Bee-flower, or Goat-flower.

Ophin'roids, or **Ophiu'rans**, *n. pl.* (Zool.) An order of *Echinodermata* embracing forms which have the central disc very small in comparison to the size of the arms, and circular, and the arms starting off abruptly from its circumference. Locomotion is effected

Fig. 1993. OPHICLEIDE.

Fig. 1994. — ADDER'S-TONGUE,
(*Ophioglossum vulgatum*.)

by means of spines. Müller and Troschel divide the *O.* into 2 groups: the *Ophiuræ* (Fig. 1995), characterized by simple arms, and the *Euryalæ* (Fig. 975), by branched arms.

Fig. 1995. — OPHIURAN, (group *Ophiuræ*.)

Ophthalmia, (of-thál'me-á.) *n.* [Gr. *ophthalmos*, the eye.] (*Med.*) Inflammation of the eye. Under this head may be included inflammation of all the various parts that enter into the formation of the eye. General ophthalmia is of very rare occurrence, the disease being in the great majority of cases confined to some one of the parts, and having a distinct name; as conjunctivitis, iritis, or corneitis, denoting inflammations of the conjunctiva, iris, or cornea respectively. The most frequent form of ophthalmia is inflammation of the conjunctiva, or white of the eye. It may be caused by the presence of any irritating body, and is frequently produced by cold, when it is known as catarrhal ophthalmia. In it the eyes are bloodshot, the redness being produced by injection of the network of vessels which covers the white of the eye; the lids are swollen, with a good deal of smarting and itching, and a feeling as if there were sand or other foreign body in the eye. There is at first lachrymation, which is soon followed by the secretion of a thin mucopurulent discharge, which accumulates at the corners of the eyes. This is ordinarily a mild and manageable complaint, and may, in most cases, be got rid of by rest, a brisk purgative, and the occasional application of tepid water, or milk and water, to the eye. If the inflammation does not subside in a day or two, the eye may be bathed several times a day with a dilute solution of alum or of sulphate of zinc; and, in severe cases, blood-letting, either general, or more commonly local, by means of cupping-glasses, or leeches applied to the temples. A much more severe form of conjunctivitis is *purulent ophthalmia*, or, as it is frequently called, *Egyptian ophthalmia*, from its having been brought into France by the army returning from the expedition to Egypt during the wars of the first Napoleon. In this all the symptoms of the preceding are greatly aggravated. The conjunctiva is red and swollen, rising up like a wall round the cornea; the eyelids are tense, livid, and often enormously swollen; a copious secretion of mucopurulent matter is poured out, and there is a burning pain in the eye, with inability to bear the light. It requires prompt and decided treatment, as there is always great risk of permanent injury to the eye, from its tendency to produce thickening and granulation of the conjunctiva of the lids, or ulceration and sloughing. In the severer forms of the disease recourse must be had to bleeding, either general or by means of cupping-glasses or leeches, and purgatives, and the various other antiphlogistic means employed. The eye should be frequently cleansed with warm water, or a weak warm solution of alum or bichloride of mercury, and one or two drops of a weak solution of lunar caustic (from two to four grains to an ounce of water) should be let fall into the eyes once or twice a day. Infants of a few days old are often subject to a very severe form of inflammation of the conjunctiva, to which the name of *ophthalmia neo-natorum* (ophthalmia of new-born infants) has been given. In mild cases, bathing or cleansing the eye several times a day with a weak warm solution of alum may be all that is necessary; in severe cases a leech should be applied to the temples, purgatives administered, and a weak solution of nitrate of silver applied to the eye daily. *Strumous*, or *scrofulous ophthalmia*, occurs in children of scrofulous habit, and is chiefly remarkable for the extreme intolerance of light by which it is accompanied. The child keeps its head down, shelters his eye with his hand, and avoids the light. The eye itself presents little appearance of inflammation, merely a faint blush of redness; but in many cases little pustular elevations form upon the edges of the cornea. In such cases the treatment should be chiefly adapted to the constitutional disorder from which it springs. Pure air and exercise, mild aperients and tonics, especially bark and iodine, should be administered, and the general health carefully attended to. Slightly astringent lotions may also be applied to the eyes, and in the earlier stages a few leeches, or blisters behind the ears, are of great service. In *scleritis*, or inflammation of the sclerotica, when pure (but it is apt to be conjoined with inflammation of the conjunctiva, cornea, or iris), the redness of the eye is of a pink tint, forming, when most marked, a zone round the cornea, and gradually shading off towards the circumference of the eye. There is always considerable pain, of a dull,

heavy kind, which often extends all round the orbit, or over the forehead, and is accompanied by an intolerance of light and a profuse secretion of hot tears. Warm fermentations are of service locally; besides which, a dose of calomel and opium at bedtime, followed by a purgative on the following morning, will generally remove the affection. In severe cases, blood-letting, and counter-irritation by means of blisters, are likewise necessary. The other forms of ophthalmia are much less common than the above, and their mode of treatment does not differ materially from that just given.

Ophthalmie, *a.* Pertaining to the eye.

Ophthalmography, *n.* (*Anat.*) An anatomical description of the eye.

Ophthalmologist, *n.* One versed in ophthalmology.

Ophthalmology, **Ophthalmotology**, *n.* [Gr. *ophthalmos*, the eye, and *logos*, discourse.] (*Anat.*) A treatise on, or description of the eye.

Ophthalmometer, *n.* [Gr. *ophthalmos*, eye, and *metron*, measure.] (*Anat.*) An instrument for measuring the capacity of the anterior and posterior chambers of the eye in anatomical experiments.

Ophthalmoptosis, *n.* [Gr. *ophthalmos*, and *ptosis*, a fall.] A protrusion of the whole globe of the eye.

Ophthalmos, *n.* [Gr., an eye.] (*Photography*.) A new instrument for taking photographic views of scenery. It consists of a camera, provided with mechanical contrivances for automatically uncovering and covering the lens and exposing the plate. The *O.* is attached to a small balloon, and is sent up without an operator, and at any required height, it is asserted, takes a picture of the surface of the earth beneath it, with all the bearings of the compass accurately marked.

Ophthalmoscope, *n.* [Gr. *ophthalmos*, eye, and *skopein*, to view.] (*Med.*) An instrument which, by reflecting the light on the retina, enables the condition of the interior of the eye to be appreciated.

Ophthalmoscopy, *n.* [Gr. *ophthalma*, and *skopeo*, to behold.] (*Med.*) The art of judging of the temper, &c., of a person, by examining his eyes.—The art of judging of health or disease by inspection of the eye.

Ophthalmus, *n.* (*Med.*) See OPTHALMIA.

Opiate, *n.* [Fr. *opiat*, from Lat. *opium*.] (*Med.*) Primarily, a medicine of a thicker consistence than syrup, prepared with opium;—hence, any medicine that contains opium, or has the quality of producing sleep or repose; a narcotic.

—That which produces rest or inaction; that which quiets uneasiness.

—*a.* Inducing sleep; soporiferous; somniferous; narcotic.—Causing rest or inaction.

—*v. a.* To lull to sleep; to subject to the influence of an opiate.

Opiated, *a.* Mixed with opiates; under the influence of opiates.

Opiferous, *a.* [Lat. *ops*, help, *fero*, to bear.] Bringing help.

Opine, *v. a.* To think of or about.

Opinative, *a.* Stiff in a preconceived notion, or opinion.—Imagined; not proved; founded on mere opinion.

Opinatively, *adv.* Conceitedly; in an opinative manner.

Opinateness, *n.* The state of being opinative.

Opinion, (*op-in-yun*), *n.* [Fr.: Lat. *opinio*, *opinionis*, from *opinor*, to suppose, deem, believe, think; akin to Hind. *pindar*, Pers. *pandar*, opinion.] Sentiment; notion; persuasion; belief; that which is opined; settled judgment in regard to any point of knowledge or action; the judgment which the mind forms of any proposition, statement, theory, or event, the truth or falsehood of which is supported by a degree of evidence that renders it probable, but does not produce absolute conclusiveness or certainty.—The judgment which the mind forms of persons or their qualities; particularly, favorable judgment; estimation.—Sentence; judgment; censure. (*R.*)

(*Law.*) The formal decision of judgment given by a judge, arbitrator, or other legal referee or counsellor, officially called upon to consider and determine the merits of a case of difficulty or dispute.

Opinionate, **Opinionated**, *a.* Stiff in opinion; firmly or unduly adhering to one's own opinion; obstinate in opinion.

Opinionately, *adv.* Stubbornly; obstinately.

Opinative, *a.* Unduly attached to one's own opinions; fond of preconceived notions.

Opinatively, *adv.* With undue fondness for one's own opinions; stubbornly.

Opinateness, *n.* Obstinacy; excessive attachment to one's own opinions.

Opinioned, *a.* Conceited; attached to a particular opinion.

Opinionist, *n.* [Fr. *opinioniste*.] One fond of his own notions.

Opisthotonos, (*Med.*) A violent spasm of the muscles of the back; a convulsion by which the patient is bent backwards like a bow, the body resting on the back of the head and the heels, a perfect arch being formed beneath. One of the spasmodic contortions of *tetanus*, or rigid spasm.

Opium, (*op-e-um*), *n.* [Gr. *opos*, juice.] (*Chem.*) The inspissated juice of a species of poppy (*Papaver somniferum*), originally a native of the East, but now naturalized throughout most of Europe. The best *O.* is procured by making longitudinal incisions in the green capsules, which contain a prodigious number of seeds. The incisions are made during the evening, and the milky juice which exudes is allowed to remain for 24 hours to acquire consistence, when it is removed, and the process repeated. The period of sowing this poppy is in the autumn, when the seeds are the only object,

and at the end of the following July, or beginning of August. The root of the plant is annual, and gives out a stem from two to four feet in height, which is glaucous. The flowers are terminal, white or light gray, and three or four inches in diameter. *O.* is the most energetic of narcotics, and one of the most valuable of all medicines. In procuring relief from pain at all times, it is invaluable; it is an efficient remedy in cholera, spasmodic affections, convulsions, tetanus, neuralgia, &c. It is most commonly used for the purpose of procuring sleep; but its habitual use is attended with very pernicious effects. A full dose is exhilarating; but if taken in large quantities, it produces dangerous and fatal results. *Laudanum* is a liquid preparation of *O.* made with alcohol, and its effects on the human system are similar to those of *O.* The principal countries in which *O.* is prepared are India, Turkey, and Persia. Indian *O.* is of three kinds, of which the chief are Patna, grown in the provinces of Bahar and Benares, the former of which is most esteemed; the third kind, produced in the province of Malwa, is still less esteemed than that of Benares. The best-esteemed *O.*, however, is that obtained from Turkey. The *O.* of commerce is in masses of different sizes. It is rather hard, brown in color, and possesses a bitter, acrid, and nauseous taste. Its odor is characteristic, and when heated in the air it kindles, but does not burn readily. Its analysis shows that it contains acidulous meconate of morphia, extractive matter, mucilage, fecula, resin, fixed oil, caoutchouc, a vegetable substance, debris of vegetable fibres, occasionally a little sand, together with a white crystalline salt of *O.*, known as *nicotine*.

Opium alkaloids. The *morphine*, *codeine*, *papaverine*, *narcotine*, *thebaine*, *narcine*, and *meconine*, all of which form well-marked salts with the acids. *O.* also contains *meconic* and *thebolic* acids. These principles are very fully described in Miller's "Elements of Chemistry," Part III., to which the student is referred. They are extracted from opium by a very simple process. They exist in the raw drug as difficultly crystallizable meconates. Chloride of calcium is, therefore, added to the aqueous solution, by which means the more easily crystallizable hydrochlorates of the bases are formed in the liquid, and meconate of lime is precipitated. From the clear solution the hydrochlorates of morphine and codeine crystallize first, leaving the others dissolved in the mother-liquor. The morphine and codeine salts are separated by solution in water, to which excess of ammonia is added. This throws down the morphine, the hydrochlorates of codeine and ammonia remaining in solution. Morphine is the only base which demands an extended notice. It is found in opium in combination with meconic acid. In the pure alkaline state it crystallizes in short rectangular prisms, soluble in 1,000 parts of cold and 400 of boiling water. The solution has an intensely bitter taste, and turns yellow turmeric-paper to a deep brown. Boiling alcohol dissolves it abundantly; but it is insoluble in ether. Morphine is a powerful sedative, and is much used in medicine, either in the form of hydrochlorate, acetate, sulphate, or citrate; the first-named being the most frequently used. The other bases have no very extended use either in pharmacy or manu.

Opobalsam, *n.* [Gr. *opos*, juice, and *balsamos*, the balsam-tree.] The balm of Gilead. See BALSAMODENDRON.

Opodeldoc, *n.* (*Pharmacy*.) A term invented and formerly applied by Paracelsus to a plaster for all external injuries; but in modern usage it signifies a liniment made by dissolving soap in alcohol, with the addition of camphor and volatile oils.

Oporto, or **PORTO**, an important city and seaport of Portugal, on the Douro, 2 m. from its mouth, 174 m. N. E. of Lisbon; Lat. 41° 8' N., Lon. 8° 37' W. Situated on a steep declivity on the right bank of the river, the appearance of *O.* from the sea is picturesque and imposing; but this general and pleasing distant appearance, however, is materially altered on a closer inspection, when the actual narrow, crooked, and dirty character of the streets and lanes, constituting a large part of the town, are investigated by a progress over the city. *O.* possesses many churches and convents, but no monument worthy of a special notice. There are 4 colleges, an academy of navigation and commerce, a school of medicine and surgery, and other literary and scientific institutions. *Manuf.* Silk, cotton, woollen and linen fabrics, ropes, tobacco, soap; also, ship-building. The harbor within the bar across the mouth of the Douro can only be entered by large vessels at high water. Owing to her situation, *O.* is the emporium for a large portion of Portugal, and has an extensive commerce. The principal export is a red wine called Port, produced on the banks of the Douro. The climate is generally damp and foggy; in winter the cold is very severe, but in summer the winds from the E., S., and W. moderate the intensity of the heat. *O.* occupies the site of the ancient *Portus Cale*, from which the name Portugal is derived. It was taken and sacked by the French in 1805.

Opussum, *n.* (*Zoöl.*) See DIDELPHIDÆ.

Opussum Creek, in Pennsylvania, enters the Conewago Creek in Adams co.

Op'eln, a town of Prussian Silesia, on the Oder, 51 m. S. E. of Breslau. *Manuf.* Linen, leather, ribbons, and earthenware. *Pop.* 10,223.

Oppenheim, (*op-pen-hime*), in New York, a post township of Fulton co.

Op'pidan, *n.* [From Lat. *oppidum*, a town.] An appellation given to those students of Eton College, England, who board in the town, and not in college.

Op'pido, a town of S. Italy, prov. of Reggio, 14 m. N. E. of Reggio; *pop.* 6,210.

Oppo'uency, *n.* [L. Lat. *opponentia*.] The opening of an academical disputation; the proposition of objections to a tenet; an exercise for a degree.

Opponent, *a.* [Lat. *opponens*.] Opposite; adverse; opposing.

Opponent, *n.* An adversary; an antagonist; one who opposes; — particularly, one who opposes in controversy, disputations, or argument.

Opportune, *a.* [Fr. *opportun*; Lat. *opportunus*.] Present at a proper time; convenient; fit; suitable.

Opportune, *adv.* Seasonably; at a time favorable for the purpose.

Opportune'ness, *n.* The condition or quality of being opportune or timely.

Opportunity, *n.* [Fr. *opportunité*; Lat. *opportunitas*.] Fit or convenient time; time or occasion favorable for the purpose; suitable time, combined with other favorable circumstances.

Opposable, *a.* Capable of being opposed.

Oppose, *v. a.* [Fr. *opposer*; Lat. *oppono*, *oppositus* — *ob*, and *pono*, to set, to place.] To set or place against; to set or place before, over against, or opposite; to place in front of. — To put into antagonism or opposition, with a view to counterbalance or counteract, and thus to place as an obstacle to prevent effect intended, or to effect unlooked-for results; to act or set against; — with an object, either direct or indirect. — To resist, either by physical agency, by argument, or other means; to act against; — with a direct object. — To act against or strive with, as a competitor; as, to oppose a rival in love. — To resist strenuously; to check effectually.

"I am too weak to oppose your cunning." — *Shaks.*

Oppose, *v. n.* To act adversely; — with *against*. (R.) — To object or act against controversially, or in disputation.

Opposer, *n.* One who opposes; an opponent in party, in principle, in controversy, or in argument; one who acts in opposition; one who resists; an antagonist; an adversary; an enemy; a rival.

Opposite, (*-it*), *a.* [Fr.; Lat. *oppositus*.] Placed in front; facing each other; standing or situated in front. — Adverse; repugnant. — Contrary.

(Bot.) Said of leaves, &c., when placed over against each other. A stamen is said to be opposite a petal when it stands before it, as in the flower of buckthorn (Fig. 1996). — *Gray.*

Opposite, *n.* An adversary; an enemy; an antagonist. — That which is opposed or contrary.

Oppositely, *adv.* In front; in a situation to face each other. — Adversely; against each other.

Oppositeness, *n.* State of being opposite or contrary.

Oppositifolious, *a.* [Lat. *oppositus* and *foliosus*.] (Bot.) Opposite a leaf, as the tendrils of vitis and the peduncles of phytolacca.

Opposition, *n.* [Fr.; Lat. *oppositio*, from *oppono*.] Situation so as to front something else; a standing over against; contrariety. — Attempt to check, restrain, or defeat. — Obstacle; resistance; that which opposes.

(Pol.) The collective body of opponents of the ministry or administration.

(Astron.) The aspect of two bodies when diametrically opposite to each other. Thus, the moon, or a planet, is said to be in opposition with the sun when it passes the meridian at midnight.

Oppositionist, *n.* One who belongs to the party opposing the administration.

Oppositive, *a.* [Fr. *oppositif*.] That may or can be put in opposition.

Oppress, *v. a.* [Lat. *opprimo*, *oppressus*, from *ob*, and *premo*, to press down.] To press down; to depress; to load or burden with unreasonable impositions; to treat with unjust severity, rigor, or hardship; to overpower; to overburden. — To sit or lie heavily on; as, to oppress the stomach with too much food.

Oppression, *n.* [Fr.; Lat. *oppressio*.] The act of oppressing; the imposition of unreasonable burdens; cruelty; severity. — State of being oppressed or overburdened; misery. — Hardship; calamity. — Depression; dulness of spirits; lassitude of body; a sense of heaviness or weight in the breast, &c.

Oppressive, *a.* [Fr. *oppressif*.] Unreasonably burdensome; unjustly severe. — Tyrannical; grievous; onerous. — Heavy; overpowering; overwhelming.

Oppressively, *adv.* In a manner to oppress; with unreasonable severity.

Oppressiveness, *n.* The quality of being oppressive.

Oppressor, *n.* [Lat.] One who imposes unjust burdens on others; one who harasses others with unjust laws or unreasonable severity.

Opprobrious, *a.* [Lat. *opprobriosus*.] Reproachful and contemptuous; scurrilous; abusive. — Blasted with infamy; despised; rendered hateful.

Opprobriously, *adv.* With reproach mingled with contempt; scurrilously.

Opprobriousness, *n.* Reproachfulness mingled with contempt; scurrility.

Opprobrium, *n.* [Lat., from *ob*, and *probrum*, a shame or reproachful act.] Reproach mingled with contempt or disdain; disgrace; ignominy; infamy.

Oppugn, (*op-pūn'*) *v. a.* [Sp. *opugnar*; Lat. *oppugno*, from *ob*, and *pugno*, to fight.] To fight or contend against; to attack; to oppose; to resist.

Oppugnancy, *n.* Opposition; act of oppugning.

Oppugnant, *n.* An opponent; a person who oppugns. (R.)

Oppugnant, *a.* Hostile; opposing.

Oppugnation, *n.* Resistance; opposition.

Oppugner, (*op-pūn'er*), *n.* One who opposes or attacks; that which opposes.

Ops, (*Myth.*) A name of CYBELE, *q. v.*

Optometer, *n.* [Gr. *opsis*, sight, and *metron*, measure.] (Optics.) An instrument for measuring the extent of the limits of distinct vision in different individuals, and consequently for determining the focal lengths of lenses necessary to correct imperfections of the eye.

Optative, *a.* [Fr. *optatif*; Lat. *optativus*, from *opto*, *optatus*, to wish.] Expressive of a desire or wish.

Optative, *n.* (Gram.) That mood or form of the verb in which wish or desire is expressed.

Optatively, *adv.* In an optative manner.

Optic, *n.* An organ of sight; an eye.

Optic, **Optical**, *a.* [Fr. *optique*; Gr. *optikos*.] Relating or pertaining to vision or sight. — Relating to the science of optics.

Optic nerves. (Anat.) The nerves of vision, or the second pair of cerebral nerves, each optic nerve terminating in the retina or camera of the eye, the disc at the back of the ball on which all objects are reflected.

Optically, *adv.* By optics or sight.

Optician, (*op-tish'an*), *n.* [Fr. *opticien*.] A person skilled in the science of optics. — One who makes or sells optical glasses and instruments.

Optics, *n. sing.* [From Gr. *optomai*, to see.] That branch of science which treats of the nature and properties of light; of the changes which it undergoes in its qualities or in its course when passing through bodies of different kinds and shapes, when reflected from their surfaces, or when passing near them; of the structure of the eye, and the laws of vision; and of the construction of those instruments in which light is the chief agent. (For an account of the nature and general properties of light, see LIGHT; and for its physiological action, see EYE.) Like the early history of all the sciences cultivated by the ancients, that of optics is veiled with obscurity; it would appear, however, that soon after the art of glass-making was discovered, lenses and spheres of glass were used as burning-glasses. By referring to the article upon LIGHT, the reader will observe a slight sketch of the history of this science, and also a definition of the two hypotheses on which the propagation of light is accounted for, — the hypothesis of *emission*, and the hypothesis of *undulation*. In this article it is our intention to treat of optics principally as a mathematical science, without regard to either theory, merely tracing by mathematical calculation the results of certain experimental laws. From a bright object light emanates in all directions, and this light may be conceived to be made up of rays. By the term *ray* we intend to express the smallest quantity of light which can proceed in any direction; and we reason concerning rays as if they were geometrical lines. In the same way an object, in order to be a source of light, must be of finite, though it may be of very small dimensions; thus, a bright point, which is a source of light, is considered as a geometrical point. Any substance which allows the transmission of light through it is called a *medium*; and light can proceed either through a medium or in vacuum. A pencil of rays is an assemblage of rays proceeding from a luminous point. In form, pencils are considered conical, and the axis of the cone is called the *axis of the pencil*. A conical pencil may consist either of convergent or of divergent rays, — if the rays are proceeding from some source of light towards a point, the pencil is convergent, and divergent when the rays are proceeding from a luminous point. If rays are parallel, the pencil is neither convergent nor divergent. The direction of a ray of light proceeding in a uniform medium or in vacuum is rectilinear; but when it is incident on the surface of a medium, it is generally divided into three parts. One portion is reflected according to a regular law, and is called the *reflected ray*; another portion enters the medium according to a regular law, and forms the *transmitted or refracted ray*; a third portion is scattered, that is, reflected in all directions, without any regular law. It is the third portion which renders objects visible. There is also a certain portion of light besides the reflected, refracted, and scattered portions, which is *absorbed* by the medium. In the case of polished metallic surfaces, the reflected ray is the only one which sensibly exists; and generally the relative intensities of the reflected and refracted rays vary with the circumstance of the incidence, and also with the nature of the medium. The angle which a ray of light falling upon a plane surface, makes with the line perpendicular to the surface, or the *normal*, is called the *angle of incidence*, and the angles which the reflected and the refracted rays respectively make with the same line are called the *angles of reflection and refraction*. When a ray is incident on a curved surface, it is reflected or refracted in the same manner as if it fell upon the plane which touches the surface at the point of incidence; and the angles of incidence, reflection, and refraction, are those which the incident, reflected, and refracted ray, respectively, makes with the normal to this plane. The following are the laws of reflection: — First, the incident and reflected rays lie in the same plane with the normal at the point of incidence, and on opposite sides of it. Second, the angles of incidence and reflection are equal. And the following are the laws of refraction: — First, the incident and refracted rays lie in the same plane with the normal at the point of incidence, and on opposite sides of it. Second, the sine of the angle of incidence bears to the sine of the angle of refraction a ratio dependent only on the nature of the media between which the refraction takes place, and on the nature of the light. The true law of refraction was discovered by

Willebrod Snell, professor of mathematics at Leyden, in 1613. The discovery was at first erroneously attributed to Descartes. According to the second law of refraction mentioned above, if we call the angle of incidence, ϕ , and that of refraction ϕ' , we shall have $\sin \phi = u \sin \phi'$, where u is a quantity independent of the angles of incidence and dependent only on the nature of the media and light. Thus it will have one value for refraction from a vacuum into glass, and another from glass into water, &c.; it will also have one value for blue light, another for red, and so on. The quantity u is called the *refractive index*, and is greater than 1, when refraction takes place from vacuum into a medium, and, as a general rule, is greater than 1 when the refraction is from a rarer to a denser medium, and less than 1 when the opposite is the case. These laws may be deduced from actual observation by the following experiment, and may be made susceptible of considerable accuracy if proper precautions be taken. Take a rectangular card, and let its opposite sides be bisected by

Fig. 1997.

the lines AEB, CED. Then immerse the card perpendicularly in water as far as the line AB, and place it in such a position that a very small beam of sunlight, admitted through an opening in a shutter of a darkened room, may be incident along the line FE, on the surface of the water E. A portion of this ray will then be observed to be reflected in a direction such as EG; and in measuring CE, CG, they will be found to be equal; hence it will be seen that the angles FEG, GEC, are equal; and it is manifest that FEG, CE, and GE, are in the same plane, as they are all in the plane of the card. Again, the ray EH, transmitted through the water, is the refracted ray, which is also manifestly in the same plane with FE and DE. If, also, the lines CF and DH be measured from different angles of incidence, and CE and HE computed from them, it will be found that the ratio CF : FE :: DH : EH, is the same, whatever be the direction of the ray. The ratio will not, however, be the same if another fluid be substituted for water, or if the color of the light be altered. The names of *prisms* and *lenses* have been given to those transparent bodies which are most useful in optical experiments and in the construction of optical instruments. The different forms of lenses will be found described in the article upon LENS. A prism is a solid piece of glass having three plane surfaces, which are called its refracting faces, the light passing through any two of them. One of the most remarkable and interesting phenomena connected with refraction by prisms is the total reflection which takes place within the transparent medium. The light is far more brilliant than that obtained from polished silver, which gives more reflected light than any other metal. The phenomenon of total reflection may be seen by filling a tumbler with water and holding it above the head, so as to see the image of a candle reflected from the lower side of its surface when at rest. Diamonds and precious stones, and cut-glass ornaments, are often cut so as to return to the eye the light that has undergone total reflection. Another remarkable effect produced by refraction of prisms, is the proof that white light is a compound element. The constituent parts or colors, which compose white light are seven in number, — red, orange, yellow, green, blue, indigo, and violet. The received doctrine of colors depends on the different refrangibility of the rays of light. White light is decomposed into its seven component parts when it is allowed to pass through a prism. A beam of parallel rays is admitted through a small aperture in a window-shutter, and suffered to fall on one side of a prism, through which it passes under peculiar conditions. It does not pass in its original path, but is refracted unequally in its transit; and on leaving the prism it diverges, and casts upon a screen an oblong figure, called the prismatic spectrum, with curved extremities, divided into seven unequal breadths, each breadth occupied by a distinct and separate color. The order of the colors, taking them from the bottom of the spectrum, is as we have given it above, — the red rays being least refrangible and the violet most; and the refractions of the intermediate colors increasing from the red upwards. (See SPECTRUM.) White light is considered to be composed of at least three primary colors, — red, blue, and yellow; and any one of these is complementary to the other two. Thus, when the eye is strongly impressed with one color, it becomes, by some physiological action, pre-eminently fitted to see and appreciate the complement of that color. For instance, if the eye be fixed upon a bright red wafer for some time, and then suddenly directed towards a sheet of plain white paper, a spectral image of the wafer will be seen of a green color; green being the complementary color of red. Orange is the complementary color of blue, and purple of yellow.

Optimacy, *n.* The nobility; the body of nobles. (R.)

Op'timate, *a.* Pertaining to the nobility. (*R.*)

—*n.* The principal person in a city or state; a person of noble rank.

Optime, (*ôp'ti-mé*), *n.* [Lat. *optimus*, the best.] A term applied in the University of Cambridge, England, to those who hold, next after the wranglers, the highest rank as mathematical scholars. There are two classes, *senior optimes* and *junior optimes*.

Optimism, *n.* [Fr. *optimisme*, from Lat. *optimus*, best, suppl. of *bonus*.] The opinion or doctrine that everything in nature is ordered for the best, or adapted to produce the greatest good.

Optimist, *n.* One who holds the opinion that all things are ordered for the best.

Optim'ity, *n.* The state of being best.

Option, (*ôp'shun*), *n.* [Fr.; Lat. *optio*, from *opto*, to wish, to desire.] The power of choosing; the right of choice or election. — The power of wishing; wish. — Election; preference.

(*Stock Exchange*.) A percentage given for the *option* of putting or calling, i. e. selling or buying stock in time-bargains at a certain price.

Opt'ional, *a.* Left to one's wish or choice; depending on choice or preference. — Leaving something to choice.

Opt'ionally, *adv.* With the privilege of choice; in an optional manner.

Optom'eter, *n.* [Fr. *opticomètre*.] (*Optics*.) An instrument for measuring the focal distance of the eye, or the distance at which a minute object is distinctly seen. As the distance varies in respect of different individuals, the instrument is applicable to the purpose of determining the focal length of spectacles required for myopic or presbyopic eyes.

Opulence, *n.* [Fr.; Lat. *opulentia*, from *opulens*, fruitful.] Wealth; riches; affluence.

Opulency, *n.* The same as **Opulence**. (*R.*)

Op'ulent, *a.* [Lat. *opulens*, *opulentis*, rich, abounding in means.] Having a large estate or property; wealthy; affluent; rich.

Op'ulently, *adv.* Richly; with abundance or splendor.

Opuntia, (*ô-pun'she-a*), *n.* [From *Opuntis* (*opis*), a city of Locri, near which it flourished.] (*Bot.*) A genus of plants, order *Cactaceæ*. They are shrubby plants, with articulated branches, the joints usually broad and flattened, with fascicles of prickles regularly arranged upon the surface. *O. vulgaris*, the Prickly Pear, or Indian Fig (Fig. 66), is a curious fleshy plant, native in rocky and sandy places, in America and the S. of Europe. It is often cultivated, and is formed by a series of thick fleshy leaves, growing from the tip or sides of each other, and armed with orange-colored spines. The flowers come forth from the edge of the joints, large, bright yellow, and succeeded by a smooth, crimson, edible fruit. The fruit of *O. tuna* is of a fine carmine color, and has been employed as a water-color. *O. cochinealis*, the Cochineal Fig or Nopal plant (Fig. 637), is cultivated in Mexico and other parts for the nourishment of the cochineal insect.

Opus'cle, **Opus'cule**, *n.* [Lat. *opusculum*, dim. of *opus*, work.] A little work.

Opus'culum, *n.* [Lat.] An opuscle; a small work.

Oquaka, (*ô-kwa'ka*), in *Illinois*, a post-village, cap. of Henderson co., abt. 132 m. N.W. of Springfield.

Or, *conj.* [A. S. *oththe*, *outher*; Ger. *oder*; Lat. *aut*.] A disjunctive particle that marks an alternative, and frequently corresponds with *either*; as, you may come *either* to-morrow *or* the next day. It also frequently connects a series of words or propositions, denoting a choice of either; as, you may love me, *or* hate me, *or* treat me with indifference. — In poetry, *or* is sometimes used for *either*.

"Or to conceal or else to tell." — Cowley.

Or is, again, often employed to signify an alternative of definitions or explications of the same thing in different terms; as, a parallelogram is a right-lined, quadrilateral figure, *or* a figure whose opposite sides are parallel, and consequently equal.

Or, A termination in Latin substantives, denoting an agent, as in *actor*, *debtor*. It is attached to many words of English origin, as in *assessor*. In general, however, *or* is annexed to Latin words, and *er* to those of English parentage.

Or, *n.* [Fr.; from Lat. *aurum*, gold.] (*Her.*) One of the metals employed in blazoning.

Or'ach, *n.* (*Bot.*) See **ATRIPLEX**.

Oracle, (*ôr'a-kul*), *n.* [Fr.; Lat. *oraculum*, from *oro*, to speak.] (*Antiq.*) The answer given by heathen deities to those who consulted them. The name was also applied to the sacred place where these answers were communicated. The credit of oracles was so great that no business of any importance was undertaken without consulting some oracle; and their answers were generally given in dark and ambiguous phrases, so that they might be interpreted to correspond with whatever happened. The responses were given by the priest or priestess of the god, and they frequently consisted of incoherent words uttered in a state of delirium or divine inspiration. Sometimes they were given by signs; as the movement of leaves or the murmuring of the waters of a fountain. Responses were usually given in Ionic hexameters; but on account of the scandal to which their metrical defects occasionally gave rise, they were subsequently given in prose. Apollo was regarded as the great oracular deity, Jupiter being less frequently consulted. The Greeks had no fewer than twenty-two oracles for the consultation of this deity, the most famous being at Delphi. The most important oracles of Jupiter were at Olympia in Elis, and Dodona in Epirus, at both of which he only sent signs for men to interpret. In Italy there were no oracles where the priests

spoke by inspiration. The Romans had not recourse to oracles so much as the Greeks. They trusted more to augury and the Sibylline books. The principal Roman oracles were those of Faunus, in the grove of Albunea, and on the Aventine Hill where the inquirer received his answer in sleep in prophetic visions; those of Fortuna, where the responses were given by lot; and that of Mars, which in early times existed at Tiora Matene, and at which the revelation was given through a woodpecker. By degrees these mysterious deliverances lost their hold upon the public faith. The skeptical few had always secretly ridiculed them as the offspring of subtle, unscrupulous priests; but the politicians looked upon them with favor, as a means of advancing their interests, and not unfrequently directed the responses. Aristophanes made them objects of railery; Demosthenes accused the Pythia of favoring Philip; and Cato of Utica disdained to interrogate Jupiter Ammon. The early Christians attributed the predictions of the oracles to the agency of demons; and Eusebius and others affirmed that they became silent at the birth of Christ; the reason assigned being that Christ then put an end to the power of Satan upon the earth. The Urim and Thummim, and the Bath Kôl (literally daughter of the voice, echo) of the Jews, have been supposed by some critics to resemble the heathen oracles.

Or'acle, *v. n.* To utter oracles.

Orac'ular, *a.* [Lat. *oracularius*] Uttering oracles; pertaining to an oracle. — Resembling an oracle. — Having or pretending to have the authority of an oracle; positive; authoritative; magisterial. — Obscure; ambiguous, like the oracles of pagan deities.

Orac'ularly, *adv.* In the manner of an oracle; authoritatively; positively.

Orac'ularness, *n.* The quality of being oracular.

Orac'ulous, *a.* Uttering oracles; resembling oracles. (*R.*) — Positive; authoritative; dogmatical. — Obscure; ambiguous.

Orac'ulously, *adv.* In the manner of an oracle.

Orac'ulousness, *n.* The state of being oracular.

Or'al, *a.* [Fr. and Sp.; from Lat. *os*, *oris*, the mouth.] Pertaining to the mouth; uttered by the mouth, or in words; spoken, not written; as, *oral* testimony.

Or'ally, *adv.* By mouth; in words, without writing.

Oran, (*ô-ran'*), a town of Algeria, cap. of a province of same name, 200 m. by rail, W. S.W. of Algiers, at the foot of a hill called the Peak of St. Croix. Pop. (1897) 55,500.

Orange, (*ôr'anj*), *n.* [Fr.] (*Bot.*) See **CITRUS**.

—*a.* Pertaining to an orange; of the color of an orange.

Orange, (*PRINCE OF*.) See **WILLIAM III.**

Orange, (*ôr'anj*), a town of France, dept. of Vaucluse, on the Meyne, a tributary of the Rhone, 5 m. E. of the Rhone, and 12 m. N. of Avignon. *Manuf.* Linen, serge, and paper. It is noted for its Roman antiquities, the principal of which are a triumphal arch and a theatre. *O.* was formerly the cap. of a small principal city, which gave the title of *Princes of Orange* to the family now occupying the throne of Holland. The king of Holland, however, merely retains the title, the town and principality having been ceded to France by the treaty of Utrecht in 1713. Pop. (1897) 12,240.

Orange, in *Connecticut*, a post-town and township of New Haven co. Pop. (1897) 4,640.

Orange, in *Florida*, an E. central co. of the peninsula; area, about 1,566 sq. m. *Rivers*. St. John's river, Oklawaha, and many smaller streams. *Surface*, level, undulating, and abounding in lakes. *Noted* for its abundant and delicious oranges. *Cap.* Orlando. Pop. (1897) 14,500.

Orange, in *Indiana*, a S. by W. co.; area, about 400 sq. m. *Rivers*. Patoka and Lost rivers, and Salt creek. *Surface*, level, or pleasantly diversified; *soil*, fertile. *Min.* Carboniferous limestone. *Car.* Paoli. Pop. (1890) 14,678.

—A post-township of Fayette co.

Orange, in *Massachusetts*, a post-township of Franklin co., about 70 m. N.W. of Boston. Pop. (1895) 5,361.

Orange, in *New Hampshire*, a township of Grafton co.

Orange, in *New Jersey*, a city of Essex co., about 3 m. N. N.W. of Newark. Pop. (1895) 22,792.

Orange, in *New York*, a S. E. co., adjoining New Jersey; area, about 791 sq. m. *Rivers*. Hudson, Walkill, and Shawangunk rivers. *Surface*, much diversified, the Shawangunk Mountain traversing the W. part of the co.; *soil*, generally fertile, but better adapted to grazing, and the produce of the dairies are justly celebrated. *Min.* Iron, marble, limestone, and sandstone. *Caps.* Newburgh and Goshen. Pop. (1897) 104,400.

Orange, in *North Carolina*, a N. central co.; area, about 380 sq. m. *Rivers*. Neuse, Eno, and Newhope rivers. *Surface*, undulating; *soil*, fertile. *Cap.* Hillsborough. Pop. (1890) 14,948.

Orange, in *Pennsylvania*, a township of Columbia co. —A post-village of Luzerne co.

Orange, in *Texas*, an E. S. E. co., adjoining Louisiana, area, 390 sq. m. *Rivers*. Sabine and Neches rivers; Sabine lake at the S. extremity. *Surface*, level; *soil*, fertile. *Prod.* Hides, cotton, and wool; lumber and shingles. *Cap.* Orange. Pop. (1897) about 23,000.

—A city, cap. of above co., on Sabine river and So. Pac. R.R., 271 m. E. of Austin; has large lumber and cotton interests; the city is surrounded by immense forests of pine and cypress, which supply nearly a score of saw and shingle mills, employing some 2,000 to 3,000 hands. Pop. (1897) 5,500.

Orange, in *Vermont*, an E. co., adjoining New Hampshire; area, 659 sq. m. *Rivers*. Connecticut river and several branches of White river. *Surface*, diversified mountainous in N.W. *Min.* Iron, slate, granite, &c. *Cap.* Chelsea. Pop. (1897) 19,901.

Orange, in *Virginia*, a N. E. central co.; area, 360 sq. m.; watered by Rapidan and North Anna rivers. *Surface*, hilly; *soil*, fertile. *Cap.* Orange. Pop. (1890) 12,814.

—A post-village, cap. of above co., on Ches. & Ohio, Southern, and P. & P. R. R.s., 85 m. S.W. of Washington, D. C. Pop. (1897) 620.

Orange, in *Wisconsin*, a village and township of Juneau co.

Orange, or **Gariiep**, a river of South Africa, rising near Lat. 29° S., Lon. 30° E., and after a N. W. course of about 1,000 m., falling into the Atlantic, Lat. 28° 30' S., Lon. 16° 30' E.

Orangeade, (*ôr-enj-âd'*) *n.* A beverage made of orange-juice, in a manner corresponding to lemonade.

Orangeat, (*ôr-an-zhâ'*) *n.* [Fr.] Candied orange-peel. — Orangeade.

Orangeburg, in *Kentucky*, a post-village of Mason co., abt. 8 m. S.E. of Maysville.

Orangeburg, in *Mississippi*, a village of Marion co., abt. 80 m. S. by E. of Jackson.

Orangeburg, in *South Carolina*, a S. central district; area, about 1,400 sq. m. *Rivers*. Congaree, North and South Edisto, and Santee rivers. *Surface*, moderately diversified; *soil*, generally fertile. Large quantities of lumber and turpentine are procured annually from the pine forests. *Cap.* Orangeburg. Pop. (1890) 49,373.

—A fine town, cap. of above co., on Atl. Coast Line and S.C. & Ga. R.R.s., 51 m. S. of Columbia. Pop. (1897) 3,450.

Orange Free State, a republic of Dutch origin in South Africa, lying between the Vaal and Orange Rivers, and in contact on the north with the Transvaal or South African Republic, and on the west with the diamond district of Griqualand West, some of the diamond mines being on its territory. On the east are the Drakenberg Mountains. The country is a plateau, from 3000 to 5000 feet high, and is principally devoted to pastoral pursuits, it containing much magnificent pasture land. The area is estimated at 41,500 sq. miles, the white population at over 60,000. Grain is grown; horses, cattle, sheep, goats, and ostriches are raised; coal and diamonds are mined. The capital is Bloemfontein. This country was settled by the Boers who emigrated from Cape Colony, and part of whom settled the Transvaal territory. Great Britain laid claim to it in 1845, but acknowledged its freedom in 1854. In 1899 its people joined those of the Transvaal in their war with Great Britain, and lost their independence in 1902. See **SOUTH AFRICAN REPUBLIC**.

Orang-ou'tang, **Orang-u'tang**, *n.* (*Zool.*)

A monkey belonging to the *Simiade*, and the only species of the genus *Simia*. This animal, *Simia satyrus* (Fig. 1998), is about five feet high, and is covered with coarse, red hair. Its facial angle is 30°; the face is bluish, and the hind thumbs are very short compared with the toes. In Borneo, its native name is *Mias*, and

Fig. 1998. — ORANG-OUTANG, (*Simia satyrus*.)

it is abundant in the S. and W. districts, in low swampy grounds. In his march through the virgin forest, the mias may be seen walking deliberately along the

branches in an erect attitude. Choosing a place where the branches of an adjacent tree intermingle, he seizes the smaller twigs, pulls them towards him, grasps them together with those of the tree he is on, and having so formed a kind of bridge, swings himself forward, and seizing hold of a thick branch with his long arms, is in an instant walking along to the opposite side of the tree. He never jumps, or even appears to hurry himself, and nevertheless moves as quickly as a man can run along the ground beneath. These animals sleep on trees, in a kind of nest they make on leafy branches weaved together, but seldom use the same nest more than once or twice. They do not appear to live in society, though a male and female may occasionally be seen, accompanied by half-grown young ones. They live exclusively on fruits, of which some, that they seem fond of, are intensely bitter.

Orange-leaf, (Oil of), n. See CITRUS.

Orangeman, n.; pl. ORANGEMEN. (Hist.) One of a society instituted in Ireland, in 1795, to uphold the ascendancy of the Protestant religion, and for the discouragement of Catholicism. It was dissolved in 1835 at the instance of the House of Commons, but was revived in 1845, and is still extensively diffused throughout the British Islands and Canada. It has office-bearers, a secret organization, distinctive colors (blue and orange), serious riots took place during processions of the order in New York (1871) and Belfast (1880 and 1886), and numerous minor disturbances have occurred elsewhere.

Orange-root, n. (Bot.) See HYDRASIS.

Orangery, n. [Fr. orangerie.] A kind of gallery, in a garden or parterre, for preserving orange-trees during the winter season. An O. is distinguished from a conservatory by its having an opaque roof, while that of the latter is glazed. The name is also given to a plantation of orange-trees.

Orange-tawny, a. Of a color resembling an orange; of a color between yellow and brown.

—**n.** A color resembling that of an orange.

Orange-wife, n. A woman who sells oranges.

Orange Springs, in Virginia, a post-village of Orange co., abt. 104 m. N.N.W. of Richmond.

Orangetown, or ORANGE, in New York, a township of Rockland co.

Orangeville, in Indiana, a post-village of Orange co., abt. 8 m. N.W. of Paoli.

Orangeville, in Michigan, a township of Barry co.; pop. abt. 500.

Orangeville, in New York, a post-township of Wyoming co.

Orangeville, in Ohio, a post-village of Trumbull co., abt. 7 m. E. by S. of Cleveland.

Orangeville, in Pennsylvania, a post-village of Columbia co., abt. 80 m. N.N.E. of Harrisburg.

Oration, n. [Lat. oratio, from oro, oratus, to speak.] A speech or discourse composed according to the rules of oratory, and spoken in public; a discourse pronounced on a special occasion; an harangue.

Orator, n. [Lat.] A public speaker; a person who pronounces a discourse publicly on some special occasion, as on the celebration of some memorable event; an eloquent public speaker.

(*Law.*) The party who files a bill in chancery.

(*Eng. Universities.*) The principal, and in many cases the only ostensible, agent for the university in all those matters of form which are merely external.

Oratorical, a. Oratorical; pertaining or belonging to oratory, or to an orator.

Oratorially, adv. In an oratorical manner.

Oratorians, or CONGREGATION OF THE ORATORY. (Eccl. Hist.) A society for the exercise of devotion with religious study, was founded in Italy by St. Philip Neri (July 21, 1515–May 26, 1595) in 1550, and called the Order of the Holy Trinity. It received the public approval of Gregory XIII. in 1577. It took the name of the Congregation of the Priests of the Oratory of Jesus, and the rule framed by the Fathers was approved by Paul V., Feb. 21, 1612. The name is derived from the chapel or oratory built by Neri at Florence. The French society of Fathers of the Oratory of the Holy Jesus was instituted by Peter de Berulle in 1613. Dr. Newman introduced the Congregation into England in 1847.

Oratorical, a. Pertaining to an orator or to oratory; rhetorical; becoming an orator.

Oratorically, adv. In a rhetorical manner.

Oratorio, n. [Ital.] (Mus.) A kind of musical drama, consisting of airs, recitatives, duets, trios, choruses, &c. The text is usually derived from some Scriptural subject; as, for instance, that of the "Messiah," of the "Creation," and of "Elijah." The origin of the oratorio is somewhat obscure. The most probable account is that which attributes its invention to St. Philip Neri, who, in 1540, organized, at the new chapel at Rome, certain musical performances, consisting of poems on sacred subjects, sung by first-rate singers, accompanied by the best instrumentalists, for the purpose of attracting large congregations, and of creating a zeal for religion. Though a somewhat profane method of effecting so sacred a purpose, it was entirely successful, and these performances, which at first were only poems in four parts, were, in less than half a century after the death of Neri, in 1593, developed into those splendid compositions called by modern oratorios. Italy, although the birth-place of the oratorio, has produced very few of any note. The Germans, on the contrary, excel in this species of composition; as a proof of this, it is only necessary to mention the names of S. Bach, Haydn, Beethoven, Mozart, and, greatest of all, Handel.

—An oratory; a place of worship.

Oratoriously, adv. In an oratorious manner.

Oratory, n. [Fr. oratoire; Sp. and It. oratorio; Lat.

oratoria, from orator, an orator.] (Eccl. Arch.) The name given by Christians to certain places of religious worship. In early Christian writers, the term is frequently applied to churches in general; but afterwards it came to be confined to private chapels, or places of worship set up for the convenience of private families, yet still depending on the parochial churches, and differing from them in being strictly only places of prayer, and not for celebrating the communion.

(*Rhetoric.*) The art of speaking well, or of speaking according to the rules of rhetoric, in order to persuade; exercise of eloquence; rhetoric. See RHETORIC.

Oratress, Oratrix, n. A female orator.

Oravicza, a town of the S.E. of Hungary, county of Krasso, 53 m. S.S.E. of Temesvar; pop. 5,000.

Orb, n. [Fr. orbe; Lat. orbis.] A hollow or solid body of round form; a sphere; a globe. — One of the celestial spheres. — The eye, as luminous and spherical. — An orbit; a circle described by the revolution of a celestial body. — A period; revolution of time. — A wheel; any rolling body.

—**v. a.** To surround; to encircle; to form into a circle or sphere.

Orb, a town of Bavaria, circle of Lower Franconia, on the Orb, 42 m. N.W. of Würzburg. Manuf. Paper; and it has salt mines and mineral springs. Pop. 4,600.

Orb, or Orbe, a river of France, dept. of Hérault, rising near Roumiers, and, after a S. course of 60 m., flowing into the Mediterranean, 7 m. below the Canal du Midi.

Orbey, (or-ba'), a town of France, dept. of Haut-Rhin, 14 m. W.N.W. of Colmar. Manuf. Cotton, glass, and earthenware. Pop. 5,600.

Orbed, (orbd.) a. Formed into a circle or round shape; round; circular.

Orbic, Orbical, a. Spherical.

Orbicular, a. [Fr. orbiculaire; L. Lat. orbicularis, from orbiculus, a small disc.] Circular; spherical; globe-shaped.

Orbicularly, adv. In a circular manner or form; spherically.

Orbicularness, n. The state of being orbicular.

Orbulate, n. A figure whose horizontal section is circular, and vertical section oval.

Orbulate, Orbulated, a. Made or being in the form of an orb; rounded; circular.

(*Bot.*) Circular, or nearly circular, as the leaves of *Pyrola*.

Orbicular, n. (Bot.) A thick, solid mass covering over the ovary and adhering to the stamens. *Lindley.*

Orbisoria, in Pennsylvania, a post-borough of Huntingdon co., about 81 m. W. of Harrisburg.

Orbit, n. [Lat. orbita, from orbis, a sphere; Fr. orbite.] (Astron.) The path which any celestial body describes by its proper motion. The O. of all the planets and satellites are ellipses; and recent discoveries seem to show that the orbits of double stars, which revolve about each other, are curves of the same kind. Some comets have been supposed to move in parabolic or hyperbolic orbits.

(*Anat.*) The bony cavity in which the eyeball is imbedded. Each O. in man is formed by seven bones — the frontal, maxillary, jugal, lachrymal, ethmoid, palatine, and sphenoid. The number of orbital bones, and the portion and degree of circumscription of the O., vary much in lower vertebrates.

(*Zoöl.*) In Crustacea, that portion of the carapace in crabs and lobsters (*Decapoda*) to which the eye is attached, and the groove into which the eye and its peduncle are retracted. — In Ornithology, this term is applied to the skin which surrounds the eye; this is generally bare of feathers, for the facility of its movements, but especially so in the parrot tribe and the heron.

Orbital, Orbitor, a. Pertaining to an orbit, or to the orbit of the eye.

Ore, Orca, n. [Lat. orca.] (Zoöl.) A name of the Grampus. See DELPHINIDE.

Oreades, (or'ka-dēz.) (Anc. Geog.) Ancient writers represent this group, at the extreme N. of Britannia, to consist of between 30 and 40 small islands, supposed to be the modern Orkney and Shetland Islands, q. v.

Ore'dian, a. (Geog.) Belonging, or pertaining to the Orkney Islands.

Oreagna, ANDREA, (or-kan'yā.) a corruption of L'ARCAGNOLA, one of the greatest of the early Italian painters, combined in his works the severity and grandeur of Giotto, with the softness and tenderness of Simone and the Lorenzetti. He was great also as a sculptor and architect. Few of his frescoes have escaped the ravages of time and the restorer, so that they have now little attraction except for art-students. His greatest works were, the frescoes in the choir of Santa Maria Novella, hopelessly damaged soon after their completion; frescoes of the *Last Judgment, Paradise and Hell* in the Strozzi chapel; altar-piece in the same chapel, executed in 1357; and as sculptor and architect, the Tabernacle of the church of Or San Michel, completed in 1359. O. executed a mosaic for the cathedral of Orvieto in the following year. The great frescoes of *The Triumph of Death, The Last Judgment, and Hell*, in the Campo Santo of Pisa, are attributed to him by Vasari, whose assertion is stoutly controverted on internal evidence by recent critics. D. at Florence, in or before 1376.

Orchal, n. (Chem.) The same as ARCHIL, q. v.

Or'chard, n. [A. S. ortgeard.] An inclosure or assemblage of fruit-trees, especially of apple-trees, peach-trees, &c.

Or'charding, n. The cultivation or care of orchards.

Or'chard Grass, n. (Bot.) See DACTYLIS.

Orchella, (or-chee'ya.) an island of Venezuela, in the Caribbean Sea, abt 80 m. N.W. of Tortuga; Lat. 11° 50' N., Lon 66° 14' W. It has an area of abt. 15 sq. m., with a low surface and arid soil.

Orchella-weed, n. (Bot.) A species of lichen, *gen. Roccella*. See ARCHIL.

Orchestra, Orchester, (or'kes-tra,) n. [Gr. orchestra, from orcheomai, to dance.] That part of a theatre between the stage and the audience, where, among the Greeks, the chorus danced. — In modern theatres, that part of the building appropriated to the musicians. — The body of performers in the orchestra, or the collective mass of instruments employed.

Orchestral, (or'kes-tral,) a. Pertaining to an orchestra; suitable for, or performed by, an orchestra.

Orchestra'tion, n. (Mus.) Same as INSTRUMENTATION, q. v.

Orchidaceæ, n. [From Lat. orchis.] (Bot.) The

Orchid family, an order of plants, alliance *Orchidales*. *Diag.* Irregular gynandrous flowers and parietal placenta. — They are herbaceous plants or shrubs, always perennial, occurring all over the world, except in the very coldest regions, or those where everlasting dryness reigns. The O. are distinguished by the peculiar form which one piece of the perianth (labelum, or lip) assumes in many cases, so as to cause the flower to resemble some insect, reptile, or bird; by its pollen cohering in grains or waxy masses; and by its 1-celled inferior ovary. The orchids are remarkable for the singularity, beauty, and fragrance of their flowers; and new species or varieties are highly prized by horticulturists. *Vanilla* (Fig. 1211) is the most important commercial product of this order, which includes 394 genera and about 3,000 species.

Orchidaceous, Orchideous, a. (Bot.) Belonging to the order *Orchidaceæ*.

Orchidales, n. pl. (Bot.) An alliance of plants, class *Endogens*. *Diag.* 1 to 3 stamens, and seeds without albumen. The alliance is divided into 3 orders, viz.: BURMANNIACEÆ, ORCHIDACEÆ, and APOSTASIACEÆ, q. v.

Or'chil, Or'chilla, n. The same as ARCHIL, q. v.

Orchis, (or'kis,) n. (Bot.) The typical gen. of the ord. *Orchidaceæ*. The roots of several species, as those of *O. mascula* and *O. morio* (Fig. 1999), when dried, form the European or indigenous *salep*. That prepared from the first-named species is said to be the best. *Salep* contains the principle called *bassorin*, and a little starch; it possesses similar properties to those of starchy and mucilaginous substances generally. *O. spectabilis*, the Showy orchis, is a pretty little plant found in shady woods and among rocks.

Or'cine, n. [Fr.] (Chem.) A white crystalline substance found in the lichens used for the preparation of archil and litmus. It crystallizes in 6-sided prisms, which are very soluble both in water and alcohol. Exposed to air and light, orcine turns red. *Form.* C₁₄H₈O₄.

Ordain', v. a. [It. and Lat. ordinare, to set in order, from ordo.] To dispose; to arrange; to regulate; to establish in a particular office or order; — hence, to invest with a ministerial function or sacerdotal power. — To appoint or decree; to establish; to institute. — To constitute; to set apart for an office.

Ordain'able, a. Capable of being ordained or appointed.

Ordain'er, n. One who ordains, appoints, or invests with sacerdotal powers.

Ordain'ing, a. Investing with sacerdotal functions; establishing; appointing.

Ordainment, n. Act of ordaining. (*R.*)

Ordeal, n. [A. S. ordael, from or, great, and dele, judgment.] A manner of trial practised in the Middle Ages, being founded upon the belief of an actual interposition of God to free the innocent and condemn the guilty. Hence it received the name of *Judicium Dei* (God's judgment). Perhaps the earliest trace of this practice is to be found in the "waters of jealousy," mentioned in the book of *Numbers* (ch. v.), which the Hebrew women suspected of incontinency were required to drink as a test of their innocence. It appears to have been practised also by the ancient Greeks; for in the *Antigone* of Sophocles, a person suspected by Creon of a misdemeanor, declares himself ready to "handle hot iron and to walk over fire;" and Grotius gives many instances of water-ordeal in Bithynia, Sardinia, and other places. The ordeals common in Europe in the Middle Ages were of two kinds, viz., fire and water; the former being chiefly confined to persons of high rank, the latter to the common people. Fire-ordeal was performed either by taking up in the hand unhurt a piece of red-hot iron, or else by walking barefooted and blindfolded over nine

red-hot ploughshares laid lengthwise at unequal distances. If the party escaped unhurt, he was adjudged innocent; but if not, as without collusion was usually the case, he was condemned as guilty. The water-ordeal was performed either by plunging the bare arm up to the elbow in boiling water, and escaping unhurt thereby, or by casting the person suspected into a river or pond of cold water; and, if he floated without swimming, it was evidence of his guilt; but if he sunk, he was acquitted. The judicial combat or duel was a very common mode of appealing to heaven, in Germany, in early times. The *carsued*, or consecrated bread and cheese (*panis ordeaceus*), was the ordeal to which the clergy commonly appealed when accused of any crimes. If the culprit swallowed the bread and cheese freely, he was declared innocent; but if it stuck in his throat, he was pronounced guilty. A decree of the fourth Lateran council (1215) was issued, declaring against any trial by ordeal, as being the work of the devil.

—Severe trial: elaborate scrutiny.

Ordeal, *a.* Of, or pertaining to the trial by ordeal.

Order, *n.* [Fr. *ordre*; Lat. *ordo*, a regular series.] Regular disposition, or methodical arrangement, or established sequence or succession: as of material things, like the accounts in a ledger; of intellectual abstractions, like the heads of a sermon; of periods of time, or events, or the like.

"Order is Heaven's first law."—Pope.

—Proper state or condition: normal or befitting state; becoming appearance; as, we found everything in *order*. —Established method or rule of proceeding; settled mode of operation; fixed manner of usage; custom; fashion.—Regular government, authority, or discipline; favorable condition resulting from conformity with established law; public tranquillity; general quietude; as, to preserve *order*.—Authoritative direction; precept; mandate; injunction; special rule; as, a judicial *order*, he issued strict *orders* not to be disturbed.—That which prescribes a stated course of regulation, rule of government, or method of procedure; adherence to the point in discussion; according to established rules in debate; regularity; as, the standing *orders* of a legislative body.—Necessary provision or care; preparatory measures.

"I take *order* for my own affairs."—Shaks.

—A commission to effect purchases or furnish goods or wares; a written command to pay money; a free pass, as to a place of public entertainment; as, a money-*order*, an *order* for groceries, an *order* to the pit of a theatre.—A regular row or series; a rank; a grade; particularly, a rank or class in the community; a division of persons occupying the same social status;—hence, a privileged grade of men; as, the higher *orders* of society.

(*Her. and Eccl.*) The word *order* is applied to an aggregate of conventional communities comprehended under one rule, or to the societies, half military, half religious, out of which the institution of knighthood sprang. Religious orders are generally classified as *monastic*, *military*, and *mendicant*.—See KNIGHTHOOD, and MONACHISM. (*Eccl.*) An ordinal.

(*Arch.*) A system or assemblage of parts subject to certain uniform established proportions, regulated by the office which each part has to perform. There are 5 classical orders, distinguished by the base, capital, and entablature of their columns,—viz., the *Tuscan*, the *Doric*, the *Ionic*, the *Corinthian*, and the *Composite*. See ARCHITECTURE and COLUMN.

(*Zool.*) The subdivision of a class, characterized by a complication of the general plan of structure. Orders are further divided into *families*, and the families into *genera*, which are again subdivided into *species*.

(*Bot.*) A division inferior to *class*, but superior to *family*, and comprising those genera which, though varying in some respects from each other, have the essential characters alike. Thus mustards, turnips, radishes, and cabbages, all belong to different genera, but they all agree in their general structure, and are hence included in the order *Brassicaceæ*. The orders are the most important of all associations in botany, and on their accuracy and distinctness botanists have bestowed the highest degree of attention. The term *natural order* is used to express genuine relationship, in distinction to artificial grouping.

(*Math.*) A term frequently used synonymously with *degree*. Thus the order of a curve or surface is the same as the degree of its equation.

(*Mil.*) A general order is the command or bulletin which a commanding officer issues to the forces of his command.—An *order of battle* is the plan or disposition of troops preparatory to the strategic manœuvres incidental to a general engagement.

(*Pol.*) In legislative bodies, one method of superseding a question already proposed to the House is by moving "for the *order of the day* to be read." This motion, to entitle it to precedence, must be for the order generally, and not for any particular order; and, if this is carried, the orders must be read and proceeded on in the course in which they stand. But it can be in its turn superseded by a motion "to adjourn."

Order, *v. a.* To set or place in order; to methodize; to reduce to systematic rules; to adjust, with reference to a definite result.—To subject to system or method in management or execution; to conduct; to dispose; to regulate.—To command; to direct; to give an order to; as, he was *ordered* off about his business.—To ordain; to admit to holy orders; to receive into the fold of the Christian ministry.

—*v. n.* To give command, direction, or instruction.

Orderable, *a.* Capable of being ordered, or of receiving orders.

Orderer, *n.* One who gives orders; one who methodizes or regulates.

Ordering, *n.* Disposition; distribution; management.

Orderless, *a.* Without order or regularity; disorderly.

Orderliness, *n.* State of being orderly or methodical; regularity.

Orderly, *a.* Methodical; regular; systematic.—Observant of order or method; well-regulated.—Performed in good order; not tumultuous; according to established method; not unruly; not inclined to break from inclosures; peaceable; as, an *orderly* march.—Being on duty; as, an *orderly* officer, or officer of the day.—*adv.* Methodically; according to due order; regularly; according to rule.

—*n.* (*Mil.*) A non-commissioned officer, who accompanies a superior officer, for the purpose of bearing orders, or to render other services.

Orders, (*Holy*), *n. pl.* (*Eccl.*) In the Roman and Greek churches, a sacrament by which ministers are specially set apart for the service of religion, and are regarded as receiving a certain religious consecration, or, at least, designation for their office. While some of the reformed churches altogether deny the distinction of ranks in the ministry, none of them admits more than three ranks, of *bishop*, *priest*, and *deacon*. But in the Roman and Greek churches, a further classification exists. In the Roman Church, a distinction is made between the major (or holy) orders and the minor orders. The major orders are the classes of bishops, priests, and deacons. A fourth rank of sub-deacons is generally regarded as one of the major orders, but its functions closely resemble in their nature and their degree those of the deacon. The minor orders in the Roman Church are four in number—those of *door-keeper*, *reader*, *exorcist*, and *acolyte*. To none of these orders is any vow of celibacy annexed. Some of their functions had their origin in the peculiar religious condition of the early church. Preparatory to the receiving of these orders, candidates are initiated in what is called the *tonsure*, which consists in the cutting off of the hair, as a symbol of separation from the world and its vanities—a rite which appears also as one of the ceremonies of the religious profession. The tonsure, however, is not reckoned as an order; it is but a distinguishing characteristic of a class. In the Roman Catholic Church, the sacrament of orders is held to produce an indelible character, and therefore to be incapable of being forfeited and of being validly repeated. This, however, applies only to the holy orders.

Ordinal, *a.* [Fr.; Lat. *ordinalis*, from *ordo*, *ordinis*.] Noting order of succession; as, the *ordinal* numbers, first, second, third, &c.

—*n.* A number noting order; as, first, second, &c.—A book containing the ordination service, as prescribed in the Anglican Church.

Ordinalism, *n.* The quality of being ordinal. (*R.*)

Ordinance, *n.* [Fr. *ordonnance*, from Lat. *ordino*.] A law, rule, prescript, or command of a sovereign or superior. This term, now almost obsolete in England, has been sometimes applied in America to acts of regulation of Congress, as the *ordinance* of the 15th July, 1787, or the government of the North-Western Territory, and more usually to the laws of a corporation; as, the *ordinances* of the city of Philadelphia.

(*Eccl.*) An established rite, such as baptism, the Lord's supper, &c.

Ordinand, *n.* [Lat. *ordinandus*.] A person about to be ordained.

Ordinant, *n.* The person who ordains.

Ordinarily, *adv.* Primarily; according to established rules or settled method; commonly; usually; generally; customarily; habitually.

Ordinary, *a.* [Lat. *ordinarius*, from *ordo*, *ordinis*, order.] According to established rules; methodical; regular; customary.—Of common rank; not distinguished by superior excellence.

—Common; usual; as, the *ordinary* routine of life.—Plain; not handsome; as, of *ordinary* form or figure.—Inferior; of little merit; as, an *ordinary* writer.

—*n.* (*Common Law*.) One who has ordinary or immediate jurisdiction, in matters ecclesiastical, in any place. In this sense, archdeacons are ordinaries; but the term is more frequently applied to the bishop of a diocese, who, of course, has the ordinary ecclesiastical jurisdiction, and the collation to benefices within such diocese. An archbishop is the ordinary of the whole province, having power to visit and receive appeals from inferior jurisdictions. The Roman Catholic writers on canon law call the Pope *ordinary of ordinaries*.

(*Navy*.) The establishment of the shipping not in actual service. An *ordinary seaman* is one not qualified to take the helm or sail the ship.

—A settled establishment. (*R.*)—A restaurant or dining-room where meals are served at one fixed price.

(*Her.*) That portion of the shield comprised between straight or other lines. It is the simplest species of bearing, usually comprising, when charged, one-third, and when uncharged, one-fifth of the field. Many of the most ancient escutcheons known contain no other bearing, although in others, also of great antiquity, the ordinary itself is charged with some device. Morgan says, "the plainer the coat, the nearer antiquity; and fields full of charge are empty of honor." The nine honorable ordinaries (Fig. 2000) are: the (1) *Chief*, (2) *Pale*, (3) *Scotcheon*, (4) *Bar* (containing one-fifth of field), (5) *Fess* (containing one-third of field), (6) *Brind*, (7) *Chevron*, (8) *Cross*, (9) *Saltier*, and in French heraldry (10) the *Bordure*; but a number of others are in use, as the *Chevronel*, or couple-close, half the size of the *Chevron*; *Closet*, half the size of the *Bar*; *Barrulet*, half the size of *Closet*; *Bendlet*, half the width of *Bend*;

Garret, one-third; *Ribbon*, one-fourth; and the *Cost*, of same size, *couped*. *Baton* (*m*) and the *Bend sinister* are marks of bastardy. *Pallet*, half the size of *Pale*; *Farty per pale* (*a*), a line dividing shield vertically; *Lozenge*

Fig. 2000. — 1 to 10. HONORABLE ORDINARIES.

a, Party per pale; *b*, Cross of St. John; *c*, Cross paton; *d*, Cross moline; *e*, Cross bumette; *f*, Cross boltonce; *g*, Cross croslet fitchee; *h*, Cross flory; *i*, Cross maslee; *k*, Cross fitchee; *l*, Lozenge fleury; *m*, Baton; *n*, Arms of Cleborne (A. D. 1237).

fleury (*l*), and various forms of crosses. A Fess removed to the upper part of the escutcheon is termed a *Chief*, and is deemed an honorable augmentation. When a Border is used as a *difference* (as in English heraldry, to distinguish one branch or part of a family from another of the same stem), it should run under the Chief, but over all other ordinaries. When more than two *Chevrons* are borne, they are interlaced or braced, as in the ancient scutcheons of De Cleborne (*n*, Fig. 2000), and the Lords Fitzhugh.

Ordinate, *a.* [Lat. *ordinatus*, from *ordino*, from *ordo*, *ordinis*, order.] Regular; methodical.

—*n.* (*Geom.*) The distance of any point of a curve from the axis of abscissas measured on another line called the *axis of ordinates*, or on a line parallel to this axis.—*Worcester*.—See ABSCISS and CO-ORDINATE.

Ordinately, *adv.* In a regular, methodical manner. (*R.*)

Ordination, *n.* [Fr., from Lat. *ordinatio*; *ordino*, *ordinare*, to set in order, to ordain.] The act of ordaining.—The state of being ordained or appointed; established order or tendency consequent on a decree.

(*Eccl.*) The act of conferring holy orders or sacerdotal power in the Christian ministry. (See ORDERS, HOLY.)

Ordinative, *a.* [Lat. *ordinativus*.] Indicating or signifying order; giving order. (*R.*)

Ordinance, (*ord'nans*), *n.* (*Mil.*) A term applied generally to all kinds of heavy artillery used in war, as cannon, mortars, carronades, howitzers, &c. It is probable that the name was derived from the *compagnies d'ordonnance*, or Franks archers, instituted by Charles VII. of France in 1448. The forms and methods of field and siege artillery have received so many developments of late years, and are even now progressing so rapidly, that it is impossible to do justice to the Science of Artillery within the limits of an article. In conformity with the general plan of this work, the subject has been treated under CANNON, GUN, RIFLE, &c., and also in various articles applying to the more recent ordnance in use. It is, therefore, proposed to limit this article to Gatling's machine-gun, which is an improved form of the ribandequin or organ gun of the 15th century, and of which the *mitrailleuse* of the French is only a modification. Dr. J. R. Gatling, born in N. C. in 1818, conceived in 1861 the idea of the revolving battery gun which bears his name, and the first was made in 1862. Fig. 2001 represents

the 16-barrel gun, inch caliber, an improvement of the Gatling battery, which was patented in 1865. The adjustable plug at B provides a method of removing the locks without taking the gun apart. The knob at C is a cocking device by which the snapping of the gun when in revolution is controlled at will. This improvement enables a raw hand to receive his instruction in the use of the gun without requiring it to be discharged. To increase the effectiveness of the engine as a battery, a carriage-bed having a lateral motion, sweeping the sector of a circle of 12 degrees, has been adopted. This permits the distribution of the fire to cover more than 500 yards of an enemy's front. The mechanical simplicity of the Gatling gun is its distinguished merit. This improved battery is described as follows: "The gun consists of 6 rifle-barrels of 58-100th inch calibre; each barrel is firmly connected to a breech-piece by a screw of one inch in length. The breech-piece is composed of one solid piece, which is made secure to a shaft $1\frac{3}{4}$ inches in diameter. The barrels are inserted in the breech-piece around the shaft on a parallel line with the axis of said shaft, and held in their proper position by a muzzle-piece bored by the same gauge as the holes for the breech-piece, for the reception of the barrels. The breech-piece is also bored in the rear end for the reception of the locks, on a parallel line with the barrels, each barrel having its own independent lock revolving simultaneously, so that in case one lock or barrel becomes disabled, those remaining can be used effectively. Between the locks and the barrels is a receptacle for the charges on a parallel line with the locks and barrels. As the entire gun revolves, the charges find their way through a hopper (A), fed from cases containing any given number, instantaneously. The breech-piece contains the locks, and is entirely protected by a heavy casing of gun-metal made fast to a wrought-iron frame resting on trunnions, $1\frac{1}{2}$ in. in

Fig. 2001. — THE GATLING BATTERY-GUN.
(The original Mitrailleuse.)

diameter. It is screwed to the frame by 4 bolts. Inside this casing is attached an inclined ring which the hammers of the locks ride as the gun revolves, until coming to the point of line of fire, when the discharge takes place. The locks are composed of 3 pieces and 1 spiral spring, and are entirely protected from dust or any injury. The gun is mounted, as other field-pieces, with limber attached. While the Gatling gun has, at most, but 10 barrels, the Belgian mitrailleuse has 37, and also the French mitrailleuse, largely used in the Franco-German War. This may be several single barrels, or a cylinder with that number of bores. The other essential difference between the American and the European gun is in the feed, which in the latter is an hexagonal plate having 37 perforations, into which the cartridges are thrust. This plate is dropped into the space between the breech-action and the rear cavities of the barrels. The final operation of forcing the cartridges through the plate into the barrels — obviously necessitating great mechanical accuracy, as the axes of 37 cartridges are to be made parallel to the axes of as many barrels — is the work of a lever. Each barrel of the mitrailleuse has likewise its individual lock, but the locks are stationary in the breech, while the barrels are revolving. The lock feature of the Gatling gun is especially admirable. Entirely concealed and protected, it is not liable to external damage. It revolves with its battery, and by another and reciprocal motion it is constantly about its mission; either by a forward action adjusting the cartridge, and discharging its barrel, or, by an opposite, retiring the metallic case after a fire. Thus, in a 10-barrel piece, 5 barrels are all the time being automatically loaded, while the remainder are consecutively firing. Should any accident occur to the lock — and it can only occur through default of the lock itself — all guns of the Gatling class are constructed upon the assembling or interchangeable principle, and a new lock can be arranged in its place in less than a minute. The feeding operation is, in connection with the lock, a distinct merit of this gun. The cases, thin compartments of tin or galvanized metal, are placed in the hopper by one man, and caught by the carrier, are conveyed into a position to leave the cartridges, of which each case contains 24, one by one in their respective chambers. In the meantime the man on the other side works the crank seen in the cut, which revolves the series of barrels. Ordinary practice has demonstrated that one man can refill the cases as they pass out emptied, while the other is discharging the gun, and thus there is no necessary interruption of firing. The difference between the Gatling

and the mitrailleuse is that the former discharges but one barrel, but keeps up the discharge continuously, while the latter empties itself at one discharge and then has to be loaded again. The guns first employed fired 100 bullets per minute, but the newer types are able to discharge ten times that number, and can be worked with a slight swaying motion, so as to spread the bullets over a limited space. Gatling guns were first used in the American Civil War, and have been employed in all the important wars since that period. The Hotchkiss resembles the Gatling in having a revolving motion, while the Nordenfeldt and the Gardner machine-guns have a horizontal series of barrels which may be discharged and reloaded with great rapidity. The Maxim automatic machine-gun differs from the above in having but one barrel, which is kept cool by an outer case containing water. In this gun the force of recoil is utilized to act on ingenious mechanical appliances by which the old cartridge is dropped out and a new one brought forward in position for firing. Thus it may be made to fire continuously with great rapidity until the supply of cartridges is exhausted, while a new series of cartridges can be instantly supplied. See GUN, MACHINE AND RAPID-FIRE.

Or'donnance, *n.* [Fr.] (*Fine Arts.*) The proper disposition of figures in a picture, or of the parts of a building, or of any work of art.

Or'donnant, *a.* Arranging; serving or tending to dispose in proper order.

Or'dure, *n.* [Fr.; It. *ordura*; Lat. *sordidus*, dirty, *sordes*, dirt, filth.] Dung; excrement; manure.

Ore, *n.* [A. S. *ora*, ore, metal.] (*Metall.*) The mineral body from which a metal is extracted. Metals exist in the ores in one of the four following states: 1. In a metallic state, and either solitary or combined with each other; in the latter case forming alloys. 2. Combined with sulphur, forming sulphides or sulphurets. 3. Combined with oxygen, forming oxides. 4. Combined with halogens and acids, forming chlorides, bromides, carbonates, phosphates, &c., which generally go by the name of *metallic salts*. The ores which contain the useful metals constitute masses in rocks of different kinds, or are distributed in lodes, veins, nests, concretions, or beds, with stony and earthy admixtures, the whole or parts of which become the objects of mineral exploration. These stores occur in different geological formations. The strata of gneiss and mica slate, and the limestones of the carboniferous period, are in Europe, especially rich in the ores of the various metals. See IRON MANUFACTURE, MINING, SMELTING, &c.

O'read, *n.* [Gr. *oreias*, from *oros*, mountain.] (*Myth.*) A mountain-nymph.

O'rebro, a town of Sweden, cap. of a prov. of same name, on the W. of Lake Hielmar, 100 m. W. of Stockholm. *Manuf.* Woollen cloth and hosiery. *Pop.* 8,383.

O'regon, a N. W. State of the American Union, bounded N. by the State of Washington, E. by that of Idaho, S. by Nevada and California, and W. by the Pacific Ocean. It lies between 42° and 46° N. Lat., its greatest extent from N. to S. being 275 m., and from E. to W. 350 m., embracing an area of 96,030 sq. m., or 61,459,200 acres. The extent of the coast line is about 300 m., and presents chiefly a bold, iron-bound shore, with few good harbors. — *Gen. Desc.* The State may properly be divided into two distinct parts, so far as relates to climate and agricultural capacities, viz.: the *Eastern* and *Western*, lying respectively on the E. and W. sides of the Cascade Mountains, which extend from the N. to the S. boundary. The Coast Range of mountains, commencing at the Bay of San Francisco, extends N. through the States of California and Oregon. In this State they consist of a series of highlands running at right angles with the coast, with valleys and rivers between, the numerous spurs having the same general direction as the highlands. — *Western Oregon*, the portion of the State first settled, embraces about 31,000 sq. m., or 20,000,000 acres, being nearly one-third of the area of the whole State, and contains the greater preponderance of population and wealth. Nearly the whole of this large extent of country is valuable for agriculture and grazing; all the productions common to temperate regions may be cultivated here with success. When the land is properly cultivated, the farmer rarely fails to meet with an adequate reward for his labors. The fruits produced here, such as apples, plums, pears, quinces, and grapes are of superior quality and flavor. Large quantities of apples are annually shipped to the San Francisco market, where they usually command a higher price than those of California, owing to their finer flavor. The valleys of the Willamette, Umpqua, and Rogue rivers are included within this section of the State, and there is no region of country on the continent presenting a finer field for agriculture and stock-raising, because of the mildness of the climate and depth and fecundity of the soil. Farmers make no provision for housing their cattle during winter, and none is required; although in about the same latitude as Maine, on the Atlantic, the winter temperature cor-

Fig. 2002. — SEAL OF THE STATE.

responds with that of Savannah, Ga. From Nov. to May, the rainy season prevails; frequent showers occur till Feb., when a clear season often continues for several weeks, followed again by frequent rains until about the 1st of May; between the latter month and Nov. rain falls in sufficiency to prevent drought, thick mists occasionally occurring during this period. The summer may, on the whole, be considered dry, yet seldom to such a degree as to injure crops. The O. farmer W. of the Cascades rarely realizes the necessity of irrigation.

These valleys presented to the early immigrants an unbroken forest of magnificent evergreens, and to those who had not beheld the mammoth trees of California these must have appeared of giant growth; among them the fir-tree shoots up to the height of 250, but often attaining 300 ft., with trunks 4 to 5 ft. in diameter. The value of this timber has been recognized by the establishment of numerous saw-mills at various points on the coast, and on the Willamette river, for cutting and preparing lumber for market, and there is an active lumber trade between Port Orford, Coos Bay, and other ports in the State, and San Francisco. The timber, on account of its immense size and superior quality, is peculiarly valuable for ship-building. Among other prominent forest-trees found in this locality are the Oregon cedar, sugar-pine, western yellow pine, and fragrant white cedar. Throughout these extensive mountain forests, there are numerous tracts lying sufficiently level for cultivation, but lands producing timber of such valuable qualities, and in such extraordinary quantities, should be preserved as timber lands throughout all time. These forests are capable of producing 1,000,000 feet of lumber to the acre. Upon the Coos and Coquille rivers, in the Coast Range, the land has been cleared, and its fertility found extraordinary, it producing all kinds of grain and vegetables in abundance. The soil and climate in the Rogue river valley, in the S. W. part of the State, are admirably adapted to the culture of the grape, which culture is rapidly increasing. That section of the State extending from the Cascades to Snake river, termed *Eastern Oregon*, has a much drier climate than the region W. of the Cascades, and is more subject to extremes of heat and cold; the major part of the soil is not available for tillage, yet furnishes an extensive scope for grazing. Along the Columbia river, in the valley of the Umatilla and Walla-Walla rivers, the soil is highly fertile, and the agricultural capacity excellent. Many thriving settlements, with extensive improvements in manufactures and agriculture, exist in this portion of the State. In the great valley of the John Day river, also bordering on the Columbia, are some of the oldest settlements in the State, extending a distance of nearly 100 m. in length along the prairie bottoms of the river. The larger portion of this valley, as well as that of the Des Chutes, is fit for grazing only, but for this purpose is excellent. Much of E. Oregon is thinly peopled, from its lack of fertility, though there are fertile valleys along the streams and near the lakes, while at the northern extremity, near the base of the Blue Mountains, the land is rolling and highly fertile. The most densely peopled portion of the State is the Willamette Valley, 150 m. long and 30 to 70 wide, and extremely fertile throughout. In the valleys of the Grande Ronde, Powder, Burnt, Malheur, and Owyhee rivers, near the E. frontier, are situated large tracts of tillable land. The soil is of good quality, and agriculture thrives. Many varieties of garden vegetables are said to succeed better in some of these valleys than in the Willamette, on account of the higher temperature of the summer. Timber is less abundant in E. Oregon than W. of the Cascades; on the slopes and summits of the Blue Mountains, and in various spurs and ridges, which traverse this division of the State, are found the cedar, fir, hemlock, pine, and other varieties of forest-trees. — *Rivers, &c.* The Columbia, Willamette, Snake river, and Clark's Fork are the four principal navigable streams, and are successfully traversed by steamboats. The first named, forming the chief part of the N. boundary of the State, and one of the largest and most important rivers on the continent, has for its principal affluent Lewis Fork, and passes through some of the grandest and most picturesque scenery in the world. The fir-covered summits of the Cascade Range on either side, with massive rocks thousands of feet high rising from its surface, with Mounts Rainier, Baker, Hood, and St. Helen's, from 10,000 to 15,000 feet high, in the distance, piercing the clouds with their snow-capped peaks, present a scene of unsurpassed sublimity and magnificence. The Willamette flows into the Columbia, and the Umpqua and Rogue rivers into the Pacific Ocean. A railroad has been constructed around the Cascades at a point on the river some 60 m. E. of the mouth of the Willamette; the rapids here are similar to those of Niagara below the Falls, and obstruct navigation for a considerable distance. At the Dalles, 45 m. above this point, the river is again impeded by rapids for a distance of 15 m., around which is railroad communication. A canal was begun past the rapids of the Cascades in 1876 and finished in 1896. It is 3,000 feet long, being cut through a spur of rock. The upper gates of the lock are claimed to be the largest lock-gates in the world. This great achievement has opened the river for navigation to the Dalles, where it is proposed to pass the obstructions by a boat railway. From the latter point the river is passable to vessels for a distance of 160 m. to White Bluffs, or 300 m. to the ocean. Snake river empties into the Columbia about 12 m. N. of old Fort Walla-Walla, and is navigable as high as Lewiston in Idaho, a distance of 160 m. The Willamette is navi-

gable to Eugene City, 200 m. The obstacle to free navigation was a fall of 40 feet at Oregon City; here a portage was required; a canal with locks is now in operation. Vast quantities of delicious salmon of many varieties formerly abounded in the Columbia and its tributaries, forming an important article of commerce, but the supply has been greatly decreased through the use of destructive fishing apparatus. The sturgeon fisheries have been nearly ruined. Steps are being taken to restore the salmon fisheries by the aid of artificial fertilization, but in this work O. is behind California and Washington. The shad and oyster have been successfully planted, and the former prolific fisheries of the State may, in the end, be reproduced. The salmon make a fall and spring run from the ocean, penetrating most of the Oregon rivers to the smaller branches from which they flow, and stem the powerful current of the Columbia for more than 1,000 m.—*Min.* The mineral resources of the State, though not so extensively prospected as those of adjacent States and Territories, are both extensive and valuable, and will, doubtless, at some future time, form a prominent source of wealth. Placer mining has been carried on extensively and profitably in the S. counties since 1852, and the mines of John Day and Powder rivers have yielded several millions of dollars since their discovery, in 1860. A great mining canal, said to be the largest yet made, is under construction in S. Oregon for the purpose of developing the gravel deposits along the Rogue river, the lack of available water preventing the development of the rich mineral beds of this region. It is proposed to use the canal also for irrigation. Hydraulic mining is also employed in the extreme east of the State, while quartz mining is pursued in several localities. Silver is nearly coextensive with gold, and copper and lead frequently accompany silver. Cinnabar is mined in Josephine co. Douglas co. possesses the most extensive deposit of nickel ore yet found in America, while iron exists in considerable abundance. Of the other minerals may be named agate, chalcedony, carnelian, and jasper. Coal also exists in various localities.—*Soil, Agric., &c.* The soil in the valleys of the Willamette, the Umpqua, and Rogue rivers is very rich and deep, resting upon a substratum of clay retentive of the elements of fertility. Large portions of these valleys are open prairie, just rolling enough for the requirements of agriculture. All the products common to temperate regions, whether of the field, orchard, or garden, can be cultivated with the highest degree of success. The chief products of field husbandry are wheat, oats, barley, rye, hay, maize, buckwheat, flax, hemp, sorghum, pease, beans, millet, broom-corn, pumpkins, and potatoes; of the garden, turnips, squashes, tomatoes, cabbages, onions, cucumbers, gourds, beets, carrots, and parsnips; and of the orchard, apples, pears, plums, cherries, apricots, quinces, peaches, and grapes. Many of these productions are of giant growth, and superior quality and flavor. The yield of wheat is frequently 40 and 50 bushels per acre, and when the land is properly cultivated it never fails, and in no part of the Union can equally remunerative crops be cultivated, year after year, with less labor or trouble. As to the harder fruit, no country could produce finer. The trees come into bearing several years earlier than is usual in the Atlantic States, and a failure in the crop is rarely known. The Willamette valley is more exposed to the sea-breezes than the more sheltered bottoms of the Umpqua and Rogue rivers, and the nights are too cool for corn and the peach to thrive well. Rogue river valley being more sheltered than the valleys to the N. of it, appears admirably suited to the grape. Indian corn and sorghum also succeed better here than in other portions of W. Oregon. The State may be summed up as peculiarly a crop-raising and fruit-growing region, though by no means wanting in valuable mineral resources. Possessing a climate of unrivalled salubrity, abounding in vast tracts of rich arable lands, heavily timbered throughout its mountain ranges, watered by innumerable springs and streams, and subject to none of the drawbacks arising from the chilling winds and seasons of aridity which prevail further S., it is justly considered the most favored region on the Pacific slope as a home for an agricultural and manufacturing population. Of the most recent industries may be mentioned the cultivation of the sugar-beet, which is being developed. Wheat, however, is the leading product of the State, its annual crop being about 12,000,000 bushels, and steadily increasing. Millions of fruit trees fill the orchards of the State, the lands best suited to them being the valleys and foot-hills. But these are of great extent, and the richness of the soil and mildness of the climate make the State highly productive. Oregon prunes are the largest and finest in the world, apples are very fine and prolific, cherries are of great size, and pears, peaches, and grapes are very successfully cultivated. Great quantities of fruit, both green and dried, are annually exported. In E. Oregon, as the bunch grass is disappearing and the cattle decreasing, the pursuits of agriculture and horticulture are being stimulated. In the central and southeast parts of the State the rainfall is insufficient for crops, and irrigation is here necessary for farming, but in the northern section of E. Oregon sufficient rain falls, and agriculture is a promising pursuit. Sheep are raised in large numbers, O. possessing more than 2,500,000 of these animals, and having an annual wool clip of 20,000,000 lbs. (over 6,000,000 lbs. of washed wool). Cattle are also abundant, and the yearly yield of butter and cheese amounts to from three to four million pounds.—*Commerce, &c.* The navigable rivers and railroads of the State, and its ocean ports, facilitate internal and external trade, which is

of considerable importance. There are numerous lines of railroad, of which several connect the State with the East and South, while steamboats run on all the navigable streams. The industrial interests of the State, aside from agriculture and mining, are largely confined to fruit and fish preservation, the salmon pack in 1896 being 567,537 cases, worth \$2,530,206. Since then over-fishing has led to a decrease. The value of products of manufacture in the manufacturing census of 1905 was \$44,023,548.—*Pol. Div.* The State is divided into 32 counties, as follows:

Baker,	Douglas,	Lane,	Sherman,
Benton,	Gilliam,	Lincoln,	Tillamook,
Clackamas,	Grant,	Linn,	Umatilla,
Clatsop,	Harney,	Malheur,	Union,
Columbia,	Jackson,	Marion,	Wallowa,
Coos,	Josephine,	Morrow,	Wasco,
Crook,	Klamath,	Multnomah,	Washington,
Curry,	Lake,	Polk,	Yamhill.

Chief towns, &c. The principal centers of trade and population are Portland, East Portland, Salem (State cap.), Astoria, Albina, Albany, Oregon City, Baker, Lagrange, Pendleton, Ashland, Corvallis, Roseburg, Marshfield City, Grant's Pass, and McMinnville. The government is similar to that of the other States of the Union. The governor and the senators are elected for 4 years, and the representatives for 2 years. The judiciary consists of a chief justice and 3 associate judges of the Supreme Court, who are chosen in districts for 6 years, the oldest, or the one having the shortest time to serve, acting as chief; their number may be increased, providing it does not exceed 5, until the population of the State is over 100,000, and never exceed 7. The Supreme Court is simply a tribunal of appeals. Each justice holds a circuit court with both original and appellate jurisdiction, the terms being so arranged that a court shall sit twice a year in each co. The State returns 2 senators and 1 member to the House of Representatives in the National Congress.—*Educ., &c.* Liberal donations of land have been made by the State government for educational purposes, and an ample fund for the development of public schools is thus made available. There are normal schools at Weston, Monmouth, Ellensburg, Ashland, and Drain, an agricultural college at Corvallis, and a number of higher institutions of learning, including the State University at Eugene, the Willamette University at Salem, the Pacific University at Forest Grove, the Portland University, Corvallis College, McMinnville College, and various academies and private schools. The public schools have about 100,000 enrolled pupils, and property valued at \$2,988,312.—*Finances.* O. is out of debt, the small State debt being completely paid off by 1909, the total debt, including cities and counties, being no more than \$10,000,000. The assessed valuation of property in 1905 was \$188,058,281.—*Hist.* The name Oregon was long applied to all the territory claimed by the U. S. on the Pacific coast, extending from Lat. 42° to 54° 40' N. By the treaty of 1846, a boundary line was fixed between Great Britain and the United States; that portion S. of Lat. 49°, watered by the Lower Columbia and its affluents, the Lewis and Clark rivers, and the Willamette, being ceded to the U. S., and the country N. of Lat. 49°, including the valley of the Upper Columbia, with right of navigating the Columbia from its mouth, and the whole basin of Fraser river, to Great Britain. The discovery of the Columbia river, in 1792, was succeeded by an exploration under Capt. Lewis and Clark, 1804-5. In 1808 the Missouri Fur Company established trading-posts in the country; and, in 1811, the American Fur Company (presided over by J. J. Astor) founded a settlement at the mouth of the Columbia, and named it Astoria. In 1833, the emigration of Americans commenced overland by way of the South Pass, and the territory continued to receive settlers yearly until 1848, when the California "gold-fever" attracted a large quota of her citizens away. In 1850, however, the land-donation law, passed by Congress, had the effect of registering 8,000 citizens in Oregon, which was formally organized as a Territory, Aug. 14, 1848. On March 2, 1853, Washington Territory was formed out of the N. half of O. Nov. 5, 1857, a State Constitution was adopted; and Feb. 14, 1859, the State was admitted into the Union by Act of Congress under the Constitution previously ratified. From 1845 till 1855, a desultory warfare was kept up with the Indian aborigines, and a resumption of the same occurred in 1858, and again in 1872-73 (Modoc War). Pop. (1890) 313,767; (1900) 413,536.

Oregon, in California, a township of Butte co.

Oregon, in Illinois, a city, cap. of Ogle co., about 176 m. N. by E. of Springfield, on Rock river, and the Chicago and Iowa R.R. Pop. (1897) 1,740.

Oregon, in Indiana, a post-township of Clarke co.

Oregon, in Iowa, a township of Washington co.

Oregon, in Michigan, a post-township of Lapeer co.

Oregon, in Missouri, a S. co., adjoining Arkansas; area, about 780 sq. m. Rivers, Eleven Points and Spring rivers, besides numerous smaller streams. Surface, diversified; soil, fertile. Cap. Alton. Pop. (1890) 10,467.

—A post-village and township, cap. of Holt co., about 210 m. N.W. by W. of Jefferson City. Pop. (1897) 1,045.

Oregon, in New York, a village of Chautauque co., about 20 m. S. of Dunkirk.

Oregon, in Ohio, a township of Lucas co.

—A village of Seneca co., about 10 m. N.W. of Tiffin.

—A post-village of Warren co., now called OREGONIA.

Oregon, in Pennsylvania, a township of Wayne co. —A post-village of Lancaster co., 7 m. N.N.E. of Lancaster city.

Oregon, in Wisconsin, a post-village and township of Dane co., about 12 m. S. of Madison.

Oregon City, in Oregon, a city, cap. of Clackamas co., formerly the seat of the Territorial government, on the Willamette river, about 50 m. below Salem. It has abundant water power. Pop. (1897) 3,740.

Oregon House, in California, a post-village of Yuba co., abt. 23 m. N.E. of Marysville.

Orel, Or'lov, Or'lof, a govt. of European Russia, S. of Kalouga and Tula, between Lat. 51° 50' and 54° N., Lon. 33° and 39° E.; area, 16,780 sq. m. The surface is undulating and the soil fertile. Rivers, Desne, Sosna, and Oka. Prod. Corn, hemp, flax, honey timber, and cattle. Min. Iron, copper, nitre, and millstones. Pop. 1,533,619.

Orel, cap. of the above govt., on the Oka: Lat. 52° 57' 58" N., Lon. 35° 57' 15" E. Manuf. Cotton and linen fabrics. It is the entrepôt of the commerce between Russia, Little Russia, and the Crimea. Pop. 34,973.

Orellana, FRANCISCO, B. at Truxillo, in Spain, early in the 16th century, accompanied Pizarro to Peru in 1531. Ambitions of adventure, he set out to explore the continent of South America, eastward from Peru; passed down a branch of the Amazons into that vast river, and thence to the sea; thus being the first European navigator of the Amazons. His accounts of the marvellous country he had crossed induced Charles V. to authorize him to settle colonies there, and he returned for that purpose in 1549, but soon after his arrival.

Orenburg, a city of Russia in Europe, cap. of a govt. of same name, on the Ural river, 727 m. by rail E.S.E. of Moscow. It is important for its commerce with Central Asia, via the railroad to Samarcand. Pop. 56,000. The government is 73,794 sq. m. in area. Pop. 1,380,794.

Oreodaphne, n. (Bot.) A gen. of plants, ord. Lauraceae. Several yield valuable timber; thus, *O. exaltata* yields the Sweet-wood; *O. fabrus*, the Til of the Canaries; and an unknown species, the Strabali of Demerara.

Oreography, n. [Gr. *oros*, a mountain, and *graphein*, to describe.] The science of mountains.

Orestes, (ores'tes.) One of the heroes of antiquity; the son of Agamemnon and Clytemnestra, the brother of Olythemenis, Electra, and Iphigenia, is represented as the avenger of his father, and the deliverer of his sister, through the murder of his mother. His history is the subject of several celebrated dramas by Æschylus, Sophocles, and Euripides.

Orfah, ORFA, OORFA, or URFA, a fortified town of Asiatic Turkey, 78 m. S.W. of Diarbekr; Lat. 37° 8' N., Lon. 38° 5' E. It is well built, and has a considerable trade with North Syria and Mesopotamia. It is supposed to be the site of the "Ur of the Chaldees," mentioned in Scripture. Pop. 30,000.

Orfila, MATEO JOSÉ BONAVENTURA, (or'fê-la,) a French physician of Spanish parentage, and the founder of the science of toxicology, b. at Mahon, in Minorca, 1787. In 1813 he published his *Treatise on Poisons*, which placed him among the best French chemists, and led to his election as member of the Academy of Medicine, and correspondent of the Institute. In 1819 he became professor of medical jurisprudence; in 1831 he was elected dean of the faculty of medicine. His most important works were *Elements of Chemistry, applied to Medicine and the Arts*; *Treatise on Legal Medicine*, in four volumes, which is the greatest work on medical jurisprudence extant; and *Lectures upon Legal Medicine*. D. 1853.

Orford, in New Hampshire, a post-village and township of Gratton co.

Orfordville, in Wisconsin, a post-village of Rock co., abt. 12 m. W.S.W. of Janesville.

Orgal, n. (Chem.) Same as ARGAL, q. v.

Organ, n. [Fr. *organe*; Lat. *organum*. Gr. *organon*, from *ergo*, to do work.] *(Physiol.)* A natural instrument of action, or operation by which some process necessary to the perfect economy of the living animal is carried on; such as the organ of circulation, the heart; of respiration, the lungs; of digestion, the stomach; of sensation and perception, the brain, etc. In anatomy, whatever part of the animal system performs a function or executes a duty, is called an organ; thus, the glands that secrete the saliva, so necessary as a solvent to the food and an adjunct of digestion, are called the salivary organs; those that assist in the secretion of the salts generated and absorbed by the body, as the kidneys, are known as the renal organs; and that which performs the duty or function of eliminating bile from the refuse blood on its way back to the heart, is called the *biliary organ*; while the cartilages and fibrous threads situated at the top of the trachea or windpipe, and anatomically called the pharynx, are known as the *organs of voice*.

(*Organism*.) This derivative from the word organ has been applied to the body as a whole, being referred by Linnæus to all forms of life, whether animal or vegetable, all of which he classed under the general term *Organisata*, while we constantly speak of them in their complete state as *organisms*, while applying the term *organ* to their larger, well-defined, and integrated parts, and employing the word *organic* to designate their internal activities and the products thence arising. The old conception of an organism as a collection of organs with fixed functions, and working together like the parts of a machine, is disappearing before the doctrine that it is the protoplasm existing in all parts of the body—Huxley's "basis of life"—which is the source of all the vital activities. The doctrine that there is a vital distinction between the chemical products of the action of the organs and those of inorganic chemistry has similarly disappeared before the discovery that many of these products could be obtained in the laboratory, and the term "organic chemistry" is now usually confined to the chemistry of carbon compounds, however produced. See ORGANIC.

(*Musical*.) See SECTION II.

Organdie, Or'gandy, n. [Fr. *organdi*.] A species

of muslin or cotton fabric, of great lightness and transparency.

Organic, Organ'ical, a. Pertaining to an organ or its functions; consisting of organs, or containing them. — Produced by the organs. — Instrumental; acting as instruments of nature or art to a certain end.

Organic Analysis. (Chem.) The connection between organic chemistry and animal and vegetable physiology is so great, that it has been the aim of nearly every chemist of eminence to endeavor to perfect, as far as possible, the means of resolving organic compounds into their component parts. This branch of analysis has, therefore, now arrived at a very great state of perfection. Begun by Gay-Lussac and Thénard, and improved by Berzelius, Dumas, Bunsen, and, above all, by Liebig, the process has reached a degree of precision scarcely to be equalled by any other branch of physical investigation. Organic substances contain all, or some, of the four elements, carbon, hydrogen, oxygen, and nitrogen. The operations of organic analyses consequently have for their end the quantitative determination of these elements. It has been found in practice that the easiest way of determining the amount of carbon and hydrogen in a body is to supply it, while in a state of combustion, with sufficient oxygen to convert the former element into carbonic acid, and the latter into water. This is effected by mixing a known weight of the substance with oxide of copper or chromate of lead, and transferring the mixture to a tube of hard glass closed at one end. The other end communicates with a tube containing chloride of calcium, to absorb the water, and a set of bulbs half filled with solution of caustic potash, to retain the carbonic acid. Heat is applied to the tube by means of a gas or charcoal furnace; and when the combustion is completed, the tube containing the chloride of calcium and the potash-bulbs are weighed, the increase of weight giving the amounts of water and carbonic acid formed, from which the proportions of hydrogen and carbon are easily calculated. Should the substance contain nitrogen, it is heated with hydrate of soda and quicklime in excess, and the resulting gases conducted through hydrochloric acid, the amount of ammonia formed giving the proportion of nitrogen. The weight of the nitrogen, hydrogen, and carbon, deducted from the original weight of the substance, gives the oxygen. Should saline matter be present, it is determined by calcining a known quantity of the body. Chlorine, bromine, iodine, sulphur, and phosphorus are, if present, determined in the ordinary manner. The apparatus necessary for organic analysis is very expensive, a first-rate balance being an indispensable adjunct. For a complete account of the apparatus required, and the methods to be pursued, the student is referred to Liebig's *Handbook of Organic Analysis*.

Organic and Inorganic Chemistry. The division of chemistry into organic and inorganic is more arbitrary than real. The line of demarcation between the two becomes every day more and more indefinite. Many distinguished chemists have attempted to define the difference between the two branches of the science. Laurent calls organic chemistry "the chemistry of carbon;" Liebig, "the chemistry of compound radicles." The researches of modern chemists prove that the combination and decomposition of members of each division are regulated by precisely the same laws; both animal and vegetable compounds being now formed in the laboratory, that have hitherto had a purely organic origin. (See SYNTHESIS.) In his *Manual of Chemistry*, Dr. Odling wisely breaks down the barrier at once, and considers organic and inorganic compounds under the same head, it being impossible to separate them when they are arranged in a typical series. The distinction between organic and organized bodies is often lost sight of by writers. It will, therefore, perhaps, be as well to define it. Organic compounds are those that have an amorphous or crystalline structure, and a definite composition; such as sugar, quinine, and acetic acid. They may, in certain cases, be obtained by the direct synthesis of their components from inorganic bodies. They are often spoken of as the proximate principles of plants and animals. Organized bodies are such as possess a rounded vesicular or fibrous structure, which, when once destroyed, cannot be restored, and form part of the system of the living animal or vegetable body. Starch, lignin, and cellulose, may be adduced by examples. They cannot be formed by synthesis of their components, being the result of vital assimilation. Organic compounds may, however, be formed from them by substitution; such as pyroxylin, xyloidin, and others. See CHEMISTRY.

Organic Bases. (Chem.) The name applied to compounds containing nitrogen united with other elements having a more or less alkaline reaction, and capable of forming neutral salts with ammonia. They are generally divided into two classes: 1. Bases obtained by artificial means, such as aniline, ethylamine, &c.; and, 2. bases existing naturally in vegetable or animal substances, as, for instance, quinine, strychnine, morphine, kreatine, &c. The researches of Hofmann, Wurtz, Cahours, and others, into the artificial organic bases, seem to indicate that no alkaline base can exist without either nitrogen, or one of the nitrogen group of substances, entering into its composition; and that all bases, including those existing ready formed in the plant, are founded on the ammonia type. Aniline, for instance, has been proved to consist of ammonia, in which one atom of the hydrogen is replaced by an atom of phenyl; and it seems highly probable that quinine, strychnine, &c., &c., are also ammonias in which one or more of the equivalents of hydrogen are replaced by unknown complex atoms.

Organic Disease. (Med.) Any structural affection of an organ, such as enlargement, ulceration, thickening or any other injury permanent or likely to interfere seriously with the function of the organ.

Organic Laws. (Pol.) The name given to laws directly concerning the fundamental parts of the constitution of a state. Fundamental laws are merely declaratory, containing the principles or theory of government, while organic laws are such which apply those principles to the actual condition of society by positive enactment, and add the sanction of punishment.

Organic Radicles. (Chem.) An organic radicle is a group of elements, whether or not isolable, which may be transferred from one compound to another in exchange for one or more atoms of hydrogen or its representatives. They are divided into two principal classes. — those, like ethyl, teryl, &c., which have electro-positive properties, and form bases; and those, like acetyl, formyl, &c., which have electro-negative properties, and form acids. Liebig was the first to apply this theory to the explanation of the composition of the alcohols and organic acids; and although his views on the subject were at first vigorously combated, they afterwards received the strongest confirmation from the researches of innumerable experimenters. The first of the alcohol radicles isolated was acetyl; others soon followed, and we daily hear either of the isolation of radicles known to exist theoretically, or of the formation of new groupings acting as such. The theory of compound radicles has been applied with great success to the explanation of the composition and properties of numerous compounds belonging to organic chemistry. Thus the peculiar compound formed by the direct combination of chlorine and nitric oxide is regarded as the chloride of azotyl, NO_2Cl , the grouping NO_2 , azotyl, acting as a metallic radicle: a view confirmed by the existence of at least two sulphates of azotyl. Of late years an important series of compounds, termed the organo-metallic radicles, has been discovered; cacodyl may be taken as the type of them. They are mostly formed by the union of a metal with one of the alcohol radicles, and act in combination precisely in a similar way to the metallic elements. See CACODYL and ZINC METHYL.

Organically, adv. With organs; with organical structure or disposition of parts. — By means of organs.

Organicalness, n. State of being organical.

Organicism, n. (Med.) The doctrine of the localization of disease, or which refers it always to a material lesion of an organ.

Organific, a. Forming organs.

Organism, n. [Fr. organisme.] Organical structure.

Organist, n. [Fr. organiste.] (Mus.) One who plays on the organ.

Organizability, n. Capability of being organized.

Organizable, a. That may be organized.

Organization, n. Act or process of organizing, or of forming organs or instruments of action; act of forming or arranging the parts of a compound or complex body in a suitable manner for use or service; act of distributing into suitable divisions, and appointing the proper officers, as an army or government. — Structure; form. — Suitable dispositions of parts which are to act together in a compound body.

Organize, v. a. [Fr. organiser; Gr. organizō, organo-ō.] To form with suitable organs. — To construct so that one part may co-operate with another; to distribute into suitable parts, and appoint proper officers over, that the whole may act as one body.

(Mus.) To sing in parts.

Organ-loft, n. The loft where an organ stands.

Organ-ogen, n. [Gr. organon, an organ, and gēnein, to produce.] (Chem.) A term applied to the four substances, hydrogen, oxygen, nitrogen, and carbon.

Organogenesis, n. [Gr. organon, and genesis, birth.] (Bot.) The gradual formation of an organ from its earliest stage.

Organogeny, n. [Gr. organon, an instrument, and gēneao, to beget.] A description of the organs of a living body.

Organograph'ic, Organograph'ical, a. That relates to organography.

Organographist, n. One who describes the organ of an animal or of a plant.

Organography, n. [Gr. organon, an organ, and graphein, to describe.] (Nat. Hist.) The description of organs of animals, or the structure of plants.

Organology, n. [Gr. organon, and logos, discourse.] (Physiol.) That branch of physiological science which specially treats of the different organs of animals, but more particularly those of the human species. — Maunders. — Phrenology; craniology.

Organon, Organum, n. [Gr. and Lat.] (Phil.) A word nearly synonymous with *method*, and implying a body of rules and canons for the direction of the scientific faculty, either generally or in reference to some particular department; as the *Organon* of Aristotle, and the *Novum Organum* of Bacon.

Organoplastic, a. [Gr. organon, and plassein, to form.] That possesses the faculty of reproducing the tissues or organs of living bodies.

Organoscopy, n. [Gr. organon, and scopeo, to behold.] Same as PHRENOLOGY, *q. v.*

Organ-pipe, n. (Mus.) The pipe of a musical organ.

Organ-stop, n. (Mus.) The stop of a musical organ, or a collection of pipes, under a general name.

Organzine, n. [Fr. organzin.] (Manuf.) A name applied to silk which, after having been first wound off from the cocoons into hanks, is then placed on a winding-machine, which reels off the hanks on to wooden reels. These are then placed on spindles, and the fibres of each are made to pass through a minute orifice and

small brush, which together clean the thread and remove any knots or projections from it, throwing it at the same time into hanks again. Then the threads of two hanks are taken, and again reeled off, this time on to one hank, being twisted together to the left; then two of these double reels are taken, and the ends being laid together, are twisted to the right. These operations, consisting of winding, cleaning, throwing, and twice twisting and doubling, constitute *organzine silk*.

Orga'os, (Serra dos.) a mountain ridge of Brazil, traversing the provinces of Rio de Janeiro, São Paulo, and Santo Catharina. Maximum height, 3,800 ft.

Orgasm, n. [Gr. orgasmós, from organ, to feel an ardent desire.] (Med.) A strong desire or impulse for something; state of excitement and turgescence of any organ whatever; erethism.

—Immoderate excitement or emotion.

Organt, (or'zhät,) n. [Fr.] A sweetened emulsion of almonds, usually flavored with a few bitter almonds and a little orange-flower water. Mucilage of gum-arabic is also sometimes added. It is both used as an agreeable syrup to mix in certain drinks, or medicinally as a mild demulcent.

Orgues, (orgz,) n. pl. [Fr. pl. of orgue; from Lat. organum.] (Fort.) Long and thick pieces of wood shod with iron and suspended each by a separate rope over a gate so as to be ready to be let fall and stop it up upon the approach of an enemy. The term also denotes a number of gun-barrels, so joined that they may be discharged all at once; these are sometimes used to defend breaches.

Orgy, n.; pl. ORGIES, (ör'jiz.) [Gr. orgia, any religious performances.] A name originally applied to all sacrifices with certain ceremonies; afterwards given especially to the mysteries of Dionysius (Bacchus); then extended to the mysteries in general; and now applied to scenes of drunkenness and debauchery. (Commonly used in the plural).

Orichalcous, a. [Gr. oros, a mountain, and chalkos, brass.] (Geol.) Having a lustre between that of gold and brass.

Oriel, O'riol, n. (Mediæval Arch.) A projection from a building, or a recess within it, such as a closet, a window (Fig. 2003), or a private chamber, usually screened off to form an oratory. This name is often erroneously given to the bay-window of a hall for the side-board; hence, *oriel-window*, which is retained to this day.

O'rient, a. [Lat. oriens, from orior, oriri, to rise.] Rising; as, "the orient sun." (Milton.) — Eastern; oriental. — Bright; shining; glittering.

—*n.* The part of the horizon where the sun rises or first appears in the morning; the east. — The countries of Asia.

—*v. a.* [Fr. orienter.] (Surveying.) To mark the situation or bearing of a place with regard to the four cardinal points.

O'rient, in Maine, a post-township of Aroostook co.—In Iowa, a p. o. of Adair co.

O'rient, in New York, a post-village of Suffolk co., about 100 m. E. by N. of New York city.

Oriental, a. [Lat. orientalis.] Eastern; pertaining to the east or orient. — Situated in the east, particularly in or about Asia; proceeding from the east.

—*n.* A native or inhabitant of some eastern part of the world, — particularly an Asiatic.

Orientalism, n. A term applied to doctrines or idioms of the Asiatic nations.

Orientalist, n. An inhabitant of the eastern parts of the world. — One versed in eastern languages and literature.

Orientalize, v. a. To conform to Oriental manners and customs.

Orientalion, n. An eastern direction or aspect. — The act of placing a church so as to have its chancel point to the east.

Orientalor, n. An instrument used for the orientation of a church.

Orifice, (or'i-fis,) n. [Fr.; Lat. orificium, from os, oris, a mouth, and facio, facere, to make.] The mouth or aperture of a tube, pipe, or other cavity; any opening or perforation.

Ori'flamme, (-flām,) n. [From Lat. aurum, gold, and flamma, flame.] (French Hist.) It was formerly the custom of all Catholic churches of any note to possess a flag or banner; and the one belonging to the abbey of St. Denis was called the *ori'flamme*, from its color, being a piece of red taffeta fixed on a golden spear, and cut into three points, each of which was adorned with a tassel of green silk. When Louis le Gros marched against the emperor Henry V., in 1124, he took this banner to accompany him in his expedition; and from that time, during nearly three centuries, the French monarchs were in the habit, on the commencement of a war, of receiving this banner with great ceremony from the hands of the abbot of St. Denis, to whom, at the conclusion of hostilities, it was returned. It is said to have been borne for the last time by Louis XI., at the battle of Montherly, July 16, 1465.

Orig'anum, n. [Gr. oreiganon, from oros, a mountain,

Fig. 2003.
(From Vicar's Close,
Wells, England.)

galas, I delight.] (*Bot.*) A genus of plants, order *Lamiaceae*. *O. vulgare*, the common or wild Marjoram, is found in limestone and chalky districts. This yields a stimulant acrid oil, sold in the shops as oil of thyme.

Fig. 2004.

1, Sweet Marjoram (*Origanum majorana*); 2, Common Marjoram (*Origanum vulgare*).

There are three kinds cultivated as garden herbs, namely, — *O. majorana* (the Sweet or Knotted Marjoram), *O. onites* (the Pot Marjoram), and *O. heracleoticum* (the Winter Sweet Marjoram). They are all similar in properties.

Oria, a town of S. Italy, prov. of Terra di Otranto, 21 m. N.E. of Taranto; pop. 6,403.

Origen, a father of the Church, and one of the most learned ecclesiastical writers, was born at Alexandria, A. D. 185, of Christian parents, who early instructed him in religious knowledge and in the sciences. At the age of 17 he lost his father, who was beheaded for his profession of Christianity. Origen had now recourse to the teaching of grammar for the support of himself, his mother, and brothers; but this occupation he relinquished on being appointed catechist, or head of the Christian school of Alexandria. In this situation, he distinguished himself by the austerity of his life; and taking the Scriptures in the most rigid sense, he went so far as to put in practice the passage of the gospel, "There be some who have made themselves eunuchs for the kingdom of heaven." From Alexandria he went to Rome, where he began his famous *Hexapla*, an edition of the Hebrew Bible with five Greek versions of it. At the command of his bishop he returned to Alexandria, and was ordained. Soon after this, he began his *Commentaries on the Scriptures*. His great talents and popularity exposed him to the jealousy of the bishop, whose persecutions at length drove him from his native country, and for a long period made him a wanderer. Origen is supposed to have died at Tyre about the year 254. St. Jerome styles Origen "a man of immortal genius, who understood logic, geometry, arithmetic, music, grammar, rhetoric, and all the sects of the philosophers, so that he was resorted to by many students of secular literature, whom he received chiefly that he might embrace the opportunity of instructing them in the faith of Christ." The allegorical mode employed by Origen in interpreting the Holy Scriptures led, however, to violent controversies in the 4th century; but many of his errors are said to be owing to heretical interpolations of his writings. Among the errors of the *Origenists*, who pretended to draw their opinions from the works of Origen, are, that the souls of men were pre-existent; that our Saviour's soul was united to the Word before his conception; that after the resurrection the bodies of men will have a spherical form, and not, as at present, be erect; that the punishment of devils and of the damned will continue only for a time; and that in future ages Christ will be crucified for the salvation of devils, as he has already been for that of man. This heresy spread for a time widely in Egypt, Spain, and other countries. They were condemned by the second council of Constantinople, 553.

Origenians, *n. pl.* (*Eccles. Hist.*) See ORIGEN.

Origenism, *n.* (*Eccles. Hist.*) The doctrines attributed to Origen, (*q. v.*)

Origin, *n.* [*Fr. origine*; *Lat. origo, originis*, from *orior, oriri*, to rise.] The first existence or beginning of anything; beginning. — That from which anything primarily proceeds; source; cause; root; foundation.

Originable, *a.* That may be originated.

Original, *n.* [*Fr.* from *L. Lat. originalis*.] Origin; source; cause. — First copy; archetype; model; that from which anything is transcribed or translated, or from which a likeness is made by the pencil, press, or otherwise. — An eccentric or peculiar person. (*Colloq.*)

(*Fine Arts.*) A work not copied from another, but the work of the artist himself. When an artist copies his own work, it is called a *duplicate*.

(*Law.*) An authentic instrument of something, and which is to serve as a model or example to be copied or imitated. — (*a.*) First, or not deriving authority from any other source; as, *original jurisdiction, original writ, original bill*, and the like.

a. Pertaining to the origin of being. — First in order; preceding all others; primitive; pristine. — Having the power to originate new thoughts or combinations of thought.

Original sin, (*Theol.*) The first sin that the first man committed; — also, the imputation of it to his posterity, or that depravity of nature which is its consequence.

Originalist, *n.* One who is original, or forms original ideas.

Originality, *n.* [*Fr. originalité*.] Quality or state of being original; the power of originating or producing new thoughts, or uncommon combinations of thought.

Originally, *adv.* Primarily; from the beginning or origin. — At first; at the origin. — By the first author.

Originableness, *n.* The quality or state of being original.

Originant, *a.* Tending to originate; taking first existence.

Originary, *a.* [*Lat. originarius*.] Productive; causing existence. — Primitive; that which was the first state.

Originat, *v. a.* To give origin to; to cause to be; to bring into existence; to produce what is new.

— *v. n.* To take first existence; to have origin.

Origination, *n.* [*Lat. originatio*.] Act of originating, or of bringing or coming into existence; first production. — Mode of production or bringing into being.

Originative, *a.* Originating; possessing power to originate or bring into existence.

Originatively, *adv.* In an originative manner.

Originator, *n.* A person who originates or commences.

Orihua, (*o're-wa*), one of the Sandwich group of islands.

Orihuela, (*or-e-wai'la*), a town of Spain, prov. of Valencia, on the Segura, 14 m. E.N.E. of Murcia, and 98 m. S.S.W. of Valencia. It is situated in a fertile country called the "Garden of Spain." *Manuf.* Silk, linen, hats, and brandy. *Pop.* 18,000.

Orihuela, in Wisconsin, a post-township of Winnebago co.

Orihuela, *n.* [*Fr.* a little ear.] (*Fort.*) A rounded or angular projection at the shoulder of a bastion for the purpose of covering the guns in the flanks.

Orihuela, (*or-e-no'ko*) [*Ind.* "coiled serpent,"] a large and important river of S. America. It rises on the W. slope of the Parima Mountains, in Venezuela, abt. Lat. 3° 30' N., Lon. 64° W., and afterwards turning round with a circular sweep, it holds a N. course, when, being joined by numerous large rivers from the E. ridge of the Andes, it becomes swelled to an immense size, and runs E. to the Atlantic Ocean, which it enters by several mouths, in Lat. 8° 40' N., Lon. 61° W. During the rainy season it inundates the immense plains through which it flows, during the highest flood to an extent of from 80 to 90 m. Its delta commences about 100 m. from the coast. It is computed that the river has 50 outlets into the ocean, only 7 of which are navigable, but not for vessels of any great burden. The grand mouth of the *O.* is formed by Capo Barima to the S.S.E., which is in Lat. 8° 54' N., and the island of Cangrejos, lying W.N.W. of the cape. They are 25 m. from each other, but the breadth of the navigable part of the passage is not quite 3. The depth of water on the bar, which lies a little farther out to sea than the cape, is, at ebb, 17 ft. Near the Andes are the Falls of *Maypures* and *Atures*, hitherto much over-estimated. The annual swell of the *O.* commences in April and ends in Aug., and its basin has an area estimated at 252,000 sq. m. Its banks are clothed with dense forests, which, like the waters, abound with animal life. The *O.* is joined by 436 rivers and upwards of 2,000 streams. Its principal affluents are the Ventuari, Caura, and Paragua or Paraba, from the right, and the Guaviare, Meta, Arauca, and Apure from the left.

Oriole, *n.* [*Fr. oriol*.] (*Zoöl.*) The common name of Insectores birds composing the genus *Icteria*, family *Icteridae*. The BALTIMORE ORIOLE, *q. v.*, may be taken as the type of this genus.

Orion, (*Myth.*) A celebrated Greek giant and hero, and the reputed son of Ilyriens of Ilyria, in Boeotia. So immense was his size, that when he waded through the deepest seas he was still a head and shoulders above the water; and when he walked on dry land, his stature reached the clouds. Once on a time he came to Chios, in the Aegean Sea, where he fell in love with Eero or Merope, daughter of Enopion. He cleared the isle of wild beasts, and brought their skins as presents to his sweetheart; but her father always put off their marriage; whereupon *O.*, one day giving way to passion (while under the influence of wine), sought to take the maiden by force. Enopion now called upon Dionysus (Bacchus) for help, who put out the eyes of the inebriate lover. *O.*, however, recovered his sight in Lemnos, by following the advice of an oracle, and returned to Chios

to take vengeance on Enopion. Not finding him, he went to Crete, where he spent the rest of his life hunting in company with Artemis (Diana). The cause and manner of his death are differently related. (See DIANA.) After his death he was placed with his hound in heaven, where, to this day, the following constellation bears his name.

(*Astron.*) One of the ancient constellations found by Ptolemy. The equinoctial passes nearly through its centre, and it is situated in the S. hemisphere with respect to the ecliptic. Four of the seven stars constituting the constellation are situated in the middle of it in a straight line. Two of these are of the first magnitude; namely, Betelgeuse or Beltegeux, in the right shoulder, and Rigel in the left foot. In the middle of the square are three stars of the second magnitude, which form what is called the belt of Orion. The constellations which surround Orion are Eridanus, Caus Major, Gemini, Auriga, and Taurus. Near the sword-scabbard, round the star marked θ , is a remarkable nebula, and within the constellation are thousands of small stars, which are only visible by powerful telescopes.

O'ron, in Illinois, a twp. of Fulton co.

O'ron, in Michigan, a post-township of Oakland county.

O'ron, in Minnesota, a township of Olmstead co.

Oriskany, in New York, a creek flowing into the Mohawk in Oneida co. — A post-village of Oneida co., abt. 7 m. N.W. of Utica.

Oriskany Falls, in New York, a post-village of Oneida co., abt. 18 m. S.W. of Utica.

Orismology, *n.* [*Fr. orismologie*, from *Gr. orismos*, a marking out as a boundary, and *logos*, a discourse.] That branch of natural history which relates to the technical terms of science; an explanation of technical terms; terminology.

Orison, (*or'i-zon*), *n.* [*Fr. oraison*; *Lat. oratio*, from *oro, orare*, to speak, to pray.] A prayer or supplication; — used chiefly in poetry.

Orissa, a prov. of Hindostan, wholly included in the presidencies of Bengal and Madras, between Lat. 18° and 20° N., Lon. 83° and 87° E., having N. the provs. of Bengal and Bahar; W., Gundwanah; S., the river Godavary; and E., the Bay of Bengal. *Area*, 28,000 sq. m. The shore is low and sandy, and the interior is composed of rugged hills and jungles, in which the atmosphere is pestilential. *Principal towns.* Cuttack, Juggernaut, and Balasore. *Pop.* Estimated at 4,500,000.

Oriстано, a town of Italy, island of Sardinia, div. of Cagliari, at the mouth of the Tirsì, in the Bay of Oriстано, 55 m. N.N.W. of Cagliari. It has a large trade in corn, salt, salt fish, and wine. *Pop.* 10,000.

Orizaba, a town of Mexico, abt. 70 m. W.S.W. of Vera Cruz; pop. 16,000. About 25 m. to the N. is the volcanic peak of Orizaba; height, 17,350 feet.

Orkney and Shetland (or **Zetland**) **Islands**, an archipelago off the N. coast of Scotland. These islands, the anc. *Thule*, lie in two groups, and form a co. of Scotland. The Orkneys (anc. *Orcades*), the most S. group, are separated from the co. of Caithness by the Pentland Frith, 6 m. in breadth; Lat. bet. 58° 44' and 59° 24' N., Lon. bet. 2° 25' and 3° 20' W. There are 49 in number, the principal of which is Pomona, and 22 of the smaller are uninhabited. *Area*, 2,448 sq. m. The *Shetland* or *Zetland* *Isles* (anc. *Ultima Thule*), the most N. group, are separated from the Orkneys by a channel 48 m. wide; Lat. between 59° 52' and 60° 50' N., Lon. 0° 44' and 1° 44' W. *Area*, 5,388 sq. m. They number 117, of which 87 are uninhabited. The principal is Maifland. The E. and N. coasts are generally low, while the W. coasts are elevated, terminating in bold, steep cliffs. The soil is generally poor. *Clim.* Varied, and unhealthy. *Prod.* Wheat, oats, barley, potatoes, and turnips. Large numbers of cattle, horses, and sheep are reared; the Shetland horses, or "Shelties" (as they are called), are celebrated. The fisheries, however, are the chief object of pursuit, the islands being periodically visited by vast shoals of herrings, besides cod and other species of white fish. *Min.* Copper and iron. *Manuf.* Unimportant, principally plaiting straw, hosiery, and gloves. *Chief towns.* Kirkwall in Orkney, and Lerwick in Shetland. *Pop.* 64,055.

Orl, **Orlet**, **Orlo**, *n.* [*O. Fr.*; *N. Fr. ourlet*; *L. Lat. orlam*, dim. of *ora*, border.] (*Arch.*) A fillet under the ovolo of a capital. — Also, the plinth in the base of a column or pedestal.

Orland, in Illinois, a post-township of Cook county.

Orland, in Indiana, a post-village of Steuben co., abt. 10 m. N.W. of Angola.

Orland, in Maine, a post-village and township of Hancock co., abt. 55 m. N.E. by E. of Augusta.

Orlando, (*Legendary Hist.*) [*Spanish Roldan*]. See ROLDAN.

Orlando, in Florida, a city, cap. of Orange co., on S., F. & W. and Fla. Cent. & P. R.Rs., 90 m. S. of Palatka. *Pop.* (1897) 3,050.

Orle, *n.* (*Her.*) One of the ordinaries.

Orléans, an ancient dukedom, and titular name borne by the princes of the blood-royal of France, of which there are two lines: — 1. The first line has given the following names to history: — Louis I. of France, Duke d'Orléans, second son of Charles V., b. 1371, became regent in consequence of the mental incapacity of his brother, Charles VI., 1393, and was murdered by his cousin, the Duke of Burgundy, 1407. This event was the source of the bloody feud between the houses of Orléans and Burgundy. CHARLES, son of the preceding, Duke d'Angoulême in his father's lifetime, taken prisoner at the battle of Agincourt, & while attempting the conquest

Fig. 2005.
PEASANT OF ORIHUELA.

of the Milanese, which he claimed in right of his mother, 1465. He left a son, Louis II. of Orleans, who, in 1498, succeeded to the crown as Louis XII. — Between the first and second houses we find JEAN BAPTISTE GASTON, third son of Henri IV. and Marie de Medici, b. 1608, created Duke d'Orléans 1626, and noted for his intrigues during the reign of his brother, Louis XIII. He was banished to Blois by Mazarin in 1652, and d. there 1660. — 2. The second house of Orléans commences with PHILIPPE I., second son of Louis XIII. and Anne of Austria, b. 1610, received the title of Orléans on the death of his uncle, Gaston, 1660, and the next year married his cousin, Henrietta Anne, daughter of Charles I. of England. After the death of this princess, he married Elizabeth of Bavaria, of whom his successor was born; d. 1701. PHILIPPE II., b. 1674, succeeded to the title of the preceding 1701, and became the celebrated Regent d'Orléans after the death of Louis XIV. He was educated in profligacy by the abbé Dubois, and, though endowed with brilliant talents, brought the kingdom to the verge of an insurrection (see LAW); d. suddenly, 1723. LOUIS, son and successor of the latter, b. 1703, was distinguished for his accomplishments as a universal scholar and linguist. He d., after passing his life in a literary and religious retirement, 1752. LOUIS PHILIPPE, son and successor of Louis the preceding, b. 1775, was lieutenant-general in the Flemish wars, and governor of Dauphiné. He was a man of taste and a lover of literature, and d. generally regretted, 1785. LOUIS JOSEPH PHILIPPE, son of the last-named, surnamed *Philippe Égalité*, b. 1747, known by the title of Duke de Chartres, during the lifetime of his father, was an object of contempt to the French court for his cowardice. He joined the revolutionary party against the court; became a member of the national assembly; voted for the death of Louis XVI., and was nevertheless condemned to suffer death himself by the revolutionary tribunal, which sentence was executed in 1793. His son and successor became King of the French under the name of LOUIS PHILIPPE, *q. v.* See PARIS, COMTE DE.

Orléans, (The Bastard of.) See DUNOIS.

Orléans, (or'le-ans,) a city of France, cap. of the dept. of Loiret, on the Loire, 34 m. N.E. of Blois, and 63 m. S.W. of Paris, was the former cap. of the old province of *Orléannais*, which now forms the greater part of the depts. of Loiret, Eure-et-Loir, and Loir-et-Cher. It is situated in a rich and fertile country, and is surrounded by pleasantly-shaded boulevards. Its cathedral is one of the finest specimens of Gothic architecture in France. O. contains 3 monuments in honor of Joan of Arc, the finest of which, an equestrian statue, was erected in 1855. (See Fig. 1449.) Near the city is the Forest of Orleans, consisting of 94,000 acres, planted with oak and other valuable trees. *Manuf.* O. is chiefly celebrated for its vinegar, which is the best in France. O., the *Genabum* of the Romans, was afterwards named *Aurclianum*, from Marcus Aurelius, who rebuilt it in the 2d century. It was besieged by the English in 1428–29, who were obliged, through the efforts of Joan of Arc, to retire. In 1563, it was also besieged by the Duke de Guise, who was assassinated under its walls by Poltrot de Mere. *Pop.* (1897) 63,600.

Or'leaus, in California, a prosperous post-township of Humboldt co.

Orleans, in Illinois, a post-village of Morgan co., about 8 m. E. of Jacksonville.

Orleans, in Indiana, a post-village and township of Orange co., about 15 m. S. of Bedford, on the Louisville, New Albany & Chicago R. R.

Orleans, in Iowa, a village of Appanoose co., about 13 m. W. of Bloomfield.

—A township of Winneshiek co.

Orleans, in Louisiana, a southeast parish; *area*, about 187 square miles. *Rivers.* Mississippi river and some smaller streams, while Lake Pontchartrain washes it on the N. and Lake Borgne on the E. *Surface*, level and low, being mostly below the level of the Mississippi; *soil*, all along the river and in certain other parts, exceedingly fertile. *Cap.* New Orleans. *Pop.* (1897) 280,000.

Orleans, in Maryland, a village of Alleghany co., about 24 m. E. by S. of Cumberland.

Orleans, in Massachusetts, a post-township of Barnstable co. *Pop.* (1895) 1,219.

Orleans, in Michigan, a post-township of Ionia co.

Orleans, in Missouri, a post-village of Polk co., about 120 m. S.W. of Jefferson City.

Orleans, in New York, a N.W. co., bordering on Lake Ontario; *area*, about 399 sq. m. *Rivers.* Oak Orchard, Johnson's and Sandy creeks. *Surface*, diversified, but for the most part level; *soil*, generally fertile. *Min.* Bog iron ore, sulphur and salt springs. *Cap.* Albion. *Pop.* (1897) 31,850.

Orleans, in Oregon, a village of Linn co., about 11 m. S.W. of Albany.

Orleans, in Vermont, a N. co., adjoining prov. Quebec; *area*, about 728 sq. m. *Rivers.* Lamoyille and Mississippi rivers, and Black, Barton, and Clyde creeks, besides a portion of Lake Memphremagog and several smaller lakes or ponds. *Surface*, uneven, and in the E. and W. parts mountainous; *soil*, generally fertile. *Cap.* Newport. *Pop.* (1897) 22,364.

Orleans, in Virginia, a post-village of Fauquier co., about 112 m. N. by W. of Richmond.

Orleans, Isle of, an island of prov. Quebec, in the St. Lawrence river, about 5 m. below Quebec. It is about 20 m. in length by 6 m. in breadth; *area*, 120 sq. m.

Or'lo, n. (*Arch.*) See ORL.

(Mus.) A kind of Spanish wind-instrument.

Orloff (or'lof), a celebrated Russian family, founded

under Peter the Great by Ivan Orel, one of the archers, or *strelitzes*, who, when that body was destroyed, saved his life by his cool courage, and became an officer and a noble. The most celebrated of his descendants were: — GREGORY, a Russian general and political intriguer, who greatly promoted the elevation of his mistress, Catherine II., to the throne. Being disappointed in his hope of sharing the crown with her, and declining a private marriage, he was supplanted by a new favorite, and d. insane 1783. He had one son by the empress, named Bobrinski. — ALEXIS, his brother, and fellow-conspirator, was a man of gigantic stature and strength, and is said to have strangled the emperor Peter with his own hands. He was a favorite of Catherine, and was married to the Princess Tarakanoff, daughter of the empress Elizabeth; d. 1808. — GREGORY VLADIMIROVITZ, a nobleman of the same family, b. 1778, and bearing the title of COUNT ORLOFF, was distinguished for his patronage and culture of letters. He was author of *Historical, Political, and Literary Memoirs of Naples*, and *History of the Arts in Italy*; d. 1826. — MICHAEL, son of the above Alexis, b. 1785, served in the Russian army against Napoleon I., and went to Paris with the allies in 1814. — ALEXIS, brother of the preceding, b. 1787, distinguished himself as a diplomatist and statesman under Nicholas, and d. 1861.

Or'lop, n. [*Du. overloop*, from *over*, and *loopen*, to run.] (*Naut.*) The lower deck of a ship of the line; or that, in other vessels, on which the cables are stowed.

Ormoln', n. [*Fr. or-moulu*, from *or*, gold, and *moulu*, from *moudre*, to grind.] An alloy in which there is less zinc and more copper than in brass, that it may present a nearer resemblance to gold. It is used for the ornamentation of furniture. In many cases a gold lacquer is applied to heighten the color of the alloy; but in some instances the native color of the metal is preserved after being properly brought out by means of sulphuric acid. Furniture ornamented with ormolu came into fashion in France in the reign of Louis XV., and was long in favor among the wealthy and the great. Even at the present time it retains its attraction with many of the rich virtuosos.

Orms'kirk, a town of England, co. of Lancaster, 11½ m. N.N.E. of Liverpool, and 180 m. N.W. of London. *Manuf.* Silks, cottons, mats, and rope. *Pop.* 6,426.

Or'muz, (anc. Ozyris,) an island situated at the mouth of the Persian Gulf, in Lat. 2° 12' N., Lon. 56° 25' E. It is 12 m. in circumference, and belongs to the Imam of Muscat. The harbor is sheltered on 3 sides, and it has a good anchorage. Its town, now decayed, was formerly of great importance.

Or'muzd, (Persian Myth.) The beneficent deity of the Zoroastrian religion as it is set forth in the Zendavesta. According to this system (DUALISM), Ormuzd, the principle of light and purity, created six immortal spirits, then twenty-eight subordinate spirits, and lastly the souls of men, while Ahriman, the opposing evil principle, produced six evil angels with sundry subordinate demons. These are all engaged in a ceaseless conflict, which is to end with the triumph of Ormuzd, when Ahriman will acknowledge his supremacy, and all creatures shall be delivered from the dominion of evil.

Ornament, n. [*Fr. ornement*; *Lat. ornamentum*, from *orno, ornare*, to adorn.] That which adorns or embellishes; something which, added to another thing, renders it more beautiful to the eye; embellishment; decoration; additional beauty.

—*v. a.* To adorn; to embellish; to deck; to decorate; to make beautiful; to furnish with embellishments.

Ornament'al, a. Serving to ornament, adorn, or decorate; giving additional beauty; embellishing.

Ornament'ally, adv. In such a manner as to add embellishment.

Ornamenta'tion, n. The art of ornamenting, or state of being ornamented. — Ornament; that which embellishes or ornaments; decoration.

Ornament'er, n. He who, or that which, ornaments.

Ornamentist, n. One engaged or employed in ornamentation.

Or'rate, a. [*Lat. ornatus.*] Adorned; embellished; decorated; splendidly furnished or equipped.

Or'nately, adv. In an ornate manner.

Or'nateness, n. State or quality of being ornate.

Orne, (orn,) a small river of France, rising near Leez, dept. of Orne, and flowing into the English Channel after a course of 86 m.

Orne, a dept. in the N.W. of France, between Lat. 48° 12' and 48° 48' N., Lon. 1° E. and 1° W., having N. the depts. of Calvados, and Eure; E., Eure, and Eure-et-Loire; S., Sarthe and Mayenne; and W., Manche; *area*, 2,500 sq. m. The surface is diversified, and the soil fertile along the banks of the rivers. *Rivers.* Orne, Dive, Vie, Sarthe, Mayenne, and Ille. Agriculture is backward. *Prod.* Oats, hemp, flax, and potatoes. Cattle and sheep are extensively reared, and the horses are considered the best in France. *Min.* Iron, manganese, and porcelain clay. *Manuf.* Metallic and linen goods, needles, pins, wire, paper, glass, beet-root sugar, &c. *Chief towns.* Alençon (the cap.), Argentan, Domfront, and Mortagne. *Pop.* 414,618.

Ornith'ic, a. [*Gr. ornithos, a bird.*] Belonging, or having reference to birds; as, *ornithic fossils*.

Ornith'ichnite, n. [*Gr. ornithos, and ichnos, track.*] (*Pal.*) The foot-mark of a bird on a stone. Some of these are very remarkable, as proving the existence of birds at very remote periods; for instance, at the early epoch of the new red sandstone formation.

Ornithicnology, n. [*Gr. ornithos, bird, ichnos, track, and logos, treatise.*] (*Pal.*) That branch of science which relates to ornithicnites.

Ornithodel'opid, a. Having reference, or pertaining to animals resembling the ornithorhynchus.

Ornithog'alum, n. [*Gr. ornithos, and gala, milk*; why so called is not obvious.] (*Bot.*) A genus of plants, order *Liliaceæ*. They are perennial herbs; leaves radical; scape naked, racemose or corymbose. *O. umbellatum*, the Star of Bethlehem, is a handsome plant from England, but naturalized in this country. Flowers few, in a kind of loose corymb; petals and sepals white, beautifully marked with a longitudinal green strip on the outside.

Ornithoidich'nite, n. [*Gr. ornithos, eidos, form, and ichnos, track.*] (*Pal.*) A fossil foot-mark resembling that of a bird.

Ornith'olite, n. [*Gr. ornithos, bird, and lithos, stone.*] (*Pal.*) The fossil remains of a bird.

Ornithologic, Ornitholog'ical, a. [*Fr. ornithologique.*] Pertaining, or having reference to ornithology.

Ornithologist, n. [*Fr. ornithologiste.*] A person who is skilled in ornithology, or in the natural history of birds, who understands their form, structure, habits, and uses; one who describes birds.

Ornithology, n. [*Fr. ornithologie*; *Gr. ornithos, a bird, and logos, discourse.*] (*Zoöl.*) The science which teaches the natural history and arrangement of birds; or, to use the definition of Cuvier, of vertebrated oviparous animals, with a double circulation and respiration, organized for flight. The sub-division of this class of birds is by no means so clearly indicated by either external or anatomical characters as that of mammals, and the system of O. presents, in consequence, great discrepancy. See BIRD.

Ornith'omancy, n. [*Gr. ornithos, and manteia, prophecy.*] Among the ancients, a kind of divination practised by means of birds, their flight, &c.

Or'nithon, n. [*Gr. ornithōn.*] A building or receptacle for the safe-keeping of birds.

Ornith'opus, n. (*Bot.*) The Bird's-foot, a genus of ornamental plants, order *Fabaceæ*, sub-order *Papilionaceæ*, deriving both its popular and its botanical name from the resemblance of its curved pods to birds'-claws; the leaves are pinnate, with a terminal leaflet.

Ornithorhynchus, (-rink'us,) n. [*Fr. ornithorhynque*, from *Gr. ornithos, and rynchos, beak.*] (*Zoöl.*) The Duck-bill, a genus of mammals, order *Monotremata*, characterized by the form of the mouth, which resembles the bill of a duck (Fig. 244). It is about two feet long, and is peculiar to the fresh-water rivers and lakes of Australia and Tasmania. It constitutes, in common with the *Echidna* (*q. v.*), the lowest of the mammals, and resembles the reptiles in laying eggs. The two milk glands, which unite it with the mammalia, open upon a flat bare patch of skin.

Orobanchaceæ, (o-ro-ban-kai'se-e,) n. [*Gr. arobos, vetch, and ancho, I strangle.*] (*Bot.*) The Broom-rape family, an order of plants, alliance *Gentianales*. *Diag.* No stipules, simple stigmas at the end of a manifest style, parietal placentæ, and didynamous flowers. They are fleshy herbs growing parasitically on the roots of other plants. The stems are scaly without any true green leaves. The order contains 12 genera and 116 species. See EPIPHEGUS.

Oro'bun, n. (*Bot.*) A genus of plants, order *Fabaceæ*. They are perennial herbs, chiefly native of Europe. *O. tuberosa*, the Bitter-vetch, with other species, afford good food for cattle. The tubers have a sweet taste, resembling that of liquorice, and are sought after by children;

Fig. 2006. — BITTER-VETCH. (*Orobancha tuberosa*.)

they are also bruised and steeped in water in some parts of the Highlands of Scotland, to make a fermented liquor. They are well-flavored and nutritious when boiled or roasted.

Orographic, (-grä'fik,) Orograph'ical, a. Belonging or having relation to orography.

Orography, n. [*Gr. oros, mountain, and graphein, to depict.*] An account of, or treatise on, mountains.

Orolog'ical, a. [*Fr. orologique.*] Relating to a description of mountains.

Orol'ogist, n. One who describes mountains.

Orology, *n.* [Fr. *orologie*, from Gr. *oros*, mountain, and *logos*, doctrine.] The science treating of the description of mountains.

O'range, *n.* [Fr., a fine sort of mushroom.] The *Agaricus Caesarus*, one of the best and handsomest of fungi, celebrated among the Romans under the name of *Boletus*.

Oro'no, in *Iowa*, a small village and township of Muscatine co., about 15 m. W. by S. of Muscatine. Pop. of township (1897) 580.

Orono, in *Maine*, a post-township of Penobscot co. Pop. (1897) 2,810.

Oronoco Station, in *Minnesota*, a post-village in Oronoco township of Olmsted co., about 10 m. N. by W. of Rochester. Pop. of township (1897) 895.

Oronoko, in *Michigan*, a township of Berrien co.; pop. abt. 1,249.

Orou'tes, [Arab. *El-Assay*, "the rebellious,"] a river of Asiatic Turkey, in N. Syria, rising on the E. side of the mountain Anti-Libanus, near the village of El-Ras, and after a W.N.W. course of 240 m., falling into the Mediterranean 40 m. N. of Latakia.

Orontia'ceæ, *n. pl.* (Bot.) The Orontiad, or Sweet-flag family, an order of plants, alliance *Juncaceæ*. DIAG. Spadiceous flowers, and an axile embryo with a lateral cleft.—They are herbs with broad entire or deeply divided leaves, which, however, are occasionally sword-shaped and equitant. Some of them are stemless, others scramble over trees, to which they adhere by creeping-roots; a few are aquatic. Fruit baccate. Seed usually with a fleshy or mealy albumen. The plants of this order are found in cold, temperate, or tropical climates. See ACURUS. The order includes 13 genera and 70 species.

Orosza, a town of E. Hungary, co. of Bekes, 27 m. S.W. of Bekes; pop. 10,000.

Orotava, a town of the Canary Islands, on the N. coast of Tenerife, below the peak. Its harbor is bad. Pop. 8,500.

Orotund, *n.* [Lat. *os*, *oris*, mouth, and *rotundus*, round.] A mode of intonation proceeding directly from the larynx, and giving that ringing or musical sound which forms the highest perfection of the human voice.

—*a.* Characterized by distinct and smooth articulation, or musical intonation; —said of the human voice.

Oroville, in *California*, a town, cap. of Butte co.; abt. 75 m. N. of Sacramento.

Orpah, (Script.) The Moabitess, Naomi's daughter-in-law, who remained with her people and gods, when Ruth followed Naomi and the Lord. (Ruth i. 4-14.)

Orphan, (orphan), *n.* [Fr. *orphelin*; Gr. *orphanos*, orphaned, without parents; Lat. *orbus*, bereaved.] A child who is bereaved of father or mother, or both.

—*a.* Bereaved of parents.

—*v. a.* To reduce to a state of orphanage.

Orphanage, **Orphanhood**, **Orphanism**, *n.* State or condition of being an orphan.

Orphaned, (or'fund), *a.* Bereft of parents or natural protectors.

Orphanet, *n.* A young orphan. (R.)

Orphanhood, **Orphanism**, *n.* Same as ORPHANAGE *q. v.*

Orphan's Island, in *Maine*, at the entrance of Penobscot River, opposite Bucksport.

Orphean, *a.* [Lat. *Orpheus*; Gr. *Orpheios*.] Relating or pertaining to Orpheus, the mythological poet and musician; as, *Orphean melodies*.

Orpheus, [Gr.] (Myth.) According to the common story, a son of the Thracian river Æsgrus and the muse Calliope. His power of moving inanimate things by music, the share he bore in the Argonautic expedition, his descent into the Shades to recover his wife Eurydice, and his death by the violence of the Thracian women, are well known.

Orphic, *a.* Having reference to Orpheus; Orphean.

Orphrey, (or'frey), *n.* [Fr. *orfroi*.] (Ecc.) An ornamented band pertaining to sacerdotal vestments.

Orpiment, *n.* [From Lat. *aurum*, gold, and *pigmentum*, a color.] (Chem.) The commercial name for the ter-sulphide of arsenic. It is the coloring ingredient in the pigment known as King's yellow.

Orpin, *n.* (Paint.) A yellow color, of various degrees of intensity, approaching also to red.

Orpine, *n.* (Bot.) See SEDUM.

Orrach, *n.* (Bot.) Same as ORACH, *q. v.*

Or'rary, *n.* [Named after the Earl of Orrery.] (Astron.) A machine for representing to children the motions and relative magnitudes and distances of the bodies composing the solar system. The orrery, once regarded as important, is now relegated to the position of a toy, it being impossible to get correct ideas concerning the sizes and distances of the planets, in the words of Sir John Herschel, "by drawing circles on paper, or, still worse, from those very childish toys called orreries." They are of some utility, however, in giving a general idea of the way in which the planets move.

Or'rington, in *Maine*, a post-township of Penobscot co. Pop. (1897) 1,450.

Or'ris-root, *n.* (Bot.) See IRIS.

Orrs'town, in *Pennsylvania*, a post-borough of Franklin co., about 10 m. S. of Chambersburg.

Orrs'ville, in *Georgia*, a village of Gwinnett co.

Orr'ville, in *N. Carolina*, a village of Mecklenburg co.

Orrville, in *Ohio*, a post-village of Wayne co., on the Penna. and 3 other R. Rs. Pop. (1897) 1,980.

Orsini, a celebrated Roman family, the rivals of the Colonna, who lived during the Middle Ages. The first Orsini known became cardinal in 1145; his nephew, Matthew Orsini, was Prefect of Rome in 1153; Gaetano Orsini was made Pope in 1277, under the name of Nicholas III. Another of the family was elected Pope in 1724, with the title of Benedict XIII. The family has had many cardinals and distinguished personages among its members.

Ort, *n.*; *pl.* ORTS. [Dan. and Fris. *orte*.] A fragment; a shred; any refuse or rejected part; —generally employed in the plural.

Orta, a lake of N. Italy, in Piedmont, div. of Novara, 6 m. W. of Lago Maggiore, into which it discharges its surplus waters. Ext. 8 m. long, and 1½ wide.

Orthez, or **Orthes**, (or'tai), a town of France, dept. of Basses-Pyrenees, on the Gave de Pau, 24 m. N.W. of Pau. Manuf. Woollen stuffs, brass and iron wire, and copper-ware. Pop. 6,724.

Or'thite, *n.* [Gr. *orthos*, straight.] (Min.) A variety of Allanite, which occurs massive, and also in long, thin, acicular crystals. It is of a blackish-gray color, and either opaque or only slightly translucent when reduced to thin splinters.

Orthocerate, *n.* [Gr. *orthos*, and *keras*, horn.] A family of Cephalopods, with chambered siphoniferous shells which are straight, or are continued straight after commencing with a greater or less curvature, thus resembling a horn.

Orthoclase, *n.* [Gr. *orthos*, and *klasis*, fracture.] (Min.) Common or Potash Felspar. A silicate of alumina and potash; but a portion of the potash is frequently replaced by lime, soda, magnesia, &c. It occurs in crystals which are generally white, reddish-white, or grayish, and translucent. Potash Felspar enters into the composition of many rocks, and is one of the ordinary ingredients of granite.

Orthodox, *a.* [Fr. *orthodoxe*; late Gr. *orthodoxos*.] Having or holding a right opinion or doctrine; sound in the Christian faith; believing the original doctrines taught in the Holy Scriptures; —opposed to *heterodox*, or *heretical*. To the Roman Catholic, he only is orthodox who believes that which the Church enjoins; and all others are heterodox.

Orthodoxal, *a.* Relating to, or testifying, orthodoxy.

Orthodoxical, *a.* Orthodox; in a manner in accordance with, or evincing, orthodoxy.

Orthodoxy, *adv.* With soundness of faith; in an orthodox manner.

Orthodoxy, *n.* [Gr. *orthodoxia* — *orthos*, straight, and *doxa*, opinion, notion, from *dokao*, to think, to suppose; akin to Hindoo *dekhna*, to suppose.] Right opinion, doctrine, or belief, soundness in the Christian faith. — Accordance with genuine scriptural doctrines; orthodoxy; as, the *orthodoxy* of a creed.

Orthodromic, *a.* [Gr. *orthos*, and *dranein*, to run.] Belonging or relating to orthodromy.

Orthodromy, *n.* [Fr. *orthodromie*.] Art or operation of sailing on a great circle.

Orthoëpic, **Orthoëpical**, *a.* Pertaining, or having reference to orthoëpy.

Orthoëpically, *adv.* In an orthoëpical manner.

Orthoëpist, *n.* One versed in orthoëpy; one who pronounces words correctly, or who is well skilled in pronunciation.

Orthoëpy, *n.* [Gr. *orthoepeia* — *orthos*, right, and *epos*, *epos*, a word. See EPIC.] Right speech or pronunciation; the art of uttering words with preciseness and propriety; correct pronunciation of words.

Orthogon, *n.* [Gr. *orthos*, right, and *gonia*, angle.] (Geom.) A rectangular figure.

Orthogonal, *a.* [Fr.; Lat. *orthogonius*.] Right-angled; rectangular.

Orthogonally, *adv.* Perpendicularly; at right angles; as, a circle projected *orthogonally*.

Orthographer, *n.* One versed in orthography, or the correct spelling of words, according to common usage.

Orthographic, **Orthographicical**, *a.* Belonging, or having reference to orthography, or the correct spelling of words; correctly spelled; written with the proper letters; as, *orthographical rules*.

(Geom.) Relating or pertaining to right lines or angles.

O. projection. The projection of points on a plane by straight lines at right angles to the plane.

Orthographically, *adv.* According to the rules of proper spelling; in an orthographical manner. — In the manner of an orthographic projection.

Orthographist, *n.* Same as ORTHOGRAPHER, *q. v.*

Orthographize, (or-thog'ra-fiz), *v. n.* To spell words correctly. (R.)

Orthography, *n.* [Gr. *orthographia* — *orthos*, right, and *grapho*, to write.] The art, practice, or operation of writing words correctly, or with the proper letters, according to common usage. — That part of grammar which treats of the nature and properties of letters, and the proper method of spelling words; the practice of spelling or writing words with the correct letters.

(Arch.) A geometrical representation of an elevation or section of a building.

Orthometrie, *a.* (Crystallog.) With the axes at right angles to one another; — said of crystals.

Orthometry, *n.* [Gr. *orthos*, and *metron*, measure.] The act, art, practice, or laws of correct versification.

Orthopedic, **Orthopedical**, *a.* (Med.) Pertaining or relating to the cure of diseases of the feet.

Orthopedist, *n.* (Med.) One who cures diseases or deformities of the feet.

Orthopedy, *n.* [Gr. *orthos*, straight, and *pais*, gen. *paidos*, a child.] (Med.) That part of the science which has for its object to prevent and correct deformities in the bodies of children. Generally used, however, with a more extensive signification, to embrace the correction or prevention of deformities at all ages.

Orthophony, (or-thöf'one), *n.* [Gr. *orthos*, straight, and *phonē*, voice.] The art of correct utterance or proper articulation.

Orthopneæ, **Orthopny**, *n.* [Gr. *orthos*, and *pneim*, to breathe.] (Med.) A difficulty of breathing, which is increased by any deviation from the erect posture.

Orthop'tera, *n. pl.* [Gr. *orthos*, and *pleron*, wing. (Zool.) A sub-order of insects embracing those whose wings lie straight along the top and sides of the back, the upper ones being somewhat thick and opaque, and sometimes slightly overlapping, and the under ones larger, thin, and folded in plaits like a fan. They do not undergo a complete transformation in coming to maturity, but the young are constantly active, feeding and growing, and differ from the adults only in size, and in having only the rudiments of wings, and in frequently changing their skins. At length, having shed their skins for the sixth and last time, they come forth perfect insects, without having passed through the inactive phase of the pupa state.

Orthop'teran, *n.* (Zool.) One of the orthoptera.

Orthop'terous, *a.* Belonging to, or presenting the characteristics of, the order *Orthoptera*.

Orthorhom'bie, *a.* [Gr. *orthos*, straight, and *rhombos*, rhombus.] (Crystallog.) Same as TRIMETRIC, *q. v.*

Orthostyle, *n.* [Gr. *orthos*, straight, and *stylos*, pillar.] (Arch.) A straight range of columns.

Orthot'omous, *a.* [Gr. *orthos*, straight, and *temnein*, to cleave.] (Crystallog.) Having two cleavages at right angles with each other.

Orthot'ropal, **Orthot'ropous**, *n.* [Gr. *orthos*, straight; *tropo*, I turn.] (Bot.) A term applied to ovules in which the nucleus is straight and has the same direction as the seed to which it belongs, the foramen being at the end most remote from the hilum.

Orthotypous, *a.* [Gr. *orthos*, straight, and *typos*, figure.] (Crystallog.) With a perpendicular cleavage: — said of crystals.

Or'tive, *a.* [Late Lat. *ortivus*, from *orior*, *ortus*, to rise.] Having reference to the time or act of rising, as of a star; eastern; orient; as, the *ortive* amplitude of a planet.

Ortler, or **Ort'eler**, the loftiest mountain of the Tyrol, and of the Austrian empire, situated in the Rhetian Alps, 10 m. S. of Glarus. Height, 12,811 ft.

Ortolan, *n.* [Fr.; It. *ortolano*.] (Zool.) See PLECTROPHANES.

Orto'na, a town of Italy, prov. of Abruzzo Citeriore, on the Adriatic, 8 m. N. of Lanciano, and 11 m. E. of Chieti; pop. 11,862.

Ortyx, a genus of birds, family *Perdidae*, distinguished by having the bill stout, head without a crest, and the tail short. The Quail, *O. Virginianus* (sometimes called Colin), of the U. States, E. of the High Central Plains (Fig. 2009), is ten inches long, the wing nearly four and three quarter inches; prevailing color above, brownish-red; the under parts white, tinged with brown before, and marked with obtusely V-shaped spots of black; the head is beautifully marked with pure white and black. The female has the white markings of the head replaced by brownish-yellow, and

Fig. 2007. — COCKROACH, (*Blatta Orientalis*.)

Fig. 2008. — ORTLER-SPITZ.

Ortolan, *n.* [Fr.; It. *ortolano*.] (Zool.) See PLECTROPHANES.

Orto'na, a town of Italy, prov. of Abruzzo Citeriore, on the Adriatic, 8 m. N. of Lanciano, and 11 m. E. of Chieti; pop. 11,862.

Ortyx, a genus of birds, family *Perdidae*, distinguished by having the bill stout, head without a crest, and the tail short. The Quail, *O. Virginianus* (sometimes called Colin), of the U. States, E. of the High Central Plains (Fig. 2009), is ten inches long, the wing nearly four and three quarter inches; prevailing color above, brownish-red; the under parts white, tinged with brown before, and marked with obtusely V-shaped spots of black; the head is beautifully marked with pure white and black. The female has the white markings of the head replaced by brownish-yellow, and

Fig. 2009. — AMERICAN QUAIL, (*Ortyx Virginianus*.)

the black wanting. In New England, New York, and westward, this bird is called the Quail; but in Pennsylvania and southward it is called the Partridge. Its clear whistle is composed of three notes, the first and last of equal length, the first being loudest. The nest is built near a tuft of grass; eggs ten to eighteen, pure white. The Mountain Quail, *O. pictus* (Fig. 2010), of the mountain ranges of Oregon and California, is ten and a half inches long, and the wing five inches.

Fig. 2010.
CALIFORNIA QUAIL.
(*Oryzopsis pictus*.)

- Oruro**, (*o-roo-ro*), a town of Bolivia, abt. 100 m. N.W. of Sucre; pop. 5,000.
- Orus**, (*Myth.*) Same as *Horus*, *q. v.*
- Orust**, an island of Sweden, in the Cattegat, 28 m. N.W. of Gothenburg; length, 14 m., breadth, 10 m.; pop. unascertained.
- Orval**, *n.* (*Bot.*) *Lamium orvala*, an odoriferous meadow-plant, genus *Lamium*, *q. v.*
- Orvietan**, *n.* An antidote for poison, said to have been invented by a mountebank of Orvieto in Italy.
- Orvieto**, (*or-vee-ah-to*), a town of central Italy, prov. of Perugia, at the junction of the Paglia and Chiane rivers, 11 m. N.E. of the Lake of Bolsena, and 59 m. N.W. of Rome. It stands on an isolated rock, and contains numerous palaces. Pop. 12,955.
- Orwell**, a river of England, co. of Suffolk, rising near Felsham, and flowing E. joins the Stour, to form the harbor of Harwich.
- Orwell**, in New York, a town of Oswego co., celebrated for a fine cataract, called *Salmun River Falls*, which forms an unbroken cascade of 107 feet.
- Orwell**, in Ohio, a post-township of Ashtabula county, abt. 46 m. E. of Cleveland.
- Orwell**, in Pennsylvania, a post-township of Bradford co.
- Orwigsburg**, in Pennsylvania, a post-borough of Schuylkill co., abt. 9 m. S. E. of Pottsville.
- Orycteropus**, *n.* [*Gr. oryctes*, a digger, and *pous*, a foot.] (*Zool.*) A genus of edentate mammalia, the AARD-VARE, *q. v.*
- Oryctography**, **Oryctology**, *n.* [*Gr. oryktos*, fossil, and *graphein*, to write.] (*Pal.*) That branch of natural history which treats of the description of fossils and minerals.
- (*Min.*) The nomenclature, classification, and description of minerals.
- Oryx**, *n.* (*Zool.*) The long-horned Antelope, or Gemsbok, of central and southern Africa, a species of Antelope, as large as the stag, with straight, slender, round, and pointed horns, 2 or 3 feet long, with the lower third obliquely annulated.
- Oryza**, (*o-ri-za*), *n.* (*Bot.*) A genus of plants, order *Graminaceae*, including the Rice-plant. See *Rice*.
- Oryzopsis**, *n.* [Named from its resemblance (*opsis*) to the genus *Oryza*.] (*Bot.*) A genus of plants, order *Graminaceae*. *O. asperifolia*, the Mountain Rice, is very common in woods in the Northern States. Leaves green through winter; caryopsis white, about as large as rice, farinaceous.
- O. S.** An abbreviation of *Old Style*. See *Calendar*.
- Os**, *n.*; *pl.* *Ossa*. [*Lat.*] (*Anat.*) A bone.—Also, the mouth.
- Osage**, (*o-sazh*), in Illinois, a post-village of Franklin co., abt. 50 m. S. of Centralia.
- A township of La Salle co.
- Osage**, in Iowa, a city and township, cap. of Mitchell co., on the Ill. Cent. and N. & W. R.Rs., 17 m. N.N.W. of Charles City. Pop. (1895) 2,509.
- Osage**, in Kansas, an E. county; area, about 720 sq. m. Rivers. Osage river and several of its affluents. Surface, diversified; soil, fertile. *Min.* Coal in large quantities. Cap. Lyndon. Pop. (1895) 24,818.
- A township of Miami co.
- Osage**, in Missouri, a S.E. central co.; area, about 586 sq. m. Rivers. Missouri, Osage, Gasconade, and Marais rivers. Surface, uneven; soil, fertile. Cap. Lin. Pop. (1890) 13,080.
- A village of Crawford co., abt. 91 m. S.E. of Jefferson City.
- Osage Orange**, *n.* (*Bot.*) See *MAELURA*.
- Osage River** rises in Wabunsee co., Kansas, and flowing generally S.E. into Missouri, turns to the N.E., and after a tortuous N.E. course of over 400 m., enters the Missouri river between Osage and Cole cos. Total length, about 500 m. Navigable for 200 m.
- Osages**, *n. pl.* [*Fr.* from Algonquin *onashash*, bone men.] A tribe of North American Indians, of the Sioux or Dacotah family. By treaty with the U. S., in 1825, the tribe was located on a tract of land of 7,564,000 acres in area, lying in the present State of Kansas. They continued, however, troublesome, combining depredations upon the whites with their pursuit of the chase, and were therefore removed to a reservation in the north of the Indian Territory. They are about 1,200 in number.
- Osborn**, in Iowa, a village of Howard co., about 25 m. N.W. of Decorah.
- Osborn**, in Missouri, a post-village of De Kalb co., about 29 m. E. of St. Joseph.
- Osborn**, in Ohio, a post-village of Greene co., about 10 m. N.E. of Dayton. Pop. (1897) 760.
- Osborn**, in Wisconsin, a township of Outagamie co.
- A village of Rock co., about 28 m. S.E. of Madison.

Oscar I., KING OF SWEDEN AND NORWAY, born in 1792, was the son of Charles XIV., formerly the French General Bernadotte. Oscar succeeded in 1844, but resigned in 1857 on account of illness, in favor of his son Charles as regent (afterwards Charles XV.). Died in 1859.

Oscar II., KING OF SWEDEN AND NORWAY, the son of Oscar I., was born in 1829 and succeeded his brother Charles XV. in 1872. A man of kindly disposition, he was loved in both kingdoms, but Norway seceded from his rule in 1905 on account of political differences. Oscar won repute as an historian and poet. He died Dec. 8, 1907, and was succeeded by his son Gustavus V.

Oseola, a chief of the Seminole Indians, b. in Florida abt. 1813, was the son of an Indian trader called Powell. In 1835, while on a visit to Fort King, his wife was claimed as a slave, as being the daughter of a fugitive slave-woman, and carried off as such. O. resolved upon vengeance, and some months afterwards, finding Gen'l Thompson outside of the fort, killed him and 6 other whites in his company, Dec. 28, 1835. Such was the beginning of the second Seminole War, during which O. defeated the U. S. troops in several engagements. On Oct. 23, 1837, while holding a conference under a flag of truce with Gen. Jessup, near St. Augustine, he was treacherously seized and kept in confinement at Fort Moultrie till his death, in 1838.

Fig. 2011. — OSEOLA.

Oseola, in Arkansas, a post-town, cap. of Mississippi county.

Oseola, in Florida, a S.E. central co.; area, 1,758 sq. m. Cap. Kissimmee. Pop. (1897) 3,500.

Oseola, in Illinois, a post-township of Stark co.

Oseola, in Iowa, a post-village and township, cap. of Clarke co., about 40 m. S. by W. of Des Moines.

—A township of Franklin co.

Oseola, in Michigan, a N.W. central co. of the lower peninsula; area, about 580 sq. m. Rivers. Muskegon river, and numerous smaller streams. Surface, diversified; soil, fertile. Cap. Hersey. Pop. (1894) 16,470.

—A township of Livingston co.

Oseola, in Missouri, a post-village, cap. of St. Clair co., about 132 m. W.S.W. of Jefferson City.

Oseola, in New York, a post-township of Lewis co. Pop. (1897) 610.

Oseola, in Ohio, a post-village of Crawford co., about 70 m. N. of Columbus. Now spelled OCEOLA.

Oseola, in Pennsylvania, a post-borough and township of Tioga co., about 20 m. N. of Wellsborough.

Oseola, in Wisconsin, a township of Polk county.

Oseola Centre, in Michigan, a village of Livingston co., abt. 50 m. N.W. by W. of Detroit.

Oseola Mills, in Wisconsin, a post-village, cap. of Polk co., abt. 27 m. N. of Hudson.

Oshatz, (*o'shats*), a town of N. Germany, in Saxony, 81 m. E.S.E. of Leipsic. *Manuf.* Woollen cloth and yarn. Pop. 6,000.

Oschersleben, (*oshers-la-ben*), a town of Prussian Saxony, on the Bode, 19 m. W.S.W. of Magdeburg; pop. 4,000.

Oscillancy, *n.* State of oscillating, or making a see-saw kind of motion.

Oscillate, *v. n.* [*Lat. oscillo, oscillatum*, to swing — *ob*, or *obs*, and ancient *cillo*, to move.] To move to and fro, or backwards and forwards; to swing; to vibrate, as a pendulum; — hence, to fluctuate between expressed limits.

Oscillating engine. (*Mach.*) A marine engine with a vibrating cylinder, having the piston-rod connected to the crank, and the cylinder supported by the trunnions projecting from the sides at or near the centre, cast hollow, and connected to the steam and eduction pipes.

Oscillation, (*os-sil-lai'shun*), *n.* [*Fr.* from *Lat. oscilatio*.] (*Mech. and Phys.*) The vibration or reciprocal ascent and descent of a pendulous body. The problem of oscillation, in its widest sense, includes most of those which occur in astronomy, optics, &c. To their average motions, the moon and planets add small oscillations about their mean places; the tides consist of oscillations of the ocean, about the uniform spheroid, which, if it were not for the action of the heavenly bodies, would be carried round in the daily rotation of the earth; the phenomena of light are supposed to result from oscillations in an elastic ether; those of sound from oscillations in the air, &c. In general language, however, the problem of oscillation refers only to the purely theoretical part of the problem of the pendulum. (See *PENDULUM*.) The centre of oscillation is that point in a vibrating body in which, if all the matter of the body were collected into it, the vibrations would be performed in the same time as before. The axis of oscillation is a straight line passing through the point of suspension, parallel to the horizon.

Oscillative, *a.* Having a tendency to oscillate; oscillatory; vibratory.

Oscillatoria, **Oscillaria**, *n. pl.* (*Bot.*) A genus of wild plants, order *Conferaceae*. They are composed of cylindrical filaments, (see Fig. 663,) inclosed singly

in tubular cellulose sheaths, open at the ends, from which the filaments emerging wave backwards and forwards. For a time they were held to be organized bodies, but are now generally admitted to belong to the vegetable kingdom.

Oscillatory, *a.* [*Fr. oscillatoire*.] Moving backward and forward, like a pendulum; swinging; oscillative; vibratory; as, oscillatory motion.

Oscines, *n. pl.* (*Zool.*) A sub-order of *Insectores* birds, comprising the true singing-birds, such as have the larynx provided with five pairs of peculiar muscles, which are used in the production of song.

Oscitancy, *n.* Act of yawning or gaping. — Morbid tendency to slumber; drowsiness; lethargic dulness.

Oscitant, *a.* [*Fr.* from *Lat. oscitare*.] Yawning; gaping. — Drowsy; extremely sleepy; lethargic; sluggish.

Oscitantly, *adv.* In an oscitant manner; gapingly; drowsily; sluggishly.

Oscitate, *v. n.* [*From Lat. os, the mouth, and citare, to accelerate*.] To yawn; to gape with drowsiness.

Oscitation, *n.* [*Lat. oscitatio*.] Act of gaping or yawning from sleepiness.

Oseco, or OSEKOW, in Illinois, a post-township of Henry co. Pop. (1897) 964.

Osculant, *a.* [*Lat. osculans*, from *osculari*, to kiss.] Closely connecting or embracing; — applied to caterpillars and other creeping things.

(*Nat. Hist.*) Intermediate between two groups; as, osculant genera.

Osculate, *v. a.* [*Lat. osculor, osculatus*, from *osculor*, a little mouth, a kiss, from *os, oris*, the mouth.] To salute with the mouth; to kiss.

(*Geom.*) To come in contact with; — said of two curves.

—*v. n.* To kiss; to kiss one another.

(*Geom.*) To touch by coming in contact — said of curves.

Osculation, *n.* [*Fr.*; *Lat. osculatio*, a kissing.] The act of kissing.

(*Geom.*) The contact of one curve with another, when at the point of contact they have each the same curvature for the major number of consecutive points in common.

Osculatory, *a.* [*Fr. osculatoire*.] Kissing; pertaining or having relation to kissing; as, "the osculatory ceremony." — *Thackeray*.

(*Geom.*) Susceptible of osculation; relating to, or having the properties of, an osculatrix.

O. circle. (*Geom.*) The circle whose contact with a given curve is of the second order. It coincides with the circle of curvature.

O. plane, to a curve of double curvature, a plane passes through three successive points of the curve.

O. sphere, to a line of double curvature, a sphere passing through four successive points of the curve.

Osculatrix, *n.* (*Geom.*) A curve which has a higher order of contact with a given curve, at given points, than any other curve of the same kind.

Oscule, *n.* [*Fr.*; from *Lat. osculum*, a small mouth.] A small bi-labiate orifice.

Ose-ro, an island of Austria, near the island of Cherso, in the Adriatic. Ext. 16 m. long and four broad. Pop. 3,000.

Osgood, in Indiana, a post-town of Ripley co., about 52 m. W. of Cincinnati, O.

Oshaku'ta, in Wisconsin, a village of Columbia co., about 30 m. N. of Madison.

Oshawa, a town and port of entry of Ontario co., prov. of Ontario, 33 m. E. of Toronto.

Oshawa, in Minnesota, a thriving post-township of Nicollet co., about 6 m. S.W. of St. Peter. Intersected by the Chicago & Northwestern R.R.

Oshkosh, in Wisconsin, a city, cap. of Winnebago co., at the mouth of Fox river, abt. 75 m. N.N.E. of Madison. This city, before its almost total destruction by fire, April 2, 1875, was a well-built place, doing a flourishing trade in lumber and manufactures. Pop. (1895) 26,947.

Oshemo, or OSTEMO, in Michigan, a post-village and township of Kalamazoo co., abt. 6 m. S.W. of Kalamazoo.

Osier, (*o'sher*), *n.* (*Bot.*) See *SALIX*.

Osiery, **Osier-holt**, *n.* A place where osiers are cultivated.

Osi mo, a town of Central Italy, prov. of Ancona, 81½ m. S.S.W. of Ancona. It has a trade in silk and corn. Pop. 15,210.

Osi'ris, (*Egyptian Myth.*) One of the chief divinities, the brother and husband of Isis, and together with her the greatest benefactor of Egypt. After visiting the greater part of Europe and Asia, he found on his return his own subjects excited to rebellion by his brother Typhon, by whose hand he was killed. His principal office, as an Egyptian deity, was to judge the dead, and to rule over that kingdom into which the souls of the good were admitted to eternal felicity. The characters of Osiris, like those of Isis, who was thence called Myrionymus, or "with 10,000 names," were numerous. He was that attribute of the deity which signified the divine goodness; and in his most mysterious and sacred office, he was superior to any even of the Egyptian gods; for, as Herodotus observes, though all the Egyptians did not worship the same gods with equal reverence, the adoration paid to Osiris and Isis was universal. He was styled the *Manifester of Good*, as having appeared on earth to benefit mankind; and after falling a sacrifice to Typhon, the evil principle (which was at length overcome by his influence after his leaving the world), he "rose again to a new life," and became the "judge of mankind in a future state."

Oskaloo'sa, in Iowa, a town and township, cap. of Mahaska co. *Indus.* Coal mining and very extensive manufacturing. Pop. (1895) 8,551.

Oskaloosa, in Kansas, a post-village and township

cap. of Jefferson county, about 25 miles W.S.W. of Leavenworth.

Oskausas, in *Wisconsin*, a village of Columbia co., abt. 9 m. S. of Portage City.

Osma, (anc. *Osmus*), a river of Bulgaria, European Turkey, which after a course of 100 m. joins the Danube at Nicopolis.

Osman. See OTHMAN.

Osmanli, *n.*: pl. OSMANLIS. [From *Osman*, founder of the Ottoman Empire of the East.] A Turkish functionary; also, a denomination for a native Turk.

Osmazome, *n.* [Gr. *osme*, smell, and *zomos*, broth.] (Chem.) An obsolete name given by Thenard to the extractive matter of muscular fibre, which gives the peculiar smell to broiled meat, and flavor to broth and soup. It has been proved that *O.* is a mixture of several substances.

Osmelite, *n.* (*Min.*) A silicate of lime, with soda, potash, and a small quantity of oxide of iron, found in their radiating prismatic concretions of a grayish-white color, at Niederkirchen on the Rhine. The name is derived from the peculiar argillaceous odor given out by it when breathed upon.

Osmia, *n.* (*Zoöl.*) See APIDÆ.

Osmiate, *n.* (Chem.) A salt composed of osmic acid and a base.

Osmic Acid, *n.* (Chem.) See OSMIUM.

Osmious Acid, *n.* (Chem.) The tetroxide of osmium, OsO_4 .

Osmite, *n.* (Chem.) A compound of osmious acid with a base.

Osmium, *n.* [From Gr. *osmē*, odor.] (Chem.) One of the platinum group of metals, found in platinum residues. It differs from its congeners by its analogy with the arsenic and antimony group. There are four oxides of osmium known, of which the highest acts as an acid. Osmic acid is volatile and very poisonous, violently attacking all mucous membranes. The metal itself is said to be the heaviest substance in nature. It has been used to some considerable extent for tipping the points of gold pens, for which its unusual hardness admirably adapts it. The presence of even a minute quantity of osmium in gold greatly increases its hardness. *Equir.* 195. *Symbol*, Os.

Osmometer, *n.* [Gr. *ōsmos*, impulse, and *metron*, measure.] An instrument for determining the amount of osmotic action.

Osmorrhiza, *n.* [Gr. *osme*, perfume, *rizā*, root, from its aromatic root.] (Bot.) A genus of plants, order *Apiaceæ*. They are perennial herbs; leaves bipinnately divided, with the umbels opposite; involucre few-leaved; involucels 4-7-leaved; flowers white. *O. longistylis*, the Sweet Cicely, is a leafy plant found in woods from Canada to Virginia, having a branching fleshy root of an agreeable, spicy flavor. *O. brevistylis*, the Short-styled Cicely, is another species similar in appearance, but destitute of the anise-like flavor of Sweet Cicely.

Osmose, *n.* [Gr. *ōsmos*, from *ōthein*, to push.] (Chem.) A kind of molecular attraction; an uninterrupted communication is produced between two fluids of different densities, when placed on opposite sides on an animal membrane, or unglazed earthen-ware. See ENDOSMOSE, and EXOSMOSE.

Osmotic, *a.* Belonging, or having reference to, or partaking of, the property of osmose; as, *osmotic force*.

Osmunda, *n.* (Bot.) A genus of ferns, order *Polypodiaceæ*. The species *O. cinnamomea*, the Cinnamon-colored Fern, is among the largest of our ferns growing in swamps and low grounds. The fertile fronds resemble spikes, 1 to 2 ft. long, and an inch wide. Leaflets all fertile, erect, with segments covered with fruit in the form of small, roundish capsules, appearing under the microscope, half to 2-cleft.

Osnaburg, or **Osnabrück**, a walled town of Prussia, prov. of Hanover, on the Hase, a tributary of the Ems, 83 m. S.W. of Hanover. The treaty of Westphalia was concluded in 1648 in its town-hall. *Manuf.* Woollen cloth, tobacco, paper, leather, and soap. It has a considerable trade, particularly in coarse linen cloths, known in the trade under the name of *Osnaburgs*. *Pop.* 16,160.

Osnaburg, in *Ohio*, a post-village and township of Stark county, abt. 125 m. N. of Columbus. Coal, iron ore, and limestone, are abundant.

Oso'lo, in *Indiana*, a township of Elkhart county.

Osor'no, in *Chili*, a river which rises in a lake of its own name, and flowing N.W., enters the Pacific Ocean abt. 34 m. S.S.W. of Valdivia. — A ruined town on the above river, abt. 45 m. S.

Osphresiology, (*os-frē-si-ō-lō-jy*), *n.* [Gr. *osphresis*, olfaction, and *logos*, treatise.] (Med.) A treatise on, or description of, olfaction and odors.

Osprey, **Ospry**, (*os'pre*), *n.* [A corruption of Lat. *osifraga*, the bone-beaked.] (*Zoöl.*) The Fish-hawk, a numerous species of birds, belonging to the *Falconidæ*. Its general characters are as follows: — Beak strong, short, rounded, and broad, the cutting edge being nearly straight; nostrils of an oblong-oval form, and placed obliquely; wings long, the second and third quill-feathers the longest; legs short and muscular; tarsl short, covered with reticulated scales; toes five, nearly equal in length, with the outer toe reversible; and all covered with strong, curved, sharp claws; the under surface of the toes being covered with small pointed scales. It generally dwells near the sea-shore, on account of its living nearly exclusively on fish; and it is found in considerable abundance in N. America, particularly on Long Island, N. Y. It catches its prey by sailing at a considerable altitude above the surface of the water, and when it perceives it,

suddenly darts down and bears it off in its claws with triumph. It measures about 22 in. in length. The beak is black, the eye blue, and the irides yellow; the top of the head and neck is white, shaded with brown; the whole upper surface of the body brown, with the ends of the primary feathers of the wings black; the under surface of the body white, and the tail brown. It builds its nest on high trees or rocks, or about old ruins near the sea, or by the margins of lakes and rivers; and it lays three eggs, which are about two inches long, and are blotched and spotted over with reddish spots. During the period of incubation the male watches near, and supplies the wants of the female, catching fish for her, so that she should not be obliged to leave the nest. The parent birds feed the young until they are perfectly able to fish and provide for themselves.

Os'sa, a celebrated mountain of Greece, in Thessaly, immediately N. of Mount Pelion, and bounding, with the opposite chain of Olympus, the vale of Tempe.

Ossabaw, in *Georgia*, an island of Bryan co., at the mouth of the Ogeechee River.

Ossawat'omie, in *Kansas*, a post-village and township of Miami co. Here John Brown resided, to whom a monument was unveiled in 1877.

Oss'eans, or **Pis'ces Os'sei**. [Lat., bony fishes.] (*Zoöl.*) A primary division of the class of fishes, including all those which have a true bony skeleton.

Oss'let, *n.* [Fr.; from Lat. *os*, *ossis*, bone.] (*Furriery*.) A hard excrescence found growing on the inner side of a horse's knee, among the small bones.

Os'seo, in *Michigan*, a post-village of Hillsdale co., abt. 5 m. E. of Hillsdale.

Osseo, in *Minnesota*, a post-village of Hennepin co., abt. 14 m. N.N.W. of Minneapolis.

Osseo, in *Wisconsin*, a post-village of Trempealeau co., abt. 55 m. N. of La Crosse.

Oss'eous, (*os'sē-us*, or colloq. *ōsh'us*), *a.* [Lat. *osseus*, from *os*, *ossis*.] Bony; consisting or composed of bone; resembling or having the properties of bone; as, an *osseous formation*.

O. breccia, (*Geol.*) A breccia in which are found bones of extinct animals. See BRECCIA.

Ossian, (*os'shan*), a mythical Gaelic hero and bard, is said to have lived in the 3d cent., and to have been the son of Fingal, a Caledonian hero, whom he accompanied in various military expeditions. His name has derived its celebrity from the publications of Macpherson, who, about 1760, gave to the world, as the *Poems of Ossian*, a remarkable series of ballads, on the deliverance of Erin from the haughty Swaran, king of Lochlin, by Fingal. They have been translated into all the European languages, and please by their delineation of the scenery of the Highlands, picturesque expressions, bold but lovely images and comparisons, and tender, melancholy tone. See MACPHERSON, and GAELIC LANGUAGE AND LITERATURE.

Oss'ian, in *Indiana*, a post-village of Wells co., abt. 11 m. N. of Bluffton.

Ossian, in *Iowa*, a post-town of Winneshiek co., about 40 m. W. by N. of McGregor.

Ossian, in *New York*, a post-village and township of Livingston co. *Pop.* (1897) 1,010.

Ossicle, (*ōs'si-k'l*), *n.* [Lat. *ossiculum*, dimin. of *os*, *ossis*.] A small bone.

Ossiculated, *a.* Small-boned.

Ossiferous, *a.* [Fr. *osifère*, from Lat. *os*, *ossis*, and *ferre*, to bear.] Containing bone; furnishing bone.

Ossific, *a.* [Fr. *ossifique*.] Possessing power to ossify, or change fleshy and membranous substances into bone.

Ossification, *n.* [From Lat. *os*, bone, and *facio*, to make.] (*Physiol.*) The formation of bone. — In the growth of the skeleton of man and the higher animals, this process goes on naturally, and it occurs in the reproduction of new bones after the destruction or loss of old ones. *O.* also occurs as an unnatural or morbid process, and is observed in several tissues of the body. It occurs most frequently in the cartilages of the ribs, where the process is almost constantly going on in advancing years. Bone begins to form in the cartilages of the ribs after the fiftieth year; but in some cases it commences between the ages of thirty and forty. The cartilages of the windpipe are next to those of the ribs in their liability to become osseous. *O.* of the movable joints never occurs. The disease called *ossification of the heart* is not an affection of the proper substance of that organ, but of its valves, in which earthy matter is sometimes deposited; thus rendering them stiff and unyielding. This substance is composed of carbonate and phosphate of lime, as bone is; but its particles have no definite arrangement.

Ossifrage, *n.* [Lat. *ossifraga* — *os*, *ossis*, a bone, and *frango*, *fractus*, to break.] (*Zoöl.*) An obsolete name of the young of the Sea-eagle or Bald eagle, *Haliastur pelagicus*.

Ossifragous, *a.* Bone-breaking; serving to fracture bones.

Ossify, *v. a.* [Lat. *os*, and *facio*, to make.] To convert into bone; to change from a soft animal substance into bone, or into a substance of a hardness resembling bone. — *v. n.* To become bone; to be converted from soft matter into a condition of bony hardness or ossification.

Oss'ining, in *New York*, a township of Westchester co.

Oss'in River, in *Wisconsin*, enters Rock River in Dodge co.

Ossipee, in *New Hampshire*, a lake of Carroll co., abt. 8 m. N.E. of Winnipisogee Lake; *area*, abt. 25 sq. m. — A river which rises in Ossipee Lake, and flowing E. into Maine, enters the Saco River from York co. — A mountain on the line between Carroll and Grafton cos., abt. 18 m. W. of Ossipee Lake. — A post-village and

township, cap. of Carroll co., abt. 45 m. N.N.E. of Concord.

Ossivarons, *a.* [Fr. *ossivore*; Lat. *os*, *ossis*, and *vore*, to devour.] Feeding on bones; as, *ossivarous animals*.

Ossuary, (*ōs'shu-a-r'y*), *n.* [Fr. *ossuaire*; Lat. *ossuarium*, from *os*.] A charnel-house; a repository for the bones of the dead.

Ostashkov', or **Ostaschkow'**, a town of European Russia, gov't. of Tver, on Lake Salig, 104 m. W.N.W. of Tver. *Manuf.* Leather and soap; and has salt and spirit magazines, and ship-building docks. *Pop.* 9,000.

Ostend', a fortified sea-port town of Belgium, prov. of W. Flanders, on the North Sea, 14 m. N.W. of Bruges, and 27 m. E.N.E. of Duukirk. The harbor is large and commodious, but large ships can only enter at high water. *Manuf.* Rope, sail-cloth, and refined sugar, and salt. The cod and herring fisheries are carried on to a considerable extent. It is celebrated for the long and obstinate siege it sustained against the Spaniards from 1601 to 1604, when it finally capitulated after a loss of 50,000 men to the garrison, and 80,000 to the besiegers. *Pop.* (1897) 26,550.

Ost'end, in *Ohio*, a village of Washington co., about 16 m. E. by N. of Marietta.

Ost'end, in *Pennsylvania*, a village of Clearfield co., about 2nd m. N.N.W. of Altoona.

Ostensibility, *n.* State or quality of being ostensible.

Osten'sible, *a.* [Fr.; from Lat. *ostendo*, *ostensus* — *ob*, and *tendo*.] That may be shown; proper or necessary to be shown. (*R.*) — Plausible; colorable; appearing; seeming; shown, declared, or avowed; as, an *osten'sible* motive, an *osten'sible* excuse.

Osten'sibly, *adv.* In appearance; in a manner that is declared or pretended; as, he acted *osten'sibly* for the benefit of others.

Osten'sive, *a.* [Sp. *ostensivo*.] Exhibiting; showing; presenting.

Osten'sively, *adv.* In an ostensive manner; by way of public exposition.

Ost'ent, *n.* [From Lat. *ostendere*, to show.] Manner; mien; air; demeanor; as, "a sad *ost'ent*." (*Shaks.*) — Show; token; manifestation: exemplar; as, "fair *ost'ents* of love." (*Shaks.*) — A portent; an omen; anything ominous.

Ostenta'tion, *n.* [Fr., from Lat. *ostentatio*.] Outward show or appearance: ambitious or vainglorious display; pompous parade: vulgar or pretentious pageantry; — usually in an invidious and depreciative sense; as, the *ostenta'tion* of a parvenu, or vulgar person made suddenly rich.

Ostentations, (*-tā'shus*), *a.* Given to ostentation; fond of display from motives of vulgar vanity; boastful; fond of parading one's endowments or belongings to another in an advantageous or pompous light; as, an *ostentatious* man. — Exhibiting ostentation or vainglorious parade: intended for empty or pompous display; pretentious: showy; gaudy; as, an *ostentatious* manner or mode of living.

Ostenta'tiously, *adv.* With vain and pretentious display; boastfully; in an ostentatious manner.

Ostenta'tiousness, *n.* State, quality, or condition of being ostentatious; pompousness; pretentious or vainglorious display; boastfulness.

Osteocolla, *n.* [Gr. *osteon*, bone, and *collā*, glue.] (*Min.*) A cellular calc tufa, formed of incrustations of carbonate of lime around the stalks and leaves of reeds and other marsh-plants, — derives its name from a supposed power favoring the formation of callus in fractures of bone.

Osteog'eny, *n.* [Gr. *osteon*, and *gainein*, to produce.] Formation or development of bone.

Osteog'raphy, *n.* [Gr. *osteon*, and *graphein*, to describe.] Same as OSTEOLOGY, *q. v.*

Osteolite, *n.* [Gr. *osteon*, bone, and *lithos*, stone.] (*Pal.*) A petrified or fossil bone.

Osteologic, **Osteolog'ical**, *a.* [Fr. *osteologique*.] Belonging, or having reference to a description of the bones.

Osteolog'ically, *adv.* After the manner of osteology.

Osteolog'ist, **Osteolog'er**, *n.* One learned in osteology.

Osteology, (*os-te-ō-lō-jy*), *n.* [Fr. *osteologie*; Gr. *osteon*, a bone, and *logos*, treatise.] A discourse or treatise on the bones; that branch of anatomy which describes the bones and their uses. — See ANATOMY, and BONE.

Osteopath, *s.* The same as osteopathist (*q. v.*)

Osteopath'ic, *a.* Of or belonging to osteopathy.

Osteopath'ically, *adv.* In an osteopathic manner.

Osteopath'ist, *v.* One who believes in or practices osteopathy.

Osteop'athy. — [*osteon*, a bone, *pathos*, suffering.] A theory and practice of healing without the use of drugs, discovered in 1874 by Andrew Taylor Still, M.D., then of Baldwin, Kansas, and afterward practiced and taught by him at Kirksville, Mo., where he founded a school in 1892. The basic principle of the system depends upon *skeletal adjustment* (hence the name) by a scientific manipulation in order to bring about organic and glandular activity, an unimpeded flow of blood and lymph, and a normal vibration of nerve energy throughout the body. There are now about four thousand practitioners in the United States and foreign countries. The science has received legislative recognition and protection in twenty-three states, and there are ten established colleges where it is taught through a three-years' course of study, to a student body only second in numbers to any other school of therapeutics.

Osteoplas'ty, *n.* [Gr. *osteon*, and *plassein*, to form.] (*Surg.*) An operation by which the total or partial loss of a bone is remedied.

Osteopterygious, *a.* [Gr. *osteon*, and *pteryx*, fin.]

With bones in the fins; acanthopterygious

Osteotomy, *n.* [Gr. *osteon*, and *tomē*, a cutting.] (*Anat.*) That branch of practical anatomical science which has reference to the dissection of bones.

Osteroede, a town of Prussia, prov. of Hanover, on the Söse, a tributary of the Leine, 49 m. S.S.E. of Hanover. *Manuf.* Woollen and cotton goods, table linen, &c. *Pop.* 6,000.

Ostia, an anc. city of Italy, now a village, at the mouth of the Tiber, 16 m. W.S.W. of Rome. It was formerly an important fort and naval station of Rome, but is now 3 m. distant from the sea.

Ostuary, *n.* Same as *ESTUARY*, *q. v.*

Ostic, *a.* [From *Algis ostegwon*, a head.] Belonging, having reference to, or designating the language of the Tascaroras, Iroquois, Wyandots, Winnebagoes, and a part of the Sioux Indians.

Ostler, *n.* Another spelling of *HOSTLER*, *q. v.*

Ostlery, *n.* Same as *HOSTELRY*, *q. v.*

Ostmen, *n. pl.* [From Dan. *öst*, *östen*, the East.] East-men:—a name anciently given to the Danish settlers in Ireland.

Ostracean, (*-trā'shan*), *n.* [From Gr. *ostreion*, oyster.] (*Zoöl.*) One of the *Ostreidae*, or Oyster family.

Ostracism, (*-sizm*), *n.* [Fr. *ostracisme*; Gr. *ostrakismos*, from *ostrakon*, a shell.] (*Greek Hist.*) A judgment of the Athenian people, by which they were in the habit of condemning to ten years' exile citizens whose wealth and power seemed to them to have reached an extent dangerous to the common liberty. When it appeared necessary to have recourse to this expedient, a space in the Forum was inclosed by wooden balustrades, having as many doors (10) as there were tribes in the republic; and when the appointed time had come, the citizens of each tribe entered by their own door, and threw into the midst of the open space a shell, or piece of baked clay in the form of one, on which was written the name of the citizen whom it was proposed to banish. The archons and senate presided over the assembly, and counted the votes, and if as many as six thousand were in favor of the banishment of the accused, he had to leave the city within the space of ten days. No disgrace, however, was considered to attach to banishment by *O.*, which was never inflicted as a punishment for crime.—Hence, expulsion; banishment; exile from society.

Ostracize, (*-siz*), *v. a.* [Gr. *ostrakizō*.] To banish by means of ostracism;—hence, to expel; to exile; to taboo; to put under the ban of society.

Ostranite, *n.* (*Mín.*) A grayish or clove-brown zircon, found in Norway.

Ostraceous, (*-ā'shus*), *a.* [From Lat. *ostrea*, oyster.] Pertaining, or having reference to an oyster, or to a shell; shelly.

Ostrich, *n.* [Fr. *autruche*.] (*Zoöl.*) The largest of known birds, type of the order of *Cursores*, and more especially of the family *Struthionidae*, termed by the Persians, Arabs, and by the Greeks, the "Camel-bird," distinguished not only for its great size, but for the beauty and value of its plumage, presents the following characteristics: The true, or African *O.*, *Struthio camelus* (Fig. 335), is from 7 to 9 feet high from the top of its head to the ground; the head, which is small, and the neck, which is long, are destitute of feathers, being clothed only with a few scattered hairs; the bill is straight and depressed. The feathers of the body are blackish; those on the wings and tail white, sometimes marked with black. The thighs are as bare as the head and neck, and the legs hard and scaly. The most distinguishing features of the *O.* are the shortness of its wings, which are furnished with spurs, and the peculiar arrangement of their feathers, which utterly unfit the bird for flight. The bird appears to have been known from the earliest times; it was forbidden in the Old Testament as an article of food, and was much prized by the gourmands of the Roman empire. The African *O.* frequents the burning sands of that continent in large flocks. The female lays from 10 to 12 eggs, several times a year, in a hole in the sand, and broods over them only in the night, leaving them to be acted on by the sun during the hottest part of the day. As fashion has set a high value on certain feathers in the back or tail of the *O.*, it is frequently hunted, but is caught with difficulty, as by the aid of his wings he is able to run far more swiftly than the fleetest horse. The Arabs and Moors have two methods by which they are enabled to come up with them. In the one case, one of the hunting party pursues the bird, which always runs in a circuitous direction, as long as possible, and then the chase is taken up by another on a fresh horse, and so on, until the bird is worn down. The other method is, for a hunter to cover himself with an *O.*-skin, and thus be enabled to approach the flock sufficiently near to surprise it. The *O.*, in a tame state, and probably also when wild, is apt to swallow with the greatest voracity such indigestible substances as iron, nails, stones, and bits of rag or leather; and is even, in one instance, said to have swallowed leaden bullets hot from the mould without any apparent inconvenience.—The American *O.*, or Nandan, *Rhea Americana*, chiefly found on great plains in the Argentine republic, is much smaller than the preceding, and particularly distinguished by having 3 toes, all armed with nails. Its plumage, which is of a uniform gray, is almost valueless.

Ostriferous, *a.* Consisting of, or producing oysters.

Ostrog, a town of Russian Poland, govt. of Volhynia, on the Gorin, 100 m. W. of Zhitomir: *pop.* 6,500.

Ostrogoths, *n. pl.* (*Hist.*) The name given to the eastern Goths, as distinguished from the Visigoths, or western Goths. The *O.* inhabited the countries on the Black Sea up to the Danube. See *GOTHS*.

Ostrya, *n.* [Gr. *ostreon*, a scale; in allusion to the conspicuous sacs (not scales) of the fertile aments.] (*Bol.*) A genus of plants, order *Corylaceæ*. They are small trees, found throughout the U. States. *O. Virginica*, the Hop-hornbeam, Iron-wood, or Lever-wood, is 25 or 30 ft. high. Its bark is remarkable for its fine, narrow longitudinal divisions. Leaves about twice as long as wide. The fruit is similar in appearance to hops, suspended from the ends of the branches, consisting of membranous, imbricated sacs, containing each a flower. The wood is very white, hard and strong, and much used for levers, &c.

Ostuni, a town of S. Italy, prov. of Terra di Otranto, 24 m. W.N.W. of Brindisi: *pop.* 6,000.

Oswaldwhistle, (*os'wald-wis'cl*), a town of England, co. of Lancaster, 4 m. from Blackburn. *Manuf.* Cotton spinning. *Pop.* 8,000.

Oswayo, in Pennsylvania, a post-township of Potter co., on Oswayo Creek.

Oswayo Creek, rises in McKean co., in Pennsylvania, and flowing N. into New York, enters the Alleghany River in Chataugaus co.

Oswego, in Illinois, a post-village and township, former cap. of Kendall co., about 45 m. W.S.W. of Chicago. *Manuf.* Brooms, carriages, and windmills.

Oswego, in Indiana, a post-village of Kosciusko co., about 113 m. N. of Indianapolis.

Oswego, in New York, a river rising in the N.W. part of the State. It pursues a general E. course of about 24 m., and enters Lake Ontario from Oswego co.

—A N.W. co., bordering on Lake Ontario; *area*, about 962 sq. m. It is washed by Oneida, Oswego, and Salmon rivers, and contains Oneida Lake. *Surface*, undulating, or nearly level; *soil*, generally fertile. *Min.* Iron, sandstone and salt. *Pop.* (1890) 71,883.

—A city, port of entry, and cap. of the above co., on the Oswego River, at its entrance into Lake Ontario, about 170 m. W.N.W. of Albany; *Lat.* 43° 25' N., *Lon.* 76° 35' W. Oswego is finely situated, and commands an extensive trade. The city is regularly laid out, with wide, handsome streets crossing each other at right angles, and contains many fine public and private edifices. The Oswego River has a fall of 34 feet within the city limits, affording an immense hydraulic power for manufacturing purposes, which branch of industry has increased greatly of late years, and with its commerce constitutes *O.* one of the most important cities on our N. frontier. *O.* was established by the French as a trading-post soon after the settlement of Quebec. It was taken by the English in 1724, retaken by the French under Montcalm, and finally surrendered to the English again, who kept possession of it until the War of Independence. It is defended by Fort Ontario. *Pop.* (1897) 22,300.

Oswego Tea, *n.* (*Bol.*) See *MONARDA*.

Oswestry, a town of England, co. of Salop, 191 m. N.W. of London: *pop.* 5,414.

Osymandias, an Egyptian king, and the first monarch who founded a library, reigned at Thebes about 2100 B. C.

Otaconstic, *a.* [Fr. *otacoustique*, from Gr. *ous*, *ōtos*, ear, and *akoustikos*, pertaining to the sense of hearing. See *ACOUSTIC*.] Facilitating or promoting the sense of hearing; as, an *otacoustic* instrument.

Otaconstic, *Otaconsticton*, *n.* An acoustic instrument, as an ear-trumpet.

Otaheite, (*ota-he'ite*). See *TAHITI*.

Otalgia, *Otalgy*, *n.* [Gr. from *ous*, *ōtos*, ear, and *algos*, pain.] (*Med.*) Ear-ache.

Otalgic, (*ōtāl'jē*), *n.* (*Med.*) A remedy for the ear-ache.

Otaria, *n.* [From Gr. *ous*, *ōtos*, ear.] (*Zoöl.*) The Otary, a genus of seals having external ears.

Otego, in New York, a creek flowing into the Susquehanna River from Otsego co.

—A post-village and township of Otsego co., about 25 m. S.S.W. of Cooperstown.

Other, (*āth'ēr*), *pron.* and *a.* [A.S.; Goth. *anthur*; Lat. *alter*; Sansk. *antara*, other.] Not the same; different; noting something besides; additional; not identical; second of two.

"A distaff in her other hand she had."—*Spenser*.

—Not this, or these; not this, but the contrary; opposite; as, the other side of a question, the other side of the continent.

(NOTE. *Other* forms a correlative adjective or adjective pronoun, and is generally employed in contrast with *this*, *some*, *one*, &c.; or elliptically, with a noun expressed or implied. It is also often expressed with the indefinite article as one word, *another*; is again used with *each*, denoting an action or relation of reciprocal meaning; and occasionally applied in an elliptic sense for *other person* or *other thing*, in which case it may take plural action. It is also, frequently used for *otherwise*.) *The other day*, not long ago; at a certain time past, not distant, but indefinite; as, I saw him *the other day*.

Oth'ernise, *adv.* Of another kind or way; in another manner;—frequently, in modern parlance, corrupted to *otherguess*.

Fig. 2012.
HOP-HORNBEAM
(*Ostrya Virginica*.)

Oth'erness, *n.* State, quality, or condition of being other, different, or the contrary; separateness; alterity.

Oth'erwise, *adv.* [Other, and *wise*, way, manner.] In a different or contrary way or manner; by other causes; in other respects.

"Men seldom consider God *otherwise* than in relation to themselves."—*Rogers*.

Oth'man, or *OSMAN*, founder of the Ottoman empire, was one of the emirs who, on the destruction of the empire of the Seljukides, became independent chiefs. Joined by other emirs, he invaded the Eastern empire in 1299, and made himself master of Nicaea, Iconium, and other towns. He took no other title than Emir, but ruled with absolute power, not without justice and moderation. D. at a great age, 1326.—A *second*, of the same name, was the 16th Ottoman sultan, reigned 1618-1622, and was strangled.—A *third*, who was the 25th sultan, reigned 1754-1774.

Oth'man, IBN-AFFAN, son-in-law of Mohammed, succeeded to Omar as 3d caliph, 644. He was murdered by Mohammed, son of Abu-bekr, 656.

Oth'nich, (*Script.*) Son of Kenaz, and first judge of the Israelites, delivered them from the tyranny of the king of Mesopotamia, and ruled them in peace 40 years. (*July*. i. 13; iii. 9, 10.)

Otho, MARCIUS SALVIUS, a Roman emperor, was B. at Rome, A. D. 32. After Nero's death, he attached himself to Galba, but that emperor having adopted Piso as his heir, *O.* excited an insurrection, murdered Galba and Piso, and ascended the throne in 69. He was opposed by Vitellius, who was supported by the German army, and, in a battle between the two rivals near Bedriacum, *O.* was defeated, upon which he slew himself, after reigning three months.

Otho I., emperor of Germany, called the *Great*, B. 923, was the eldest son of Henry the Fowler, and crowned king of Germany in 936, at the age of 14. He carried on war with the Huns, and drove them from the West; made Bohemia his tributary; deprived the duke of Bavaria of his estates, and then had to encounter the resistance of the great chieftains of the empire, aided by the king of France. He afterwards aided the same king against his revolted vassal, Hugh the Great, defeated the Danes, and again invaded Bohemia. He was then engaged for ten years in war with the Hungarians, and finally defeated them at Leck. Berenger having usurped the title of emperor of Italy, *O.* entered Rome, where he was crowned emperor by John XII. That pontiff afterwards leagueed with Berenger, on which *O.* caused him to be deposed, and put Leo VIII. in his place, in 963. On the emperor's return to Germany, the Romans revolted and imprisoned Leo; for which *O.* again visited Rome, which he besieged, and restored Leo. He next turned his arms against Nicephorus, emperor of the East, whose army he defeated. John Zimisces, the successor of Nicephorus, made peace with *O.*, who d. in 973.

Otho II., surnamed the *Bloody*, B. 951, succeeded Otho I., his father, 973. His mother, Adelaide, opposed his accession, her party proclaiming Henry, the duke of Bavaria, emperor. *O.* expelled his mother from the court, defeated Henry, repulsed the Danes and Bohemians, and afterwards marched into Italy to expel the Saracens, but fell ill at Rome, where he d. 983.

Otho III., B. 980, succeeded Otho II., his father, 983. The empire was administered during his minority by his grandmother Adelaide, conjointly with the archbishop of Cologne. At the age of 16 he assumed the reins of government, and went to Italy, which was in a state of confusion, owing to the opposition of different popes. Otho having reestablished order, returned into Germany, and made Boleslas king of Poland. He was obliged again to pass into Italy to quell a revolt, but died soon afterwards. D. 1002.

Otho IV., called the *Superb*, was the son of Henry, duke of Saxony, and chosen emperor in 1208. He was excommunicated by the Pope for seizing the lands which the Countess Matilda bequeathed to the Holy See. In 1212 the princes of the empire elected Frederic king of Sicily, in the room of Otho, who, after struggling against his rival until 1215, resigned his crown to him, and retired to Brunswick. D. 1240.

Otho, KING OF GREECE, 2d son of Louis I., king of Bavaria, was B. at Salzburg, 1815. At 17 years of age he was invited by the Greeks to become their monarch, and this proposition being acceded to by the govts. of Great Britain, France, and Russia, in a treaty concluded in London in May, 1832, *O.* was accordingly declared king of Greece in Jan., 1833, and, in June, 1835, on his attaining the age of 20, he assumed the reins of government. *O.*, however, soon became unpopular with his subjects, owing to his selection of Bavarians as his cabinet advisers, and, also, to the strong pro-German sympathies he continually manifested. After a stormy and inglorious reign of 30 years, *O.* abdicated the throne, Oct. 20, 1862, and fled the country, the latter being then in a state of insurrection against the royal authority. D. in Bavaria, 1867.

Otho, in Iowa, a post-village and township of Webster co., abt. 8 m. S.S.E. of Fort Dodge.

Oth'rys, (*Monnt.*) a mountain-chain forming the N. frontier of Greece, *Lat.* 39° N., *Lon.* between 21° and 23° E., and connected E. with the Pindus chain. Height varying between 4,000 and 6,000 feet.

Otiöse, (*ō'shi-ös*), *a.* [Lat. *otiosus*, from *otium*, leisure.] Idle; unemployed; being at rest, ease, or leisure.

O'tis, JAMES, an American lawyer and publicist, B. 1724. After graduating at Harvard College he commenced the practice of law at Plymouth, Mass., in 1748, whence he shortly after removed to Boston, where he got into lucrative business. In 1760 *O.* was engaged in the famous case of the "writs of assistance," and successfully de-

fended the merchants against the British govt. His powerful speech was circulated far and wide, and in the language of John Adams, "American independence was then and there born." The next year he was elected to the legislature, and, on June 6, 1765, he introduced a motion advising the calling of a congress of delegates from the several colonies. The motion was adopted, and in Oct. of that year, the Stamp Act Congress met in New York, of which body O. was an active member. In 1770 he retired to the country for his health, and was deranged nearly all the rest of his life. In 1783, while standing at the door of his house, he was killed by a stroke of lightning.

Otis, *n.* (Zool.) The Bustards, a genus of large Cursor birds, peculiar to the dry, grassy plains of Europe, Asia, and Africa, and belonging to the *Struthionidae* or Ostrich family. Bustards are birds of bulky form, with long necks and long naked legs; the toes, three in number, all directed forward, short, united at the base and edged with membrane; the wings rather rounded; the bill of moderate length, straight, or nearly so. The Great B. (*Otis tarda*) is the largest of European birds, the male sometimes weighing nearly 30 lbs. The anatomy of the male exhibits a remarkable peculiarity in a large bag or pouch, capable of holding several pints, the entrance to which is between the under-side of the tongue and the lower mandible. The use of this bag is unknown; but it has been conjectured to be for conveying water to the females and young, in wide arid plains. The Great B. feeds indiscriminately on animal and vegetable food. Its flesh is highly esteemed for its flavor. It is polygamous. No difficulty is found in taming it, but all attempts to reduce it to a state of true domestication have hitherto failed, from its not breeding in the poultry-yard.

Otis, in *Maine*, a post-township of Hancock co., 18 m. S.E. of Bangor.

Otis, in *Massachusetts*, a post-township of Berkshire co., 22 m. S.S.E. of Pittsfield.

Otis, in *Minnesota*, a township of Yellow Medicine co. —A post-township of Waseca co.

Otis, in *Michigan*, a post-township of Ionia co. Traversed by Flat river.

Otis, in *Minnesota*, a post-township of Waseca co., about 30 m. S. by W. of Faribault.

Otisco, in *New York*, a small lake of Onondaga co., abt. 4 m. E. of Skaneateles Lake. —A post-township of Onondaga co.

Otisfield, in *Maine*, a post-township of Cumberland co.

Otisville, in *New York*, a post-village of Orange co., abt. 85 m. N.W. of New York city.

Otitis, *n.* [Gr. *ous*, *ōtos*, ear.] (Med.) Inflammation of any part of the organ of hearing.

Otium, *n.*; *pl.* OTIA. [Lat.] Rest; leisure; as, 'otium cum dignitate,' (ease with dignity.)

Otley, a town of England, co. of York, on the Wharfe, 9½ m. N.W. of Leeds. In the vicinity are cotton, worsted, and woollen mills; also, tanning and malting works. Pop. 5,000.

Otocoinite, *n.* [Gr. *ous*, *ōtos*, ear, and *konis*, dust.] (Med.) A calcareous deposit found in the sacs of the vestibule of the ear.

Oto, *ot*. An initial compounding element, derived from the Gr. *ous* (gen. *ōtos*), the ear.

Ōtoe, in *Nebraska*, an E.S.E. co., adjoining Iowa; area, about 649 sq. m. Rivers, Missouri and Little Nemaha rivers. Surface, undulating; soil, very fertile. Min. Limestone, and salt in abundance. Products, Wheat, corn, live stock, &c. Cap. Nebraska City. Pop. (1890) 25,403.

Otography, *n.* [Gr. *ous*, *ōtos*, ear, and *graphein*, to describe.] That branch of anatomical science which describes the ear.

Otolite, *n.* [Gr. *ous*, *ōtos*, the ear, and *lithos*, stone.] (Zool.) A calcareous concretion found in the labyrinth, or internal ear, of fishes, and fish-like amphibia.

Otology, *n.* [Gr. *ous*, *ōtos*, ear, and *logos*, discourse.] A treatise on the ear; that branch of anatomy which has reference to the ear.

Otopathy, *n.* [Gr. *ous*, *ōtos*, ear, and *pathos*, suffering.] (Med.) A diseased condition of the ear.

Otoque, (*o-to'ka*), an island of the U. S. of Colombia, in the Bay of Panama; Lat. 8° 30' N., Lon. 80° 20' W.

Ototomy, *n.* [Gr. *ous*, *ōtos*, ear, and *tomē*, an incision.] (Anat.) Dissection of the ear; that branch of anatomical science having relation to the dissection of the aural organs.

Otran'to, (Duke of.) See Fouché.

Otran'to, a seaport-town of S. Italy, prov. of Terra di Otranto, on the Strait of Otranto, 24 m. S.E. of Lecce. Under Napoleon I. it gave the title of duke to Fouché. Pop. 4,500.

Otranto, in *Iowa*, a post-twp. of Mitchell co.

Otranto, (Cape,) on the STRAIT OF OTRANTO, a channel connecting the Adriatic with the Mediterranean Sea; Lat. 40° 8' N., Lon. 18° 29' E. Length of strait, 80 m.; width, 44 m.

Otranto, (Terra di,) a prov. in the S.E. extremity of Italy having E. the Adriatic, and W. the Gulf of Tarento, forming the "heel of the Italian boot"; area, 2,883 sq. m. Cap. Lecce. Pop. 447,982.

Otsd'wa, in *New York*, a post-village of Otsego co.

Otse'go, in *Illinois*, a village of Lake co., about 42 m. N.N.W. of Chicago.

Otsego, in *Indiana*, a township of Steuben co.

Otsego, in *Iowa*, a village of Fayette co.

Otsego, in *Michigan*, a post-village and township of Allegan co., about 14 m. N.N.W. of Kalamazoo. Traversed by the Kalamazoo river. Manuf. Flour and saw mills, furniture, &c. Pop. (1897) 1,950.

Otse'go, in *Minnesota*, a post-town of Wright co., about 28 m. S.W. of St. Anthony. Pop. (1897) 1,010.

Otsego, in *New York*, a lake of Otsego co., about 60 m. W. of Albany. It covers an area of about 15 sq. m., and forms the source of the Susquehanna river.

—An E. central co.; area, about 956 sq. m. Rivers. Unadilla and Susquehanna (E. Branch) rivers, and Butternut, Otsego, and Shenevas creeks, besides Canadaga and Otsego lakes. Surface, hilly and broken; soil, in some parts fertile. Min. Iron, sandstone, limestone, and marble. Cap. Cooperstown. Pop. (1897) 52,330.

—A township of the above co.

Otsego, in *Ohio*, a post-village of Muskingum co., abt. 73 m. E. of Columbus. —A village of Wood co., abt. 20 m. S.S.W. of Toledo.

Otsego, in *Wisconsin*, a post-village and township of Columbia co., abt. 15 m. S.E. of Portage.

Otse'lie, in *New York*, a river rising in Madison co., and flowing S.W. into the Tioughniogo River from Broome co.

—A post-township of Crenango co.

Ottar, **Otto**, *n.* See ATTAR OF ROSES.

Ottawa, or GRAND RIVER, an important river of British N. America. Rising abt. Lat. 48° 30' N., Lon. 80° W., it flows a general S.E. course between Upper and Lower Canada to Lake of the Two Mountains (an expansion of the Ottawa River), a distance of abt. 800 m. During this course it receives many large rivers, as Rouge River, Rivière du Lièvre, Gatineau, Madawaska, Bonno Cher, Petewahweh, and Maniwagemon. It also traverses or expands into considerable lakes, as Grand and Temiscaming lakes. Owing to numerous rapids and cataracts, some of which are 12 m. in length, navigation is much impeded. Rafting, however, is extensively carried on.

Ottawa, a S. W. co. of prov. of Quebec; area, abt. 31,500 sq. m. Rivers. Ottawa, Gatineau, Petit, Nation, and Lièvre. Cap. Hull. —A city, cap. of the Dominion of Canada, and seat of justice of Carleton co., on the Ottawa river, about 110 m. N.N.E. of Kingston. The scenery about O. is picturesquely grand, the streets are wide, and the govt. buildings handsome. It was founded in 1827, and called Bytown; incorporated as a city in 1854, and soon after selected as the seat of govt. of Canada. O. has extensive trade, especially in lumber, flour, and iron; has several fine schools and seminaries. Pop. (1897) 46,210. —In Illinois, a city, cap. of La Salle co., on Fox river, about 84 m. W.S.W. of Chicago. It has an active trade, chiefly in bread stuffs, and numerous manufacturing. Rich deposits of coal exist in the vicinity.

Ottawa, in *Iowa*, a village of Clarke co.

Ottawa, in *Kansas*, a N. cent. co.; area, about 720 sq. m. Rivers. Solomon Fork of Kansas river, and many less important streams. Surface, undulating; soil, fertile. Cap. Minneapolis. Pop. (1895) 10,424.

—A city, the cap. of Franklin co., about 25 m. S. of Lawrence. Pop. (1897) 7,310.

Ottawa, in *Michigan*, a W. co. of the lower peninsula, bordering on Lake Michigan; area, about 800 sq. m. Rivers. Grand river, and Crocker creek. Surface, undulating; soil, very fertile. Cap. Grand Haven. Pop. (1894) 39,075.

Ottawa, in *Minnesota*, a post-village and township of Le Sueur co., about 6 m. S. of Le Sueur.

Ottawa, in *Ohio*, a small river flowing into Maumee Bay of Lake Erie from Lucas co. —A N. by W. co. bordering on Lake Erie; area, about 311 sq. m. Rivers. Portage and Sandusky rivers, and Toussaint creek. Surface, nearly level; soil, fertile. Cap. Port Clinton. Pop. (1890) 21,974.

—A post-village, cap. of Putnam co.

Ottawa, in *Wisconsin*, a post-village and township of Waukesha co., abt. 30 m. W. by S. of Milwaukee.

Ottawa Centre, in *Michigan*, a village of Ottawa co., abt. 22 m. W.N.W. of Grand Rapids.

Otter, *n.* [A. S., D., and Ger.; Icel. *otr*; Fr. *lontre*; Lat. *lutra*; Sansk. *udra*.] (Zool.) A genus of carnivorous animals, *Lutra*, family Mustelidae. In many particulars they resemble weasels, martins, and polecats; but in other respects they differ from them. They have long

Fig. 2013.—AMERICAN OTTER, (*Lutra Canadensis*.)
(Copied from Tenney's Manual of Zoology.)

flexible bodies, low on the legs; their heads are compressed, and their tongues a little rough; but they differ chiefly from the animals just alluded to, by having

their feet webbed and adapted to swimming, and their tails flattened horizontally. They are excellent swimmers, and feed almost entirely upon fish, which they frequently destroy wantonly, when they do not need it for food. The otter is found in many countries widely distant from each other, and they differ in some particulars, according to the climate which they inhabit; the otters of India, for instance, having the hair very rough, while, in Kamtschatka, the covering of the otter is very soft and fine. But the coverings of O. of all countries have more resemblance to each other than those of land animals, being all grayish-brown, more or less dark on the upper part of the body, and generally white or whitish under the throat. The fur of all of them has the property of the feathers of diving-birds, in not becoming wetted; and O. of all species reside in burrows, forming the entrance of their holes under water, and working upwards, making a small orifice for the admission of air in the midst of some neighboring bush. The period of gestation is about nine weeks, and the litter consists of four or five. They make their appearance about April, and the mother drives them from the nest to shift for themselves about May. —The European, or common O., is about 2 feet in length to the insertion of the tail, which is 16 inches long; it is brown above, and whitish around the lips, on the cheeks, and beneath. The American O., which is found in the rivers of North America as well as those of the South, is rather larger than the European O., and is distinguished by having merely a margin of naked skin around the nostrils, instead of the distinct naked muzzle of the latter. It is also more social than most of the O., small troops of this species inhabiting the same places of the rivers, and several females taking up their abode and producing their young in the same nest. —The Sea-Otter (*Enhydra marina*), which is found on the north-western coasts of North America and the shores of Kamtschatka, and is much larger than the other O., is about 3½ feet long in the body; the tail, however, is shorter in proportion, and not exceeding 15 inches. The general color is a beautiful maroon brown, but the head, neck, and under part of the fore-legs are brownish silver-gray. Its skin is accounted the finest of all furs both in texture and durability, and a single one often brings, in the markets of China and Japan, as much as twenty pounds. As an inhabitant of the sea, it approximates to the seal in its habits, and in some degree in its structure; the hind-legs are shorter than in the common O., and brought nearer to each other; the toes are shorter, and the claws shorter by the webs extending nearly to their points; and at the same time the fore-feet are but ill-adapted for walking. It frequents seawashed shores during the winter, living on fish, crustacea, and sea-weed, and in summer ascends the rivers and enters the fresh-water lakes; salt or fresh water being indifferent to the O. as an element to perform his operations. In former times, otter-hunting was a sport greatly in fashion in England, and is still occasionally practised. The O., if procured young, may be tamed and taught to catch fish for its master; but the natural fierceness of the animal makes this a difficult task.

Otter, in *Iowa*, a township of Warren co.

Otterburn, a township of England, co. of Northumberland, 20 m. N.N.W. of Hexham. About half a mile from the village is an obelisk marking the spot where Earl Douglas fell in the battle of Chevy Chase, in 1388.

Otter Creek, in *Illinois*, a post-village and township of Jersey county, about 38 miles N.N.W. of St. Louis, Missouri.

Otter Creek, in *Indiana*, enters the Wabash River from Vigo county. —A township of Ripley county. —A township of Vigo county.

Otter Creek, in *Iowa*, a township of Jackson county. —A township of Linn county. —A township of Lucas county. —A township of Tama county.

Otter Creek, in *Vermont*, rises in Bennington co., and flowing N.N.W. abt. 80 m., enters Lake Champlain from Addison co.

Otter Peaks, or PEAKS OF OTTER, in *Virginia*, two summits between Bedford and Botetourt cos., abt. 30 m. W. by N. of Lynchburg. Height, 4,200 ft. (See Fig. 159.)

Otter River, in *Virginia*, rises on the E. slope of the Blue Ridge, in Bedford co., and flows S.E. into the Staunton River from Campbell co.

Otter Tail, in *Minnesota*, a N.W. central co.; area, about 2,200 sq. m. Rivers. Red River of the North and Leaf river, besides many less important streams and numerous lakes, of which latter Otter Tail lake, in the center of the co., is the largest. Surface, diversified; soil, very fertile. Prod. Wheat, rye, oats, live stock, &c. Cap. Fergus Falls. Pop. (1895) 39,453.

Otter Village, in *Indiana*, a village of Ripley co., abt. 50 m. W. of Cincinnati, Ohio.

Otterville, in *Missouri*, a post-village of Cooper co., abt. 50 m. W.N.W. of Jefferson City.

Ottery St. Mary, a town of England, co. of Devon, on the Otter, 11½ m. N.E. of Exeter. Manuf. Silk, woollen cloth, serges, and ropes. Pop. 4,500.

Otto, in *Illinois*, a post-village of Fulton co., abt. 57 m. S. by E. of Knoxville. —A township of Kankakee county.

Otto in *Michigan*, a post-township of Oceana county.

Otto in *New York*, a post-township of Cattaraugus county. Manuf. Cheese, flour, and woollens.

Otto in *Pennsylvania*, a township of McKean county.

Ottocar II., king of Bohemia, surnamed *The Conqueror*, united the kingdoms of Bohemia, Austria, and Styria, in 1253, and protested against the election of Rudolph

of Hapsburg. Placed under the ban of the empire in 1275, he lost Austria, and perished at the battle of Marchfeld, 1278.

Ot'tokee, in *Ohio*, a post-village, former cap. of Fulton co., about 125 m. N. W. of Columbus.

Ot'toman, *a.* [Fr., from *Othman*, *Othoman*, or *Osmun*, the founder of the Turkish empire.] Belonging, having reference to, or derived from the Turkish empire; as, the *Ottoman* Porte.

—*n.*: (*pl.* OTTOMANS.) A Turk; a native or inhabitant of the Ottoman empire. See **TURKEY**.

—[Fr. *ottomane*.] Originally, a sort of thick stuffed mat used in Turkey; now specifically applied to a kind of stuffed sofa, or bergère, without a back.

Ottelite, *n.* (*Min.*) A hydrated silicate of alumina, and of the protoxides of iron and manganese.

Ottville, in *Pennsylvania*, a post-village of Bucks co., abt. 112 m. E. of Harrisburg.

Ottumwa, in *Iowa*, a city, cap. of Wapello co., on the Des Moines River, abt. 75 m. N.W. of Keokuk. It is finely located, contains many handsome edifices, and is thriving rapidly. Pop. (1895) 16,761.

Ottumwa, in *Kansas*, a post-village of Coffey co., abt. 25 m. E.S.E. of Emporia.

Otumba, (*o-toom'ba*), a village of Mexico, abt. 35 m. N.E. of the city of Mexico.

Otway, THOMAS, an English dramatic writer, b. at Trotter, Sussex, 1651. His tragedy of *Venice Preserved* is his best work. D. 1685.

Otway, (*Port*), a haven of S. America, on the W. coast of Patagonia, abt. 15 m. N.E. of Cape Tros Montes; Lat. 46° 49' 30" S., Lon. 75° 18' 15" W.

Ouachita City, in *Louisiana*. See **WASHITA CITY**.

Oubiette, (*ou-ble-et'*), *n.* [Fr., from *oublier*, to forget.] A dark and secret dungeon, with an opening only at the top, intended for persons condemned to perpetual imprisonment, or private death by starvation or madness; as, the *oubiettes* of the Spanish Inquisition.

Ouch, *n.* [Fr. *oche*, or *hoche*, a notch.] A bezil or socket in which a gem is set. — A carcanet of gold.

Oude, Oudh, (*ool*), a prov. and former kingdom of British India, between Lat. 26° and 28° N. Lon. 79° and 83° E.; having N. Nepaul, E. the prov. of Bahar, S. Allahabad, and W. Delhi and Agra. Area, 25,300 sq. m. The surface is level, and the soil very fertile. The climate is dry, and subject to extremes of heat and cold. Rivers. The Ganges, Goggra, Goomtee, and Sye, are the principal. Prod. Wheat, barley, rice, sugar, indigo, opium, &c. Manuf. Cotton cloth, coarse woollen blankets, paper, glass, gun-powder, fire-arms, &c. The kingdom of O. came under British protection in 1765, and in 1856 was formally annexed to the British provs. in India after the deposition of the king. The annexation, made in violation of treaty engagements, caused much discontent among the population, and gave rise in a great measure to the great Indian Mutiny, a large portion of the Sepoys being natives of O. Chief towns. Lucknow (the cap.), Fyzabad, Oude, Baraitche, and Pertabghur. Pop. (1897) 12,990,400.

Oude, or AYODHYA, a town of the above prov., and the former cap. of the kingdom of Oude, on the river Goggra, 74 m. E. of Lucknow; Lat. 26° 48' N., Lon. 82° 4' E. It is large, and greatly venerated by the Hindoos, but it is now mostly in ruins.

Oudenarde, or AUDENARDE, a town of Belgium, prov. of E. Flanders, on the Scheldt, 14 m. S.S.W. of Ghent. Manuf. Cotton, woollen, and linen fabrics. Here, in 1708, the French were defeated by the allies, under the Duke of Marlborough and Prince Eugene. Pop. 8,540.

Oudinot, CHARLES NICOLAS, (*oo-da-no'*) Duke of Reggio and Marshal of France; b. at Bar-sur-Ornain, 1767. He entered the army when nineteen years of age, and when the revolution broke out held the rank of captain. He embraced the popular cause, and rising to the rank of general, accompanied Massena into Italy as one of his staff-officers, in 1799. His fortunes from this time were linked with those of Napoleon till the capitulation of Paris, March 31, 1814, when he became a Bourbonist. In that character he headed the army that invaded Spain in 1823, and was resident at Madrid some months as governor. He succeeded Marshal Momey as governor of the Invalides 1842, and D. 1847.

Oufa, Oofa, or Ufa, a river of European Russia, rising in the Ural Mountains and after a S.W. course of 400 m., joining the Belaita at Oufa.

Oufa, Oofa, or Ufa, a town of Asiatic Russia, cap. of the gov't. of Orenburg, at the junction of the Oufa and the Belaita, 200 m. N. of Orenburg, Lat. 54° 42' N., Lon. 56° 18' E. Pop. 6,000.

Ought, (*uwt*), *n.* Same as **AUGHT**, *q. v.*

Ought, (*awt*), *v. imp. pp.*, or *aux.* (Originally, the *pret.* and *pp.* of *owe*, and used likewise in the present tense as a verb formed upon them.) Should; is proper, fit, or necessary:—used in an impersonal sense; as, he *ought* to pay his debts.

(NOTE. *Ought* is now almost wholly used as an auxiliary verb, denoting propriety, congruity, fitness, expediency, moral incumbency, &c., in the action or condition prescribed by the governing verb.)

Oui-dire, (*we-der'*) [Fr.] Hearsay; a rumor.

Onis'titi, *n.* (*Zoöl.*) See **JACHUS**, and **MARMOSSET**.

Onorrhagy, (*oo-lor'ru-jé*), *n.* [Gr. *onon*, the gum, and *ragé*, a bursting forth.] (Med.) Hemorrhage from the gums.

Ounce, (*ouns*), *n.* [Fr. *once*; Sp. *onza*; Lat. *uncia*.] A denomination of English weight. In troy weight the ounce is the twelfth part of the pound, and weighs 480 grains. In avoirdupois weight the ounce is the sixteenth part of the pound, and equal to 43½ grains troy.

(*Zoöl.*) The *Leopardus uncia*, a medium-sized cat of the Old World, smaller than the leopard, inhabiting the

mountainous regions of Asia, and distinguished by black spots on a gray ground.

Our, *possess. pron.* [A. S. *ure*. See *I.*] Pertaining, or belonging to us; as, *our* native country. (*Ours* [A. S. *ures*, which is primarily the possessive case of *our* (A. S. *ure*), is never used as an adjective, but as a substitute for the adjective and the noun to which it belongs; as, your house is on a plain; *ours* is on a hill.] "Tom Burke of *Ours*," (*i. e.*, our regiment.)—*Lever*.

Ouranography, *n.* Same as **URANOGRAPHY**, *q. v.*

Our'ga, or **Ur'ga**, a city of Mongolia, cap. of the Khalkas country, on the Tula, a tributary of the Orkhon, on the grand route from Kiakhta to Peking, 165 m. S.S.E. of Kiakhta; Lat. 48° N., Lon. 108° E. It is the seat of the Kootooktoo, or deified Lama of the Mongols. Pop. 6,000.

Our'ology, **Ouros'copy**, *n.* [Gr. *ouron*, urine, *legein*, to speak, and *skopem*, to inspect.] Inspection of urine, with regard to a diagnosis of disease.

Our'o Pre'to, a city of Brazil, cap. of the prov. of Minas-Geraes, abt. 200 m. N.N.W. of Rio de Janeiro. It was founded in 1699, and received the name of *Villa Rica* on account of the rich gold mines in the vicinity, which are now nearly exhausted. Pop. 7,000.

Ours, *possess. pron.* See **OUR**.

Ourself, *pron.*; *pl.* **Ourselves**. [*Our* and *self*.] We; us; not others;—added to *we*, by way of emphasis or opposition, and used chiefly in the plural. — Myself;—used reciprocally, and added after *we* and *us*, and also, sometimes, used without either for *myself*, in the regal style only; as, "We *ourself* will follow."—*Shaks*.

Ouse, (*oöz*), *n.* and *v.* Same as **Ooze**, *q. v.*

Ouse, a river of England, co. of York, formed by the junction of the Swale and Ure, and after a S.E. course of 60 m., unites with the Trent to form the estuary of the Humber. It is navigable for large vessels 45 m., or to York. — **OUSE**, (*GREAT*), rises near Brackley, co. of Northampton, and after a N.E. course of 160 m., two-thirds of which is navigable, enters the Wash at Lynn Regis. — **OUSE**, (*LITTLE*), or **BRANDON RIVER**, falls into the Great Ouse, at the junction of the river Stoke, and the New Bedford and Wisbeach Canal.

Ouse, a river of prov. of Ontario, flowing into Lake Erie at Sherbrooke.

Ousel, **Ouzel**, (*oöl-sl*), *n.* [A. S. *osle*.] (*Zoöl.*) A name common to several species of birds of the Thrush family. See **TURDIDE**.

Ousley's Bar, in *California*, a town of Yuba co., abt. 110 m. N.N.E. of Benicia.

Oust, *n.* Same as **OAST**, *q. v.*

Oust, (*owst*), *v. u.* [O. Fr. *oster*; Fr. *ôter*, to remove; Provencal *ostar*, to take away; probably from L. Lat. *hausture*, frequent, of Lat. *haurire*, *haustum*, to draw out. See **EXHAUST**.] To remove; to take away; to vacate; as, "wager of law *ousted*."—*Hale*.

—To eject; to dispossess; to expel; to turn out.

"The clergy were deprived and *ousted* by Act of Parliament."—*Lesley*.

Ouster, (*owst'er*), *n.* Disseizin; dispossession; ejectment; a putting out of holding or occupancy; as, "ouster of the freehold."—*Blackstone*.

Out, *adv.* [A. S. *út, úte*; D. *ut*; Ger. *aus*; Sansk. *ut*, upwards.] Without; on the outside; on the exterior, or beyond the limits of any inclosed place or fixed line;—opposed to *in* or *within*;—used, specifically, in multifarious senses; as, abroad; not at home; as, he is *out* of town;—a colloquialism for *gone out*.—In a state of discovery or revelation; as, the mystery is *out*, that is, has come out, is disclosed. — Not in hiding, concealment, secrecy, or confinement; as, "Nature's custom holds . . . the woman will be *out*."—*Shaks*.

—In a state of exhaustion or destitution; in a condition of being extinguished or effaced; with loss or deficiency; in want, debt, or difficulty; as, my money is *out*, the light is *out*, his eyes are *out*.—Not in office or employment; as, to be *out* of work.—Abroad, or not at home; in public; as, the troops were *out* to-day. — To the end; wholly; entirely; completely; as, the day wore *out*.

"The tale is long, nor have I heard it *out*."—*Dryden*.

—Loudly; forcibly; without restraint; in an open or free manner; as, to laugh *out*, to call *out*, to throw *out*. — In an error or embarrassment; mistaken; in a wrong or faulty position or opinion.

"You are mightily *out* to take this for a token of esteem."—*L'Estrange*.

—Not in the hands of the owner; as, land *out* on lease. — At a loss; in a puzzle; perplexed; bewildered.

"I have forgot my part, and I am *out*."—*Shaks*.

—Uncovered; denuded of garments; with clothes torn; wanting shelter; as, a coat *out* at elbows, pants *out* at the knees, to be shut *out*.

(NOTE. *Out* is extensively used as a prefix to compound words, all more or less having reference to the sense of issuing, extending, separating, drawing from, and the like, or of any limit of restraint or inclosure; also, implying excess, or the doing to a greater degree or in a better manner than.)

Out and *out*, wholly; completely; thoroughly; without check or reservation; as, he is *out* and *out* a good fellow. — *Out of*, from;—a phrase generally considered as a preposition, and employed to denote an infinite variety of relations; as, derivation; origin; source; as, waters spring *out of* the earth, he finds amusement *out of* trifles. — Exclusion; dismissal; absence; dereliction; departure; as, out of place, out of favor, out of fashion. — Neglect of due attention or proper observance; as, he cannot be talked *out of* his purpose. — Extravagance; irregularity; exorbitance; unusual deviation from a customary rule, standard, or regulation; as, this is *out of* order, he goes *out of* his way to find faults. — Disor-

der; divergence from a normal or proper state or condition; as, the violin is *out of* tune, his digestion is *out of* tone. — Consequence; effect; result;—indicating the motive, cause, or reason; as, this was done *out of* spite, I will grant it *out of* charity. — Quotation or citation from an original;—in the same sense as *from*; as, that passage is *out of* Byron. — State of being absent, or away from, or not within; as, he is *out of* the country. — Liberation; emancipation; rescue; salvation; as, to be delivered *out of* trouble. — State of exceeding the limits of, or of being beyond; as, *out of* reach, *out of* sight, *out of* mind. — Excess; extreme measure or degree;—corresponding with *beyond*; as, she was frightened *out of* her wits. — Exhaustion; deprivation; loss; collapse; as, to be *out of* breath from running, to be *out of* funds. — *Out of* frame (vulgarly, *out of* sorts), not in natural or proper condition; unwell; deranged; disordered; irregular; as, he is *out of* sorts after too much wine. — *Out of* hand, at once; forthwith; on the moment; without delay; as, to get work done *out of* hand. — *Out of* one's time, having reached majority or maturity; past one's minority or apprenticeship; as, next week I am *out of* my time. — *Out of* print, no longer purchasable; not in the market, all previous copies having been disposed of; as, the book is *out of* print. — *Out of* season, not in season; at an unsuitable or improper time; as, oysters are *out of* season from April till September, a joke *out of* season. — *Out of* temper, in ill-temper; peevish; morose; irritated; as, a little thing puts her *out of* temper. — *Out of* trim, not in seafaring condition; dismantled; improperly stowed, fitted, or rigged;—said of a ship; hence, not having the usual power, disposition, or aptitude; as, I felt *out of* trim for work. — *Out of* tune, dissonant; discordant; harsh; inharmonious, as the sound of a musical instrument;—hence, ruffled; annoyed; dis-tempered; not having a usual equanimity of mind or manner; as, I found him *out of* tune. — *Out of* twist, or winding, even; not having a winding or twist;—used in application to surfaces in mechanism. — *Out of* wind, exhausted or breath; in a panting state; as, he was *out of* wind after the first round. (Colloq.) — *Out to out*, (*Corp.*) From exterior to exterior, including all dimensions;—used in reference to measurements. — *Out upon you, out upon it*, away with you; away with it;—terms of opprobrium or contempt.

Out, *n.* He who, or that which, is without;—specifically, one who is not in office;—opposed to *in*, *q. v.* — A nook or corner; an open place or space around or outside of;—principally applied in the phrase *ins and outs*. See **IN**.

(Printing.) An omission made in setting up copy.

To make an *out*. (Print.) To omit something in setting up type from copy.

—*v. a.* To put out; to eject; to expel; to drive away from by expulsion. (*R.*)

"The members . . . were counted deserters, and *outed* of their places in Parliament."—*King Charles I.*

—*interj.* Away! hence! begone! off!—used as an exclamation of command, and expressive also of abhorrence or contempt.

"Out, damned spot! out, I say."—*Shaks*.

Outagamie (*oo-ta-ga-mee'*), in *Wisconsin*, an E. co.; area, about 640 sq. m. Rivers. Fox and Wolf rivers. Surface, mostly level; soil, moderately fertile. Cap. Appleton. Pop. (1895) 44,404.

Outaet, *v. a.* To exceed or go beyond in acting.

Outar'gue, *v. a.* To surpass in argument.

Outbal'ble, *v. a.* To surpass or exceed in prattling talk; as, one woman *outbubbles* another.

Outbal'ance, *v. a.* To outweigh; to exceed in weight, effect, or consequential result.

Outbar, *v. a.* To bar out; to shut out by a bar or barriers.

Outbat'ter, *v. a.* To outdo in battering, as in a siege.

Outbeg, *v. a.* To surpass in begging.

Outbel'low, *v. a.* To bellow louder than.

Outbid, *v. a.* (*imp.* **OUTBADE**.) To bid higher than; to go beyond in the offer of a price.

Outbid'der, *n.* A person who outbids another.

Outblaze, *v. a.* To transcend in blazing.

Outbleat, *v. a.* To surpass in bleating.

Outbloom, *v. a.* To bloom in greater perfection than.

Outblow, *v. a.* Inflated or distended with wind.

Outblush, *v. a.* To blush brighter or deeper than.

Outboard, *n.* (*Naut.*) That which is not on ship-board;—opposed to *inboard*; as, *outboard* cargo.

Out'boru, *a.* Foreign; exotic; not native-born.

Out'bouud, *a.* Proceeding from one port to another abroad or distant;—said of a ship.

Outbow, *v. a.* To surpass in bowing.

Outbowed, (*-bôd'*), *a.* Bowed, bent, or curved outward; convex.

Outbrag, *v. a.* To exceed in bragging; to gasconade.

Outbrave, *v. a.* To exceed in heroic dash or bravery. — To bear down by insolent conduct. — To surpass in splendid appearance.

Outbrazen, (*-brā'zn*), *v. a.* To bear down with an impudent or brazen face.

Outbreak, (*-brāk*), *n.* A breaking or bursting forth; eruption; outburst.

"The flash and outbreak of a fiery mind."—*Shaks*.

Outbreaker, *n.* A wave dashing upon the rocks; a breaker.

Outbreaking, *n.* That which makes an eruption.

Outbreathe, *v. a.* To weary by having better breath. — To cease to go forth, as breath.

"That sign of last *outbreathed* life."—*Spenser*.

—*v. a.* To breathe out; to exhale.

Outbribe, *v. a.* To surpass or go beyond in bribing.

Outbring, *v. a.* To bring or bear out; to produce.

Outbud', *v. n.* To sprout forth.
Outbuild, (*-bld*), *v. a.* To exceed in building; to surpass in permanence of building.
Out-building, (*-bld-ing*), *n.* An out-house or building detached from, and belonging to, a farm or country-house.
Outburn', *v. a. or v. n.* To exceed in burning.
Outburst, *n.* A bursting or breaking out; an eruption; an explosion; as, an *outburst* of passion or anger.
Outcant', *v. a.* To surpass in canting, ranting, or playing a Puritanical part.
Outcast, *n.* One who is cast out, ejected, or expelled; a castaway; an exile; one driven from home or country. — *a.* Thrown away; cast out; rejected as useless.
Outcheat', *v. a.* To cheat to a greater extent than another; to dupe.
Out-clearance, *n.* (*Com.*) Clearance from, or out of, a port, as of a ship or cargo.
Outclimb, (*-clim'*), *v. a.* To surpass in climbing.
Outcome, (*-kūm*), *n.* That which comes out of, or follows as a necessary consequence of something else; issue; result; effect.
Outcompass, (*-kūm'pas*), *v. a.* To exceed the compass, limits, or bounds of.
Out-court, *n.* An exterior court.
Outcraft', *v. a.* To exceed in craft or cunning.
Outcrier, *n.* One who cries out or proclaims; a herald or public crier.
Outcrop, *n.* (*Geol.*) The intersection of the plane of any bed or stratum with the surface of the earth at any place. The various stratified rocks being almost without exception inclined at an angle more or less considerable to the horizon, they must cut it at some line. This may either form a kind of cliff if the bed is hard, or may be a depression and covered by vegetable soil if soft and decomposable. In the latter case it can only be detected by removing the surface, unless indeed a change in the soil itself is effected by the change in the underlying rock.
v. n. (*Geol.*) To come forth to the surface of the ground; — said of strata; as, *outcropping* quartz.
Outcry, *n.* A loud or vehement cry; a cry or ejaculation of distress. — Clamor; public vociferation, indicative of opposition or hatred.
"A loud and universal outcry against ingratitude." — Swift.
— A public sale; an auction; a vendue. (R.)
Outdare', *v. a.* To venture beyond; to surpass in hardihood or daring.
Outdazzle, *v. a.* To exceed in dazzling.
Outdo', *v. a.* To perform more perfectly than another; to transcend; to excel; to surpass.
"An impostor outdoes the original." — L'Estrange.
Out-door, *a.* Extraforaneous; being without the house or building; as, *outdoor* sports.
Outdoors, *adv.* Out of doors; abroad; not inside the house.
Outdraw', *v. a.* To draw, extract, pull, or force out.
Outdream', *v. a.* To dream beyond.
Outdrink', *v. a.* To surpass in drinking.
Outdwell', *v. a.* To dwell or remain beyond.
"He outdwells his home." — Shaks.
Outer, *a.* (*comp.* of *OUT*.) Being farther out than something else; exterior; being on the outside; external; — opposed to *inner*; as, the *outer* gate.
Outerly, *a.* Toward the outside. (*R.*)
Outermost, *a.* (*superl.* from *OUTER*.) Being farthest out, or on the extreme external part; remotest from the midst; — correlative to *innermost*.
Outface', *v. a.* To look out of countenance; to brave, by putting a good face on; to resist or bear down by impudence or effrontery.
"We'll outface them and outswear them too." — Shaks.
Outfall, *n.* A fall or current of water. — A tiff; a falling out; a disagreement; a quarrel. (Used as an English provincialism.)
Outfawn', *v. a.* To surpass in fawning or servile adulation.
Outfeast', *v. a.* To excel in feasting.
Outfeat', *v. a.* To surpass in the performance of a feat.
Out-field, *n.* (*Agric.*) In Scotland, arable land which bears a succession of crops without being manured. (See *IN-FIELD*.) — In Scotland, a field lying at some distance from the farm-house.
Outfit, *n.* A fitting out, as of a ship for a voyage; expenses incurred, or articles used in preparing and furnishing a ship for a voyage. — Equipment; means, money, or supplies furnished for a journey or expedition; — hence, an allowance of expenses allotted for the performance of any special duty involving travel or residence abroad.
Outfitter, *n.* One who furnishes supplies and equipments for a voyage or journey.
Outflank', *v. a.* (*Mil.*) To extend the flank of one army beyond that of another.
Outflash', *v. a.* To surpass in scintillating or flashing.
Outflatter', *v. a.* To excel in flattering.
Outflow, *n.* An efflux; a flowing out; ebb; as, the *outflow* of the tide.
— v. n. To ebb; to flow out.
Outfly', *v. a.* To surpass in flying.
Outfool', *v. a.* To go beyond in folly.
Outfrown', *v. a.* To frown down.
Outgaze', *v. a.* To see farther than. (*R.*)
Outgeneral, *v. a.* To exceed in generalship; to acquire advantage over by superior military skill.
Outgive', *v. a.* To surpass in giving.
Outgo', *v. a.* (*imp.* *OUTWENT*; *pp.* *OUTGONE*.) To advance before in going; to go beyond or faster than. — To surpass; to excel. — To circumvent; to overreach.
— v. n. To go out; to terminate.

Out'go, *n.* That which goes out; expenditure; cost; outlay; — correlative to *income*.
Outgoer, *n.* One who goes out, leaves, or departs.
Outgoing, *n.* Act or state of going out. — Outgo; expenditure; that which goes out; outlay. — Closing part; end; limit; extreme; — hence, the entire or complete thing.
Outgrin', *v. a.* To surpass in grinning.
Outground, *n.* Ground lying at a distance.
Outgrow', *v. a.* To surpass or exceed in growth. — To grow too great or too old for; as, to *outgrow* one's clothes, to *outgrow* a woman's liking.
Outgrowth, *n.* Excessive development of growth; enlargement beyond reasonable limits. — That which has grown out of anything; offshoot; progeny.
Out-guard, *n.* (*Mil.*) An outlying guard; a picket; a patrol; — hence, any defensive arrangement placed at a distance from the main body.
Outgush', *v. n.* To gush or flow out or forth.
Outhaul, *n.* (*Naut.*) A rope used on shipboard for hauling out the clue of a boom-sail.
Out-herod, *v. a.* To exceed in resemblance the cruelty of Herod; — hence, to surpass; to go beyond in any excess of evil or obliquity.
"It out-Herods Herod." — Shaks.
Out-house, *n.* Same as *OUT-BUILDING*, *q. v.*
Outing, *n.* Act of going out, or taking the air. — That which goes out; an emission; an exudation; an evacuation. — In some districts of England, a junket or feast given by an apprentice to his friends on the occasion of his completing his time.
Outjest', *v. a.* To overpower by jesting.
Outjuggle, *v. a.* To excel in juggling or legerdemain.
Outjut, *n.* That which juts out or projects from anything.
Outkave, (*-nāv'*), *v. a.* To surpass in knavery.
Outlabor, *v. a.* To exceed or excel in laboring.
Outlandish, *a.* [*A. S.* *utlāndisc*; *out* and *land*.] Foreign; exotic; not native; as, *outlandish* curiosities; — hence, vulgar; uncouth; rude; rustic; barbarous; not in harmony with popular tastes or usage; as, *outlandish* behavior.
Outlast', *v. a.* To last longer than; to go beyond in duration.
Outlaugh, (*-lāf'*), *v. a.* To outdo in laughing. — To laugh down; to discomfit by laughing.
Outlaw, *n.* [*A. S.* *utlaga*, *utlah*; *out*, and *law*.] One excluded from the benefit of the law, or deprived of its protection.
— v. a. [*A. S.* *utlagian*.] To deprive of the benefit and protection of the law; to proscribe; to make alien.
"He that is drunken is outlaw'd by himself." — Herbert.
— To set aside from legal jurisdiction; to deprive of legal force; as, to outlaw a claim.
Outlawry, *n.* (*Eng. Law.*) An exclusion from the protection of the law, so that an outlaw cannot bring actions, &c., and his property is forfeited to the crown, although with respect to real property the forfeiture does not in some cases extend beyond his own life. An outlaw is, however, still entitled to the protection of the criminal law. Outlawry may be inflicted as a punishment (in criminal cases) for non-appearance to an indictment, or (in civil cases) for absconding after judgment, leaving the judgment debt unpaid. In the U. S., outlawry in civil cases is unknown, and the criminal cases are very rare, if, indeed, there be any.
Outlay, *v. a.* To lay out; to open to view; to expose.
Outlay, *n.* A laying out or expending. — Cost; expenditure; outgo; that which is laid out or expended; as, a large *outlay* of capital.
Outleap', *v. a.* To outdo in leaping; to pass beyond by leaping.
— n. Sally; flight; escape. (*R.*)
"Youth must have some liberty, some outleaps." — Locke.
Outlearn, (*-lérn'*), *v. a.* To surpass or outdo in learning.
Outlet, *n.* An exit; a passage outward; a way of egress; the place or means by which anything escapes or is discharged.
"Hysterics, the outlet of a woman's fury." — Colton.
Outlet', *v. a.* To let free; to emit; to exude.
Outlicker, *n.* [*Ger.* *ausleger*.] (*Naut.*) A small boom jutting out astern from the poop.
Outlie', *v. a.* To surpass in lying.
Out-lier, *n.* One who is non-resident in the place or district with which his duty or vocation connects him.
(Geol.) The name given to a portion of stratified rock remaining in its place in an isolated position after the part of the rock that once connected it with the main deposit has been removed by denudation. An out-lier is thus in advance of the general crop of the stratum to which it belongs.
Outline, *n.* The exterior line; the line or contour by which a figure is defined outwardly. — The first sketch or draught of a figure; the naked delineation of an object. — Hence, the first general sketch or draught of any scheme, enterprise, or design.
— v. a. To draw the exterior line or contour of. — To sketch; to draught; to delineate; to draw in outline.
Outliu'ear, *a.* Forming an outline; pertaining, or having reference to, or being in outline.
Outlive, (*-liv'*), *v. a.* To live longer than; to survive. — To outlive to better purpose.
Outliv'er, *n.* One who outlives; a survivor.
Outlook', *v. a.* To face down; to browbeat.
"To outlook conquest, and to win renown." — Shaks.
— n. [*Fr.* *vigie*.] A looking out; vigilant watch. — The place where one is placed on the look-out; a watch-tower; a semaphore. — Prospect gained by looking out; view; sight.

Outlustre, (*-lus'tr*), *v. a.* To surpass in effulgence, lustre, or brightness.
Outlying, *a.* Lying out or on the exterior; being on the exterior or frontier; as, *outlying* pickets. — Lying or being at a distance from the main body or design; remote; far removed.
"We have taken all the outlying parts of the Spanish monarchy." — Addison.
Outmaeuivre, (*-ū'vr*), *v. a.* To outdo in manoeuvring.
Outmantle, *v. a.* To mantle more than. (*R.*)
Out-march', *v. a.* To pass in marching; to march so as to leave behind; as, "the horse *out-marched* the foot." — *Clarendon*.
Outmeasure, (*-mez'h'ur*), *v. a.* To exceed in measure, extent, or capacity.
Outmost, *a.* Outermost; most remote or distant from the middle; farthest outward.
Outmount', *v. a.* To mount above.
Outname', *v. a.* To exceed in naming.
Outness, *n.* Separateness; remoteness; state of being out or beyond. — Externality; objectivity; having existence with space or spatial relations; materiality.
Outnoise', *v. a.* To outdo in noisiness.
Outnumber, *v. a.* To exceed in number; to be numerically greater than.
Out-of-door, *adv.* In the open air; outdoor; extraforaneous; not being within a building or place of shelter; as, *out-of-door* exercise.
Out-of-doors, *adv.* Outdoors.
Out-of-the-way, *a.* Singular; unique; remarkable; strange; unusual; different from the ordinary way, method, manner, usage, or fashion; — used colloquially; as, an *out-of-the-way* kind of person, an *out-of-the-way* mode of acting.
Out-paramour, *v. a.* To exceed in keeping mistresses or concubines. (*R.*)
"He out-paramoured the Turk." — Shaks.
Out-parish, *n.* An outlying parish; a parish lying without the walls of a city, or the confines of a civic or territorial jurisdiction.
Outpart, *n.* A part distant from the main or centre part; as, the *outparts* of a diocese.
Outpass', *v. a.* To pass beyond; to pass and go forward in advance.
Out-patient, (*-pā'shēnt*), *n.* A patient who receives medical relief from a hospital, while resident outside its walls.
Outpeer', *v. a.* To surpass or excel; to outvie.
Out-pensioner, (*-pen'shon-r*), *n.* In England, a pensioner belonging to a royal hospital, as Greenwich or Chelsea, who has full liberty to fix his residence where he pleases.
Outpoise, (*-poize*), *v. a.* To overbalance; to outweigh.
Outporch, *n.* An outer porch, or entrance-gate.
Outport, *n.* A sub-port within the jurisdiction of a chief custom house; a harbor, haven, or port somewhat distant from the chief port or centre of commercial business; as, Jersey City is an *outport* of New York.
Outpost, *n.* (*Mil.*) A body of men posted beyond the main guard; so called because being without the bounds or limits of the camp.
Outpour', *v. a.* To effuse; to emit in a mass or volume; to discharge or send forth in a stream.
Outpray', *v. a.* To exceed in prayer or supplication.
Outpreach', *v. a.* To surpass or outvie in preaching.
Outquench', *v. a.* To extinguish; to put out.
Outrage, *v. a.* [*Fr.*; *It.* *oltraggio*; *L. Lat.* *ultragium* — *Lat.* *ultra*, beyond, exceeding, and *agere*, to act.] To exceed in rage. (*R.*) — To do extreme violence or injury to; to treat with exceeding violence or wrong; to abuse by rude or insolent language; to injure by rough, coarse treatment of whatsoever kind.
— v. n. To perpetuate an outrage; to commit an excess.
— n. Excessive abuse or injury done to a person or thing; injurious or rude violence offered to persons or things; wanton mischief; gross detriment.
Outrageous, (*-rāj'ūs*), *a.* [*It.* *oltraggioso*; *Fr.* *outrageux*.] Committing or comprising an outrage; enormous; atrocious; exceeding reason, decency, or all bounds of moderation; violent; furious; exorbitant; tumultuous; turbulent; as, *outrageous* villainy, *outrageous* abuse, to pay an *outrageous* price for an article, &c.
Outrageously, *adv.* In an outrageous manner; with great violence; furiously; excessively.
Outrageousness, *n.* State or quality of being outrageous; fury; violence; enormity; excess.
Outrance, (*oō'trāngs*), *n.* [*Fr.*] The last extremity; as, a combat *à l'outrance*, that is, a combat to the death.
Out-rank', *v. a.* To precede in rank; to be of higher rank than.
Out-raze', *v. a.* To raze to utter demolition.
Outré, (*ōō'trā'*), *a.* [*Fr.*, from *outrer*, to magnify, from *Lat.* *ultra*.] Singular; grotesque; bizarre; being out of the ordinary kinds of persons or course of things; extravagant; peculiar; as, to make an *outré* appearance.
Out-reach', *v. a.* To reach beyond; to extend further than a certain limit.
Out-reason, (*-rē'zn*), *v. a.* To surpass in reasoning.
Out-reckon, (*-rēk'n*), *v. a.* To surpass in computation; to exceed in reckoning.
Outrecuidance, (*ōō'trūh-kwē-lōngē'*), *n.* [*Fr.*, from *outré*, beyond, and *cuidar*, to think.] Inordinate presumption. (*R.*)
Outreign, (*-rān'*), *v. a.* To reign longer than; to reign through the whole of.
Outremer, *n.* [*Fr.*] The name given in France to the fine pulverized portions of lapis-lazuli used by painters.
Out-ride', *v. a.* To pass or get beyond in riding; to ride faster than.

—To travel about; to go out riding, whether in a vehicle or on horseback.

Out-ride, *n.* A riding out; an excursion; a ride, or place for riding out.

Out-rider, *n.* One who rides about on horseback; — specifically, a mounted servant or lacquey who attends a carriage or cavalcade.

Out-ri-gger, *n.* (*Naut.*) A kind of boom or spar projected over the sides, &c. of a vessel, for extending ropes and sails, and the like purposes; also, a boat carrying such; as, to row an *outrigger*.

Out-right, (*-rit*), *adv.* Straightway; directly; immediately; at once; without delay; as, the last was hanged *outright*. — Utterly; completely; wholly; entirely; as, he laughed *outright*.

Out-ri-ng, *v. a.* To ring louder than.

Out-ri-val, *v. a.* To surpass in excellence; to outdo in importance or esteem.

Out-roar, *v. a.* To exceed in roaring.

Out-ro-mancee, *v. a.* To surpass or outdo in romantic character.

"Their real sufferings *outromanced* the fictions of many." *Fuller*.

Out-room, *n.* An outer room; an exterior apartment; an ante-room.

Out-root, *v. a.* To extirpate; to eradicate.

Out-run, *v. a.* To exceed or go beyond in running; to leave behind in progress; as, the flight of a bullet *outruns* the eye. — To exceed; as, to *outrun* one's income.

To *outrun* the constable, to spend more than one is able to pay. (Used colloquially.)

Out-rush, *v. a.* To rush out with some degree of force; to issue forth hurriedly or expeditiously.

Out-sail, *v. a.* To pass by or leave behind in sailing; as, we *outsailed* the chase, and brought her to.

Out-scent, (*-sent*), *v. a.* To smell stronger than, or overpower in odor. (*R.*)

Out-sold, *v. a.* To scold or browbeat more than.

Out-scorn, *v. a.* To despise; to crush by open contempt.

Out-scour-ing, *n.* That which is scoured or washed out.

Out-sell, *v. a.* (*imp.* and *pp.* *outsold*.) To exceed in the prices of articles sold. — To surpass in amount of sales. — To fetch, or realize, a higher price.

Out-sentry, *n.* (*Mil.*) A vidette, an out-guard; a picket who guards the approach to any place.

Out-set, *n.* Beginning; commencement in any business or undertaking; as, the *outset* of life.

Out-settler, *n.* One who settles in a place remote from others.

Out-shine, *v. a.* To excel in lustre, attraction, or excellence.

—*v. n.* To emit lustre; to shine out or forth with brilliance; as, "bright *outshining* beams." — *Shaks.*

Out-shoot, *v. a.* To shoot farther than. — To shoot beyond; — hence, to get in advance.

"Some men are resolved never to *outshoot* their forefathers' mark." — *Norris*.

Out-shut, *v. a.* To shut out; to exclude.

Out-side, *n.* The side or part of a thing that is outermost; the exterior; the external surface; the part, end, or side which forms the surface or superficies; superficial appearance; external man.

"His vanities were but the *outside* of the Roman Brutus." — *Shaks.*

—The part or place that lies without or beyond a limit or inclosure; as, the *outside* of a house or apartment. — Utmost; the ultimate limit as to number, quantity, extent, degree, and the like: as, fifty dollars is the *outside* of my offer. — The person who, or thing which, is without; — hence, an *outside* passenger of a vehicle, as distinguished from one who is *inside*; as, the mail-coach carried twelve *outsides*. (Used in England.)

—*a.* On the outside; external; exterior; superficial; consisting in outward appearance; as, *outside* show.

Out-sider, *n.* One unconnected with the party, clique, concern, business, &c. spoken of; one having no interest or kindred feeling with what is going on.

Out-sin, *v. a.* To sin beyond others.

Out-sing, *v. a.* To excel in singing.

Out-sit, *v. a.* To sit longer than the time permitted.

Out-skip, *v. a.* To evade by retreat.

Out-skirt, *n.* Border; frontier; confine; suburb; outpost; as, the *outskirts* of a city or country.

Out-sleep, *v. a.* To sleep longer than.

Out-slide, *v. n.* To advance or progress by sliding.

Out-soar, *v. a.* To soar above or beyond.

Out-sound, *v. a.* To surpass in sound.

Out-spar-ke, *v. a.* To sparkle exceedingly.

Out-speak, *v. a.* To speak more, oftener, longer, or louder than.

Out-speed, *v. a.* To excel in speed or rapidity of motion.

Out-spend, *n.* Outlay; expenditure; disbursement. (*R.*)

Out-spin, *v. a.* To spin out; to run through; to finish.

Out-sport, *v. a.* To outdo in sport.

"Let's teach ourselves not to *outsport* discretion." — *Shaks.*

Out-spread, (*-spred*), *v. a.* To extend; to spread out; to diffuse.

Out-spread, *a.* Expanded; extended; diffused; circulated.

Out-spring, *v. a.* To issue or spring forth.

Out-stand, *v. n.* (*imp.* and *pp.* *outstood*.) To project or jut out forward from the main body. — To stand or linger behind the proper time; — hence, to be unpaid, as a debt or obligation.

—*v. a.* To withstand; to resist steadily. (*R.*) — To stand beyond the specified time.

Out-standing, *a.* Projecting outward. — Remaining unpaid; not collected; as, *outstanding* debts.

Out-stare, *v. a.* To stare out of countenance; to browbeat; to face down with impudence or effrontery.

"I would *outstare* the sternest eyes that look." — *Shaks.*

Out-starting, *a.* Starting out; as, *outstarting* eyeballs.

Out-step, *v. a.* To exceed or pass beyond; as, to *outstep* the bounds of propriety.

Out-storm, *v. a.* To excel in storming.

Out-street, *n.* A street in the outskirts or suburbs of a town; a street beyond the walls of a city.

Out-stretch, *v. a.* To stretch or spread out; to enlarge; to expand; as, with *outstretched* arms.

Out-stride, *v. a.* To surpass in striding or progressing.

Out-strip, *v. a.* To outrun; to outgo; to advance beyond; to make greater speed than; to leave behind; as, he *outstripped* all competitors.

Out-suffer, *v. a.* To surpass in the endurance of suffering.

Out-swear, *v. a.* (*imp.* and *pp.* *outsware*.) To overpower by swearing.

Out-sweet-en, *v. a.* To exceed in sweetness or mellifluousness.

Out-swell, *v. a.* To overflow; to swell over.

Out-talk, (*-lawk*), *v. a.* To overpower by talking; to outdo in speech.

Out-tell, *v. a.* To exceed in telling; to tell, count, or compute more than.

Out-term, *n.* An external or superficial thing, occurrence, or remark.

Out-throw, *v. a.* To throw out or beyond.

Out-toil, *v. a.* To toil to a greater degree than another.

Out-tongue, *v. a.* To beat down by talk or clamor.

Out-travel, *v. a.* To exceed in travelling; to journey more than.

Out-twine, *v. a.* To disentangle; to extricate; to unfold or unfasten; — opposed to *entwine*, (*q. v.*)

Out-val-ue, *v. a.* To transcend in price; to exceed in value or estimation.

Out-ven-om, *v. a.* To exceed in poison.

"Slander's tongue *outvenoms* all." — *Shaks.*

Out-vie, *v. a.* To exceed in vying with, or in rivalry; to surpass.

Out-villain, *v. a.* To exceed in villainy.

Out-vote, *v. a.* To exceed in the number of votes given and declared; to defeat by a plurality of suffrage.

Out-walk, (*-wawk*), *v. a.* To leave behind in pedestrianism; to walk faster than.

Out-wall, *n.* The exterior wall of a building or fortification. — Superficial aspect or appearance. (*R.*)

Out-ward, *a.* [*A. S.* *utward*, or *utoward* — *ut*, out, and *ward*, towards.] External; exterior; outer; forming the superficial part; — in contradistinction to *inward*; as, an *outward* appearance, an *outward* garment. — Adventitious; extrinsic.

"An *outward* honour for an inward toil." — *Shaks.*

—Tending to the outer or exterior part.

"The fire will force its *outward* way." — *Dryden*.

—*n.* External form; exterior; outer appearance; as, "a fair *outward*." (*Shaks.*) (*R.*)

—*adv.* Toward the outer parts; tending or directed toward the exterior or external surface. — Seaward; to some foreign clime or region from some port or country; as, a ship bound or cleared *outward*.

Out-ward-bound, *a.* Bound outwardly, or to foreign parts, as a ship; — opposed to *homeward-bound*.

Out-wardly, *adv.* Externally; in an outward manner; on the outside; — opposed to *inwardly*; — hence, apparently; seemingly; superficially; not intrinsically; as, some men are *outwardly* religious, and find it profitable.

Out-wards, *adv.* See *OUTWARD*.

Out-watch, *v. a.* To exceed in watching.

Out-way, *n.* A by-way; a roundabout passage out.

Outwear, (*-wér*), *v. a.* To last longer than; to exceed in duration. — To pass irksomely or tediously; as, to *outwear* the night.

Out-weary, *v. a.* To fatigue; to tire out.

Out-weep, *v. a.* To weep longer than another.

Out-weigh, (*-wá*), *v. a.* To exceed in weight or gravity of substance. — To preponderate in value, interest, influence, or importance.

"Your truth to him *outweighs* your love to me." — *Dryden*.

Outwent, *imp.* of *OUTGO*, *q. v.*

Out-where, (*-hōr*), *v. a.* To surpass in lewdness or lechery.

Out-wing, *v. a.* To outstrip in flying; to move faster on the wing.

Out-wit, *v. a.* To surpass in wit or wisdom; to outdo in design or stratagem, craft or subtlety; to defeat or impair by superior sagacity or ingenuity; to overreach; to get the best of.

Out-work, (*-wurk*), *v. a.* (*imp.* *OUTWORKED* (*-wurkt*), or *OUTWROUGHT* (*-rawt*); *pp.* *OUTWROUGHT*.) To surpass in the performance of work or labor.

Out-work, *n.* (*Fortif.*) Any work or sectional part of a fortress which is erected without the outer wall, within or beyond the moat or principal ditch.

Out-worth, *v. a.* To exceed in worth, value, or estimation.

Out-write, (*-rit*), *v. a.* To write better, quicker, or longer than.

Out-zu-ty, *v. a.* To surpass in buffoonery or tomfoolery.

Ouvirau-dra, *n.* (*Bot.*) A genus of plants, order *Juncaginaceae*. *O. fenestralis*, the Lattice-leaf. Lace-leaf, Water-yam, or Ouvirandrano, is a native of Madagascar, and grows in running streams. Its flowers are in forked spikes. The leaves are very curious, the blade resembling lattice-work or open needle-work of a most regular pattern. The whole appearance of the plant is very beautiful. It grows very well in hot-house aquaria.

Ouvirandra-no, *n.* (*Bot.*) See *OUVIRANDRA*.

Ouze, (*ōz*), *n.* and *v.* Same as *OOZE*, *q. v.*

Ouzel, (*ōz*), *n.* (*Zoöl.*) See *TURDIDÆ*.

O'va, *n. pl.* [From Lat. *ovum*.] (*Arch.*) Egg-shaped ornaments carved on the contour of the ovolo, or quarter-round, and separated from each other by anchors and arrow-heads.

O'val, *a.* [*Fr.* *ovale*; Lat. *ovalis*, from *ovum*, egg, the shape of an egg; akin to Gr. *ōōn*. See *EGG*.] Of the shape, form, or figure of an egg; resembling the longitudinal appearance of an egg. — Oblong and curvilinear, bounded by a curve-line returning to itself; elliptical (*Bot.*) Elliptical in a great degree.

—*n.* (*Math.*) Any curve, or isolated branch of a curve, which returns into itself.

Ovalu-men, *n.* [Lat. *ovum*, egg, and Eng. *albumen*.] The albumen or white of an egg; — in contradistinction to the serum of the blood.

Oval-iform, *a.* [Eng. *oval* and *form*.] Egg-shaped; having one of two perpendicular sections circular, and the other oval.

O'val-ly, *adv.* In an oval form; so as to be oval.

O'val-shaped, (*-shāpt*), *a.* Oval.

Ova-ri-al, *Ova-ri-an*, *a.* Pertaining to the female ovaries.

Ovari-ot-omy, *n.* [*Gr.* *oarion*, ovary, and *tome*, incision.] (*Surg.*) The operation for removing the ovary.

Ova-ri-ous, *a.* Consisting of eggs. (*R.*)

O'vary, *n.* [*Fr.* *ovaire*; Sp. *ovario*; Low Lat. *ovaria*, from Lat. *ovum*, egg; Gr. *oarion*, dim. of *ōōn*, egg.] (*Bot.*) That part of the *pistil*, or central organ of a flower, which contains the rudimentary seeds or ovules. These rudimentary seeds are attached to a projection on the walls of the ovary, called the *placenta*. The ovary is said to be *compound* when it is composed of two or more ovaries combined together; it is said to be *simple*, when it constitutes the lower part of a simple pistil, or of one of the carpels of an apocarpous pistil. (See *CARPEL* and *PISTIL*.) The ovary, whether simple or compound, may be either adherent to the calyx, or free from it. In the former case, as in the Myrtle, it is *inferior* or *adherent*, and the calyx is *superior*; in the latter, as in the Lychnis, it is *superior* or *free*, and the calyx *inferior*. See *PLACENTA*.

(*Anat.* and *Physiol.*) The ovaries are the organs in which the ova are formed in oviparous animals. By analogy, the name has been given to two ovoid bodies which, in women, are placed on each side of the uterus, between the Fallopian tube and round ligament. They are composed of a very close, spongy texture (*stroma*), and of small vesicles (*folliculi Graafiani*), filled with a clear fluid; these vesicles contain ovules, which detach themselves from the ovary before and after fecundation, and are carried into the cavity of the uterus by the Fallopian tube.

O'vate, **O'vated**, *a.* [Lat. *ovatus*.] Shaped like an egg. (*Bot.*) Presenting the shape of a section of an egg; as, an *ovate* leaf.

O'vate-acu-mi-nate, *a.* (*Bot.*) Having a form intermediary between ovate and cylindraceous; ovato-acuminate.

O'vate-ob-long, **O'va-to-ob-long**, *a.* (*Bot.*) Having a form intermediary between ovate and oblong.

O'vate-cylind-race-ous, (*-drā'shus*), *a.* (*Bot.*) Having a form intermediary between ovate and cylindraceous; ovato-cylindraceous.

O'vate-lan-ce-olate, *a.* (*Bot.*) Having a form intermediary between ovate and lanceolate.

O'vate-sub-u-late, *a.* (*Bot.*) Having a form intermediary between ovate and subulate.

Ovation, (*-vā'shun*), *n.* [Lat. *oratio*, from *ovo*, *ovatus*, to celebrate an ovation, from *oris* = Gr. *ois*.] (*Rom. Hist.*) A lesser sort of triumph among the ancient Romans, in which sheep were sacrificed instead of bullocks. Ovations were granted when the success was not brilliant enough to justify a triumph; or when the war was not completely ended by it, as in the case of Marcellus (*Livy* xxvi. 21); or if the enemy were not honorable, as in the servile war with Spartacus, &c.

—Hence, a manifestation of popular applause; acclaim paid to one who is a public favorite.

Ova-to-acu-mi-nate, *a.* (*Bot.*) Same as *OVATE-ACUMINATE*, *q. v.*

Ova-to-cylind-race-ous, *a.* (*Bot.*) See *OVATE-CYLINDRACEOUS*.

Ova-to-rotun-date, *a.* (*Bot.*) Roundly ovate; having a form intermediary between that of an egg and a sphere.

O've-alty, **O'velty**, *n.* (*Law.*) See *OWELTY*.

O'ven, (*ūv'n*), *n.* [*A. S.* and Ger. *ofen*; Icel. *ofn*.] A furnace; a place arched over with brickwork or masonry for baking, heating, or drying anything. — An apparatus for roasting, baking, or drying; as, a Dutch *oven*.

O'ven-bird, *n.* (*Zoöl*) The Golden-crowned Thrush, *Scirurus auricapillus*, of N. America E. of the Missouri, belonging to the *Sylviolidae*, or Warbler family.

O'ver, *prep.* (In poetry often contracted to *o'er*.) [*A. S.* *ofer*; D. and Dan. *over*; Ger. *über*; Lat. *super*; Ir. *ōr*; Gr. *hyper*.] Across; from side to side; — denoting a passing above or on the surface of a thing; as, to sail *over* a lake, to reach *over* a table. — Above, in place, or position; — correlative of *below*; as, the sky is *over* us. — On the entire surface; through the whole extent; as, money is money all the world *over*. — Above, — denoting superiority in excellence, value, or dignity.

"Young Pallas shone conspicuous *o'er* the rest." — *Pope*.

Fig. 2014.

a, Ovary, to one side of which are attached numerous ovules. d—b, Style; c, Stigma.

—Above in power or authority; —implying the right or power of controlling or governing; —opposed to *under*. "I will make thee ruler *over* many things." —*Matt.* xxv. 23.

—During the whole time; from first to last; as, we have food enough to last *over* winter. —With care, watchfulness, concern for; with circumspection in regard of; as, to keep guard *over* one. —Above the top of; covering; as, the river has risen *over* its banks.

Over, *adv.* From side to side; across; as, a plank a foot *over*, that is, a foot in diameter. —In transit; from one to another by passing; as, to hand *over* valuables into safe-keeping. —On the opposite side; as, he went *over* to the enemy. —From one place or country to another, by passing; as, to go *over* the Atlantic. —Above the top; as, measure brimming *over*. —Beyond a limit; more than the quantity specified.

"The ordinary soldiers had all their pay, and a month's pay *over*." —*Hayward.*

—Throughout; completely; from first to last; as, to discuss a topic *over* again. —(NOTE. *Over*, *off*, *out*, and adverbs of the like character, are frequently employed predicatively with the sense and application of adjectives, corresponding in this respect with the adverbs of place, *here*, *there*, *everywhere*, *anywhere*, *nowhere*; as, the proceedings were *over*, his coat was *off*, the proprietor was *out*.)

Over again, once more; with repetition. —*Over against*, in front; opposite; as, on the wall *over against* the door. —*Over and above*, besides; beyond what is intended or limited; as, *over and above* the price agreed on. —*Over and over*, once and again; repeatedly; continuously; as, make them do it *over and over* till they are perfect. —*To give over*, to cease from; as, *to give over* grumbling. To look upon as in a hopeless condition; as, the doctors have *given him over*.

Over, *a.* Upper; covering; enclosing; —principally employed in composition; as, an *over-coat*, *over-shoes*, &c.

Overabundant, *a.* To be superabundant.

Overact, *v. a.* To act or perform to excess; as, he *overacted* his part.

—*v. n.* To act more than is just or necessary.

Overaction, (*-ak'shan*), *n.* Exaggerated performance; excessive action.

Overagitate, *v. a.* To agitate beyond expediency.

Overalls, *n. pl.* A kind of loose leggings or trousers worn over others to keep them from becoming soiled.

Overanxiety, (*-ang-z'i-ete*), *n.* State or condition of being overanxious; morbid or excessive anxiety or concern.

Overanxious, (*-anl'shus*), *a.* Excessively anxious.

Overanxiously, (*-ank'shus-ly*), *adv.* With excess of anxiety.

Overarch, *v. a.* To cover with an arch; to arch over.

—*v. n.* To bend or hang over, like an arch.

Overawe, *v. a.* To keep too much in awe; to curb or restrain by awe, dread, or other superior influence.

Overawful, *a.* Unduly or excessively reverential; overawed.

Overbalance, *v. n.* To weigh down; to preponderate in weight, value, or importance.

—*n.* Excess or preponderance in weight, value, or importance; something more than an equivalent; as, the *overbalance* of probability.

Overbarren, *a.* Barren to utter unproductiveness.

Overbear, *v. a.* (*imp.* *OVERBORE*; *pp.* *OVERBORNE*.) To bear over or down; to overpower, overwhelm, or subdue; to repress; to conquer; to domineer over; as, *overborne* by numbers.

—*v. n.* To bear issue, fruit, or progeny to excess.

Overbearing, *a.* Haughty; dictatorial; dogmatical; imperious; domineering; tyrannical; disposed or tending to repress or subdue by insolence or effrontery; as, an *overbearing* man.

Overbearingly, *adv.* In an overbearing manner; dictatorially; haughtily; dogmatically.

Overbeck, *FRIEDRICH*, (*o'ber-bek*), the founder of the modern German religious school of painting, b. at Lübeck, in 1787; went to Rome in 1810, embraced the Roman Catholic faith, and made that city his residence. His best fresco is the *Miracle of Roses of St. Francis*, in the church at Assisi. His best known oil-paintings are the *Entrance of Christ into Jerusalem*, and *The Descent from the Cross*, at Lübeck.

Overbend, *v. a.* (*imp.* and *pp.* *OVERBENT*.) To bend or stretch to excessive tension.

—*v. n.* To bend over.

Overbid, *v. a.* To bid more than an equivalent.

—*v. n.* To bid beyond or more than.

Overblow, *v. n.* (*imp.* *OVERBLEW*; *pp.* *OVERBLOWN*.) To be past its violence; to blow over.

(*Naut.*) To blow with such violence as not to admit of topsails being set.

—*v. a.* To blow away; to scatter, as clouds before the wind.

"This cloud of sorrow's *overblown*." —*Dryden.*

Overblown, *a.* Expanded beyond the usual size or degree; as, an *overblown* woman, an *overblown* rose.

Overboard, *a.* (*Naut.*) Out of a ship or from on board; over the board or deck; as, to heave cargo *overboard*.

Overboil, *v. a.* To boil unduly or more than is necessary.

Overbold, *a.* Excessively bold; bold to effrontery; impudently; unduly; presumptuous.

Overboldly, *adv.* In an overbold manner; with effrontery; impudently.

Overbookish, *a.* Unduly addicted to the perusal of books; excessively bookish.

Overbounteous, *a.* Bounteous to an injudicious or extravagant degree.

Overbreed, *v. a.* To breed more than is necessary.

Overbrim, *v. a.* To fill so as to surge over the brim.

Overbrimmed, (*-brim'd*), *a.* Having a brim of unusual size, as a hat.

Overbrow, *v. a.* To beefle or hang over like a brow.

Overbuilt, (*-bült*), *a.* Built over. —Built to an extent more than is profitable or necessary; having too many buildings; as, an *overbuilt* part of a town.

Overbulk, *v. n.* To weigh down or oppress by bulk. (*R.*)

Overburden, (*bür'dn*), *v. a.* To burden unduly; to load with too great weight; as, an *overburdened* horse, an *overburdened* conscience.

Overburdensome, *a.* Burdensome to excess.

Overburn, *v. a.* To burn more than is needful.

—*v. n.* To burn unduly.

Overbusy, (*-biz'y*), *a.* Too busy; officious; meddlesome.

Overbuy, (*-bi'*), *v. a.* To buy at too dear a rate.

Overcanopy, *v. a.* To cover as with a canopy.

Overcapable, *a.* Capable to an excessive degree; —preceding *of*; hence, prone to; as, *overcapable of criticism*.

Overcare, *n.* Unwonted care, concern, or anxiety.

Overcareful, *a.* Careful to excess.

Overcautious, *a.* Overanxious; too full of concern.

Overcarry, *v. a.* To carry too far, to urge beyond proper limits.

Overcast, (*imp.* and *pp.* *OVERCAST*), *v. a.* To cloud; to dim; to darken; to cover with gloom.

"Our days of age are sad and *overcast*." —*Raleigh.*

—To rate or compute too high; to cast at too high a figure. —To sew over and over.

Overcatch, (*imp.* *OVERCAUGHT*), *v. a.* To overtake; to catch up with.

Overcautions, *a.* Cautious to an extreme; prudent to excess.

Overcautiously, *adv.* Cautiously to an excessive degree.

Overchange, *n.* Too frequent change; fickleness.

Overcharge, *v. a.* To charge or load to excess; to overload; to cloy; to burden; to oppress; to surcharge.

—To crowd; to fill to excess; to load too full.

"Our language is *overcharged* with consonants." —*Pope.*

—To charge too much; to enter in an account more than is just; —applied to persons.

(*Mil.*) To load with too great a charge, as a gun.

—*v. n.* To make excessive charges.

—*n.* An excessive load, weight, or burden. —An excessive charge, as of a gun. —A charge in an account of more than is just.

Overclean, *v. a.* To clean to excess.

Overclimb, (*-klin'*), *v. a.* To climb over.

Overcloud, *v. a.* To cover or overspread with clouds.

Overcloy, *v. a.* To fill to satiety.

Overcoat, *n.* An upper coat; a top coat; a great-coat.

Overcold, *a.* Cold to excess.

Overcolor, **Overcolour**, (*kül'er*), *v. a.* To color too highly; as, an *overcolored* picture or description.

Overcome, (*küm'*), *v. a.* To be victorious over, as foes; to overpower; to vanquish; to conquer; to subdue; to surmount.

—*v. n.* To gain the advantage or superiority.

Overcomingly, *adv.* Victoriously; with advantage or superiority.

Overconfidence, *n.* Excess of confidence.

Overconfident, *a.* Confident to an unlimited degree.

Overconfidently, *adv.* With too much confidence.

Overcorn, *v. a.* To corn to excess.

Overcostly, *a.* Unduly costly; extravagantly dear or expensive.

Overcount, *v. a.* To reckon or rate above the true value.

Overcover, *v. a.* To cover wholly or completely.

Overcredulous, *a.* Credulous to a pitch of fatuity.

Overcrow, *v. a.* To crow over, as in triumph; to assume airs of superiority over.

Overcunning, *a.* Cunning to excess; ingenious to a degree.

Overcurious, *a.* Curious or nice to excess.

Overdare, *v. a.* and *n.* To dare too much; to be too daring.

Overdate, *v. a.* To date beyond the proper period; to render antiquated.

Overdelicate, *a.* Nice to a fault; dainty to excess.

Overdelighted, *a.* Delighted beyond expression.

Overdelight, (*-dit'*), *a.* Covered over.

Overdiligent, *a.* Diligent to excess.

Overdo, (*imp.* and *pp.* *OVERDONE*), *v. a.* To cause to do too much. —To harass; to fatigue; to oppress by much labor or exertion.

"Nature much oftener *overdoes* than *underdoes*." —*Grew.*

—To holl, bake, or roast too much; as, *overdone* meat.

Overdose, *v. a.* To give too many or too large doses to.

—*n.* An excessive dose; as, an *overdose* of medicine.

Overdraw, *v. a.* (*imp.* *OVERDREW*; *pp.* *OVERDRAWN*.) To draw beyond the proper limits; to draw beyond one's credit or funds; as, to *overdraw* one's account at a bank.

To paint too highly; as, an *overdrawn* description.

Overdress, *v. a.* To dress to excess; to adorn too much, or more than is consonant with good taste; as, an *overdressed* woman.

Overdrink, *v. a.* and *n.* To drink to excess, or more than is good for one.

Overdrive, *v. a.* and *n.* To drive too hard.

Overdrown, *v. a.* To saturate or drench to excess; to moisten excessively.

Overdry, *v. a.* To dry to excess.

Overdue, *a.* Due beyond the proper time; past the time of payment; as, an *overdue* bill of exchange.

Overdye, (*-di'*), *v. a.* To dye too much or too deeply.

Overeager, (*ēgr*), *a.* Too eager; too impetuous or vehement in wishing.

Overeagerly, *adv.* With excessive eagerness.

Overeagerness, *n.* Excess of eagerness.

Overearnest, (*-ē'nest*), *a.* Too earnest.

Overearnestness, *n.* Excess of earnestness.

Overeat, *v. a.* and *n.* To eat beyond sufficiency.

Overellegant, *a.* Elegant to excess.

Overestimate, *v. a.* To estimate too highly.

—*n.* An estimate too highly rated.

Overexcited, *a.* Too much excited.

Overexcitement, *n.* Excess of excitement.

Overexquisite, *a.* Unduly exquisite, fastidious, or exact.

Overfatigue, (*-tēg*), *n.* Exhaustion from fatigue.

—*v. a.* To weary out; to fatigue to excess.

Overfeed, *v. a.* (*imp.* and *pp.* *OVERFED*.) To feed to excess or repletion.

Overfield, in *Pennsylvania*, a township of Wyoming co.

Overfierce, *a.* Excessively fierce.

Overfill, *v. a.* To surcharge; to fill to excess.

Overflak'kee, an island of the Netherlands, prov. of S. Holland, between two arms of the Rhine, the Haringvliet and Flakkee, at their entrance into the North Sea. It is 25 m. long, and 7 m. broad.

Overfloat, *v. a.* To inundate; to overflow. (*R.*)

Overflourish, (*-flūr'ish*), *v. a.* To make excessive flourish of.

Overflow, *v. a.* (*imp.* and *pp.* *OVERFLOWED*.) To flow or spread over, as water; to inundate; to flood; to cover with water or other fluid; to fill beyond the brim.

"New milk that *overflows* the pails." —*Dryden.*

—To cover as with numbers; to overwhelm; to overpower.

—*v. n.* To flow or run over; to swell and run over the brim or banks. —To exuberate; to abound; as, *overflowing* plenty.

Overflow, *n.* An inundation; also, superabundance.

Overflowing, *n.* Exuberance; copiousness.

—*a.* Abundant; copious; exuberant.

Overflowingly, *adv.* Exuberantly; copiously.

Overflush, *v. a.* To flush to excess.

Overflutter, *v. a.* To flutter over.

Overflux, *n.* Exuberance; excess of abundance. (*R.*)

Overfly, *v. a.* (*imp.* *OVERFLEW*; *pp.* *OVERFLOWN*.) To cross by flight.

Overfond, *a.* Fond to excess.

Overfondly, *adv.* In an overfond manner.

Overforce, *n.* Excessive or violent force. (*R.*)

Overforward, *a.* Forward to excess.

Overforwardness, *n.* Too great forwardness; officiousness; presumptuousness.

Overfree, *a.* Free to excess; liberal or familiar to a fault.

Overfreely, *adv.* With too great freedom.

Overfreight, (*-frāt'*), *v. a.* To burden too heavily; as, to *overfreight* a ship.

Overfrequent, *a.* Too frequent.

Overfrieze, (*-frēz'*), *v. a.* To overlay, as with a frieze.

Overfruitful, *a.* Producing superabundant crops.

Overfull, *a.* Too full; brimming over.

Overgaze, *v. a.* and *v. n.* To overlook.

Overgird, *v. a.* To gird too tightly.

Overglad, *a.* Unduly glad.

Overglance, *v. a.* To glance over with the eye.

Overglide, *v. a.* To glide over.

Overgloom, *v. a.* To overshadow with gloom.

Overgo, *v. a.* To exceed; to surpass.

Overgorge, *v. a.* To gorge to excess; to make a glut of.

Overgrace, *v. a.* To pay measureless honor.

Overgreat, *a.* Too great.

Overgreatness, *n.* Excessive greatness; enormous size.

Overgreedy, *a.* Ravenously greedy.

Overgross, *a.* Excessively gross.

Overgrow, *v. a.* To grow beyond; to rise above; to cover with growth or herbage.

—*v. n.* To grow beyond the fit or natural size; to increase or enlarge to an excess.

Overgrown, *p. a.* Grown over; covered with herbage; risen above in growth; grown beyond the natural size; as, an *overgrown* lad.

Overgrowth, *n.* Exuberant or excessive growth.

Overhand, *n.* The upper hand; advantage; superiority.

Overhandle, *v. a.* To handle too much; to allude to too often.

Overhang, *v. a.* To hang or impend over; to jut or project over.

—*v*

Overhigh, *a.* Too high.
Overhighly, *adv.* In an excessive degree.
Overhonestly, *adv.* With too scrupulous regard to the appearance of honesty.
Overinfluence, *v. a.* To influence in an undue or excessive degree.
Overinform, *v. a.* To be more than enough to fill the mind.
Overis'el, or **OVERYSSEL**, in *Michigan*, a post-township of Allegan co.
Overissue, (*-ish/shu*), *n.* An issuing or dissemination to excess; as, an *overissue* of paper money; an issuing, as of debentures, beyond the capital, or in excess of the public demand.
—v. a. To issue in excess.
Overjealous, *a.* Excessively jealous.
Overjoy, *v. a.* To please too highly. — To transport with gladness or delight.
—n. Joy to excess.
Overjump, *v. n.* To jump over; — hence, to let pass.
Overkind, *a.* Kind to an excessive degree.
Overkindness, *n.* Excess of kindness.
Overknowing, *a.* Too knowing; too shrewd or astute.
Overlabor, **Overla'bour**, *v. a.* (*imp.* and *pp.* **OVERLABORED**) To harass with toil or severe labor. — To labor to excess.
Overlade, *v. a.* (*imp.* **OVERLADED**; *pp.* **OVERLADEN**.) To load with too great a freight or burden; as, an *overladen* ship or animal.
Overland, *a.* Passing over by land; as, an *overland* mail.
Overlander, *n.* A traveller over lands or countries.
Overlap, *v. a.* or *n.* To lap over. (Tautological.)
Overlarge, *a.* Too large; too great.
Overlargeness, *n.* Excess of size.
Overlash, *v. a.* To urge to excess.
Overlate, *a.* Too late; very late.
Overlavish, *a.* Lavish to a fault; profuse to excess.
Overlay, *v. a.* (*imp.* and *pp.* **OVERLAID**.) To lay too much upon; to oppress with incumbent weight. — To cover or spread over the surface of. — To smooth with close covering; to overwhelm. — To cloud; to overcast; to cover. — To join two opposite sides to a cover.
Overleap, *v. a.* To leap over; to pass or move from side to side by leaping.
Overlearnedness, *n.* Excess of learning.
Overleather, (*-leth-er*), *n.* The leather which forms the upper part of a shoe; that which is over the foot.
Overleaven, *v. a.* To leaven too much. — To corrupt.
Overliberal, *a.* Too free; too generous.
Overliberally, *adv.* Too freely; in a too liberal manner.
Overlie, *v. a.* To lie over or upon.
Overload, *v. a.* To load too much, or with too heavy a burden or cargo. — To fill to excess; to overburden.
Overlook, *v. a.* To survey; to oversee; to inspect; to superintend. — To view from a higher place; to stand in a more elevated place, or to rise so high as to afford the means of looking down on. — To review; to examine a second time or with care. — To pass by indulgently; to excuse; not to punish or censure. — To neglect; to slight.
Overlying, *a.* Lying over or upon something; as, *overlying* rocks.
Overmaster, *v. a.* To overpower; to subdue; to govern.
Overmate, *v. a.* To be too powerful for; to conquer; to oppress by superior force.
—n. One superior in power; one able to overcome.
Overmuch, *a.* Too much; exceeding what is necessary or proper.
—adv. In too great a degree.
Overnight, *adv.* Through the night; in the evening, or on the evening before.
Overpass, *v. a.* To cross; to go over. — To overlook; to pass without regard. — To omit, as in reckoning. — Not to receive or include.
Overpay, *v. a.* To pay too much, or more than is due; to reward beyond the price or merit.
Overplus, *n.* That which is over and above; surplus; that which remains after a supply, or beyond a quantity proposed.
Overpower, *v. a.* To affect with a power or force that cannot be borne; to bear down by force; to reduce to silence in action or submission; to overcome; to crush.
Overpoweringly, *adv.* With superior force.
Overpraising, *n.* The bestowal of too great praise or commendation.
Overpress, *v. a.* To bear upon with irresistible force; to crush. — To overcome by entreaty; to press or persuade too much.
Overprize, *v. a.* To value at too high a price.
Overprompt, *a.* Prompt to excess.
Overproportion, *v. a.* To make of too great proportion.
Overprovident, *a.* Excessively provident.
Overprovoke, *v. a.* To provoke to too great a degree.
Overquake, *v. a.* To quell or subdue; to subject.
Overrake, *v. a.* (*Naut.*) To break in upon, as waves upon a vessel's bows, when she is at anchor with her head to the sea.
Overran, *imp.* of **OVERRUN**, *q. v.*
Overrate, *v. a.* To estimate at a value or amount beyond the worth.
Overreach, *v. a.* To rise above; to extend or stretch beyond. — To deceive by artifice; to cheat.
Overreach'ing, *n.* A reaching too far. — Act of deceiving.
Overrule, *v. a.* To influence or control by predominant power; to subject to superior authority. — To gov-

ern with high authority. — To disallow; to supersede or reject; as, in law, to *overrule* a plea, is to reject it as incompetent.
Overruling, *a.* Exerting superior and controlling power.
Overrun, *v. a.* To grow over; to cover all over. — To march or rove over; to harass by hostile incursions; to ravage. — To outrun; to run faster than another and leave him behind. — To overspread with numbers. — To injure by treading down.
(Printing.) To run beyond a certain length by reason of insertions; to change in position, as types, by transferring them from a line, column, or page to another.
—v. n. To overflow; to run over.
Overrunning, *a.* Spreading over; ravaging.
Over-sea, *a.* Transmarine; foreign; from beyond the sea.
Oversee, *v. a.* To overlook; to superintend; to inspect; implying care.
Overseer, *n.* One who oversees or overlooks; a superintendent; a supervisor; an inspector.
Overset, *v. a.* To turn from the proper position or base; to turn upon the side, or to turn bottom upward; to upset. — To subvert; to overthrow; to throw off the proper foundation.
—v. n. To turn or be turned over; to turn or fall off the base or bottom.
Overshade, *v. a.* To cover with shade; to overcloud; to overshadow.
Overshadow, *v. a.* To throw a shadow over. — To overshadow; to shelter; to protect; to cover with protecting influence.
Overshoot, *v. a.* To shoot, cast, or throw beyond the mark. — To pass swiftly over. — (With the reciprocal pronoun), to hurry, go, or pass beyond, as the mark; to venture too far; to assert too much.
—v. n. To fly beyond the mark.
Overshot-wheel, *n.* (*Mech.*) A water-wheel to which the water is conveyed over the top of the wheel and applied above the axle. In his case the water acts merely by its weight, and not by the impulse of the stream.
Over-sight, *n.* Superintendence; watchful care.
—An overlooking, or failing to notice; a mistake; error; omission; inadvertence; neglect.
Over-size, *v. a.* To surpass in size. — To smear or daub over, as with size or other glutinous substance.
Over-slaugh, (*-slaw*), *v. a.* (*Mil.*) To pass over; to omit.
Over-sleep, *v. a.* To sleep too long; — used with the reflective pronoun.
Over-slide, *v. n.* To glide or slip by.
Over-slip, *v. a.* To let slip by; to neglect.
Over-sold, *imp.* and *pp.* from **OVERSELL**, *q. v.*
Over-soon, *adv.* Too soon.
Over-span, *v. a.* To extend over.
Over-speak, *v. a.* To say too much; — used with the reflective pronoun.
Over-spent, *p. a.* Having all the strength gone; wearied; exhausted; forspent.
Over-spin, *v. a.* To draw out to an excess.
Over-spread, *v. a.* To spread over; to cover over; to scatter over.
—v. n. To be spread or scattered over.
Over-spring, *v. a.* To spring or leap over.
Over-stare, *v. n.* To stare wildly.
Over-state, *v. a.* To state too high or in too strong terms; to exaggerate in statement.
Overstate'ment, *n.* Exaggeration; too exaggerated statement.
Over-stay, *v. a.* To remain over; as, to *overstay* the time.
Over-step, *v. a.* To step over or beyond; to exceed.
Over-stink, *v. a.* To surpass in stench.
Over-stock, *v. a.* To fill too full; to crowd; to supply with more than is wanted.
—n. A superabundance.
Over-store, *v. a.* To store with too much.
Over-strain, *v. n.* To make exertion, or to labor to excess; to make violent efforts.
—v. a. To strain or stretch too much or too far; to stretch or deflect beyond the proper limits.
Over-strain'ing, *n.* The overdoing or overstraining of anything.
Over-stretch, *v. a.* To stretch excessively.
Over-strew, *v. a.* To spread or scatter over.
Over-strict, *a.* Needlessly strict; excessively strict.
Over-stride, *v. a.* To stride over or across.
Over-strong, *a.* Too strong.
Over-studiousness, *n.* Too much application to study; excessive studiousness.
Over-subtle, (*-sul'tl*), *a.* Too subtle.
Over-superstitions, *a.* Too superstitious; carried away by superstition.
Over-sure, *a.* Too certain; too confident.
Over-sway, *v. a.* To overrule; to bear down.
Over-swell, *v. a.* To rise above.
Over-swift, *a.* Too quick; too swift.
Over-t, *a.* [*Fr.* *ouvert*, from *ouvrir*; *Lat.* *aperire*, to open, from *ad*, and *pario*, to produce.] Open; public; manifest.
Over-take, *v. a.* To come up with in a course, pursue, progress, or motion; to catch; — To take by surprise.
Over-task, *v. a.* To impose too heavy a task or injunction on.
Over-tax, *v. a.* To tax too heavily.
Over-tedious, *a.* Very tedious.
Over-tempt, *v. a.* To tempt too much.
Over-terrible, *a.* Too terrible or frightful.
Over-throw, *v. a.* To turn upside-down; to overturn; to throw down. — To demolish; to ruin; to destroy. — To defeat; to vanquish; to conquer.

—n. The state of being overthrown; ruin; destruction. — Defeat; discomfiture; rout. — Degradation; downfall.
Overthrow'er, *n.* One who overthrows.
Overthrow'ing, *n.* Overthrow; ruin; defeat.
Overthwart, *a.* Opposite; being over against. — Crossing anything perpendicularly. — Perverse; adverse; cross; contrary.
—prep. Across; athwart. (*R.*)
Overthwart'ness, *n.* Posture across. — Pervicacity; perverseness.
Over-tilt, *v. a.* To overturn or upset.
Over-tire, *v. a.* To overcome with fatigue.
Over-tiring, *n.* Weariness; fatigue.
Over-titled, *v. a.* To bestow too high a title on.
Over-tly, *adv.* Publicly; openly; in an overt manner.
Over-toil, *v. a.* To over-work.
Over-ton, in *Pennsylvania*, a post-township of Bradford co. *Pop.* (1897) 825.
Over-ton, in *Tennessee*, a N. by E. co., adjoining Kentucky; *area*, about 360 sq. m. *Rivers*, Cumberland and Obie's rivers, besides many smaller streams. *Surface*, mountainous; *soil*, generally fertile. *Min.* Iron and coal in abundance. *Cap.* Livingston. *Pop.* (1897) 12,560.
Over-top, *v. a.* To rise above; to raise the head above. — To excel; to surpass.
Over-tower, *v. n.* To tower too high; to rise or fly too high.
Over-trade, *v. n.* To trade to excess, or beyond capital, or to purchase goods beyond the means of payment, or beyond the wants of the community.
Over-trad'er, *n.* One who overtrades.
Over-trad'ing, *n.* Excessive traffic, or trading beyond one's capital.
Over-tread, *v. a.* To tread, or walk over.
Over-trip, *v. a.* To trip over; to walk lightly over.
Over-trust, *v. a.* To confide too much in; to trust too much.
Over-tumble, *v. a.* To turn or tumble over.
Over-ture, *n.* [*Fr.* *ouverture*, from *ouvrir*, from *Lat.* *aperire*, to open.] A disclosure; a discovery. — A proposal; declaration; something offered for consideration. — An opening. (*R.*)
(Mus.) An introductory symphony to an opera or oratorio, or a kind of musical prologue in keeping with the piece which it ushers in. This species of composition is said to have been originated in France, where it was afterwards perfected by Lully. Modern overtures are formed upon the subject of the opera, and generally contain snatches from the leading airs. As splendid examples of this species of composition, we may mention Mozart's overtures to *Figaro* and *Don Giovanni*, Weber's overture to *Der Freischütz*, and Rossini's overture to *Guillaume Tell*.
Over-turn, *v. a.* To turn or throw from a base or foundation; to throw down. — To subvert; to ruin; to destroy. — To overpower; to conquer.
—n. State of being overturned or subverted; overthrow.
Overturn'able, *a.* Capable of being overturned.
Overturn'er, *n.* One who overturns; subverter.
Overturn'ing, *n.* Subversion.
Over-valuation, *n.* Over-estimate of value or price.
Over-val'ne, *v. a.* To value too highly; to rate at too high a price.
Over-val'uing, *n.* Over-valuation.
Over-veil, (*-vāl'*) *v. a.* To cover; to obscure.
Over-vote, *v. a.* To conquer by plurality of votes.
Over-walk, *v. a.* To walk over or upon.
Over-wan'ton, *a.* Excessively wanton.
Over-war'y, *a.* Too cautious or circumspect.
Over-wash, *v. a.* To run over; to overflow.
Over-wasted, *a.* Very much wasted.
Over-watch, *v. a.* To subdue with long want of rest.
Over-watched, *a.* Tired with too much watching.
Over-weak, *a.* Too weak; too feeble.
Over-wear, *v. a.* To wear too much.
Over-weary, *v. a.* To subdue with fatigue.
Over-weather, *v. a.* To batter by violence of the weather.
Over-ween, *v. n.* To think arrogantly or conceitedly; to reach beyond the truth in thought; to think too favorably.
Over-ween'er, *n.* A conceited person.
Over-ween'ing, *a.* Thinking too highly, or conceitedly; conceited; vain.
Over-ween'ingly, *adv.* Conceitedly; with too much arrogance.
Over-weigh, *v. a.* To exceed in weight; to cause to preponderate; to outweigh; to overbalance.
—n. Excess of weight; greater weight; preponderance.
Overwhelm, *v. a.* To overwhelm, cover, or spread over; to overspread or crush beneath something violent and weighty, that covers or encompasses the whole; to immerge; to submerge; to sink; to immerse and bear down; to overpower; to overcome; to subdue.
Overwhelm'ing, *p. a.* Crushing with weight or numbers.
Overwhelm'ingly, *adv.* In a manner to overwhelm.
Over-wise, *a.* Wise to affectation.
Over-wit, *n.* To overreach in wit, cunning, and craftiness.
Over-wood'y, *a.* That is too much abounding in wood.
Over-work, *n.* Excessive work or labor.
—v. a. To work to excess, or beyond the strength of; to cause to labor too much; to tire.
Over-worn, *a.* Worn to excess; worn out; subdued by toil.
Over-wrestle, (*-rēs'tl*) *v. a.* To subdue by wrestling.
Over-wrought, *p. a.* Wrought or labored to excess; worked all over.
Over-y'sel, a province of the Netherlands, having N. Friesland and Drenthe, E. Hanover and Westphalia, &

Gelderland, and **W. the Zuyder-Zee**. *Area*, 1,293 sq. miles. The surface is level, with large tracts of marshy ground, but the soil is fertile along the banks of the rivers. *Rivers*, Yssel, Zwart, Water, Vechte, Schiepbek, and the Linde. *Prod.* Rye, buckwheat, hemp, and fruits. Large numbers of cattle are raised. *Manuf.* Linen and cotton fabrics, carpets, leather, wicker-ware, mats, and hardware. Ship-building is also carried on. *Chief towns*. Deventer (the cap.), Zwolle, and Kampen. *Pop.* 256,449.

O'vibos, *n.* [Lat. *ovis*, a sheep, and *bos*, an ox.] (*Zoöl.*) The Musk-ox, *q. v.*

Ovicular, *a.* Pertaining to an egg.

Ovid, **PUBLIUS OVIDIUS NASO**, a celebrated Roman poet of the Augustan age, was of the equestrian order, and B. at Sulmo, B. C. 43. He studied the law, and is said to have pleaded with eloquence in the court of the centumviri; he was also constituted one of the triumviri, whose authority extended to the trial of capital causes; but his decided predilection for polite literature, and particularly poetry, led him to neglect severer studies, and on succeeding to the paternal estate, he quitted the bar for poetry and pleasure. Horace and Propertius were his friends, and Augustus was a liberal patron to him; but he at length fell under the displeasure of the Emperor, who, for some cause never explained, banished him from Rome, and sent him to live among the Getae, or Goths, on the Euxine. It is probable that the political intrigues of the Empress Livia and her son Tiberius contributed to the removal of the poet; while the licentiousness of his writings, and the irregularities of his life, afforded plausible pretenses for the infliction of this punishment. His chief works are the *Amores*, *De Arte Amandi*, the *Fasti*, and *Metamorphoses*. He in vain solicited his recall to Rome, and D. at Tomi, A. D. 18. Ovid was born a poet—he “lisp’d in numbers, for the numbers came;” and that he possessed high poetical genius is unquestionable. His judgment and taste, however, are sometimes at fault, and the vigorous fancy and warmth of coloring displayed in some parts of his works are necessary to counterbalance the false taste and frigid conceit which present themselves in others. At the same time, it must be granted that no poet, either ancient or modern, has expressed beautiful thoughts in more appropriate language.

Ovid, in *Michigan*, a township of Branch county.—A post-village and township of Clinton county, about 69 miles E. of Grand Rapids.

Ovid, in *New York*, a post-village and township, cap. of Seneca co., on an isthmus between Seneca and Cayuga Lakes, abt. 190 m. W. of Albany. The Willard Insane Asylum is located at Willard, 2 m. distant.

Oviduct, *n.* [Lat. *ovum*, an egg, and *ductus*, a leading or conducting, a duct. See *EGG* and *DUCT*.] (*Anat.*) A duct or passage for the egg in animals, from the ovary to the womb, or to an external outlet. In mammals, this duct is termed the **FALLOPIAN TUBE**, *q. v.*

Oviedo, (*o-ve-ai'-do*), an anc. city of Spain, prov. of Oviedo, at the junction of the rivers Ovía and Nora, 60 m. N.W. of Leon. *Manuf.* Arms, leather, hats, horn, combs, and metal buttons.

Oviedo y Valdez, **GONZALO FERNANDEZ**, (*o-ve-ai'-do e val'-duith*), a Spanish historian, B. 1478, author of a *General History of the Indies*, a book of immense learning, though denounced by Las Casas as little better than fabulous. D. abt. 1558.

Oviform, *a.* [Lat. *ovum*, and *forma*, form.] Having the form or figure of an egg.

Ovigerous, **Oviferous**, *a.* [Lat. *ovum*, and *gero*, to bear.] Bearing or containing eggs.

Ovine, *a.* [Fr., from Lat. *ovinus*; *ovis*, a sheep.] Pertaining to sheep.

Oviparous, *a.* (*Zoöl.*) A term applied to the mode of generation by the exclusion of the germ in the form and condition of an egg, the development of which takes place out of the body, either with or without incubation. Fishes, reptiles, and birds are called **Oviparous** Vertebrates, although some of both the former classes hatch the egg within the body and bring forth their young alive, as the viper and dog-fish.

Ovipositor, *v. a.* To deposit, as eggs.

Oviposition, *n.* (*Zoöl.*) The act of excluding eggs from the abdomen.

Ovipositor, *n.* [Lat. *ovum*, and *pono*, *positus*, to place.] (*Zoöl.*) The instrument by which an insect conducts its eggs to their appropriate nidus, and often bores a way to it; the same instrument is, in some genera, used as a weapon of offence, when it is called the *aculeus*.

Ovis, *n.* [Lat., a sheep.] (*Zoöl.*) See **SHEEP**.

Visac, *n.* [Lat. *ovum*, and *saccus*, a sac.] (*Anat.*) The cavity in the ovary which numerically contains the ovum.

Ovoid, **Ovoidal**, *a.* [Lat. *ovum*, and Gr. *eidōs*, form.] (*Bot.*) Ovale or oval in a solid form.

Ovolo, *n.* (*Arch.*) A moulding (see **COLUMN**), the profile of which is the quadrant of a circle. In Grecian architecture there is a deviation from this precise form; it is most apparent at the upper portion, where it resembles the form of an egg, whence this moulding derives its name. In fact, a Grecian ovolo is a portion of a cycloid.

Ovology, *n.* [Lat. *ovum*, and Gr. *logos*, discourse.] A treatise on eggs; oölogy.

Ovos, (*Ilha Dos*), (*ee'-ya-doe o'-voce*), an island of Brazil, at the entrance of the Bay of Cuma.

Ovoviparous, *a.* (*Zoöl.*) Bringing forth a living fetus, more or less extricated from the egg-coverings, which has been developed within the body of the parent, without any vascular or placental adhesion between the ovum and the womb.

O'vulatory, *a.* Belonging to ovules.

Ovulation, *n.* (*Physiol.*) The formation of ova in the ovary, and their discharge.—*Dunlison*.

Ovule, *n.* [Fr., from Lat. *ovulum*, a small egg.] (*Bot.*) The young or immediate seed of a plant.

Ovulite, *n.* [Lat. *ovum*, and Gr. *lithos*, a stone.] (*Pal.*) A fossil egg.

Ovulum, *n.* [See **OVULE**.] (*Bot.*) An ovule.

(*Physiol.*) The ovum of the mammalia, so called on account of its relatively minute size.

Ovum, *n.*; *pl.* **OVA**. [Lat., an egg.] (*Anat.*) The body formed by the female in which, after impregnation, the development of the fetus takes place. It is generally formed in a definite part, called the *ovarium*; but in some of the simplest animals, as the Polypes, the common cellular parenchyma of the body seems to have the unlimited faculty of producing the ova. The essential and apparently first-formed part of an ovum is a minute pellucid cell, called the *germinal vesicle*, which is characterized by an opaque speck or nucleus, called the *germinal spot*. The vesicle is immediately surrounded by a stratum of granules or nucleated cells, which form the *germinal disc*. These parts float in a greater or less quantity of fluid and graules, called the *yolk*, which is generally of some well-marked color, as yellow, green, violet, red, owing to the presence of a minutely diffused oil. The yolk is enclosed in a thin, delicate, structureless coat, called the *vitelline membrane*, and this is finally surrounded by an outer tunic called the *chorion*. Between the chorion and vitelline membrane there is commonly a greater or less quantity of albumen. In the birds, this fluid, which is called the *white* and the *yolk*, is in great quantity; the chorion is laminated, and the outer layer is combined with earthy salts to give due firmness, and preserve the shape of the egg while subject to the weight of the parent during incubation. Two twisted strings of firm albumen, called *chalazæ*, are continued from each end of the yolk, a little below the poles, and serve to steady and keep uppermost the *cicatricula* or *tread*, formed by the impregnated germinal vesicle or disc. A space intercepted between two of the layers of the chorion, or *membrana putaminis*, at the great end of the egg, contains a small quantity of gas, containing more oxygen than atmospheric air; this space is called the *vesica aërea*.

Owasco, in *New York*, a lake of Cayuga co., abt. 160 m. W. by N. of Albany; *area*, abt. 8 sq. m. It communicates with Seneca River through Owasco Creek.—A post-village and township of Cayuga co., abt. 160 m. W. by N. of Albany.

Owatona, in *Minnesota*, a city and township, cap. of Steele co., on the Chic., Milw. & St. Paul and the Chic. & Northwestern R.R.s.; has manuf. of farming implements, &c., and a fine trade with the rich agricultural region surrounding. Near here is a valuable mineral spring. *Pop.* (1897) 5,040.

Owe, *v. a.* [A. S. *agan*, pp. *āhte*; Ger. *eigen*; Gr. *echein*, to have, to hold.] To be under obligation or bound to pay; to be indebted.—To be obliged for; to be obliged to ascribe.

“That he may to me owe all his deliverance.”—*Milton*.

—*v. n.* To be due to; to be the result or effect of.

“O deem thy fall not owed to man's decree.”—*Pope*.

Owego, in *Illinois*, a township of Livingston co.

Owego, in *New York*, a handsome town, cap. of Tioga co., on the Susquehanna river, and the Erie, Del., Lack. & W., and Lehigh Valley R.R.s., 37 m. E. of Elmira; has large manuf. and considerable trade. *Pop.* (1897) 5,200.

Owely, **Ovelty**, **Ovealty**, *n.* (*Law*.) Equality; as, *owely* of partition.

Owen, (*o'en*), **RICHARD F.R.S.**, a celebrated English comparative anatomist, B. 1804. After matriculating at Edinburgh University, in 1824, he became a member of the Royal College of Surgeons of London in 1826, and was appointed Hunterian Professor and Conservator of the Museum of the College in 1835, having for some years previous been engaged in preparing the *Descriptive and Illustrated Catalogue of the Specimens of Physiology and Comparative Anatomy*; the *Catalogue of the Natural History*, that of the *Osteology*, and that of the *Fossil Organic Remains*, preserved in the Museum. He took an active share in the work of the commission of Inquiry into the Health of Towns, and also a conspicuous part in the organization of the “Great Exhibition of all Nations,” at London, in 1851, serving as president of one of the juries, and, at the request of the government, went to Paris, where he was president of the jury of the same class of objects in the “Universal Exposition of 1855,” and received the Cross of the Legion of Honor. In the same year he brought out, in Paris, his *Principles of Comparative Osteology*, published in French. Discerning in a fragment of fossil bone from New Zealand, submitted to him in 1839, evidence of a bird more gigantic than the ostrich, Professor O. published an account of it; transmitted copies to New Zealand, and obtained evidence in confirmation and extension of his idea, which occupies many successive parts of the “Transactions of the Zoölogical Society.” In that for 1855, he propounds his theory of the extinction of species, on the principle of the “contest of existence,” through the operation of extraneous influences. The genera of birds thus lost by natural rejection are *Diornis*, *Aptornis*, *Notornis*, *Chemornis*, &c. Concluding in the work *On the Nature of Limbs*, his researches on the unity of plan of animal organization, the author is led to regard species as due to secondary cause or law, continuously operating and producing them successively, but in a way unknown to him. Prof. O. produced, besides other works, *Memoir on the Pearly Nautilus* (1832); *Odontography* (1840); *Lectures on the Compara-*

tive Anatomy of the Invertebrate Animals, and *History of British Fossils, Mammals, and Birds* (1846); *On the Archetype and Homologies of the Vertebrate Skeleton* (1848); *On the Nature of Limbs*, and *On Parthenogenesis, or the Successive Production of Procreative Individuals from a Single Ovum* (1849); *History of British Fossil Reptiles* (1849–51); *On Paleontology*, and *On the Megatherium* (1860); *On the Aye-Aye* (Chiroruy) (1863); *On the Gorilla* (1865); *On the Dodo*, and *On the Anatomy of Vertebrates* (1866); and articles on *Zoölogy*, *Comparative Anatomy and Physiology*, in *Brande's Dictionary of Science*, &c., in which the article *Species* contains the professor's latest views of their nature and origin. Prof. O., who communicated numerous papers to the transactions of the Royal Linnean, Geological, Zoölogical, Cambridge Philosophical, Medico-Chirurgical, and Microscopical Societies, and contributed some elaborate reports, published in the *Transactions of the British Association for the Advancement of Science*, was one of the founders and first president of the Microscopical Society, a fellow or associate of nearly all the learned societies or scientific academies of Europe and America, a chevalier of the Prussian Order of Merit, and one of the eight foreign associates of the French Institute. In 1877, Prof. O. brought out, at his own cost, a magnificently illustrated work *On the Fossil Mammals of Australia*, 2 vols., 450 pp., with 132 plates. His very useful work *On the Extinct Wingless Birds of New Zealand* appeared in 1879. Died Dec. 18, 1892.

Owen, **ROBERT**, a modern English philanthropist, and the founder of the political system called “Socialism,” was B. in 1771. He rose to affluence as proprietor of Charlton Cotton Mills, near Manchester, and afterwards as co-proprietor, along with his wife's father, of the “New Lanark Twist Company's” works near Glasgow. There he presided over 4,000 operatives with a high benevolence, building new schools and dwellings, and evincing a patriarchal care for the welfare of all connected with him. From 1810 to 1815, he published his *New View of Society, or Essays on the Formation of the Human Character*. In 1823 he went to the U. S., where he purchased a large tract of land in Indiana, and founded a community called by him “New Harmony.” This proving a failure, O. returned to England in 1827, and attempted similar social establishments in that country, but without success. D. 1858.—**ROBERT DALE OWEN**, eldest son of the preceding, B. in 1804, accompanied his father to the U. States, and remained there, becoming a prominent citizen, and representing Indiana for some years in Congress. Associated with Fanuy Wright (1830), a gifted English woman, he edited the *New Harmony Gazette*. He was a warm advocate of the rights of women, and a leading Spiritualist. He was the author of *Footfalls on the Boundary of Another World* (1859); *The Wrongs of Slavery* (1864); *Debatable Land* (1872); greatly esteemed. D. June 24, 1877.—**DAVID DALE OWEN**, an American geologist, brother of the preceding, B. 1807, and educated in Switzerland, became a citizen of the United States in 1833 and achieved distinction as the conductor of the geological surveys of the States of Indiana, Iowa, Wisconsin, Minnesota, Kentucky, and Arkansas. D. at New Harmony, Ind., 1860.

Owen, in *Illinois*, a township of Winnebago county.

Owen, in *Indiana*, a S.W. central co.; *area*, about 390 sq. m. *Rivers*. West Fork of White river, and several less important streams. *Surface*, level, or generally undulating; soil, generally fertile. *Min.* Iron and coal. *Cap.* Spencer. *Pop.* (1890) 15,040.

—A township of Clarke co.

—A township of Clinton co.

—A township of Jackson co.

—A township of Warrick co.

Owen, in *Iowa*, a township of Cerro Gordo co.

Owen, in *Kentucky*, a N. co.; *area*, about 312 sq. m. *Rivers*. Kentucky river, Eagle creek, and many smaller streams. *Surface*, undulating; soil, fertile. *Cap.* Owenton. *Pop.* (1890) 17,676.

Owenborough, in *Kentucky*, a city, cap. of Daviess co., on the Ohio river, about 155 m. below Louisville. *Pop.* (1897) 10,350.

Owenite, *n.* [After David Dale Owen, an American geologist.] (*Min.*) A silicate of iron and lime.

Owensburg, in *Indiana*, a post-village of Greene co., about 15 m. E. S. E. of Bloomfield.

Owen's Lake, in *California*, a sheet of water in Inyo co. It covers an area of about 80 sq. m., and receives Owen's river from the N.

Owen's River, in *California*, rises on the E. slope of the Sierra Nevada, in Mono co., and flows S. into Owen's lake, in Inyo co.

Owensville, in *Indiana*, a post-town of Gibson co., about 9 m. S.W. of Preston.

Owensville, in *Missouri*, a post-village of Gasconade co., about 28 m. S. of Hermann.

Owensville, in *New York*, a village of Westchester co., about 112 m. S. of Albany.

Owensville, in *Texas*, a post-village, former cap. of Robertson co., about 100 m. N. E. of Austin.

Owenton, in *Kentucky*, a post-village, cap. of Owen co., abt. 28 m. N. of Frankfort.

Owenville, in *N. Carolina*, a post-village of Sampson co., abt. 84 m. S.S.E. of Raleigh.

Owhyhee, or **Hawaii**, (*o-wi'-he'*) an island in the N. Pacific Ocean, the most E., and by much the largest, of the Sandwich Islands. It is of a triangular shape. *Area*, estimated at 4,100 sq. m. *Desc.* Mountainous and volcanic. It has several lofty peaks, among which is Mauna Roa, an active volcano, which has an elevation of 13,120 feet above the level of the sea. In some part

there are volcanic appearances, the ground being everywhere covered with cinders, and intersected in many places with black streaks, which seem to mark the course of a lava-stream that has flowed not many ages back from the mountains to the shore. *Prod.* Sugar-cane, bread-fruit, sandal-wood, and numerous tropical productions. *Pop.* Estimated at from 80,000 to 100,000. Lat. of S. point $19^{\circ} 32' N.$, Lon. $154^{\circ} 54' W.$ It was on this island that the celebrated Captain Cook fell a sacrifice to a misunderstanding, or sudden impulse of revenge on the part of the natives, on Sunday, the 14th of February, 1779. It was afterward frequently visited by different navigators. See HAWAII.

Ow'ing, *p. a.* [Used for *owen* or *owed*.] Due; that moral obligation requires to be paid; as, money *owing* to a person for goods. — Consequential; ascribable, as a cause; as, his misfortunes are all *owing* to his own folly. — Imputable as an agent; as, to estimate how much is *owing* to nature, how much to art.

Ow'ing's Mills, in Maryland, a post-village of Baltimore co., abt. 17 m. N. of Baltimore.

Ow'ingsville, in Kentucky, a post-village, capital of Bath co., abt. 45 m. E. by N. of Lexington.

Owl, *n.* [A. S. *ule*; Ger. *eule*; Lat. *ulula*.] Formed from the cry of the bird. (Zool.) One of the fam. *Strigidae*, ord. *Raptiores*, including all the nocturnal birds of prey. The owls fill during the night the same offices which are performed by the bolder hunting-falcons in the open day; and they serve to keep in check the increase of mice and other small mammalia which come out at night. For this purpose, the various organs of the owls are beautifully adapted. The vision is acute, although not suited to the light of noon. Their ears are contrived to catch sound in the broadest way, and also possess a delicate perception; while their plumage is of the softest texture, falling lightly on the air, so as not to cause any obstruction; and the wings are constructed for light, buoyant, and noiseless flight. In addition to these advantages in the pursuit of their prey, another is found nearly as essential, and without which the others would be useless. The color of the plumage exhibits a union of tints best suited for concealment; for a dusky and harmonious arrangement of colors renders the owls in-

Fig. 2015. — BARN-OWL. (*Strix flamma*.)

visible in the gloomy twilight or gray darkness of night. The tarsi and beak, although not showing any great strength, are finely formed for grasping; for, as in the *Scansores*, the external toe is versatile. The foot can thus be used either in scrambling in the interior of some rent or chimney, or in the hollow of a tree, while it also becomes more complete as an organ of prehension. In their habits, owls may generally be termed arboreal, the dark recesses of the forest or wooded rocks affording cover from the too strong light of the day. From these retreats, they sally out at nightfall on predatory excursions, seldom returning without something for their nest. Their eggs are of a roundish form, and are always nearly pure white in color. The geographical distribution of these birds is very extensive. The common White, Barn, or Screech-owl (Fig. 2015), which may be taken as a type of the family, is common on the North American continent. The Long-eared owl is identical both in this country and in Africa. The Short-eared owl is not uncommon in the United States; and it is also common to Asia, several specimens having been obtained from China. The Tawny owl inhabits N. Europe and America, reaching nearly to the polar latitude. The genus *Bubo* (q. v.) includes the largest species known as Great-horned, Cat, or Eagle owls. The other most important species are described under their proper names.

—*v. a.* (imp. and pp. OWLEN.) To prowl; to go prying about. (Used as an English provincialism.) — Hence, by implication, to carry on a contraband or illegal traffic; — so called from its being performed chiefly in the night. (Used in England.)

Owl'er, *n.* One who carries or passes contraband goods.

Owl'et, *n.* [Dimin. of *owl*.] An owl; or, specifically, a little owl.

Owl'et-moth, *n.* (Zool.) A name common to many species of lepidopterous insects of the family *Noctuidæ*, (q. v.)

Owl-light, *n.* Glimmering, or dim, imperfect light.

Owl Pra'rie, in Indiana, a post-village of Daviess co., abt. 16 m. N. of Washington.

Owl's Head, in Maine, a promontory and light-house on the W. side of the entrance of Penobscot Bay. It exhibits a fixed light 147 feet above sea-level; Lat. $44^{\circ} N.$, Lon. $68^{\circ} 58' W.$

Ow'n, (on,) *a.* [A. S. *agen*, pp. of *agan*. See OWE.] Belonging to; possessed exclusively by; peculiar; — usually following a possessive pronoun, as *my*, *our*, *thy*, *his*, *her*, *it*, *their*, in order to express an emphatic idea of ownership, or of sole ownership to the exclusion of others; as, *my own* work, — that is, work performed by myself only, and not by any other.

"Every subject's soul is his own." — *Shaks.*

—*v. a.* (imp. and pp. OWNED.) To possess; to have the legal or rightful title to; to have the exclusive right of possession and use of; as, to *own* an estate. — To acknowledge to belong to; to avow or admit that some certain thing, as property, belongs to; as, he *owned* him for his son. — To avow; to acknowledge; to confess, as a fault, crime, or other act; to admit to be true; not to deny; as, I *own* I am in the wrong.

Ow'n'er, *n.* One who owns; the rightful possessor or proprietor; one who has the legal rightful title, whether he be in possession or not.

Ow'n'ership, *n.* Exclusive right of possession; proprietorship; legal or just claim or title; state of being an owner.

Owse, **Ow'ser**, *n.* Same as OOSE, q. v.

Ow's'ey, in Kentucky, an E. central co.; area, abt. 176 sq. m. Rivers. Kentucky river and its three forks, besides several less important streams. Surface, mountainous; soil, not very fertile. Min. Iron and coal in great quantities. Cap. Booneville. Pop. (1890) 5,975.

Ow'y'hee, in Idaho, an extreme Southwestern co., adjoining Nevada on the S., and Oregon on the W.; area, about 7,800 sq. m. Rivers. Lewis Fork of Columbia river, and its numerous tributaries. Surface, mountainous; soil, in some parts fertile. Min. Gold and silver. Cap. Silver City. Pop. (1897) 3,456.

Ow'y'hee River, in Oregon, rises on the W. slope of the Blue Mountains, and flowing W. enters the S. branch of Lewis River.

Ox, *n. pl.* [A. S. *oxa*; Du. *os*; Ger. *ochs*; perhaps from Gr. *auxo*, I increase, the prosperity of individuals in early times being estimated by the amount of cattle they possessed.] (Zool.) The common name of the gen. *Bos*, including ruminant animals of the family *Bovideæ*, characterized by horns rounded, muzzle broad, usually naked, and without a vertical furrow at the end. In common parlance the male is called *Bull*, and the name *Ox* is restricted to the castrated male, the female being called *Cow*, and the young *Calf*. The early domesticity of the ox is attested by the mention made of it in the writings of Moses, and by the worship of it in Egypt, which the Israelites imitated in making the golden calf at Mount Sinai. The ancient accounts of the wild ox describe it to have been an animal of enormous size and great fierceness, and the fossil remains of oxen which are found in this and other countries certainly seem to prove that the oxen of ancient times possessed these characteristics. The modern breeds of oxen pre-eminently noticeable in Great Britain are remarkable for their numerous varieties, caused by the almost endless crossing of one breed with another; the principal varieties, however, are the *North Devon*, distinguished for the activity of its movements, its docility, and powers of labor. (See DEVONSHIRE.) The *Hereford*, which are larger than the Devon and fatten to a much greater weight. The *Sussex*, which has all the activity of the Devon and the strength of the Hereford, with the propensity to fatten, and the fine-grained flesh of both. The *Welsh*, which are stunted in their growth, from the poverty of their pastures; but which thrive where others starve, and which rapidly outstrip most others when they have plenty of good pasture. The Alderney cow, (Fig. 2016,) with her crumpled horn. The Scotch, of which there are many varieties; the principal being the West Highlanders, or Kyloes, as they are called; the Argyleshire breed; the cattle of the Shetland Islands, which are dwarfish, ill-shaped, and covered with hair. Fifeshire possesses a breed peculiar to itself, of a very superior description; and the Galloway polled cattle are a fine and valuable breed, from which is descended the celebrated dun cow of Suffolk. Of Irish cattle there are two breeds, — the middle-horns and the long-horns, (Fig. 2017,) the former being the original breed, tenanted the forests and more mountainous districts; while the latter are descended from an old Lancashire or Yorkshire breed. All these varieties have been imported into this country, and more or less successfully acclimated. There is also now in the U. States a class of native cattle, arising from a mixture of various breeds imported by the early settlers, varying in different districts with the

Fig. 2016. — ALDERNEY COW.

Fig. 2017. — LONG-HORNED BULL.

richness of soil, salubrity of climate, and care of breeders. Almost every part of the ox is of use to mankind. Boxes, combs, knife-handles, and drinking-vessels are made of the horns; glue is made of the cartilages, gristles, and the finer pieces of cuttings and parings of the hides. The skin of the young ox is made into vellum; the hair is valuable in various manufactures, and the suet, tat, and tallow, for candles. The value of its flesh as food needs scarcely be mentioned.

Ox'ac'id, *n.* (Chem.) An acid containing oxygen.

Ox'al'amide, *n.* (Chem.) Same as OXAMIDE, q. v.

Ox'alate, *n.* (Chem.) A salt of oxalic acid.

Ox'al'ic Acid, *n.* (Chem.) A very powerful organic acid, existing ready formed in the leaves of the wood-sorrel, in the leaf-stalks of the common garden-rhubarb, and in many other plants having an acid taste. It is also found in combination with lime, in crystals, in the juices of many vegetables. It is prepared artificially by oxidizing starch or sugar by nitric acid, or by acting on sawdust with a mixture of the hydrates of potash and soda. It crystallizes in fine transparent four-sided prisms, and dissolves in nine parts of cold water. Its solution has an intensely sour taste, and acts as a violent poison, occasioning death in a few hours. Its best antidote is the administration of chalk or magnesia suspended in water, with which it forms an inert and insoluble oxalate. It greatly resembles Epsom salts in appearance, and has been frequently administered for that popular purgative with fatal consequences. It is used in calico-printing as a resist, in the form of binoxalate of potash, and occasionally as a resist in combination with alumina. It is a bibasic acid, and forms acid and neutral salts with the bases, most of which are insoluble. Heated strongly, it splits up into carbonic acid and carbonic oxide, and is much used in the laboratory as a source of the last-mentioned gas. Form. $H_2C_2O_4$.

Ox'alid'ac'ea, *n.* (Bot.) The Oxalid or Wood-sorrel family, an order of plants, alliance *Geraniales*. DIAG. Symmetrical flowers, distinct styles, carpels longer than the torus, and seeds with abundant albumen. — They are herbs, under-shrubs, or trees, generally distributed throughout both the hot and the temperate regions of the globe; the shrubby species, however, are almost confined to the tropics. They are chiefly remarkable for their acid juice, containing binoxalate of potash. The order contains 6 genera and 325 species.

Ox'al'is, *n.* [Gr. *oxys*, sour; from the acid taste of most species.] (Bot.) The typical genus of the order *Oxalidaceæ*. They are mostly perennial plants with trifoliate leaves. *O. acetosella*, the Common Wood-sorrel, is a well-known species. It has ternate leaves, and is considered by many to be the true Shamrock of the Irish, as its leaves open about St. Patrick's day. When infused in milk or water, it forms a pleasant refrigerant drink in fever. The leaves taken as salad, are antiscorbutic. The species *O. crenata*, called the Arracacha, and several others, have edible tubers, which are used as substitutes for potatoes in some districts. *O. anthelmintica*, the Mitchamitcho of Abyssinia, has very acrid tubers, which are employed for their anthelmintic properties.

Ox'al'ite, *n.* (Min.) A native yellow oxalate of iron; humboldtine.

Ox'al'yle, *n.* (Chem.) The hypothetical radicle of oxalic acid. Form. C_2O_2 .

Ox'am'ic Acid, *n.* (Chem.) One of the products of the destructive distillation of binoxalate of ammonia. Form. $NH_2C_2O_2.HO.C_2O_3$.

Ox'amide, *n.* (Chem.) A white substance produced during the destructive distillation of oxalate of ammonia; — hence its name, compounded of *oxalis* and *ammonia*. It is a compound of nitrogen, hydrogen, oxygen, and carbon, in such proportions as to form oxalate of ammonia by the addition of four atoms of water. Form. $NH_2C_2O_2$.

Ox'-bird, *n.* (Zool.) See TRINGA.

Ox'-bow, *n.* Part of a yoke intended to encircle an ox's neck.

Ox'bow, in New York, a post-village of Jefferson co., abt. 28 m. N. N. E. of Watertown.

Ox'en's'tiern, AXEL, COUNT, an eminent Swedish statesman, distinguished for profound sagacity, patriotism, and political honesty, was b. in 1583. He was the favorite of Gustavus Adolphus, after whose death he conducted the affairs of the kingdom with equal ability and integrity. D. 1654. — His sons, JOHN and ERIC, both distinguished themselves as diplomats.

Ox'-eye, *n.* (Bot.) See HELIOPOLIS.

(Zool.) The Large titmouse, *Parus major*.

(Meteorol.) A kind of heavy squall, resembling a typhoon, peculiar to the tropical latitudes of W. Africa.

Ox'-eyed, (-id,) *a.* Having large, full eyes, resembling those of an ox.

Ox'-eye Daisy, *n.* (Bot.) See LEUCANTHEMUM.

Ox'-fly, *n.* A fly hatched under the skin of cattle; *Astus bovis*. See ÆSTRIDÆ.

Ox'ford, an inland co. of England, having N. the co. of Warwick, N. E. and E. Northampton and Buckingham, S. Berks, from which it is separated by the Thames, and W. Gloucester. Area, 739 sq. m. The surface is diversified, and the soil fertile in the N., but elsewhere gravelly or thin. Rivers. Windrush, Evenlode, Cherwell, and Thames. *Prod.* Wheat, barley, and vegetables. Large numbers of sheep are raised. *Chief towns.* Oxford, (the cap.) Banbury, Woodstock, and Henley. Pop. (1897) 187,180.

OXFORD, a city, cap. of the above co., at the junction of the Isis and the Cherwell, 62 m. W. N. W. of London. It is pleasantly situated in a plain, thickly planted with trees, with the above-mentioned rivers on three sides, and contains many fine streets and handsome edifices.

Fig. 2018.—RADCLIFFE LIBRARY, OXFORD.

Library (Fig. 2018), a splendid circular building, founded in 1749. Pop. (1897) 51,500.

Oxford, (University of.) This celebrated university lays claim to great antiquity, tradition assigning its foundation to King Alfred in 879. The earliest charter was granted by King John, and its privileges were confirmed and extended by subsequent monarchs, the act by which it was created a corporate body having been passed during the reign of Elizabeth in 1570. The number of colleges established are 20, viz.:—University, (founded, 1249); Baliol (1263); Merton (1274); Exeter (1314); Oriel (1326); Queen's (1340); New (1386); Lincoln (1427); All Souls' (1437); Magdalen (1456); Brasenose, (1509); Corpus Christi (1516); Christ Church (1525); Trinity (1554); St. John's (1557); Jesus (1571); Wadham (1613); Pembroke (1620); Worcester (1714); and Keble (1869). There are, besides, 5 halls, or colleges, not incorporated, viz.:—Magdalen, St. Edmund's, St. Mary's, New Inn, and St. Alban's. The constitution of the University was changed in Aug., 1854, and amended in June, 1856. Each college is bound by its own statutes, but controlled by the general laws governing the University, and contributes from their members, elected by vote, to the executive and legislative departments of the University. Attached to the University is the Bodleian Library, founded by Sir Thomas Bodley, containing about 500,000 printed vols., and more than 30,000 valuable MSS. The University received from James I., in 1604, the privilege of sending 2 members to the House of Commons; this was reduced to 1 member in 1885.

Oxford, a S.W. co. of prov. of Ontario; area, about 700 sq. m. Rivers. Thames and some less important streams. Cap. Woodstock. Pop. (1897) 49,350.

Oxford, in Alabama, a post-village of Calhoun co., about 110 m. N. by E. of Montgomery. Pop. (1897) 1,580.

Oxford, in Connecticut, a post-township of New Haven co. Pop. (1897) 950.

Oxford, in Illinois, a village and township of Henry co., about 14 m. N. of Galesburg.

Oxford, in Indiana, a post-town, former cap. of Benton co., about 88 m. N.W. of Indianapolis.

Oxford, in Iowa, a post-village and township of Johnson co., about 15 m. W.N.W. of Iowa City.

—A township of Jones co.

Oxford, in Kansas, a township of Johnson co.

Oxford, in Kentucky, a post-village of Scott co., about 22 m. E. by N. of Frankfort.

Oxford, in Maine, a W. co., adjoining Canada on the N. and New Hampshire on the W.; area, about 1,900 sq. m. Rivers. Androscoggin, Saco, and Margalloway rivers, besides numerous smaller streams and several lakes. Surface, generally hilly, and in the N. mountainous; soil, in some parts fertile. Cap. Paris. Pop. (1897) 31,100.

—A post-village of the above co.

Oxford, in Maryland, a post-town and port of entry of Talbot co., 12 m. S.W. of Easton. Pop. (1897) 1,220.

Oxford, in Massachusetts, a post-village and township of Worcester co., about 11 m. S. by W. of Worcester. Manuf. consists largely of cottons and woollens.

Oxford, in Michigan, a post-village and township of Oakland co., about 14 m. N. of Pontiac, on the Mich. Cent. and P. & N. R. Rs.

Oxford, in Mississippi, a city, cap. of La Fayette co., about 180 m. N. of Jackson.

Oxford, in North Carolina, a post-village, cap. of Granville co., about 45 m. N. of Raleigh. Pop. (1897) 3,160.

Oxford, in New Jersey, a post-township of Warren co.

Oxford, in New York, a post-village and township of Chenango co., about 170 m. W. by S. of Albany.

—A village of Orange co., about 52 m. N.W. of New York city.

Oxford, in Ohio, a post-village and township of Butler co., about 105 m. W.S.W. of Columbus.

—A village and township of Coshocton co.

—A township of Delaware co.

—A township of Erie co.

—A township of Guernsey co.

Oxford, in Ohio, a village of Holmes co.

—A township of Tuscarawas co.

Oxford, in Pennsylvania, a village and township of Adams co., abt. 10 miles N.E. of Gettysburg.—A post-borough of Chester county, about 69 miles S.E. of Harrisburg.—A former township of Philadelphia county, now included within the limits of the city of Philadelphia, on the Delaware River, abt. 6 miles N.E. of the State House.

Oxford, in Wisconsin, a post-township of Marquette co.

Oxford Depot, in New York, a post-vill. of Orange co., abt. 52 m. N.W. of New York.

Ox'gang, n. (Old Eng. Law.) As much land as an ox can plough in a season.

Ox'goad, n. An instrument with a sharp point for goading on oxen.

Ox'hide, n. The skin of an ox, which, when tanned, forms a strong, serviceable quality of leather.

(Old Eng. Law.) A measure of land, being as much as could be surrounded by a hide cut into narrow strips or thongs.

Oxia, (oks-she'a), one of the smaller Ionian islands off Cape Skropha, Acarnania. Length, 4 m., with a breadth of 2 m.

Oxidability, n. The susceptibility of being converted into an oxide.

Ox'idable, a. [Fr.] That is susceptible of conversion into an oxide.

Ox'idate, v. a. (Chem.) Same as OXIDIZE, q. v.

Oxidation, n. (Chem.) The operation or process of converting into an oxide.

Oxidator. (Chem.) Same as OXYGENATOR, q. v.

Ox'ide, n. [Gr. oxus, acid.] (Chem.) A compound of oxygen, and a base destitute of acid and solidifying properties. See CHEMICAL NOMENCLATURE.

Ox'idizable, a. That may be oxidized.

Ox'idize, v. a. To convert into an oxide.

—v. n. To be changed or converted into an oxide.

Ox'idized, p. a. Converted into an oxide; oxidated.

Ox'idizement, n. The act of oxidizing; oxidation.

Ox'idizer, n. That which oxidizes.

Ox'idizing, p. a. Converting into an oxide.

Oxidulated, a. (Chem.) Present in the state of a protoxide;—said of an oxide.

Oxioidic, a. (Chem.) Consisting of oxygen and iodine.

Ox'tip, n. (Bot.) A species of primrose, so called from some resemblance in the flowers to the lips of an ox; *Primula elatior*.

Oxonian, n. A student or graduate of Oxford University, England.

Ox'tongue, n. (Bot.) A popular name applied to several plants of the genera *Helmenthia*, *Picris*, and *Anchusa*.

Ox'us, AMOO, or JIBOUN, a river of Central Asia, rising in the mountain-lake Sir-i-kol, dist. of Pamir, Lat. 37° 27' N., Lon. 73° 40' E., at an elevation of 15,000 ft. above the sea. It forms the boundary between Tibet and Great Bokhara, and after a S.W. course of 1,300 m. falls into the Aral Sea, on its S. side, by numerous mouths; Lat. 43° N., Lou. 58° to 59° E. It is navigable for 300 m. to Kharjoo.

Oxyacid, n. (Chem.) An acid, such as the nitric, sulphuric, chromic, &c., in which it is supposed that oxygen forms the acidifying principle, as distinguished from the hydric acids, in which hydrogen is thought to play that part. The salts formed from them are called oxy-salts, in opposition to the haloids, or hydric acid salts.

Oxycoccus, (ok-se-kok'kus,) n. [Gr. oxys, sour, kokkos, berry.] (Bot.) A genus of plants, order Vaccinaceae. They are slender, prostrate shrubs, with alternate, coriaceous leaves, and eatable fruit. *O. palustris*, the common Cranberry, and *O. macrocarpus*, the larger Cranberry, are two very common species, the latter of which is now much cultivated, and the fruit of both are used for making tarts, jams, &c.

Oxygen, n. [Fr. oxigène, from Gr. oxus, and gennao, I generate.] (Chem.) The most abundant of the elements. It forms 8-9ths of water, 1/4 of air, and about 1/2 of silica, chalk, and alumina, the three chief constituents of the earth's surface. It is also the most important element, being essential to the support of animal life. It is met with in nature in mechanical combination with nitrogen, as the atmosphere which surrounds our globe. It is also given off by growing plants, under the influence of direct sunlight. It possesses strong chemical properties, uniting with all the elements, except fluorine, in a large number of proportions. It was discovered by Priestley in 1774, and was obtained by him by the action of heat from the red oxide of mercury. It is tasteless, colorless, inodorous, and was first reduced to the liquid state in 1877. It is the least refractive of all the gases, and possesses magnetic properties similar to those of iron. It is sparingly soluble in water, being only absorbed in the proportion of 3 per cent. *O.* is readily procured in a pure state from a great number of compounds. For labora-

tory use, it is mostly obtained by heating chlorate of potash, finely powdered and mixed with one-eighth its weight of oxide of copper, iron, or manganese. Peroxide of manganese is a cheap source of oxygen when large quantities are required. It should be heated to redness in an iron bottle, to which a tube is attached, when oxygen is given off, and a low oxide of manganese left behind. The majority of the metals do not unite spontaneously with dry oxygen or air; but in moist *O.*, or air, many of them become slowly oxidized. Other bodies, such as phosphorus, certain metals in a highly divided state, greasy rags, and damp hay, having a great affinity for oxygen, unite with it at ordinary temperatures, and undergo spontaneous combustion. Many others when heated to redness unite with it with vehemence, giving rise to the phenomena of burning or combustion. Oxygen was so named by Lavoisier from the supposition that it was the acidifying principle, and it was thought by him to be essential to the constitution of an acid. Davy's researches on chlorine disproved this theory, by showing that hydrochloric acid contained no oxygen. The description of the various compounds of oxygen will be found under the heads of the elements with which it is united. Various methods have been proposed for the isolation of *O.* on a large scale, but its production in quantities suitable for extensive use, and of sufficient cheapness, has only of late years been achieved. One method employs oxide of barium, BaO, which is heated to a dull redness, and air passed over it under pressure. The result is the production of a quantity of barium peroxide BaO₂, which, when heated to a full red heat, yields up its extra *O.* in a pure state, and is reduced again to BaO. The same effect is produced without change of temperature by a considerable lowering of the pressure. This is the method pursued in practice. In another process, manganate of soda is used, a stream of superheated steam passing over it and withdrawing the *O.* from the soda, which may be reoxygenized by passing heated air over it. In both these methods the supply of *O.* is inexhaustible and the expense of isolating it is not great. The liquefaction of *O.* was accomplished in 1877 by Cailletet, of Paris, and Pictet, of Geneva, the latter employing a pressure of 320 atmospheres and a temperature of -140° C. It was afterward reduced to the solid state, and both these results are now easily achieved. Atom. wt. 16, sp. grav. (hyd=1) 16; 100 cub. in. weigh 34.203 grains. Symbol *O.*

Oxygenation, n. The act of combining with *O.*

Oxygenator, n. (Chem.) A contrivance for throwing a current of air on the flame of an argand lamp; an oxidator.

Oxygenizable, a. (Chem.) Susceptible of being oxygenized or oxygenated.

Oxygenize, v. a. (Chem.) To oxygenate.

Oxygenize'ment, n. (Chem.) Same as oxygenation.

Oxygenous, a. (Chem.) Pertaining to oxygen, or obtained from it.

Ox'ygón, n. [Gr. oxys, sharp, and gonía, an angle.] (Geom.) An acute-angled triangle.

Ox'ygónal, Ox'ygónial, a. (Geom.) That has three acute angles; acute-angled.

Oxyhydrogen Blowpipe, (oks-e-hi'dro-jen,) n. (Chem.) By throwing a jet of oxygen into a flame of coal-gas or hydrogen, the most intense heat known is produced. The same object is attained by burning the mixed gases in a blowpipe of a peculiar form, known as Hemming's jet, in which the tube conveying the gases from the reservoir is filled with pieces of very fine brass wire, packed closely together, in order to prevent the possibility of the flame rushing back into the tube and causing an explosion. M. St. Clair Deville has lately invented an oxyhydrogen furnace, by which large quantities of the most intractable metals, such as iridium and platinum, are melted like lead.

Ox'ymel, n. [Gr. oxys, sharp, and meli, honey. See MELLIFLUOUS.] A mixture of vinegar and honey boiled to a syrupy consistence.

Oxymoron, n. [Gr. oxymoros—oxys, sharp, and moros, dull, slow.] (Rhet.) That which is pointedly absurd or foolish; a rhetorical figure in which an epithet of a quite contrary signification is added to a word, as *cruel kindness*.

Oxymuriatic Acid, n. (Chem.) The former name of CHLORINE, q. v.

Ox'opia, Ox'yopy, n. [Gr. oxys, sharp, and opsís, vision.] The faculty of seeing more acutely than usual. Thus there have been instances known of persons who could see the stars in the day-time. The proximate cause is a preternatural sensibility of the retina. It has been known to precede the gutta serena; and it has been asserted that prisoners who have been long detained in darkness, have learned to read and write in darkened places.

Oxyph'ony, n. [Oxys, and phone, voice.] Acuteness or shrillness of voice.

Ox'yría, n. [Gr. oxys, sour; in allusion to the qualities of the leaves.] (Bot.) A genus of plants, order Polygonaceae. They are perennial herbs, with leaves mostly radical, petiolate; and stem nearly leafless, paniculate-racemose. *O. reniformis*, the Mountain Sorrel, is found on the summits of the White Mountains, and N. to the Arctic Sea.

Ox'yrhodine, n. [Gr. oxys, sharp, and rodón, a rose.] (Med.) A conserve of vinegar and roses, used as a liniment in herpes and erysipelas.

Ox'ysalt, Ox'ysel, n. (Chem.) A salt formed of the union of an oxygen acid with a salifiable base.

O'yapoc, or O'yapok, a river of S. America, separating French Guiana from Brazil, and flowing into the Atlantic Ocean abt. 70 m. S.E. of Cayenna.

Fig. 2019.—CRANBERRY, (*Oxycoccus macrocarpus*.)

O'yer, *n.* [O. Fr.; Fr. *ouïr*, from Lat. *audire*, to hear.] (*Law.*) A prayer or petition to the court that the party may hear read to him the deed, &c., stated in the pleadings of the opposite party.

O'yer and Terminer, *n.* (*Law.*) The name of courts of criminal jurisdiction in the U. States, generally held at the same time with the court of quarter sessions, and by the same judges, and which have power, as the terms imply, to hear and determine all treasons, felonies, and misdemeanors committed within their jurisdiction.

O'yez, [Norm.] (*Law.*) Hear ye;—a word used by the sheriff or his substitute in making proclamation in court, requiring silence and attention. It is thrice repeated, and commonly pronounced *O yes*.

Oyster, *n.* [Ger. *auster*; Lat. *ostrea*, from Gr. *ostreon*, an oyster.] (*Zoöl.*) A well-known edible mollusc, order of *Lamellibranchiata*, the several species of which compose the family *Ostreidae*. The shell, formed of two unequal valves, connected together by a hinge of the simplest character, has externally a coarse and dirty appearance; each shell being composed of a great number of laminae irregularly closed down on each other. In some species it is smooth; in others, striated, tuberculous, or prickly: the lower shell being always the deepest. The animal itself is also of very simple structure; no vestige of a foot can be seen; and the ligament which unites the valves is of small size. On separating the valves, four rows of gills, or what is called the beard, are observed at a little distance from the fringed edge of the mantle. Through these water is drawn in the function of respiration, and with it the food of the animal, which consists of microscopic organisms, the gill openings thus serving also the purpose of a mouth. The adductor muscle is situated at about the center of the body, near which the heart is to be distinguished. The oyster is one of the most sedentary of animal forms, remaining, in the mature state, firmly fixed upon some submarine substance, giving scarcely a sign of life beyond the opening and closing of its valves, passing water through its body in the breathing process, and obtaining nourishment from the minute organic forms borne to it upon the gentle currents thus produced. The young, however, enjoy a brief period of free life, swimming for a short time, and then fastening upon rocks, stones, shells, or other substances that happen to be in the vicinity. Very commonly they adhere to adult shells, and thus are formed the large masses called oyster banks. In about a year and a half they attain a size suitable for the table. The oyster genus is almost cosmopolitan in its range, though not represented in the Polar seas. Authors have divided it into about 70 recent species, in addition to a considerable number of fossil ones, but the actual species are probably less numerous, while only a few of them are used as articles of food. Of these the most notable are *Ostrea edulis*, the edible oyster of Europe, and *Ostrea virginiana*, that of the Eastern U. S. Both of these species vary considerably in form, and some authors have divided the American species into two—*O. borealis*, a Northern rounded form, and the longish *O. virginiana* of the Southern coast. *O. edulis* is comparatively small in size, and has a coppery flavor, which is absent from the American species. It is hermaphroditic, while in the American species the sexes are separate. The powers of multiplication which *O.* possess are so wonderful, that the banks or beds which they form occupy portions of the sea, extending for miles, in shallow parts; and in some places (particularly along the alluvial shores of Georgia) walls of living *O.* literally counteract the otherwise restless force of the tide. The common *O.* of Europe, *O. edulis*, are particularly abundant on the coasts of France and England. After having been dredged from the bottom, they are transferred to artificial beds or parks (Fig. 2020,) in some favorable and accessible locality, where they are preserved for sale, continually growing in size and improving in flavor. The species most esteemed in America are the Virginian oyster (*O. virginiana*), and the Northern oyster (*O. borealis*). In the *O. virginiana*, the shell is elongated and narrow, and the beaks pointed; it often measures 12 to 15 inches in length, but is rarely more than 3 inches wide. This is the common oyster from Chesapeake Bay southward. In the *O. borealis*, the shell is more rounded and curved, with the beaks short and considerably curved; a common size is 5 or 6 inches in length, but it grows to the length of a foot, and to a width of 6 inches. This is the common New York oyster, said also, formerly, to have been abundant in Massachusetts Bay. Boston market is supplied principally from artificial beds, derived from the Virginia and New York oysters; the flats in the vicinity of our large maritime cities are generally thickly beset with poles indicating the localities of oyster-beds. The oyster, particularly when eaten raw, is easy of digestion, and remarkably nutritious; its digestibility and nutritive properties, however, are materially impaired by cooking, and though very tempting and piquant culinary prepara-

tions are made with it in the form of sauces, ragouts, soups, patties, &c., these effects are obtained at the sacrifice of the best qualities of the fish, and should be carefully shunned by the invalid.—*Oyster Culture*. Oysters have been a favorite article of food for many centuries, and large heaps of their shells on the shores of American and European seas testify to the fondness for them of the primitive inhabitants. They have been during the 19th century fished for so diligently that the great natural beds are largely exhausted, and artificial culture has come into play, in some cases small *O.* being transferred from natural oyster beds to private areas, in others raised solely in such areas. The latter is the case generally in Europe, particularly in France, where the raising of *O.* from the spawn or spat produced on the spot is extensively practiced. In this country the former custom is most in vogue, it being

Fig. 2020.—OYSTER PARKS.

found most profitable to transplant young *O.* from their native habitats to private beds. The practice of rearing them from the spat produced in these beds is practiced to some degree, shells being thrown into the water for them to fasten on, and this method is likely before many years to become far more general. Efforts have been made to propagate the oyster artificially, in the method pursued in fish culture, but though successful, the results have proved of no practical value. It has also been proposed to convert the salt marshes along parts of the Atlantic coast into oyster-raising pounds, in which they can be protected from the enemies which prey upon them in the open seas. This proposition, which doubtless will eventually be put into effect, cannot but add very largely to the oyster harvest of the United States. See SECTION II.

Oyster Bay, in New York, an arm of Long Island Sound, in Queen's co.

—A post-town of Queen's co., about 30 m. E. of New York city. Pop. 13,870.

Oyster-catcher, or **Sea-pie**, *n.* (*Zoöl.*) The popular names of *Himantopus ostralegus*, a small Grallatorial bird, allied to the plover, has been so named from its habit of opening the shells of bivalve mollusca with its powerful bill. It makes no nest. It is indigenous in the northern portion of the Old World, from Ireland to Japan.

Oyster Creek, in Texas, enters the Gulf of Mexico from Brazoria co.

Oyster-dredge (-drĕj), *n.* A small drag-net for fishing oysters.

Oyster-pat'ty, *n.* A pastry or paté containing oysters, and baked.

Oyster-plant, *n.* (*Bot.*) The Salsify. See TRAGOPOGON.

Oysterville, or **Os'terville**, in Massachusetts, a village of Barnstable co., about 70 m. S.E. of Boston.

Oysterville, in Washington, a post-town, former cap. of Pacific co., about 100 m. S.W. of Olympia.

Oyster-wench, **Oyster-wife**, **Oyster-woman**, *n.* A woman who sells oysters.

Oz, an abbreviation for ounce or ounces.

Ozania (o-sa'ma), a river in Hayti, West Indies, rises in the central part of the island, and flowing S.E., then S., enters the Caribbean Sea at St. Domingo. Length, 50 m.

Ozan', in Arkansas, a township of Hempstead co.

O'zark, in Arkansas, a post-town, cap. of Franklin co., about 121 m. W.N.W. of Little Rock.

Ozark, in Kansas, a township of Anderson co.

Ozark, in Missouri, a S. co., adjoining Arkansas; area, about 780 sq. m. Rivers. North Fork, Little North Fork, and Bryant's Fork of White River, and Beaver Creek. Surface, hilly; soil, in some parts fertile. Cap. Gainesville. Pop. (1890) 9,795.

O'zark, in Missouri, a post-town, cap. of Christian co., about 15 m. S.S.E. of Springfield.

Ozau'kee, in Wisconsin, a S.E. co., bordering on Lake Michigan; area, about 232 sq. m. Rivers. Milwaukee River, Cedar Creek, and some smaller streams. Surface, undulating; soil, fertile. Cap. Ozaukee. Pop. (1895) 16,545. Ozaukee, its cap., is situated on Lake Michigan, about 90 m. E.N.E. of Madison. It is also called PORT WASHINGTON.

Ozaw'kie, or **Ozankie**, in Kansas, a post-town of Jefferson co., about 35 m. W. by S. of Leavenworth.

Oze'na, *n.* [Lat. *ozeena*; Gr. *ozeina*, from *ozein*, to smell.] (*Med.*) An affection of the pituitary membrane, which gives occasion to a disagreeable odor.

Ozieri, or **Othieri** (o-ze-a'-ree), a town of the island of Sardinia, prov. of Sassari, 29 m. E.S.E. of Sassari. Pop. 8,000.

Ozocerite, *n.* [Gr. *ozein*, to smell, and *keros*, wax.] (*Min.*) Fossil wax, paraffine wax, and mineral tallow are the more familiar names by which this commodity is known. It is a fossil form of paraffine, and is found in large quantities in the mines of Galicia. It also occurs in the Saupete Valley, Utah, and in other coal regions. Its principal uses are for the manufacture of paraffine and ceresin or imitation beeswax, and for the covering of electrical conductors. It came into commercial use about 1860, when a thriving trade was built up, until the large quantities of paraffine obtained from the Pennsylvania coal field reduced the demand for it. In chemical composition it is a mixture of liquid hydrocarbons, paraffines, waxy resins, bituminous resins, and coke. When gathered it is much mixed with dirt, and has to be hand-picked, washed and boiled, after which it is molded in cone-shaped cakes of 100 or 200 pounds, and marketed in this condition. It melts at 133° to 158° F., and is preferred of a light color, though the tints often run to green and brown.

Ozona'tion, *n.* Act or process of treating with ozone.

Ozone', *n.* [Gr. *oze*, a stench.] (*Chem.*) A peculiar odor was long ago found to attend the working of an electrical machine, which was similarly found to appear where electric sparks were passed through a tube containing oxygen. It was therefore called by Von Marum the "smell of electricity." Various explanations of this phenomenon were offered, but its true cause was not discovered until 1840, when it was closely investigated by Schönbein. He named the substance producing the odor *ozone*, and suggested that it might be a higher oxide of oxygen. Others considered it to be an allotropic condition of oxygen, but later investigations have sustained Schönbein's suggestion, and it is believed to be virtually an oxide of oxygen, or a compound of 3 atoms, ordinary oxygen being a compound of 2 atoms. Ozone has been liquefied under pressure, at a temperature of about -23° C. Its density, as its composition indicates, is one and a half that of oxygen. Its properties are as follows: It bleaches the vegetable colors, converting indigo, for instance, into colorless isatin. It oxidizes black sulphide of lead into the neutral sulphate, and converts moist iron, copper, and even silver filings, into their respective oxides. There are several methods of forming it, one of the easiest consisting in transmitting a succession of electric sparks through a tube containing pure dry oxygen. Although formed in minute traces only, the characteristic smell of this peculiar body is soon perceived. It may be detected chemically by immersing in a vessel, containing even the smallest trace of it, a piece of paper covered with moistened starch and iodide of potassium. The *O.* immediately displaces the iodine, which unites with the starch, giving rise to a blue color. A temperature a little below 212° is sufficient to destroy the active properties of ozone. It appears to act most beneficially as a disinfectant in the economy of the world; it having been proved that epidemic diseases, such as cholera, fevers, &c., are always accompanied by a decrease, or entire absence, of this agent from the atmosphere. The quantity of *O.* in the atmosphere is never great, and it varies within wide limits. It is believed to be active in destroying unwholesome substances, through its intense oxidizing properties. Efforts have been made to take advantage of this useful property by the production of *O.* in hospitals and other places infected by disease germs. See PERMANGANIC ACID, and PICRATE.

Ozonification, *n.* The act of producing ozone.

O'zonize, *v. a.* To change into ozone; also, to impregnate with ozone.

Ozonometer, *n.* An instrument for determining the amount of ozone in the atmosphere.

Ozonomet'ric, *a.* Having reference to or employed in ozonometry; as, ozonometric observations.

Ozonometry, *n.* Determination of the quantity of ozone in the atmosphere.

Ozorkow, or **Ozorkov**, a town of Russian Poland, govt. of Warsaw, on the Bzura, 76 m. W.S.W. of Warsaw. Pop. (1897) 5,840.

O.—SECTION II.

OATH

ODIL

Oak Cliff, in *Texas*, a suburb of Dallas, in Dallas co. Pop. (1897) about 3,600.

Oak Harbor, in *Ohio*, a post-village of Ottawa co., 24 m. E. by S. of Toledo. Pop. (1897) 1,850.

Oak Park, in *Illinois*, a post-village of Cook co.; a suburb of Chicago. Pop. (1897) 6,500.

Oakdale, in *California*, a post-town of Stanislaus co., 34 m. S. of Stockton. Pop. (1897) 1,170.

Oakdale, in *Nebraska*, a post-village of Antelope co., 5 m. E. of Neligh; has good water power and several mills. Pop. (1897) 780.

Oakes, in *North Dakota*, a city of Dickey co., 25 m. E. of Ellendale; has foundry and machine shops. Pop. (1897) 500.

Oakesdale, in *Washington*, a post-town of Whitman co., 46 m. S. of Spokane Falls. Pop. (1897) 650.

Oakland, in *Iowa*, a post-town of Pottawattamie co., 25 m. E. of Council Bluffs. Pop. (1895) 912.

Oakland, in *Maine*, a post-town of Kennebec co., 6 m. from Waterville. Pop. (1897) 2,066.

Oakland, in *Nebraska*, a post-village of Burt co., 16 m. N. of Tekamah. Pop. (1897) 950.

Oakland City, in *Indiana*, a post-village of Gibson co., 28 m. N.N.E. of Evansville; has 2 large brick-yards, 2 stove factories, &c. Pop. (1897) 1,620.

Oar, *n.* [*A. S. ar.*] (*Naut.*) A mechanical agent, formed of a long, thin piece of timber, by which boats, barges, &c., are propelled through the water, in conjunction with manual labor. An oar consists of three parts—the *blade*, which is the smooth part dipped in the water; secondly, the *shoulder*, which marks the termination of the blade; and, lastly, the *handle*, which is held in the grasp of the oarsman. The fulcrum on which the leverage of the oar is exerted is called the *rowlock* (pronounced *ru-lock*); and this is inclosed by two pins of timber, termed *thole-pins*, or by brass round-shaped tholes, termed *crutches*.—To *ship* and *unship* oars are respectively to fix or unfix them from the rowlocks.—To *feather an oar* is, at the end of a stroke, in rowing, to bring the blade horizontal with the water by a turn of the wrist, so as to allow it to shake off its grasp of the water. See *FEATHER*.

To *boat the oars*. (*Naut.*) To cease rowing, and stow the oars in the boat.—To *lie or rest on the oars*. To cease pulling, lifting them out of water, but not boating them;—hence, to refrain from work of any kind; to idle.

“Having made his fortune, he *rested on his oars*.”—*Hamlyn*.

To *muffle the oars*. To cover the oars with something, in order to prevent sound or noise in rowing.—To *ship the oars*. To fix them in the rowlocks.—To *toss the oars*. To elevate the oars perpendicularly, the butt or handle resting on the bottom of the boat;—generally performed by way of salute or compliment.—To *unship the oars*. To remove them from the rowlocks.

—*v. n.* To row.

“He *oar'd* with lab'ring arms along the flood.”—*Pope*.

—*v. a.* To impel by rowing.

Oath, *n.* [*A. S. ath.*] A solemn declaration or promise, made under sanction of the maker's religion, in the presence of one legally authorized to administer it. It is required on entering upon certain public offices and before giving evidence in a court of justice. The oath-taker imprecates divine punishment if he be guilty of a falsehood or violate his promise. The most important oaths affecting the general public are those administered in courts of justice to jurors and witnesses. The ordinary witness-oath is promissory in form, the witness swearing that the evidence he shall give will be the truth, the whole truth, and nothing but the truth. In the absence of express statutory directions, the oath is administered in that form which the one taking it considers most binding on his conscience. A Jew is sworn on the Pentateuch, with his hat on. Mohammedans are sworn on the Koran, and Parsees on their sacred books. A part of the ceremony of swearing a Hindu consists in his touching the foot of a Brahmin, or, if a Brahmin is sworn, in his touching another Brahmin's hand. Chinese oath-takers break a saucer or behead a fowl as an essential part of the ceremony. The oaths taken by public officials are usually promissory. The President of the U. S. is required to swear that he will faithfully execute the office, and will, to the best of his ability, preserve, protect, and defend the Constitution of the U. S. In mediæval times, oaths in Europe were administered in chapels and other places esteemed holy, at the altars, which were thought to be made more sacred by

placing upon them relics considered holy. The Pope, according to the Roman Catholic faith, has authority to absolve from the obligation of an oath. Oaths to perform illegal acts do not bind, nor do they excuse the performance of the act. The employment of oaths, even in legal proceedings, has been criticised by persons whose opinion is worthy of great respect, as irreligious and also as useless. Pothier, the great French lawyer, declared: “In the exercise of my profession for more than 40 years . . . I have not more than twice known a person restrained by the sanctity of an oath from persisting in what he had before asserted.” Any person called as a witness, or required or desiring to make an affidavit or deposition, who shall refuse or be unwilling, from conscientious motives, to be sworn, may make instead a solemn declaration or affirmation.

Obdormition, *n.* [*Lat., obdormio.*] (*Path.*) The temporary numbness of some part of the body from pressure on the nerves.

(*Obs.*) A sleeping soundly.

Oberlin, in *Kansas*, a post-village and cap. of Decatur co., 260 m. N.W. of Topeka. Pop. (1897) 860.

Oberlin College. (*Educ.*) This institution is located at Oberlin, O. It was started in 1833 as a private institution, and chartered in 1834 as the Oberlin Collegiate Institute. Its original object was to train Congregational ministers. In 1850 it became Oberlin College. Since its incorporation it has always admitted students, irrespective of sex or color, which was a remarkable innovation 60 years ago. Negro students have constituted from 3 to 5 per cent. of the whole, and the total attendance, averaging from 1,300 to 1,500 a year, has been about equally divided between the sexes. Another marked feature of the institution for many years was the encouragement of students to assist themselves by manual labor. There are theological, collegiate, and preparatory departments. Especial attention is given to instruction in music, and the choral singing of the students is of rare excellence. The college, in 1905, had 110 instructors and 1715 students, with more than 120,000 volumes in its library. In the same year its productive funds were in excess of \$1,200,000 and its income \$230,000.

O'bion, in *Tennessee*, a post-village of Obion co., 74 m. S.S.W. of Paducah. Pop. (1897) 750.

Objective Teaching. The system of instruction which generalizes the facts obtained by object-teaching.

Objectivism, *n.* The power to treat subjects objectively apart from the agent's own personality; or the quality resulting from such treatment.

(*Philos.*) The tendency to overestimate the objective elements of knowledge; or the idea that the facts of the non-ego have precedence over those of the ego.

Object-lesson, *n.* A lesson in which the object which is the subject of study (or a representation of it) is presented to the eye of the pupil.

Object-teaching, *n.* The method of teaching by object-lessons, employing the perceptive faculties of the pupil.

O'Brien, JOHN, actor (stage name, JOHN T. RAYMOND), was born in Buffalo, N. Y., April 5, 1836; began his theatrical career in 1853; his first tour was made with E. A. Sothern, in *Our American Cousin*, in which he took the part of *Asa Trenchard*. In 1871 he won his greatest success in *The Gilded Age*; his inimitable rendition of *Colonel Sellers* made this play peculiarly his own. He made a European tour in this character, but its characteristic American humor was not appreciated by foreigners, and he soon abandoned the tour. His last appearance on the stage was at Hopkinsville, Ky. Died April 10, 1887.

Observation-car, *n.* A railway car with open or glass sides, or ends, for obtaining an unobstructed view of the country or the track. Used by tourists, and by railway officials on inspection trips.

Ocarina (*ûka-ri'-na*), *n.* [*It.*] (*Mus.*) A small musical instrument made of terra-cotta, with month-piece and finger-holes; introduced by a company of performers calling themselves the “Mountaineers of the Apennines,” who played seven, of different sizes, in unison, with pleasing effect.

Occipito, *n.* An initial compounding element, from *Lat. occiput* (gen. *occipitis*), the back part of the head.

Occultism, *n.* Investigation of the mysterious and supernatural.—Supernatural power, as claimed by an astrologer.—Modern theosophy, as professing to have spiritual illumination, and an insight into things hidden from material eyes.

O'cean Grove, in *New Jersey*, a post-town of Monmouth co., adjoining Asbury Park on the S.; a sea-bathing resort and camp-meeting site. Summer population estimated at 12,000. Pop. (1895) 2,754.

Ocean Springs, in *Mississippi*, a post-town of Jackson co., 43 m. from Mobile, Ala. Pop. (1897) 1,280.

O'chiltree, in *Texas*, a N.W. co.; area, 900 sq. m. Cap. Ochiltree. Pop. (1890) 198.

Ochle'sis, *n.* [*Gr. disinibance.*] (*Med.*) Crowding-poisoning; disease, or liability to disease, from the overcrowding of dwelling-houses.

O'clock. A contraction for *of the clock*; as, what o'clock is it?—i. e., what hour of or by the clock is it?

Oconee, in *Georgia*, a N. central co.; area, 168 sq. m.; bounded E. by the Oconee river, and W. by the Appalachee river. Surface, hilly; soil, fertile in the valleys. Min. Gold, mica, asbestos, corundum, copper, and magnetic iron ore. Cap. Walhalla. Pop. (1890) 7,713.

Oconee, in *South Carolina*, an extreme N.W. co.; area, 620 sq. m.; bounded E. by the Kiowee river, N.W. by the Chattooga, and S.W. by the Tugaloo. Surface, part mountainous, part rolling; soil, fertile in the valleys. Min. Gold, mica, asbestos, corundum, copper, and magnetic iron ore. Cap. Walhalla. Pop. (1890) 18,687.

O'Con'nor. THOMAS POWER, M. P., was born at Athlone, co. Roscommon, Ireland, in 1848; educated at Queen's College, Galway, and at Queen's College, Cork; began journalistic work first in Dublin, and later in London, in connection with the *Daily Telegraph*. In 1876 he published a life of Lord Beaconsfield. He entered Parliament (1880) as member from Galway, and became prominent in the Parnell party; was one of the executors of the Land League both in England and in Ireland. He came to the United States in 1881, and lectured in the principal cities on behalf of the Irish cause, and within seven months raised a large sum of money. In 1883 he became president of the Irish National League of Great Britain. Besides his principal work, *The Parnell Movement* (1885), he has written many articles, political and literary, for current magazines. He also served as member of parliament from a Liverpool district, and became editor of the *London Sun* and *Sunday Sun*.

O'Con'or. CHARLES, lawyer, was born in New York city, Jan. 22, 1804. At an early age he became eminent in the law, his most famous case being the Forrest divorce suit, in which he was brilliantly successful as a pleader. During the Civil War he was in sympathy with the South, and became counsel for Jefferson Davis when the latter was indicted for treason. In 1871-75 he was conspicuous in the New York courts as chief counsel in the proceedings against the famous “Tweed Ring,” and published an account of the cases (1875) under the title, *Peculation Triumphant*. In 1872, the old-line Democrats, who refused to accept Horace Greeley as a Presidential candidate, gave expression to this opposition by nominating Mr. O'C.; but he did not receive an Electoral vote. He was president of the Law Institute of New York, being elected in 1869. Died May 12, 1884.

Oct-, Octa-, Octo-. An initial compounding element from the *Lat. octo*, or *Gr. okto*, eight.

Octad, *n.* A series of eight; especially in chemistry, an atom element or radical with a combining power of eight.

Octam'eter, *n.* [*Gr. okto*, eight; *metron*, measure.] A verse of eight feet; used also adjectively.

Octet, or **Octette**, *n.* (*Mus.*) A piece of music of eight parts.—A choir of eight voices, or an orchestra of eight performers.

Octic, *a.* (*Math.*) Of the eighth degree in order.

Oddment, *n.* An incidental, not essential, part of a thing; a trifle, a remnant.

(*Pl.*) The parts of a book, as title, preface, index, &c., not portions of the actual text.

O'debolt, in *Iowa*, a post-town of Sac co., 21 m. S.W. of Sac City; has flour mills and creamery. Pop. (1895) 1,400.

Odenkirchen (*o-d'n-keer'k'n*), a town of Rhenish Prussia, 15 m. W.S.W. from Düsseldorf, near the right bank of the Niers. Manuf. Velvets, paper, leather, &c. Pop. (1897) 32,000.

Odes'sa, in *Missouri*, a post-village of Lafayette co., 39 m. E. of Kansas City; has a large flour mill and grain elevator. Ships extensively of grain, fruit, and live stock. Pop. (1897) 1,330.

Odilon-Barrot. CANILLE HYACINTHE, a celebrated French advocate, was born at Villefort, 1791.

He was a most active member of the party which brought about the revolution of July, 1830, and was again the leader of the agitation, in favor of reform, which led to the revolution of 1848. It is evident he did not foresee the results to which the agitation, partly aroused by himself, was destined to lead, for he halted midway, accepted the task of forming a cabinet in company with M. Thiers, and supported the right of the Count de Paris to the throne, and that of the Duchess d'Orléans to the regency. Under the presidency of Louis Napoleon, he was for some time a minister, and conducted the government of France with success until 1851, when he retired from active political life. Died in August, 1873.

Odograph, n. [Gr. *hodos*, a way; *graphō*, to write.] A hand-odometer for recording the rapidity, length, and number of strides of a pedestrian in a given distance.

Odometer, n. (*Mech.*) A recording-device for attachment to a carriage or other vehicle, for the purpose of registering the distance it has travelled. Such mechanisms have been in use from an early period. As commonly made, it consists of a train of wheel-work, which receives motion from the axle of a vehicle-wheel, to an index which moves round the circumference of a dial. The wheel-work is arranged so as to produce a great diminution of the velocity impressed by the axle of the vehicle, and the dial is so graduated that the index can show the number of miles, &c., traversed. The instrument is also constructed to work independently, being in this case provided with wheels and an axle of its own; when this is done, the wheel is made of such a size that its circumference is an aliquot part of a mile, an arrangement which greatly simplifies the calculation of the distance traversed. This form is used by surveyors.

odon. Terminal compounding element, from Gr. *odons* (gen. *odontos*), tooth; as in mon-odon, a genus of animals with one tooth.

Odont-, Odonto-. Initial compounding forms, from Gr. *odons* (gen. *odontos*), tooth.

Odontoglossum, n. (*Bot.*) An extensive genus of orchids, found principally in the cool mountain regions of Mexico, Peru, New Grenada, and Venezuela. Some species are epiphytal, and others terrestrial.

A considerable number of its species have been introduced into this country, and are much prized by cultivators for their magnificent flowers. *O. grande* (Fig. 3010), a native of Guatemala, has been found to live and flower in the open air in this country during the summer season. Its scape bears from two to five flowers, each some six or more inches across, yellow, closely marked with cinnamon-brown bands and blotches.

Fig. 3010.—ODONTOGLOSSUM GRANDE.

Odontoscope, n. [Gr. *odontos*, and Gr. *skopeō*, to see.] An instrument for viewing the teeth, comprising a dental mirror with an electric light.

Oel'la, n. In Maryland, a post-village of Baltimore co. Pop. (1897) 750.

Oel'wein, n. In Iowa, a post-town of Fayette co., 14 m. N. of Independence. Pop. (1895) 1,928.

Oersted, ANDERS SANDØE, naturalist, was born in Rudkøbing on June 21, 1816; became professor of Natural History in the University of Copenhagen, in 1837; travelled in North and South America, and afterward published several volumes describing his scientific discoveries there. Died Sept. 3, 1872.

Officer of the Day. (*Mil.*) A commissioned officer temporarily managing the internal affairs of a post or encampment.

Officer of the Deck. (*Naut.*) One of the officers of a vessel who is temporarily in charge of the deck, and superintendent of the work of the crew.

Officer of the Guard. (*Mil.*) An officer subordinate to the officer of the day, detailed to command, instruct, and inspect the guard.

Off'ish, a. Rather shy or distant in manner; reserved, unsociable.

Off'let, n. A pipe laid at the bottom of a canal or other artificial waterway to let off the water.

Off'print, n. A paragraph or article reproduced from some other publication.

Off'shore, adv. In a direction away from the land; at some distance from the land.

Off'take, n. (*Mining.*) A level through which water is carried away over the country; a drain.

Ogallal'a, n. In Nebraska, a post-village, cap. of Keith co., on South Fork of Platte river, 342 m. W. of Omaha. Pop. (1897) 650.

Og'doad, n. [Gr. *ogdoas* (gen. *ogdoados*), the number eight.] A thing composed of eight parts, as a poem of eight lines, a body of eight persons, &c.—In the Gnostic system, eight divine beings or æons; also heaven, or the ethereal region.

O'geman, n. In Michigan, a N.E. central co.; area, 576 sq. m.; drained by Rifle river, which rises in it. Surface,

undulating, two-thirds heavily timbered; soil, fertile, clay, and sandy loam. Lumbering is the principal industry, but farming is rapidly superseding it. Cap. West Branch. Pop. (1894) 5,635.

Oglesby, RICHARD JAMES, soldier and statesman, was born in Oldham co., Kentucky, July 25, 1824. Orphaned in childhood, he supported and educated himself, being admitted to the bar in Illinois in 1845. He was a first-lieutenant in the Mexican War; in 1849 he made the overland trip to California, and engaged in mining for two years; returned in 1851, and resumed his law practice; was elected State senator (1860), but relinquished the office to take part in the Civil War, which he entered as colonel of the 8th Illinois Volunteers; reached the rank of major-general of volunteers. He was elected governor of Illinois in 1864; reelected in 1872; chosen U. S. Senator in 1873 for a term of six years. From 1885 to 1889 he was again governor of Illinois.

Ogo'bai, Ogo'way, or Ogo'wé. (*Geog.*) A large river in Western Africa, examined by Du Chaillu, which flows by a delta into the sea about Lat. 1° S. Its length is about 500 miles, navigable to Ngunic Falls. Its most northern mouth, the Nazareth, flows into a bay of the Atlantic, on the north of Cape Lopez. Another mouth, to the south, is the Mexican. The southernmost, which seems largest of all, is the Fernand Vas. Its valley is under French protection.

Oh'net, GONCRES, novelist and playwright, was born in Paris, April 3, 1848; became a journalist (1870) on the staff of the *Constitutionnel* and *Le Pays*; wrote a number of dramas and romances; among his novels are *Le Doctor Rameau* and *Volenti*. His dramas *The Iron-Master* and *La Grande Marnière* are his most successful plays.

-oid. A suffix from the Greek *eidos*, form, used to denote resemblance.

Oil Rivers, n., pl. The branches of the Niger and a few rivers of independent source which help to form the delta of the Niger, making a network of waterways. Most of the palm oil exported from West Africa comes from this region, which is low and marshy near the coast, but firm and dry above tide-water. The climate is more healthful than that of most British colonies in West Africa. Akasa, at the mouth of the main Niger, is the chief port of these rivers, and they are under the control of a British imperial commissioner residing at Lagos.

Oil Wells. The forcing of a series of pipes several hundred, or perhaps several thousand, feet into the earth requires much ingenuity and experience, as well as superior tools and appliances. The art has been developed in its highest degree in the Pennsylvania oil-fields, where the first well was sunk in 1859. The drilling is done with rock-drills, but not the style that are seen in use by blasters and excavators. A long and heavy chisel-like bit or drill is used as one of a string of free-falling tools, which do their work by being raised from above and dropped again. In the most primitive form of oil-well a bent tree and a rope were used to elevate the tools; now a wooden, or preferably a steel, derrick, 70 to 80 feet high, is universally employed, a stationary engine, with a walking-beam, operating the bull-wheel, band-wheel, and ropes. The bull-wheels are mounted on a heavy shaft that carries a reel, on which is wound the principal cable used in rope-drilling. In beginning a well, a tool is suspended by a rope from a pulley at the top of the derrick, and this is jumped up and down until a hole is made large enough and deep enough to admit a string of tools. These tools are usually at least 70 feet in length, and consist of a temper-screw, hung from the walking-beam; below this, a cable, a rope-socket, a sinker-bar, a pair of sliding links called jars, the auger-stem, and, lastly, the bit. The temper-screw is so adjustable as to allow an attendant to give a partial rotation to the string of tools at every stroke. The sinker-bar is a heavy piece of metal, perhaps 20 feet in length. The jars have links which afford them 13 inches of play, and when a blow is delivered they allow the sinker-bar to bounce up, making it easier to withdraw the bit should it be jammed. The sinker-bar, jars, auger-stem and bit are attached by screwing the lower end of one into the head of the next, and so on. The upper part of an oil-well is made of eight inches diameter, to accommodate the drive-pipe, which is usually run down 300 to 400 feet, as far as the surface water penetrates, when a water-tight joint is made, and the casing, which is a 5½-inch pipe, is inserted, and the well continued down at that diameter. The lower end of the casing is closed when it is let down, in order that any water which has gathered may buoy up a portion of its great weight, and make the lowering easier. When the casing is down the drilling is easily continued by forcing the tools through its bottom. The casing-pipe forms the main part of the well and excludes the surface water, which may settle between it and the drive-pipe. Within the casing is inserted a smaller tube, commonly two inches, but sometimes from one to four inches in diameter, through which the oil is designed to flow. A temporary disk near the lower end of the tubing serves to keep out the oil until the proper time. At the extremity of the tubing is a perforated pipe called the anchor, which admits the oil, and prevents the entrance of large particles which might choke the well. The work of drilling is subject to numerous accidents through tools becoming jammed or broken hundreds of feet below the surface, and divers tools and devices have been invented to overcome these difficulties. If the various grabs, hooks or screws fail to bring up a lost tool or a broken part, a long tapering heavy instrument called a whipstock is forced down to one side of the lost part, and pounded until the impediment is crowded out of

the way sufficiently to allow the well to go on. If the drive-pipe becomes indented, it is necessary to lower into it a big swedge, rounded on the lower end, which will pound it back into shape. Sometimes the casing becomes loaded with sediment, and has to be split or cut off. In addition to rectifying such accidents, there is the regular work of stopping to pump out sand, for which purpose sand-pumps are provided. Bailers and swabs are used for cleaning the hole. The swab is a pipe with a rubber collar, and is often used to remove paraffin and the heavier oils. When the oil-sand is reached, drilling is suspended, and a torpedo let down. A pointed tool termed a "go-devil" is dropped on the torpedo and explodes it. The oil and gas then issue with tremendous force for a time, bringing up also a shower of dirt and small stones. When this subsides the tubing is lowered, and its weight causes a comparatively steady flow of oil, which may last for months or years. When it ceases, the well is pumped, and when it becomes dry the torpedo is used again, until no more is to be had. The average life of a well is about five years, but some have yielded for as long as fifteen years. Wells have been sunk which yielded oil when down but a little over 200 feet, and one was sunk in Sillesia, in Northern Austria, to a depth of 6,568 feet. It is usual to give each oil-well five acres of ground, though they are sometimes sunk more closely, in which case one is likely to draw what might flow through the other. About 65,000 oil-wells have been sunk in the U. S. and Canada, and the total number in the world is probably within 100,000.

Oil'-bee'tle, n. (*Entom.*) See MELÆE.

Oil'-bird, n. (*Ornith.*) The GUACHARO-BIRD (*q. v.*).

Oil'-box, n. A box containing a supply of oil for a journal, and feeding it by means of a wick or other contrivance.

Oil'-cake, n. The residuum of various seeds after expressing the oil, especially of linseed, rape, and cottonseed; it is used for cattle-feeding, and as manure.

Oil'-can, n. A can, of any size, usually made of tin, for holding or distributing oil.

Oil'-cellar, n. A receptacle in a journal-box, containing lubricating oil.

Oil'-distributor, n. (*Naut.*) A device by which oil may be spread over the surface of the sea to calm the waves in a storm.

Oil'-mill, n. A mill for pulverizing fruits, nuts, seeds, &c., from which oil is to be expressed.

Oil'-ring, n. A ring about a horizontal journal, dipping into an oil-cellar, and bringing oil to the journal at each rotation.

Oil'-river, n. A stream on the banks of which oil is found, or a river used for conveying oil.

Oil'-size, n. A size made of boiled linseed oil and chrome yellow, used with gold-leaf to cause it to adhere to any surface; gold-size.

Oil'-smell'er, n. A person supposed to be able to detect the smell of oil; used to determine profitable locations for oil-wells.

Oil'-spring, n. A spring which yields mineral oils, petroleum, naphtha, &c., with or without water.

Oil'-stove, n. A stove using oil as fuel for cooking or heating purposes.

Oil'-test'er, n. The finding of the flashing-point of oils is of importance, as indicating under what circumstances they may be used with safety. A number of tests for determining this have been either legalized or ordered by enactment of various states and governments. The Abel oil-tester is officially used in Germany, and to some extent in England. It consists of a holder filled with water, partially immersed in which is a smaller holder for the oil. A thermometer passes through the cover into the oil, so that its temperature can be regularly noted. The water being heated to 44° to 55° C., the oil is allowed to heat, and a sliding-bar is withdrawn from the top of the oil-holder and a flame tipped over the opening. If no flash results, the sliding-bar is closed, until the temperature of the oil rises one-half degree, when it is withdrawn and the flame again brought over the opening. This is repeated until the oil reaches a temperature where it gives off enough vapor to ignite, thus determining the flashing point. It is usual to make the test 3 times on each sample of oil, and to average the result of the 3. Very many oil-testers more or less similar to this have been devised, as the Parrish, used in Holland, in which the inflammable mixture is carried out of the petroleum-holder to a stationary flame; the Bernstein, in which the vapors evolved are displaced by water-pressure; the Saybolt, in which an electric spark serves for the flame; the Braun, having a magnetic pendulum arrangement for applying the flame; the Engler, having a stirrer for the oil; the Grey, having a stirrer for the oil and another for the vapor; and the Pensky, which is used for testing lubricating oils. Most of them employ a lamp to heat water, which so surrounds an oil-cup as to heat it gradually and uniformly.

Okan'ogan, n. In Washington, a N. co.; area, 7,258 sq. m.; bounded S. by the Wenatchee river and S. E. by the Columbia, and intersected from N. to S. by the Okanogan river. Surface, principally hilly, mountainous in parts; soil, sandy loam, very productive. Min. Gold, silver, lead, some iron, and coal. Plenty of timber. Stock-raising is the chief industry. Cap. Conconully. Pop. (1897) 2,550.

Okar'che, n. In Oklahoma, a post-village of Canadian co., 10 m. from Kingfisher. Pop. (1897) about 1,000.

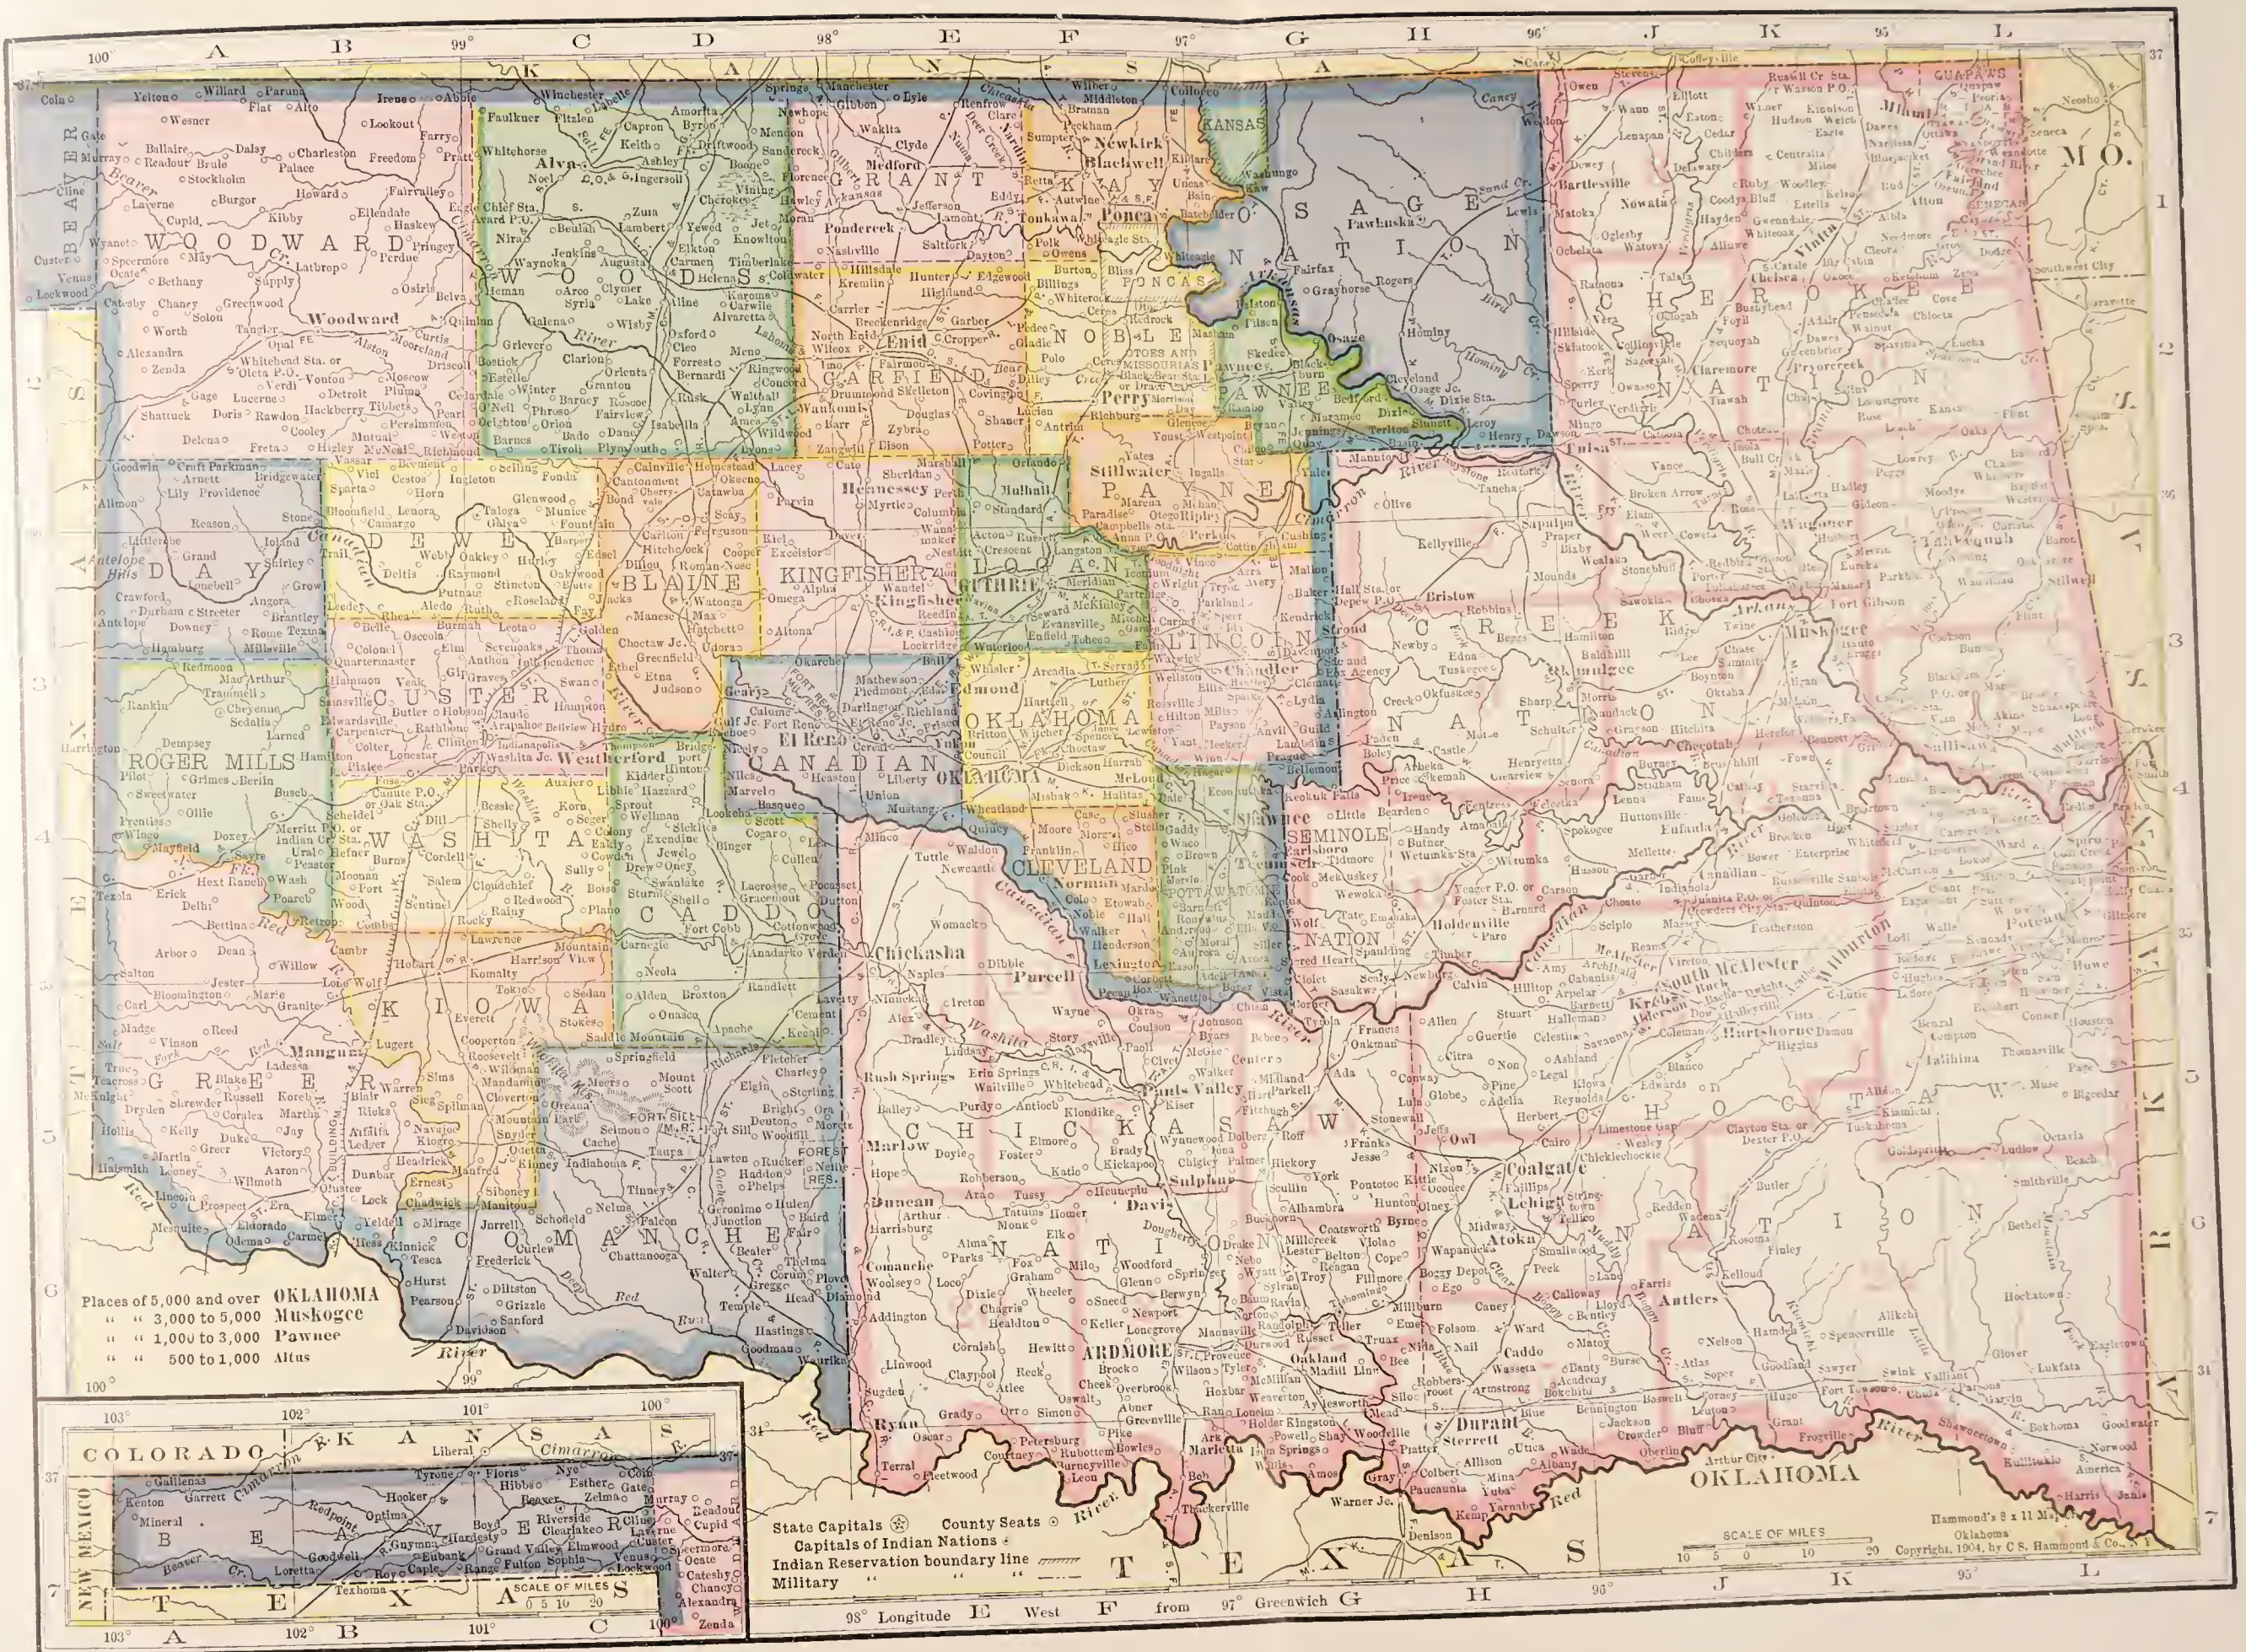

Okeene', n. In Oklahoma, a post-village of Blaine co., 24 m. W. of Hennessey. Pop. (1897) about 500.

also the narrow Public Land Strip left unassigned after the organization of Texas. It lies between Lat. 33° and 37° N., Lon. 94° and 103° W., and has an area of 70,430 sq. m. It is bounded N. by Kansas and Colorado, E. by Missouri and Arkansas, and S. and W. by Texas and New Mexico. The surface is mainly rolling prairie, with broad stretches of rich land along the streams and an abundance of timber. A broad belt of forest known as the "Cross Timbers," from 40 to 60 miles wide, extends north and south through the central region of the State. The eastern section—the recent Indian Territory—is fertile and well watered, and is broken in the S. and S. E. by groups of hills and low mountains, forming part of the Ozark range. The principal streams are the Arkansas and Red Rivers, which have numerous affluents. The western portion of O.—recently the Oklahoma Territory—has a lower rainfall and fewer streams, many of its water courses being so saturated with alkaline salts as to make their waters unfit for use. In the river valleys and some of the upland regions there are fertile spots, but much of this region resembles western Kansas in aridity during unfavorable seasons. The Public Land Strip, extending westward from the N. W. corner of the State and forming one of its counties, was formerly covered with cactus and sage brush, but is now a productive farming and grazing region. Though the climate of O. is generally mild, the average annual temperature being about 60°, it is subject to sudden changes produced by the "northerly" which are common in this part of the U. S. Yet the climate permits the staple products of both North and South to be cultivated; wheat, corn, oats, potatoes, and cotton being important products. Mineral wealth is abundant in the eastern section, and comprises coal, copper, iron, lead, zinc, and marble. Coal is extensively mined. O. has abundant means of railroad communication with the other states.

Hist. This region was originally set aside as a reservation for the Creeks, Choctaws, Chickasaws, and Seminoles of the South, but other tribes and remnants of tribes were subsequently removed to it. The present population of the former Indian Territory comprises many negroes, first introduced as slaves by the Indians, and whites, who entered as tenants. Intermarriage of the Indians with the negroes and whites has been so common that few true Indians remain. In 1866 the tribes ceded the western portion of their domain, which they had not occupied, to the United States, with the stipulation that it was to be reserved for settlement only by Indians and freedmen. Yet various efforts were made by whites to occupy the territory, and these became so persistent that in 1888 the U. S. bought the lands from their Indian owners and opened them to settlement on April 22, 1889. At the hour fixed more than 50,000 settlers crossed the border, and a year later the settlement was organized as Oklahoma Territory. In Sept., 1893, the President opened by proclamation some 6,000,000 acres more, and the rush of 1889 was repeated. The population increased so rapidly that the 78,475 of 1890 was augmented to 398,331 in 1900. During the same period the population of Indian Territory, now restricted to the eastern half of the original area, increased from 180,182 to 392,060, the increase being chiefly in whites. An agitation arose in the early years of the twentieth century for the admission of these Territories either as a single State or as two States. A bill was finally passed, June 16, 1906, for their admission as one State, to be known as Oklahoma. Its constitution was ratified by the President in Sept. 1907, it thus becoming the 46th State of the Union. *Pop.* (1900) 790,331.

A central co.; area, 750 sq. m.; intersected by the North Fork of the Canadian river. Surface, rolling; soil, red loam; timbered. Cap. Oklahoma City. Pop. (1900) 25,915.

Oklahoma City, a city, cap. of Oklahoma co., 31 m. S. of Guthrie. Pop. (1900) 10,037.

Oklahoma University of. (Educ.) This institution was established at Norman in 1892, by act of the legislature. It was endowed with 181,000 acres of land, from which is derived at present an income of \$7,000 a year. The total income was \$26,714 in 1896, when it had 7 instructors, 150 students, and 2,500 volumes in its library. It is co-educational and non-sectarian.

-ol. A suffix, an abbreviation of *alcohol*, denoting that a compound is a true alcohol.

-ole. A suffix, derived from Lat. *oleum*, oil, to denote a hydrocarbon.

Old Bailey. The building in which occur the monthly sessions of the Central Criminal Court of London, England; it is situated on Old Bailey Street, and adjoins Newgate Prison (*q. v.*). On the restoration of Charles II. to the throne the surviving judges of Charles I. were tried in the Old Bailey Court; and in the same place and year (1660) the hangman burned Milton's *Eikonoklastes* and *Defensio Prima*. Among other noted trials held here were those of Lord William Russell (1683), Jack Sheppard (1724), Bellingham (1812), and the Cato Street conspirators (1820). The judges of the Old Bailey Court are the lord mayor, the lord chancellor, the judges, aldermen, recorder, and common sergeant of London, but, among these, the lower officials most frequently preside. Crimes of every sort are tried here, and the record of the court-sittings runs back to the time when there were no records kept. For many years the sheriffs gave dinners to the judges at the Old Bailey; they were served twice a day, and were famous for their beefsteaks and marrow puddings.

Old Catholics. (Ecol. Hist.) After the Vatican Council in 1870 had decreed papal infallibility, a number of priests refused to be bound by that decree. They

seceded from the Roman Catholic Church and called themselves Old Catholics, professing to retain the whole Roman Catholic system with the exception only of the Vatican decree, which was regarded as a dangerous innovation. Dr. Dollinger did more than anyone else to incite to rebellion against the Vatican decree. He, however, declined to join the Old Catholics, which did not prevent his being excommunicated April 17, 1871, as being guilty of "the crime of open and formal heresy." The movement spread with considerable rapidity in Germany and Switzerland. The sect was formally organized by the election of Prof. Joseph Hubert Reinkens as bishop, who was consecrated by the Jansenist bishop, Heykamp, at Rotterdam, Aug. 11, 1873, and now resides at Bonn, on the Rhine, having been recognized in his new dignity by the Prussian government. Sept. 18, 1876, Bishop Reinkens consecrated Edward Herzog as bishop of the Old Catholics of Switzerland. Père Hyacinthe has recently declared himself an Old Catholic. Most in sympathy with the Church of England and the Protestant Episcopal Church in the U. S., the Old Catholics have never identified themselves with Protestantism in any form. At the synod held at Bonn, in 1878, a resolution was passed favoring the marriage of the clergy. The movement seems to be dying out.

Old World. The Eastern Hemisphere, including Europe, Asia, Africa, and Australia.

Old-fogyish, a. Having antiquated notions; extremely conservative; old-fashioned.

Old-ham, in Texas, a N.W. co.; area, 1,460 sq. m.; intersected by the Canadian river. Cap. Tascosa. Pop. (1890) 270.

Old Maid, n. A woman who remains single beyond the usual age of marriage; usually, but not necessarily, a disparaging term.

—A game of cards, in which, one card being removed from the pack, the cards are matched, and the one holding the unmatched card is "old maid."

Old-maid'ish, a. Having the characteristics usually attributed to an old maid; prim; fussy; peculiar.

Old-timer, n. One who has lived in a place or held a position a long time. Formerly, one belonging to, or clinging to, the views and habits of olden times.

Old-world, a. Inhabiting the Eastern Hemisphere.—Pertaining to a bygone age, antiquated.

O'leo, n. An abbreviation of *oleomargarine*.

Oleo. An initial compounding element (derived from Latin *oleum*, oil), denoting substances containing oil.

O'leograph, n. [*oleo*, and Gr., *graphō*, to write.] A picture produced by a process similar to lithographing, imitating oil-painting.

Oleomar'garine, n. Artificial butter made originally from beef fats, but now usually from oleo-oil, a deodorized product of other fats, neutral lard, milk, and pure butter, with a coloring matter. It was first made in France by M. Hippolyte Mège, about 1870. The process consists in repeated washing of beef fat in fresh water until it becomes a pure white fat. It is then cut up by machinery into fine pieces, and in this condition it is easily rendered, after which it is pressed until the butter-oil ceases to flow, leaving a cake of hard and white stearin. The butter-oil pressed out is collected and solidifies, when it may then be churned with milk and becomes oleomargarine, or oleo, or butterine, or suine, according to the taste of the person naming it.

Oleometer, n. An instrument, usually some form of hydrometer, for ascertaining the gravity of oils. One form has a weighted glass bulb and graduated tube divided into 50 degrees, and arranged to float at zero in pure oil of poppy-seed, and at 50° in pure olive oil.

Olfactometer, n. An instrument for measuring the acuteness of the sense of smell.

Oligocene System. (Geol.) A geological system of the Tertiary age, lying between the Eocene and Miocene, and formerly included within those systems. Its strata are widely distributed and rich in fossils, including an abundant flora, largely composed of modern genera, and a fauna comprising numerous strange mammalian forms. In physical conditions the O. differed little from those of the Tertiary strata generally, its climate being genial, but probably less tropical than that of the Eocene, and its land surface marked by great lakes, which afterward silted up.

O'lin, in Iowa, a post-town of Jones co., 14 m. S.E. of Anamosa; has a cheese factory, tile works, and creamery. Pop. (1895) 648.

O'iphant, LAURENCE, traveller, novelist, and mystic, was born in 1829, son of Sir Anthony O., chief justice of Ceylon. His first publications were *A Journey to Khatmudi* (1852), and *The Russian Shores of the Black Sea* (1853), both descriptive of his travels. He studied law, but never practiced; became private secretary to the Earl of Elgin, governor-general of Canada; afterward accompanied Lord Elgin on his embassy to China; published *Minnesota and the Far West* (1855), and *A Narrative of the Earl of Elgin's Mission to China and Japan* (1860). He was *chargé d'affaires* in Japan in 1861, when he was obliged to resign on account of having been severely wounded by assassins. He was a member of parliament for several years, and a magazine writer of note. He became absorbed in a religious mania, and joined a spiritualistic community in the U. S., under the influence of T. L. Harris (*q. v.*); subsequently broke away from this connection, and went to reside at Haifa, in Palestine, ultimately returning to London. His writings were numerous and varied, but chiefly of the nature of tourists' descriptions and clever social notions; of the latter may be mentioned *The Tender Recollections of Irene Magillicuddy*. In *Scientific Religion* (1888) is

embodied his peculiar religious opinions. Died Dec. 23, 1888.

O'iphant, MRS. MARGARET (WILSON), novelist and biographer, was born in Scotland, in 1820. Her first book was *Passages in the Life of Mrs. Margaret Maitland* (1849), and from that date she continued to publish stories at short intervals, until she has become one of the most voluminous novelists of the day. Some of her best novels are: *Adam Graeme, of Mossgray* (1852); *The Quiet Heart* (1856); *Miss Majoribanks* (1865); *The Chronicles of Carlingsford* (1866); *White Ladus* (1871); *The Heir Presumptive and the Heir Apparent* (1891), and *The Marriage of Elinor* (1893). She has written valuable biographies and critical sketches of many celebrated people, and her series of art and antiquarian volumes, *The Makers of Florence*, and *The Makers of Venice*; *Jerusalem, &c.*, are all of superior interest. She also wrote extensively on English history and literature. Died June 25, 1897.

Olive Oil. (Agric.) The culture of the olive-tree and the manufacture of oil from its fruit is gradually becoming a leading industry in California, in the valley of Santa Barbara and the foot-hills of Santa Inez. The olive is propagated almost entirely by cuttings taken from the sprouts and branches of mature trees at the time of pruning. These are placed in a perpendicular position in a bed of good soil, 6, 8, or 10 inches apart, their tops level with the surface. Here they remain, throwing out leaves and branches until April or May, when they are taken up and are set out in the orchard in rows about 25 feet apart each way. The ground between the trees may be cultivated for several years, with little or no detriment to the young trees. The process of extracting the oil as practiced in Santa Barbara is very simple. A large, broad stone wheel is held by an arm from a center-post, and drawn by a horse. The fruit is thrown upon this stone bed and is shovelled constantly in the line of the moving wheel until it is considerably macerated, but not thoroughly, and without breaking the stones. This process finished, the pulp is wrapped in coarse cloths or gunny sacks, and placed under a rude, home-made screw or lever press. The oil and juices, as they ooze through the cloth or sacks, flow into a small tank, and as they increase are distributed into other vessels, from the surface of which the oil is afterward skimmed. The oil flowing from this first pressure is that known as "virgin oil," and commands the highest price from connoisseurs of the table. Without further preparation the oil is now ready for use, except that, in order that any intrusive matter may be separated from the body of the oil and collected at the bottom of the oil cask or jar previous to bottling, it is set away for a time to rest. The "second-class oil" is the result of a second and more thorough crushing of the berries, in which even the stones are broken, and of a subsequent selection of the pulp to the press. The berries are sometimes submitted even to a third process of crushing; and, previous to pressure, are brought to a boiling heat in huge copper kettles. The oil thus obtained is of an inferior quality, and is sold for use as a lubricator, and also as an ingredient in the manufacture of castile and fancy toilet soaps, and for other purposes, for which it is superior to animal oil. The tree at 5 years of age returns a slight recompense for care; and at 7 an orchard should afford an average yield of about 20 gallons of berries to a tree. Thus an average yield of olives derived from an orchard covering one acre of land, will produce about \$800 worth of oil. After deducting the entire cost of production and manufacture, a net profit may be anticipated of at least \$2 per gallon. A large part of the oil sold in America, and purporting to be olive-oil of European manufacture, is the product of adulteration and imitation. It is generally manufactured in this country, and is composed principally of animal oil, though mustard-seed oil and other inferior vegetable oils also form materials for its adulteration. Every one familiar with the nature of olive-oil knows that it retains its perfect transparency and uniform oily consistence under any temperature. Animal oil condenses under the influence of cold, but vegetable oil does not. The genuine oil glows clear beneath the glass in all weathers; the adulterated oil turns flaky with the cold. It is an advantage, also, of the genuine "virgin oil," obtained by home manufacture, that it retains its perfect sweetness longer than any other oil.

Olive-branch, n. A branch of an olive-tree; figuratively, an emblem of peace.

(Humorous.) A child; founded on Psalm cxxviii., 5 (usually in the plural).

O'iver, n. [From name of inventor.] A small lift-hammer, worked by the foot. The head is about 2½ inches square and 10 inches long, with a swage-tool, having a conical crease attached to it; and a corresponding swage is fixed in a square cast-iron anvil-block, about 12 inches square and 6 deep, with round holes for punching, &c.

O'iver, in North Dakota, a S.W. central co.; area, 720 sq. m.; bounded on the E. by the Missouri river. Surface, rolling prairie; soil, well adapted to grains and vegetables. Cattle, sheep, and swine are largely raised. Cap. Sanger. Pop. (1890) 464.

Oliver Springs, in Tennessee, a post-village of Anderson co. Pop. (1897) 725.

O'ivet, n. An imitation pearl, used for heads and in traffic with savages.

Olivet, in Michigan, a post-village of Eaton co., on the Chicago & Grand Trunk R.R., 27 m. S.W. of Lansing; in a fine farming region. Seat of Olivet College (Congregational). Pop. (1894) 783.

Oliz-, Olizo-. An initial compounding element, from *Gr. olizos*, few, little, denoting smallness of proportion, fewness, littleness.

Olmstead, FREDERICK LAW, landscape gardener, was born in Hartford, Conn., April 26, 1822; attended Yale College, taking studies bearing upon agriculture. In 1848 he turned his attention to landscape gardening, making a walking tour through England and parts of the Continent, observing the conditions of this art in the older countries. This tour he described in *Walks and Talks of an American Farmer in England* (1852). A few years later he journeyed through the Southern States, observing agricultural conditions under the institution of slavery, and publishing his experiences in several volumes. During the Civil War he was secretary of the Sanitary Commission; in 1863-65 he was a member of the California Yosemite Restoration Commission. He superintended the laying out of Central Park, New York; the Capitol grounds, Washington; the World's Fair grounds, in Jackson Park, Chicago (1893), and various parks in Brooklyn, Buffalo, Chicago, &c. Died August 28, 1903.

O'ney, RICHARD, lawyer and statesman, was born at Oxford, Mass., Sept. 15, 1835; graduated from Brown University, and studied law at Harvard, beginning practice in Boston; was a member of the State legislature in 1874, and was once defeated as the Democratic nominee for attorney-general of Massachusetts. In 1893 he was made U. S. attorney-general in Mr. Cleveland's Cabinet; and upon the death of Mr. Gresham he was appointed secretary of state (June 10, 1895), administering the affairs of that office with so much force and brilliancy that his retirement (March, 1897) was a source of genuine regret to very many of the opposite political party. Mr. O. has since resumed the practice of law in Boston. An evidence of his broad judicial temperament—and also, perhaps, of his political sagacity—was seen in his letter to the Brown University corporation (August, 1897), severely criticising the course of action which had led to the resignation of the former president, Dr. E. Benjamin Andrews, a few weeks before.

O'logy, n. (*Humorous.*) Any branch of learning or science.

-ology. A terminal compounding element, derived from *Gr. logos* (the *o* being prefixed or derived from the initial element), word, discourse; denoting, usually, a branch of science.

Oloza'ga, DON SALUSTIANO, a Spanish statesman, was born at Logroño, in 1803. Elected a member of the Cortes, he led the opposition against the Isturiz Ministry in 1835, and in the year following gave his support to the Mendizabal Cabinet, after the overturn of which he became the chief of the monarchical opposition. From 1840 till 1843 he held the ambassadorship at Paris, after which he was entrusted with the formation of a new Cabinet, which however, owing to the intrigues of Narvaez, had but a brief existence. He became a member of the Ministry of 1868, and president of the Constitutional Committee appointed by the Cortes, and in February, 1871, was again made Spanish ambassador at Paris, a position he resigned in April, in consequence of his having been elected president of the Chamber of Deputies at Madrid. Died in 1873.

Olyphant, in Pennsylvania, a post-borough of Lackawanna co., 6 m. N. E. of Scranton; has extensive collieries and heavy shipments of coal. *Pop.* (1897) 4,540.

Om-, Omo-. An initial compounding element, derived from the *Gr. omos*, shoulder.

O'maha, in Illinois, a post-village of Gallatin co. *Pop.* (1897) 500.

Ombrograph, n. [*Gr. ombros*, rain storm, and *graphō*.] An instrument for recording, automatically, the quantity and rapidity of a rainfall and the time of occurrence.

O'men, in Texas, a post-town of Smith co., 5 m. N. of Troupe. *Pop.* (1897) 600.

Omi'cron, or Omikron. [*o* and *mikron*, little.] The fifteenth letter of the Greek alphabet, corresponding to English short *o*. So called by the Greeks to distinguish it from *omega*, great, or long *o*.

Omini-. An initial compounding element, derived from the *Lat. omnis*, all, denoting universality.

Omopha'gia, n. [*Gr. omos*, raw, and *phagō*, to eat.] The eating of raw flesh.

Omph-, Omphalo-. An initial compounding element, from the *Gr. omphalos*, the navel.

Omphalism, n. [*Gr. omphalos*, the navel, a center.] Locating, or a tendency to locate, the capital of a country at its geographical center; hence, a tendency to strengthen a central government at expense of its subordinate local governments.

Omphalop'agus, n. A double monster united at the navel; as the Siamese twins.

Ona'ga, in Kansas, a post-village of Pottawattomie co., 20 m. N.W. of Westmoreland. *Pop.* (1895) 519.

On'ager, n. (*Zoöl.*) The large, horse-like, wild ass (*Equus onager*) of the Central Asian deserts from Persia to Sind, remarkable for its fleetness. Also called *KULAN*. Compare *KIANG*.

Onco-. An initial compounding element, derived from the *Gr. onkos*, mass.

On'come, n. [*Scot.*] The first part of any undertaking. (*Med.*) A mysterious attack of disease.—A swelling or gathering.

Oncosim'cter, n. [*Gr. onkosis*, swelling, and *metron*, measure.] A device for ascertaining the specific gravity of a molten metal, by immersing in it a ball of known weight made of a different metal.

-one. (*Chem.*) A suffix used as an abbreviation of acetone or ketone.

Onei'da, in Idaho, a S. E. co.; area, 2,700 sq. m. *Rivers.* Bear, Snake. *Surface*, mountainous; *soil*, fertile. Has rich gold and silver mines. *Cap.* Malad City. *Pop.* (1890) 6,819.

Oncida, in Wisconsin, a N. central co.; area, 936 sq. m.; drained by the Wisconsin, Tomahawk, Little Rice rivers, and numerous smaller streams and lakes. *Cap.* Rhinelander. *Pop.* (1895) 7,060.

O'Neill, in Nebraska, a city, cap. of Holt co., 60 m. W. S. W. of Yankton, Dak. *Pop.* (1897) 1,500.

Oneir-, Oneiro-. An initial compounding element, derived from the *Gr. oneiros*, a dream.

Oneirology, n. The science of dreams; a study or collection of dreams with their interpretation.

Onise-, Onisci-, Onisco-. An initial compounding element, derived from the *Gr. oniskos*, a wood-louse.

Onocent'aur, n. [*Gr. onos*, an ass, and *kentavros*, centaur.] (*Myth.*) A fabulous monster, represented in ancient sculpture, with a body partly human, partly asinine.

Ontario. The most populous province of the Dominion of Canada. It was known as Upper Canada until 1867, when it adopted its present name when it joined Quebec (formerly Lower Canada), New Brunswick, and Nova Scotia in political union. Ontario lies between Lat. 42° and 53° N., and Lon. 74° and 95° W., extending about 1,200 miles north and south, and nearly 700 east and west, its area being approximately 222,000 sq. m., of which 2,350 are water surface. The older and more thickly settled portions of the province are those which adjoin Lakes Erie and Ontario. In 1868 the wide territory to the northwest, which had long been under the control of the Hudson Bay Company, was acquired, and settlement spread with some rapidity in this direction. The boundaries of Ontario to the N. and W. were not finally settled until 1878, when arbitrators made a satisfactory arrangement between the several provinces and territories concerned. The older portions of the province are of low elevation, nowhere exceeding 1,000 feet; but north of the St. Lawrence basin the country presents an aspect of greater boldness, the Laurentian Hills here crossing the province, though reduced to a hummocky plateau which is known as the Height of Land. This ridge forms the watershed between Hudson Bay on the N., the Ottawa on the E., and Lakes Nipigon and Superior on the W. In addition to Nipigon, the province embraces Lakes Nipissing, Muskoka, and Simcoe, with numerous smaller ones.—*Geol.* Ontario is composed almost completely of Archaean and Palaeozoic strata, which have been little disturbed during the later ages, but greatly denuded, the rocks that resisted denudation remaining as hills. East of Kingston and Ottawa Silurian limestones appear, and between Kingston and Georgian Bay are Devonian strata, while the mineral-bearing area, extending from Georgian Bay to Lake Winnipeg and northward, consists of Laurentian gneisses and granites, with many areas of volcanic rocks. In the upper valley of the Ottawa occur fossil-bearing Cambro-Silurian rocks, overlying Laurentian strata. A wide belt of Huronian deposits crosses the country from S.W. to N.E.—*Climate.* The country is one of pleasant summers and cold winters, though the cold is extreme only in the uninhabited northern region. In the southern section it is bracing and easy of endurance, while the snows are of much service to the lumbermen and farmers. The mean winter temperature varies in several sections of the southern district from 9° to 24°, and the summer from 58° to 65°.—*Soil and Products.* Much of the country is still in forest, which covers in all about 100,000 sq. m. of area, while of the occupied land (about 25,000,000 acres) about one-half has been cleared, and nearly 12,000,000 acres are woodland and marshes. 8,000,000 acres of cleared land are devoted to agriculture, 2,500,000 to pasture, and nearly 200,000 to horticulture. Nearly all the useful grains and roots can be cultivated, oats being the leading cereal crop, though the yield of wheat is also large. The other important crops are barley, pease, turnips, potatoes, and hay. The orchards are devoted mainly to the hardy fruits, apples giving usually a profitable yield, while the same may be said of plums and cherries. The peach is grown in the Niagara district, while there is an excellent yield of grapes and berries in the Lake Erie and Ontario districts. Domestic animals are raised in large numbers, the total value of the live stock being estimated at over \$100,000,000, while the wool-clip is large and valuable. Special attention has been paid to the breeding of carriage and saddle horses.—*Minerals.* There is considerable mineral wealth, particularly in the country between Lake Nipissing, Port Arthur, and the Lake of the Woods. The minerals here consist of gold, silver, copper, nickel, iron, lead, zinc, and plumbago, with granite, marble, and freestone in large deposits. Most of these metals also occur in the central and eastern countries, and also phosphates and other mineral fertilizers. Salt, petroleum, and gypsum occur in the western section.—*Pol. Div., &c.* Ontario is divided into 42 counties and 6 districts. The principal cities are Toronto (the capital), Hamilton, Ottawa, London, Kingston, Brantford, Guelph, St. Thomas, Windsor, Belleville, Stratford, and St. Catharines. The governing powers consist of an executive council and a legislative assembly, with a lieutenant-governor, who has a cabinet of 8 members. The legislature sits for 4 years, but may be dissolved by the lieutenant-governor. Matters of a general character are under the jurisdiction of the Federal government sitting in Ottawa, and controlling the affairs of the dominion.—*Education.* There is a free school system of growing importance, the province expending more than \$4,000,000

on its public schools, which have an enrollment of about 500,000, and over 250,000 attendance. There are 2 normal schools, and excellent provision for the higher education. At the head of the system stands Toronto University, while there are various colleges of good standing. Ontario has no public debt. It has about 8,000 miles of railway and a number of important canals, while its position on the Great Lakes has greatly stimulated its commerce. *Pop.* (1901) 2,182,947.

Ontario, in California, a post-village of San Bernardino co., 38 m. N. of Los Angeles. *Pop.* (1897) 760.

Ontog'ney, n. [*Gr. on* (gen. *ontos*), being, and *genesis*, origin.] The history of the development of the individual; germ-history.

Ontography, n. [*Gr. on* (gen. *ontos*), being, and *graphō*, to write.] A description of the nature of beings.

Ontologism, n. [*Ecl. Lat. ontologismus.*] The doctrine that the human intellect has an immediate consciousness of God as its proper object and the principle of all its cognitions.

Onych-, Onycho-. An initial compounding element, derived from the *Gr. onyx*, claw, or nail.

On'ycha, n. [*Lat. onyx*, mussel.] An ingredient of the Mosaic incense (*Exodus xxx., 34*), probably an operculum of a mollusk of the genus *Strombus*.

On'ychite, n. (*Petrol.*) A kind of marble or alabaster, with brown and yellow veins.

Oo'lakan, n. See *CANDLE-FISH*.

Oo'ri. (Geog.) An African river forming part of the northern boundary of the South African Republic. It flows into the Indian Ocean and has a length of about 900 m. Same as the LIMPOPO; also called BEMPE, CROCODILE RIVER, and INHAMPERA.

Ooze, n. (Geol.) Large areas of the floor of the oceanic basins are covered with a soft chalky mud called ooze. Thousands of square miles of this have been found in both the Atlantic and Pacific. A sounding-lead dropped upon it sinks deeply, and hundreds of specimens have been brought up. (See *SOUNDINGS, DEEP-SEA.*) A dredge is filled at once with this fleecy deposit. The upper layer, says Geikie, is a yellowish, creamy, somewhat sticky substance, full of entire and broken shells of minute animal organisms (infusoria, and the like), together with fragments of sponges and other submarine creatures. Underneath this surface-layer the ooze shows the shells in a more crumbling state, and no doubt in the deeper parts of the deposit, which the dredge cannot reach, the substance may consist only of a kind of fine chalk, formed almost entirely of the mouldered remains of these lowly forms of life. (See *CHALK.*) The principal constituent of the ooze, however, is the calcareous (chalky) part of the skeletons of a microscopic animalcule (a reticularian protozoan) known as *Globigerina*, which, in many species, exists near the surface of all oceans in countless multitudes, and whose coiled, nautilus-like shells begin to sift slowly down to the bottom as soon as the animal dies. It is a striking commentary on the lapse of time in the history of the world that this minute creature, and slow process of deposit, have been able to build up the great deposits of chalk and the thick beds of oceanic ooze of which we know.

Opeid'oscope, n. [*Gr. ops* (gen. *opsis*), voice; *eidōs*, form; *scopeo*, to see.] An instrument giving a visual illustration of sound by means of the movements of a ray of light reflected from a mirror upon a screen.

Open Sesame (sis'a-my). The words, constituting a magical charm, by which, in the story of *Ali Baba and the Forty Thieves*, the door of the cave was opened. Hence, any specific for opening closed doors or gaining entrance to a secret place.

Op'era Bouffe. [Fr.] A French term—corresponding to the Italian *opera buffa*—for a farcical comic operetta. See *OPERA*.

Oph-, Ophido-, Ophio-. An initial compounding element, derived from the *Gr. ophis*, a serpent.

Ophiur-. An initial compounding element, derived from the *Gr. ophiouros*, serpent-tailed.

Ophthalm-, Ophthalmo-. An initial compounding element, derived from the *Gr. ophthalmos*, eye.

Ophthalmostat, n. [*Gr. ophthalmos*, and *statos*, fixed.] (*Surg.*) An instrument for holding the eye in a fixed position to facilitate an operation.

Opia'ic, a. Pertaining to or derived from opium or narcotic.

O'pie, MRS. AMELIA (née ALDERSON), novelist and poet, was born Nov. 12, 1769, at Norwich, England. She was a voluminous writer of stories, sketches, and poems, and a brilliant figure in social life, mingling with the most distinguished people of the day in London and Paris. In her later years she joined the Society of Friends, and ceased to write novels, but retained her characteristic gaiety of spirit to the end. She was married to John Opie, the painter, on May 8, 1798. Died Dec. 2, 1853.

Opic, JOHN, painter, was born at St. Agnes, Cornwall, in May, 1761. In early childhood he evinced a mathematical bent, but his art tendency proved stronger still. With the encouragement and assistance of Dr. Walcot ("Peter Pindar"), he pursued his studies, and secured patronage as a portrait painter. Sir Joshua Reynolds also aided him by his advice and approbation. In 1782 he began to exhibit at the Royal Academy. A few years later he was largely employed in painting pictures for the important illustrated works of the day; notably, for *Boydell's Shakespeare*, *Macklin's Poets*, and *Hume's History of England*. In 1805 he was elected professor of Painting to the Royal Academy, and his series of lectures there are accounted among the best contributions to critical literature. His marriage to Amelia Alderson, the writer, was most happy. He worked incessantly, on lectures and paintings, until early in 1807,

when his health failed, and after a few months' struggle to finish his work for the Academy exhibition, he died, April 9, 1807, and was buried, with some pomp, in St. Paul's Cathedral.

Opisometer, n. [Gr., *opisō*, backward, and *metron*, measure.] An instrument for measuring an irregular line. It has a thin wheel set to rotate on a screw-thread. By rolling it over an irregular line, and then backward over a straight line till it returns on the thread to the point of starting, and measuring the straight line traversed, the length of the irregular line is ascertained.

Opisth-, Opistho-. An initial compounding element, derived from the Greek *opisthen*, behind, at the back.

Opisthograph, n. A manuscript or a slab inscribed on the back as well as the front.

Opopanax, n. [Gr., *opos*, juice, and *panax*, kind of plant, all-healing.] (*Bot.*) A genus of *Umbelliferae*, the parsley family.

(*Chem.*) The resinous juice from the roots of *Pastinaca opopanax*. It occurs in lumps of a yellowish-red color, with a bitter acrid taste and a peculiar odor; used in pharmacy.

Opfert, JULES, Orientalist, was born in Hamburg, Germany, July 9, 1825; studied at several leading German universities; was professor of German in the lycéums of Laval and Rheims, France, and was a member of a government scientific expedition to Mesopotamia. In 1854 he received the grand prize of 20,000 francs, from the French Institute, for his method of deciphering the cuneiform inscriptions. He taught Sanskrit, and in 1874 became full professor in the College of France. He has published, *Assyrian Studies* (1860), a *Sanskrit Grammar* (1857), *Babylonia and the Babylonians* (1869), *Mythological Fragments* (1882), &c.

Opportunist, n. One who endeavors to turn circumstances to the advantage of himself or his party; one who accepts what comes nearest to his ideal and acts upon it. In France, a member of the moderate faction of the Republican party led by Gambetta.

Opposition, n. (*Logic.*) The relation between any two judgments which have the same matter but a different form, the same subject and predicate but a different quantity, quality, or relation. *O.* may be contradictory, contrary, subcontrary, or subaltern.

Opsomania, n. [Gr.] (*Pathol.*) An insane or morbid craving for some particular food; daintiness in regard to food.

Optic, OLIVER. See ADAMS, W. T.

Optigraph, n. An instrument for copying landscapes, the rays of the object to be drawn being reflected from a plane mirror through the object-glass of the instrument to a speculum, and thence through an eye-glass to the eye. Between the eye and the speculum is a piece of parallel-faced glass, with a dot in the center exactly in the focus of the eye-glass. By moving the pencil, the dot seen in the field of the telescope is passed over the outlines of the object, which are at the same time traced on the paper by the pencil.

Optimum, n. [Lat.] (*Bot.*) The conditions that produce the best results; the combination of conditions producing the best average result; the mean of two or more maximum or minimum effects representing the most favorable result.

Opto-. An initial compounding element, derived from the Gr. *optikos*, optic.

Optogram, n. (*Optics.*) An image of the last object seen before death, said to be retained on the retina.

Optography, n. (*Optics.*) The photo-chemical process of bleaching an optogram into the visual purple.

Oquirrh (*Ōkwēr*), *n.* A mountain range in Utah, forming the boundary between Tooele and Utah counties, and extending south from the Great Salt Lake. It contains some of the richest silver mines in the country. Its sterile peaks form a striking and beautiful feature of the landscape viewed from Salt Lake City.

Orange, in California, a S. co.; area, 740 sq. m.; drained by the Santa Ana river and Alisos creek. Cap. Santa Ana. Pop. (1897) 15,000.

Orange, in California, a post-village of Orange co., 30 m. S.E. of Los Angeles; center of the raisin production of southern California. Pop. (1897) 1,200.

Orange City, in Iowa, a post-town, cap. of Sioux co., about 45 m. N.N.E. of Sioux City; has a cheese factory and flour mill, ships grain and live stock. Pop. (1895) 1,480.

Orange Culture in the United States.

Oranges are cultivated with more or less success along the Gulf and Atlantic coasts of the United States from the Rio Grande to the sea islands of South Carolina, and in California; but Florida, Louisiana, and California are the only States which have raised more than enough for home consumption. The sour or bitter orange, known as the wild orange in Florida, is not native to America, as is sometimes stated, but has naturalized itself in the tropical and sub-tropical regions, having escaped from early Spanish gardens. It grows in thickets in Florida and South America; candied orange-peel and marmalade are made from its fruit, and its bark, leaves, and flowers yield various extracts useful as medicines and perfumes; it is sometimes cultivated as an ornamental tree, but its chief value horticulturally is as a hardy stock on which any variety of sweet orange may be grafted. Like most other fruits, oranges do not reproduce their characteristics accurately by seed, the only way of keeping the varieties true being to propagate by budding or grafting. Some growers prefer to use seedling sweet oranges as a stock, for in that case if the tree is frozen to the ground the sprouts from the roots will still bear edible oranges, but others claim a greater hardness for the wild-orange stock, and think it equally

available, as seedling sweet oranges are usually inferior in quality to the named varieties, so that the new growth should be grafted in any case. Although sweet oranges have been grown ever since the early settlement of Florida and Louisiana, most of the large Florida groves have been planted within thirty years; in spite of repeated injurious freezes, the orange acreage steadily increased in Florida up to 1894-5; in Louisiana there is rather less attention to orange-growing now than formerly, and as the conditions governing the orchards there do not vary materially from those in Florida, they do not need separate consideration. The "Orange Belt" of Florida, though often spoken of as the middle portion of the State, might more properly be said to cover the whole State, as a large part of the crop is grown along the banks of the St. John's river, as far north as Jacksonville; and even the extreme southern end of the peninsula is not free from frost. The high and the low-lying districts, and the districts having peculiarities of soil, all claim to be specially adapted to orange culture, but the only result is to prove that the orange itself is adaptable, suiting itself to varied conditions, although certain varieties are evidently best suited to certain districts; Florida oranges, as a whole, are acknowledged to be among the finest in the world, and certainly the finest in America, surpassing the California oranges in tenderness, thinness of skin, and juiciness. Among the famous Florida orange groves are the Dummit grove, on Indian river near Hanover, Brevard county; the Harris grove, near Citra, Marion county; the Belair groves, near Sanford, Orange county; and the Tiger Tail Island grove, near Homosassa, Citrus county. Young orange groves, even in southern Florida, have often been more or less injured by frosts which set back their growth for a year or two, but did no very serious damage; of late years, however, the damage by cold has been more serious. In 1886 there was a cold wave during which the thermometer registered 15° at Jacksonville, and many of the groves in northern Florida were seriously cut back; such cold had not been known since 1835, at which time there were no important orchard interests; orange growers hoped that as long a time would pass before it occurred again, but in December, 1894, there was a blizzard, during which the mercury sank to 14° at Jacksonville, and almost as low in the middle and southern part of the State; the crop had been an exceedingly large one, and a great part of it, as much as 3,000,000 boxes, had not been picked, and was frozen upon the trees; although a quantity of the frozen fruit was eaten and shipped away while still fresh, the greater part of it was an entire loss. The leaves and younger branches were frozen too, and after a few weeks the leaves fell off, leaving the trunks of the trees unprotected against a second cold wave of equal force, which occurred early in February, 1895, completely destroying whole groves and injuring well-protected trees, far below Tampa Bay and Jupiter Inlet. Unprotected trees were injured as far south as 26° 39', but the damage south of 27° was not serious. Every effort has been made to reclaim these frozen groves by regrafting the root-stocks or the shoots which they send up, but with the utmost care and success it was several years before the acreage of bearing trees in Florida became as great as it was in the fall of 1894, when the estimated crop was 5,000,000 boxes. The cultivation of the orange in California was first undertaken by the Catholic missions in the latter part of the 18th century. The first American settlers found trees at San Gabriel, Los Angeles county, which were in full maturity, and of which no one knew the age. From 1850 to 1860 some extensive orchards were planted around Los Angeles, and about the same time experiments were made in San Bernardino and elsewhere. These orchards matured without difficulty and produced fruit which sold for good prices. The period from 1865 to 1875 was marked by heavy immigration to California, and many orange orchards were planted, mostly in Los Angeles and San Bernardino counties, in the latter the celebrated orange-growing settlement of Riverside being founded in 1871. In 1876 the Department of Agriculture sent to Riverside two navel-orange trees, imported from Bahia, Brazil, and although various navel oranges had already been tried in Florida and California, this Bahia, or Riverside, navel took precedence of them all, and in California, became the most widely planted orange in the State on account of its skin, seedlessness, juiciness, and good flavor. Oranges are now planted in various districts of California, as far north as Butte and Tehama counties. Oddly, the northern crops ripen first, and are marketed before the southern reach maturity. The orange is not successfully grown in the California coast regions, and it is almost everywhere subject to various insect pests which have proved more serious there than in Florida, where the frosts which injure the trees do a little good by also destroying parasites. The scale insects, a great variety of which infest orange trees, are the most serious pests. A few years ago the cottony cnsion scale, or fluted scale (*Icerya purchasi*) was destroying the orange groves of Southern California so rapidly that some growers lost hope and cut down their trees, but its lady-bird enemy (*Novius cardinalis*) was introduced from Australia, the original home of the fluted scale, and by help of the lady-bird, by fumigating with hydrocyanic gas, and by spraying the trees, the scale is now under control. This fluted scale has never reached Florida, but various other scales are prevalent there; the whole subject of scales will be considered under the heading, SCALE INSECTS. The "rust mite," a minute insect which lives upon the essential oil of the orange skin, and produces the dis-

coloration known as rust, is prevalent in Florida, but not in California; it does not affect the quality of the fruit, but injures its appearance and consequently its market value; experiments in spraying show that it, also, may be combatted by proper care. Various diseases, notably the "die back" and the "foot rot," both attributed to fungi, are troublesome in Florida, but may usually be avoided by attention to the general health of the trees. In spite of the increase of orange cultivation in the U. S., the home supply does not yet equal the demand, and oranges are annually imported to a considerable extent. This, however, may soon be overcome by the increase of acreage under orange culture.

Orange River, the largest river of South Africa, rises in the Kuthlamba Mountains, east of Basutoland, and flows west, inclining to the north, to the Atlantic Ocean. In its course of 1000 miles, it describes numerous wide curves, and formed the southern boundary of the former Orange River Free State. Area of basin 325,000 sq. m. It is also known as the Gariep, and has several tributaries, of which the principal are the Caledon and the Vaal. The latter gave the name to the Transvaal Republic, which it bounded on the south. Its volume varies greatly between the rainy and dry seasons. In the former it overflows in its upper course, and in the latter it is not navigable. Its mouth is obstructed by a bar.

O'rant, n. [Lat. *oro*, to pray.] (*Art.*) A worshipper.

Orate', v. a. [*Oration.*] (*Humorous.*) To deliver an oration, make a speech, harangue.

Orbigny (*ōr-bān'yā*), CHARLES DESSALINES D', a French naturalist, was born at Loire-Inférieure, 1806; became assistant in the Museum of Natural History, Paris, in 1835. His works embrace *Tableaux Synoptiques du Règne Végétal* (1834); *Dictionnaire Universel d'Histoire Naturelle* (1839-40); *Dictionnaire Abrégé d'Histoire Naturelle* (1842). Died in 1876.

Orbit-, Orbito-. An initial compounding form, derived from the Lat. *orbita*, orbit.

Orches'trion, n. (*Music.*) A large musical instrument constructed on the principle of a hand-organ, designed to imitate an orchestra in force and variety of tone.

Ord, EDWARD OTHO CRESAP, U. S. A., was born in Cumberland, Md., Oct. 18, 1818; graduated at West Point (1839); served in the Florida War until 1842; on duty on the frontier until the Civil War. In Sept., 1861, he was appointed brigadier-general of volunteers, and commanded a brigade of Pennsylvania Reserves. On May 2, 1862, he was transferred to a command in the Department of the Mississippi, with rank of major-general of volunteers; commanded the 13th Army Corps during the siege and capture of Vicksburg and capture of Jackson; in July, 1864, commanded the 8th Army Corps and the troops in the Middle Department. In Jan., 1865, he was given the command of the Army of the James and the Department of Virginia, and took part in the closing operations around Richmond; subsequently he was given the Department of the Ohio. In Sept., 1866, he was mustered out of the volunteer service, with rank of brigadier-general in the regular army. He commanded various departments from 1866 to 1880; retired in 1881, with rank of major-general, and died July 12, 1883.

Ord, in Nebraska, a post-village, cap. of Valley co., 68 m. N. of Kearney. Pop. (1897) 1,450.

Ore-crushing and Dressing Machinery. The first coarse crushing of ore is done with machines similar to or identical with rock-breakers. The Blake, Krom, Dodge, Buchanan, Fulton, and other crushers have upright jaws, one of which oscillates and crushes the ore as it works down. The Comet is a rotary crusher, and there are a few other forms. The old-fashioned stamp-mill, with its sets of upright wooden bars, raised

Fig. 3011.—HYDRAULIC SEPARATOR.

by cams, and dropped by gravity on the ore which was to be crushed, are being replaced in large ore-crushing establishments by the steam ore-stamp, which is constructed on the principle of the steam-hammer. This is an enormous and powerful machine, the largest size made weighing 70 tons and standing 30 feet high. It is capable of crushing 35 tons of ore in five hours, with a consumption of one ton of coal. The frame is pyramidal, having four stout columns, centering on a top

ring, in which is placed the steam-cylinder. The piston-rod of the cylinder descends vertically, and carries at its lower end a powerful stamp, which delivers its blow, not only by the force of its gravity, but by the added force of a strong pressure of steam behind the piston. The valves are arranged with elliptical gears, so as to admit but a small quantity of steam for the up-stroke of the piston, and reserve as much steam as possible for the down-stroke. A rubber disk is introduced between the piston and the stamp-stem, so as to preserve the cylinder from too much jar. A very heavy cast-iron mortar or anvil contains the ore, and receives the force of the stamp's blows. It is usually set on a base of spring-timbers, with a rubber cushion between to take up the vibration, but recently some have been built on a solid, unyielding base. Both ore and water are fed in at the top of the mortar, the discharge being from the lower corners. For soft ores, many prefer to

steel circle, called a ring-die, resembling a heavy wagon-tire set on its side. Within this die revolve several crushing disks, suspended from above, so that their bearings are entirely out of the way of the slimes, and so retain long life and wear. These crushing-disks bear against the inside of the ring-die with centrifugal force. A screen retains the ore until it is of the desired fineness. The Sturtevant mill, which is suited to coarse crushing, resembles a cement-mill, having two cylindrical heads rotating oppositely within a screen-lined

Golden Gate concentrators, and the Lubrig vanner. The revolving buddle or slime-table is largely used, the Evans being perhaps the most common form. It presents a table 14 feet in diameter, having the central part slightly elevated or coned. Ore and water being fed at the top and the table rotated, the ore and slimes are separated as they wash across, and are discharged at different points along the circumference. Another form of the table has the lowest point at the center, the ore and water being fed in from the circumference. In yet another form the table is stationary, and a feed-spout and wash-pipes travel around the outer edge. Two-story slime-tables are also used, which give better separation, though with all of them it is necessary to use material partially classified in advance. The Collum buddle resembles the Evans, but has light brooms which sweep half the table and assist the separation. In Germany percussion-tables are much used in place of vanners and buddles. In these the table is regularly jarred sideways, by a cam and spring, while the water washes the table downward, and the heavy particles are thus worked along diagonally. Iron ores require to be prepared for smelting much more cheaply than those containing the precious metals, and log-washers, coarse jigs, and magnetic separators are commonly employed. The log-washer is a great box-tank containing two hexagonal logs, studded with coarse iron teeth. These logs are half submerged, set at a slight angle, and rotated by gearing. The ore is dropped in from a coarse screen or grizzly, and is passed out relieved of clay and dirt on to slow-rotating screens that dispose of the remaining sand. The magnetic separators, which have come in within a few years, are much more efficient, as well as simpler in operation, than the mechanical separators. The Edison magnetic separator consists of a simple hopper, from which the ore is dropped a considerable height. To one side of the descending ore is placed a powerful electro-magnet, so adjusted as to draw the magnetic particles to one side without entirely arresting their gravity. The magnetic particles, or good iron ore, thus fall in one pile to one side of the tailings, or non-magnetic particles, which fall in a heap directly below the hopper. The Buchanan separator has two large iron rolls, so magnetized that the iron particles cling to them in falling through and are carried part way around, when the magnetism is cut off and they are allowed to fall either side of the tailings. The Ball-Norton separator uses drums magnetized by internal sectors, and divides the ore into concentrates, middlings, and tailings. The Wenstrom has a single side-magnetized drum. The Conklin and Hoffman separators both deposit the ore on belts and carry it off sideways by magnets. The Lovett-Finney magnetic separator has large magnetized iron disks on which the ore is fed and the magnetic particles retained, while the remainder is washed off by water. This has the advantage of raising no dust. The methods of using the various kinds of ore-crushing and dressing machinery vary extremely according to the value of the metal in the ore, the hardness or softness of the ore, the locality, &c.

Orec'tic, *a.* [Gr. *orektikos*.] Pertaining to the desires and appetites; used especially in reference to the natural tendencies of the soul as distinguished from the moral.

Orcide (*o'-re-id*), *n.* An alloy of copper, tin, magnesium, &c., or copper, zinc, and magnesium, with a few minor ingredients, used in the manufacture of cheap jewelry, as an imitation of gold.

O'Reilly, JOHN BOYLE, writer, was born at Dowth Castle, co. Meath, Ireland, June 28, 1844, son of William David O'Reilly, master of Netterville Institution,

Fig. 3012.—THE HUNTINGTON ORE-MILL.

use fast-running rolls for crushing, a system of revolving-screens being used for sizing, while a set of elevators carry the material back two or three times for extra rolling. Sets of rolls of graded sizes are generally used, the largest size having rolls about 18 inches in diameter. Removable steel faces are used on the rolls, so as to be replaceable after the wear has injured their contour. Two forms are made, one driven by belts, the other by gearing. The gearing is more positive in operation,

casing. These heads become piled up conically with the ore until it flies off centrifugally. There being two heads, the pieces of ore that fly off strike each other violently and are broken against themselves, thus saving wear of the mill. The Heberle mill partly shears and partly grinds the ore between a large horizontal rotating plate and two small runners. Other well-known mills are the Cyclone and Nord pulverizers, and the Griffin and Frisbee-Lucop mills. For the separation of ores so that the weightier particles containing the most metal may be divided, the jig or jiggling-machine is used. This imitates the shaking of a sieve by hand under water. The common jig is a form of long water-tank having a division which does not reach to the bottom. A screen is hung horizontally on one side of this partition, and on the screen the sized ore is fed. An agitator is operated in the water on the other side of the partition, causing a regular pulsation of the water through the screen, with the result of shaking the ore so that the heavier particles either come down through the screen or are worked along through a gate placed above the level of the

Fig. 3013.—STEAM STAMP-MILL.

but the belts admit of driving at higher speed, and wear longer than the gears. The rolls are always protected by stout springs, which give before the pressure approaches a point dangerous to the rolls. Of small mills for crushing, the best known are perhaps the Huntington and Sturtevant mills. The Huntington mill produces a complete pulverization. It has a large

screen, the lighter particles in the meanwhile working along to the side or end of the screen, where they are discharged. When more than two products of separation are wanted, jigs are provided with three or four compartments, each having its appropriate screen and agitator. Another form of separator consists of a V-form or U-form of trough, into which the pulp is flowed through a launder. Partitions are set in the trough in such a manner as to prevent direct flow, and clean water is forced in near the bottom, sending the slimes and mud to the surface, to be carried off by the overflow, while the weightier particles are discharged from below. Very similar machines are the Woodbury, Garnier, and

Fig. 3014.—AN ORE CONCENTRATOR.

Dowth Castle. He began his work as a journalist by reporting for various English papers, and several Dublin journals: became an active Fenian, and joined the army, the Tenth Hussars, for the express purpose of disseminating revolutionary sentiments among the soldiers; was arrested and tried for high treason; sentenced to twenty years penal servitude in West Australia; escaped to the Cape of Good Hope, and finally to New York; went to Boston, and found employment on *The Pilot* (of which he ultimately became editor and principal owner), and, in 1870, went to Canada a reporter for *The Pilot* during the second Fenian raid for a time commanding the Irish forces. His published

writings are chiefly of a purely literary character, and include *Songs of the Southern Seas* (1873); *Songs, Legends, and Ballads* (1878); *Moonlight*, a novel (1879); *Statues in the Block* (1881); *In Bohemia* (1886); and *Stories and Sketches* (1888). Died Aug. 10, 1890.

O'Rell, Max. See BLOUET, PAUL.

Organ, n. (Mus.) The pipe-organ is the largest, most complex, and imposing of musical instruments. It consists of a series of pipes through which wind is blown when admitted by the fingering of the keys. When a key is pressed down by the finger, a valve opens and allows air from the bellows to pass through an aperture in the sound-board into a passage communicating with the pipes in each row of the same pitch. By means of stops usually placed at the side of the organ keyboard, and attached to registers or slides in this passage, as many of these rows as are required may be opened so as to play when the air is driven into the passage. By pushing in the stops the corresponding rows are closed. Organ pipes either have a vibrating metallic tongue, or simply an aperture with a cross lip to cut the air and set it in vibration. The former are termed reed-pipes, and the latter flute-pipes. The pitch of a reed pipe depends on the length and thickness of the tongue, the shape and length of the pipe giving the quality to the note; while the pitch of a flute-pipe depends on its length only. The pipes are usually made either of pewter, with a small proportion of tin or other alloy, or of wood. The flute-tone is obtained by wooden pipes, the reed-tone by reed-pipes (*q. v.*), the string-tone by narrow-scale metal flute-pipes, and the organ-tone by broad-scale open metal flute-pipes. The keyboard for the hands is called a manual, and is sometimes made in several banks. The keys to be worked by the feet are called pedals. The mechanism connecting the keys with the pipes is called the action. It consists of a complicated series of stickers, rollers, trackers, and levers, and sometimes is so hard to operate that pneumatic or electric power is employed to make the touch easier for the player. The wind mechanism consists of a storage bellows, having weights to maintain a uniform pressure, and two or more feeding bellows, usually operated by some form of power. In the organ-pipe the air is forced into a sort of box or mouthpiece, and escapes therefrom into the air through a narrow slit at the top of the box. The pipe fits on to the end of this box. The side of the pipe near the slit is depressed inward, and slightly cut away, so that the sharp edge of the depressed portion is just above the slit in the mouthpiece. When air is forced into the mouthpiece, the current is split upon the sharp edge of the pipe, and as it escapes into the air it causes waves to be established in the pipe. The number of vibrations produced per second depends upon (1) the length of the

the tube, the mouthpiece, and the center are found to be loops or regions of the greatest amplitude of vibration, while two nodes are found at the distance of $\frac{1}{4}$ and $\frac{3}{4}$ from the mouthpiece. Each system of pipes in an organ has its own set of stops, and is called a partial organ. If there are three of these, they are designated as the great organ, swell organ, and choir organ. To these are sometimes added the solo organ and ccho organ. The system of pipes connected with the pedal keyboard is also sometimes termed the pedal organ. The barrel organ is the portable instrument familiarly carried about by street musicians. The reed organ outwardly resembles a piano-forte, but its tones are produced by brass vibrating reeds, across which the wind is forced by foot bellows, according to the operation of the keyboard.

Organo-. An initial compounding element, derived from the Gr. *organon*, organ.

OrguINETTE, n. [Dim. of *organ*.] A musical instrument with a set of reeds to which the air is admitted through paper so perforated as to bring the notes in proper sequences, the strip of paper and the bellows being moved by the turning of a crank.

Orion, n. In Illinois, a post-village of Henry co., 19 m. S.E. of Rock Island. Pop. (1897) 750.

Orland, n. In California, a post-town of Glenn co., 166 m. N. of San Francisco. Trade center of an agricultural section. Pop. (1897) 600.

Orlando, n. In Oklahoma, a post-village of Logan co., 20 m. from Guthrie. Pop. (1897) 500.

Orle, n. (Her.) One of the charges known under the name of sub-ordinaries, said to be the diminutive of *Bordure*, but differing from it in being detached from the sides of the shield (Fig. 3016). An orle of heraldic charges of any kind denotes a certain number (generally eight) of these charges placed in orle.

Fig. 3016.—ORLE.

Orleans, n. In Nebraska, a city of Harlan co., 43 m. S.S.W. of Kearney, seat of Orleans Free Methodist College. Pop. (1897) 1,200.

Ormsby, n. In Nevada, a S.W. co.; area, 144 sq. m. Surface, mountainous, with fine forests. Mining and lumbering are the chief industries. Cap. Carson City. Pop. (1890) 4,883.

Ornery, a. (Dial.) Low, mean, despicable.

Orneville, n. In Maine, a post-town of Piscataquis co. Pop. (1897) 510.

Ornith-, Ornitho-. An initial compounding element, derived from the Gr. *ornis* (gen. *ornithos*), bird.

Ornithopter, n. The term applied to flying-machines built with wings designed to flap like those of a bird. None have as yet been successful on account of the mechanical difficulties to be overcome. See AEROPLANE, AVIATION, BALLOON, HELICOPTER.

Orthometry, n. The art of composing verses correctly; proper versification.

Orthopedic, or Orthope'dia, n. [Gr. *orthos*, and *país* (gen. *paidos*), a child.] The act or art of correcting deformities in the bodies of children, or, by extension, of persons of any age.

Orting, n. In Washington, a post-village of Pierce co., 18 m. S.E. of Tacoma. Pop. (1897) 780.

Orton, EDWARD, geologist, was born in Deposit, N. Y., March 9, 1829; has held professorships in several colleges, and from 1872 to 1881 was president of the Ohio State University. In 1881 he was appointed State geologist for Ohio, having been assistant geologist since 1869; was president of the Ohio State Sanitary Association (1884); vice-president in the section of geology of the American Association for the Advancement of Science (1885). He has given special attention to the distribution of petroleum, coal, natural gas, and asphalt, concerning which he has made valuable reports. He has published several books on the *Geology of Ohio*, and one on the subject, *Petroleum and Inflammable Gas*.

Orton, JAMES, naturalist, was born at Seneca Falls, N. Y., April 21, 1830; educated at Williams College, and at Andover Theological Seminary; became a Congregational minister, and devoted his life to teaching, and (1869) became professor of Natural History at Vassar College, which post he still held at the time of his death. In 1867-68 he led the expedition sent out by Williams College to make explorations in the Andes of Ecuador; in 1873 he made a second visit, and died during the passage of Lake Titicaca, Peru, on Sept. 23, 1877. He published several works relative to mining and geology; also, *The Proverbialist and the Poet* (1852), *Liberal Education of Women* (1873).

Ortonville, n. In Minnesota, a city, cap. of Big Stone co., 45 m. N.W. of Montevideo; has grain and live stock interests, and extensive granite quarries. Pop. (1895) 1,180.

Orwell, n. In Vermont, a post-town of Addison co. Pop. (1897) 1,280.

Osage City, n. In Kansas, a post-village of Osage co., 35 m. S. by W. of Topeka. Here are large coal mines. Stone flagging and ochre are produced. Has some manufactures. Pop. (1895) 4,273.

Osaka, n. The second city in population in Japan, and a seaport, although its foreign trade is carried on

through Hiogo, one hour distant by rail. It is the headquarters of the rice and tea trade. It has a fine castle, with stones in the walls of extraordinary size, built by Hideyoshi, a great general in 1583. Afterward there was built in its precincts a palace which was perhaps the most magnificent in Japan, but which was destroyed by fire in 1868. Pop. (1897) 521,200.

Osakis, n. In Minnesota, a post-village of Douglas co., on a lake of the same name, 12 m. E. of Alexandria; a summer resort. Pop. (1895) 685.

Osborne, n. In Kansas, a N. co.; area, 900 sq. m.; drained by the South Fork of Solomon river and its tributaries. Surface, chiefly rolling prairie; soil, fertile. Corn and wheat are largely produced. Cap. Osborne. Pop. (1895) 10,877.

—A city, cap. of Osborne co., 34 m. W. of Beloit. Pop. (1895) 991.

Osceola, n. In Iowa, a N.W. co.; area, 408 sq. m.; drained by the Little Ochevedan river and smaller streams. Surface, undulating prairie; soil, fertile. Cap. Sibley. Pop. (1895) 7,377.

Osceola, n. In Nebraska, a post-village, cap. of Polk co., 115 m. S.W. of Omaha. Pop. (1897) 1,300.

Osceola Mills, n. In Pennsylvania, a post-borough of Clearfield co., 21 m. S. of Clearfield; has foundries, a tannery, and lumber mills; in a coal mining district. Pop. (1897) 2,120.

Oscillator, n. Under this name, Nikola Tesla has developed a machine which is a simplified combination of a steam-engine and an electrical dynamo, and which has been widely heralded as likely to supersede the ordinary steam-engine. One of the first built by him was exhibited at the World's Fair, in Chicago, in 1893. But this was afterward materially improved upon, and was about ready to place on the market, in 1895, when Mr. Tesla's laboratory, in New York, was totally destroyed by fire, and the work had to be begun again from the beginning. In principle the oscillator is very simple, being a steam-cylinder, with a piston like that of an ordinary steam-engine. On the piston is mounted an armature, which is thrust back and forth within the field of an electro-magnetic coil, thus setting up currents, and converting the coil into a dynamo, from which power can be sent forth on a wire. A later and more complicated form of the oscillator was made with a central steam-cylinder, having piston-rods directed oppositely, and carrying armatures into the two magnetic generating systems, so that two dynamos are thus brought into being. The pistons operate 80 to 100 times a second, a speed vastly more rapid than that attained in any steam-engine; and as a pressure of 350 pounds is used in the cylinder, it is evident that it must develop a power much beyond what is obtained from the best compound engines of similar corresponding size and weight. The construction of the steam-cylinder is such that no packing is required, a fact which facilitates the use of steam at the high pressure named. Another unique feature of the invention is that the oscillation of the pistons is regular, regardless of the load—accomplished by placing a miniature oscillator on top of the steam-chest to control the admission of the steam. The introduction of the machine in practical form is looked forward to by engineers with great interest and expectation.

Oscoda, n. In Michigan, a N.E. co.; area, 580 sq. m.; intersected by the Au Sable river. Surface, undulating; densely wooded; soil, moderately fertile. Cap. Mio. Pop. (1894) 1,804.

—A post-village of Iosco co., on Lake Huron, 70 m. N. of Bay City; has large saw and lumber mills, also three extensive salt works, claimed to be the largest in the State. Pop. (1894) 2,078.

Osiander (o-ze-än'-dër), ANDREAS, an eminent German theologian, was born at Nuremberg, in 1498, originally bore the name of HOFMANN. He early attained a high reputation for scholarship, and became a zealous friend and disciple of Luther, with whom he attended the Conference of Marburg in 1529, and the Diet of Augsburg in the year following. Later, he entered upon the professorship of Theology in Königsberg University, and became engaged in controversy on doctrinal points with Melancthon and other eminent theologians of the time. Died in 1552.

osity, n. A terminal compounding element, derived from the Lat. termination *osus*, denoting fullness or abundance.

Osman, NUBAR PASHA, military officer, was born in Tokat, in Asia Minor, in 1832; entered the cavalry service in 1854, serving under Omar Pasha; fought in Syria (1860); in Crete (1867), and in the Temica (1874); became a field-marshal in 1876; for his brilliant military feats in 1877 the Sultan bestowed on him the title of *Ghazi*—"Victorious." On Dec. 10, 1877, while attempting to break through the Russian lines he was wounded, and compelled to surrender with 40,000 men; the Czar returned his sword, and the greatest courtesy was accorded the distinguished prisoner. After the war, he was entrusted with the reorganization of the Turkish army. In 1878 he became commander-in-chief of the Imperial Guard, governor-general of Crete, and minister of war. In 1882 he received the title of Seraskier, and in 1894 became grand marshal of the palace.

Oste-, Osteo-. An initial compounding element, derived from the Gr. *osteon*, a bone.

Osteophone, n. [From Gr. *osteon*, bone, and *phone*, a sound.] An instrument for assisting the hearing of deaf persons, consisting of some form of sound-gathering device, which is placed against the teeth, so that the sound-waves are communicated through the cranial bones to the auditory nerves. The audiphone, shaped somewhat like a fan, is one form of this instrument.

Fig. 3015.—ORGAN OF THE 14TH CENTURY.

Copied from a MMS. in the French National Library.

pipe; (2) whether it is closed or open at the end; (3) upon its depth—that is, the distance from the front to the back, supposing the slit to be in the front. The width of the pipe is without effect upon the pitch of the note, but affects the loudness. If we suppose the pipe to give its fundamental note, the length of the pipe, if closed at the end, must be $\frac{1}{4}$ of the wave length of the note. In an open organ-pipe the length of the pipe is $\frac{1}{2}$ the wave length. By diminishing the size of the slit, or increasing the rapidity of the air-current, the harmonics of these notes can be formed. It follows that if two organ-pipes, otherwise alike, and treated alike, give the same note—one being closed and the other open—the open pipe is twice as long as the closed one. In order to ascertain experimentally the condition of the air as to the position of its loops and nodes—that is, points of rest and regions of greatest amplitude when the pipe is sounding its fundamental note or its harmonics—a little tambourine of thin stiff paper may be raised and depressed as the pipe is sounded. Thus, in a closed pipe, the agitation is found to be greatest at the mouthpiece, and to diminish gradually to the closed end where there is a node. In an open pipe the end of

Ostrich-farm'ing, *n.* The ostrich has been domesticated and grown for profit in South Africa, Algeria, and Tripoli, in Egypt to a small extent, and in Australia, South America, and southern California. The South African ostrich-farming is by far the most extensive and well-established, having been carried on since 1867. In the beginning it was very profitable, the feathers bringing \$500 per pound, and the plumes of one bird sometimes amounting to as much as \$125 at a plucking. The prices have naturally decreased with the more abundant supply, but the long plumes from the wings are always in demand, selling at high rates, and the less valuable feathers still bring profitable prices. Ostrich-farming falls under two divisions: (1), breeding birds for sale to other farmers, and (2) growing birds for their feathers; some farmers carry on both branches, but more usually they are separate. When artificial incubators are used to hatch the eggs, the hens lay from 75 to 90 during the year; the eggs hatch in about six weeks; the young birds are treated as "chicks" for a year, being fed three pounds of grain per day, and sheltered in wet weather; when a year old they are turned into a fenced range, or camp, to hunt food for themselves, ten acres being allowed to a bird, but they still require care to see that they are not troubled with parasites. The first crop of feathers is taken when the birds are seven or eight months old, the quills being cut off and the stubs being left for two or three weeks, after which they are shrunken and easily removed. The feather-cutting goes on at intervals of eight months, the plumage reaching perfection when the birds are three years old; the birds themselves mature at four years, and, if they brood their own eggs, they are not clipped after this time, as their feathers are needed to cover the eggs; the cocks share the labor of brooding with the hens. A good pair of adult birds used to bring as much as \$2,000 or \$2,500, and a newly hatched chicken was worth \$50. The values have now greatly decreased, and range from \$100 up per pair of full-grown birds. The most valuable ostrich feathers are the long white plumes which grow in the ends of the wings of the male birds; there are ten to twenty of them in each wing, and also a few black feathers which are salable; the tail feathers are of less value, and so are all the feathers of the female, whose long plumes are not pure white, but flecked with gray, and are known commercially as "feminines." The feathers are sold by weight, 120 to 130 of the finest going to a pound. The sandy Karroo plains of South Africa are the natural home of the ostrich, and the fact that they thrive best when grazing over an alkaline soil led, in 1882, to their introduction into southern California, where they are grown in several places with very fair success.

Oswegatch'ie, in *New York*, a post-town of St. Lawrence co. Pop. (1897) 2,450.

Owego, in *Kansas*, a city, cap. of Labette co., 15 m. S.E. of Parsons. Pop. (1895) 2,145.

Owego, in *Oregon*, a post-village of Clackamas co., 7 m. S. of Portland; has manufactures of pig-iron and cast-iron pipe.

Owego Falls, in *New York*, a post-village of Oswego co., 24 m. N.W. of Syracuse; has some considerable manufactures. Pop. (1897) 1,950.

Osy'ka, in *Mississippi*, a post-town of Pike co. Pop. (1897) 820.

Ota'go. A provincial district of New Zealand, lying at the south of South Island; it was colonized in 1848 by the Otago Association in connection with the Scotch Free Church, and was one of the original six provinces which were abolished in 1876 to make way for the county system. In 1861 gold was discovered in this district, and there are now 2,500,000 acres in the gold fields. The capital is Dunedin, on Otago Bay.

Ote'ro, in *Colorado*, a S. E. co.; area, 2,050 sq. m.; intersected by the Arkansas river. Surface, gently rolling; soil, a rich sandy loam; cottonwoods along the streams. Cap. La Junta. Pop. (1897) 12,000.

O'tis, HARRISON GRAY, an American orator and statesman, was born in Boston, 1765; after graduating at Harvard in 1783, practiced law in Boston, and in 1796 entered Congress, where he became a Federalist leader. He was the governor of Massachusetts (1805 to 1812), sat in the Hartford Convention in 1814, and U. S. Senator (1817). He was a prominent speaker against slavery. Died in 1848.

Otse'go, in *Michigan*, a N. co.; area, 540 sq. m.; drained by the Au Sable, Pigeon, and Mullett's rivers. Surface, nearly level, heavily timbered; soil, rich gravelly loam. Products. Wheat, oats, hay, potatoes. Cap. Gaylord. Pop. (1894) 4,794.

Otterbein Univer'sity. (*Educ.*) A co-educational institution, founded in 1847 at Westerville, O., under the charge of the United Brethren in Christ, a Protestant sect founded by Philip W. Otterbein, a German, who came to North America as a missionary in 1752. It has about 300 students.

Onachita (*wi'-she-ti*), or **Washita**, in *Arkansas*, a S.W. co.; area, 732 sq. m.; partly bounded N. by the Little Missouri river, and is intersected by the Ouachita, or Washita, river. Surface, somewhat hilly; soil, generally fertile. Cap. Camden. Pop. (1896) 17,033.

Ouachita, in *Louisiana*, a N. parish; area, 644 sq. m.; intersected by the Ouachita river. Surface, hilly on west bank of Ouachita river, level and fertile on east bank. Products. Cotton, corn, sweet potatoes, wool, pork, live stock. Cap. Monroe. Pop. (1890) 17,985.

Ought'ness, *n.* The quality or state of being due; obligatoriness.—The feeling of moral obligation involved in conscience.—The condition or relation of being bound by the moral law or to right conduct; moral obligation.

Ouida (*wi'-da*). See RAMÉE, MLE. DE LA.

Our'ay, in *Colorado*, a S. W. co.; area, 450 sq. m.; drained by the Uncompahgre river. Surface, mountainous; soil, fertile in valleys. Min. Gold, silver, and copper. Mining is the chief industry. Cap. Ouray. Pop. (1890) 6,510.

—A post-village, cap. of above co., about 15 m. N. of Silverton; has rich gold and silver mines, and hot sulphur and iron springs, with magnificent surrounding scenery. Pop. (1897) 3,100.

-ous. A suffix, derived from the Latin, through the French, indicating presence or possession of a quality, usually in abundance.

Our'ley, SIR FREDERICK ARTHUR GORE, musician, was born in London, Aug. 12, 1825; son of Sir Gore Ouseley, the Orientalist. He graduated at Christ Church, Oxford, and took orders, but devoted his attention to music, receiving the degree of Mus. D. at Oxford in 1854. In 1855 he succeeded Sir Henry Bishop as professor of music at Oxford, and in 1856 became vicar of St. Michael's, Tenbury. He published several works on harmony; edited *Naumann's History of Music* (1886), and composed several oratorios. He devoted his entire fortune to building and endowing St. Michael's College, Tenbury, for the training of choristers. Died April 6, 1889.

Ovam'pos, or **Ovam'bos**, *n. pl.* (*Anthrop.*) A Bantu people living in the northern part of German Southwest Africa. They occupy a territory extending from Damaraland northward to the Portuguese frontier. Ten divisions or tribes of this people have been described by explorers, and their number is estimated at 100,000. Though able to fight well, they are peaceably inclined, industrious, ingenious, and remarkably honest. Their country along the coast is sandy and unproductive, but fifty miles inland rises a lofty table-land, on which the O. raise great quantities of native grain. For agricultural purposes this land is the best in German Southwest Africa, but the people are unable to get their grain to market for lack of transportation facilities. The table-land declines on the south and east to the desert of Kalihari and the region of Lake Ngami. The region occupied by these people appears on some maps as *Ovampoland*.

Owens, JOHN E., actor, was born in Liverpool, Eng., May 4, 1824; removed to the U. S. in 1834; made his debut as an actor, in Philadelphia, on Aug. 20, 1846. He had a successful career as manager and actor in America, and also toured twice in England. His characteristic success was in such rôles as *Solon Shingle*, *Caleb Plummer*, *Aminadab Slick*, and *Dr. Pangloss*. He retired from the stage on account of failing health, and died Dec. 6, 1886.

Owos'so, in *Michigan*, a city and R.R. center of Shiawassee co., 28 m. N. E. of Lansing, on the Mich. Central and 3 other R.R.s; has important manufactures and a good local trade. Pop. (1897) about 8,800.

Ox'ford, in *Georgia*, a post-town of Newton co., about 38 m. E.S.E. of Atlanta. Here is situated Emory College (Methodist). Pop. (1897) 880.

Oxford, in *Kansas*, a post-village of Sumner co., 13 m. E. of Wellington. Pop. (1895) 549.

Oxford, in *Nebraska*, a post-town of Furnas co., 18 m. N.E. of Beaver City. Pop. (1897) 780.

Oxford Junction, in *Iowa*, a post-town of Jones co., 40 m. E. of Cedar Rapids. Pop. (1895) 726.

Oxford (Tracta'rian) Move'ment. (*Ecol. Hist.*) Toward the close of the 18th century there was formed in the Church of England an evangelical party more intent on practical Christian life than on guarding the strict formulas of orthodoxy. This church party became a liberal party in politics. The political liberalism culminated in reforms, particularly in the abolition of the Test Act. Church reform was then undertaken, and in 1833 one-half of the bishoprics in Ireland were abolished. The very existence of the Church of England seemed in danger. The seat of the evangelical party was Cambridge University. These results of the evangelical movement alarmed the High Churchmen of Oxford University, especially those of Oriel College, to which at that time belonged several very gifted young men, among whom were John Keble, the poet, Edward Bouverie Pusey, John Henry Newman, and R. H. Froude. With these cooperated A. P. Perceval, rector at East Horseley. These men combined to oppose what they thought the dangerous errors of the evangelicals. Perceval appeared in 1825 with a book—*A Christian Peace-offering*—aiming to allay the prejudices of Anglicans against the Roman Catholic Church. He argues that the differences between Anglicans and Roman Catholics are not essential and that the Roman is a true branch of the Catholic Church. In spite of this book, the evangelical movement kept advancing, and the inherent rights of the bishops were in danger of being undermined. So the young men of Oriel prepared the *Churchman's Manual*, in a catechetical form, intended to enlighten the laity as to the inalienable rights of the Church as such. Three points were made prominent in the *Manual*: the idea of the Church; the importance of the Sacraments; the significance of the priestly office. While this was in preparation the Irish bishoprics were abolished.

The *Manual* was afterward called by its authors "the first tract put forth to meet the exigencies of the times." It was followed by 90 other small treatises under the general title, *Tracts for the Times*. Hence the name of the party—Tractarians. The first tract proper appeared Sept. 9, 1833. By Nov., 1835, there had been published 70, making two volumes. Most of them were original essays, though some were extracts from earlier writers. The Tractarians, in general, had taught their followers to look indulgently on the errors of Rome. It was not wonderful then that certain young enthusiasts were on the point of actually going over to Rome. To prevent this consummation Newman wrote Tract 90, the last of the series. It appeared in 1841, and dealt with the Thirty-nine Articles from the Tractarian point of view. The Articles had, at the time of the Reformation, been accepted by Anglicans unfavorable to Protestantism. Newman, therefore, undertook to show in this tract that the articles were capable of being understood in a Roman Catholic sense. The appearance of the tract caused a great outcry, and it was condemned by the hebdomadal board of the university, which refused to wait for Newman's defence. In a sermon in May, 1843, Pusey taught transubstantiation so clearly that the authorities suspended him from preaching for two years. By 1845 Newman saw that a midway position between Anglicanism and Roman Catholicism was no longer practicable, so he became a Roman Catholic, and his act was a signal for a host of others. By December, 1846, no less than 150 clergymen and eminent laymen had followed Newman's example. By Christmas, 1852, 200 clergymen and more than as many laymen had done likewise, and the clergymen had become 300 by the end of 1862. Other leaders of the movement, including the two greatest, Keble and Pusey, remained steadfast Anglicans. The movement survived its losses and became vigorous again. As after the departure of Newman its most prominent figure was Pusey, it was for a number of years termed Puseyism. According to the Tractarians, truth was to be sought for, not by processes of thought, but by consulting authorities. As a form of church life, it is aesthetic, earnest, active, contemplative, constructive. It has assumed a more and more practical character in the institution of guilds, religious sisterhoods and brotherhoods, and parochial missions, introduction or revival of hymns and popular devotions, restoration and building of churches. It lays great stress on manners and daily conduct, as well as on architecture and ceremonies. It has infused an entirely new spiritual life into what was once the very staid, cold life of the High Church party in the Church of England, and has affected in the same way the Protestant Episcopal Church of the United States.

Ox'moor, in *Alabama*, a post-town of Jefferson co. Pop. (1897) 660.

Oxy-. An initial compounding element, derived from the Gr. *oxys*, sharp, acid. In chemical terms it denotes the presence of oxygen or its compounds.

Oya'ma, MARQUIS, Japanese soldier and statesman; distinguished as a soldier in the civil war to restore the Mikado; was promoted major-general in 1875, lieutenant general in 1879, and general in 1890, he and Yamagata alone holding this high office. He served several terms as minister of war. In 1894 he conducted the campaign leading to the capture of Port Arthur and Wei-Hai-Wei. On his return he was promoted to the rank of marquis and given the new military office of field marshal. As such he organized the campaigns in Manchuria during the Russo-Japanese war of 1904-05, and commanded the armies in person during the great Japanese victories of Liao-Yang and Mukden.

Oys'ter, Artificial Breed'ing of. Mr. Ryder, the embryologist to the United States Fish Commission, thus briefly summarizes the latest results in this important branch of economical biology: "While it is too soon to affirm that artificial breeding may be profitably available on an extensive scale in practical oyster culture, experiment has demonstrated a number of very important facts. These are: (1) Oyster spat may be reared from artificially-fertilized eggs; (2) the spat will grow just as fast in such enclosures [artificially-excavated ponds, connected by a guarded passageway with the open water of the sea] as in the open water; (3) food is rapidly generated in such enclosure; (4) the density of the water in the ponds is not materially affected by rains or leaching from the banks; (5) ponds are readily excavated in salt marsh lands, and can in all probability be used for fattening and growing *Ostrea Virginica* for market just as successfully as *Ostrea edulis* and *angulata* are grown by a similar method on the coast of France. Pond culture, where there are salt marshes adjoining arms of the sea, the waters of which have a density below 1.020, can doubtless be carried on profitably in connection with intelligent use of simple, cheap collecting apparatus placed in both open and confined waters to catch a 'set' of spat, which can then be transferred to ponds or open beds." The principal American localities where the artificial breeding of oysters is now carried on are in Long Island Sound, near New Haven, Conn., in Chesapeake Bay, and at the mouth of the James river; and a large proportion of the oysters used as "seed," or sent direct to market, are now produced in this way.

O'zark, in *Alabama*, a post-village, cap. of Dale co., 45 m. S.W. of Eufaula; has several mills, a carriage factory, and cotton gins. Pop. (1897) 1,280.

P.

PACE

P The twelfth consonant and the sixteenth consecutive letter of the English language, is the most prominent of the labial mutes, and is pronounced by compressing the lips closely, and parting them by a sudden emission of the breath. *P* is what is termed the *thin letter* of the labial series, *p, b, f, v*, and is interchangeable with the other letters of the series in nearly all the modern languages, but more especially in German. Both among English-speaking peoples, and on the European Continent, there are entire districts in which the native ear is insensible to the difference between the sound of these labials, and in which they are almost invariably confounded in pronunciation. Of this peculiarity, several counties of Wales, and the whole of Lower Saxony, present noted examples. *P* is termed the *labial mute, b, the labial sonant, and m, the labial nasal*. Like the other pure mutes, — *r* and *t*, — *p* gives an abruptness to the sound immediately preceding or following it, according as it is in itself final or initial in the syllable, as in *stop, plug*. The combination *ph* is equivalent in sound to *f*, as in *Philip*, corresponding with the Greek ϕ . In some words of Greek extraction, as *psalm*, *p* is silent. As an abbreviation in Latin inscriptions *P.* stands for *Publius, pontifex, pius, perpetuus, pro-consul, patronus, posuit, poles, pondo, post, poudum, &c.* *P.P.* denotes *pater patriæ, praprosilas, pro-patore, &c.*; *P.C.*, *pater conscripti*. In some medical formulæ *P* is used as the abbreviation of *pugillus*, the eighth part of a handful. In Music, it stands for *piano*, and in Chemistry it is the symbol of *Platinum*. *P.E.* is the abbreviation of *partes æquales*, equal parts. In Numismatics, it is the symbol of ancient coins struck at Dijon. Among the ancients the numerical value of *p* has been variously interpreted. Among the Greeks, as the initial letter of $\pi\epsilon\pi\tau\epsilon$, it seems originally to have noted 5; and, afterwards, 50. Among the Romans, it stood for various equivalents, according to different authorities.

Paas, (*pawz*), *n.* [D *paasch*.] The festival of Easter. (Local, N. Y.)

Paaseggs, hard-boiled eggs, eaten at the Easter festival.

Pabular, *Pab'ulous*, *a.* [From Lat. *pabulum*, food.] Affording or pertaining, or having reference to food; supplying aliment.

Pabulation, *n.* [Lat. *pabulatio*.] Act of feeding or procuring food.

Pabulous, *a.* Same as **PABULAR**, *q. v.*

Pabulum, *n.* [Lat., from *pasco*, to feed. See **PASTURE**.] Food; aliment; nourishment; that which feeds animals or plants.

Pace, *n.* [Braz.] (Zool.) A small rodent animal of the genus *Cavia*, distinguished from its congeners by white spots on a dark ground.

Pacaja, *PACAJAZ*, or *PACAYA*, a river of Brazil, flowing into the æstuary of the Amazonas, S. of the island of Marajo.

Pacate, *Pac'ated*, *a.* [Lat. *pacatus*.] Peaceful; tranquil.

Pacation, *n.* [Lat. *pacatio*.] Act of appeasing or pacifying.

Pace, *n.* [Fr. *pas*; Lat. *passus*, from *pando*, to spread out.] A step; a stretching out of the feet in walking; any single pedestrian movement. — Gait; manner of walking; degree of celerity or speed in pedestrianism; as, a quick *pace*, a slow *pace*. — Step; movement or act of gradation in business (R.). — A denomination of linear measure, of uncertain extent; assumed by some to be 5 feet, by others 4-4 feet, and called the *geometrical pace*. It is the quantity supposed to be measured by the foot from the place where it is taken up to that where it is set down. The space between the two feet in walking is roughly estimated at 3 feet. The military pace is 2½ feet. The ancient Roman *pace*, considered as the thousandth part of a mile, was 5 Roman feet, and each foot contained between 11-60 and 11-64 modern English inches; hence the pace was about 58-1 English inches, and the Roman *mille, mille passus*, equal to 1,614 yards. See **MILE**.

(*Manege*.) A mode of stepping among horses, in which the legs on the same side are lifted together; an amble; as, "*pace* or trot." — *Hudibras*.

To keep *pace with*, to keep up with; to move equally fast as; as, he kept *pace with* the spirit of the times.

Pace, *v. n.* To advance step by step; to go; to walk; to move. — To go, move, or walk slowly or leisurely. — To move by lifting the legs together on the same side, as a horse.

— *v. a.* To measure by steps or paces. — To regulate in motion; to cause to take measured steps. "*Pace your wisdom in that good path*." (Shaks.) — To walk over with measured paces or steps.

"Pacing through the forest, chewing the food of fancy." — *Shaks.*

(NOTE.) *Paced* is frequently used adjectively in composition; as, slow-paced, high-paced, thorough-paced, &c.)

Pacer, *n.* One who paces; — specifically, a horse that paces.

Pacha, (*pash'a*), *n.* Same as **PASHA**, *q. v.*

Pachaca'ma, *Pachaca'mac*, a village of Peru, abt. 18 m. S.E. of Lima. Here are the ruins of a temple which was consecrated to *Pachacamac*, the creator of the universe, and from which immense treasure was taken by Pizarro.

Pachalic, (*pa-shaw'lik*), *n.* and *a.* See **PASHALIC**.

Pache'co, in *California*, a post-village of Contra Costa co., abt. 30 m. N.E. of San Francisco.

Pachit'la Creek, in *Georgia*, enters the Ichaway-nochaway River in Baker co.

Pachu'ca, a town of Mexico, abt. 50 m. N.N.E. of the city of Mexico.

Pachuca'ca, a river of Peru, rising in a lake of its own name in the dept. of Cuzco, and flowing N. into the Apurimac.

Pachycor'mus, *n.* [Gr. *pachys*, thick, and *kormos*, the trunk of a tree.] (*Pal.*) A genus of homocercal, ganoid, fossil fishes, having a very thick body.

Pachyda'ctyl, (*-däk'til*), *n.* [Gr. *pachys*, thick, and *daktylos*, toe.] (*Zool.*) A thick-toed bird or animal.

Pachyda'ctylons, *a.* Thick-toed.

Pachyderm, *n.* [Fr. *pachyderme*, from Gr. *pachys*, thick, and *derma*, skin.] (*Zool.*) One of the **PACHYDERMATA**, *q. v.*

Pachyder'mal, *a.* Pertaining, or having reference to the pachyderms.

Pachyder'mata, *n. pl.* (*Zool.*) An order of mammiferous quadrupeds distinguished by the thickness of their skins, including various animals that in other respects are by no means closely allied; as, for instance, the Elephant, the Horse, and the Hog. The order is, however, subdivided into: 1. The *Proboscidea*, or those possessing a prolonged snout or proboscis, and having five toes on each foot, included in a very firm, horny skin; as the Elephant, and certain extinct gigantic species. 2. The *Pachydermata ordinaria*, in which the feet have four, three, or two toes on each foot. Among these are the Rhinoceros (Fig. 2021), Hippopotamus, Tapir, Wild Boar,

Fig. 2021. — THE TWO-HORNED RHINOCEROS.

&c. The skeleton is generally massive, indicating great strength but inactive habits; the thoracic cavity is enormous, in proportion to the great bulk and weight of the viscera; the limbs are robust, though adapted for running in the smaller members like the hog; there are no clavicles. They occur, as the animals of the first section, in the warmer climates of all parts of the world, except Australia. 3. The *Solidungula*, or quadrupeds with only one apparent toe and a single hoof to each foot, although beneath the skin, on each side of their metacarpus and metatarsus, there are bony points or processes which represent two lateral toes; as the Horse and its congeners. They are all herbivorous.

Pachyder'matons, *a.* Belonging, or relating to a pachyderm, or to the order *Pachydermata*.

Pachyma, (*pak-i'ma*), *n.* (*Bot.*) A genus of plants, alliance *Fungales*. The species *P. cocos* is highly esteemed as a food and medicine by the Chinese, and by the Indians of N. America. It is called *Tachahoe*, or *Indian-bread*.

Pacific, *a.* [Fr. *pacifique*; Lat. *pacificus* — *pax*, *pacis*, and *facio*, to make. See **PACIFY**.] Peace-making; conciliatory; suited to make or restore peace; adapted to adjust or reconcile differences; mild; appeasing; emollient; as, a *pacific* sign, *pacific* propositions. — Characterized by peaceful features; calm; tranquil; quiet; as, a *pacific* manner, a *pacific* state of society.

Pacific, in *California*, a township of Humboldt county.

Pacific, in *Missouri*, a post-town of Frauklin co., about 37 m. W. of St. Louis.

Pacific, in *Washington*, a W. by S. co., bordering on the Pacific Ocean; area, about 800 sq. m. Rivers, Columbia river, and some less important streams. Surface, diversified; soil, generally fertile. Cap. South Bend. Pop. (1897) about 6,000.

Pacific, in *Wisconsin*, a post-township of Columbia co.

Pacific'able, *a.* Placable; that may be pacified. (R.)

Pacific'al, *a.* Pacific; having reference to peace.

Pacific'ally, *adv.* In a pacific manner; peaceably; placably.

PACT

Pacification, *n.* [Fr.; Lat. *pacificatio*.] Art or operation of making peace between two nations or parties at variance; act of appeasing or pacifying wrath or hostility; reconciliation.

Pacificator, *n.* [Lat.] A peace-maker; one who restores amity between contending parties or nations.

Pacificatory, *a.* [Lat. *pacificatorius*.] Conciliatory; tending to reconcile, or to make peace.

Pacific City, in *Iowa*, a post-village of Mills co., abt. 5 m. W. of Glenwood.

Pacific City, in *Washington*, a post-village, former cap. of Pacific co., on the Columbia river, about 2 miles above the ocean.

Pacific O'cean, *The*. See **SECTION II**.

Pacific'er, *n.* One who pacifies; a pacificator

Pac'ify, *v. a.* [Fr. *pacifier*; Lat. *pacifico* — *pax*, *pacis*, peace, and *facio*, to make.] To give or restore peace to; to tranquilize. — To conciliate; to appease, as wrath, or other violent passions or appetite; to calm; to still, to quiet; to soothe; to allay as agitation or excitement; as, to *pacify* a jealous woman; to *pacify* a rebellious tribe or nation.

Pack'age, *n.* Act, art, or method of packing. — A bale; a pack or packet; a truss or small bale; a little bundle or parcel; as, a *package* of merchandise. — A charge made for packing goods.

Pack'cloth, *n.* A cloth used in packing goods, or in which they are bound up.

Pack'duck, *n.* A kind of cloth bagging used for packing goods.

Pack'er, *n.* One who packs; specifically, one who prepares merchandise for transit; also, a person appointed and sworn to pack herrings, &c.

Pack'er, in *Pennsylvania*, a township of Carbon county.

Pack'et, (formerly written **PACQUET**), *n.* [Fr. *paquet*, dimin. of Eng. *pack*; It. *pachetto*, a packet.] A small pack or package; a little bundle or parcel; as, a *packet* of envelopes.

(*Naut.*) Originally, an advice- or dispatch-boat; a ship or other vessel employed by government to convey the public mails from country to country, or from port to port; also, a vessel engaged in conveying despatches or passengers from place to place, or to carry passengers and goods coastwise at regular stated times.

— An English provincialism for the pannal borne by a pack-horse to carry packs, &c. in.

— *v. a.* To bind up in a packet, or in a parcel or parcels. — To send by a packet or dispatch-vessel.

— *v. n.* To ply with a packet or dispatch-vessel.

Pack'et-boat, *n.* (*Naut.*) A packet; a packet-ship.

Pack'et-day, *n.* The day on which a packet sails; hence, the day for posting foreign or sea-going letters.

Pack'et-ship, *n.* A ship that sails at stated times between ports in distant countries for the conveyance of mails, passengers, goods, &c.

Pack'horse, *n.* A horse employed in the carrying of packs of goods, baggage, &c.; hence, a beast of burden.

Pack'house, *n.* A depot for receiving goods.

Pack'ice, *n.* See **PACK**.

Pack'ing, *n.* Any substance or material used to fill up space, or make things lie close, by stuffing between. Act of binding in a pack, bale, or bundle.

(*Mason*.) Small stones imbedded in mortar, employed to fill the vacant spaces in the middle of walls.

Pack'ing-press, *n.* A powerful press employed in compressing goods, cotton, &c., in a small compass.

Pack'ing-sheet, *n.* A large cloth for bagging or packing goods.

(*Med.*) In hydropathy, a wet sheet used in packing water-cure patients.

Pack'load, *n.* The load which an animal can carry on his back.

Pack'man, *n.*; *pl.* **PACK-MEN**. One who carries a pack on his back; a pedlar.

Pack'saddle, *n.* The saddle of a pack-horse, on which packs or burdens are laid for conveyance.

Pack'staff, *n.* A staff on which a pedlar or traveller supports his pack.

Pack'thread, *n.* A strong thread used in tying up parcels, &c.

Packwan'kee, in *Wisconsin*, a post-village and township of Marquette county, about 55 miles N. of Madison.

Pack'wax, *n.* Same as **PAXWAX**, *q. v.*

Pack'way, *n.* A narrow bridle-road traversed by pack-men's horses.

Paco, *n.* (*Zool.*) Same as **ALPACA**, *q. v.*

Pacabahiba, a town of Brazil, abt. 12 m. W.S.W. of Mage; pop. 2,500.

Pac'olet River, rises in Polk co., N. Carolina, and flowing S.E. into S. Carolina, enters Broad River from Spartanburg dist.

Paco'ra, a river of the Republic of Colombia, flowing into the Pacific Ocean E. of Panama.

Pact, *n.* [Fr. *pacte*, Lat. *pactum*, from *paciscor*, to fix, settle.] A contract; an agreement or covenant; a compact.

Pac'tion, *n.* [Lat. *pactio*, from *paciscor*.] An agreement or contract (R.)

Pac'tional, *a.* By agreement; by way of compact

Pactitions, (*-tish'us*), *a.* Settled by agreement or covenant.

Pactol'ian, *a.* (*Geog.*) Pertaining to the river Pactolus of the ancients.

Pac'tolus, (now *Bayouly*.) (*Anc. Geog.*) A small river of Asia Minor, renowned for its auriferous deposits, which has its source in the N. side of Mt. Tmolus in Lydia, and after a N. course past Sardis, falls into the river Hermus. It is believed that, while holding the Lydian sceptre, Croesus obtained from this river his vast accumulation of money. It has, however, long since become exhausted,

Fig. 2022. — THE PACTOLUS, NEAR SARDIS.

and from the time of Strabo has ceased to yield any auriferous deposit. This is the river in which, in the earliest ages of Grecian story, Midas bathed or washed himself, turning whatever he touched thenceforth into gold, according to the myth or fable of the Greek poets.

Pacu'hi, a river of Brazil, flowing into the São Francisco, in the prov. of Minas-Geraes.

Pad, *n.* [A. S.] An easy-paced horse; a nag. — A robber who infests the road on foot; usually termed Foot-PAD, *q. v.*

—A soft substance flattened or laid flat; as, a *pad* of wool. — A package or piece of blotting-paper, &c.; as, a writing-*pad*. — A low, soft saddle; a cushion or bolster; properly, a saddle or pillion stuffed with straw. — A kind of mash-tub used by brewers. (Prov. Eng.) — The hoof of a fox. (Used in England.)

—*v. a.* To tread or walk upon; hence, to travel. — To tread or beat smooth or level.

—*v. n.* To travel slowly or leisurely. — To act the part of a footpad. — To beat a way smooth or level.

—*v. a.* (*imp.* and *pp.* PADDED.) To stuff or furnish with *pad* or padding.

(*Manuf.*) In calico-printing, to imbue cloth equally with a mordant.

Padding, *n.* The stuffing of a coat, saddle, cushion, &c. — The material used in stuffing coats, &c. — The act of imbuing cloth with a mordant.

Pad'dle, *v. n.* [Fr. *patrouiller*, from *patte*, a foot.] To handle or finger about. — To play in water with hands or feet. — To row; to beat the water as with oars; to propel a boat by means of a paddle.

—*v. a.* To propel by an oar or paddle. — To pad; to tread; to trample. (An English provincialism.)

—*n.* A broad hut short oar, used in impelling light boats. — The blade or broad part of an oar or weapon. — One of the broad-boards at the circumference of a water-wheel, or the float of the paddle-wheel of a steam-vessel. — A small sluice-gate. — A paddle-shaped foot, as of the crocodile. — A paddle-staff. (Local English.)

(*Glass Manuf.*) An implement for stirring the fused sand and ashes.

Pad'dle-beam, *n.* One of the two large beams between which a steamer's paddle-wheels revolve.

Pad'dle-board, *n.* One of the floats of a steamer's paddle-wheel.

Pad'dle-box, *n.* One of the semicircular boxes projecting from either side of a steamboat, within which the paddle-wheels revolve.

Pad'dler, *n.* One who paddles.

Pad'dle-shaft, *n.* The shaft upon which the paddle-wheel of a steamboat is fixed, placed centrally with, and connected to, the trunk-shaft.

Pad'dle-staff, *n.* A paddle, or iron-headed staff, used by ploughmen to free the share from earth, &c. (Used in England.) — A mole-catcher's staff, having a spade-shaped pike at its extremity.

Pad'dle-wheel, *n.* The wheel fixed upon the paddle-shaft of a steam-vessel, for propelling her through the water by the action of a number of floats, or paddle-boards, fixed at the circumference.

Pad'dock, *n.* [A. S. *padu*; Du. *padde*.] A great frog or toad. — A small inclosure under pasture, immediately adjoining the stables of a domain. — In Scotland, a low sledge for carrying away stones, &c.

Pad'dy, *n.* [A corruption from *Patrick*.] A name sometimes applied to an Irishman; — jocularly, or in contempt; as, "*Paddy* from Ireland, *Paddy* from Cork."

Pad'dy, *n.* In Hindostan, rice in the husk.

Pad'dytown, in W. Virginia, a village of Hampshire co., abt. 210 m. N.W. of Richmond, Virginia.

Pad'erborn, a town of Prussian Westphalia, at the source of the Pader, a tributary of the Lippe, 52 m. E. S.E. of Munster; *pop.* 12,271.

Padilla, (*pa-deel'ya*), a village of Mexico, abt. 12 m. W. N.W. of New Santander. At this place, July 19, 1824, Iturbide, the ex-emperor of Mexico, was shot.

Padil'la, DON JUAN DE, a noble Spaniard, who espoused the cause of the people against Charles V., during their arduous struggle for liberty from 1520 to 1522. Being defeated and taken prisoner at the battle of Villalar, April 23, 1521, he was put to death on the following day, and met his fate with the heroism of a true patriot. Donna Maria, his heroic wife, participated in all his labors, and after his death gained several advantages at the head of her troops, and defended Toledo for several months. She was at length deserted by the citizens, and retired to Portugal, where she died.

Padishah', *n.* [Pers.] The sovereign; the chief ruler; — a title given to the Sultan of Turkey, and to the Shah of Persia.

Pad'lock, *n.* A lock to be hung on a stable and held by a link.

—*v. a.* To fasten with a padlock; to stop; to shut; to confine.

Pad'nag, *n.* An ambling nag; as, a bishop's *pad-nag*.

Pado'ria, in Indiana, a post-village of Crawford co., abt. 50 m. W. by N. of New Albany.

Pad'ua, (*anc. Patavium*), a fortified city of Italy, prov. of Padua, at the junction of the Brenta and Bacchiglione, 24 m. W. of Venice; Lat. 45° 23' 41" N., Lon. 11° 52' 43" E. Its celebrated university, founded in the 13th century, had in former times students from all parts of the world. Among these were Dante, Petrarch, and Tasso; and among the professors were Fallopius, Fabricius ab Aquapendente, Morgagni, Galileo, and Guglielmini. The university library comprises 100,000 vols. There is also an academy of sciences. The churches, and especially San Antonio, are less remarkable for architecture than for their paintings and interior decorations. (*Manuf.* Woolleus, silks, ribbons, and leather.

Pad'ua, in Illinois, a post-township of McLean county.

Paduasoy', Pad'esoy, *n.* [From *Padua*, the Italian city, and Fr. *soie*, silk.] A kind of silken stuff formerly used for ladies' dresses.

Padu'cah, in Iowa, a village of Greene co., about 40 m. W.N.W. of Des Moines.

Paducah, in Kentucky, a city, cap. of McCracken co., on the Ohio river at mouth of Tennessee river, and on 3 railroad lines, about 48 m. above Cairo, Ill. *P.* is the chief depot of that neighborhood, and has an active and extensive trade in tobacco, pork, horses, mules, &c. *Pop.* (1897) 13,650.

Pæ'an, **Pæon**, *n.* [Gr. *paion*.] (*Antiq.*) Among the Greeks, properly a hymn in honor of Apollo, who was also called Pæon. Also a war song before or after battle: in the first case in honor of ARÊS, in the second as a thanksgiving to Apollo.

(*Anc. Poetry*.) A foot consisting of four syllables, of which there are four kinds; the Pæau primes, secundus, &c.

Pæonia, *n.* [From *Pæonia*, a mountainous country of Macedonia.] (*Bot*) The Pæony, a genus of plants, order *Ranunculaceæ*, May and June. The Chinese Poppy-

Fig. 2023. — PÆONIA PAPAVERACEÆ.

flowered Pæony, *P. papaveraceæ*, is a deciduous suffrutescent bush, 3-6 ft. high, native of China, introduced in Europe in 1787, and sometimes cultivated in this country; flowers pink, blossoming in May. It is distinguished from the other species by its united carpels.

Pæ'er, FERDINANDO, a celebrated Italian musical composer, b. at Parma in 1774. He studied at Venice, was called to the court of Vienna in 1795, became chapel-master to the elector of Saxony six years later, and after the battle of Jena, entered the service of Napoleon. He spent the rest of his life at Paris, and from 1818 till 1825 held the office of Director of the Italian Opera. He was a member of the Academy of the Fine Arts. His most successful productions were the operas of *Griselda*, *Agnese*, *Comilla*, and *Achille*. D. 1839.

Pæstum. (*Anc. Geog.*) An ancient city of Lucania, in S. Italy, in the N.W. extremity of that province, abt. 4 m. S.E. from the mouth of the Silarus (Selo), and upon a bay of the Tyrrhenian Sea, called *Sinus Pastanus*, (now Gulf of Salerno.) It was a place of importance and great beauty in the time of the Romans, and renowned for the splendid roses grown in its neighborhood, which bloomed twice a year. Several magnificent remains of its former grandeur are still standing, and attract universal attention. See Fig. 1908.

Pa'gan, *n.* [Lat. *paganus*. See PAGANISM.] A heathen; a gentile; one who worships false gods.

—*a.* Heathen; heathenish; noting a person who worships false gods; pertaining to the worship of false gods.

Paganism, *n.* [Fr. *paganisme*; from Lat. *Pagus*, *pt pagi*, villages, because heathen, when the worship of their gods was forbidden in the cities, retired to the villages, where they could practise their ceremonies secretly and safely.] Heathenism; the worship of idols or false gods. — The theology of the pagans, according to their own writers, Scævola and Varro, was of three kinds. The first may be called the *mythological*, or fabulous, as it treats of the theology and genealogy of their deities, in which they describe such things as are unworthy of deity. In this species of paganism, they ascribe to their gods thefts, murders, adulteries, and all manner of crimes. (See MYTHOLOGY.) This kind of theology is, therefore, condemned by the wiser heathen. The writers of this sort of theology were Sanchoniatho the Phœnician, and Orpheus, Hesiod, Pherecyde, &c., among the Greeks. The second sort of paganism, called *physical* or *natural*, was studied and taught by the philosophers, who, rejecting the multiplicity of gods introduced by the poets, brought their theology to a more natural and rational form, and supposed that there was only one supreme God, which they commonly make to be the sun, or at least an emblem of him, but at too great a distance to mind the world's affairs. In consequence of this, they devised certain demons, whom they looked upon as mediators between the supreme God and man. The philosophers who believed in this sort of theology, treated of the nature of these demons and their relations with regard to man. Among their writers on the subject were Thales, Pythagoras, Plato, and the Stoics. The third sort of paganism, called *political* or *civil*, was instituted by legislators, statesmen, and politicians. The first among the Romans was Numa Pompilius. Political paganism chiefly respected the gods, temples, altars, sacrifices, and rites of worship; it was properly their idolatry, the care of which belonged to the priests; and it was enjoined the common people to keep them in obedience to the civil power. The *rites* of paganism were as various as the objects of their worship. As a general rule, however, they had some idea of the necessity of an atonement for sin, and that "without the shedding of blood there is no remission." Sacrifices were deemed essential, and in many cases, and in all emergencies, they were apprehensive that the sacrifice must be, at least, of equal dignity with the sinner. Hence, among many nations, both ancient and modern, from the worshippers of Moloch to the South Sea Islanders, the practice of human sacrifices, which have stained the altars of almost every nation upon earth. In some religions of paganism, for example in those followed by Zoroaster, Plato, and Socrates, there are to be found pure and elevated notions, and precepts of morality, which would not disgrace even Christianity.

Pa'ganize, *v. a.* To render pagan or heathenish; to convert to paganism.

Paganini, Nicolo', (*pa-ga-ne'ne*), the inimitable violinist, was b. at Genoa, 1784, and initiated into the principles of music by his father, who was a commission-agent by trade, but a great musical amateur. His first public engagement was at Lucca. Here he found a zealous patroness in the Princess Bacchiocchi, sister of Napoleon; but in 1813 he left Lucca for Milan. From this period dates his wondrous performance on a single string, which at a later period called forth such bursts of applause from numerous audiences in Germany, France, and England. In 1828 he visited Vienna, where he met with an enthusiastic reception. Thence he visited the chief cities of Germany; and in 1831 he made a musical tour through France and England, where he realized enormous sums, which, however, the gambling-table swallowed up, frequently even with a greater rapidity than he gained them. His last years were spent at his villa Gajona, near Parma; and he d. at Nice, 1840. The most absurd stories were circulated regarding Paganini during his lifetime; nor did they cease even with his death. Crimes of the deepest dye were imputed to him without a vestige of foundation; though it must be admitted that the singular cast of his countenance, his reserved character, his sudden bursts of passion, and the mysterious veil which he was fond of throwing around all his proceedings, were well fitted to awaken public curiosity, with its usual adjunct, excessive credulity.

Page, *n.* [Fr. and Sp.; It. *paggio*. Etymol. unknown.] One side of the leaf of a book.

—A book or writing.

"Torn from their destined *page*."—*Ferriar*.

—A youth attached to the service of a royal or noble personage, rather for formality or show than for servitude. The name *pages* appears to have been confined to slaves and attendants of an inferior class, in modern Europe, until the reigns of Charles VI. and Charles VII. of France. As chivalric institutions prevailed, the office, by whatever name it may be called, became of importance. Courts and castles were the schools in which the young noble passed through the degree of page, in order to reach the higher grades of esquire and knight, when he became *hors de page*. In the 16th cent. the chivalrous character had become much adulterated; but the custom of bringing up sons as pages at courts continued until the disorder and license of the age rendered the service so dangerous that it was no longer sought by the better classes as a mode of education for their children. Pages then became, as they are now, mere relics of feudal custom: from almost all courts they have entirely disappeared; but are still to be found in

the household of the Queen of Great Britain, with the title of *Pages of the Presence*, &c.

Page, *v. a.* To mark or number the pages of a book or manuscript.

Page, in *Iowa*, a S.W. co., adjoining Missouri; *area*, abt. 550 sq. m. *Rivers*, Nodaway, Nishnabotona, and Tarkeo rivers. *Surface*, mostly level; *soil*, fertile. *Cap.* Clarinda.

Page, in *Virginia*, a N. co.; *area*, abt. 300 sq. m. *Rivers*, Shenandoah, and some smaller streams. *Surface*, much diversified; *soil*, in general very fertile. *Min.* Iron in abundance, also copper and lead, and a fine quality of marble. *Cap.* Luray.

Pageant, (*pa'jant*), *n.* A triumphal car, chariot, arch, or other pompous thing, decorated with flags, &c., and carried in public shows and processions; a show; a spectacle of entertainment; something intended for pomp.

—*a.* Showy; pompous; ostentatious.

—*v. a.* To represent in show. (*r.*)

Pageantry, (*pa'jan-try*), *n.* Show; pompous representation; gaudy or brilliant spectacle.

Page City, in *Iowa*, a post-village of Page co., abt. 62 m. S.E. of Council Bluffs.

Pagehood, *n.* State, quality, or condition of a page.

Pageville, in *Pennsylvania*, a village of Erie co., abt. 20 m. S.W. of Erie.

Pagil, *n.* (*Bot.*) Same as PAIGLE.

Pagina, *n.* [*Lat.*] (*Bot.*) The surface of a leaf.

Paginal, *a.* [*Lat.*] Consisting of pages; as, *paginal books*.

Pagination, *n.* Act or process of paging a book; the figures used to denote the number of pages.

Pag'ing, *n.* The marking of the pages of a book; as, the *pag'ing* of a volume of MS.

Pa'go, an island of Austria, in Dalmatia, circle of Zara, in the Adriatic, separated from the mainland by the Morlacca Channel, between 2 and 3 m. wide; *Lat.* 44° 30' N., *Lon.* 15° E. *Area*, 106 sq. m. Near its centre is the lake or inlet of Zasccha. *Pop.* 5,000.

Pa'god, *n.* A pagoda. (*r.*)

Pago'da, *n.* [Corrupted from Hind. *bootkudu*, an idol-house—*boot*, an idol, and *kudu*, house.] A Hindoo or Chinese temple, in which idols are worshipped.—An idol; an effigy of some imaginary deity.

(*Numismatics*.) A gold and silver coin of Hindostan, formerly current, and of values varying from \$1.75 to \$2.18.

Pa'godite, *n.* (*Min.*) Same as AGALMATOLITE, *q. v.*

Pago'sa Springs, in *Colorado*, a post-village, cap. of Archuleta co., 60 m. E. of Durango.

Paguridae, *n. pl.* (*Zool.*) The Hermit or Soldier Crabs, a fam. of Brachyurous Crustacea, division *Anomura*. The tail, or post abdomen, is of large size, but its envelope is little else than a membranous bag, entirely destitute of the usual hardness of the crustaceous integument. The thorax itself is not very firm; and it is only on the claws, which are of large size, that we find the true calcareous envelope. For the protection of their soft tails, the *P.* resort to various artificial methods. Many of them seek univalve shells, in which they take up their abodes; attaching themselves to the interior by a sucker with which the tail is furnished at its extremity, and also holding by its six false legs which it bears at its hinder portion. When they are feeding

Fig. 204.

DIODENES HERMIT-CRAB.

or walking, the head and thorax project beyond the mouth of the shell (Fig. 204); but when they are alarmed they draw themselves in, closing the mouth with one of the claws, which is much larger than the other, and holding to the interior so firmly, that they will rather be torn asunder than quit their attachment. As they increase in size, they are obliged to change their habitation for a more commodious one; and the way in which they accomplish this is very amusing. They may be frequently observed crawling slowly along the line of empty shells, &c., left by the last wave; and as if unwilling to part with their old domicile till a new one has been obtained, they slip their tails out of the old house into the new one, again betaking themselves to the former, if the latter is not found suitable. In this manner they not unfrequently try a large number of shells before they find one to their liking. If it happens that two hermit-crabs stop before the same shell, a dispute arises, and the weakest yields to the strongest. There are several species of various sizes, chiefly belonging to tropical shores.

Pah, *interj.* An exclamation, synonymous with BAH, *q. v.*

Pahang, a town of the Malay peninsula, cap. of a small state of same name, on a broad and shallow river, about 5 m. from its mouth; *Lat.* 3° 34' N., *Lon.* 103° 24' E.

Pahaquarry, in *New Jersey*, a township of Warren co.

Paid, *imp.* and *pp.* of PAY, *q. v.* (*Paid* for *payed*.)

Paiden'ties, *n. sing.* [From Gr. *paiden'in*, to teach, *pais*, a boy.] The science of instruction.

Pail, (*pal*), *n.* [*W. paol*, *pail*, *pot*; Gr. *pella*, a wooden bowl, milk-pail; *Lat. pelvis*, a basin, laver.] An open vessel of wood, tin, &c., used as a household utensil for carrying or holding liquids, as water or milk.

Pail'-brush, *n.* A brush used in cleaning pails.

Pail'ful, *n.*; *pl.* PAILFULS. The quantity held by a pail.

Pailleuse, *Palliasse*, (*pal-yas'*), *n.* [*Fr.* from *paille*, straw, from *Lat. palea*, chaff.] A straw under-bed.

Painbœuf, (*paug-buf'*), a seaport-town of France, dept. of Loire-Inférieure, on the Loire, 22 miles W. of Nantes. It is the deep-water harbor of the port of Nantes, vessels of more than 200 tons going there to load and unload their cargoes. *Pop.* 3,500.

Pain, (*pân*), *n.* [*A.S. pin*, *pune*; *D. pijn*; *Ger. peín*; *Fr. peine*; *Lat. pœna*.] Physical suffering arising from pressure, from a blow, or from some other external cause; an uneasy sensation in animal bodies of any degree from slight disturbance to extreme or acute distress or torture; suffering; bodily grief.—Suffering or evil inflicted as a punishment for a crime; punishment suffered or denounced; penalty.

"None shall presume to fly under *pain* of death."—*Addison*.

Mental distress; agony of spirit; torment; uneasiness of mind; disquietude; anxiety; solicitude for the future.

"Sweet is pleasure after *pain*."—*Dryden*.

—*pl.* Labor; work; toil; laborious or diligent effort; task; as, to take *pains*.—The throes of travail or childbirth; pangs of parturition.

—*v. a.* [*A. S. pinian*; *Fr. peiner*.] To torment; to torture; to cause uneasy sensations of any degree of intensity in the body of.—To render uneasy in mind; to trouble; to grieve; to disquiet; to wound the feelings of. "She drops a doubtful word that *pains* his mind."—*Dryden*.

Paincourt, in *Louisiana*, a post-village, cap. of Assumption parish, about 67 m. S. of Baton Rouge.

Paine, THOMAS, an American political writer, b. in England, 1737. He early distinguished himself by his literary abilities and republican notions. At the outbreak of the War of American Independence, he, in 1774, emigrated to this country, when he became editor of the *Pennsylvania Magazine*, and gave an impulse to the Revolution by his famous pamphlet called *Common Sense*, in which he advocated the policy of separation and independence. He went to Paris in 1789, and published, in 1791, his *Rights of Man*, in reply to Burke's speech on the French Revolution. In Sept., 1792, he was elected a member of the French National Convention, acted with the Girondists, narrowly escaped death in the reign of terror, and brought out, in 1795, his celebrated deistical work entitled, *The Age of Reason*. He returned to the U. States in 1802, and died at New York, in 1809.

Paine's Kollow, in *New York*, a post-village of Herkimer co., abt. 75 m. W.N.W. of Albany.

Painesville, in *Ohio*, a post-village and township, cap. of Lake co., abt. 29 m. N.E. of Cleveland. It is finely located and commands an active trade. *Manuf.* Machinery, barrels, flour, &c.

Pain'ful, *a.* Full of pain; giving pain, uneasiness, or distress to the body; occasioning pain, disquiet, or uneasiness to the mind; afflictive; distressing; grievous; producing anguish or misery; as, a *painful* event.—Requiring severe labor or toil; full of difficulties; exercising labor; undergoing toil or trouble; industrious; as, *painful* exertion.

"While pensive poets *painful* vigils keep,"—*Pope*.

Pain'fully, *adv.* With suffering of body; with affliction; uneasiness, or distress of mind; laboriously; with toil; with arduous effort or diligence.

Pain'less, *n.* and *a.* Same as PAINLESS, *q. v.*

Pain'less, *a.* Free from bodily pain or mental trouble; as, a *painless* disease, a *painless* operation.

Pain'tlessness, *n.* Freedom from pain or trouble; state, quality, or condition of being painless.

Pains, *n. pl.* Care; trouble; effort. See PAIN.

Pain'staker, *n.* One who takes pains; a laborious person.

Pain'staking, *a.* Laborious; industrious; carefully diligent; sparing no pains.

Paint, *n.* A substance used in painting, either simple or compound; a coloring material; a pigment.—A composition used for heightening the color of the skin or complexion; a cosmetic; rouge.

—*v. a.* [*Fr. peindre*, *pp. pei*.; *Sp. pintar*; *It.* from *Lat. pingere*, pictum; Sansk. *pinj*, to paint.] To form a figure, likeness, or representation of in colors; to portray by colors or images; to exhibit in forms and hues; to represent in a tinted semblance; as, to *paint* a portrait.

"As idle as a *paint*ed ship upon a *paint*ed ocean."—*Coleridge*.

—To cover or besmear with hues or colors, either with or without figures; to color; to embellish or diversify with tints or colors; to lay on artificial color for ornament; as, to *paint* a house, ship, sign-board, &c.—To represent or exhibit to the mind; to present in form or likeness to the intellectual view; to describe; to delineate; to portray; to depict; as, his errors were *paint*ed in the strongest terms.

—*v. n.* To practise the art of painting; as, this artist *paints* well.—To lay artificial coloring on the face by way of embellishment.

Paint, in *Ohio*, a township of Fayette co.

—A post-township of Highland co.

—A township of Holmes co.

—A township of Madison co.

—A township of Ross co.

—A township of Wayne co.

Paint, in *Pennsylvania*, a township of Clarion co.—A township of Somerset co.

Paint Creek, in *Iowa*, a township of Allamakee co.

Paint Creek, in *Michigan*, enters the Clinton River in Oakland co.

Paint Creek, in *Ohio*, enters the Scioto River abt. 3 m. below Chillicothe.

Paint'ed Post, in *New York*, a post-village of Steuben co., abt. 2 m. W. of Corning.

Painter, *n.* One whose occupation is to paint; one skilled in representing persons or things in colors.

(*Naut.*) A rope employed to fasten a boat to a ship, wharf, &c.

—The cougar or panther. (*Local U. States*.)

Painters' Colic, *n.* (*Med.*) A disease which derives its name from the fact that painters are more frequently attacked by it than persons of other occupations, though habitual cider-drinkers, and people of various callings, are sometimes liable to its attack. As the cause in all cases is the presence of lead in the system, absorbed through the skin by contact with paints containing preparations of that metal, especially those known as white and red lead, or taken into the lungs from the fumes during smelting, or else received into the stomach by drinking liquors or water kept in leaden cisterns, it will be readily understood how many persons, coming in contact with easily absorbed minerals, may be affected by all the symptoms of the *P. C.*, the special peculiarity of which is the tremor of the hands, and sometimes of the head and legs—a mild form of paralysis that attends it. This very serious disease commands the prompt attendance of a physician. *Iodine of potassium* is said to be an effective remedy for lead and mercurial poisoning. See LEAD.

Painter'ship, *n.* State or condition of being a painter.

Painter-stainer, *n.* An heraldic painter.—A member of a London guild, denominated "The Worshipful Company of Painter-stainers."

Paint'ing, *n.* An art which, by means of light, shade, and color, represents on a plane surface all objects presented to the eye or to the imagination. As the desire to imitate is one of the natural tastes of man, and the variety of forms and colors one of his chief sources of pleasure, it is not wonderful that traces of the art should be found among the remains of every nation, however ancient, and that it should be practised by every existing people, however uncivilized. In the absence of any positive information on the subject, it would be idle to inquire how early in the history of the world painting took a prominent place among the arts of life; and we must be content with the knowledge that it was practised by the Egyptians several thousand years before the Christian era. Painting appears to have had its origin among all nations as a species of writing; and among the Egyptians it scarcely ever became anything more. The specimens which we possess of Egyptian art, executed 18 or 19 centuries before Christ, show that the arts were at that period in the highest condition which they ever attained in Egypt; and through the whole course of Egyptian art, we find that, as in these specimens, Egyptian painting seldom, if ever, attempted more than an outline of the object as seen in profile, such as would be obtained by its shadow. To this outline colors were applied simply and without mixture or blending, and without the slightest indication of light or shade. As the Egyptians did not practise dissection, they were ignorant of the true form of the bones and the muscles, and in the representation of the human figure, therefore, could only obtain such success as might result from attention to the length of the different parts of the body. The chief reason, however, for the low state of Egyptian art was the fact that during the larger period of its existence it was under the domination of the priesthood, who refused to allow the artists, in the religious works which formed almost their sole employment, to depart from certain sacred and conventional forms. The Egyptian artists employed six pigments, mixed up with a gummy liquid, namely, white, black, red, blue, yellow, and green,—the first three always earthy, and the remaining vegetable, or at least frequently transparent. With regard to the Hebrews, we have no information as to whether the art of painting was ever practised among them; but it may be inferred that a people who were acquainted with the arts of carving in wood and stone, and of chasing gold and silver, would not be wholly ignorant of painting. There has been much discussion as to how far the ancient Greeks were acquainted with the art of painting; but as their ancient writers, who were acquainted with the finest sculptures and the most beautiful architecture, speak in almost extravagant praise of the painters of their day, it may fairly be taken for granted that the art was practised among them with distinguished success. The first Grecian painting on record is the *Battle of Mynete*, by Bupalchus, and purchased by Candaulus, King of Lydia, for its weight in gold, or, as some say, a quantity of gold coins equal to the extent of its surface. This was in the year 718 B. C. During five centuries, however, the art had previously flourished in the cities and islands, and especially at Corinth, having passed through the various gradations of simple skiagraphy (or shadow-painting), the monographic style (consisting of a simple outline), monochromatic compositions (in which one color only was employed), and polychromatic (where a variety of hue, but without shading, was used). After Bupalchus, the art of painting continued slowly to improve until the time of Polygnotus of Thasos, who, in 460 B. C., founded what may be called the Athenian school, and whose pictures were admired several centuries after his death. Even at this period, however, the art was deficient in the most powerful of its means, the magic of chiaroscuro, and also in its instruments, the ancient paintings being executed with a *cestrum*, a short metal rod, broad at one end and pointed at the other, in the following manner:—The tablet, primed in white, was laid over with a varnish of resin mixed with wax, and usually incorporated with a dark reddish coloring-matter. Upon this the subject was traced, and the lights worked in with the *cestrum*. At length, however, the pencil was invented; and a new and glorious period of Grecian art commenced (400 B. C.) with a Polyo-

dorus, Parrhasius, Timanthes, and Zeuxis, the latter of whom is the first from whose works we derive explicit statements of the ideal in Grecian painting, and who was the first to discover or practise the grand principle in the heroic style of painting—to render each figure the perfect representative of the class to which it belongs. There is reason to believe, also, that he was the first to teach the true method of grouping, artists before his time having arranged the figures in lines, without any principal group on which the interest of the event was concentrated. The last epoch of painting in Greece commences with Apelles (about the conclusion of the 4th century B. C.), whose style, as far as we can judge from the descriptions of the ancient writers, must have closely resembled that of Raffaele, while their choice of subject appears to have been nearly similar. A Venus painted by him was esteemed the most faultless creation of the Grecian pencil, and was purchased, long after the artist's death, for 100 talents, or \$100,000, by the emperor Augustus. Contemporary with Apelles was Protogenes, an excellent artist, whose only fault was that he finished too highly, and somewhat later lived Nichomachus, Pansius, Aetion, and others, with whom the art began to decline, through causes connected with the dismemberment of the Macedonian empire. We can never satisfactorily determine what perfection the art of painting attained in Greece; for while, on the one hand, the writers of antiquity, whom we know to have been most accomplished critics of poetry, oratory, sculpture, and architecture, speak in the most glowing terms of the works of the Greek artists, there is a great disparity between the means and instruments of the art as described by them, and the excellence of the effects they assert to have been produced by them; and, in fact, in the few and very imperfect remains of ancient paintings which have come down to us, such as in the delineations upon vases, it is observable, that, while the artist evidently well understood the principles common to form, he was but imperfectly acquainted with those peculiar to painting. As far as can be understood from the allusions of ancient writers, the Greek artists practised three principal methods of painting: first, *distemper*, employed for mural pictures; second, *glazing*, when the picture, after being finished in water-colors, crayons, or distemper, was covered with a coat of hard and transparent varnish; and thirdly, *encaustic*, when the coloring-matters, actually incorporated with wax, or preparations of wax, were thus applied in a liquid state, and when finished allowed to dry. It may here be observed that the practice of coloring marble statues was common among the Greeks; and that vase-painting was regarded as an art in itself. The Roman school of painting is scarcely worth a thought, the influx of Greek productions having had the effect of almost completely stifling native Italian talent, and the genius of the people leading them to prefer what was ostentatious and glittering to what was pure in design, pathetic in expression, or perfect in form. There are, however, three periods observable in the history of painting in ancient Rome: the first, that of Græco-Roman art, which may be dated from the conquest of Greece until the time of Augustus, when the artists were chiefly Greeks; the second, from the beginning of the Christian era until about the latter end of the 3d century; the third, when Rome, in consequence of the foundation of Constantinople, and the changes it involved, suffered spoliations similar to those which it had previously inflicted upon Greece. During the second period, portrait painting was very common in Rome, and *Mosaic* was so general as to a great extent even to supersede painting. The fanatic fury of the early Christians against anything that reminded them of paganism, the division of the empire, and the incursions of the Goths and other barbarians, led to the destruction of all traces of the former splendor of the fine arts; and Christianity helped still further to stifle them, by making purity of heart everything, and physical ugliness or deformity nothing, and by inculcating that mankind, being corrupt and born in sin, no Christian painter ought to look at the naked figure while he was painting it. In spite of the fact that the popes and emperors at an early period gave orders for the adornment of the churches with pictures, the art continued to decay until the middle of the 11th century, when St. Didier having sent (A. D. 1066) for Greek artists to adorn Monte Casino, at Subiaco, the example was followed by the corporations of Pisa, Venice, Analfi, and Genoa, who rivalled each other in adorning their native cities with works of art; and painting, having sunk to the lowest barbarism, went on improving, till the taking of Constantinople by Mahommed II. dispersed the Greek artists collected there, and scattered them all over Europe. Hundreds went to Italy, and inoculated Italian artists with some remnant of their taste for beauty, decayed as it was. Soon after their arrival, some of their pupils began to excel them, and Cimabue (A. D. 1240) was one of the first, if not the first, to give indications of attempting something new in painting. He was himself excelled by Giotto, a shepherd-boy, whom Cimabue had taken as a pupil, and who may be looked upon as the father of painting in Italy. In the 15th century there were two schools of painting in Europe descended from the Byzantine school, i. e., from the Greek artists who had emigrated from Constantinople to various parts of Europe on its capture by Mahommed II.; namely, the Transalpine school and the Italian school; the former being again divided into the *Dutch*, *Flemish*, and *German* schools; and the latter into the *Florentine*, the *Senese*, the *Roman*, the *Neapolitan*, the *Venetian*, the *Mantuan*, the *Modenese*, the school of *Parma*, the school of *Cremona*, the *Milanese*, the *Bolognese*, the *Ferrarese*,

the *Genoese*, and the school of *Piedmont* and the adjacent territory. As few characteristics of a national style are to be found in the history of art in the Dutch and Flemish schools, as distinct from the German school, prior to the close of the 16th century, they may here be considered as one and the same. Its earliest pictures were painted upon wood, usually oak, covered sometimes with canvas, always with a white ground, upon which the outline of the subject was sketched, and the whole overlaid with gilding, the latter forming the real grounding of the picture, which was painted in water or size-color, with great care and diligence, and with more truth to nature than occurs in any other works of the same age and description. At the beginning of the 15th century, however, John van Eyck discovered, or at any rate brought oil-colors into general use; and the Transalpine school being thus put early into possession of an advantage contributing principally to the distinguishing qualities of fine coloring and exquisite finish, at once took a high position. Of the great masters of this school, we may more particularly mention the Flemish painter, John van Eyck himself, whose paintings are distinguished by brilliant coloring, magic effect of the *chiar-oscuro*, carefully labored though often tasteless drawing, a strong yet natural expression, and boldness in composition. Francis Floris (born 1520, died 1570), called the "Flemish Raffaele;" Francis Snyders, whose hunting-pieces are among the very best, if not the best, of their kind; and Peter Paul Rubens (born 1577, died 1640), the author of about 4,000 pictures, distinguished for brilliancy of coloring, the play of reflected lights, and splendor of general effect in his historical pictures; and for the freshness, clearness, and variety of nature in his landscapes; but who, in the former class of pictures, is sadly wanting in the elevation of form and sentiment which ennobles the works of the old masters of the schools of Florence and Rome. Of the Dutch school, the most distinguished during the 16th and 17th centuries were, Luke of Leyden (born 1494); Cornelius Poelenburg, of Utrecht (born 1586, died 1663), who was famous for his skill in painting small landscapes with figures; John Daniel de Heem, of Utrecht, (born 1604, died 1674), known for his faithful imitation of flowers, fruits, carpets, and vases; and, greatest of all, Paul Rembrandt van Rhyne, born in 1606, who was master of all that relates to coloring, distribution of light and shade, and the management of the pencil, but who was wanting in many of the characteristics of a true artist; such as composition, perspective, and dignified expression. Of the German branch of the Transalpine school, as it ceased to be a distinct school when it ceased to be Gothic,—i. e. after the 15th century, it will be sufficient here to mention Albert Dürer, born in Nuremberg, 1471, whose works, although somewhat hard and meagre, excel in truth, originality, simplicity of thought, and good coloring; and Holbein, his contemporary, whose works, chiefly painted in England during the reign of Henry VIII., are excellent examples of the school. Their successors, departing from the national style, became blended with the Italian masters, to whom we must now return.—The great men of the Florentine school painted more in fresco than in oils. After the lapse of a hundred years from the death of Giotto, during which the art had been slowly improving, appeared Tomaso da San Giovanni, nicknamed Masaccio, from his total neglect of personal appearance, who, although he died at the age of twenty-four, advanced the art from a state of infancy far towards the vigor of manhood. Shortly after his death was born Leonardo da Vinci, who, as philosopher, poet, and artist, anticipated three centuries, and who, to the truth and precision of character introduced by Masaccio, added new and most valuable qualities, by introducing the principles of *chiaroscuro*, and depth of tone in color. The "Last Supper," painted by him in fresco at Milan, exhibited a dignity and propriety of expression unequalled at the time; and, if seen as originally painted, probably still unsurpassed. After him came two contemporaries, who are regarded as the greatest painters of any age or country. Michael Angelo, (equally famous as a sculptor,) born in Florence in 1474, and Raffaele, born in Urbino in 1483. Although contemporaries, they are most unlike in all the characteristics of genius, save in the final result. The former excelled in energy, the latter in beauty. Michael Angelo's conceptions are wonderful, but singular, and remote from nature; the figures on his canvases are a superior order of beings, and there is nothing about them to put us in mind of their belonging to our species. An ideal abstraction of mind was the object of his imitation, to which all living nature, elevated into gigantic forms and energetic nodes, was to be moulded into subserviency. The excellency of Raffaele, on the other hand, lay in the propriety, beauty, and majesty of his characters; his judicious contrivance of composition, correctness of drawing, and purity of taste. The manner of his best pictures is full, harmonious, sweet, and flowing, yet bold, learned, and sustained, and composed of such a union of natural grace and antique correctness as meet only in the creations of his pencil. Raffaele properly belongs to the Roman school of painters; but in speaking of the history of the art of painting, it is difficult not to associate his name with that of Michael Angelo. Of the artists who supported the reputation of the Florentine school after Michael Angelo, we may mention Daniel di Volterra, who imitated him, as did many others, in a somewhat hard and laborious manner; Andrea del Sarto, who followed the style of Leonardo da Vinci; and Carlo Dolce, who is famous for Madonnas and small pictures, which he finished with exquisite delicacy of pencil, and which are fraught with the genuine expression of certain af-

fecting emotions.—*The Roman School.* Some lovers of art have doubted the right of the Roman school to that appellation, as most of the artists who flourished at Rome were either natives of the other cities of the Roman State or from other parts of Italy; however this may be, the Roman school or academy appears to have come into existence about the time of the transference of the papal chair from Avignon to Rome, and to have owed its immediate origin to the diligence of the pontiffs in decorating the Vatican. The only master of this school whom we will here mention before Raffaele, is Pietro Perugino, his instructor in the mysteries of the pencil. His style was narrow and contracted, his figures and draperies being pinched up in a very unpleasant manner; but his youthful and female heads were frequently graceful, and it is known that Raffaele esteemed his works very highly. Raffaele, whose place of birth we have already mentioned, had at different periods of his life three distinct styles of painting; the first dry and meagre, in imitation of his master, Pietro Perugino, but not without truth, and often great beauty of finishing; the second and intermediate step, an attempt to escape from the minuteness, which he soon found to be unsuitable both to his own favor and the dignity of art. The third manner solely and exclusively individual, proceeding from the study of nature and the antique, and of which the most wonderful example is his picture of the *Transfiguration*. His death, in 1520, proved an irremediable loss to the arts; and that, and the death of Leo, with the inattention of his successors to anything connected with the fine arts, proved most injurious to the Roman school, which still, however, produced some great masters, of whom the most prominent are Michael Angelo Caravaggio (B. 1569), who aimed at great simplicity of color, and generally chose sombre subjects, such as nocturnal skirmishes, treachery, and murder. Salvator Rosa (B. 1615), who applied the style of Caravaggio to landscape, and chose as his subjects savage scenery, Alps, broken rocks and caves, wild thickets, and desert plains. His genius, however, was not confined to such compositions, as he painted some altar-pieces which were well conceived and of powerful effect. Nicholas and Gaspar Poussin, although Frenchmen, are generally classed in the Roman school, as its style was their rule, and Rome was the constant theatre of their efforts. Towards the close of the 17th century, the Roman school had sunk into the last stage of decline; the result of the calamitous events which had afflicted Rome about the middle of that century; the feuds of the nobles, the flight of the Barberini family, and the dreadful plague of 1655. The rudiments of the *Venetian school* of painting appear to date from the 11th century, about the year 1070, when the doge Selvo invited mosaic-workers from Greece to adorn the magnificent church of St. Mark; a great impulse being given to it by the arrival of an immense quantity of pictures, statues, and basso-relievi from Constantinople, after its capture in 1204. The Venetians were the first of Italian artists who became acquainted with Van Eyck's method of painting in oils; and George Bellini was the first in Venice, toward the close of the 15th century, to practise and obtain success in it. His pictures are gracefully drawn, and mellow in color; but his chief merit consists in the fact that he was the master of the three great Venetian painters—Titian, Giorgione, and Sebastiano del Piombo—from whom the Venetian school may be said to have taken its distinctive characteristics of smooth harmony and brilliancy of coloring. Giorgione, whose real name was Giorgio Barbarelli, the friend and rival of Titian, painted with a certain freedom and audacity of manner, of which he may be said to be the inventor, and which he combined with very rich and careful finishing in fresco; and as these works were generally upon the outside of the walls of houses, scarcely any of them now remain. Many of his oil-paintings, however, are to be found both in Venice and other places, in excellent preservation, and full of grace and beauty. Sebastiano del Piombo, who may be considered a disciple, and the most distinguished one, of Giorgione, imitated him very closely in the tone of his colors and the fulness of his forms, and was particularly successful in pictures for private rooms and portraits. It is said that Michael Angelo held him in such esteem as a colorist, that he united with him, in order to oppose the too favorable opinion entertained by the Romans of Raffaele. Great as were these painters, however, Titian (B. 1477, D. 1576) must be regarded as altogether at the head of the school under notice. In expression he is the most historical of all painters, his portraits being second only to those of Raffaele; in careful imitation of natural effect, he is equal to the most painstaking of the Dutch school, while at the same time preserving great grandeur and breadth of effect. In his pictures, the surrounding colors and objects are delicately reflected by every surface capable of reflecting, even in the eyes of the figures; and the broad shades, instead of being mere dark masses, are composed of those innumerable gradations which mark the shadows of nature. The Venetian masters were unable, after his death, to maintain the reputation which Titian had gained for it; but we must mention Tintoretto, his contemporary, a painter full of fire and sprightliness, who has been called the lightning of the pencil, from his miraculous dispatch, and whose pictures are distinguished by wild and fantastical inventions; Bassano, who was particularly expert in the representation of animals; and Paul Veronese, who founded a distinct branch of the Venetian school. His genius was naturally noble, and even magnificent and vast, and while his compositions failed in historical correctness and elegance of design, they are exceedingly

attractive, from their freshness and magnificence of coloring. In his pictures are to be found splendid banquets, sumptuous edifices, bright aerial spaces, noble vestments, lords and ladies, crowns and sceptres, arms and jewels. In the course of time, the masters of the Venetian school became mannerists in color; but it cannot be denied that during the period of the decline of art throughout Italy, the Venetian school shone peculiarly conspicuous in the number of superior artists it produced. The next school of any importance is the Lombard school, which comprehends those of Mantua, Modena, Cremona, and Milan. The art of miniature-painting was practised at a very early period in Mantua; but in regard to pictures, the first known artist is Andrea Montegna, who was a native of Padua, and established his school at Mantua at the end of the 15th century, where he has left some works of great merit; and with him must be mentioned Giulio Romano (B. 1492, D. 1546), Raffaele's most distinguished pupil, whose last works at Mantua, chiefly in fresco, place him at the head of that school. Contiguous to the Modenese school is the Parmesan, which brings us to Correggio (B. 1494, D. 1534), the most delightful of all painters, and one who, from the bosom of poverty, without master, without patron, burst at once upon the view in all the blaze of original talent. He had come into notice at a time when it was resolved to paint the great cupola of St. John at Parma, and he was selected as the artist. The clearness and relief, the sweetness and freedom of pencil in the works which he thereupon executed, have never been exceeded; while the grandeur of design, and the boldness of conception in the foreshortenings, have astonished all succeeding generations of artists. In the management of light and shade he was unequalled; and his only defects were a certain want of correctness, and a want of force, which sometimes render the whole effect of his pictures effeminate and monotonous. Parmegiano is the next important name in this school; but he cannot be compared with Correggio. The school of Cremona appears to have had its origin in the foundation of the magnificent cathedral in 1107, which was as speedily as possible decorated with all that sculpture and painting could afford; and, indeed, the history of the school is almost identical with the history of its adornment. The Milanese school dates from 1335, when Giotto was employed in ornamenting various places in the city, which long continued to be regarded as most beautiful specimens of the art; but the founder of the Milanese school is, however, by many considered to be Vicenzio Foppa, who flourished about the year 1407, and was employed by the celebrated Francesco Sforza.—*The Bolognese School.* Towards the close of the 16th, and early part of the 17th century, the progress of decline in the art of painting in Italy was stayed for a time by the rise of a new school—the Bolognese, or Eclectic, the great principle of which was to select what was most excellent in the primitive schools—design from the Florentine, grace from the Roman, from the Venetian color, and from the Lombard, light and shade. We have spoken of this school at length under the head Bolognese School. The most ancient specimens of the art of painting in France are those on glass, many still remaining of considerable beauty. The school of French painting may fairly, however, be supposed to have risen in the reign of Francis I., who, for the improvement of his subjects, brought artists from Italy. The first native painter of France whose name we find recorded, is Jean Cousin; but the first French masters of eminence were Vouet (B. in 1582) and Nicholas Poussin (B. 1594); who has been already mentioned as belonging to an Italian school, and who had formed his taste by a residence of nearly twenty years in Italy, before he was invited, in 1639, to a pension and an apartment in the Tuileries. He has been called the Raphael of France; and the characteristics of his works are extreme correctness of form and costume, great propriety in keeping, and the most enchanting simplicity of design. Louis XIV., who commenced his reign in the year 1643, having resolved to give to France a school of native artists, called into existence a race of painters, of whom the most distinguished were Le Sueur, who, with the exception of Poussin, is supposed by some critics to be the best painter France ever produced; Le Brun, who had a lively fancy, great dexterity of hand, and sometimes noble conceptions, but who was in all things too artificial. Contemporary with these was Claude Lorraine, commonly called Claude Lorraine, who was a master of aerial perspective, as of nearly every other branch of landscape; but though French by birth, he practised his art and passed most of his life in Italy. In the succeeding reign, Antoine Watteau painted *fêtes galantes* with grace and effect; Joseph Vernet was noted as a marine painter; and Jean Baptiste Greuze was famous for his female heads and representations of domestic life. Painting deteriorated in France during the latter half of the 18th century; but was restored to a certain amount of vitality about the time of the French revolution by Jacques Louis David, whose style, known as the "classic," is dry and pedantic; and who was followed by a numerous band of scholars. At length, Gros, Gericault, and others inaugurated the system of painting from nature, and originated the modern French school, of whom a few of the most distinguished ornaments are Paul Delaroche, historical painter; Ary Scheffer, famous for ideal conceptions; Horace Vernet, unrivalled in battle-pieces; Rosa Bouheer, Decamp, Courbet, Corot, Daubigny, Gerome, Troyon, Flandrin, Fortuny, &c. The Spanish school can scarcely be said to have had an existence previous to the middle of the 15th century, when some Flemish artists gave the native painters their first practical ideas of color and design. In the 16th century, schools were in exist-

ence in Castile, Valencia, Seville, and elsewhere, that of Seville being the most distinguished. Among the eminent men connected with them were Antonio del Rincon, Luis de Vargas, Luis de Morales, Vincente Joanes, sometimes called the Spanish Raphael; Pablo de Cespedes, and Juan de las Roelas, most of whom studied in Italy, and flourished in the 16th century; Francisco Zurbaran, a distinguished painter of the naturalistic school of Caravaggio; and Diego Velasquez de Silva, and Bartolomé Esteban Murillo, whose place is in the first rank of the artists of any age or clime. Since the commencement of the 18th century, Spain has produced no painters of eminence.—Of the *English school of painting*, little can be said previous to the 18th century; since, although Holbein, Rubens, Vandyke, and other distinguished artists had, during the previous two centuries, successfully practised their art in England, their influence failed to form a national school. Sir Joshua Reynolds, who flourished 1750–80, may be considered as the founder of the English school. He was truly a great artist, excelling in portraiture, and eminent as a colorist. His contemporary and rival, Gainsborough, while nearly approaching Sir Thomas in portraits, is better known as a landscape painter of the highest order. They were both preceded by Hogarth, whose pictures are powerful satires on the manners, morals, and follies of the age; though unique in the treatment of his subjects, Hogarth appears to have had but little direct effect upon contemporary painters. Among the other artists who flourished during the latter half of the last century were Fuseli, the "Dante" of painters, Richard Wilson, eminent in landscapes, Romney and Opie, famous for their portraiture of female beauty; and Barry, an eccentric man of genius, who produced some great historical pictures. In the first quarter of the present century appeared Sir Thomas Lawrence, whose female heads are remarkable for their striking grace and elaborate finish; Hoppner, Jackson, and Sir Henry Raeburn, his peers in portraiture; Sir David Wilkie, the best delineator of humble life that England has yet produced; Haydon, the "apostle of high art," an historical painter of great merit, but objectionable mannerisms; Etty, a splendid colorist, and the "Rubens" of the English school; Turner, the most original and æsthetic perhaps of all English landscapists; Constable, Callcott, Collins, Morland, Nasmyth, and John Martin, famous for his startling chiaro-scuri. During the same period, *genre* painting was cultivated by Bird, Smirke, Stothard, and others, who had, as their successors in this style of art, Newton, Leslie, Cooper, Mulready, Maclise, Herbert, Sir Charles Eastlake, Redgrave, E. M. Ward, Gilbert, Cruikshank, Webster, Hamilton, Cope, Dyce, C. Landseer, Frith, Horsley, Ford, Faed, and innumerable others of mark, the majority of whom have also painted historical subjects and landscape with success. In the latter branch of art, the most eminent painters of late years have been Creswick, Boddington, Linnell, and F. Lee. Roberts achieved celebrity by his delineations of Eastern life and travel; Ilaghe for Flemish interiors; Lance as the first painter of still-life of his time; Stanfield for his unrivalled sea-pieces; and, as animal painters, Sir Edwin Landseer, Andsell, and Herring, stand in their several walks unrivalled. At the head of the English school of portrait-painting at the present day, is Sir Francis Grant, President of the Royal Academy. Among the chief names in the English school of water-color painting may be mentioned, Prout, Copley Fielding, Cox, Roberts, Hunt, Cattermole, Nash, Absolon, and E. Corbould. A new school grafted on the old, and called the *Pre-Raphaelite*, has for its chief representatives, Holman Hunt, Millais, and Dante G. Rossetti, the poet. In the U. States, painting, previous to the present century, made but scant progress. Benj. West, a native of Pennsylvania, the earliest of American painters, gained his reputation in England, as also did Copley, who in that country won celebrity by his portraits. C. W. Peale and Col. John Trumbull may be said to be the first native painters who practised their art to any noticeable extent in this country. The gallery of national portraits and pictures illustrative of American history now at New Haven would in themselves form the valuable nucleus of a national gallery of art. In the beginning of the present century, Malbone, Gilbert Stuart, and Allston, appeared as the expositors of American claims to artistic eminence: the first, a fine miniature painter; the second, scarcely inferior to Reynolds in portraiture; and the third, a worker of peculiar excellence in grand historical art. At the same period, too, portrait-painting found able operators in J. W. Jarvis and Thomas Sully; and historical pieces were ably treated by Vanderlyn. About 1825, Thos. Cole founded what may be styled the American school of landscape-painting, a department which was thenceforward more cultivated by American artists as a specialty. The works from Cole's atelier, though not remarkable for striking vigor of conception, are, nevertheless, characterized by a dreamy morality (as it were), in its type approaching to allegory. Of his pictures, the series forming *The Course of Empire*, and *The Voyage of Life*, are among the *chef d'œuvres* of American art. Immediately following Cole, appear the names of Inman, Durand, Fisher, and Doughty, of whom Doughty and Durand excelled in landscape, while Inman may be esteemed the first successful American master of *genre*. Besides these distinguished painters, we may mention Rembrandt Peale, Weir, Page, Huntington, Rothermel, and Buchanan Read, all of whom have figured in a more or less degree in historical representation, genre, and landscape,—Page being peculiarly notable as a colorist. Morse, Neagle, Ingham, Harding, and Fraser, form in themselves a group of "limners of the human face divine" of deserved celeb-

ity. During the last 30 years, landscape-painting has derived a fresh and healthful impetus, and it is questioned if, in the art schools of Europe, there shall be found a higher development of talent in this department than exists now in this country. Prominent among the great names of the time are those of Bierstadt, Church, Kensett, G. L. Brown, Cropsey, Chapman, Casilear, W. and J. M. Hart, Mignot, Gignoux, Gifford, Colman, Gay, Cranch, Innes, Shattuck, Hubbard, Boughton, Dana, W. T. Richards, *cum multis aliis*. The works of these painters are, for the most part, characterized by close fidelity to nature, and are in general notably free from mannerisms and Old World conventionalisms. During the same period, genre has been cultivated with considerable success by Laubdin, Mount, Langer, Ehringer, May, Darley, Hoppin, Eastman, Johnson, Wm. Hunt, Edmonds, and others; miniature-painting by Staigg and Brown; while Beard, Hunkley, Tait, and Hays are well known animal painters. Historical art has comparatively few professors, doubtless owing to the lack of popular encouragement; there are, however, among them, the eminent names of Lentze, Rothermel, Rossiter, White, Gray, Terry, Schussele, and Powell.—With regard to *P.*, considered as an art, it may be said to consist of two chief parts,—*outline* and *design*. Outline is a design without color, and examples of it may be seen in the cartoons of Raphael, Retzsch, Flaxman, and others. Design, properly so called, includes outline, representing the contour of objects, together with color, which gives to the image not only the hue, but also the form and relief proper to the object. The technical processes of painting are oil-painting, water-color painting, encaustic-painting, miniature-painting, fresco-painting, enamel-painting, &c. There are at least ten branches of the art, viz.—history, grotesque, portraits, fancy, animals, flowers and fruits, seascape, landscape, still-life, and battle-pieces. In order to successfully prosecute the art, the painter should be well acquainted with anatomy, as otherwise the living model would be useless to him. Without perspective, he is unable to dispose the objects in his picture properly. Symmetry teaches him to observe the relative proportions of parts to each other; invention assists him in representing the action and expression of the persons employed in his picture; expression tells how to depict the passions and emotions of the mind. Coloring—that crowning beauty of the painter's art—has also its laws. All trifling, or artful play of little lights, or an attention to a variety of tints, is to be avoided; a quietness and simplicity should reign over the whole work, to which a breadth of uniform and simple color will greatly contribute. "Grandeur of effects is produced in two different ways, which seem totally opposed to each other. One is by reducing the colors to little more than chiaro-scuri, which was often the practice of the Bolognese school; and the other by making the colors very distinct and forcible, such as we see in those of Rome and Florence; but still the presiding principle in both those manners is simplicity."

Paint'less, a. That may not be painted, delineated, or represented.

Paint'ress, n. A female painter; a woman who paints.

Paint'-strake, n. (*Naut.*) The uppermost strake of plank immediately below the plank-sheer.

Paint'ville, in Kentucky, a post-village, cap. of Johnson co., abt. 140 m. E. by S. of Frankfort.

Pair, (pâr.) n. [*Fr. paire*, a pair, couple; *pair* = Lat. *par*, equal.] Two things that are equal in any respect; two things of a kind, similar in form, applied to the same purpose, and suited to each other or used together; a couple; a brace; as, a *pair* of gloves or shoes, a *pair* of horses, &c.; distinctively, a man and wife.

"Baucis and Philemon . . . a happy pair." — *Dryden*.

—*v. n.* To be joined in pairs; to couple; to go together; as, turtles *pair*. — To suit; to fit, as a counterpart.

"My heart was made to fit and pair with thine." — *Rowe*.

—*v. a.* To assort and place together in twos, as things that are equal, similar, suited, or adapted to each other; to unite in couples; to unite as correspondent, or rather to contrast.

To *pair off*, to depart in a pair or in pairs; hence, to come to an understanding with one of an opposite party or political faith, by which the votes of both are withheld from counting in the division of a legislative assembly; as, the honorable member *paired off* for the remainder of the session.

Pair'ing-off, n. (*Eng. Pol.*) A practical custom by which two members of a legislative body holding opposite political opinions, concur to absent themselves from divisions of the house during a specified period.

Pair'ing-time, n. The season when birds couple.

Pair'-royal, a. [*Fr. pair*, equal, and *Eng. royal*.] Three things of a kind;—used specifically in some games at cards. (Also, but incorrectly, written *parial* and *prial*.)

Paisiello, GIOVANNI, (pai-se-ail'lo), a celebrated singer and composer, was the son of a veterinary surgeon of Taranto in Italy, and B. in 1741. He was put under the care of the celebrated Durante, and, in 1763, produced his first opera, *La Pupilla*, with great applause, at the Marzighi Theatre, in Bologna. From this period commenced a long career of success; and his works were not only applauded in Italy, but over the whole continent of Europe. D. at Naples, 1816. His operas, serious and comic, exceed 70, and he wrote, besides, a great variety of ballets, cantatas, &c. Simplicity, elegance, and correctness are the characteristics of his style.

Paisley, (pâz'le), a manufacturing town of Scotland, co. of Renfrew, on the White Cart River, 8 m. S.W. of Glasgow. *Manuf.* Shawls, muslins, thread, scarfs, and gauzes.

Paixhans, HENRI JOSEPH, (*paix'hān*), a French general of artillery, b. at Metz, 1788. He is the inventor of the guns and projectiles which bear his name. The Paixhans guns are adapted to throw shells and hollow shot. These guns and projectiles were used on board the Russian fleet at the battle of Sinope, when the Turkish ships were annihilated by their deadly effects. D. 1854.

Pajaro River, (*pal-ha'ro*), in California, rises in the Coast Range, and flows W. into Monterey Bay. —A township of Monterey co.

Paks, a town of Hungary, co. of Tolna, on the Danube, 62 m. S. of Buda; pop. 9,000.

Pal, *n.* An accomplice; a comrade; a partner; an associate. (Slang.)

Palace, (*pāl'ās*), *n.* [Fr. *palais*; Lat. *Palatium*, the name of one of the hills on which Rome was built, and where Augustus had his residence.] A magnificent house in which a monarch, prince, or noble of high rank, resides; as, an imperial *palace*, a royal *palace*, a ducal *palace*, &c. In France, however, the term is used in a much more extended signification: as the Palais Législatif, and the Palais de la Bourse, in Paris.

Paladin, *n.* [Fr.; from Lat. *Palatinus*.] A term originally derived from the Counts Palatine, or of the Palace, who were the highest dignitaries in the Byzantine court, and thence used generally for a lord or chief-tain, and by the Italian romantic poets for a knight-errant.

Palaeography, *n.* See PALEOGRAPHY.

Palaeologus, an illustrious Byzantine family, first mentioned about 1078, when George P. was a faithful servant of the emperor Nicephorus III. He was killed while defending Dyrrhachium, or Durazzo, against the Normans in 1081. The P., the last Greek family that occupied the throne of Constantinople, reigned from 1260 to 1453. A branch of the P. ruled over Montferrat in Italy from 1305 to 1530.

Palaeontology, *n.* See PALEONTOLOGY.

Palaeozoic, *a.* [Gr. *palaios*, ancient, and *zōon*, an animal.] (*Geol.*) The term applied, by the universal consent of modern geologists, to the oldest of the three great groups of fossiliferous strata, commencing with the lower deposits of the new red sandstone, and continuing downwards into the rocks that have not yet been found to contain any fossils. The term simply means *old life*, and refers to the significant and unquestioned fact that in these rocks we see the remains of the most ancient known forms of life that were introduced on our globe. Involving thus no theory, it admits of universal application, and is very convenient. It has entirely replaced the term *primary*. The subdivisions of the P. series will be found under GEOLOGY.

Palais, (*st.*) (*pal'ai*), a seaport-town of France, dept. of Morbihan, on the N. side of the island of Belleisle. It has a small port, defended by a citadel. Pop. 5,000.

Palamedes, a Grecian hero, the son of Nauplius, king of Euboea. Being sent by the confederated leaders before Troy to visit Ulysses and find the cause of his refusal to join the expedition, Palamedes discovered that the insanity put on by the king of Ithaca, to avoid leaving his wife and kingdom, was only feigned, and accordingly brought the sage Ulysses back with him. Enraged at being detected in practising a fraud, Ulysses conceived a mortal hatred against the man who had unmasked his hypocrisy, and, resolving to work his ruin and death, bribed one of Palamedes' servants to dig a hole in his master's tent and conceal in it a large sum of money, with which he supplied him, and then carefully to cover the opening. Having effected the first part of his scheme, Ulysses next forged a letter purporting to come from Priam to Palamedes, in which the Trojan monarch reproached the Greek chief for not having sooner fulfilled his contract and delivered the Grecian army into his hands, according to the tenor of his promise and in return for the bribe already delivered to him as payment for his treachery. This letter was carried before the Grecian princes. Palamedes was summoned, and protested his innocence, but vainly, as the money was discovered in his tent. He was found guilty by all the army, and stoned to death. Homer is silent as to the miserable fate of Palamedes. Palamedes was a learned man, as well as a soldier, and, according to some, he completed the alphabet of Cadmus by the addition of some letters. To him, also, is attributed the invention of chess and backgammon.

Palamow, a dist. of British India, presidency of Bengal, between lat. 23° 12' and 24° 22' N., lon. 83° 18' and 84° 31' E.; area, 3,468 sq. m. Palamow, the cap., is situated on the Coyle or Koel River; lat. 23° 52' N., lon. 84° 10' E.

Palanquin, (*pal-an-kēen'*), *n.* [Corrupted from Hind. *pal-kee*, a sedan.] A covered litter used in India, China, &c., borne on the shoulders of men. The cut (Fig. 2025) represents the kind used chiefly in the country districts, and often, also, named *dooly*.

Palatable, *a.* Agreeable to the palate or taste; savory; gustable; that is relished.

Palatableness, *n.* Quality of being palatable or agreeable to the taste; relish; gusto

Palatably, *adv.* In a manner agreeable to the taste or palate.

Palatal, *a.* [Fr. and Sp.] Pertaining or having reference to the palate; uttered by the aid of the palate.

—*n.* A letter pronounced by the aid of the palate, or an articulation of the root of the tongue with the roof of the mouth, as *g* soft, *ch* soft, or *j*.

Palate, *n.* [It. *palato*; Lat. *palatum*. Etymology unknown.] (*Anat.*) The root or upper part of the mouth. In man it is composed of two parts, — the hard palate, which forms an arch in the anterior part of the mouth; and the soft palate, which lies in the posterior part of the mouth, and consists of a membranous curtain of muscular and cellular tissue, from the middle of which hangs the uvula.

—The organ of taste; seat of gustation; relish; gusto; as, a fastidious *palate*.

—Mental relish; intellectual taste.

"The men of nice *palates* could not relish Aristotle as dressed up by the schoolmen." —Baker.

Palate, *n.* (*Bot.*) The convex base, or inward projection of the lower lip of a perianth corolla.

Palatial, (*lā'shāl'*), *a.* [From Lat. *palatium*, palace.] Pertaining, or having reference to, or becoming a palace; magnificent; stately; as, a *palatial* residence, he lives in *palatial* style.

Palatine, *n.* A palatal. (*R.*)

Palatinate, (*LOWER*), or PALATINATE OF THE RHINE, (*palātī-nāt'*). The name formerly given to two states of Germany, which were designated, by way of distinction, the Upper and Lower Palatinate, and though not contiguous, were under the control of the same sovereign till 1620. At that period they underwent great changes. Since the wars of the first French Revolution, which contributed more than any event on record to unsettle the ancient landmarks, they have been divided among different German sovereigns, and their very name has disappeared from the maps of Germany. The word *palatinate* is of feudal origin, and signifies in a more restricted sense the province or seignior of a palatine, i. e. of a high dignitary during the Middle Ages, who originally held office in the court of the sovereign, and was designated the *comes palatii*, but who afterwards obtained, within his own province or district, the same power, rank, and jurisdiction, which the *comes palatii* possessed in the palace. Hence the old German title *pfalzgraf*, count-palatine; in English, *palsgrave*.

Palatine, *a.* and *n.* See PALATINATE.

County palatine, in England, a county in which the crown formerly possessed rights of seignior and jurisdiction; as, the *counties palatine* of Lancaster, Chester, Durham, and Cornwall.

Palatine, in Illinois, a post-village and township of Cook co., abt. 26 m. N.W. of Chicago.

Palatine, in New York, a post-township of Montgomery co.

Palatine, in W. Virginia, a post-village of Marion co., on the Monongahela River, opposite Fairmount.

Palatine Bridge, in New York, a post-village of Montgomery co., abt. 55 m. W. by N. of Albany.

Palato-pharyngeus, *n.* (*Anat.*) A muscle which arises at the root of the uvula and soft palate, and is inserted into the upper and back part of the thyroid cartilage; it draws the uvula and soft palate downwards and backwards, and pulls the thyroid cartilage and pharynx upwards.

Palaver, (*pal-ah-ver*), *n.* [Sp. *palabra*, from Lat. *parabola*.] Nonsensical or idle talk; flattery; inconsequential speech; bunkum; bosh; blarney. —A conference or formal debate; a public discussion or deliberation; as, to meet for *palaver*.

—*v. a.* or *v. n.* To hold a palaver; hence, to employ trivial, nonsensical, inconsequential talk; to bamboozle or humbug by words; to flatter.

Palaverer, *n.* One who palavers, or talks blarney or bunkum.

Palawan, or **Paragna**, an island of the Eastern Archipelago, between Borneo and the Philippine Islands; between lat. 8° 37' and 11° 30' N., lon. 117° and 120° E. Length, 275 m.; breadth, 30 m.

Pale, *a.* [Fr. *pâle*, to grow pale; Lat. *pallidus*, pale, from *pallere*, to be or look pale.] Wan; deficient in color or bloom; pallid; not ruddy or fresh of color; as, a *pale* complexion, a *pale* blue, &c. —Dim; of a faint lustre; not bright, brilliant, or shining; as, the *pale* moonbeams.

(NOTE. *Pale* is frequently employed in the construction of self-explaining compound terms; as, *pale-faced*, *pale-eyed*, *pale-looking*, *pale-colored*, *pale-visaged*, &c.)

—*v. n.* To turn pale; to become pale; as, she *paled* with fright.

—*v. a.* To make pale.

Pale, *n.* [A. S. *pal*, *pīl*; D. *paal*; Dan. *paal*; Ger. *pfahl*; Lat. *pulus*, a stake; It. *palo*; W. *pawl*, a pole.] A stake; a pole; a post; a rail used in fencing or inclosing; a pointed stake; a picket. —An inclosure; properly that which incloses; a fence; a boundary-mark.

"She tempts the stream, or leaps the *pales*." —Prior.

—Hence, space inclosed; limited tract or region; as, out of the *pale* of humanity, within the *pale* of the Church, &c. —A cheese-scoop.

(Her.) The first and simplest kind of ordinary. See ORDINARY, and Fig. 2000.

English pale. (*Hist.*) The term applied to the limits of the English territory held in Ireland for a period of nearly four centuries; as, the lords and castles of the *English pale*.

—*v. a.* To inclose or surround with pales, stakes, posts, or rails; to encompass; to inclose.

"Whate'er the ocean *pales*." —Shaks.

Palazzuolo, a town of Italy, in Sicily, prov. of Syracuse, 13 m. N.W. of Noto; pop. 8,600.

Palea, or **PALEA**, *n. pl.* [Lat. *chaff*.] (*Bot.*) A name given to the bracts stationed upon the receptacle of *Asteraceæ* between the florets, and having generally a membranous texture and no color; also, the interior bracts of the flowers of grasses.

Paleaceous, (*-ā'shus*), *a.* [Lat. *palea*, chaff.] (*Bot.*) Chaffy; containing, or resembling, or consisting of chaff.

Palely, *a.* Pallidly; wanly; not freshly or ruddily.

Palembang, a town of the island of Sumatra, cap. of a Dutch residency, on the Musi, 52 m. from the Soengsang, its principal mouth in the Strait of Banca; lat. 2° 58' 51" S., lon. 104° 54' E. It is intersected by numerous branches of the river Musi, on which account P. is sometimes called the "City of Twenty Islands." *Manuf.* Jewelry, cutlery, japanning, boat-building; also, cotton fabrics, and embroidered silk stuffs. It has considerable inland and foreign trade, the latter chiefly with Java, Banca, Singapore, China, and Siam. Pop. 44,000.

Palencia, a town of Spain, cap. of the prov. of Palencia, on the Carrion, 57 m. S.E. of Leon, and 118 m. N.N. W. of Madrid. *Manuf.* Woollen goods, blankets, coverlets, serge, hats, and earthenware.

Paleness, *n.* State or quality of being pale; wanness, defect or deficiency of color; a sickly whiteness of look; want of freshness or ruddiness; as, *pale*ness of countenance. —Want of color or lustre; as, *pale*ness of light, *pale*ness of tint.

Palenque, a village of Mexico, state of Chiapas, abt. 100 m. E.N.E. of Ciudad-Real. About 7 m. S.W. of it are some of the most extensive and magnificent ruins in Central America. They consist of vast artificial terraces, or terraced truncated pyramids, of cut stone, surmounted by edifices of peculiar and solid architecture, also of cut stone, covered with figures in relief, or figures and hieroglyphics in stucco, with remains of brilliant colors. Most of the buildings are of one story, but a few are two, three, and some may have been four stories. The principal structure, known as the Palace, is 228 ft. long, 180 feet deep, and 25 feet high, standing on a terraced truncated pyramid of corresponding dimensions. It was faced with cut stone, cemented with mortar of lime and sand, and the front covered with stucco, and painted. A corridor runs around the building, opening into four interior courts, which open into many smaller rooms. On slabs of stone are carved numerous colossal figures and the remains of statues more resemble Grecian than Egyptian or Hindoo art. Other spacious and elaborately ornamented buildings appear to have been temples of religion. These ruins were in the same condition when Cortez conquered Mexico, as now, overgrown with a forest, and their site forgotten. They were only discovered in 1750. Three explorations were made by the Spanish government, but they were little known until visited by Messrs. J. L. Stephens and F. Catherwood and their account published with plans and drawings (See Stephens' *Incidents of Travel in Central America* &c.; and Catherwood's *Views of Ancient Monuments of Central America*, &c.) There are in Mexico dim traditions of the existence, at a remote period, of the capital of a theocratic state, the centre of a long since extinguished civilization, of which the only traces are these wonderful ruins and unexplained hieroglyphics.

Paleograph, **Palæograph**, *n.* An ancient manuscript.

Paleographer, **Palæographer**, *n.* One skilled in paleography.

Paleographic, **Palæographic**, **Palæograph'ic**, **Palæograph'ical**, *a.* [Fr. *paléographique*.] Pertaining, or having reference to paleography

Paleographist, **Palæographist**, *n.* Same as PALEOGRAPHER, *q. v.*

Paleography, **Palæography**, *n.* [Gr. *palaios*, old, ancient, from *palai*, of old, and *graphō*, to write.] The science or art of deciphering ancient inscriptions, including the knowledge of the various characters used at different periods by the writers and sculptors of different nations and languages, their usual abbreviations, initials, &c. The science termed *diplo-matics* is, in effect, a branch of paleography.

Paleologist, *n.* A student of antiquity; one skilled in paleology.

Paleology, *n.* [Gr. *palaios*, ancient, and *logos*, treatise.] A discourse or treatise on antiquities, or the knowledge of ancient things; archaeology.

Paleontograph'ic, *a.* Belonging, or having reference to the description of fossil remains.

Paleontog'raphy, *n.* [Gr. *palaios*, ancient, *onta*, existences, and *graphein*, to depict.] That branch of science which describes fossil remains.

Paleontolog'ical, *a.* [Fr. *paléontologique*.] Pertaining, or relating to paleontology.

Paleontologist, *n.* [Fr. *paléontologiste*.] One versed in paleontology.

Paleontology, *n.* [Gr. *palaios*, ancient, *on*, *ontos*, being, from *einai*, to be, and *logos*, treatise.] That branch of natural science which treats of fossil organic remains. Much of the light that has been thrown, of late years, on the formation and constitution of the globe is due to the discoveries and investigations of paleontology. The geologist, by its means, is able to trace the successive orders of animals and plants which have inhabited the earth at different periods of its existence. All fossiliferous systems may be viewed in two great aspects, — either as regards their mere mineral and physical relations, or as regards the plants and animals found as fossils in their strata. The former constitutes the *lithology*, and the latter the *paleontology*, of a formation. In order, however, to arrive at a

Fig. 2025. — PALANQUIN.

knowledge of the cosmical conditions which regulated the deposition of the strata of a system, an acquaintance with botany and geology is indispensable to the geologist, in order that he may be able to apply their general principles to the solutions of those problems that arise out of the science he is investigating.

Paleosaurus, *n.* [Gr. *palaíos*, ancient, and *sauros*, lizard.] (*Pal.*) A genus of extinct lizards, characteristic of the magnesian conglomerate.

Paleotherium, *n.* [Fr. *paléotherion*, from Gr. *palaíos*, ancient, and *therion*, beast.] (*Pal.*) A genus of pachydermatous mammalia, whose remains occur in the Eocene beds of England and the Continent. At least 10 species have been described, ranging in size from that of a sheep to that of a horse.

The upper Eocene gypseous quarries of Montmartre supplied the first scanty materials, which Cuvier, by a series of careful and instructive inductions, built up into an animal, whose fidelity to nature was afterwards verified by the discovery of a complete series of fossils. In general appearance the *P.* resembled the modern Tapir, and especially in having the snout terminating in a short proboscis. It had 3 toes on each foot, each terminated by a hoof. The formula of the teeth is the same as that of the Hyracotherium. It is supposed that animals of this genus dwelt on the margins of lakes and rivers, and that their habits were similar to those of the tapir.

Fig. 2026.
SKELETON OF PALEOTHERIUM,
(restored.)

Paleozoic, *a.* (*Geol.*) See PALÆOZOIC.

Palermian, *n.* (*Geog.*) A native or inhabitant of Palermo, Sicily.

-a. (*Geog.*) Belonging, or having reference to the city of Palermo, or to its inhabitants.

Palermo, (*anc. Panormus*), the cap. city, and a seaport of Sicily, on its N.W. extremity; Lat. $38^{\circ} 8' 2''$ N., Lon. $13^{\circ} 22' 2''$ E. It is built on the S.W. of an extensive bay, in a plain, which, from its luxuriance and from being surrounded by mountains on three sides, has been termed the "golden shell." In the front of the city is the *Marina*, a raised terrace, extending more than 1 m. along the bay, and is about 200 feet wide. The principal public buildings are, the royal palace, the tribunal of justice, the custom-house (formerly, palace of the Inquisition), the cathedral, Jesuit's college, and the splendid new opera house, numerous churches and convents, the former profusely ornamented. Near *P.* are many fine specimens of Saracenic architecture. *Manuf.* Silk and cotton fabrics, glass, oil-cloth, and leather. Nearly 1,000 boats, and 3,500 fishermen are engaged in the tunny fishery. *Exp.* Principally sumach, fruits, wine, manna, and brimstone. *P.*, the *anc. Panormus*, is first mentioned in history B.C. 480, when the Carthaginians made it a naval station. It was taken by the Romans B.C. 254, and it became one of their principal naval stations. It fell, with the rest of Sicily, into the hands of the Goths, in 493. The Saracens captured it in 835, and made it the cap. of their Sicilian territories. The Normans took it in 1072, and in 1282 it was the scene of the massacre called the "Sicilian Vespers." When Sicily was united to Naples, the court was removed from *P.*, but again resided here from 1806 to 1814. Palermo was taken by Garibaldi in May, 1860.

Palermo, in *Iowa*, a township of Grundy co.

Palermo, in *Kansas*, a post-village of Doniphan co., about 8 m. S.W. of St. Joseph.

Palermo, in *Maine*, a post-township of Waldo county.

Palermo, in *New York*, a post-township of Oswego co.

Pales'tia, Palæs'tia, *n.* [Gr. *palaistia*, from *palē*, a wrestling, from *pallō*, to wield, to swing round.] (*Antiq.*) A wrestling; exercise of wrestling. — A place for wrestling; an arena for athletic exercises in ancient Greece.

Pal'estine, or HOLY LAND, a country of S.W. Asia, comprising the S. part of Syria, and forming the modern pashalics of Acre, Gaza, and the S. part of Damascus; Lat. between $30^{\circ} 40'$ and $33^{\circ} 32'$ N., Lon. $33^{\circ} 35'$ and $36^{\circ} 48'$ E.; having N. the pashalic of Tripoli, S.E. and S. the Arabian Desert, and W. the Mediterranean. — *Ext.* 193 m. in length, and 75 in average breadth. *Area*, 11,000 sq. m. — *Desc.* The surface is generally mountainous, interspersed from N. to S. by the mountain

other peaks, none exceeding 3,000 feet in height, but some of which are made famous by their frequent mention in sacred history, viz.: — Mount Carmel, forming a promontory in the Mediterranean on the S.W. of the Bay of Acre; Mount Tabor, the modern Jebel Tor, at the N.E. extremity of the plain of Esdraelon, Elbal and Gerizim, in Samaria; Gilead, and Nebo or Pisgah, E. of the Jordan; and Zion, Moriah, and the Mount of Olives, in or near Jerusalem. Judæa proper, the ancient kingdom of Judah, comprises the territory extending from Lake Aspharites to the sea, and consists of hills and valleys of great beauty and fertility, where the sides of the mountains are adapted to the vine, the olive, the sycamore, and are crowned with natural groves of oak and cypress; while the earth is abundantly covered with aromatic plants. In proceeding eastward to the shores of the Dead Sea, the scene becomes more decidedly barren. Gloomy and naked rocks, stones, sand, and ashes, are the only objects which then present themselves. To the N. of ancient Judæa was Samaria, a mountainous district, but flourishing and well cultivated. To the N. of Samaria, but still communicating with Judæa by the banks of the Jordan, is Galilee, distinguished by its natural beauty and fertility. The plain of Esdraelon is described by Dr. Clarke as one vast meadow, covered with the richest pasture. He considers this as the richest part of all Palestine. The Lake of Tiberias, or Gennesareth, is surrounded by lofty and picturesque hills, the sides of which were once highly cultivated, and its banks covered with flourishing towns, now almost deserted. The regions beyond Jordan, though less noticed in history, include, however, many tracts once fertile and flourishing. Here are found the Hauran and Deschautan, consisting of a vast plain, not watered by any great river; yet the inhabitants contrive, by collecting the torrents and rain-water into ponds, to obtain a sufficient supply for the purposes of agriculture; so that very extensive crops of grain are raised in the district. In many parts there are the remains of ancient ruins. *Rivers.* Jordan, Jarmuth, Kishon, and the Nahr, Naman or Belus. — *Lakes.* Tiberias, Gennesareth, and the Dead Sea. — *Clim.* Very fine in the dry season. Frosts are slight in winter, except in the elevated parts, where snow occasionally falls. — *Prod.* Wheat, barley, millet, tobacco, and fruits. The name Palestine is derived from the Hebrew *Paleseth*, or land of the Philistines, and is properly applicable to the S.W. portion of the country. Its most ancient name was Canaan, its inhabitants being descended from Canaan, the fourth son of Ham and grandson of Noah. In the time of Moses the country E. of the Jordan was conquered and divided among the tribes of Reuben and Gad, and half of the tribe of Manasseh; under Joshua the remainder was conquered and divided between the other ten tribes. Under the reigns of David and Solomon it became one of the most flourishing kingdoms of Asia. It was conquered, however, by the

Fig. 2028. — SAMARIA.

kings of Nineveh and Babylon, who carried captive first Israel and then Judah, into the E. provs. of their empire. After the conquest of Babylon by Cyrus, the Jews were allowed to return to their country, to rebuild their temple, and reestablish their ecclesiastical constitution. *P.* continued thus a prov. of Persia till after the conquest of Alexander, to whom it submitted without resistance. The Jews were again exposed to oppression from some of the Ptolemies, who having attempted to enforce the adoption of the Grecian idolatry, were met with the most determined resistance by the Maccabees, and Judæa now became an independent country. It subsequently fell under the dominion of Rome, who established the Herods as tributary kings. It was at this period that *P.* became the theatre of those great events which form the foundation of Christianity. The Jews, however, having rebelled repeatedly against the Romans, Titus entered Judæa with a large army, took Jerusalem, which he razed to the ground, and carried the whole nation captive, dispersing them throughout the Roman empire. The country remained in the power of the Romans till the conversion of the empire to Christianity, when it became an object of religious veneration. In the 6th century it fell under the sway of the Mohammedans, which gave occasion to the Crusades. Jerusalem was taken by the European forces, and was under Godfrey of Bouillon erected into a Latin kingdom, which endured for above 80 years, during which the Holy Land streamed with Christian and Saracen blood. In

1187 Judæa was conquered by Saladin, on the decline of whose kingdom it passed through various hands, till, in 1517, it was finally added to the Turkish empire. A railroad connecting Jaffa with Jerusalem has been constructed, and a harbor made at Jaffa.

Pal'estine, in *Illinois*, a post-village of Crawford co. — A township of Woodford co.

Pal'estine, in *Indiana*, a village of Franklin co. — A post-village of Kosciusko co. — A village of Monroe co., abt. 10 m. S.W. of Bloomington.

Pal'estine, in *Iowa*, a township of Storey county.

Pal'estine, in *Ohio*, a village of Adams co., abt. 36 m. S.W. of Chillicothe. — A township of Clermont co., abt. 16 m. E. of Cincinnati. — A township of Columbia co., abt. 165 m. N.E. of Columbus. — A township of Darke co., abt. 100 m. W. of Columbus. — A post-village of Pickaway co., abt. 20 m. S.S.W. of Columbus. — A village of Shelby co., abt. 61 m. W.N.W. of Columbus.

Pal'estine, in *Tennessee*, a post-village of Hickman co., abt. 68 m. S.W. of Nashville.

Pal'estine, in *Texas*, a post-village, cap. of Anderson co., abt. 200 m. N.E. of Austin.

Pal'estine, in *W. Virginia*, a post-village of Greenbrier co., abt. 12 m. W.S.W. of Lewis.

Palestin'ean, *a.* (*Geog.*) Pertaining, or relating to Palestine.

Pales'trian, Pales'trie, Pales'trical, *a.* [Gr. *palaistrikos*, expert in wrestling.] Pertaining, or relating to the exercise of wrestling. (Also written *pales'trian, palaestric, and palaestrical*.)

Palestrina, GIOVANNI PIETRO ALOYSIO DA, (*pa-lais-tre'na*), a celebrated Italian musician and composer, b. at Palestrina, an ancient city 20 m. from Rome, in 1529; and was admitted into the Pope's Chapel in 1559. This musician holds the most prominent rank as a composer of ecclesiastical music of that age, his *motetts, masses, and chants* being still in use. Palestrina has been regarded as the Homer of ancient music and the father of choral melody. D. in 1594.

Palestri'na, (*anc. PRÆNESTE*), a town of Italy, in the Pontifical States, 22 m. E.S.E. of Rome; *pop.* 4,630.

Palestri'na, Pelestri'na, a town of Italy, on a narrow island of the Lagoos, in the Adriatic, 6 m. S. of Venice; *pop.* 4,000.

Palestro, (*pa-lais'tro*), a town of Italy, situate on the left bank of the Sesia, opposite Bobbio. Two battles were fought near this town, between the Austrians and the Sardinians aided by the French, 1859. The first took place May 30, when the French and Sardinians were victorious, capturing more than 1,000 prisoners and 80 cannon; and the second May 31, when the French and Sardinians were again successful.

Paletot, (*pal'e-to*), *n.* [Fr.] A loose overcoat.

Palette, **Pallet**, *n.* [Fr. *palette*, from L. Lat. *pala*, dimin. of Lat. *pala*, a spade or shovel.] (*Painting*.) A little oval table or board, or piece of porcelain or ivory, on which a painter places his pigments for immediate use.

(*Archæol.*) In ancient armor, one of the points covering the junction of the back and breast plates.

To set the palette. (*Paint.*) To set or lay the pigments in order for use.

Palette-knife, *n.* A flat, thin knife, rounded at the extremity, and used by painters to mix colors on the grinding-slab.

Pale'-wise, *a.* (*Her.*) See ORDINARY.

Pal'trey, JOHN GORHAM, an American clergyman, politician, and author, b. in Boston, 1796. He graduated at Harvard College, 1815, was ordained, 1818, as minister of the Congregational church in Brattle Square, Boston, was appointed, 1831, to the Dexter professorship of Sacred Literature in the Divinity school of Harvard University, and assumed in 1835 the editorship of the "North American Review," which he conducted till 1842. In 1847 he was elected to Congress by the Whigs of Middlesex county of Massachusetts, and became one of the acknowledged leaders of the Free-Soil party, and one of the most popular speakers and writers. His re-election to Congress was contested with unusual pertinacity, and after 17 successive elections without a choice, he was defeated, and from that time devoted himself entirely to literature. His principal works are: *Evidences of Christianity*; *Lectures on the Jewish Scriptures and Antiquities*; *Harmony of the Gospels*; and *History of New England*. D. April 26, 1881.

Palfrey, (*paw'fre*), *n.* [Fr. *palefroi* — *par le frein*, by the bridle, because parade and ladies' horses were led by the bridle by esquires.] A saddle-horse used for the road or for state purposes, as distinguished from a war-horse. — A small horse adapted to ladies.

Palil'ogy, *n.* [Gr. *palin*, again, and *lego*, to speak.] (*Rhet.*) The repetition of a word or part of a sentence, for the sake of greater energy.

Pal'impest, *n.* [Gr. *palin*, again, and *phao*, to rub.] (*Anat.*) A parchment from which the original writing has been erased by means of pumice-stone or some other substance, to make room for a fresh subject being written thereon.

Pal'indrome, *n.* [Gr. *palin*, back, and *dromos*, a running.] A word, verse, or sentence that is the same when read backward or forward; as *madam*.

Palindrom'ic, PALINDROMICAL, *a.* In the manner of, or pertaining to a palindrome.

Pal'ing, *n.* A fence formed with pales; or pales taken collectively.

Palingen'esis, Palingen'esy, Palingene'sia, *n.* [Gr. *palingenesia*, from *palin*, again, and *genesis*, birth.] (*Phil.*) A new or second birth; regeneration. The doctrine of the destruction and reproduction of worlds.

Fig. 2027. — LEBANON FROM BEYROUT.

chain of Lebanon, Mount Hermon, the highest peak, attaining an elevation of 10,000 ft. There are numerous

and living beings is Oriental; but the word in question appears to be of Stoical origin. (*Diog. Laert.* vii. 72.) The Stoics are said to have held that the demingus, or creator, had absorbed all being in himself, and reproduced it out of himself.

Paling-man, *n.*; *pl.* PALING-MEN. (*Hist.*) One born in that part of Ireland formerly called the jurisdiction of the English *pale*.

Palinode, *n.* [*Gr.* *palinōdia*, from *palin*, back, and *ōde*, an ode.] (*Poetry.*) A recantation; — properly a piece in which the poet retracts the invectives contained in a former ode; a declaration contrary to a former one.

Pāli, *n.* [A corruption of the Sanskrit *Prākṛit*.] The name of the sacred language of the Buddhists.

Palinod'ial, *a.* Pertaining to a palinode.

Palinurus, *n.*; *pl.* PALINURI. [*Lat.* *Palinurus*, the pilot of Æneas.] (*Zoöl.*) A genus of crustaceans; the spiny lobster.

Palisade, *n.* [*Fr.* *palissade*, from *Lat.* *palus*, a pole or stake.] (*Fort.*) A fence or fortification consisting of a row of pales, stakes, or posts, sharpened and set firmly in the ground, as a means of defence.

Palisades, in *New Jersey*, a basaltic formation in Bergen co., extending along the Hudson River from Piermont, S. abt. 20 m., and rising precipitously to a height of from 400 to 500 ft.

Pal'ish, *a.* Somewhat pale, or wan.

Palissy, BERNARD, (*pa-lis'se*), a celebrated French potter and chemist, b. at Algen, abt. 1508, who, for his ingenuity in painting on glass and other works, was patronized by Henri III. He wrote several works upon natural philosophy, and upon subjects connected with the art of pottery. The best edition of his works, which are full of valuable and curious experiments, is that of Paris, (1848,) with the notes of M. Faujas de St. Fond. His pottery has become celebrated, and few things are more prized by the connoisseur than the famous "Palissy ware." Being a Protestant, he was arrested by the Leaguers toward the end of the reign of Henri III., and d. in the Bastille, 1589. — Mr. Morley has written an interesting biography of "Palissy the Potter."

Palinurus, *n.* (*Bot.*) A genus of plants, order *Rhamnaceæ*. They are deciduous shrubs or low trees, with slender, pliant branches, and ovate 3-nerved leaves, each of which has two sharp spines at the base, one straight and the other recurved.

P. aculeatus, the Christ's thorn, Jew's thorn, or Buckler thorn, fancifully supposed to have supplied the crown of thorns with which Christ was crowned, is

Fig. 2929. — CHRIST'S THORN, (*Palinurus aculeatus*)
a, Ripe fruit.

native of the country around the Mediterranean, and is often used for hedges, its sharp spines and pliant branches admirably adapting it for this purpose. Its fruit has a singular appearance, being flat and thin, attached by the middle to a foot-stalk, the middle being raised like a hat, or shield, while the expansion resembles the brim. Hence, probably, the name Buckler-thorn.

Palk Strait, (*pawk*), that portion of the Indian Ocean which separates Ceylon from the mainland of India, Lat. 10° N., Lon. 80° E. It is 40 m. wide in its narrowest part.

Pal'kee, *n.* [*Hind.* *pal'ki*.] In India, a palanquin.

Pall, (*pawl*), *n.* [*A. S.* *pell*, a cloak; *Lat.* *pallium*.] A covering; a cloak. — A mantle of state. — The mantle of an archbishop. — The cloth thrown over a dead body at funerals.

(*Her.*) The upper part of a saltire conjoined to the lower part of a pale. It often appears in the arms of the ecclesiastical sees.

(*Mach.*) See PAWL.

—*v. a.* To cover or invest; to cloak.

Pall, *v. n.* [*W.* *pall*, to fail, *pall*, loss of power.] To become vapid; to lose strength, life, or spirit; to become cloying or surfeiting; to become tasteless or insipid.

—*v. a.* To make vapid or insipid. — To make spiritless; to dispirit; to depress.

Palla, *n.* (*Antiq.*) Among the Romans, a piece of cloth resembling a scarf, worn by females, and fastened with a brooch.

Palladium, (*pāl-lai'de-um*), *n.* [*Gr.* *Palladion*, from *Pallas*, *Pallados*, *Pallas*.] (*Heroic Hist.*) A famous wooden statue of Pallas, whose eyes appeared to move. The Trojans believed that the image of the goddess fell suddenly from heaven into an unfinished temple, and were told by the oracle that Troy would never be taken while the statue remained in its walls. The Greek chiefs Ulysses and Diomedes, hearing this prophecy, watched their opportunity, stole into the city, reached the temple, and, killing the attendants who kept guard over the heavenly present, carried the Palladium in safety to the Grecian camp. The fall of Troy was not long delayed after this exploit had been achieved.

(*Chem.*) One of the rare metals found in the ores of platinum in the proportion of 1 to 1/8th per cent. It is a white, hard metal, having a specific gravity of 11.8. It is very infusible, but melts readily in Deville's oxyhydrogen furnace. Its rarity has prevented its application to numerous useful purposes. It forms three oxides, and several other compounds at present little known. It has a stronger affinity for cyanogen than any other metal, and forms a series of double cyanides. It readily combines with gold, forming a peculiarly white alloy, even when present in small proportions. It was discovered by Wollaston in 1803, and was thus named by him from the planet Pallas, discovered the year before. *Symbol* Pd.

Pallah, *n.* (*Zoöl.*) A species of antelope; *Antelope melampus*.

Pallas, (*Gr. Myth.*) A name of MINERVA, *q. v.*

Pallas, *n.* (*Astron.*) One of the asteroids or smaller planets discovered by Olbers, at Bremen, on the 28th of March, 1802. The size of Pallas has not been measured with accuracy, but it is known to be exceedingly small. In the *Annuaire du Bureau des Longitudes*, the following elements are given of the orbit of Pallas by M. Langier: — Eccentricity, 0.2394280; inclination, 34° 37' 20"; longitude of the perihelion, 121° 24' 11".

Pallas, a freedman of the Emperor Claudius, over whom he had so great an ascendancy as to persuade him to espouse Agrippina, his niece, and to adopt Nero for his successor. Pallas, in concert with Agrippina, is charged with having hastened the death of Claudius by poison. Nero subsequently caused him to be secretly put to death, confiscated his treasure, amounting to upwards of £2,000,000 sterling; but erected a superb monument to his memory. Pallas was brother to the Felix before whom St. Paul pleaded.

Pallas, PETER SIMON, a celebrated German traveller and naturalist, was b. at Berlin in 1741. He studied at Halle, Göttingen, and Leyden, and after making a long visit to England, everywhere applying himself to his favorite science, zoölogy, he settled at the Hague. Having gained a great reputation by several scientific works, he was called in 1767 to St. Petersburg by Catherine II., and named professor of natural history in the academy. In the following year he set out with the expedition sent to Siberia to observe the transit of Venus, penetrated to the borders of China, and after great hardships and fatigues, and the loss of most of his companions, he returned to St. Petersburg in 1774. There he lived for nearly 20 years, loaded with honors, made tutor to the Grand-dukes Alexander and Constantine, and very busily engaged in literary labors. By his own desire he afterwards settled in the Crimea, the empress giving him a fine house and a good income. But in 1810 he returned to Berlin, and d. there the following year. The principal works of this laborious observer are — *Elenchus Zoöphytonum*; *Spicilegium Zoölogica*; *Observations on the Formation of Mountains*; *History of the Mongolian Nations*; *Travels through the various parts of the Russian empire*; and *Zoögraphia Russo-Asiatica*. These works are of great value as storehouses of facts, and facts of very diversified kinds. Cuvier assigned to P. very high rank as a zoölogist, and asserted that by his observation of the order of succession of the granite, slate, and chalk series of rocks, he originated modern geology. P. was a member of the French Institute, the Royal Society of London, and many other scientific bodies.

Pallas, in *Missouri*, a post-village of Greene co., abt. 10 m. S.E. of Springfield.

Pallavicino, SPORZA, (*pal-la-ve-che-no*), a learned and pious cardinal, b. at Rome, 1607. He was employed by Pope Innocent X. in various important affairs, and obtained a cardinal's hat in 1657. He wrote a *History of the Council of Trent*, intended as a reply to the great work of Father Paul on the same Council. D. 1667.

Pall'-bearer, *n.* One who carries the pall of a coffin at a funeral.

Pall'et, *n.* [*Fr.* *palette*, from *L. Lat.* *paleta*, dim. of *Lat.* *pala*, a spade.] (*Paint.*) A little oval table or board, or piece of ivory on which the painter places the colors to be used. (See PALETTE.) — A wooden instrument used by potters, &c.

(*Gilding.*) An instrument used to detach gold-leaf from the pillow, and apply or extend it.

(*Her.*) A pale less in breadth than the third of the escutcheon.

(*Horology.*) The name given to the pieces connected with the pendulum or balance which receive the immediate impulse of the swing-wheel or balance-wheel. They are of various forms and constructions, according to the kind of escapement employed.

(*Med.*) A measure formerly used by apothecaries, containing three ounces.

— [*Fr.* *paille*, straw; *lat.* *palea*, chaff.] A small bed of chaff or straw.

Pall, a town of Hindostan, in Rajpntana, prov. of Judpore, on a branch of the Luni River; Lat. 25° 48' N., Lon. 73° 24' E. It is the entrepot for the opium sent

from Malwab to Bombay, and has an extensive commerce. Pop. 50,000.

Pall'ial, *a.* [*From* *pallium*, a mantle.] Pertaining to having relation to the mantle of molluscs.

Palliasse, (*pal-yas'*) *n.* Same as PALIASSE, *q. v.*

Pall'iate, *v. a.* [*Fr.* *pallier*; *Lat.* *paliatus*, from *pallium*, a cloak or mantle.] To cover with excuse; to conceal the enormity, as of offences by excuses and apologies; to extenuate; to lessen; to soften by favorable representation; as, to *palliate* a crime. — To reduce in violence; to mitigate; to lessen or abate; to alleviate; as, to *palliate* suffering.

—*a.* Eased; lightened; assuaged; mitigated.

Pall'iation, *n.* [*Fr.*] Concealment of the most flagrant circumstances of an offence; extenuation by favorable representation; as, *palliation* of wrong.

— Mitigation; alleviation; abatement; as, *palliation* of a disease.

Pall'iative, *a.* [*Fr.* *palliatif*.] Extenuating; serving to extenuate by excuses or favorable representations.

— Mitigating; alleviating, as pain or disease.

—*n.* That which palliates or extenuates; excuse.

— That which mitigates, alleviates, or abates the violence of pain, disease, or other evil.

Pall'id, *a.* [*Lat.* *pallidus*, from *paleo*, to be or look pale.] Pale; wan; deficient in color; not high-colored; as, a *pallid* face.

Pall'idly, *adv.* Palely; wanly; not freshly or ruddily.

Pall'idness, *n.* Paleness; wanness; pallor; not freshness or ruddiness.

Palling, (*pawl'ing*), *a.* Making or becoming vapid or insipid.

—*n.* Insipidity; the state of being insipid or cloyed.

Pall'iser's Islands, a group in the S. Pacific Ocean; Lat. 15° S., Lon. 145° W.

Pallium, (*pāl'le-um*), *n.* [*Lat.*, a cloak.] (*Antiq.*) A square woollen cloak much worn by the Greeks, resembling the *toga* of the Roman citizens. It was formed of woollen cloth cut square, and was worn over the tunic, or sometimes, indeed, over the naked body as the sole covering; being fastened to the shoulder or neck by a fibula or brooch. According to Fairholt, it was the cheapest, most servicable, and simplest mode of clothing adopted by the Greeks, who are often represented upon ancient vases as clothed with no other article of dress. Apparently it resembled the *bourous* adopted by the Arabs, as a soldier could wrap himself at night in its ample folds, and sleep secure from damp and cold. It was sometimes decorated with embroidery, but had usually merely a simple border.

(*Ecdl.*) A vestment which by ancient usage is sent from Rome to all archbishops of the Roman Catholic Church, and to the four Latin patriarchs of the East, on their accession. It is now a white woollen band, made round, and worn over the shoulders, crossed in front, with one end hanging down over the breast; the other behind it, is ornamented with purple crosses, and fastened by three golden needles or pins. It was the custom, at the period of the greatest power of the Roman see, for the archbishops to come to Rome for the purpose of receiving it; it is now delivered as a mandatory, or merely by a delegate from Rome. Some simple bishops receive the pallium as a mark of honor. The cloth of which the pallium is made is woven from the wool of ten white lambs, blessed at Rome on the festival of St. Agnes, and deposited on the tomb of St. Peter during the eve of his festival.

Pall'-mall, (*pron. pell-mell*), *n.* (*Games.*) An athletic game in which a ball is driven through an iron ring with a mallet that strikes the ball. This game, once very fashionable in England, was played in the neighborhood of St. James' Park in the time of Charles II., and has given name to the celebrated street in London, running along the side of this park, called Pall-mall.

Pall'or, *n.* [*Lat.*] Paleness; absence of color or bloom.

Palls, *n. pl.* (*Ship-building.*) Strong, short pieces of wood or iron, placed near the capstan or windlass, to prevent their recoiling.

Palm, (*pām*), *n.* [*Fr.* *palme*; *Lat.* *palma*, from *Gr.* *palāmē*, the palm of the hand.] The hand spread out; the inner part of the hand.

(*Measures.*) An ancient measure of length taken from the extent of the hand. There were two different palms, — one corresponding to the length of the hand, and the other to the breadth. The Roman palm was about eight and a half English inches. The English palm is understood to be three inches.

(*Naut.*) A peculiar thimble used in sail-making. The word also denotes the flattened end of each arm of an anchor, terminating in a point to enter the ground, while the breadth of the palm gives a good hold.

(*Bot.*) See PALMACEÆ.

— The broad part of the antlers of a full-grown stag; as, a *palm* of sixteen branches. — A branch of palm or laurel anciently borne as a symbol of victory or jubilation.

— Hence, the mark or symbol of superiority or success; a token of triumph or victory; as, to carry off the *palm*.

Palm, *v. a.* To handle; to paw or touch with the hand. — To hide in the palm of the hand.

"They *palm*ed the trick that lost the game." — *Prior*.

Fig. 2030. — PALLIUM.

Bernard Palissy

1508 (?) - 1589

—To impose by deception; to put off by unfair or fraudulent means;—generally with *off*; as, he *palmed off* spurious coin upon me.

Palma, one of the Canary Islands, in the Atlantic Ocean, off the W. coast of Africa; Lat. $28^{\circ} 45' N.$, Lon. $17^{\circ} 50' W.$ Area, 330 sq. m. The surface is elevated, attaining in its highest elevation 7,000 ft. The valleys are fertile and well wooded. *Prod.* Wine, fruits, wax, honey, and sugar. *Manuf.* Silk. *Chief towns.* Santa Cruz and Fajacorte. *Pop.* 35,000.

Palma, a town of Italy, in Sicily, prov. of Girgenti, 13 m. S.E. of Girgenti. *Pop.* 8,000.

Palma, in Spain, a town, prov. of Cordova, at the junction of the Guadalquivir with the Xenil, 30 m. S.W. of Cordova. *Pop.* 5,500. — A town, prov. of Huelva, 26 m. N.E. of Huelva. *Pop.* 4,000.

Palma, a fortified town, cap. of the island of Majorca, in the Bay of Palmas, on its S.W. coast, 130 m. S. of Barcelona; Lat. $39^{\circ} 34' N.$, Lon. $2^{\circ} 45' E.$ *Manuf.* Woollens, silks, linens, glass, thread, and brandy. The port is small, and admits only vessels of light draught.

Palmaacea, *n.* (*Bot.*) The Palm family, an order of plants, alliance *Palmates*. *DIAG.* Perfect flowers, seated on a branched scaly spadix, and a minute embryo lodged below the surface of horny or fleshy albumen. — They are characterized as having trunk arborescent, simple, occasionally shrubby, sometimes branched, rough with the dilated half-sheathing bases of the leaves or their scars. — Leaves clustered, terminal, usually very large, pinnate or flabelliform, plaited with parallel simple veins, in some cases eroded and wedge-shaped. Flowers small; sepals 3, colorless, fleshy or leathery, persistent; fruit drupaceous, or nut-like, or berried, often with a fibrous rind. The plants of this order are native of tropical regions, and are among the most valuable to mankind, as affording food, and raiment, and numerous objects of economical importance. Wine, oil, wax, flour, sugar, and salt, says Humboldt, are the produce of this tribe; to which Von Martius adds, thread, utensils, weapons, food, and habitations. The order includes 73 genera and 400 (or, according to Martins, 1000) species, the most important of which are noticed in separate articles.

Fig. 2031.—PALM-TREES,
(*Corypha gebanga*.)

Palmaceae, (*-mā'shus*), *a.* (*Bot.*) Pertaining to the palm tribe.

Palma Christi, *n.* (*Bot.*) See *RICINUS*.

Palmates, *n.* (*Bot.*) An alliance of plants, class *Endogens*. *DIAG.* Perfect flowers, seated on a branched scaly spadix, and a minute embryo, lodged below the surface of horny or fleshy albumen. The alliance is represented by one order — *PALMACEAE*, *q. v.*

Palmar, **Palmary**, *a.* [*Lat. palmaris*, from *palm*, the palm of the hand.] Of the breadth of the hand. — Pertaining to the palm of the hand.

Palmary, *a.* [*Lat. palmaris*.] Deserving of the palm; chief; pre-eminent; superior.

Palmas, an island of the Republic of Colombia, in the Bay of Choco, about 15 m. N.W. of Buenaventura.

Palmas, (*Cape*), a promontory of W. Africa, forming the entrance from the north into the Gulf of Guinea; Lat. $4^{\circ} 22' N.$, Lon. $7^{\circ} 44' W.$

Palmas, (*Las*), a seaport-town, cap. of the island of Grand Canary, on its N.E. coast. It is one of the most beautiful and flourishing towns of the Canary Islands. *Manuf.* Woollens, linens, hats, glass, leather, and sailing-tackle; also ship-building. It has a large trade with the neighboring islands, the W. Indies, and Europe. It was declared a free port in 1852. *Pop.* 18,000.

Palmatifid, *a.* (*Bot.*) Palmate, but having the divisions only half-way through.

Palmatiseed, *a.* (*Bot.*) Divided, as a palmate leaf, down to the midrib, when the parenchyma is interrupted. — *Webster*.

Palmed, (*pāmd*), *a.* Having palms.

Palmed Deer, (*Venery*.) A stag of full growth, bearing palms.

Palmer, (*pāmur*), *n.* A pilgrim to or from the Holy Land, carrying several branches of palm. A poor Crusader. The palmer was distinguished, in

the middle centuries, from other pilgrims, by his poverty, and his depending upon charitable contributions for his food and the expenses of his journey.

Palmate, **Palmatel**, *a.* [*Lat. palmatus*, from *palm*, to make the print of one's hand.] (*Bot. and Zool.*) Having the shape of a hand; resembling a hand with the fingers spread.

Palmer, in Massachusetts, a post-village and township of Hampden county, about 16 miles E.N.E. of Springfield.

Palmer, in Ohio, a township of Washington county.

Palmer, in Pennsylvania, a township of Northampton co.

Palmer Depot, in Massachusetts, a village of Hampden co., abt. 3 m. E. by N. of Springfield.

Palmerston, HENRY JOHN TEMPLE, VISCOUNT, prime minister of England, b. 1784. The Temple family trace their descent as far back as the period of the Norman Conquest. One of its most distinguished members was Sir William Temple, friend of William III., and eminent as a diplomatist and man of letters. It was from Sir William's brother, Sir John Temple, that Lord Palmerston descended. He entered upon official life in 1807, being named a lord of the Admiralty, under the Tory administration of the Duke of Portland. In 1809 he was appointed Secretary of War, and in this office he remained through the various Tory administrations for nearly 20 years. But in this interval his political views had undergone considerable modification, and in 1828 he retired from the Wellington administration. After the fall of the Conservative ministry of Sir Robert Peel, in the following year, Lord Palmerston again resumed his functions in the Foreign Office. He remained in office until 1841, and it was during these six years that the name of Palmerston became so celebrated as a foreign minister. Between the years 1841-1846, he was in opposition to the Conservative ministry of Sir Robert Peel; but in the last-mentioned year he was again appointed Foreign Secretary under the Whig administration of Lord John Russell. His ready acknowledgment of the *coup d'état* effected by Louis Napoleon in 1851, led to serious differences between himself and his colleagues, and, in consequence, he was compelled to resign. His secession, however, speedily led to the fall of the Russell ministry, and upon the accession of the Coalition administration, in the following year, he took the office of Home Secretary. The mismanagement of affairs in the Crimea brought about the fall of the Coalition ministry in 1855; immediately after which Lord Palmerston reached the apex of power as First Lord of the Treasury, and Prime Minister of Great Britain. As prime minister he successfully carried out the policy of alliance with France and the war with Russia, which ended with the fall of Sebastopol, in September, 1855. Feebly supported, however, by his colleagues, he lost strength in the House, and his administration finally fell, in Feb., 1858, upon the Conspiracy Bill, intended to protect the French emperor against the machinations of plotting refugees,—an act of loyal alliance, but in opposition with the hereditary feeling of the English people against their continental neighbor. The second Derby administration succeeded, but a year later *P.* was again called to be prime minister. With surprising energy, vivacity, and industry, almost unabated by age, he directed the English policy through the Italian war, the American war, and the Polish insurrection. He was prime minister for a greater number of years than any man in this century, except Lord Liverpool, and retained his marvellous popularity to the last. Above and beyond all differences of mere opinion rose, in his country, the general consciousness of his pure patriotism; and Englishmen were proud to be represented to other nations by a man in so many ways one of themselves, both in their strength and weaknesses. *D.* Oct. 27, 1865.

Palmetto, *n.* The Cabbage-tree, (see *ARECA*.) a species of palm, genus *Chamerops*, 40 to 50 feet high, growing along the Atlantic coast from N. Carolina to Florida. It has a crown of large palmated leaves, the blade from one foot to five feet in length and breadth, and the footstalk long. The flowers are small, greenish, and in long racemes; the fruit black, about as long as a pea-pod, and not eatable. The leaves are made into hats. The terminal bud or cabbage is eaten. The wood is extremely porous, but much esteemed for wharves, as it is not liable to be attacked by worms.

Palmetto Ranch, in Texas, a locality of Cameron co., near the old battle-ground of Palo Alto, memorable as the scene of the last conflict of the Civil War. Here, on May 13, 1865, Colonel Barrett, with 459 men, attacked a Confederate force numbering about 600, under Gen. J. E. Slaughter, and after a short engagement was defeated with a loss of 115 killed and many wounded.

Palmpied, *a.* [*Lat. palma*, a palm, and *pes*, *pedis*, a foot.] (*Zool.*) Web-footed; having the toes connected by a membrane. [as NATAROKES.]

Palmpipeds, **Palmpipeds**, *n. pl.* (*Zool.*) Same as *Palmpipeds*.

Palmitic Acid, *n.* (*Chem.*) One of the most important of the Fatty acids. In a pure state, when crystallized from alcohol, it occurs in the form of beautifully white acicular crystals, arranged in tuft-like groups. These crystals are devoid of odor or taste, communicate a fatty feeling to the finger, fuse at 143.6° , and solidify on cooling in the form of crystalline scales. This acid is lighter than water, in which it is perfectly insoluble; but it dissolves freely in boiling alcohol and in ether, and the solutions have a distinctly acid reaction. The neutral palmitates of the alkalis constitute soaps, and are soluble in water; if, however, their solutions are largely diluted with additional water, they are decom-

posed, an insoluble acid salt being precipitated, while a portion of the base remains in solution. The addition of chloride of sodium (common salt) to a solution of an alkaline palmitate produces a similar effect. *Form.* $C_{32}H_{64}O_4$.

Palmitine, *n.* (*Chem.*) A white fat, usually occurring, when crystallized from ether, in the form of a mass of small scaly crystals. According to Duff, it occurs, like the allied fat stearine, in three modifications, each of which has a different melting-point—viz., 114.8° , 143° , and 145° . On cooling, it solidifies into a wax-like mass, of lower specific gravity than water, and insoluble in that fluid, but readily soluble in ether and in boiling alcohol. It is a constituent of almost every kind of fat, and is the preponderating ingredient in those of a semi-solid consistence, and in many oils. It receives its name from the abundance in which it occurs in palm-oil, and it may readily be obtained from this source by removing the liquid portion (the oleine) by pressure, and purifying the remaining palmitine by crystallization from ether, or a mixture of ether and alcohol. *Form.* $C_{32}H_{64}O_4$.

Palm-oil, *See* MACAW-TREE.

Palm-Sunday, (*pam-sun'dā*), *n.* (*Ecol.*) The Sunday next before Easter; so called from the custom of blessing branches of the palm-tree, or of other trees substituted in those countries in which palm cannot be procured, and of carrying the blessed branches in procession, in commemoration of the triumphal entry of our Lord into Jerusalem (*John xii.*). Palm-Sunday is still celebrated with great solemnity by the Roman Catholics.

Palm'y, *a.* Flourishing; prosperous; victorious.

Palmyra, (*anc. Geog.*) an ancient city, situated in a fruitful and well-watered oasis of the Syrian desert, in Lat. $34^{\circ} 18' N.$, Lon. $3^{\circ} 13' E.$ It was the *Tadmor* or *Thadmor* of the Hebrews (*1 Kings ix. 18*, and *2 Chron. viii. 4*), founded, or enlarged by Solomon, about B. C. 1001. Both its Greek name *P.*, and its Hebrew name "Tadmor," signify the city of palms, and the Arabs call it *Tadmor*. It submitted to the Emperor Hadrian in 130, and rose to its highest power in the 3d century. Sapor I., King of Persia, was defeated here by Odenathus in 262. Odenathus was murdered about 267, and his wife Zenobia assumed the title of Queen of the East. Her army having been defeated at Antioch and at Emesa, Zenobia was besieged in her capital by the Emperor Aurelian in 272. She attempted to make her escape, but was taken prisoner, and *P.* surrendered in 274. The citizens slew the Roman garrison, and Aurelian destroyed Palmyra. It was restored by Justinian I. in 527, and again destroyed by the Saracens in 744. It was plundered by Tamerlane in 1400. Its site was long unknown, until the spot was at last penetrated by some

Fig. 2033.—RUINS OF PALMYRA.

European travellers. It had an immense temple dedicated to the sun, of which 60 columns out of 300 still remain, (Fig. 2033.) Of its appearance in modern times Volney observes: "In the space covered by these ruins, we sometimes find a palace, of which nothing remains but the court and walls; sometimes a temple, whose peristyle is half thrown down; and now a portico, a gallery, a triumphal arch. It from this striking scene we cast our eyes upon the ground, another almost as varied presents itself. On which side soever we look, the earth is strewn with vast stones half buried, with broken entablatures, mutilated friezes, disfigured reliefs, effaced sculptures, violated tombs, and altars defiled by the dust."

Palmyra, in Illinois, a twp. of Lee co.

Palmyra, in Indiana, a post-village of Harrison co., about 10 miles N. of Corydon.—A township of Knox county.—A village of Rush county, about 10 miles S. of Rushville.

Palmyra, in Iowa, a post-village and township of Warren co., abt. 16 m. S.E. of Des Moines.

Palmyra, in Kansas, a post-village and township of Douglas county, about 15 miles south by east of Lawrence.

Palmyra, in Maine, a post-township of Somerset county.

Palmyra, in Michigan, a post-village and township of Lenawee county, about 60 miles south-west of Detroit.

Fig. 2032.

Palmyra, in *Missouri*, a city, cap. of Marion co., 15 m. N.W. of Hannibal. Pop. (1897) 2,840.

Palmyra, in *New York*, a post-village and township of Wayne co., abt. 22 m. E. by S. of Rochester.

Palmyra, in *Ohio*, a village of Knox county, about 16 m. S. of Newark.—A post-township of Portage county.—A village of Warren county, about 20 m. N.E. of Cincinnati.

Palmyra, in *Pennsylvania*, a post-village of Lebanon county, about 15 miles east of Harrisburg.—A township of Pike county.—A township of Wayne county.

Palmyra, in *Virginia*, a post-village, cap. of Fluvanna co., abt. 60 m. W. by N. of Richmond.

Palmyra, in *Wisconsin*, a post-village and township of Jefferson county, about 42 miles W.S.W. of Milwaukee.

Palmyra Wood, *n.* (*Bot.*) The wood of the *Borassus flabelliformis*, and of the *Cocos nucifera*. See *BORASSUS* and *COCOS*.

Pa'lo, a town of S. Italy, prov. of Terra di Bari, 11 m. S.W. of Bari; pop. 5,500.

Pa'lo, Pa'loo, or Pa'lu, a town of Asiatic Turkey, on the Euphrates, 55 m. N. of Diarbekr. *Manuf.* Cotton weaving, dyeing, and tanning. Pop. 8,000.

Palo, in *Iowa*, a post-village of Linn co., abt. 35 m. N.N.W. of Iowa City.

Palo, in *Michigan*, a post-village of Ionia co., abt. 36 m. N.W. of Lansing.

Pa'lo Alto, in *Iowa*, a N.W. co.; area, abt. 550 sq. m. *Rivers*. Des Moines and Lizard rivers. *Surface*, diversified; *soil*, generally fertile. *Cap.* Emmittsburg.

—A township of Jasper county.—A post-village of Louisa county, abt. 48 m. S.S.E. of Iowa City.

Palo Alto, in *Pennsylvania*, a township of Schuylkill co.

Palo Alto, in *Texas*, a locality of Cameron co., about midway between Point Isabel and Brownsville. Here, on May 8, 1846, occurred one of the most memorable battles of the Mexican War. Gen. Taylor, commanding 2,111 Americans, attacked and defeated 6,000 Mexicans under Gen. Arista. The former lost 32 men killed and 47 wounded. The Mexican loss was 252 men killed.

Palo de Vaca, *n.* (*Bot.*) See *BROSIMUM*.

Palo'ma, in *Illinois*, a post-village of Adams co., abt. 14 m. N.E. of Quincy.

Palo Pinto, in *Texas*, a N. central co.; area, abt. 1,100 sq. m. *Rivers*. Brazos and Palo Pinto rivers. *Surface*, mostly level prairie lands; *soil*, moderately fertile, and well adapted to stock-rearing. *Cap.* Palo Pinto, abt. 190 m. N. by W. of Austin.

Pa'los, in *Illinois*, a post-township of Cook county.

Palouse River, (*pah-looz'*) rises on the W. slope of Bitter Root Mountains, in Idaho, and flowing W. into Washington, enters Lewis Fork of Columbia river in Spokane co.

Palp, *n.* [*Lat. palpare*, to touch softly.] (*Zoöl.*) A jointed sensiferous organ, attached in pairs to the *labium* or *maxilla* of insects, and termed, respectively, *labial* and *maxillary* palpi, or feelers.

—*v. a.* To feel. (*R.*)

Palpability, *n.* Quality of being perceptible by the touch.

Pal'pable, *a.* [*L. Lat. palpabilis*.] Perceptible by the touch; that may be felt, as darkness. —Gross; coarse; easily perceived and detected, as a mistake. —Plain; obvious; easily perceptible, as proof.

Pal'pably *adv.* In such a manner as to be perceived by the touch; grossly; plainly; obviously.

Palpa'tion, *n.* [*Lat. palpatio*, from *palpo*, to stroke.] The act of feeling or touching.

Pal'pebral, *a.* [*Fr.* from *Lat. palpebralis*, from *palpebra*, an eyelid.] Of, or pertaining to, the eyelids.

Pal'pebrons, *a.* That has eyelids.

Pal'piform, *a.* That has the form of a palp.

Palpig'erous, *a.* Bearing or producing palp.

Pal'pitate, *v. n.* [*Lat. palpitare*, frequent.] To tremble; to throb; to beat gently; to beat, as the heart; to flutter, that is, to move with little throes; to go pit-a-pat.

Palpitation, *n.* [*Fr.* from *Lat. palpitatio*.] (*Med.*) A preternatural beating or pulsation of the heart. There are few diseases more distressing, or often more alarming to the sufferer, the importance of the organ affected adding to the alarm of the patient. In general, however, *P.* is more a functional than an organic disease, and in delicate constitutions may proceed from causes that have nothing to do—directly, at least—with the heart. These irregular movements, as they are called, of the heart, may consist of a mere occasional tremor, transient, indeed momentary, in its duration; or they may be hard, steady, or intermitting beats, sometimes only heard when the patient is in bed, or lying on his side; or they may be so loud as to be audible to a stranger at the other side of the room, and at the same time so violent as sensibly to move the clothes covering that part of the chest. *P.* is sometimes accompanied by what is called *bruit de soufflet*, a peculiar sound, which is described under *stethoscope* (*q. v.*), and attended by a feeling of sickness and anxiety, with a pulsation at the pit of the stomach, and not unfrequently by faintings, and even *syncope*. Females are more subject to *P.* than males, and those of a nervous temperament, and of a weak, relaxed habit of body, much more so than those of a sanguineous temperament, and of a robust constitution. The exciting causes are, generally, strong mental emotions, such as great or sudden grief or joy, violent exercise, or whatever debilitates or relaxes the frame. Young females suffering under catamenial irregularities, (chlorosis,) or delicate women in the early months

of pregnancy, are the persons most liable to this affection. It is only by a close observation of his patient's condition, by a frequent and careful scrutiny of the pulse, and by the use of the stethoscope, that the physician can, in severe cases, detect the presence of organic mischief as the direct cause of *P.*

Pal'pus, *n.*; *pl.* PALPI. [*Lat.*] (*Zoöl.*) A PALP, *q. v.*

Palsical, *a.* Afflicted with the palsy

Palsied, *a.* Affected with palsy.

Pal'ster, *n.* A pilgrim's staff.

Pal'sy, *n.* [Contracted from *Fr. paralysie*, from *Gr. paralysis*.] (*Med.*) Same as PARALYSIS, *q. v.*

Pal'sy, *v. a.* To paralyze; to deprive of action or energy.

Pal'ter, *v. n.* To shift; to dodge; to act insincerely.

Pal'terer, *n.* An insincere dealer; a shifter.

Pal'triety, *adv.* In a paltry manner; despicably.

Pal'triness, *n.* The state or quality of being paltry or vile.

Pal'try, (*pawl'try*), *a.* [*Sw. palta*; *Scot. paltrie* or *peltrie*, vile trash.] Worthless; despicable; contemptible; vile; mean.

Palu'dal, *a.* [*Lat. palus*, a swamp.] Pertaining to marshes; marshy.

Paludamentum, *n.* [*Lat.*] (*Antiq.*) The cloak worn by a Roman general commanding an army (Fig. 2034), his principal officers and personal attendants, in contradistinction to the *sagum* of the common soldiers, and the *toga* or garb of peace. It was the practice for a Roman magistrate, after he had received *imperium* from the *comitia curiata*, and offered up his vows in the capitol, to march out of the city arrayed in the *P. exire paludatus*, attended by his lictors in similar attire (*paludatus lictoribus*), nor could he again enter the gates until he had formally divested himself of this emblem of military power. The *P.* was open in front, reached down to the knees or a little lower, and hung loosely over the shoulders, being fastened across the chest by a clasp. The color of the *P.* was commonly white or purple, and hence it was marked and remembered that Crassus, on the morning of the fatal battle of Carrhæ, went forth in a dark-colored mantle.

Paludine, *a.* [From *Lat. palus*, *paludis*, a marsh.] Pertaining to a marsh.

Paludin'ide, *n. pl.* [*Lat. palus*, a pool.] (*Zoöl.*) The River-snail family, order *Gastropoda*, including fluviatile mollusca very widely diffused in rivers and ponds. *Paludina integra*, of the Western and Middle States (Fig. 1900), may be taken as a type of the family.

Pal'y, *a.* Pale; wanting color. (Used only in poetry.)

(*Her.*) Applied to a shield divided into four or more equal parts. See *PALE*.

Pam, *n.* The knave of clubs.

Pam'ah, in *Iowa*, a village of Jones co., abt. 35 m. N. by E. of Iowa City.

Pam'e'lia, in *New York*, a twp. of Jefferson co.

Pamelia Four Corners, in *New York*, a post-village of Jefferson co., abt. 165 m. N.W. of Albany.

Pamiers, (*pa'me-ai*), a town of France, dept. of Ariège, on the river Ariège, 10 m. N. of Foix. *Manuf.* Woollens, cottons, caps, and hats. Pop. 8,000.

Pamir', Pameer', or **Pamere'**, an extensive table-land of central Asia. Its highest point, called by the natives the "roof of the world," in *Lat.* 37° 27' N., *Lon.* 73° 40' E., is 15,600 feet above the sea.

Pam'lico, in *N. Carolina*, a river rising in Granville co., and flowing a general S.E. course enters Pamlico Sound by a large estuary in Beaufort co. Its upper part is called *TAR RIVER*.

—A light-house on the S. side of the entrance to Pamlico River, about 35 m. S. of Washington.

Pam'lico Sound, in *N. Carolina*, an inlet of the Atlantic Ocean, washing the cos. of Tyrel, Kyde, Beaufort, and Craven. It is about 80 m. long, by an average breadth of 20 m., very shallow, and receives the Neuse and Pamlico rivers.

Pam'pa Grande, a level sandy desert of Peru, between Arequipa and the Pacific Ocean. It has an elevation of 2,000 feet above sea-level, and is destitute of water or vegetation.

Pam'pas, in *Illinois*, a township of De Kalb co.; pop. about 1,298.

Pam'pas, *n. pl.* (*Geog.*) Treeless plains extending for 2,000 m. from the tropic of Capricorn to the S. limit of the American continent on the E. side of the Andes. The breadth varies from 240 to 500 m. The total area is estimated at 750,000 sq. m. Within this wide range of country there are necessarily great differences of climate. For the most part the plains form step-like terraces, ranging N. and S., and rising to the W. Generally sterile, their steps are sometimes richly covered with verdure. They are here and there intersected by streams; but the waters flowing over them do not fertilize the soil. Huge boulders occasionally interrupt the dreary flat, black lava platforms sometimes intervene, and white incrustations of salt are not wanting.

Swamps occur in the S. part of the tract, which are occasionally flooded by the rivers and entirely inundated. In other districts these remarkable platforms are exceedingly fertile, and they are estimated to feed at least a million of horned cattle and three million of horses, all of which are derived from animals introduced by the Spaniards. The higher plains to the W. are less fitted for natural pastures, but admit of very successful cultivation. A large salt desert forms the N. termination of the Pampas.—The Pampas-grass (*Gynerium argenteum*), which covers a large part of the *P.*, is a hardy plant, belonging to the order *Gramineæ*. Its leaves are 6 or 8 feet long, the ends hanging gracefully over; the flowering stems 10 to 14 feet high; the panicles of flowers silvery-white, and from 18 to 24 inches long. Its tufts have a splendid appearance, but the herbage is too coarse to be of any agricultural value. It is cultivated in this country and in Europe on account of its ornamental character.

Pam'pas del Sacramen'to, a plain, or series of plains, in the N.E. part of Peru; area, about 60,000 sq. miles. They are traversed by the Ucayale and other rivers, and though for the most part destitute of trees, they are in some places covered with immense forests, and are occupied by various tribes of Indians.

Pam'pas-grass, *n.* (*Bot.*) See *PAMPAS*.

Pam'pelmouse, *n.* (*Bot.*) Same as *POMPELMOUSE*, *q. v.*

Pampelu'na, or **Pamplo'na**, a fortified city of Spain, cap. of the prov., and of the former kingdom of Navarre, on the Arga, 48 m. S. of Bayonne, and 198 N.E. of Madrid. *Manuf.* Coarse woollens, paper, and leather. *P.* was taken by the French in 1808, retaken by the English in 1813, and again occupied by the French in 1823. Pop. 22,896.

Pam'per, *v. a.* [*O. Fr. pampre*, from *pamprer*, to fill or cover with vine-leaves, from *Lat. pampinus*, a vine-leaf.] To gratify to the full; to furnish with that which delights; to feed luxuriously; to glnt.

Pam'peredness, *n.* The state of being pampered.

Pam'perer, *n.* One who pampers.

Pam'perize, *v. a.* To feed luxuriously; to pamper. (*R.*)

Pampe'ro, *n.*; *pl.* *PAMPEROS*. Violent S.W. winds which sweep over the pampas in the S. part of the Argentine republic.

Pamphilus, (*pam'fi-lus*), a painter of Macedon, who flourished under King Philip, said to have been the first to apply the laws of proportion and perspective to his art. Apelles was the pupil of this master.

Pam'philus, an early Christian writer, probably B. in Berytus, was the friend and collaborator of Eusebius, and suffered martyrdom in Cæsarea, February 16, 309. — See *EUSEBIUS*.

Pamphlet, (*pam'flet*), *n.* [*Fr. Écra anonyme*.] A small book consisting of sheets stitched together, and sold unbound. The English *pamphlet* is synonymous with the French *brochure* and the German *flugschrift*, as they all mean publications that are merely written for the moment, and for immediate effect.

Pamphleteer', *n.* A writer of pamphlets; a scribbler.

Pamphleteer'ing, *a.* Writing and publishing pamphlets.

—*n.* The writing and publishing of pamphlets.

Fig. 2034. — PALUDAMENTUM.

Fig. 2035. PALUDINA INTEGRÆ.

Fig. 2036. — PAMPAS-GRASS, (*Gynerium Argenteum*.)

Pamphy'lia. (*Inc. Geog.*) An ancient kingdom of Asia Minor, bounded N. by Pisidia and Mount Taurus, S. by Phrygia, E. by Cilicia, and W. by Lycia and part of Phrygia. The principal towns were Albia and Attalia.

Pam'ple'gia, n. [*Gr. pam, and plego, I strike.*] (*Med.*) General paralysis.—Palsy of the whole body.

Pam'plin's Depot, in *Virginia*, a post-village of Appomattox co., about 87 m. W. of Petersburg.

Pam'plo'na, a town of the Republic of Colombia, about 200 m. N.E. of Bogota. *Pop.* 4,000.

Pamun'key River, in *Virginia*, formed in Hanover co. by the union of the North Anna and South Anna rivers, and flows S.E. to West Point in King William co., joins the Mattaponi to form the York River.

Pan. (*Gr. Myth.*) The god of shepherds, of huntsmen, and of all rural inhabitants. He was the son of Mercury, and was a monster in appearance, having two small horns in his head, a ruddy complexion, a flat nose; and his legs, thighs, tail, and feet were like those of a goat. His education was intrusted to a nymph of Arcadia, but she was so terrified at the sight of the monster, that she fled from him. His father then wrapped him in the skins of beasts, and carried him to heaven, where Jupiter and the gods long entertained themselves with the oddity of his appearance, and Bacchus gave him the name of Pan. He quitted the abode of the gods, and dwelt chiefly in Arcadia, choosing for his habitation the most sequestered woods and rugged mountains. He was the inventor of the flute with seven reeds, and amused himself by deceiving the nymphs; and even captivated Diana herself by transforming himself into a beautiful white goat. The worship of Pan was established in Arcadia, and his festivals, called by the Greeks *Lyceæ*, were brought to Italy by Evander, and were well known at Rome by the name of *Lupercalia*. The worship and the different functions of Pan are derived from the mythology of the ancient Egyptians.

Pan, n. [*A. S. panna, panne; Du. pan; Lat. patina, a broad dish.*] A vessel broad and shallow, in which provisions are dressed or kept; any vessel of like character.

(*Mil.*) The part of a gun-lock, or other fire-arm, which holds the priming that communicates with the charge.—A leaf of gold or silver.—The hard stratum of earth that lies below the soil, and holds the water.—The top of the head; the brain-pan; the cranium.—A masticatory substance. See *ARECA* and *BETEL*.

Pa'na, in *Illinois*, a city of Christian co., on the Illinois Central, Balt. & Ohio S.W., and C., C. & St. L. R.R.s., 42 m. S.E. of Springfield. *Pop.* (1897) 5,650.

Pan'abasc, n. (*Mex.*) Same as *TETRAEDRITE, q. v.*

Panace'a, n. [*Lat.; Gr. panakeia, from pas, pan, all, and akromai, to heal.*] (*Med.*) Something supposed to have the power of curing all diseases; a remedy for all diseases; a universal medicine; a cure-all; a catholicon.

Panache, (*pa-nash'*) *n.* [*Fr., from Lat. penna, a feather.*] A plume of feathers formerly worn on a casque or helmet; as, "a panache of variegated plumes."

Prescott.

(*Arch.*) That part of a domed vault presenting the form of a spheroid triangle.

Pan'ada, Panade', Pan'ado, n. [*Fr. panade; Sp. panada; It. panata, from Lat. panis, bread.*] A kind of thick gruel made of bread boiled to a pulpy state, and sweetened; — used for invalids.

Panama', a fortified city and seaport of the Republic of Panama, in Central America, situated on the Pacific, 38 m. S.E. of Chagres. The city stands on a rocky peninsula, projecting into the Bay of Panama, and has an imposing aspect from the sea. Its streets are well ventilated, and it is cleaner than most Hispano-American cities. The houses are mostly of stone, built in the Spanish style, the larger ones with court-yards and balconies, and the smaller with but one story. *P.* has suffered much by disastrous fires in 1864, 1870 and 1874, the loss in the last year amounting to \$1,000,000. It has a large commerce, but most of it is due to the transit trade. It is a station for the mails between countries on the Atlantic, and those on the South or Central American coast on the Pacific, and is the Pacific terminus of the Panama railroad, which connects this place with Aspinwall, on the Atlantic side of the Isthmus. Two American lines of steamers connect it with San Francisco. The harbor or roadstead of *P.* is one of the finest in the world: there are a number of islands a short distance from the mainland, which afford secure anchorage for ships of any burden, and from which supplies of provisions, including excellent water, may usually be obtained. The tides daily rise and fall from 20 to 27 ft., so that it is peculiarly well-fitted for the repair and building of ships. *Pop.* (1897) 19,500.—OLD PANAMA, founded by the Spaniards in 1518, stood abt 3 m. to the E. of the present city, and was destroyed by the buccaneer, Sir Henry Morgan, in 1670, shortly after which the existing city was commenced.

P. (BAY OF.) A large indentation formed by the waters of the Pacific Ocean, extending inland abt. 120 m., has a width across of 135 m. It contains numerous islands, particularly on its E. side, where the group called Pearl Islands covers abt. 400 sq. m. Of its several harbors, Panama in the N., and San Miguel in the E., are best known. The bay is usually tranquil, and not agitated by much wind or sea, but destructive storms occasionally occur, and during the rainy season W. winds send in a heavy swell. The tide rises from two to four fathoms.

P. (ISTHMUS OF.) (sometimes called *ISTHMUS OF DARIEN*), a narrow neck of land which connects the continents of N. and S. America, formerly a prov. of the republic of Colombia, between 8° and 10° N. Lat., and 77° and 81° W. Lon., having E. the Colombian prov. of Choco, W. that of Veragua, N. the Atlantic Ocean, and

S. the Pacific. The "Cordillera" or chain of the Andes is here interrupted by several remarkable breaks of low or level land, through which a line of railroad has been laid from Aspinwall to Panama city. The isthmus, and, though without any river of considerable length, several of its streams are partially navigable. The climate is very hot on the coasts; on the flanks of the mountains, in the interior it is relatively cool, but miasmatic fevers prevail everywhere. Nearly all the vegetable products of the torrid zone grow luxuriantly, and much of the surface is covered with dense forests, in which are found many of the most valuable kinds of timber, dye, cabinet, and medicinal woods and shrubs. Conspicuous among the trees are the giant cedars and the palms, among the latter of which are the wine, sago, ivory, grove, cabbage, and cocoa palms. In the rainy season when the blossoming trees are festooned with flowering vines and epiphytes, the forests are magnificent beyond description. A state in 1861, and subsequently a department, of the republic of Colombia, a revolution broke out in *P.* Nov. 3, 1903, in consequence of the rejection by the Colombian Senate of the canal treaty with the United States. The new republic was recognized by the United States Nov. 6, and has succeeded in maintaining its independence as a member of the family of nations. See *PANAMA CANAL*, in SECTION II.

Panaro, a river of N. Italy, rising in Monte Cimone, and after a N. course of 75 m. falling into the Po, 12 m. N.W. of Ferrara.

Pan'ary, a. [*From Lat. panis, bread.*] Consisting of, or pertaining to having reference to, bread.

Pan'atom, n. See *ATOMMECHANICS*.

Pan'ax, n. [*Gr. pan, all, acos, a remedy; i.e., a panacea, or universal remedy.*] (*Bot.*) A genus of herbs or shrubs, order *Araliaceæ*. *P. trifolium*, the Ground-nut or Dwarf Ginseng, is common in low woods in the U. States and Canada. *P. schinseng* produces the root called Asiatic ginseng, which is so highly prized by the Chinese as a stimulant and aphrodisiac, that they will sometimes give for it its weight in gold. *P. quinquefolium* of N. America has the same properties, but is held in little estimation in this country.

Pan'cake, n. A thin cake fried in a pan, or baked on an iron plate; a fritter.

Puncle Tuesday, Shrove-tide; Shrove-Tuesday.

Pancarte', n. [*Fr.; Lat. pancharta, from Gr. pan, all, and chartos, a leaf of paper.*] A royal charter ratifying to a subject all his possessions.

Panch'way, Panch'way, n. [*Hind. panso'i.*] (*Naut.*) A Bengalese four-oared passage-boat.

Pancration, (kra'shan.) Paneratic, a. Pertaining, or having reference to the panacration.

Pancra'tiast, Pan'eratist, n. One who excels in gymnastic performances; one engaged in the athletic contests of the panacration.

Pancra'tium, (-shi-um), n. [*Lat., from Gr. pan, all, and kratos, strength*] (*Rom. Antiq.*) Among the ancient Romans, an athletic contest which combined boxing and wrestling.

(*Bot.*) A genus of plants, order *Amaryllidaceæ*. *P. maritimum*, though not now regarded as official, has properties resembling those of the squill. There are many tropical species which are extremely ornamental. They characterize a section of the order distinguished by the presence of a cup or coronet within the perianth, the stamens being borne on the cup.

Pan'creas, n. [*Gr. pan, all, and kreas, flesh.*] (*Anat.*) A gland known in the lower animals as the *Sweetbread*. It is a single glandular organ, situated transversely across the upper part of the abdomen, at the posterior part of the epigastric region, about on a level with the last dorsal vertebra (see Fig. 218). It is of an irregular elongated form, from six to eight inches in length, an inch and a half in breadth, and from half an inch to an inch thick. The right extremity or head is curved upon itself from above downwards, and is embraced by the cavity of the duodenum. Its body tapers towards its left extremity, where it forms a tale terminating at the spleen. The *pancreatic duct* extends from left to right through the substance of the pancreas, giving off numerous branches, and terminating in the common cholemic duct, which conducts its secretions, called *pancreatic juice*, to the duodenum. In structure, the pancreas closely resembles the salivary glands, but it is looser and softer in texture; and the fluid secreted is almost identical with saliva. Its object is believed to be to reduce fatty matters to the state of an emulsion, and thereby promote their absorption by the lacteals. The amount daily secreted by man is from five to seven ounces, and it is most abundant at the commencement of digestion. Its importance is evident from the fact that it is found in all vertebrates, whether carnivorous or herbivorous.

Pancreatic, a. Pertaining to the PANCREAS, *q. v.*

Pan'creatoid, n. [*Gr. pankreas, and eidos, form.*] (*Med.*) A tumor of pancreas-like form.

Pancsova, (pan'cho-roh), a fortified town of S. Hungary, in the Banat, at the confluence of the Temes and the Danube, 62 m. S.S.W. of Temesvar; *pop.* 12,000.

Panda, n. (*Zoöl.*) The *Ailurus fulgens*, a quadruped of the family *Ursidae*, found in N. India, and called by Cuvier the most beautiful of known quadrupeds. Its size is that of a common cat, the fur is soft and thickly set, the color above of the most brilliant cinnamon-red, the head whitish, and the tail marked with brown rings, while the under part of the body is black. The *P.* is also called *Wah* and *Chit-wa*, from the peculiar cry which it utters.

Pandana'tee, n. (*Bot.*) The Screw-pine family, an order of plants, alliance *Arcales*. *DIAG.* Numerous naked

or scaly flowers, arranged on a spadix covered by many spathes, stalked anthers, loose seeds, and a solid minute embryo.—They are palm-like trees or bushes, sometimes sending down aerial roots (see Fig. 39). The leaves are sheathing, imbricated, and spirally arranged in three rows, simple or pinnate; flowers unisexual or polygamous; stamens numerous; anthers 2- to 4-celled; ovaries 1-celled; ovules solitary or numerous, on parietal placentas. Fruit consisting of a number of 1-seeded fibrous, or of many-celled, many-seeded berries; embryo at the base of fleshy albumen. The plants of this order are common in most of the tropical islands of the Old World, but rare in America. None possess any very active properties. The genus *Pandanus* has edible seeds. A species called *Laguos*, in the Isle of France, is chiefly abundant in Madagascar (see Fig. 1671). *P. candelabrum*, the Chandelier-tree of Guinea, is so called from its peculiar tendency to branch. The unexpanded leaves of *Carludorica palmata* furnish the material employed in the manufacture of Panama hats. The order contains 7 genera and 75 species.

Pan'dar, n. On old spelling of PANDER, *q. v.*

Pan'darus, a son of Lycan, is remarkable for having broken the truce which had been agreed upon between the Greeks and Trojans; he also wounded Menelaus and Diomedes; but was at last killed by Diomedes. Æneas then carried him off in his chariot, and, attempting to revenge his death, nearly perished by the hand of the furious enemy. In mediæval romances, and in Shakspeare's *Troilus and Cressida*, he is represented as procuring for Troilus the love and good graces of Chryseis.

Pande'm, a. [*From Pan.*] Belonging, or having reference to Pan.

P. pipes, or Shepherd's pipe. (*Mus.*) An ancient instrument (5, Fig. 1893) consisting of a number of reeds of progressive lengths joined together, said to have been invented by the god Pan.

Pan'dect, n.; pl. PAN'DECTS. [*Lat., from Gr. pandektes, from pas, pan, all, and dechomai, to take, to receive.*] A treatise comprising the entirety of any science.

—*pl.* The name of a collection of Roman laws. See *JUSTINIAN I.*

Pandem'ic, a. [*Fr. pandémique; Lat. pandemus, from Gr. pan, all, and demos, people.*] Epidemic; occurring to a whole people; as, a pandemic disease.

Pandemon'ium, n. [*Gr. pas, pan, all, and daimon, a demon.*] The fabled great hall or council-chamber of demons or evil spirits; — hence, figuratively, a hell, or place or scene of anarchy or torment.

Pan'der, n. (Formerly written *Pandar.*) [*From Pandarus of Troy.*] A pimp; a procurer; a mean, profligate person who caters to the lusts of others. — Hence, an assistant in, or promoter of, the evil designs and passions of another.

"My honesty was made the pander to thy lust and black ambition." — *Rowe.*

—*v. a.* To play the pander to; to procure the satisfying of the lust or passion of.

—*v. n.* To act as pimp; to be subservient to lust or passion; — hence, to aid in the evil designs or vicious propensities of others, as, they pander to the excesses of the mob.

Pan'derage, n. A going between; a promoting of sexual intercourse.

Pan'derism, n. Vocation or vices of a pimp or pander; a procuring; a going between.

Pan'derly, a. Playing the pander; pimping.

Pandic'ulated, a. Stretched or spread out; extended; enlarged by distention.

Pandicula'tion, a. [*From Lat. pandiculi, to stretch one's self, from pandere, to spread out.*] A spasmodic or paroxysmal stretching of the limbs, or involuntary extension and stiffening of the trunk and extremities, induced by lassitude, fatigue, or the incipient action of disease.

Pan'door, n. Same as *PANDOUR, q. v.*

Pando'ra, [Lat.; Gr. Pandōra, from pan, all, and dōron, gift.] (*Myth.*) The first mortal female, according to Hesiod. She was made by Vulcan out of clay, at the command of Jupiter, who wished to punish the impiety of Prometheus by giving him a companion. When the statue was animated, each god and goddess, to make the mortal more captivating and certain to effect the object meditated by the supreme god, bestowed on her some special charm or attribute, beauty, grace, music, wisdom, fascination, and eloquence; while Jove himself presented her with the *Pandora's box*, a rare casket full of secret wonders, which could be only opened by the mortal she selected for her husband. When fully armed with all her gifts, and named *P.* from the multiplicity of her presents, Mercury carried her to earth, and presented her to the notice of the arch-burglar Prometheus. That crafty and cunning prince, however, though admiring the beauty of the maid, declined the alluring bribe, and refused the offer. His more susceptible brother, however, captivated by *P.*'s charms, eagerly asked for and obtained the lovely *P.* for his wife, upon which she presented him with the casket, her dowry from the gods. When Epimetheus, the husband, opened the lid, a host of evils — all the ills and mischiefs that afflict mankind — flew out and spread themselves over the world; and the consequences would have been still more fatal, had there not been Hope at the bottom, to ameliorate the pains and sufferings of life.

(*Zoöl.*) A genus of bivalve molluscs, having unequalled shells, and found at a considerable depth in the sandy shores of Europe and of the Pacific Ocean.

(*Astron.*) An asteroid, discovered by G. Searle in 1858. — [*It pandura; Sp. pandero; Fr. mandole.*] (*Mus.*) A kind of lute, furnished with strings of brass.

Pan'doran, Pan'dore, n. (*Mus.*) Same as *EXDORÉ, q. v.*

Pan'dorr, Pau'door, n. [From *Pandur*, a place in Hungary.] (*Mil.*) An Hungarian infantry soldier in the Austrian service.

"Her whisker'd *pandours* and her fierce hussars." — *Vimpbell*.

Pandow'dy, n. A baked pudding, consisting of bread and apples, sliced, and placed in alternate layers.

Pau'durate, Pandu'riform, a. [Lat. *pandura*, *pandore*, and *forma*, *form*.] (*Bot.*) Fiddle-shaped; borate, with a concavity in both sides.

Pane, n. [A.S. *pan*, a piece; Fr. *pan*; Lat. *pannus*, a cloth.] A piece, section, or compartment distinct in itself; a limited division of a surface; particularly, a plate of glass; one of the squares of glass in a door, sash-frame, &c. — The narrow edge of the head of a hammer.

(*Arch.*) A term formerly applied to the sides of a tower, turret, spire, &c.

(*Drainage*.) A subdivision of an irrigated tract, between a feeder and an outlet drain.

Paned, (pānd), a. Variegated; composed of small squares, as a counterpane.

Panegyric, (jī'rik), n. [Fr. *panegyrique*; Gr. *panēgūrikos*, from *pas*, all, and *agūros*, *agōra*, an assembly, from *ageiro*, to bring together.] An oration or eulogy in praise of some distinguished person or achievement; a formal or elaborate encomium; praise bestowed on some eminent person, action, or virtue.

Panegyric, Panegyric, a. Containing panegyric, praise, or eulogy; encomiastic.

Panegyrically, adv. By way of panegyric, praise, or encomium.

Panegyrist, n. [Fr. *panégyriste*.] One who bestows praise; a eulogist; an encomiast, either by writing or speaking.

Pan'gyrize, v. a. To praise highly; to write or pronounce a eulogy or encomium.

— *v. n.* To bestow praises.

Panel, n. [Fr. *panneau*, dimin. of *pan*, a pane.] (*Arch.*) A space or compartment of a wall, ceiling, wood-work, &c., enclosed by beams, mouldings, framing, and so forth. It is generally sunk under the plane of the surrounding style. In wood-work, *P.* are thinned parts used to fill in a strong framing, as in doors, shutters, &c. In early Gothic architecture the panelling in stone-work is very varied: circles, trefoils, quatrefoils, (Fig. 2037), cinquefoils, &c., and the pointed oval called the *vesica piscis*, are common forms; they are also frequently used in ranges, like shallow arcades, divided by small shafts or mullions, the heads being either plain arches, trefoils, or cinquefoils, and panels similar to these are often used singly; the backs are sometimes enriched with foliage, diaper-work, or other carvings.

(*Masonry*.) One of the faces of a hewn stone.

(*Painting*.) A thin square board on which a picture is painted, instead of canvas.

(*Mining*.) A heap of ore dressed and ready for sale. (*Law*.) A schedule containing the names of jurors empanelled by the sheriff;—hence, commonly the whole jury. — (*Scots. Law*.) A prisoner arraigned for trial at the bar of a criminal court.

— *v. a.* To construct with panels; as, to *panel* a wainscot or ceiling; as, a *panelled* staircase.

Fig. 2037. — EARLY GOTHIC PANELLING.

Pane'less, a. Without panes of glass, — said of windows, &c.

Pan'el-game, n. A method of committing theft, extortion, &c., as in a panel-house.

Pan'el-house, n. A house of ill-fame, to which persons are enticed by women who act as decoys, and where, after making sure of the victim, a man—usually playing the assumed part of the woman's husband—suddenly enters the room by a panel or other secret passage, and extorts money by threats of violence, or, if the sufferer be asleep, robs him of whatever valuables he may possess.

Pan'elling, n. Wainscoting; panel-work.

Pan'el-saw, n. A fine saw, generally used for cutting out panels.

Pau'el-thief, n. One who steals or extorts money in a panel-house.

Pan'el-work, n. The act of covering with boards in panel; wainscoting; panelling.

Pan'eu'logism, n. [Gr. *pas*, *pan*, all, and *eulogia*, eulogy.] Indiscriminate praise; eulogism of every one and everything.

Pau'ful, n.; pl. PANFULS. As much as a pan will hold; sufficient to fill a pan.

Pang, n. [A.S. *pyngan*; Lat. *pungo*, to prick, to pierce.] A sharp and sudden pain; particularly, a sudden par-

oxysm of extreme pain; anguish; a throo; distress; suffering; agony; as, the *pangs* of maternity.

— *v. a.* To torment cruelly; to torture. (*R.*)

Pangia'ceæ, n. pl. (Bot.) A small order of arborescent unisexual plants, alliance *Papayales*, nearly allied to *Papayaceæ*, but differing principally in being polypetalous, and in the fertile flowers having as many scales as there are petals. There are two genera and four species, natives exclusively of the hotter parts of India. They are more or less poisonous; but the seeds of one species, *Pangium edule*, after being boiled and soaked, are used for flavoring curry.

Pan'golin, n. (Zool.) The common name of the genus *Manus*, Armadilla family, including animals of the Eastern hemisphere, differing from the gen. *Myrmecophaga* (q. v.) in having the body, limbs, and tail clothed with large trenchant scales arranged like tiles, which they elevate when they roll themselves into a ball, as they do when they would ward off the attacks of an enemy. The short-tailed Pangolin, *M. pendactyla* (Linn.) of the East Indies, is three or four feet in length.

Pan Handle, in W. Virginia, a name given to that narrow portion of the State extending N. between Pennsylvania and Ohio.

Panhellen'ic, a. Pertaining, or having reference to all Greece.

Panhellenism, n. A national project of forming all the Greeks into one political body, similar to that of united Germany.

Panhellenist, n. One who advocates panhellenism.

Panhellenium, n. [Gr. *panhellenion*, from *pas*, all, and *Ellén*, pl. *Ellénēs*, the Greeks.] (*Gr. Antiq.*) The national council of all the Greek states.

Pan'ic, n. [Fr. *panique*, chimerical; Gr. *Panikos*, sacred to Pan, from *Panikon*, panic, fear; said to be from the fabled god *Pan*, who assisted the Athenians at Marathon, by striking causeless fear into the enemy.] A sudden fright; particularly, a sudden fright without real cause, or terror inspired by a trifling cause or misapprehension of danger; as, the army was seized with a *panic*, a commercial or monetary *panic*, &c.

— *a.* Extreme or sudden; — applied to fright; as, *panic* terror.

Pan'ic, Pau'ic-grass, n. (Bot.) A plant of the genus *Panicum*, q. v.

Panicle, n. [Fr. *panicule*.]

(*Bot.*) A form of inflorescence in which the primary axis develops secondary axes, which themselves produce tertiary. In other words, a raceme bearing branches of flowers in place of simple ones.

Pan'icled, PANICULATE, PANICULATED, a. (Bot.) Arranged in a panicle.

Pan'ic-stricken, Pau'ic-struck, a. Seized with a sudden fear or panic.

Pan'icum, n. [From Lat. *panis*, bread.] (Bot.)

A genus of plants, order *Graminaceæ*, including several useful species. *P. miliaceum* yields the grain called Indian Millet, the *Wance*, and *Kadi-kane* of the East. *P. spectabile*, a Brazilian species, attains the height of six feet or more, and is an excellent fodder-grass. It is commonly known as Angola-grass. *P. jumentarium* is another fodder-plant, known as Guinea-grass, or Panic-grass. *P. pilorum* yields the grain called *Bhadlee* in India. The grain of *P. frumentaceum* is used in the Deccau under the name of *Shamool*.

Pan'iput, or PANIPUT, a city of India, presidency of Bengal, cap. of a dist. of same name, 55 m. N.N.W. of Delhi; Lat. 29° 22' N., Lon. 76° 51' E.

Paniv'orons, a. [Lat. *panis*, bread, and *vorare*, to devour, to eat greedily.] Subsisting on bread; eating bread.

Pannade', n. (Manege.) [Fr.] The curvet of a horse.

Pan'nage, n. [O. Fr. *panage*, from Lat. *panis*, bread.]

Mast, as food for swine; also, a tax paid in England for feeding swine in the woods.

Pan'nary, a. [From Lat. *panis*, bread.] Pertaining to bread; that is used in making bread.

Pan'nel, n. [Du. *panneel*; Fr. *panneau*.] A kind of rustic saddle.

— A hawk's stomach.

Pannier, (pan'yer), n. [Fr. *panier*; It. *paniere*, from Lat. *panis*, bread.]

A wicker-basket; a basket used for carrying fruit or other things on a horse.

(*Arch.*) Same as CORBEL, q. v.

(*Archæol.*) A defence of basket-work formerly used by archers.

Pan'nikin, n. A small pan or cup.

Pannonia. (Anc. Geog.) A large extent of country in Europe, bounded on the N. by the Danube, S. by Illyricum and Moesia, E. by the Danube, and W. by Noricum, inhabited by Celtic tribes, and including the parts now known as Hungary and the Duchy of Austria. It was attacked by the Romans, under Octavianus, B. C. 35, and made a Roman province by Tiberius in 8. It was ceded to the Huns by Theodosius II. about 447, came into the hands of the Ostrogoths at the death of Attila

Fig. 2038. — A PANICLE.

in 453, and to the Longobardi (527–65), from whom it passed to the Avari in 568. The Ungri, or Hungarians, settled here in 889; and from them a large part of *P.* received the name of Hungary.

Pano'la, in Illinois, a post-village and township of Woodford co.

Pano'la, in Mississippi, a N. by W. co.; area, abt. 800 sq. m. Rivers. Tallahatchie River, Coldwater Creek, and some smaller streams. Surface, undulating, or nearly level; soil, fertile, and well adapted to the culture of sugar, cotton, and rice. Caps. Batesville and Sardis. Pop. (1890) 26,977.

— A village, former cap. of above co.

Pano'la, in Texas, an E. by N. co., adjoining Louisiana area, abt. 840 sq. m. Rivers. Sabine River and many of its affluents. Surface, mostly level prairie-lands, interspersed with extensive forests; soil, generally fertile. Cap. Carthage.

Pano'la Station, in Illinois, a post-village of Woodford co., abt. 40 m. S. of La Salle.

Pan'oplied, (-plid), a. Completely armed; as, *panoplied* in mail, *panoplied* in virtue.

Pan'oply, n. [Gr. *panoplia*, from *pas*, *pan*, all, and *ōplon*, arms.] Complete armor or defence; a full suit of defensive armor.

Panop'ticon, n. [Fr. *panoptique*; Gr. *pan*, and root *op*, future *opsonai*, to see.] A room for the exhibition of novelties — A prison constructed so as to have all the prisoners within view of the officers at all times, without being seen by them.

Pano'ra, in Iowa, a post-village, former cap. of Guthrie co., about 44 m. W. by N. of Des Moines.

Panora'ma, n. [Gr. *pan*, all, and *ōrama*, a sight.]

A complete and entire view on all sides.

— A large picture, generally of a town or landscape, so constructed that a spectator in the centre of the room can have a complete view of the objects represented. This ingenious contrivance was invented by an English artist, Robert Baker, about 1794. It was painted in *distemper*, or similarly to the mode employed in scene-painting. The panorama forms the surface of a hollow cylinder or rotunda, in the centre of which is a detached circular platform for the spectators, covered overhead to conceal the daylight, thus increasing the illusion and adding greater effect to the picture. The latter is painted on canvas, like the scenes of a theatre. In painting a panorama, the artist must take from a high point an accurate plan of the whole surrounding scenery as far as the eye can reach. The great objects to be aimed at in panoramas are truthfulness of representation and closeness of imitation. The *diorama* differs somewhat from the panorama. — See DIORAMA.

Panora'm'ic, Pauora'm'ic, a. Belonging to, or like, a panorama.

Panphar'macon, n. [Gr. *pan*, all, and *pharmakon*, a medicine.] A universal remedy for all diseases; a panacea; a cure-all.

Pan-Sla'vic, Pan-Slavo'nian, a. Pertaining to the Slavic races.

Pan-Sla'vism, n. [Gr. *pan*, all, and *Slavic*.] A project of uniting all races of Slavic origin into one confederacy or nation.

Pan-Sla'vist, n. An advocate of pan-Slavism.

Pansoph'ic, a. Pretending to universal knowledge. (*R.*)

Pansoph'ist, n. One who pretends to universal knowledge. (*R.*)

Pan'sophy, n. [Gr. *pan*, all, and *sophia*, wisdom.] Universal wisdom or knowledge. (*R.*)

Pan'stereorama, n. [Gr. *pan*, all, *stereós*, firm, solid, *ōrama*, a sight.] A model of a city, county, &c., executed in wood, cork, &c., presenting every object in relief.

Pan'stereoram'ic, a. Pertaining to a panstereorama.

Pan'sy, n. [Fr. *pensée*, thought, from *penser*, to think, from Lat. *pensare*, to ponder. Written also *pancy*.] (*Bot.*) The Heart's-ease or Garden Violet (*Viola tricolor*). — See VIOLA.

Pant, v. n. [Fr. *panter*.] To beat with preternatural violence or rapidity, as the heart in terror, or after hard labor, or in anxious desire or suspense. — To have the breast heaving, as in short respiration or want of breath. — To long; to desire ardently; — with *after* or *for*.

"Who pants for glory finds but short repose." — *Pope*.

— To play with intermission or declining strength, as a breeze.

— *v. a.* To breathe in a labored manner, or quickly; to gasp out. — To long for.

— *n.* A violent palpitation of the heart. — A gasp; a catching of the breath.

Pan'tagon, n. See ATOMECHANICS.

Pan'tagraph, n. Same as PANTOGRAPH, q. v.

Pantagru'clism, n. [From *Pantagruel*, a character in Rabelais' works.] The doctrine or practice of the medical profession; — applied in burlesque or derision.

Pantalet', n. [Dimin. of *pantaloen*, q. v.] A child's or woman's drawers; — generally used in the plural.

Pantaloen', n. [Fr. *pantalon*; said to be named from *Pantaleon*, formerly the patron-saint of Venice.] A species of close, long trousers, worn by males, extending from the waist to the heels; — used in the plural, and abbreviated *pants*.

(*Dram. Hist.*) One of the chief actors in a pantomime, who plays the part of foil to the clown, to display his witticisms upon. The name is derived from one of the masks in Italian comedy, who was dressed in wide, long garments, similar to those which the modern pantaloen wears.

Pantaloen'ery, n. Stuff or materials for pantaloens; trowsering. — Buffoonery; characteristic tricks performed by a pantaloen in pantomimes.

Pan'tamorph, n. That which exists in all forms.

Pantamorphic, a. [Gr. *pan*, all, and *morphê*, shape.] Assuming all forms; protean.

Pantech'nicon, Pantechnethe'ca, n. [Gr. *pan*, all, and *technê*, art.] A place where all kinds of merchandise and wares are exposed for sale.

Pantellaria, (pan-tel-la-ree'a.) (Anc. *Cossyra*.) An island of Italy, in the Mediterranean, prov. of Girgenti, 60 m. from the S.W. coast of Sicily; Lat. 36° 51' 15" N., Lon. 11° 54' 29" E. It is 30 m. in circumference. *Prod.* Corn, fruits, and grapes. At its N.W. point is the town of Oppidolo, with a convenient port for small vessels. *Pop.* 7,000.

Pant'er, n. One who, or that which, pants or gasps for breath.

Pant'ess, n. The difficulty of breathing peculiar to a hawk.

Pan'theism, n. [Fr. *pantheisme*, from Gr. *pan*, all, and *theos*, God.] (*Phil.*) A doctrine or system of philosophical speculation or religious belief, which affirms that all existence, material and spiritual, is only modifications of one eternal self-existent substance, which it calls God. The word pantheism was first used in its present signification by Toland in 1705, and a society was formed who took the name of Pantheists, because they professed worship of all nature as their deity. Pantheism, however, had existed from the earliest times, but was classed under the general name of atheism. It is to be found in the most ancient records of the race, apart from Scripture. The Vedic writings of the Hindoos are pervaded with pantheism; their innumerable host of gods being regarded as emanations of the primeval and unchangeable; while in the opposing system of Buddhism, the final object of aspiration is the absorption of man in the great eternal substance. Passing from India to Greece, we find pantheism to prevail in various of the philosophic systems there. Anaximander of Miletus (B. C. 611-547) is regarded as the father of the pantheistic tendencies of Greek speculation, and with him began the disposition to develop the universe from one grand indeterminate abstraction. He was followed by the Pythagoreans and Eleatics. Many of the Neo-Platonists adopted a system of pantheism; it also found a place among the Gnostics. In the 7th century, John Scotus Erigena, a man of great learning and original genius, advocated pantheism, and maintained that "all which is truly said to be is God alone;" "that everything is God," and "God is everything." In the 12th century pantheism reappears in the speculations of Amalric de Bena and David de Dinante. Giordano Bruno, who was burned as a heretic at Rome in 1600, may be regarded as the precursor of Benedict Spinoza in the history of modern pantheism. The latter, however, is the one with whose name pantheism is most commonly associated, and whose system is the most able and philosophic that has ever appeared. It is elaborated in his great work, the *Ethica*, in which he has attempted to deduce mathematically, from the knowledge of God, the fundamental laws of morality, and the principles that should regulate human life. In true geometric fashion, he begins by laying down a series of definitions and axioms, from which he proceeds to evolve, demonstratively, in a set of theorems, each depending on what has gone before, his entire scheme of God and the world. According to him, there can only be one existing substance, which has two modes or properties — thought and extension; and that of one or both of these all things consist: so that they are modifications of the one infinite substance, which is Deity. All things are modes of extension, all thoughts are modes of thought. This Deity is not a conscious or intelligent individual; but whatever of mental faculties it possesses can only be the aggregate of the mental powers and actions of the innumerable beings that possess intelligence. Death is but a returning into the infinite whole; and, consequently, there is no future state. The modern systems of Fichte, Hegel, and Schelling, are pantheistic.

Pan'theist, n. One who believes the universe to be God; a believer in pantheism.

Pantheistic, Pantheistical, a. Pertaining to pantheism; confounding God with the universe; founded in, or inclining to, pantheism.

(*Sculpt.*) Applied to statues and figures which bear the symbols of several deities together, the meaning of which has been a subject of dispute among antiquaries.

Pantheologist, n. One learned in pantheology.

Pantheology, n. [Gr. *pan*, all, *theos*, God, and *logos*, discourse.] An entire system of theology; a system of theology embracing all religious beliefs.

Pan'ther, n. [Fr. *panthère*; Lat. *panthera*.] (*Zoöl.*) The *Felis pardus* of Africa and India, one of the largest *Felidae*, being of the size of a large dog, with short hair. The *P.* is now generally supposed to be identical with, or a mere variety of, the *Leopard*, *q. v.*, differing only in a somewhat larger size and deeper color. The *Puma*, or American *P.*, *Felis concolor*, is the largest of the American cats, except the Jaguar, being larger than the largest dogs. The color above is uniform, pale, brownish-yellow, finely mottled by dark tips to all the hairs; beneath, dingy-white. It preys upon deer, sheep, and smaller quadrupeds, and has been known to attack and kill a human being. It is sometimes called *Catamount*, and *Cougar*.

Pan'theon, n. [Lat. and Fr., from Gr. *pan*, all, and *theos*, God.] A temple dedicated to all the gods. — A work of mythology; a book in which all the deities worshipped by a people are treated of; as, *Tooke's Pantheon*. — A place of public exhibition in which is found every variety of amusement.

(*Roman Arch.*) One of the most magnificent temples

of ancient Rome, dedicated to all the gods. Of all the splendid fanes of this Queen of Cities, the Pantheon is the only one that has come down to modern days uninjured by war or time, being now converted into a Christian church dedicated to the Virgin Mary and all the martyrs. (Fig. 2039.) The Pantheon was built by Agrippa,

Fig. 2039. — THE PANTHEON (Rome).

the son-in-law of Augustus. It consists of a vast rotunda, with a spherical dome, and has a noble, Corinthian, octostyle portico. Its diameter and height from ground to light is 144 feet. Within this rotunda — as it is sometimes called from its shape — were arranged all the gods, goddesses, and deities of the Roman mythology.

Pan'therine, a. Pertaining to, or resembling, a panther; characteristic of the panther.

Pan'ther's Creek, in Ohio, enters the West Branch of the Miami River in Miami co.

Pan'ther Springs, in Tennessee, a post-village of Jefferson co., abt. 220 m. E. of Nashville.

Pan'tile, n. (Written also *pentile*.) A gutter-tile; a tile with hollow or curved surface; — hence, a pavement constructed of such; as, the *Pantiles* at Tambridge Wells, England.

Pan'tingly, adv. With palpitation or rapid breathing.

Pantisoc'rary, n. [Gr. *pas*, *pantos*, all, *isos*, equal, and *kratein*, to govern.] An Utopian scheme of government; a self-governing community.

Pant'ier, n. [Fr. *pantier*; Lat. *panis*, bread.] The officer, in a great family, who keeps the bread, and has charge of the pantry. (*R.*)

Panto'ble, n. Same as PANTOFLE, *q. v.*

Pantochronom'eter, n. [Gr. *pas*, *pan*, gen. *pantos*, all, and Eng. *chronometer*.] An instrument combining the properties of the compass, the sun-dial, and the universal time-dial.

Panto'fle, n. [Fr. *pantoufle*.] (Also written *pantable*, and *pantoble*.) A slipper.

Pan'tograph, Pan'tagraph, Pen'tagraph, n. An instrument devised for the purpose of copying drawing, so that the copy may be either similar to, or larger or smaller than the original.

Pantograph'ic, Pantograph'ical, a. Pertaining to, or performed by, a pantograph.

Pantog'raphy, n. [Gr. *pas*, *pantos*, all, and *gráphein*, to write.] General representation or description; complete view or observation of an object.

Pantolog'ical, a. Pertaining or relating to pantology.

Pantologist, n. One conversant with pantology; a writer on pantology.

Pantology, n. [Gr. *pas*, *pantos*, all, and *logos*, discourse.] A work on universal science, or of general information; a systematic compendium of all branches of human knowledge.

Pantomime, n. [Lat. *pantomimus*; Gr. *pantomimos*, from *pas*, *pantos*, and *mimos*, an imitator.] An actor who expresses his meaning by mute action or gesticulation; a mimic.

(*Dram. Hist.*) A theatrical representation, in which the entire plot is exhibited by gesticulations and scenic agency, without speeches or conversation. The ancient *P.* were persons who could mimic all sorts of actions and characters, and were first introduced on the Greek stage to imitate, by actions of feature, hands, and body, the substance or plot of what the chorus was singing; subsequently, they were employed as a sort of interlude to divert the audience after the chorus and actors had left the stage; and, finally, the *P.* became a separate performance, and formed a species of entertainment of its own.

Pantomime, Pantomim'ic, Pantomim'ical, a. Pertaining to the pantomime; representing only in mute action; as, *pantomimic* show.

Pantomim'ically, adv. In the manner of pantomime; by dumb show.

Pan'tomimist, n. An actor in pantomime.

Pan'ton, PAN'TON-SHOE, n. (*Far.*) A shoe contrived to recover a narrow and hoof-bound heel.

Pan'ton, in Vermont, a post-township of Addison co.; *pop.* abt. 600.

Pantophagist, (-tôf'a-jist) n. [Gr. *pas*, *pantos*, all, and *phagein*, to eat.] A person or animal that eats all sorts of food.

Pantoph'agous, a. Eating all kinds of food.

Pantoph'agy, n. The power or habit of eating food of all kinds.

Pan'try, n. [Fr. *paneterie*, pantry, safe; L. Lat. *pane-*

taria, from Lat. *panis*, bread.] A closet or apartment in which bread and other provisions are kept.

Panu'co, a town of Mexico, on the Tula River, abt. 50 m. N.N.E. of the city of Mexico.

Panur'gide, n. pl. (*Zoöl.*) See APIDE.

Pão D'Alho, (povung dal'yo,) a town of Brazil, abt. 40 m. W.S.W. of Pernambuco.

Pão D'Assu'car, a huge rock on the W. side of the entrance to the Bay of Rio de Janeiro. It is of granite, devoid of vegetation, and rises abruptly from the sea 600 ft. On it is the fort of São João.

Pa'ola, a town of S. Italy, in Calabria Citeriore, 12 m. W.N.W. of Cosenza. *Manuf.* Woolleus, silks, and earthenware. *Pop.* 5,000.

Paola, in Kansas, a thriving township, cap. of Miami county, about 55 miles south of Leavenworth. *Pop.* (1895) 3,009.

Paoli, PASQUALE, (pa'-le.) a Corsican patriot, b. 1726, whose father, Hyacinth, was, in 1735, elected one of the chief magistrates of the island, and subsequently acted as a leader in the revolt against the Genoese. On being compelled to quit Corsica, he retired to Naples with Pasquale, who was placed in the military college of that city. In 1755, being invited by the Corsicans to become their captain-general, he put himself at the head of his countrymen, and, during twelve years, waged a fierce war with the Genoese, who were in the end driven from almost every fort in the island. Genoa, however, gave up the island to France in 1765; and soon afterwards a large force was landed, under the command of Count Marboeuf, against whom Paoli and his followers fought desperately. But the Corsicans being totally routed at Pontenovo, the island submitted. Paoli went to England, where he remained until 1789, in which year, Mirabeau having moved in the National Assembly the recall of all Corsican patriots, Paoli repaired to Paris, and was created by Louis XVI. military commandant in Corsica. While the government of France was monarchical, Paoli remained faithful; but, at the outbreak of the Revolution, he conceived a scheme for making Corsica an independent republic. Until this time he had been on the best terms with the Bonaparte family, but they now joined the Jacobin party, while he allied himself with Britain, favored the landing of 2,000 British troops in the island in 1794, and joined them in driving out the French. He then surrendered the island to George III., but becoming dissatisfied with the government, he quarrelled with the British viceroy, while many of his countrymen were displeased with the course he had adopted in allying himself with the British. He, therefore, left the island in 1796, and went to London, where he d. 1807.

Pa'oli, in Indiana, a post-village and township, cap. of Orange county, about 40 miles north-west of New Albany.

Paoli, in Pennsylvania, a post-village of Chester co., abt. 19 m. W. by N. of Philadelphia. In this vicinity, Sept., 1777, Gen. Wayne with a body of American troops was surprised by a superior force of British soldiers under Gen. Grey. The former were overpowered, and after laying down their arms were massacred by the victors.

Pap, n. [From Lat. *papilla*.] A nipple or teat, by which the infant draws its first food. — A rounded, tear-like hill; as, the *Paps* of Jura. — A soft food for infants, made with bread boiled or steeped in water; panada. — The pulp of fruit.

— *v. a.* To feed with pap.

Papa', n. [Lat., Fr., Du., Ger., Dan., Sp., and It. *papa*.] A childish name for father.

Papa', a town of Hungary, co. of Wesprim, 82 m. S.E. of Vienna. *Manuf.* Earthenware, paper, and glass. *Pop.* 13,000.

Pap'acy, n. [Fr. *papauté*; Norm. *papate*; It. *papato*, from *papa*.] The office and dignity of the Pope or pontiff of Rome; papal authority or jurisdiction; popedom. — The popes taken collectively. See POPE.

Papaga'io, or Papagay'os, a group of islets of Brazil, off the S.E. coast of the province of Rio de Janeiro.

Pap'agay, n. (*Zoöl.*) Same as PORINJAY.

Papagay'yo, a gulf of Nicaragua, on the Pacific coast S.W. of Lago Nicaragua. On the N. shore is a volcano of the same name.

Pa'pal, a. [Fr.] Belonging to the Pope or pontiff of Rome; proceeding from the Pope; annexed to the bishopric of Rome; as, the *papal* chair, a *papal* dispensation. — *Papal Crown*. See TIARA.

Pa'palize, v. a. To make or render papal.

— *v. n.* To conform to papal doctrine.

Pa'pally, adv. In a papal manner.

Papal States. See STATES OF THE CHURCH.

Papa'na, in Indiana, a village of Whitley co., abt. 10 m. N.W. of Columbia.

Papapho'bia, n. [Gr. *pápas*, and *phobos*, fear.] Fear of the Pope; hatred of, or hostility to, the Pope.

Pa'parchy, n. [Gr. *papas*, the Pope, and *archein*, to govern.] The papal government.

Papasquero, (papas-ke-a-ro,) a town of Mexico, abt. 50 m. W.N.W. of Durango; *pop.* 3,860.

Papaver, n. [Celtic *papa*, pap, a soporific food for children, composed of poppy-seeds, &c.] (*Bot.*) The typical genus of the order *Papaveraceæ*. The species *P. somniferum*, the White, or Opium poppy, furnishes the valuable drug *opium*, used so largely in medicine, and as a narcotic indulgence. Opium is obtained by making incisions into unripe capsules, and inspissating the milky juice which exudes from them. *P. rhæus*, the common Red, or Corn poppy, is common in corn-fields and on roadsides. Its scarlet petals are official in our pharmacopœias, being used to prepare a syrup,

which is supposed to have some slight narcotic properties, but which is probably useful only as a coloring ingredient.

Papavera'ceæ, n. (Bot.) The Poppy-worts, an order of plants, alliance *Ranales*. **DIAG.** Dimerous or trimerous flowers, consolidated carpels, deciduous calyx, and usually parietal placentæ. — They are herbs or shrubs, often with milky juice; leaves alternate and exstipulate; peduncles 1-flowered; flowers regular and symmetrical; calyx and corolla deciduous, hypogynous; stamens numerous, hypogynous; ovary compound, 1-celled, with stigmas opposite to the placentas; fruit 1-celled; seeds numerous, albuminous. The plants of this order are in almost all cases characterized by well-marked, narcotic properties. Many species are commonly cultivated in gardens. The order includes 18 genera and 130 species.

Papavera'ceous, a. [From. Lat. *papaver*, poppy.] Pertaining to the poppy.

Papav'eros, a. [From. Lat. *papaver*.] Resembling the poppy; possessing the nature of poppies.

Papaw, n. (Bot.) The fruit of *Carica papaya*, order *Papayaceæ*. See *CARICA*, and Fig. 2040.

Papaya'ceæ, n. (Bot.) The Papayad family, an ord. of plants, alliance *Papayales*.

DIAG. Monoepetalous flowers, having no scales in the throat of the females. — They are trees or shrubs, sometimes yielding an acrid milky juice; leaves alternate, on long taper petioles, lobed; flowers unisexual; calyx inferior, minute, five-toothed. The fertile flower has a 1-celled superior ovary, with from 3 to 5 parietal placentas. Fruit succulent or dehiscent. Seeds numerous, albuminous, with radicle towards the hilum. The order contains 8 genera and 25 species, native of S. America, and the warmer parts of the Old World. The most important plant of the order is the Papaw, (Fig. 2040.)

Fig. 2040.

PAPAW-TREE, (*Carica papaya*.)

Papaya'les, n. pl. (Bot.) An alliance of plants, subclass *Diclinous Exogens*. **DIAG.** Dichlamydeous flowers, superior consolidated carpels, parietal placentæ, and embryo surrounded by abundant albumen. The alliance consists of 2 orders — *PAPAYACEÆ* and *PANGIACEÆ, q. v.*

Papenburg, a town of Prussia, prov. of Hanover, 21 m. S.S.E. of Emden. Manuf. Linen, tobacco, and chicory. **Pop.** (1897) 4,780.

Pap'per, n. [Fr. *papier*; It. *papiro*; Lat. *papyrus*, from Gr. *papuros*, an Egyptian reed, from the bark of which a kind of paper was made.] A substance made in thin sheets, by chemical and mechanical processes, from wood, rags, grass, straw, etc., for printing, writing, and various industrial purposes. The first paper was that made from the Egyptian papyrus (*q. v.*), from which the name is derived. Very thin slices of the cellular pith of the papyrus were laid side by side, then crossed with another layer. This being moistened, subjected to heavy pressure, and then dried, formed a sheet of paper, which was finished by rubbing and polishing with a smooth stone, shell, or the like. About 300 years B. C. the Chinese made a writing material from silk waste, but fibrous vegetable paper was not made by them until about the year 100 A. D. Hemp, rags, bark, and the fiber of old fishing-nets were among the materials used. Paper-making was established at Bagdad in 795. The first making of rag paper in Europe was in Spain in 1154. The art was introduced in France and Germany about 1314. The first English paper-mill is believed to be that established in Stevenage, in Hertford, in 1460, though paper was used in England at least a century earlier. The first paper-mill erected in the United States was in 1690, in what is now a part of Philadelphia. The next was in 1714, in Delaware, afterward owned by a Mr. Wilcox, who furnished paper to Franklin. It was introduced into Massachusetts in 1717, and in Norwich, Conn., in 1768. It soon made rapid progress, so that in Pennsylvania, New Jersey, and Delaware, there were 40 paper-mills in 1770, and in the New England States the supply was far short of the demand. In 1810 the number of paper-mills in the United States was 185, producing over 200,000 reams of writing-paper, besides over 100,000 reams of wrapping and other kinds of paper. In 1897 there are about 1,500 mills in the United States, producing nearly 2,000,000 tons of paper annually of all kinds. The production of the other countries of the world is estimated at 1,500,000 tons annually, this being the product of about 3,500 mills. The paper made in the earlier part of the 19th century was almost wholly

rag, but various fibers have been gradually introduced, including a great many varieties of wood, grasses, and straw. The available vegetable fibers are now so numerous that the sort used in different localities depends very much upon the cheapness and ease with which it can be obtained. Wood pulp, esparto grass, straw, and cotton and linen rags have come to be the commonest materials used, the three former for the cheaper grades, and the latter for the better. Paper was made entirely by hand until 1799, in which year Robert Louis built a machine for the Messrs. Didot, of the Essonnes paper-mills, near Paris. In 1803-4 the machine was introduced into England by Henry and Sealy Fourdrinier and Donkin. The Fourdriniers purchased the French patents, and developed the type of machine in use to-day, which is commonly called by their name. As now made, the paper-making machine is really a series of machines, set in a line, so as to operate continuously. The total length is sometimes 100 to 125 feet, and the width runs up to 126 inches. First is the pulp-vat, in which the pulpy mixture of fiber, water, &c., is agitated, being pumped therefrom into a regulator-box, from which it flows out through a gate, by means of which an even, regular flow is obtained. The pulp is received next on an endless wire cloth, or apron, the edges of which are protected by straps called deckles, so that the pulp may not run over the sides, the surplus water being drained off into a save-all box. The movement of the pulpy web is so regulated as to determine the thickness of the paper, while to the entire web a shaking motion from side to side is given, which serves to spread the pulp evenly, to cross the fibers, and assist in draining the superfluous water through the wire-gauze. The pulp, by this means, is somewhat solidified. The wire apron carries the paper-pulp on to the couch-rolls, which transfer it to an endless wet-felt apron, thence to other rolls, and to the press-felt apron and the press-rolls. These last squeeze out most of the water. The speed of the felt aprons has to be very nicely regulated to prevent the breaking of the tender web of paper, but after leaving the press-rolls it is sufficiently strong to carry itself, and passes on to a series of hot drying-cylinders. Steam is introduced into these cylinders, of which there are 10 or 12, so that the last vestige of moisture is evaporated. The calendaring rolls, which are of polished cast-iron, serve to give a certain finish to the paper by pressure. The paper may be then coated, or tub-sized, and then passed again through calender rolls. The slitting-machine then slits the web into the desired widths and trims the edges, after which the paper may be cut into sheets and quired. The plated papers used for labels, &c., and frequently plated on one side only in colors, are made by coating. White plate paper is given its high finish by being placed between zinc plates, and run through pressure rolls. So many kinds of paper are manufactured that it is impossible to attempt an enumeration of them. Wrapping paper, manila, blotting, news, book, writing, drawing, linen, coated, parchment, bond, paraffine, manifold, and filtering are some of the more distinctive sorts, suggesting the wide variety of kinds and qualities. Newspaper is used in enormous quantities, forming the bulk of the product manufactured. Common newspaper now sells at about 2 cents per pound, magazine paper at about 5 cents, and finely coated paper at 9 to 15 cents. The best bond papers are worth 8 cents a sheet.

Following is a list of the sizes of writing and printing papers that bear special names, though paper is now made in such a multitude of sizes that it is usually ordered definitely by inch measurements:

Sizes of Paper.	U. S.	English.
Foolscap, writing.....	12½ x 16	13½ x 17
Foolscap, printing.....		13½ x 17
Flat Cap.....	14 x 17	14 x 17
Post.....		15¼ x 19
Commercial Post.....		11 x 17
Small Post.....		13½ x 16½
Large Post.....		16½ x 20¾
Demy, writing.....	16 x 21	15 x 20
Demy, printing.....		17½ x 22
Folio Post.....	17 x 22	17 x 22
Medium, writing.....	18 x 23	17½ x 22
Medium, printing.....	19 x 24	19 x 24
Royal, writing.....	19 x 24	19 x 24
Royal, printing.....	20 x 25	20 x 25
Super-royal, writing.....	20 x 28	19¼ x 27½
Super-royal, printing.....	22 x 28	21 x 27
Imperial, writing.....	23 x 31	
Imperial, printing.....	22 x 32	22 x 30
Elephant, writing.....	23 x 25	23 x 28
Atlas, writing.....	26 x 33	26 x 34
Columbian, writing.....	23 x 34	24 x 34½
Antiquarian, writing.....		31 x 53

In making rag paper, the rags are first sorted, separating the cotton and linen. They are then run through a series of dusting, boiling, cutting, and comminuting machines. The boiling is done with caustic soda. Washing, beating, and bleaching follow. Resin soap, treated with alum, is added to the pulp for engineering, and starch is also used for this purpose. The coloring matter, if any, is next mixed in, a certain quantity being necessary to produce pure white paper. Aniline colors are commonly employed for tinted papers. Clay is added to paper as an adulterate, to give it more weight. Some fine grades of paper are still made by hand, for writing, drawing, &c., and are supposed to be

stronger than machine-made paper. A great deal of newspaper, and some book and manila papers are made and sold in the roll, for use on web printing-presses. If cut, it is either piled and bundled flat, in frames, or rolled, or folded in quires of 24 sheets, 20 quires to the ream. Some paper is sold, however, with 500 sheets to the ream. The water-mark is impressed in the body of the paper by shaping the wires on the dandy-rolls, or gauze wire cylinders which are placed over the wire apron upon which the pulpy sheet is formed. Deckled, or rough-edged, paper is that which comes untrimmed from the machine, the edges being irregular, as shaped by the deckles. Paper is either "laid" or "wove." (See those words.) The paper used by the U. S. government in the manufacture of bank-notes has colored silk threads worked into it, to discourage counterfeiting. Paper is brown when unbleached; natural or cream tint, when no color is introduced for whitening; toned, when slightly tinted; coated when brushed with a mixture of chalk, china clay, gypsum, sulphate of barytes, &c. Paper pulp is moulded into a great variety of commercial articles, as for wall decorations, filling for car-wheels, cartridge-cases, barrels, basins, pails, boats, building materials, &c.

Paper, v. a. To cover or spread with paper; to furnish with paper-bangings; as, to *paper* a room.—To envelop, inclose, or fold in paper.

Paper-cloth, n. A fabric made from the inner bark of the paper-mulberry, by islanders of the S. Pacific.—Also, any thin cloth faced with paper on one or both sides.

Paper-coal, n. Coal formed from masses of petrified leaves, found in the Tertiary formation.

Paper-cutter, n. A printers' and bookbinders' machine, for cutting and trimming large piles of paper. It is built on the guillotine principle, with a powerful horizontal knife, which is depressed with a side or drawing motion.

Paper-faced, a. With a face as white as paper.

Paper-hang'er, n. One who covers the walls of rooms with paper.

Paper-hang'ings, n. pl. Paper, ornamented or otherwise, intended for pasting on the walls of rooms, &c. Paper-hangings are printed by processes similar to those used by the calico printer.

Paper-holder, n. A file for newspapers; also, any convenient box or small receptacle for newspapers, writing paper, &c.

Paper-knife, n. A knife of ivory, bone, wood, &c., having a jointless handle and dull blade, usually formed in one piece, and serving to cut the leaves of untrimmed books, magazines, &c.

Pap'ermill Vil'lage, in Vermont, a village of Bennington co., about 115 m. S.W. by S. of Montpelier.

Paper-mulber'ry, n. A tree of Japan and the S. Pacific islands (*Broussonetia papyrifera*), of the mulberry family; it is short and bushy, and has light, downy leaves.

Pap'ermus'lin, n. Glazed muslin, used for linings, &c.

Pap'er Nau'tilus, Paper-sail'or, n. (Zool.) See ARGONAUT.

Paper-ru'ler, n. A ruling-machine for making the soft lines on writing paper.—Any device for ruling a line on paper.—One who makes a business of ruling writing papers.

Paper-scales, n. Minute scales of great accuracy, for judging of the weight of a ream of paper by the weight of a single sheet.

Paper-spar, n. A variety of calcite, occurring in thin plates, suggestive of paper sheets.

Pap'erstain'er, n. One who stains or colors paper for hangings, &c.

Paper-stock, n. Material for making paper.—An assortment of paper. About 25 per cent. of old paper can be worked into new stock in making the pulp. It adds to the body of the paper, but nothing to the strength, being practically deprived of its fiber.

Pap'ertown, in Pennsylvania, a village of Cumberland co., about 7 m. S. of Carlisle.

Pap'er-wasp, n. A wasp (as a *vespid*) that builds a nest of a papery material.

Pap'er-weight, n. A small weight placed upon loose papers to prevent their being blown away by the wind.

Pap'ery, a. Resembling paper; of the consistency of paper.

Papes'cent, a. Containing pap; having the nature of pap.

Papeterie, (pāp-a-tree'), n. [Fr., from *papier*, paper.] An ornamented case or portfolio containing paper and writing-materials.

Paph'ian, a. [Lat. *Paphinus*, from Gr. *Paphos*.] (*Geog.*) Belonging, or relating to Paphos, a city of Cyprus; as, the *Paphian* goddess.

—Pertaining to Venus, or having reference to her rites.

—A native or inhabitant of Paphos.

Paphlago'nia. (Anc. Geog.) A country of Asia Minor, bounded on the N. by the Euxine; on the S. by Galatia; on the E. by the Helles, which separates it from Pontus; and on the W. by the river Parthenius, which parts it from Bithynia. P. contained 7 principal cities, of which Sinope (the cap.), Gangra, Amastris, and Sora, were the most important. It is mentioned by Homer, B. C. 962; was incorporated in the Lydian empire by Croesus, B. C. 560-546; and in that of Persia by Cyrus, B. C. 546. Nominally independent for some time afterwards, it fell to the share of Eumenes, B. C. 323. It was united to Pontus by Mithridates III., B. C. 290; formed a part of the province of Galatia, under the Romans, B. C. 25; and was made a separate province by Constantine I., (323-337.)

Paphos. (Anc. Geog.) The name of two towns in the

Isle of Cyprus. The older city, *Palaipaphos* (now *Kuklos*, or *Konuklia*), was situated in the W. part of the island, about $1\frac{1}{4}$ m. from the coast. It was probably founded by the Phœnicians, and was famous, even before Homer's time, for a temple of Venus, who was said to have here risen from the sea close by, whence her epithet *Aphrodite*, "foam-sprung," and who was designated the Paphian goddess. This was her chief residence, and hither crowds of pilgrims used to come in ancient times. — The other Paphos, called *Neopaphos* (now *Baffa*), was on the sea-coast, about 7 or 8 m. N.W. of the older city, and was the place in which the apostle Paul proclaimed the gospel before the proconsul Sergius, and struck the sorcerer Elymas blind.

Papier-maché. (*pap'yā-mā-shā'*) *n.* [Fr., mashed paper.] A name given to articles manufactured of the pulp of paper, or of old paper ground up into a pulp, with other materials, and moulded into various forms. This article has been used upon an extensive scale for the manufacture of mouldings, rosettes, and other architectural ornaments; and is also now used in this country for making the moulds of stereotype plates. It is lighter, more durable, and less brittle and liable to damage than plaster, and admits of being colored, gilt, or otherwise ornamented. Another material, similar to papier-maché, and extensively used, is called *carton pierre*. Another kind of papier-maché consists of sheets of paper pasted or glued and powerfully pressed together, so as to acquire when dry the hardness of board, and yet to admit, while moist, of curvature and flexure; tea-trays, waiters, snuff-boxes, and similar articles are thus prepared, and afterwards carefully covered by japan or other varnishes, and often beautifully ornamented by figures or landscapes and other devices, &c., inlaid occasionally with mother-of-pearl. A mixture of sulphate of iron, quicklime, or glue, or white of egg, with the pulp for *P. M.*, renders it to a great extent waterproof; and the further addition of borax and phosphate of soda contributes to make it almost fireproof.

Papilio. (*pā-pil'yō*) *n.* [Lat., butterfly.] (*Zoöl.*) The typical genus of the Papilionidae, *q. v.*

Papilionaceæ. *n.* (*Bot.*) A sub-order of plants, order *Fabaceæ*. *DIAG.* Petals papilionaceous, imbricated in aestivation, the upper exterior. The plants of this sub-order are the only specimens known.

Papilionaceous. (*pā-pil-yō-nā'shūs*) *a.* [Fr. *papilionacé*.] (*Zoöl.*) Like the butterfly.

— *n.* [Fr. *papilionacé*, from Lat. *papilio*, a butterfly.] (*Bot.*) The name applied to the corolla of leguminous plants, from its fancied resemblance to the figure of a butterfly, (Fig. 65.) It consists of a large upper petal or vexillum, two lateral petals called *alæ*, and two intermediate petals forming a carina.

Papilionidæ. *n. pl.* (*Zoöl.*) A family of insects, embracing lepidoptera, which are the largest of our butterflies, and which generally have their hind-wings extended into a tail-like appendage (Fig. 2041.)

Fig. 2041.
SWALLOW-TAILED BUTTERFLY,
(*Papilio machaon*.)

Papilla, n.; pl. PAPILLÆ. [Lat.] (*Anat.*) Small eminences, more or less prominent, at the surface of several parts, particularly of the skin and mucous membranes, containing the ultimate expansions of the vessels and nerves, and are susceptible in some cases of a kind of erection.

(*Bot.*) A small, elongated, or nipple-shaped protuberance.

Papillary. Papillose, a. [Fr. *papillaire*, *papilleux*.] Pertaining to, or resembling the nipple, or nipple-like parts, such as small eminences on the surface of the tongue, &c.; covered with papillæ; warty; verrucose.

Papillate, v. n. To grow into a nipple, or into the form of a nipple.

— *a.* (*Bot.*) Having papillæ.

Papilliform, a. [Lat. *papilla*, nipple, and *forma*, form.] Nipple-shaped.

Papillon (or Big PAPILLON) River, in *Nebraska*, rises in Washington co., and flowing generally S.S.E., enters the Missouri River in Sarpy co.

Papillote, n. [From Fr. *papillon*.] A lady's curl-paper; — also, sometimes, a cigarette.

Papillous, a. Same as PAPILLARY, *q. v.*

Papin, DENIS, a French physician, b. at Blois, 1647. He studied medicine in Paris, practised for some time as physician, devoted himself subsequently entirely to the study of physics, went to England, where he became member of the Royal Society, in 1681, and was called to the chair of mathematics in the university of Marburg, in Hesse-Cassel. D. there, 1714. To *P.* undoubtedly belongs the high honor of having first applied steam to produce motion by raising a piston; he combined with this the simplest means of producing a vacuum beneath the raised piston, viz., by condensation of aqueous vapor; he is also the inventor of the "safety-valve," an essential part of his "Digester," (*q. v.*) By this latter machine, *P.* showed that liquids in a vacuum can be put in a state of ebullition at a much lower temperature than when freely exposed to the air. *P.*'s sagacity led him to many other discoveries; he discovered the principle of action of the siphon, improved the pneumatic machine of Otto de Guericke, and took part

against Leibnitz in the discussion concerning "living" and "dead" forces.

Papist, n. [Fr. *papiste*, from *pape*, the pope.] A Roman Catholic; one who adheres to the Church of Rome and the authority of the Pope; — originally used by Protestants.

Papistie, Papistical, a. Conformable to the doctrine or practice which requires submission to the Pope, popish.

Papistically, adv. In a papistical manner.

Papistry, n. The doctrines of the Church of Rome; popery; — a term used by Protestants.

Papoose', Pappoose', n. The name given by N. American Indians to a babe or young child.

Papose', Pappons, a. Downy; furnished with downy hairs, as the seeds of certain plants.

Pappus, n. [Gr. *pappos*.] (*Bot.*) A term applied to the calyx of *Asteraceæ*, and allied orders, which exists in the rudimentary condition of a cup or membranous coronet, or in the more perfect state of slender hairs or scales, or in some other similar condition, at the top of the achæmium or fruit.

Paps of Jura, four mountains of the island of Jura, Helvides, Scotland. The highest has an elevation of 2,470 feet.

Pappy, a. Like pap; soft; succulent.

Papua, or NEW GUINEA, a large island of the Eastern Archipelago, the largest of the globe after Australia, between Lat. $0^{\circ} 30'$ and $10^{\circ} 4' S.$, Lon. 131° to $151^{\circ} 30' E.$, having N. and N.E. the Pacific Ocean, S. Torres Strait, and W. the Moluccas Sea. It is abt. 1,500 m. in length from N.W. to S.E.; area, estimated at 250,000 sq. m. *Desc.* *P.* is deeply indented by several bays, but of which, as also of most of the interior, very little is known as yet. The surface is generally mountainous, and covered with palm and other timber of large size. There are several high peaks, the principal of which is Mount Owen Stanley, with an elevation of 13,205 feet. The soil is very fertile, and the climate generally healthy. *Rivers.* Ambermon, or Rochussen, Aird's River, the Oeta-Nata, and the Karoela. *Prod.* Rice, sugar-cane, tobacco, cocoa-nuts, sago, bananas, oranges, lemons, &c. *Min.* Gold, coal, and ironstone. The inhabitants are of two distinct races, those of the W. being negroes, and those of the E. resembling the South-Sea Islanders. They are governed by native chiefs, though nominally under the authority of the sultan of Tidore. They do not seem to have any particular idea of religion, though there are temples with carved figures, &c. They are generally of fine figure. *P.* was discovered by the Portuguese in 1511, and visited by the Dutch in 1615 who founded a colony in 1828. In 1883 the island was annexed to the colonial govt. of Queenstown, this was not approved by the Home Government. Subsequently the S. Coast was taken possession of by Great Britain and Germany the N. Coast.

Papuan, a. (*Geog.*) Belonging to, or having reference to, the island of Papua, or New Guinea.

— *n.* (*Geog.*) A native or inhabitant of Papua.

Papula, n.; pl. PAPULÆ. [Lat.] (*Med.*) A small accumulated elevation of the cuticle with an inflamed base; very seldom containing a fluid, or suppurating, and commonly terminating in scurf or desquamation.

Papudo Bay, an inlet of the Pacific Ocean, in Chili, abt. 45 m. N.E. of Valparaiso.

Papulose, Papular, a. Covered with papulæ.

Papulous, a. Full of pimples.

Papyrus, (pā-pī'rus.) (*Bot.*) A genus of plants, order *Cyperaceæ*. *P. antiquorum*, the Bulrush of the Nile, is celebrated on account of the soft cellular substance in the interior of its stems, having been in common use by the ancients for making a kind of paper. The uses of the papyrus were not confined to the making of paper alone, but it was also used for making sail-cloth, cordage, and wearing apparel. At the present day, it is still used for some of these purposes. In Abyssinia, boats are also made by weaving the stems closely together, and covering them with a sort of resinous matter. The roots are also used for fuel. Its most ancient and important use, however, was for the manufacture of paper. *P. sicula*, a Sicilian species, had likewise been employed for the same purpose. *P. corymbosus* is extensively used in India for

Fig. 2042. — PAPHYRUS ANTIQUORUM.

the manufacture of the celebrated Indian matting. The paper made by the Egyptians from the *P.* plant was used for writing about B. C. 2000. The rolls of that material were made known in Europe through the French expedition, in 1798; specimens of which were printed by Cadet in 1805. Philostratus mentions it as a staple manufacture of Alexandria, in 244. It continued to be used in Italy till about the 12th century. In the ruins of Herculaneum 1,756 rolls were found about 1753.

Papyræcons, Papyrean, a. [From Lat. *papyrus*; Fr. *papyracé*.] Pertaining, or relating to the papyrus, or papyri.

Papyrine, n. A modification of paper formed on dipping it into sulphuric acid, washing, immersing in dilute ammonia, re-washing and drying. The product is tough and durable. It is commonly called *vegetable parchment*.

Papyrography, n. [Gr. *papyrus*, and *graphein*, to write.] A method of taking impressions from a sort of pasteboard covered with a calcareous substance. *Worc.*

Paque, (pāk,) n. [Fr.] Same as PASCHA, *q. v.*

Paqueta, an island of Brazil, in the Bay of Rio de Janeiro.

Par, n. [Lat. *par*, *paris*, equal.] State of equality; equal value; equivalence without discount or premium; as, gold is at *par*. — Equality of condition; parity of circumstances.

On a *par*, on a level; equal; co-existent in the same condition or on the same terms; as, they are both on a *par*. — *Par of exchange.* (*Com.*) See EXCHANGE. — *Par value*, nominal value.

Par'a, n. [Turk., from Pers. *pārah*.] A Turkish current coin, being the fortieth part of a piastre, or about one quarter of a cent.

Para, a. A prefix derived from the Greek, signifying *beside, beyond*.

Para. [Pg., father of waters.] The name formerly applied to the Amazonas River, Brazil, but now only given to its S. mouth or estuary. It leaves the main stream abt. Lat. $1^{\circ} S.$, Lon. $50^{\circ} 30' W.$, and flowing a circuitous S., then E., then N.E. course, enters the Atlantic Ocean, after receiving the Tocantins and several less important streams. It is 200 m. in length, and varies from 12 to 40 m. in width.

PARA, a large N.E. prov. of Brazil, bordering on the Atlantic Ocean, and having an area of 983,598 sq. miles.

Rivers. Amazonas, Para, Rio Negro, Tocantins, Madeira, Tapajós, and many others. — *Surface*, mostly elevated, being a portion of the great table-lands of Brazil; soil, in general fertile, producing almost every variety of tropical fruits, vegetables, and cereals in abundance. *Pop.* 385,000.

PARA, (formerly *Belém*), a city and sea-port, cap. of the above prov., at the mouth of the River Para, opposite the island of Joanes or Marajo, estimated about 60 m. from the Atlantic, and 300 miles W.N.W. of Maranhão; Lat. $1^{\circ} 30' S.$, Lon. $48^{\circ} 22' 33'' W.$ It stands in a fertile plain, and is one of the finest of Brazilian cities, its streets being straight, and the houses almost all of stone, and both solid and elegant. The cathedral and governor's palace are said to be magnificent edifices. Para has a judicial tribunal, royal college, botanic garden, hospital, theatre, and arsenal. The harbor is confined, and is said to be diminishing in depth; the approach from the ocean is also rather difficult, and it is always expedient to take on board a pilot at the mouth of the estuary. The principal articles of export are cocoa, of which it exports above 35,000 bags; caoutchouc, of which it is the principal mart; with isinglass, rice, drugs, and cotton, amounting in all from \$750,000 to \$850,000 a year. The sugar grown in the neighborhood is bad, the soil not being favorable for the cane. Ships of war have been built here; and timber used to be exported to Lisbon for the use of the arsenals. The climate of Para is very hot, and thunder-storms occur almost daily. It was formerly deemed very unhealthy, but in this respect it has latterly materially improved. *Pop.* abt. 25,000.

Par'able, n. [Fr. *parabole*; Gr. *parabolē*, from *para*, beside, and *ballō*, to throw.] A fable or allegorical relation, or representation of something real in life or nature, from which a moral is drawn for instruction; as the *parables* of the New Testament.

— *n. a.* To describe or represent by fiction, fable, or allegory.

Fig. 2043. — FEMALE INDIAN.
(Province of Para.)

Parab'ola, *n.*; *pl.* PARABOLAS. [Fr. *parabole*; Gr. *parabolē*.] (*Geom.*) One of the conic sections formed by the intersection of a plane and a cone, when the plane passes parallel to the side of the cone. — See ELLIPSE.

Parab'ole, *n.* [Lat., from Gr. *parabolē*.] (*Rhet.*) Comparison; similitude; a parable.

Parabol'ic, **Parabol'ical**, *a.* Expressed by parable or allegorical representation; as, *parabolical* description. — Of, or belonging to a parabola; having the form of a parabola; as, a *parabolic* curve.

Parabolic conoid. See PARABOLOID. — **Parabolic spindle**, the solid generated by the rotation of a parabola about any double ordinate. — **Parabolic spiral**, a spiral curve supposed to be formed by the periphery of a semi-parabola, when its axis is wrapped about a circle. — **Parabolic pyramoid**, a solid generated by supposing all the squares of the ordinates applicable to the parabola, so placed that the axis shall pass through all their centres at right angles, in which case the aggregate of the planes will form the solid called the *parabolic pyramoid*, the solidity of which is equal to the product of the bases and half the altitude.

Parabolically, *adv.* After the manner, or by way, of parable. — In the form of a parabola.

Parabol'iform, *a.* [From Lat. *parabola*, and *forma*, shape.] Like a parabola in form.

Parabol'ist, *n.* A writer or expositor of paraboles.

Parabol'oid, *n.* [Gr. *parabolē*, parabola, and *eidos*, form.] (*Geom.*) The solid generated by the rotation of a parabola about its axis, which remains fixed. A frustum of a paraboloid is the lower solid formed by a plane passing parallel to the base of a paraboloid. (Sometimes termed a *parabolic conoid*.)

Paraboloid'al, *a.* Belonging to, or resembling, a paraboloid.

Paracatu, or PARAZATU, (*pa-ra sa-too'*) a city of Brazil, on a river of the same name, (an affluent of the São Francisco,) abt. 350 m. N.N.W. of Rio de Janeiro. It contains a Latin school, and was once noted for the rich gold and diamond mines in the vicinity.

Paracel'sian, **Paracel'sist**, *n.* A follower of the system of medical practice initiated by Paracelsus.

— *a.* Pertaining, or having reference to Paracelsus or his practice.

Paracel'sus, theosophist, physician, and chemist, was b. at Einsiedeln, near Zurich, in 1493. His real name was PHILIP THEOPHRASTUS BOURBAST VON HOHENHEIM, but he assumed the high-sounding name of AUREOLUS THEOPHRASTUS PARACEL'SUS. He learned the rudiments of alchemy, astrology, and medicine from his father, and then became a wandering scholar, visiting almost all parts of Europe, and gathering information from physicians, barbers, old women, conjurers, &c. He made some fortunate cures, and announced that he had discovered an elixir which would prolong life indefinitely; whereby he made himself, for a time, an immense reputation of physic and surgery in the University of Basle, and there set the example of lecturing in the vulgar tongue. But his arrogance, coarseness of language, and habits of drunkenness and debauchery, soon destroyed his fame and influence, and he lost his professorship, and left Basle at the end of 1527. The rest of his life was spent in roving from place to place, practising medicine, indulging in low habits, and writing his books, which were published in 10 vols. 4to. Notwithstanding all his faults, errors, and absurdities, *P.* gave a new direction to medical science, by his doctrine that the true use of chemistry is not to make gold, but to prepare medicines; and from his day the study of chemistry became a necessary part of a medical education. He opposed the theories of Galen and Avicenna, and publicly burnt their works at Basle; and their long reign came to an end. *P.* made great use of the Cabalistic writers, adopted the grossest pantheism, boasted of his own divine inspiration, and employed many new and barbarous words, and used old ones in new senses, thus obscuring his opinions. D. at Salzburg, 1541.

Paracentesis, *n.* [Lat.; Gr. *para*, at the side, and *kentein*, to pierce.] (*Surg.*) The operation of tapping any of the cavities of the body for the purpose of withdrawing a contained fluid.

Paracentric, **Paracentric'al**, *a.* (*Math.*) Applied to a curve line having this property, that a heavy body descending along it by the force of gravity will approach to or recede from a centre or fixed point, by equal distances in equal times.

P. motion. (*Astron.*) The rate at which a planet approaches nearer to or recedes farther from the sun or centre of attraction in a given interval.

Parachronism, (*-āk'ron-izm*), *n.* [Gr. *para*, beyond, and *chronos*, time.] A chronological error by which an event is post-dated as regards the actual time of occurrence.

Par'achute, (*-shūt*), *n.* [Fr., from *parer*, to ward off, and *chute*, to fall.] A machine attached to a balloon, to retard the velocity of descent, or to enable the aeronaut to desert his car at any moment, and come gently to the earth. This has frequently been accomplished with success, and the parachute is a highly important addition to the balloon. In some cases, however, failure has attended the use of the parachute, and the aeronaut has paid with his life for his daring. The balloon itself may be so constructed as to act as a parachute by being collapsed at the will of the operator.

Paraclet, (*par'a-klet*), a village of France, dept. of Aude, 3 m. from Nagent-sur-Seine. Here are the ruins of the convent founded by Abeland in the 12th cent., of which Heloise was abbess.

Paraclete, *n.* [Fr. *paraclet*; Lat. *paracletus*, from Gr. *para*, beside, and *kalein*, to call.] An advocate; one summoned to aid, sustain, or support; — hence, the

comforter, consoler, or intercessor; — a term applied to the Holy Spirit.

Paraclet'ia, in Arkansas, a village, former cap. of Sevier co., about 165 m. S. W. of Little Rock.

Par'aclose, **Par'close**, **Per'close**, *n.* [O. Fr. *parclose*, from Lat. *per*, through, and *claudere*, *clausum*, to close.] (*Arch.*) A screen dividing a chapel from the body of a church.

Paracrost'ic, *n.* [Gr. *para*, and *akrostichon*.] (*Lit.*) A poetical effusion in which the first contains, in due order, all the letters which initial the remaining verses of the piece.

Paracyan'ogen, *n.* (*Chem.*) A brown, solid matter, having the same composition with gaseous cyanogen, and produced by the decomposition of cyanide of mercury by heat. Form. C_2N_2 .

Parade, *n.* [Fr., military show or review; from Lat. *parare*, *paratas*, to place in order.] Display; gaudy show; exhibition; ostentation; — hence, military review or display; order and array of troops for inspection, &c.; — hence, also, the place where soldiers assemble for exercise, mounting guard, and the like. — Pompons procession, show, or spectacle. — Act of parrying a thrust in fencing. (*A Gallicism*.)

Parade of a field-work. (*Fortif.*) The space within the lines of a parapet. — **Parade of a permanent work**, the space inclosed within the rampart of a fort.

— *v. a.* To exhibit in a pompous manner; to show off ostentatiously; to make a spectacle of; as, a match-making mamma *parades* her marriageable daughters. — To assemble and array or marshal in military order; as, to *parade* troops.

— *v. n.* To go or walk about for show. — To assemble and be marshalled in military order; to go about in military procession.

Paradigm, (*pär'a-dīm*), *n.* [Gr. *paradeigma*.] A pattern; a model; an example. (*R.*)

(*Gram.*) An example of a verb conjugated in the several moods, tenses, and persons.

Paradigmat'ic, *n.* (*Ecol. Hist.*) A compiler of the memoirs of religious worthies, as examples of Christian excellence.

Paradigmat'ically, *adv.* By paradigm; in the way of example or model.

Paradis, (*par-a-dē'*), *n.* [Fr.] A wet-dock. — The upper gallery of a theatre; in England, the gallery sacred to the "gods."

Paradisa'ic, **Paradisa'ical**, *a.* Pertaining, or relating to, or resembling paradise; paradisaical.

Par'adisa, *a.* Same as PARADISAIC, *q. v.*

Par'adise, *n.* [Fr. *paradis* = Gr. *paradeisos*, a park or pleasure-grounds; an Oriental word, in Ar. *farāḍ*, *pl. farāḍis*; Sansk. *parādēśa*, a land elevated and cultivated; Lat. *paradisus*.] (*Script.*) The Garden of Eden, the abode of Adam and Eve after their creation. — Hence, a region of ineffable bliss; a place of unalloyed delight. — Heaven, the seat of eternal felicity for sanctified souls after death.

(*Arch.*) The cloistered court in front of a church; also, the private apartment of a convent. — A churchyard or cemetery; a parvis.

Grains of Paradise. See AMOMUM.

Bird of Paradise. See PARADISEIDÆ.

Par'adise, in Illinois, a post-village and township of Coles county, about 80 miles east south-east of Springfield.

Paradise, in Pennsylvania, a post-village and township of Lancaster co., about 10 m. E. of Lancaster. — A twp. of Monroe co. — A twp. of York co. — A post-village in each, Cal., Ill., Kan., Ky., Mo., N. Y., Texas, and Utah.

Paradis'can, *a.* Of, or having reference to paradise.

Paradis'idæ, *n. pl.* (*Zoöl.*) The Bird-of-Paradise family, comprising Insessorcs birds peculiar to New Guinea and adjacent islands, and distinguished for their wonderfully developed and beautiful plumage. The genus *Paradisæa* is the principal one. The Great Emerald Paradise Bird, *P. apoda*, from the tip of the bill to the end of the long side-feathers, is about two feet, but to the end of the real tail abt. 12 inches, the size of the bird being that of a thrush. The bill is slightly bent, and of a greenish color; the base being surrounded, for the distance of half an inch, with close-set, velvet-like black plumes, with a varying lustre of gold-green; the head, together with the back part of the neck, is of a pale gold-color, the throat and fore part of the neck of the richest changeable gold-green; the whole remainder of the plumage on the body and tail is of a fine deep chestnut, except on the breast, which is of a deep purple color. From the upper part of each side of the body, beneath the wings, springs a vast assemblage of extremely long, loose, broad floating plumes, of the most delicate texture and appearance; in some specimens of a bright deep yellow, in others of a paler hue, but most of them

Fig. 2044.—GREAT BIRD OF PARADISE, (*Paradisæa apoda*.)

marked by a few longitudinal dark red spots; and from the middle of the rump spring a pair of naked shafts, considerably exceeding in length even to the long loose plumes of the sides.

Paradisi'acal, **Paradisi'al**, **Paradisi'an**, *a.* [Lat. *paradisiacus*.] Pertaining, or relating to paradise, or to a place of supreme felicity; applicable to, or resembling, Eden or paradise.

Paradis'ic, **Paradis'ical**, *a.* Same as PARADISAICAL, *q. v.*

Par'ados, *n.* [Fr., from *parer*, to guard, and *dos*, Lat. *dorsum*, tack.] (*Fortif.*) An earthwork thrown up to protect the rear of a battery.

Par'adox, *n.* [Fr. *paradoxe*; Gr. *paradoxia*, marvellousness — *para*, contrary to, and *doxa*, opinion.] A tenet, assertion, or a term applied to any proposition which seems to be absurd, or at variance with common sense, or to contradict some previously ascertained truth; though, when properly investigated, it may prove to be perfectly well founded.

Paradox'ical, *a.* Possessing the nature of a paradox. — Disposed to tenets, notions, or abstractions, contrary to accepted opinions and received convictions; — applied to persons.

Paradox'ically, *adv.* In a paradoxical way or manner, or in a manner seemingly absurd.

Paradox'icalness, *n.* State or quality of being paradoxical.

Paradox Lake, in New Jersey, a small sheet of water in the S. part of Essex co., covers an area of abt. 3 sq. m.

Paradoxy, *n.* A paradoxical statement or argument; also, paradoxicalness.

Par'afine, (*-fēn*), *n.* [Fr., from Lat. *parum*, too little, and *affinis*, akin.] (*Chem.*) A waxy substance obtained by the distillation, at a low temperature, of coal-tar, peat, petroleum, and other bodies of a similar nature. Its most abundant source is, however, Bog-head coal, from which it is now extracted in enormous quantities for the manufacture of candles, which are superior in every way to those made of the finest wax or the finest stearic acid. It is a white, hard, translucent body, melting at 110°, burning with a bright white flame. It is insoluble in water, but is readily dissolved by alcohol and ether. It is unacted on by the strongest mineral acids, chlorine, or the alkalis; hence its name, from *parum affinis*, without affinity. From forming no compounds with any known substance, its atomic constitution cannot be determined; it contains, however, equal atomic proportions of carbon and hydrogen.

Paragoge, (*-gō'jē*), *n.* [Lat. and Fr., from Gr. *para-gōgē* — *para*, and *agō*, to lead.] (*Gram.*) The addition of a letter or syllable at the end of a word, as *olden* for *old*.

Paragog'ic, **Paragog'ical**, *a.* Relating to, or constituting a paragoge; serving to lengthen a word.

Par'agon, *n.* [Fr. *parangon*, from Gr. *paragō*, to pass by — *para*, and *agō*, to lead.] Something that surpasses or is supremely excellent; a model or pattern, as example by way of distinction, implying superior excellence or perfection; as, a *paragon* of beauty.

— *v. a.* [Sp. *paragonar*.] To come into emulation with; to rival; to equal.

"A maid that *paragons* description." — *Shaks.*

— *v. n.* To pretend to rivalry or equality. (*R.*)

Par'agram, *n.* [Gr. *paragramma*.] A substitution of one word or letter of a word for another; a play upon words, or a pun.

Paragram'matist, *n.* A punster.

Par'agraph, (*-gräf*), *n.* [Fr. *paragraphe*; Gr. *para*, and *graphe*, to write.] A distinct part of a discourse or writing; any portion or section of a writing or chapter which relates to a particular point, whether consisting of one sentence or many sentences. — A marginal note, employed to direct attention to something in a text, or to indicate a change of subject; — as, for instance, the character §, used as a reference, or to mark a division.

— A brief notice; a sententious remark; a short passage; as, a newspaper *paragraph*.

— *v. a.* To express paragraphically; to write in the form of a paragraph. — To notice in a paragraph.

Paragraph'ic, **Paragraph'ical**, *a.* Consisting of paragraphs, or short divisions, with breaks.

Paragraph'ically, *adv.* By paragraphs; in the manner of short sentences, with breaks.

Parag'raphist, *n.* A writer of paragraphs.

Parag'raphis'tical, *a.* Pertaining, or having reference to a paragraph or paragraphs.

Par'agress, *n.* (*Bot.*) See LEOPOLDINIA.

Paraguazu', or PARAGUAZU', a river of Brazil, flowing into the Bay of Todos-os-Santos, abt. 35 m. W.N.W. of São Salvador.

Paraguano, a peninsula of Venezuela, extending into the Caribbean Sea; Lat. 12° N. Lon. 70° W.

Paraguay, (*pä-rä-gwai'*), a state of S. America, nominally republican, lying principally between the 21st and 27th degrees of S. Lat., and the 54th and 58th of W. Lon.; having N. and E. Brazil; S. E., S. and W. Argentine Republic, and N. Bolivia; in two sections, E. and W. *P.*, divided by *P.* river; length, N. to S. 400 m. Area, 142,000 sq. m. The inhabitants are composed of whites of Spanish descent, native Indians, negroes, and mixed races originating from the foregoing, those of Indo-Spanish descent greatly preponderating. *P.* is an inland peninsula, inclosed E. and S. by the Parana and its tributary the Yajuari, and W. and N.W. by the rivers Paraguay and Blanco. A chain of mountains, the Sierra Amambay, enters *P.* on the N., runs through it near its centre to near Lat. 26°, and then divides into two branches, inclosing the basin of Tibiquari. From the undivided chain many small rivers flow on either

side to join the Parana and the Paraguay, and are all swollen in the rainy season, so as to inundate a considerable extent of country. There is but one lake, that of Ypaó, worth mentioning; extensive marshes, however, abound in the W. The climate is temperate, but damp. *P.*, in point of fertility, forms a favorable contrast to the adjacent parts of the Argentine republic. It is well wooded, and diversified with undulating hills and verdant vales. Almost half the entire territory is national property. It consists of pasturage lands and forests, which have never been granted to individuals; the estate of the Jesuit mission, and a great number of country houses and farming establishments, were confiscated by the dictator Francia.—*Zoöl.* The ostrich is seen in the plains of *P.*, and is remarkable for its immense size, fine plumage, and swift motion. The wild animals are the jaguar or tiger, the puma or cougar, the black bear, the ant-bear, and the tapir, or river-cow. Mosquitoes, and an innumerable variety of insects infest both the waters and the land, with snakes, vipers, and scorpions. The great boa-constrictor is found in the moist places adjoining the rivers, and some parts are haunted by the vampire-bat.

—*Prod.* The temperate parts abound with all kinds of grain, beans, peas, melons, cucumbers, and European vegetables and fruits. The other products are medicinal plants and the *P.* tea, or maté, a plant, an infusion of which supplies the inhabitants with a refreshing drink. The forests abound with a variety of woods, medicinal and aromatic, and many of them yielding useful dyes. The trade of *P.* consists in the export of its tea, tobacco, sugar, cotton, hides, tallow, wax, honey, cattle, horses, mules, wool, leather, hemp, rice, and ornamental timber. *P.* was first discovered by Sebastian Cabot, in the year 1526. In 1556 the Jesuits made their appearance, and by the effect of gentleness and policy, succeeded in obtaining a great ascendancy over the minds of the natives, and in establishing settlements in different parts of the country. In 1768 they were expelled, and soon after the Indians, already half civilized, relapsed into their former barbarism. In 1811 the people rebelled against the yoke of Spain. In 1817, Francia was elected dictator, and until 1844, foreigners were excluded from the country. In 1841 General Lopez, elected president, succeeded to Francia, and he, in his turn, was succeeded by his son, Don Francisco Solano Lopez, in 1862. In 1865, *P.* became involved in war with Brazil, Uruguay, and the Argentine Republic. (See LOPEZ.) In 1870, after the death of President Lopez, the country submitted to the allies, who imposed a war indemnity. There are but few towns in *P.*—ASSUMPTION, the cap., is situated on the left bank of Paragnay river, in Lat. 25° 18' S., Lon. 57° 30' W. It was founded in 1535 by the Spanish, and soon became a place of importance. Its pop. (1897) was 25,000.—Pop. of Paragnay (1897) 310,410. In 1878, the Prest. of the U. S., acting as arbitrator, decided a boundary dispute that had existed since the war between *P.* and the Argentine Confederation in favor of *P.*

Fig. 2045.—INDIAN OF PARAGUAY.

Paraguay, a large river of S. America, an affluent of the Parana (*q. v.*), rises in the Brazilian prov. of Matto Grosso, on a plateau of red sandstone, in Lat. 13° 30' S., Lon. abt. 55° 50' W., 9,535 feet above sea-level. Pursuing a S.W. course, and after flowing through a level country covered with thick forests, the *P.* is joined from the W. by the Jauru, in Lat. 16° 20' S. It then continues to flow S. through the marsh of Xarayes, which, during the season when the stream rises, is an expansive waste of waters, stretching far on each side of the stream, and extending from N. to S. over abt. 200 m. The river still pursues a circuitous but generally southward course, forming from 20° to 22° S. the boundary-line between Brazil and Bolivia, thence flowing S.S.W. through the territories of Paraguay to its junction with the Parana, in Lat. 27° 17' S., a few m. above the town of Corrientes. Its chief affluents are the Cuyaba, Tacuary, Mondego, and Apa on the left; and the Jauru, Pilcomayo, and Vermejo on the right. The entire length of the river is estimated at 1,800 m.; it is on an average about half a mile in width, and is navigable for steamers to the mouth of the Cuyaba, 100 m. above the town of Corumbá. The waters of the *P.*, which are quite free from obstructions, were declared open to all nations in 1852; and since 1858, the great water-system, of which this river forms such an important part, was regularly traversed by steamers plying between Buenos Ayres on the Rio de la Plata.

Paraguayan, (-gwí'an,) *n.* (*Geog.*) A native or inhabitant of Paraguay.

—*a.* (*Geog.*) Pertaining or relating to Paraguay, or its people.

Paraguay Tea, *n.* See ILEX.

Parahiba-do-Sul, or SOUTHERN PARAHIBA, a river of Brazil, flowing into the Atlantic Ocean at São João de Praya, abt. Lat. 21° 40' S., Lon. 40° 50' W., after a course of abt. 500 m.

Parahiba-do-Sul, a town of Brazil, on the above river, abt. 40 m. N. of Rio de Janeiro; pop. 2,500.

Parahitanga, a town of Brazil, abt. 140 m. N.E. of São Paulo; pop. 5,000.

Parahyba, PARAHIBA, or PARAIBA, (*pa-ra-ee'ba*), in Brazil, a river which rises in the valley between the sierras of Cavirris and Boborema, and flowing a general E. by N. course of 270 m., enters the Atlantic Ocean abt. Lat. 7° 8' S., Lon. 34° 45' W.

PARAHYBA, an E. prov. of Brazil, bordering on the Atlantic Ocean. It lies between Lat. 6° and 8° S., and Lon. 34° 40' and 38° 40' W., and has an area of 40,985 sq. m. *Rivers.* Parahyba and Mamanguape. *Surface*, mostly elevated, and in the W. parts mountainous; *soil*, generally fertile. *Prod.* Sugar, cotton, Brazil-wood, drugs, timber, &c. *Expts.* Cotton, sugar, and rum. *Pop.* 345,000.

PARAHYBA, a handsome town, cap. of the above prov., on the river of the same name, abt. 10 m. from the sea, and 65 m. from Pernambuco.

Paralep'sis, **Paralep'sis**, **Paralip'sis**, *n.* [*Gr.*; *Fr.* *paralipse*.] (*Rhet.*) The artificially exhibited omission or slight mention of some important point, in order to impress the hearers with indignation, pity, &c., called by the Latins *præteritio*, *omissio*, &c.

Par'lian, *n.* [*From Gr.* *para*, beside, and *als*, sea.] A dweller by the sea. (*R.*)

Paralipom'ena, *n. pl.* [*Lat.*, from *Gr.* *paraleipomena*, things omitted.] Things left out, — hence, a supplement containing something omitted in a preceding work, as the two Books of Chronicles, which are supplementary to those of Kings.

Par'allel, *a.* [*Fr.* *parallèle*; *Gr.* *parallēlos* — *para*, beside, and *allēlon*, of one another.] Going on side by side; having the same direction or tendency; running in accordance with something.—Continuing a resemblance through many particulars; equal; like; similar; as, a parallel case, a parallel position.

(*Geom.*) A term applied to lines, figures, and bodies which are everywhere equidistant from each other, or which, if ever so far produced, would never meet.

Parallel Bars. In machinery, the rods parallel to the center of a beam, joining the connecting link at the lower end.—In gymnastics, two horizontal bars rigidly supported by upright posts, and a few feet above the ground.

Parallel Railroads. Two lines of railroad covering substantially the same territory. This arrangement generally results in benefit to the public concerned if there shall be active competition between the two lines; but it has frequently occurred that the second line was built chiefly for the purpose of forcing its purchase by the older company, which purpose, if accomplished, is likely to result in the entire abolition of competition, and a consequent increase in freight and passenger rates, due to the enlarged capitalization without a corresponding expansion of business. Efforts have been made in various States to prohibit by law the construction of such roads.

Parallel motion. The connection between the top of the piston-rod and the beams of a steam-engine: — a term given to a contrivance invented by James Watt, for converting a reciprocating circular motion into an alternating rectilinear motion. — **Parallel rod**, or **coupling rod**, a rod that connects the crank-pins of the driving-wheels of a steam-engine, as distinguished from the **connecting rod**, or that rod which connects the cross-head with the crank-pin. — **Parallel ruler**, an instrument consisting of two wooden, brass, or steel rulers, equally broad throughout, and so joined together by the cross blades as to open to different intervals, and accede and recede, yet still retaining their parallelism.

Parallel sailing. (*Navig.*) Sailing on a parallel of latitude.

Parallel sphere. (*Astron.* and *Geog.*) That position of the sphere in which the equator coincides with the horizon, and the poles are in the zenith and nadir.

Par'allel, *n.* A line which, throughout its entire extent, is equidistant from another line.

"Who made the spider parallels design?" — Pope.

—A line on the globe, parallel to the equator, and marking the latitude. — Direction conformable to that of another line, or a continuity continued through many particulars, or in essential points; resemblance; likeness.

"Twixt earthly females and the moon,
All parallels exactly run." — Swift.

—Anything equal to, or resembling another in all essential particulars; counterpart; as, where shall we find his parallel? — Comparison made, or similitude described; as, to draw a parallel between Caesar and Napoleon I.

(*Fort.*) In the assault of a fortress, a wide trench parallel to the attacked work, protected by the besieged troops. The parallels are connected by approaches or zigzags.

(*Printing.*) A mark of reference [thus ||] employed to direct attention to notes at the foot or in the margin of a page.

Parallel of altitude. (*Astron.*) Small circles of the sphere parallel to the horizon.

Parallel of declination. (*Astron.*) See DECLINATION.

Parallel of latitude. (*Astron.* and *Geog.*) See LATITUDE.

Par'allel, *v. a.* To place so as to be parallel with. — To level; to equalize; as, "his life is parallel'd."

(*Shaks.*) — To correspond to; as, to parallel another in eloquence. — To be equal to; to resemble in all essential particulars; as, nothing can parallel his stupidity. — To compare; as, to parallel an idea with another.

Par'allelism, *n.* [*Fr.* *parallelisme*.] State of being parallel; equality of state; resemblance; comparison; as, the parallelism of the axis of the earth.

Parallel'stic, *a.* Characterized by, or involved in parallelism; as, the parallelistic form of Hebrew poetry.

Par'allelize, *v. a.* To make parallel.

Par'allelless, *a.* Without parallel, beyond parallel (*R.*)

Par'allelly, *adv.* In a parallel manner; with parallelism.

Parallel'ogram, *n.* [*Gr.* *parallēlos*, parallel, and *gramma*, a letter, a mathematical diagram, from *graphō*, to write.] (*Geom.*) A quadrilateral right-lined figure whose opposite sides are parallel.

Parallelogram of forces, a phrase denoting the composition of forces, or the finding a single force that shall be equivalent to two or more given forces when acting in given directions.

Parallelogrammat'ic, *a.* Pertaining, or having reference to a parallelogram; parallelogrammic.

Parallelogram'mic, **Parallelogram'mi-cal**, *a.* Having the properties or characteristics of a parallelogram.

Parallelop'iped, **Parallelopip'edon**, *n.* [*Gr.* *parallēlos*, and *epipedos*, on the ground, plane, superficial.] (*Geom.*) A regular solid, contained under six parallelograms, the opposite of which are equal and parallel; or it is a prism whose base is a parallelogram; it is triple to a pyramid of the same base and height.

Fig. 2046.

PARALLELOPIPED.

Paralog'ical, *a.* Characterized by paralogism; illogical; irrational.

Paralogism, *n.* [*Fr.* *paralogisme*; *Gr.* *paralogismos* — *para*, and *logismos*, a reckoning, from *logos*, reason.] (*Logic.*) A false conclusion; a fallacy; a quibble; an illogical deduction or inference; a reasoning which is false in point of form, or in which a conclusion is deduced from premises which do not logically warrant it; — antithesis of *sylogism*.

Paralogize, *v. a.* To reason falsely or illogically.

Paralogy, *n.* False ratiocination; paralogism.

Paralysis, *n.* [*Gr.*] (*Med.*) The loss of the natural power of sensation or motion in any part of the body. It is owing to some diseased condition of the nervous system, either of the brain or spinal cord, or of the nerves. If the nerves of sensation or their centres be affected, there will be loss of sensation; if of motion, then loss of motion; to the latter of which the term *P.* is by some exclusively applied. Each of these kinds may again be general or partial, or may have various degrees of severity. It may affect only one nerve or muscle, or it may affect a number. The most usual form is when one side or half of the body is deprived of sensation or motion, or both, called *hemiplegia*; *paraplegia* is when the lower part of the body is paralyzed, while the upper retains both sensation and motion; and general *P.* is when the loss of nervous power extends over nearly every part of the body. In hemiplegia, the seat of the disease is one side of the brain, usually that opposite to the affected side of the body; in paraplegia, the lesion is within the spinal cord; and when more limited in extent, the disease usually arises from some abnormal state of a particular nerve. *P.* frequently follows apoplectic attacks, and this usually in its most severe and dangerous form. The prognosis must be looked on as extremely unfavorable when the attack is sudden, the *P.* extensive and complete, and the loss of consciousness protracted; while, on the other hand, when the *P.* advances gradually, there is more reason to hope for prolonged life, if not for a complete restoration of health. Among the other causes that may give rise to *P.* are various injuries and diseases of the brain or spinal cord; as tumors, inflammation, external injuries, &c. When *P.* takes place without any previous apoplectic attack, the premonitory symptoms are a general torpor or lassitude, occasional giddiness, or a sense of weight and pain in the head, and loss of memory. When it is the result of injury of the spinal cord, then, of course, the *P.* takes place instantly. Paraplegia sometimes lasts for many years without greatly interfering with any function except locomotion; but when it occurs during fevers and advances rapidly, it is of very sinister augury, especially if it involves the sphincter muscles of the anus and bladder. Sometimes there is a gradual loss of power in the muscle or muscles affected; and in many cases the loss of power is preceded by severe pains in the part, cramps, a sense of numbness or tingling, and a curious feeling of coldness. *P.* is not a disease of itself, but only a sign of some disorder of the nervous system, probably at a distance from parts affected. In each case, therefore, the cause of the disorder is to be investigated, and the mode of treatment principally directed to its removal. In very many cases, however, little can be done either in the way of cure or alleviation.

Paralytic, **Paralytical**, (-it'ik,) *a.* [*Fr.* *paralytique*.] Affected with paralysis or palsy. — Inclined or tending to palsy; as, a paralytic seizure.

Paralyt'ic, *n.* A person affected with paralysis or palsy.

Paralyza'tion, *n.* Act of paralyzing; state of being paralyzed.

Paralyze, *v. a.* [*Fr.* *paralyser*; *Gr.* *paralyō*. See PARALYSIS.] To affect with paralysis or palsy; hence, to unnerve; to destroy or impair physical or mental energy, as, his hopes were paralyzed.

Paramagnetism, *n.* Same as DIAMAGNETISM, *q. v.*

Paramaribo, a town of S. America, cap. of the colony of Dutch Guiana, on the Surinam, abt. 5 m. above the Atlantic Ocean; Lat. 5° 49' N., Lon. 55° 22' W. The town is regularly laid out, generally well built, and contains many fine religious and other edifices; and though the streets are unpaved, they are wide and well shaded with tamarind and orange trees. Fort Zeelandia, the residence of the governor, is to the N. of the town. Besides other charitable institutions, there is a large hospital for lepers, on the Coppename River. Pop. 20,000.

Paramast, *n.* [From Lat. *parare*, to prepare.] The furniture, ornaments, and hangings of a state apartment or reception-room.

Paramatta, *n.* A mixed textile fabric of worsted and cotton, resembling merino in appearance and feel.

Paramatta, a town of New South Wales, co. of Cumberland, on the Paramatta river, 13 m. W.N.W. of Sydney. Pop. 4,500.

Parameter, *n.* [Fr. *paramètre*; from Gr. *para*, and *metron*, measure.] (*Geom.*) A constant right line in each of the three conic sections, and otherwise called *latus rectum*, because it measures the conjugate axes by the same ratio which has taken place between the axes themselves, being always a third proportion of them.

Paramithia, or **Paramythia**, a town of European Turkey, in Epirus, 30 m. S.W. of Yanina; pop. 5,000.

Paramo, *n.* [Sp.] The name given in South America to a mountainous district covered with stunted trees, exposed to the winds, and in which a damp cold perpetually prevails. Under the torrid zone, the Paramos are generally from 10,000 to 12,000 feet in height. Snow often falls on them, but remains only a few hours; in which respect they are distinguished from the *Nevados*, which enter the limits of perpetual snow.

Paramo D'Assuay, a pass over the Andes in Ecuador, abt. Lat. 0° 2' S. Height, 15,528 ft.

Paramount, *a.* [Norm. *peramont*, above — *par* or *per* (= Gr. *para*), above, and *monter*, to ascend.] Superior to all others; possessing the highest title or jurisdiction; preëminent; supreme; of the highest order, value, or estimation.

Lord paramount, the sovereign, as being supreme in authority.

—*n.* The chief; the highest in rank, office, or order.

Paramounty, *n.* State, rank, or condition of being paramount. (*R.*)

Paramountly, *adv.* In a paramount or supreme manner or degree.

Paramour, (*-moor*), *n.* [Fr. *par amour*, with love; Norm. *paraimor*, to love exceedingly.] A lover or wooer, in a bad sense; one of either sex who loves loosely, or with violation of moral propriety; especially, a kept mistress; a concubine.

Paranus, in *New Jersey*, a village of Bergen co., abt. 7 m. N.W. of Hackensack.

Parana, (*pa-ra-na'*), a large river of S. America, rises in the Brazilian prov. of Minas-Geraes, about 100 m. N.W. of Rio de Janeiro. It flows W. for upwards of 500 m., through the provs. of Minas-Geraes and São Paulo. In the latter it is joined by the Parnahiba, after which it flows S.S.W. to Candelaria. Passing this town, it flows W. for 200 m. to its confluence with the Paraguay, and then bending southward, passes Santa Fe, below which its channel frequently divides and encloses numerous islands. After passing Santa Fe, it rolls onward in a S.E. direction, and unites with the Uruguay in forming the Rio de la Plata. Entire length about 2,400 m. Its principal tributaries are the Paraguay, Uruguay, Pardo, Tiete, and Parnahiba. For vessels drawing 7½ feet it is navigable to Corrientes, upwards of 600 miles from its mouth.

Parana, a S. prov. of Brazil, bounded N. by the prov. of São Paulo, E. by the Atlantic, S.E. by Santa Catharina, S. by Rio Grande do Sul, W. by Uruguay and Paraguay; area, 115,000 sq. m. Cap. Curitiba. The sea-coast is indented by several bays, but the chief and almost the only port as yet is Paranaguá. A line of mountains runs parallel to the coast at a distance of abt. 80 m. inland. The streams flowing E. from this water-shed, though numerous, are inconsiderable; while the rivers flowing westward into the Parana, which forms the W. boundary of the prov., are all about or upwards of 400 miles in length. The principal are the Paranapanema, Ivaí, Piquery, and Ygnassu. The climate is unusually healthy; the soil is fertile; and agriculture, rearing cattle and swine, and gathering *máté* or Paraguay tea, are the chief employments. Pop. 138,000.

Paranaguá, a maritime town of Brazil, on a bay of the same name, abt. 170 m. S.W. of Santos. It has an excellent port. Pop. 8,000.

Paranahiba River, in Brazil. See PARNAHIBA.

Parana-Ibra, or **Paranahiba**, a river of Brazil, joins the Curuuba to form the Parana, abt. 180 m. S. of Villa-Boa.

Paranaphthaline, *n.* (*Chem.*) A white solid substance, so termed because it resembles and accompanies *naphthaline*.

Paran City, in *Iowa*, a village of Marion co., abt. 100 m. W. by S. of Iowa City.

Paran'thite, **Paran'thine**, *n.* (*Min.*) A name for certain compact varieties and crystals of white and pale blue scapolite; found in the limestone quarries at Malsjö, in Sweden.

Para-nut, *n.* (*Bot.*) The Brazil-nut. See BERTHOLLETTIA.

Paranymph, (*-nimf*), *n.* [Gr. *para*, near, and *nymphē*, bride.] Anciently, a bridesman or bridesmaid;—hence, one who gives support or countenance to another.

Parapegm, (*pär'a-pēm*), *n.* [Gr. *para*, beside, and *pēgnomai*, to fix.] Anciently, a brazen table attached

to a pillar on which laws and public announcements were engraved.

—A table fixed in a public place, containing an account of meteorological observations.

Parapet, *n.* [Fr.; It. *parapetto*—*para*, and *petto*; Lat. *pectus*, the breast.] A wall or rampart rising breast-high; a breast-work; particularly, a wall, rampart, or

Fig. 2047. — PARAPET OF THE TOWER OF MERTON COLLEGE. (Oxford, A. D. 1440.)

earthwork for covering soldiers from an enemy's fire. —A breast-wall raised on the edge of a building, bridge, quay, &c., to prevent people from falling over.

Parapeted, *a.* Having a parapet.

Paraph, (*pär'af*), *n.* [A contraction of *paragraph*.] A flourish or peculiar figure drawn by a pen under one's signature, formerly adopted as a precaution against forgery.

—*v. a.* To append a paraph to; hence, to sign, as a paper, with one's initials.

Paraphernalia, *n. pl.* Same as PARAPHERNALIA, *q. v.*

Paraphernal, (*-fer'nal*), *a.* Belonging, or having reference to, or consisting in, paraphernalia; as, *paraphernal property*.

Paraphernalia, **Parapher'na**, *n. pl.* [Gr. *parapherna*—*para*, beyond, and *pher-nē*, dowry, portion.] (*Law.*) The apparel, jewels, &c., of a wife, which are held to belong to her as a species of separate property. The husband may dispose of them in her lifetime, but cannot bequeath them away from her; and if he have not parted with them before his death, she may retain them against his executors and all other persons, except his creditors, when his other funds are not sufficient to satisfy their claims. The judge of probate is, in the practice of most states, entitled to make an allowance to the widow of a deceased person which more than takes the place of the paraphernalia.

Paraphimosis, *n.* [Gr. *para*, and *phymōsis*, a shutting up.] (*Med.*) Strangulation of the glans penis. *Dunghison.*

Paraphonia, (*-fō'nī-a*), *n.* [Gr. *para*, and *phonē*, sound.] An alteration of voice.

(*Mus.*) In Greek music, a kind of progression by fourths and fifths.

Paraphrase, (*-frāz*), *n.* [Fr.; Gr. *paraphrasis*—*para*, and *phrazō*, to speak, tell, declare.] An explanation of some text or passage in a book, in a more clear and ample manner than is expressed in the words of the author; a loose or free translation; as, "*paraphrase*, or translation with latitude." — *Dryden.*

—*v. a.* [Fr. *paraphraser*; Gr. *paraphrazō*.] To explain, interpret, or translate with looseness or freedom; to convey the meaning of with latitude; to unfold, as the sense of an author, with more clearness and particularity than it is expressed by his own words.

—*v. n.* To make a paraphrase; to explain with amplification.

Paraphrast, (*-frāst*), *n.* [Fr. *paraphraste*.] One who paraphrases.

Paraphras'tic, **Paraphras'tical**, *a.* Pertaining to, resembling, or having the nature of a paraphrase; free, clear, and ample in explanation or interpretation; diffuse; not verbal or literal.

Paraphras'tically, *adv.* In a paraphrastic manner.

Paraphrenitis, *n.* [Gr. *para*, and *phrenos*, the diaphragm.] (*Med.*) Inflammation of the diaphragm.

Paraphyses, *n.* [Gr. *para*, and *physis*, nature.] (*Bot.*) A term used, in describing mosses, to denote the sessile, ovate, abortive bodies placed below the theca.

Parapi'ti, a river of Bolivia, rising in Lake Grande, and flowing N.N.E. into Lake Ubaí.

Paraplegia, **Paraplegy**, *n.* [From Gr. *para*, and *plessein*, to strike.] (*Med.*) A paralysis of the lower half of the body, or only of both lower extremities.

Parapoplexy, *n.* [Gr. *para*, near, and *apoplexia*, apoplexy.] (*Med.*) False apoplexy.

Parasang, *n.* [Lat. *parasanga*, from Pers. *farsang*.] (*Antiq.*) An ancient Persian measure of length, diversely stated to have been from thirty to sixty stadia.

Paraseeve, (*-sē've*), *n.* [Lat.; Gr. *paraskevē*.] Among the Jews, the eve of the Sabbath.

Parasele'ne, *n.*; *pl.* PARASELENÆ. [Gr. *para*, and *selēnē*, the moon.] (*Astron.*) A luminous circle encompassing the moon.

Parasite, *n.* [Fr.; Gr. *parasitos*—*para*, and *siteō*, to feed, from *sitos*, akin to Hind. *seedha*, food.] One who dines with others;—hence, particularly, a trencher friend; a diner-out at the tables of the rich, who earns his welcome by flattery; a hanger-on; a toad-eater; a fawning, sycophantic attendant.

"T' enrich a pimp, or raise a parasite." — *Dryden.*

(*Bot.*) A plant obtaining nourishment immediately from other plants to which it attaches itself, and whose juices it absorbs.

(*Zoöl.*) This term, as designative of a group of animals, is variously applied by different naturalists. Lamarck includes under it a family of antennated Arachnidans; Cuvier, Latreille, and Kirby, apply the term to an order of Apteron insects; Strass, to a tribe of Crustaceans; but all the sections include animals of parasitic habits. They have been divided into *external* and *internal* parasites; the latter being more definitely termed ENTROZOA, or NEMATODES.

Parasitic, **Parasit'ical**, *a.* [Gr. *parasitikos*.] Of, or belonging to a parasite; partaking of the nature and habits of a parasite; fawning for food or favors; sycophantic; wheedling; as, *parasitic courtiers*. — Growing as a parasite grows; living on somebody; deriving sustentation from some other living thing, as a plant, animal, or fungus.

Parasitically, *adv.* In a parasitic, flattering, or wheedling manner; by dependence on another.

Parasiticalness, *n.* State or condition of being parasitical.

Parasitism, *n.* State, quality, or manners of a parasite.

Parasol, *n.* [Fr. and Sp., from Gr. *para*, and Lat. *sol*, the sun.] A small umbrella carried by ladies to defend themselves from the sun's rays. *P.* were used by the ancient Greeks, and the Romans employed them as a protection against the sun at the theatre. During the Middle Ages they were borne by horsemen in Italy. The modern *P.* was first used in France about 1680.

Parasollette, *n.* A small parasol; a sunshade.

Parasyuaxis, *n.* [Lat., from Gr. *para*, and *synaxis*, an assembly.] (*Law.*) An unlawful assembly.

Parataxis, *n.* [Gr. *para*, and *tassein*, to arrange.] (*Gram.*) The mere placing of propositions without sequence or dependence;—antithetical to *syntaxis*.

Parathesis, *n.* [Gr. *para*, and *tithenai*, to set or place.] (*Gram.*) The mere ranging of propositions one after another, as the corresponding judgments present themselves to our mind, without marking their dependence on each other by way of consequence or the like;—opposed to *syntaxis*.

(*Rhet.*) A parenthetical announcement of matter to be afterwards amplified.

(*Print.*) The printed matter included within brackets.

Para'ti, a seaport-town of Brazil, abt. 135 m. E.N.E. of São Paulo. It is regularly and compactly built, and has an extensive commerce. Pop. 10,000.

Paratounerre, (*pär-a-ton-nair'*), *n.* [Fr.] A lightning-conductor.

Parboil, *v. a.* [Fr. *parbouillir* (not in use)—Lat. *pars*, part, and Fr. *bouillir*, Lat. *bullire*, to boil.] To boil in part, or in a moderate degree. — To cause little vesicles on the skin by means of heat.

Parboiled, *a.* Boiled moderately or in part; as, *par-boiled potatoes*.

Par'buckle, **Par'bunle**, *n.* (*Naut.*) A purchase consisting of a single rope or chain around any weighty body, as a cask, by which it is lowered or hoisted.

—*v. a.* To hoist or lower with a parbuckle.

Parce, or **Fates**, (*par'se*), *n. pl.* (*Grecian Myth.*) Three goddesses, who were represented in the Grecian mythology as presiding over the birth, life, and death of the human race. Clotho, the youngest of the sisters, with a distaff in her hand, watched the moment of man's birth; when Lachesis, the second, spun the thread detailing all the events and actions of his life; and the eldest of the three, Atropos, stood ready with her shears to cut the thread which her sisters had spun. The power of the *P.* was great and extensive, and though, according to some opinions, they were subject to Jupiter alone, others assert that even Jove was obedient to their commands. They were supposed to be the arbiters of life and death, and whatever good or ill befell mankind was attributed to the Fates. Though it was held in vain to appeal from their decrees, statues were raised to them, and temples built in which to worship and to offer up sacrifices to them. They were generally represented as three old women, wearing chaplets of wool interwoven with the flowers of the narcissus, each holding the symbol that distinguished her. Their dress is differently represented; and they are also called the Secretaries of Heaven, and the Keepers of the Archives of Eternity.

Parcel, (*pär'sl*), *n.* [Fr. *parcelle*, from Lat. *particula*; dimin. of *pars*, part, part.] A part; a portion of anything taken separately. — Any mass or quantity; a lot; a collection. — A small bundle or package; a packet; a number or quantity of things put up together; as, a *parcel* of groceries. — A number of persons; — used in contempt or burlesque.

"This youthful *parcel* of noble bachelors." — *Shaks.*

(*Law.*) A part belonging to a whole; a piece; a portion.

—*v. a.* To divide into parts or portions; — often with *out*.

— To make up into parcels or packages.

To *parcel* a rope. (*Naut.*) To wind strips of tarred canvas around it as a protection.

Par'cel, *a.* and *adv.* In part; as, *parcel-blind*, *parcel-deaf*, *parcel-gilt*.

Par'cel-book, *n.* A book used by a merchant or trader for the registering of parcels.

Par'celling, *n.* (*Naut.*) Long narrow pieces of tarred canvas whipped round a rope.

Par'cenary, *n.* [Norm. Fr. *parcenier*.] (*Law.*) Co-heirship.

Par'cener, *n.* (*Law.*) A co-heir.

Parch, *v. a.* [Sansk. *parishushka*, very dry — *pari*, about, in composition with adjectives, *very*, and *shushka*.] To dry to extremity; to shrivel with heat; as, the *parched* places of the wilderness. — To burn superficially; to scorch; as, to *parch* the skin.

Pareh, *v. n.* To become very dry; to be scorched or superficially burned.

Parch'dness, *n.* State or condition of being parched, scorched, or dried to extremity.

Parchingly, *adv.* Scorchingly.

Parchim, or **Parchen**, (*park'im*), a town of Germany, in Mecklenburg-Schwerin, on the Elbe, 21 m. S. E. of Schwerin. *Manuf.* Woolen cloth, leather, straw-hats, tobacco, and chicory. *Pop.* 6,500.

Parchment, (*partsh'ment*), *n.* A term given to the skins of sheep and goats, prepared and rendered fit for writing upon. This is done by steeping the skins in pits impregnated with lime, stretching them upon frames, and reducing them by scraping and paring with sharp instruments. Pulverized chalk is rubbed on with a pumice-stone, which smooths and softens the skin, and improves the color. After being reduced to half its original thickness, it is smoothed and dried for use. *Vellum*, a similar substance, is made from the skins of young calves. Next to papyrus, the skins of animals in the form of *P.* formed the most extensive substance for writing upon among the ancients. About 200 B. C., when Eumenes or Attalus was desirous to found a library at Pergamum that should rival, if not excel, that at Alexandria, the king of Egypt at the time, being jealous, prohibited the exportation of papyrus. On this account, the inhabitants of Pergamum began to manufacture *P.* as a substitute; and the library was formed of manuscripts chiefly written on this material; whence it was known among the Romans as *Pergamena*, from which word the term *parchment* is supposed to have been derived. The ancient Hebrews were in the habit of writing on the skins of animals as early as the reign of King David. Herodotus relates that the Ionians, from the earliest period, wrote upon the skins of sheep and goats from which the hair had been scraped off. At the present day, *P.* is much used for charters and other writings.

Pareipany, in *New Jersey*, a village of Morris co., abt. 7 m. N. of Morristown.

Pard, *n.* [Lat. *pardus*, a leopard, panther, or ounce.]

Pard-deeville, in *Wisconsin*, a post-village of Columbia co., abt. 9 m. E. of Portage City.

The leopard; — in a poetical sense, any spotted beast.

Pardo, *n.* A Chinese vessel, somewhat smaller than a junk. — A current coin at Goa, Hindostan, worth about 60 cents.

Par'do, a river of Brazil, formed by the union of the Vermelho and Sanguexuga rivers, and flowing into the Parana abt. Lat. 21° 36' S.

Pardon, (*pär'dn*), *v. a.* [Fr. *pardoner*.] To remit, as the consequences of a fault or crime; to grant remission of, as a penalty. — To grant forgiveness of, as an offence or crime; to suffer to pass without punishment or penalty; to excuse; to accept an excuse, as for a fault.

Pardon me, excuse me, forgive me; — used as a phrase of civil denial or slight apology.

"Sir, pardon me, it is a letter from my brother." — *Shaks.*

— *n.* Remission of a penalty. — The release of an offence or of the obligation of the offender to suffer a penalty, or to bear the displeasure of the offended party; forgiveness received; as, to sue for *pardon*.

(*Law*.) An act of grace, proceeding from the power intrusted with the execution of the laws, which exempts the individual on whom it is bestowed from the punishment the law inflicts for a crime he has committed. An *absolute pardon* is one which frees the criminal without any condition whatever. A *conditional pardon* is one to which a condition is annexed, the performance of which is necessary to the validity of the pardon. A *general pardon* is one which extends to all offenders of the same kind. It may be *express*, as when a general declaration is made that all offenders of a certain class shall be pardoned; or *implied*, as in case of the repeal of a penal statute. The pardoning power is lodged in the executive of the U. States and of the various States, and extends to all offences except those which are punished by impeachment after conviction. In some States a concurrence of one of the legislative bodies is required.

Pardonable, *a.* [Fr.] That may be pardoned; venial; excusable; that may be forgiven, overlooked, or passed by; as, a *pardonable fault*.

Pardonableness, *n.* State or quality of being pardonable; venialness; susceptibility of forgiveness or excuse.

Pardonably, *adv.* Venially; excusably; in a manner susceptible of pardon.

Pardoner, (*pär'dn-er*), *n.* One who pardons or forgives; one who remits the penalty of an offence.

Pare, (*pär*), *v. a.* [Icel. *para*, a piece of the skin cut off; Heb. *par*, to cleave, to divide.] To cut off, as the superficial substance, the corners or extremities of a thing; to trim by cutting; to dress; to shave off with a sharp instrument; as, to *pare* an apple, to *pare* one's nails. — To cut off little by little; to diminish by degrees.

"The king began to *pare* a little the privilege of clergy." — *Bacon.*

(*NOTE*. The noun is in the objective case when *pare* is followed by the thing diminished; as, to *pare* a horse's hoof. When the thing divided is the object, *pare* precedes off or away; as, some parts must be *pared away*; to *pare off* the rind of a fruit.)

Paré, AMBROISE, (*pa'rai*), a French physician, b. near Laval, 1509, called the father of French surgery, and one of the greatest surgeons of modern times. He was professional adviser of four French sovereigns; and, though a Huguenot, he possessed the fullest confidence of Charles IX., and through his favor escaped the massacre of St. Bartholomew. D. 1590.

Par'don, or GREAT PAREDON KEY, an island of the W.

Indies, in the old Bahama Channel, N. of Cuba; Lat. 22° 25' N., Lon. 78° 8' W. *Area*, about 20 sq. m.

Pareg'menon, *n.* [Gr.] (*Rhet.*) The employment of words of a common derivation in the same sentence.

Paregoric, *a.* [Gr. *parégorikos* — *para*, by the side of, and *agoreuō*, to harangue, to speak.] Soothing; mitigating; assuaging pain; as, *paregoric* elixir.

— *n.* (*Med.*) An anodyne; a medicine that assuages pain.

Pareira Bra'va, *n.* (*Bot.*) See CISSAMPELOS.

Pare'con, *n.* [Gr. *para*, and *eklein*, to draw.] (*Gram.*) The addition of a syllable or particle to the termination of a pronoun, verb, or adverb.

Parella, *n.* (*Bot.*) A kind of lichen, *Lecanora parella*, found in the N. of Europe, and extensively used in dyeing. See LECANOVA.

Paren'bole, *n.* [Fr.; from Gr. *para*, beside, and *ballein*, to throw.] (*Rhet.*) A figure by which a paragraph is inserted in the middle of a sentence with which it does not grammatically cohere, by way of explaining something. It is also called *paremptosis*, and is a species of parenthesis.

Parenchyma, (*-rénk'i-ma*), *n.* [Gr., from *para*, beside, and *eychein*, to pour in.] (*Anat.*) A term applied by anatomists to the solid tissues of any organ, apart from the vessels, arteries, or veins that pass through or come out of its structure. The solid part of the lungs, liver, and other glands and organs.

(*Bot.*) The soft cellular part of the bark of plants.

Parenchymatous, **Parenchymous**, (*-rénk'-*) *a.* [Fr. *parenchymateux*.] Pertaining to, resembling, or consisting of parenchyma; spongy; porous.

Paranetic, **Paranetical**, *a.* [Gr. *parainetikos*.] Hortatory; inciting.

Par'ent, *n.* [Fr.; Lat. *parens*, from *pario*, to bear, to beget; Heb. *para*, to bear.] One who begets or brings forth offspring; a father or mother; a progenitor.

"Lords, whose parents were, the Lord knows who." — *Defoo.* — Hence, that which produces; cause; source; origin; as, idleness is the *parent* of ennui.

Par'entage, *n.* [Fr.] Extraction; birth; condition with respect to the rank of parents; as, a man of honorable *parentage*.

Parent'al, *a.* [Lat. *parentalis*.] Pertaining, or having reference to parents; as, *parental* duties. — Beseeming parents; tender; affectionate; as, *parental* care.

Parentally, *adv.* Like a parent; in a parental manner.

Paran'thesis, *n.*; *pl.* PARENTHESSES. [Fr. *parenthèse*; Sp. *parentesis*; Gr. *parenthesis* — *para*, and *thesis*, a placing, from *tithēmi*, to set, place.] (*Rhet.*) A sentence, or certain words inserted in a sentence, which interrupt the sense or natural connection of words, but serve to explain or qualify the sense of the principal sentence. In printing, the parenthesis is usually included in hooks or curved lines, thus ().

Parenthet'ic, **Parenthet'ical**, *a.* Pertaining, or having reference to a parenthesis; denoted in a parenthesis; as, a *parenthetical* allusion. — Employing or containing parentheses.

Parenthet'ically, *adv.* In a parenthesis; by way of parenthesis.

Par'entless, *a.* Without parents.

Par'er, *n.* One who, or that which, pares; an instrument for paring.

Pargasite, *n.* (*Min.*) Hornblende of a high lustre, and of a rather dark-green color, containing alumina, iron, and magnesia, found at Pargas, in Finland.

Par'get, (*-jél*), *n.* (*Arch.*) The plaster used for covering the walls and ceilings of rooms, &c.

— *v. a.* To plaster, as walls or ceilings.

— *n. n.* To plaster.

Par'getter, *n.* A plasterer.

Par'getting, (*-jél*), *n.* A kind of decorative plaster-work in raised ornamental figures, extensively employed in the 16th and 17th centuries for the internal and external embellishment of houses.

Parhel'ic, *a.* Pertaining, having reference to, or consisting of, parhelia.

Parhel'ion, *n.*; *pl.* PARHELIA. [Gr. *para*, and *hēlios*, allied to *Armor. heol*, the sun.] A mock sun or meteor, appearing in the form of a bright light near the sun. No very satisfactory explanation of this phenomenon has yet been given.

Pa'ria, (*Gulf of*), an inlet of the Caribbean Sea, S. America, lying between the island of Trinidad and the mainland. From these two lands on the N. two points jut out, with two islands intervening, which leave four openings, called the Mouths of the Dragon, by which the gulf communicates with the Caribbean Sea. This part is about 13 miles wide, and contains several islands. The length of the gulf is estimated at 100 miles.

Pa'riah, *n.* [From Hind. *pahāriyā*.] In Hindostan, one belonging to the lowest or most degraded caste of society; — hence, an outcast; one ostracised from human fellowship.

Pa'riah dogs, in India, native curs that are homeless and masterless.

Pa'rian, *n.* (*Geog.*) A native or inhabitant of the island of Paros, in the Greek archipelago. — A fine kind of porcelain clay, employed in the making of statuettes and other artistic trifles; — so called from its resemblance to Pa'rian marble.

— *a.* (*Geog.*) Pertaining, obtained from, or having relation to, Paros; as, *Pa'rian* marble.

Pa'ridæ, *n. pl.* (*Zoöl.*) See TIRMOUSE.

Paridigitate, (*-dij'*), *a.* [Lat. *par*, equal, and *digitus*, finger.] Possessing an equal number of fingers and toes.

Pa'rietal, *a.* [Fr., from Lat. *paries*, *parietis*, a wall.] Of, or pertaining to a wall. — Pertaining to, or within the walls of, a building; resembling a wall; serving as a wall.

(*Anat.*) The name of the two lateral bones of the skull, united above by the sagittal suture (formed by the interlacing of the two parietal bones), joined below to the temporal by the squamous suture, behind to the occipital bone by the lamboid suture, and united in front to the frontal bone by the coronal suture.

(*Bot.*) Applied to any organ which grows from the sides of another. Those ovaries are parietal which grow from the sides of a calyx; and placenta or ovules have this name when they proceed from the sides of the ovary.

Parieta'ria, *n.* [Lat. *paries*, a wall. Some of the species prefer to grow on old walls, &c.] (*Bot.*) A genus of plants, order *Urticaceæ*. *P. Pennsylvanica*, the common Pellitory or Hammer-wort, is a rough, pubescent annual herb, found in damp places in the Eastern, Middle, and North-western States. *P. officinalis*, the Wall Pellitory, is by many regarded as a valuable diuretic and lithontriptic.

Pari'etary, *n.* (*Bot.*) Same as PELLITORY. — See PARIETARIA.

Pari'etes, *n. pl.* [Lat. *paries*, a wall.] (*Anat.*) A name given to parts which form the enclosures or limits of different cavities of the body, as the parietes of the cranium, chest, &c.

Pa'ri'ma, (*Sierra*), a spur or continuation of the Sierra Pacaraima, in Venezuela; Lat. 4° to 6° 30' N., Lon. 64° to 67° W. The Orinoco River rises in it. *Maravaca*, the culmination, is more than 10,000 ft. high.

Parinaeo'ta, a mountain-summit of Bolivia, in Lat. 18° 10' S., Lon. 69° 11' W.; height, 20,030 feet.

Parina'rium, *n.* (*Bot.*) A genus of plants, order *Chrysobalanaceæ*, including several valuable fruit-trees. *P. excelsum* yields the fruit known in Sierra Leone under the name of Rough-skinned or Gray Plum. The leaves of *P. laurinum* supply the chief material used by the Polynesians for covering the side-walls of their houses, while its seeds yield them a perfume.

Par'ing, *n.* That which is cut or pared off; a piece clipped off; rind severed from the fruit.

(*Agricull.*) The act, practice, or process of cutting off the surface of grass-land for tillage.

Paring and burning. (*Agricull.*) The operation of paring off the surface of worn-out grass-land, or lands covered with coarse herbage, and burning it for the sake of the ashes, and for the destruction of weeds, seeds, insects, &c. Agriculturists differ as to the value of this mode of improving land, the greater number preferring a naked fallow even for one or two years, alleging that more injury is done by the loss of vegetable matter in burning than is compensated by the ashes produced.

Parini, GIUSEPPE, (*pa-re'ne*), an eminent Italian poet, was b. in 1729, at Bosizio, in the Milanese. He raised himself to eminence by his talents, which he employed in satirizing the vices and follies of the age. D. 1799. His principal poem is entitled *Il Giorno*. His works form 6 vols. 8vo.

Pa'ri pas'su. [Lat.] With equal pace or progress; step by step.

Paripin'uate, *a.* [Lat. *par*, equal, and *pinnatus*, winged.] (*Bot.*) Equally pinnate.

Par'is. (*Homeric Myth.*) The seducer of Helen, and the cause of the Trojan war, was a younger son of Priam, king of Troy, by Hecuba, his queen. His mother, before the birth of Paris, having dreamed that she had brought forth a firebrand that would destroy both the palace and the city, consulted the oracle on the interpretation of her dream; when, to save the state from so dire a possibility, the priests advised the killing of the child as soon as born. As soon as Paris saw the light, he was, accordingly, intrusted to a slave, who was bound to execute the royal will and priestly decree; and for that purpose carried the child to the side of Mount Ida, where, touched with pity, and revolting from the crime of infantine murder, the man left him; and where he was subsequently found by some shepherds, taken home, and reared as one of their own children. As Paris grew in frame and years, he showed such evidences of nobility of soul and heroic daring, especially in guarding the flocks under his care from all depredations both of robbers and wild beasts, as to obtain the title of "The Defender," or *Alexander*. Indeed, his reputation became so general, and his merits so extolled, that, at the marriage of Peleus, king of Thessaly, and Thetis, the goddess of Discord, — out of envy at being left out of the list of invited guests, — secretly entered the nuptial hall and flung down a golden apple, on which was inscribed, "The Prize of the Fairest." All the females claimed the apple as their own; and the angry feeling was only partially appeased by appointing an umpire, and allowing Minerva, Juno, and Venus to stand as candidates before the judge. The shepherd Paris was unanimously selected for that responsible office, and being seated with the apple in his hands, commanded the three beauties to appear before him with all their charms unveiled, that he might fairly judge to whom the prize should be awarded. His decision finally fell on Venus. This judgment of Paris so enraged Minerva and Juno, that they vowed eternal enmity against both Paris and his family. Priam, having been subsequently informed of the preservation of his son, and finding him so noble in appearance and heroic in his bearing, at once acknowledged him as his son, and forgetting the gloomy auguries attending his birth, freely admitted him to his court and his fatherly love. Some time after his restoration, his father dispatched him to Greece on some political mission, when, remembering the promise made to him by Venus, that he should possess the most beautiful woman in the world for his wife, and having heard the report of the surpassing attractions of the Spartan

Helen, he steered his fleet for Lacedæmon, and visiting the court of Menelaus, king of Sparta, was there most hospitably entertained by the unsuspecting Menelaus; and where he found the lovely Helen, who had become the wife of the Spartan king, far exceeded all the accounts he had received of her fascination and beauty. In the mean time, the monarch being called away on some special business to the island of Crete, Paris, who had found means to make himself agreeable to Helen, persuaded her to embrace the opportunity of her husband's absence to quit her country and elope with him to Troy. Helen accordingly fled with Paris, and was received with welcome and open arms by Priam, and installed with all honor in Ilium. This violation of good faith, and the breach of hospitality committed by the Trojan, so enraged the Spartan king, on his return from Crete, that he called upon the other states of Greece to make a common cause of the indignity he had suffered, and declare a war of extermination against perfidious Troy. This summons was promptly answered by every state and kingdom in Greece, and the 10 years' siege of Troy was the consequence. Paris, abashed by the injury he had inflicted on Menelaus, avoided on all occasions meeting the Spartan king in the frequent battles that ensued, and left the field whenever Menelaus appeared in front. Once, however, according to Homer, they met, when Paris would have fallen but for the interposition of Venus, who saved him from the wrathful vengeance of the outraged king. It was a javelin, hurled by the arm of Paris, that found the vulnerable spot in Achilles, and brought that hero prostrate to the plain. The death of Paris is variously told; all, however, that is known of his end is, that he fell at or previous to the sack of Troy, and that Helen returned, as a prize, with her husband to Greece.

Par'is, MATTHEW, one of the earliest English historians, was a Benedictine monk of St. Alban's, and is known from 1245, to the year of his death, 1259. He was a man of the highest character, and distinguished as a musician, poet, orator, theologian, painter, and architect. His practical talents were turned to the reformation of monastic discipline, on which account he was sent to Norway by the Pope. His principal work, first published in 1571, extends over English history from the reign of William the Conqueror, to his own times.

Paris, FRANÇOIS, commonly called the ABBÉ PARIS, was a French ecclesiastic, b. 1690. He died in Paris, after a life of religious mortification and charity, 1727, and was buried in the cemetery of Saint-Medard. Here extraordinary scenes took place, occasioned by the alleged miracles wrought at his tomb. Where persons went into convulsions and trauports of prophetic delirium.

Paris (*Lutetia Parisiorum*, "the mud town of the Parisii," a people of Celtic Gaul), the cap. of France, stands in the midst of a fertile plain on the Isle de France, on the Seine, about 110 miles (direct distance) from its mouth, 210 m. S.S.E. of London, and 159 m. S.S.W. of Brussels; in the centre of the network (*réseau*) of French railways; Lat. 48° 50' 13" N., Lon. 2° 20' 24" E. The city stands in a plain, surrounded on several sides, but especially N. and N.E., by considerable eminences; and the geological constitution of the district is so peculiar that the French geologists have called it the *Paris basin*. Here are found alternate strata, abounding with marine and fresh-water shells, and containing, also, many fossil remains of extinct animals. Gypsum (the *plaster of Paris*) is found in large quantities; and S. of the Seine is quarried good building-stone, of which, indeed, some of the principal edifices of Paris are formed; the older quarries, all of which were subterranean, have been converted into catacombs, or repositories for the bones of the dead, removed from the public graves that once abounded, greatly to the injury of the health of the city. Paris is situated on both sides of a considerable river, which runs through it from S.E. to N.W., and divides it into two parts, of which the largest is on the N. side; the most ancient part of the city being, however, confined to the small islands within the channel of the river, the principal of which is called the *Cité*. In the course of centuries it has so extended itself, that it now occupies an area of about 14 square miles, including the Champs Elysées, and other open spaces at its W. extremity. Many of the best streets are parallel to the river, and the open spaces, or quays, along its banks, present the most agreeable feature. The city was originally divided into 4 quarters (*quartiers*), but as it increased, new allotments became necessary, though the old name was retained; and hence we find that there are at present 80 quarters. For electoral and municipal purposes, however, Paris is divided into 20 arrondissements, each comprising 4 quarters. The arronds, or districts of Paris, differ as widely one from the other in the ideas, habits, and appearance of their inhabs. as in the height and size of their buildings, or the width and cleanliness of their streets. The *Chaussée d'Antin* breathes the atmosphere of the *Bourse*, and the *Palais Royal* is the district of bankers, stock-brokers, generals of the empire, and rich tradespeople; and it is the quarter fullest of life, most animated, most rife with the spirit of progress, change, luxury, and elegance. Here are all the fine buildings, arcades, and shops, and here are given the richest and most splendid balls. How different is the quartier *St. Germain*, the district of the long and silent street, and the large, well-trimmed garden, of the great court-yard, of the broad and dark staircase, inhabited by the administrations of the old nobility, manifesting no signs of change, no widening of streets, no piercing of arcades or passages; it hardly possesses a restaurant of note, and has but one unfrequented theatre. Further E., on the same side of the

Seine, is the quartier of the students, at once poor and popular, inhabited by those eloquent and illustrious professors who give to France its literary glory. Then there is the *Marais*, the retreat of old-fashioned judges and merchants, where the manners have been changed almost as little as the houses by the philosophy of the 18th century. Here are no carriages, no equipages; all is still and silent; you are carried back to the customs of the grand hotels in the time of Louis XIII. Then there is the *Faubourg St. Antoine*, the residence of those

Fig. 2048. — NOTRE DAME DE PARIS.

immense masses that reigned under Robespierre, and which Napoleon, after Waterloo, refused to summon to his assistance. There is the ancient *Cité of Paris*, surrounded by the Seine, and filled by a vast population. There, at the end of new and large streets which have transformed this quarter, formerly the most sordid in the city, rise the splendid towers of Notre Dame (Fig. 2048), that temple of the 12th century, which, in spite of the Madeleine, has not been surpassed in the 19th; there is the Hôtel Dieu, the antique hospital as old as the time of Philip Augustus; and there is the Palais de Justice, where sat the old parliament, and where sit now the highest courts of justice in France. The immense changes made by the Emperor Napoleon III. in the outer aspect of Paris, involving the destruction of a great part of the old city and the erection of a new and far more splendid one on its ruins, are chiefly marked in these vast thoroughfares, which form the characteristic feature of Paris, known as the *Boulevards*. The Boulevards owe their origin to the improvements that took place in Paris under Louis XIV., when the ancient fortifications of the city were destroyed and the ditches filled up. At the suggestion of Colbert, the king determined to form a wide road upon the side of the northern ramparts, and plant it with trees; and, in 1670, the Boulevard, or bulwark, from the Rue St. Antoine to the Rue St. Martin, was opened for public use. Gradually this fine thoroughfare became extended, but it was not until the reign of Napoleon III. that the girdle of boulevards, surrounding the immense city on all sides, was entirely completed. Paris contains above 100 squares, of which the most celebrated are the Place Vendôme, an octagonal space, surrounded by elegant stone buildings, and having in its centre a triumphal bronze column erected by Napoleon I.; the Place Royale, a square in the E. of Paris; the Place des Victoires, a central and busy spot; the Place de Grève, the scene of many revolutionary executions, in the centre of Paris; the Place du Carrousel, a spacious oblong between the Tuileries and the Louvre, and having the long picture-gallery on its S. side; and the Place Louis XV., situate to the W. of the garden of the Tuileries. The Champ de Mars is an oblong park on the S.W. of Paris, extending from the military school to the river, and bordered on each side by several rows of trees. The Palais Royal, situate towards the centre of Paris, forms a large pile of buildings, entered in three distinct parts by as many portals or archways, and bearing less the appearance of a princely residence than of a place of business. The façade fronting the Rue St. Honoré was built in 1781, and is ornamented with Doric and Ionic pillars, surmounted by a finely sculptured *fronton*. At the back of these courts, and at a distance from the main building, is the garden of the palace, a spacious oblong, nearly 250 yds. in length, having in its central part a basin with *jets d'eau*, and at either end a shrubbery. The Seine, flowing from E. to W., intersects Paris nearly in the middle, and is crossed by the Pont Neuf, built in the 17th century; the Pont Royal, near the Tuileries, built by Louis XIV.; and the Pont de Louis XVI., finished in 1790. Lower down the river, and opposite the Champ de Mars, is the Pont de Jena, or des Invalides, a stone bridge; and, higher up, opposite the Jardin des Plantes, is the Pont d'Austerlitz, an iron bridge; both elegant structures, and both erected under Bonaparte. Lastly comes the Pont du Louvre, an iron-wrought bridge, and the Pont des Arts, opposite to the Louvre, a neat but slight iron bridge, appropriated to foot-passengers. Within the limits of the city, the Seine is crossed by no fewer than 23 bridges. The public buildings are numerous. The Tuileries, long the residence of the kings of France, and the scene of many of its most remarkable events, was begun in the 16th cent., and finished, after various interruptions, in the 17th. It was joined by Napoleon III. to the Louvre, but was destroyed by the Commune in 1871. The palace of the Luxembourg, situate in the S. of Paris, is distinguished by the symmetry of its proportions. The Palais Bourbon, on the left bank of the Seine, on the W. side of Paris, is a

splendid building. The other buildings worthy of note are, the Hôtel des Invalides (Fig. 1394), a large structure with a dome, in the centre of which is a church, containing the tombs of Napoleon I. (Fig. 1911), Vauban, and Turenne; the Military School, which forms one end of the Champ de Mars; the Palace of the Legion of Honor, nearly opposite to the Tuileries; the Bourse, in Rue Vivienne; the Bibliothèque Nationale, containing upwards of 2,000,000 vols.; and the Pantheon (Fig. 846), in the highest part of Paris, and appropriated to the remains of distinguished Frenchmen. On the same side of the Seine, but more towards the centre of Paris, stand the buildings of the Institute (Fig. 2049), and the Mint, or Hôtel des Monnaies. Among the old structures, the principal were the Hôtel de Ville and the Palais de Justice; and, in the busy part of the town, near the street of Montmartre, there is an elegant and extensive exchange. Besides Notre-Dame, there are the churches of St. Sulpice, St. Eustache, the Madeleine, Notre-Dame-de-Lorette, &c. The mansions, or, as they are termed, the *hotels*, of great families, are spread all along the W. part of the town, particularly in the Faubourg St. Germain, and in the suburb St. Honoré. The private houses are very high, having frequently 6 and 7 stories. The most striking of the public monuments is the column of the Place Vendôme erected by Bonaparte, to commemorate his successes in Germany in 1805, and already noticed. It is a brazen pillar, with a diameter of 12 feet, and a height of 133; its form, an imitation of Trajan's pillar at Rome. After this comes the triumphal arch in the Place du Carrousel, near the Tuileries, erected in 1806; the Arc de Triomphe de l'Etoile, outside of the barrier of Neuilly; the Porte, or gate of St. Denis, a large triumphal arch, erected by Louis XIV.; and the Porte St. Martin; the column of Luxor (ancient Thebes), transported from that place, and now erected in the Place de la Concorde. The public fountains of Paris are extremely numerous, and several of them are deserving of high admiration. The hospitals of Paris are also numerous and well-managed. The largest is the Hôtel Dieu; after it come those of Charité, St. Antoine, Beaujon, Des Enfants Malades, and several others. Distinct from these are the *hospices*, or establishments where the aged, the infirm, the lunatics, are received and supported, on paying a small sum. The prisons of Paris, also, are much amended in their management since the

Fig. 2049. — INSTITUT DE FRANCE.

beginning of the present century. In literary, scientific, and educational institutions, Paris is not excelled by any other city in the world. The principal of these are the College of France, with 28 professors; the University, Academy of Paris, and various societies of medicine, of agriculture, of sciences and arts, &c.; the Athénée, the school of medicine, an elegant and capacious building, has halls for public lectures, large and generally crowded. At the Jardin des Plantes are classes for botany, zoölogy, geology, mineralogy, chemistry, &c.; to these are to be added the school for painting, sculpture, and architecture. There are also a number of celebrated schools for particular professions. The military school is for the education of youths, generally the sons of officers who have fallen in the service of their country. The École Polytechnique is for the education of engineers. The veterinary school at Alfort, near Paris, has classes on zoölogy, rural economy, the care of animals, &c. With libraries Paris is also well supplied: there are 32 altogether, and the Great National is a magnificent institution. It is divided into five sections: 1. Printed works and pamphlets, of which there are now 2,500,000, including duplicates. 2. Manuscripts, of which there are 84,000 vols. 3. Medals and antiquities. 4. Prints. 5. Maps and charts. Amid the collections of interest to artists, those of the Louvre hold, unquestionably, the first rank. Of the ground floor of that spacious building, a great part is appropriated to statues and other specimens of sculpture, ancient and modern, distributed in spacious halls, and arranged with much taste. From these a magnificent staircase leads to the gallery of paintings, a collection that may be equalled by other European galleries in the works of certain schools, but which alone offers to the practical student, and the simple lover of art, a complete, comprehensive, and instructive view of all the schools. Next to these, the object of greatest interest in P. is the Museum of Natural History, in the buildings belonging to the Jardin des Plantes. Next comes the Jardin des Plantes itself, exhibiting, in miniature, groups of plants of almost every region on the globe; also a collection of animals of the most differ-

Francis Parkman

1823-1893

ent latitudes — lions, elephants, bears, &c. In a large building in the central part of P. is the Museum of French Monuments, a collection of statues and other sculptured ornaments. The Conservatory of the Arts and Trades is appropriated to mechanical improvements, and contains models of almost all ingenious machines. The chief theatres are the New Opéra, or Academy of Music, the Théâtre Française, Opéra Comique, and the Odéon; but the others are also much frequented, and conducted with taste and ingenuity. Of the public gardens and walks, those of the Tuileries, once the finest and most frequented, have lost their beauty since the destruction of the palace, though the grounds are still frequented. On the S. side of Paris are the fine gardens of the Luxembourg. The Champs Elysées afford very pleasant walks; the Boulevards, in the summer evenings, present a strikingly animated scene; and the beautiful Bois de Boulogne, leading to the palace of St. Cloud, forms one of the most charming promenades in the world. *Manuf.* These consist chiefly of articles of taste or nice workmanship, such as jewelry, watches, clocks, porcelain, cabinet-ware, mathematical instruments, silk, artificial flowers, plate-glass, and ornamental articles in bronze; also, cottons, carpets, &c. The well-known manufactory of the Gobelins exhibits imitations of beautiful pictures in webs of the finest silk and worsted. That of Sévres is equally noted for the richness of its porcelain. Paris is, besides, almost exclusively the seat of the wholesale bookselling and printing business of France. Its commerce is greatly facilitated by the navigation of the Seine, its connection with many canals, and by railways to many of the principal towns in France. Paris was originally a Roman station, and, in the year 360, was the winter-quarters of Julian. In 508 it was constituted the cap. of the kingdom. It was surrounded with walls in the end of the 12th century, and, after the Revolution, it received many embellishments. The new line of fortifications was begun in 1840, and finished in 1848. Francis I. was the first French monarch who endeavored to render Paris worthy of being the cap. of France; under Henry IV. it increased; and to Marie de Médicis and to Cardinal Richelieu it owed much of its progress. Louis XIV. greatly embellished it. Napoleon I. was anxious that it should eclipse all other cities; and Napoleon III. made of it the handsomest city in Europe. *Pop.* (1891) 2,447,957; (1901) 2,660,559.

Par'is, *n.* (*Bot.*) A genus of plants, order Trilliaceæ, including *P. quadrifolia*, the One-berry, the juice of which is reckoned a narcotic, acrid poison.

Paris, a village of province of Ontario, on Grand river, about 72 m. N.N.W. of Niagara Falls.

Paris, in Illinois, a city and township, cap. of Edgar co. *Pop.* (1897) 5,360.

Paris, in Indiana, a post-village of Jennings co., about 16 m. W.N.W. of Madison.

—A village of Posey co., about 20 m. N. of Mount Vernon.

Paris, in Kansas, a village and township of Linn co., about 60 m. S.E. of Lawrence.

Paris, in Kentucky, a city, cap. of Bourbon co., about 40 m. E. of Frankfort. It is one of the chief cattle-markets in the State. *Pop.* (1897) 4,510.

Paris, in Maine, a post-village and township, cap. of Oxford co., abt. 40 m. W. of Augusta.

Paris, in Michigan, a twp. of Kent co.

Paris, in Missouri, a post-village, cap. of Monroe co., abt. 40 m. W.S.W. of Hannibal.

Paris, in New York, a post-township of Oneida county.

Paris, in Ohio, a township of Portage county.—A post-village and township of Stark county, about 130 miles N.E. of Columbus.—A township of Union county.

Paris, in Pennsylvania, a post-village of Washington co., abt. 34 m. W. by S. of Pittsburgh.

Paris, in Tennessee, a post-village, cap. of Henry co., abt. 110 m. W. of Nashville.

Paris, in Texas, a city, cap. of Lamar co., about 300 m. N.E. of Austin, and the center of a large cotton co., with excellent R.R. facilities. *Pop.* (1897) 10,500.

Paris, in Va., a p. v. of Fauquier co.

Paris, in Wisconsin, a post-village and township of Kenosha co., abt. 10 m. N.W. of Kenosha.

Parisburg, or GILES COURT-HOUSE, in Virginia, a post-village, cap. of Giles co., abt. 240 m. W. of Richmond.

Paris Green, a compound of arsenious acid and oxide, properly termed *arsenite of copper*. It is of a bright green color, and is sometimes used for coloring wall papers and destroying insects, and it is very cheaply made, but it is very poisonous and should be used with great caution.

Par'ish, *n.* [*Fr. paroisse*; *L. Lat. parochia*; *Gr. paroikia*, from *paros*, and *oikos*, a house, a dwelling.] An ecclesiastical division of a town or district, in which the inhabitants dwell near each other; that is, a district of comparatively limited extent;—specifically, the circuit of ground which is committed to the spiritual charge of one person, vicar, or other Christian minister, having permanent cure of souls therein.

—In the U. States, an ecclesiastical society bounded by territorial limits, but composed of those persons who choose to unite under the charge of a particular priest, clergyman, or minister.—*Webster*.

—In Louisiana, one of the State divisions corresponding to counties in other States.

—To go on the parish, in England, to become chargeable as a pauper, to the parochial poor-rate.

—*a.* Belonging, or having reference to a parish; as, a parish church.—Employed in the ecclesiastical or spiritual concerns of a parish; as, a parish priest, a parish clerk.—Maintained at the cost of a parish; as, parish poor, a parish workhouse.

—*Parish clerk*, a layman who conducts the responses, and otherwise officiates in the services of the Anglican Episcopal Church.

Par'ish, in Iowa, a v. of Des Moines co., abt. 65 m. S.E. of Iowa City.—In New York, a post-twp. of Oswego co.

Parish Grove, in Indiana, a township of Benton co.

Par'is Hill, in N. Y., a v. of Oneida co.

Parish'ional, *a.* Same as PAROCHIAL, *q. v.*

Parishioner, (*pa-rish'un-er*), *v. n.* [*Fr. paroissien*.] One who belongs to, or is a resident within, a parish.

Par'ishville, in New York, a post-village and township of St. Lawrence co., abt. 20 m. E. of Canton.

Parisian, (*pa-rēzh'i-an*), *n.* [*Fr. Parisien*.] (*Geog.*) A native or resident of Paris.

—*a.* (*Grog.*) Pertaining or having reference to, or characteristic of, the natives of Paris; as, Parisian fashions.

Parisienn, (*pa-rē'ze-ēn*), *n.* A female native or resident of Paris.

Parisology, *n.* [*Gr. paraisos*, nearly equal, and *logos*, discourse.] The practice of using ambiguous or equivocal words.

Parisyllabic, **Parisyllabical**, *a.* [*Lat. par, paris*, equal, and *syllaba*, syllable.] Denoting a word which has the same number of syllables in all its inflections.

Par'itor, *n.* An apparitor; an usher; a beadle.

Par'ity, *n.* [*Fr. parité*; *Lat. paritas*—*par*, *paris* = *armor. pār*, equal.] Equality; equivalence; analogy; like or kindred state or degree; as, *parity* of reasoning or principle.

Park, *n.* [*A. S. pearroc*; *Dan. park*; *Fr. and W. parc*.] A piece of ground in an untitled state, inclosed for purposes of the chase, or for walking, driving, &c.—A tract of land within the precincts of a city or town, and kept for ornament and public recreation; as, Fairmount Park in Philadelphia, or the Central Park in New York.

(*Mil.*) An assemblage of the heavy ordnance belonging to an army, with its carriages, ammunition-wagons, and stores, on ground contiguous to that occupied by the troops when encamped; as, a park of artillery, a park of provisions, an engineer park, &c.

Park-hack, a horse with showy action, used for equestrian exercises in parks, &c.; a cob; a nag.

Park phaeton, a low carriage, or landaulet, for use in parks.

—*v. a.* To impark; to inclose, as in a park.—To mass together in a compact body; as, to park the artillery, commissary wagons, ambulances, &c.

Park, in Colorado, a N. central co.; area, about 2,200 square miles. *Rivers*. South Fork of Platte River and Arkansas River, besides many smaller streams. *Surface*. It is surrounded on all sides by high and rocky mountains which form what is called South Park, (see THREE PARKS). *Soil*, moderately fertile. *Min.* Gold. *Cap.* Fair Play.

Park, in Michigan, a post-township of St. Joseph county.

Park, MUNGO, a British traveller, b. near Selkirk, Scotland, 1771, was killed during his second expedition in Africa, 1808. (See AFRICA, & History.) His *Travels in the Interior of Africa* were published in 1797, and the *Journal* of his second expedition appeared in 1815.

Parke, in Indiana, a W. co., adjoining Illinois; area, abt. 440 sq. m. *Rivers*. Wabash River, and Sugar and Racoon creeks. *Surface*, generally level; *soil*, deep and fertile, yielding large crops of cereals and garden produce. *Cap.* Rockville.

Parke'r, THEODORE, a distinguished American theologian, philosopher, and social reformer, b. at Lexington, near Boston, 1810. He entered Harvard College in 1830, continuing, however, for a time to work on his father's farm, and afterwards teaching in a school at Boston. In 1834 he entered the Theological School, the professors at which belonged to the then rising liberal school. After laborious and successful studies, he was chosen, in 1837, minister of a Unitarian congregation at West Roxbury, his marriage having taken place just previously. He had there leisure for study, and read extensively, enjoying the society of Dr. Channing. His views of Christianity had diverged considerably from the standard of his sect, and great excitement was occasioned by his sermon "On the Transient and Permanent in Christianity," preached in 1841. Wearied with the bitterness and opposition of his adversaries, he visited Europe in 1843. The prejudice against him led to his quitting West Roxbury, and settling at Boston in 1846, as minister of the Twenty-eighth Congregational Society. In the following year he became joint-editor with Emerson and Cabot of the *Massachusetts Quarterly Review*. He distinguished himself as the fearless opponent of the Fugitive Slave Law, and sheltered slaves in his own house. Notwithstanding his failing health he was very active as a public lecturer on various political and social topics, and was the correspondent of many eminent men; among them, Charles Sumner, Buckle, Professor Gervinus, &c. Early in 1859 he was compelled to relinquish his duties and seek health in France and Italy. It was in vain, and he died at Florence, 1860. His earliest published work was the *Discourse of Matters pertaining to Religion*, which appeared in 1847. In this work alone he exhibits his fundamental principles in a systematic form. It has passed through several editions, and has been widely read in Europe as well as in America, and is one of the most important and interesting of recent contributions to religious philosophy,—one of the books which are worth reading for their honesty, earnestness, and beauty, whether we agree or disagree with their conclusions. Among his other works, of which a collected edition has been published by Miss Cobbe, are, *Critical and Miscellaneous Writings*; *Theism*, *Atheism*, and the *Popular*

Theology; *Discourses of Politics*; *Experience as a Minister*, &c. His *Life and Correspondence*, edited by John Weiss, appeared in 2 vols. in 1863.

Park'er, *n.* The keeper or ranger of a park.

Park'er, in Illinois, a township of Clark county.

Parker, in Pennsylvania, a village and township of Butler co., abt. 18 m. E. S.E. of Pittsburgh.

Parker, in Texas, a N.E. central co.; area, abt. 900 sq. m. *Rivers*. Brazos and Noland's rivers. *Surface*, agreeably diversified; *soil*, generally fertile. *Cap.* Weatherford.

Park'ersburg, in Illinois, a post-village of Richland co., abt. 135 m. S.E. of Springfield.

Parkersburg, in Indiana, a post-village of Montgomery co., abt. 12 m. S. of Crawfordsville.

Parkersburg, in Iowa, a village of Boone co., abt. 6 m. S.E. of Boonesborough.

—A post-town of Butler co., about 18 m. W. of Cedar Falls.

Parkersburg, in West Virginia, a city and cap. of Wood co., on the Ohio river, about 100 m. S.W. of Wheeling. It owes its rapid growth and importance to the wells of petroleum which abound in the vicinity. *Pop.* (1897) 9,900.

Parkes'burg, in Pennsylvania, a post-borough of Chester co., about 45 m. W. of Philadelphia.

Parkesine, *n.* See PARKSINE.

Parke'ville, in Indiana, a village of Parke co., abt. 9 m. E.N.E. of Rockville.

Parkhurst, in Iowa, a village of Scott co., abt. 65 m. E. by S. of Iowa City.

Parkinsonia, *n.* [After Parkinson, an ancient writer on plants.] (*Bot.*) A genus of plants, sub-order *Cesalpiniæ*. *P. aculeata*, the Jerusalem thorn of the W. Indies, is used for making hedges, and is also employed as a febrifuge.

Park'-leaves, *n. pl.* (*Bot.*) The common name of the genus *Hypericum*. See HYPERICACEÆ.

Park'man, FRANCIS, an American historian, b. in Boston, 1823. He graduated at Harvard College in 1844, and in 1846 made a journey across the prairies, and explored the Rocky Mountains. His principal works are, *The Californian and Oregon Trail*; *Pioneers of France in the New World*; *The Jesuits in North America*; *Discovery of the Great West*; *The Old Regime in Canada*; *Count Frontenac and New France under Louis XIV.* (Boston, 1877). Died 1893.

Park'man, in Maine, a post-town of Piscataquis co.

Park'man, in Ohio, a post-township of Geauga co.

Parksine, PARKESINE, *n.* (*Applied Chem.*) A newly invented material, similar to ebonite, consisting of an intimate mixture of vulcanized oil and collodion, and which, in some of its applications, seems destined to take the place of caoutchouc and gutta-percha. For its preparation the oils used may be any of the so-called drying-oils, as linseed-oil, nut-oil, castor-oil, &c.; and for vulcanizing them, chloride of sulphur is used in various proportions, according to the nature of the product desired; for instance, in greater proportion, if the material is to be solid and hard, and in less if it is to be elastic and extensible. The temperature of preparation varies correspondingly with these different objects, between 200 and 300 degrees Fahrenheit. The collodion is prepared by treating cotton in nitro-sulphuric acid, and then washing with water in a centrifugal apparatus, next pressing out the moisture, and then dissolving the expressed mass in nitro-benzole. The collodion is separated in the form of a pellicle by pouring the solution into water. The two constituents are worked up together, and the mass is then pressed into the desired form and vulcanized. The applications of this material are as varied as those of caoutchouc and gutta-percha, and are adapted even to cases where these substances cannot be well employed. For the imitation of marble, in all shades, as well as of mother-of-pearl, tortoise-shell, and ivory, there is nothing to compare with it. It may be prepared at so low a cost that, in England, knife-handles of great beauty, made of this material, are sold at \$4 to \$15 per gross.

Parks'ville, in New York, a post-village of Sullivan co., abt. 4 m. N. of Liberty Village.

Park'ton, in Maryland, a post-village of Baltimore co.

Parlance, (*pär'lans*), *n.* [*Norm.*; *Fr. parler*, *parlant*, to speak.] Conversation; discourse; talk.

In common or ordinary parlance, in common phrase; in the customary or usual form of speech.

Par'ley, *v. n.* [*Fr. parler*; *It. parlare*, to speak; *Fr. parole*; *Sp. palabra*, a word, from *Lat. parabola* = *Gr. parabole*, a parable.] To speak or confer with on some point of mutual concern; to discuss orally;—hence, specifically, to confer, as with an enemy; to treat with by words.

—*n.* Mutual discourse or conversation; discussion; appropriately, a conference with an enemy in war.

"Summon a parley, we will talk with him."—*Shaks.*

To beat a parley. (*Mil.*) To beat a drum or sound a trumpet, as a signal for holding a conference with the enemy.

Parliament, (*pär'ti-ment*), *n.* [*Fr. parlement*; *It. and Sp. parlamento*; *Low Lat. parlamentum*, a conference. See PARLEY.] The grand assembly of the legislature, or Three Estates, of the united realm of Great Britain and Ireland, consisting of the sovereign with the peers spiritual and temporal, constituting the House of Lords; and the knights of shires, citizens, and burgesses, forming the lower chamber, or House of Commons. Though the sovereign is virtually one of the three orders which form the British P., the two conditions of the Lords and Commons are supposed legally to comprise the legislature of the State. The term P. is

evidently of French origin, and was first applied to general assemblies of the States under Louis VII., about the middle of the 12th century. In England, the term was not used till the reign of Henry III. or Edward I. The institution of *P.*, however, is of a much earlier date; but its origin is lost in the remote ages of antiquity. It has commonly been traced back to the free councils of our Saxon ancestors, which existed under the names of the *micel synoth*, or great council; *micel gemote*, or great meeting; and *wittena gemote*, or assembly of wise men. The popular character of these institutions was subverted for a time by the Norman Conquest; but the people of England, still Saxons by birth, in language, and in spirit, gradually recovered their ancient share in the councils of the state. It is generally agreed that the main constitution of *P.* as it now stands was marked out so long ago as the 17th year of King John (1215), in the Great Charter granted by that prince, wherein he promises to summon all archbishops, bishops, abbots, earls, and greater barons, personally, and all other tenants in chief under the Crown, by the sheriff and bailiffs, to meet at a certain place, within forty days' notice, to assess aids and scutages when necessary; and this constitution has subsisted, in fact, at least from the year 1264 (49th Henry III.). Since that period it has enjoyed supreme political power in the kingdom.

(*French Hist.*) The *P.* of France, like that of England, was in its origin a convocation of the great vassals of the crown, who treated of judicial as well as political matters in their assemblies. St. Louis was the king who first introduced into this body counsellors of inferior rank, chiefly ecclesiastics, as legal assistants; and the earliest registers of the proceedings of the *P.* which afterwards became fixed at Paris, are of the date of 1254. The important step of rendering that court permanent, and fixing its seat in the capital city, is generally attributed to Philip the Fair (1304); from that time the great barons gradually discontinued their attendance, and the lawyers occupied the higher places and more important functions of the court. The twelve peers of France, however, remained constant members of the *P.* after the other great vassals had, by disuse, ceased to be considered as members of it. The *P.* of Paris thenceforward remained the chief tribunal of the country until the revolution, with the exception of the short period of its suppression by Louis XV. in 1771; but as the great chiefs of the French monarchy were successively united to the crown, the supreme feudal court of each was invested with the title and attributes of a *P.* These were fixed at Toulouse, Grenoble, Bordeaux, Dijon, Besancon, Rouen, Aix, Pau, Rennes, Metz, Douay, Nancy. The most remarkable prerogative exercised by the *P.* was that of registering the edicts of the sovereign, and thereby giving them the force of law. Hence the important part which the parliaments, and especially that of Paris, so often enacted in French history, in modifying the otherwise absolute power of the monarchs. (See *BED OF JUSTICE*.) It was usual for the *P.* of Paris, and undoubtedly legal, although not customary for the other parliaments, to convey remonstrances to the king on the subject of his edicts. But Louis XIV. ordained that these remonstrances should always be presented after they had testified their obedience by registering them. The counsellors of *P.* were, by a law of Louis XI., immovable except in case of legal forfeiture; but the place of counsellors and presidents soon became purchasable, and afterwards transmissible by hereditary descent. Hence, in part, the powerful esprit de corps which distinguished those bodies.

Parliamentarian, *a.* (*Eng. Hist.*) Siding with the Parliament in antagonism to King Charles I.

—*n.* (*Eng. Hist.*) An adherent of the Parliament during the time of Charles I.

Parliamentary, *a.* [*Fr. parlementaire.*] Pertaining to parliament; vested in parliament; as, *parliamentary* authority. — Enacted or done by parliament; as, a *parliamentary* act or constitution. — According to the rules and usages of parliament, or to the established rules and practices of legislative assemblies.

Parlor, Parlour, *n.* [*Fr. parloir*, from *parler*, to speak.] The apartment in a nunnery where the nuns are permitted to meet and converse with each other, or with friends outside, through a grating. — The room in a house which the family usually occupy, and where they hold their ordinary converse and intercourse.

Parlor boarder, a pupil in a boarding-school who sits at table with the teacher's family.

Parlous, *a.* [*From perilous.*] Disposed to incur peril; venturesome; notable; keen; sprightly; waggish; as, a *parlous* wit.

Par'ma, in *Michigan*, a post-village and township of Jackson co.

Par'ma, a prov. and former duchy of N. Italy, between Lat. 44° 19' 30" and 45° 7' 45" N., Lon. 9° 23' and 10° 40' E., having N. Lombardy, E. Modena, S. and W. Tuscany. Area, 3,766 sq. m. The surface is diversified, and the soil fertile in the plains. The climate is healthy except in the districts along the Po. Rivers, Po, Taro, Trebbia, and Enza. Prod. Maize, wheat, tobacco, hemp, and fruits. Numerous cattle are also reared; and it is noted for its cheese from the milk of goats. Min. Iron, copper, salt, &c. Manuf. Silk, linen, and cotton goods, paper, glass, gunpowder, brass, &c. Cap. Parma. During the decline of the Roman empire, *P.* became a part of the kingdom of Lombardy. It was taken by Charlemagne, and transferred to the papal see in 774. In 1543 Paul III. erected *P.* and Piacenza into a duchy, which he bestowed upon the Farnese family, whose line became extinct in 1731. The treaty of Aix-la-Chapelle, in 1748, gave possession of *P.* to Philip, son of Philip V. and Elizabeth Farnese. In 1815, *P.*, Piacenza, and Guas-

talla were formed into a duchy, and bestowed upon Maria Louisa, wife of Napoleon I., with reversion after death to Ferdinand Charles, Duke of Lucca, the son of Maria Louisa of Spain, and the rightful heir. A revolution occurred in 1859, on which Marie Therese de Bourbon, widow of Charles III., and regent for her infant son, left the country, and *P.* was annexed to the kingdom of Italy in 1860. Pop. 256,029.

Par'ma, a fortified city, cap. of the above prov., 72 m. S.E. of Milan; Lat. 44° 48' 15" N., Lon. 10° 20' 8" E. It has a fine Gothic cathedral, and the ducal palace, which contains a library of 90,000 vols. and a museum of antiquities. *P.* has also a public library of 34,000 vols. Manuf. Silk, cotton, and woollen goods, lace, cutlery, glass, and musical instruments. Pop. 47,067.

Parma, in *New York*, a post-vill. and township of Monroe co., abt. 10 m. W.N.W. of Rochester.

Parma, in *Ohio*, a post-township of Cuyahoga county.

Parmegia'no, Parmigiano, or Parmigiano. See MAZZUOLI.

Parmelia, *n.* (*Bot.*) A genus of lichens, *P. parietina*; was formerly regarded as a valuable febrifuge, astringent, and tonic. It contains a yellow crystalline coloring-matter, called *chrysophanic acid*, which is identical with the coloring principle of rhubarb. *P. perlata* is employed in the manufacture of orchil and cudbear.

Parmenides, (*par-men'i-dees*), of Elea, in Magna Græcia, B. about 536 B. C., was one of the chiefs of the Eleatic school.

Parmetiera, *n.* (*Bot.*) A genus of plants, order *Crescentiaceæ*, q. v.

Parmesan', *n.* (*Geog.*) A native or inhabitant of Parma, Italy.

—*a.* [*It. Parmigiano.*] (*Geog.*) Pertaining, or having reference to Parma or its inhabitants; as, *Parmesan* cheese.

Parnahiba, (*par-na-er'ba*), a river of Brazil, rises in abt. Lat. 11° S., Lon. 47° W., and flowing N.N.E. between the provinces of Piauhay and Maranhão, enters the Atlantic Ocean about Lat. 2° 50' S., Lon. 41° 35' W. It receives the Urussuhy, Gurguea, Poty, Balsas, and Piracurua rivers. Length, about 750 m.

Parnassia, *n.* [*From Mt. Parnassus*, the abode of the Muses, Graces, &c.] (*Bot.*) A genus of plants, order *Hypericaceæ*. They are perennial herbs, with radical leaves and 1-flowered scapæ. *P. caroliniana*, the Grass of Parnassus, is an exceedingly elegant and interesting species, growing in wet meadows and borders of streams in the United States and Canada.

Parnassian, (*-nash'i-an*), *a.* Pertaining, or relating to Parnassus; — hence, poetical.

Parnassus, a famous mountain of Greece, govt. of Phocis, N.W. of Mount Helicon; Lat. 38° 35' 57" N., Lon. 22° 27' 36" E. It has 3 peaks, the highest of which reaches an elevation of 8,068 feet. On the W. side lay Delphi, the seat of the famous oracle, and the fountain of Castalia (see Fig. 791). The highest peak was dedicated to Bacchus, and was the scene of the orgies of his worship. The rest of the mountain was sacred to Apollo and the Muses; hence, poets were said "to climb Parnassus."

Parnassus, in *Pennsylvania*, a post-village of Westmoreland co., abt. 19 m. N.E. of Pittsburg.

Parnassus, in *S. Carolina*, a post-village of Marlborough district, abt. 20 m. S.E. of Cheraw.

Parnassus, in *Virginia*, a post-village of Augusta co., abt. 132 m. N.W. of Richmond.

Parochial, (*-rô'ki-al*), *a.* [*O. Fr.*, from *L. Lat. parochia*, parish.] Belonging, or having reference to a parish; parishes; as, *parochial* clergy, *parochial* authorities, *parochial* duties.

Parochialize, *v. a.* To form into parishes. (*Eug.*)

Parochially, *adv.* In a parish; by parishes.

Parod'ic, Parod'ical, *a.* [*Fr. parodique.*] Relating or pertaining to parody; consisting of, or resembling parody.

Parodist, *n.* [*Fr. parodiste.*] A writer of parodies.

Parody, *n.* [*Fr. parodie*, from *Gr. para*, and *ôdê*, an ode, a song.] A kind of literary composition in which the words of an author or his thoughts are, by some slight alterations, adapted to a different purpose; a kind of poetical pleasantry, in which verses written on one subject are altered and applied to another by way of burlesque. — A popular saying, adage, or proverb.

—*v. a.* [*Fr. parodier.*] To imitate in parody; to write a parody on; to alter, as verses or words, and apply to a purpose different from that of the original.

Par'oket, *n.* (*Zoöl.*) See PAROQUET.

Parol', Parole', *n.* [*Fr. parole*, from *parler*, to speak. See PARLEY.] A word.

(*Law.*) [*Written parol.*] Oral declaration; word of mouth; a pleading in a suit.

(*Mil.*) [*Written parole.*] A promise given by a prisoner of war, when he has leave to depart from custody, that he will return at the time appointed, unless discharged; — hence, word of honor; plighted faith. — A password given to officers of the guard, as distinguished from the countersign, or word given to all guards.

—*a.* Given by word of mouth; oral; not written.

Parol evidence. (*Law.*) The oral testimony of witnesses, as opposed to written evidence or record. — *Parol contract*, an agreement by word of mouth, as opposed to a written contract. In the strict legal acceptance of the term, however, everything is *parol*, even in writing, which is not under seal.

Paromology, *n.* [*Gr. para*, near, and *omologeîn*, to confer.] (*Rhet.*) A concession to an opponent, made with a view to fortify one's own argument.

Paronomasia, Paronomasy, *n.* [*From Gr. para*, and *onomasia*, a naming, from *onoma*, a name.] (*Rhet.*) A play on words; a figure of speech, by which

the same word is used in different senses, or words similar in sound are set in opposition to each other so as to give a kind of antithetical force to the sentence.

Paronomas'tic, Paronomas'tical, *a.* Pertaining, or having reference to paronomasy; consisting in punning.

Paronomasy, *n.* Same as PARONOMASIA, q. v.

Paronyeh'ia, (*-nik'-i*), *n.* [*Lat.*, from *Gr. para*, beside, and *onychos*, a nail.] (*Med.*) A whitlow.

Par'onym, Par'onyme, *n.* A paronymous phrase.

Paronymous, *a.* [*Fr. paronymique.*] (*Gram.*) Possessing the same derivation; of kindred extraction; — said of certain words, as *priest*, *priestcraft*, *priesthood*.

— Possessing an identical sound, but of different orthography and sense; as, *meet* and *meat*.

Paronymy, *n.* Paronymous quality.

Par'ouet, PAROKET, PARRAKEET, PERROQUET, *n.* (*Zoöl.*) A genus of birds belonging to the *Psittacidae* or Parrot family, distinguished by being smaller than the common Parrots, and having longer tails. There are numerous species; some, distinguished by a very long, pointed tail and collar-like mark around the neck, which inhabit the Asiatic continent and islands; and others, natives of Australia, which are distinguished by their colors being gorgeously variegated, and peculiarly mottled on the back; by their tail-feathers not being pointed; and by their being furnished with elongated tarsi, adapted for running on the ground.

Fig. 2050.

Pa'ros, an island of the Grecian Archipelago, 5 m. W. of ROSE-RINGED PAROQUET, Naxia; Lat. of Mount St. Elias, 37° N., Lon. 25° 11' E.

Area, 100 sq. m. The surface is mountainous, the scenery picturesque, and the soil fertile and in parts well cultivated. Prod. Cotton, corn, wine, fruit, and vegetables. It is noted for its famous Pariau marble, which was used by many of the greatest sculptors of antiquity. Chief town, Naussa, which has an excellent harbor. Pop. 6,000.

Parot'id Gland, *n.* (*Anat.*) One of the most important of all the salivary glands of the system. This organ, the chief source of the saliva expended in mastication, is of a quadrilateral shape, situated partly behind and partly under the ear on each side, between the external auditory passage, the mastoid process by the temporal bone, and the angle of the lower jaw, extending above to the *zigoma* of the cheek-bone, and forward to the *masseter* muscle. The *P. G.* lies with its base outwards and the apex inwards, from which proceeds the duct that carries into the mouth the secretion of the organ. This duct, after passing over the *masseter*, perforates the *buccinator* muscle, and enters the mouth through the lining membrane, exactly opposite the second molar tooth of the upper jaw. The situation and boundaries of this gland, and the position of its duct, are of the utmost importance to all surgeons operating in the neck, as not only the external carotid artery and jugular vein pass through the centre of the gland, but many important nerves are situated about it, demanding the utmost skill and care in operating in a locality so beset with dangers to be avoided.

Parot'is, *n.*; *pl.* PAROTIDES. [*Gr.*, from *para*, and *ous*, otos, ear.] (*Med.*) A tumor seated under the ear, which is reddish, hard, and attended with obtuse pains; the progress to suppuration being slow and difficult. Sometimes it is of a malignant character, sloughing, and long protracted.

Parotitis, *n.* (*Med.*) Same as MUMPS, q. v.

Par'owan, in *Utah*, a post-village, cap. of Iron co., about 110 m. S.S.W. of Fillmore City.

Par'oxysm, (*-izm*), *n.* [*Fr. paroxisme*; *Gr. paroxysmos* — *paroxyno*, to urge, prick, or spur on — *para*, and *oxys*.] (*Med.*) The severe fit or exacerbation of a disease. — Hence, any spasmodic affection or action; fit; convulsion; as, a *paroxysm* of grief.

Paroxysmal, *a.* Pertaining to, or caused by paroxysms or fits. — Characterized by paroxysms; as, a *paroxysmal* temperament.

Parquet, Parquette, (*par-kê'*, or *par-kêt'*), *n.* [*Fr.*] The pit or lower floor of a theatre, from the orchestra to the dress circle.

Parquetage, (*pâr'ket-aj*), *n.* See PARQUETRY.

Par'queted, *a.* Inlaid with parquetry; as, a *parqueded* room.

Parquetry, Parquetage, (*pâr'ket-*), *n.* [*Fr. parqueterie*, from *parquet*, dimin. of *parc*, an inclosure.] Inlaid woodwork in geometric patterns, generally composed of two different tints, and principally used for floors.

Parr, Par, *n.* A samlet; a young salmon. — An English provincialism for a young leveret.

Par'raquet, *n.* Same as PAROQUET, q. v.

Par'rel, *n.* [*From apparel.*] (*Naut.*) The hoop that confines a yard to its mast at the slings, whereby it may be hoisted or lowered at pleasure.

Par'ret, a river of W. England, rising near Bedminster, co. of Dorset, and after a N.N.W. course of 40 m., falling into Bristol Channel at Bridgewater Bay. It is navigable for vessels of 200 tons.

Parrhesia, (*-rê'zh-i-a*), *n.* [*Gr. para*, beyond, and *rêsis*, a saying.] Boldness of speech; freedom of utterance.

Parricid'al, *a.* Pertaining, or relating to parricide; involving the crime of murdering one's father, patron, &c. — Committing parricide.

Par'ricide, (-síd,) *n.* [Fr.; Lat. *parricida* — *pater*, and *caedo*, to kill. See PATERNAL.] One who murders his father, ancestor, or any one to whom reverence is due. The Athenians had no law against parricides, from an opinion that human atrocity could never reach to the guilt of parricide. This was also originally the case at Rome; but at a later period parricide was punished by the Roman law with greater severity than any other kind of homicide. The delinquent, after being scourged, was placed in a leathern sack, with a dog, a cock, a viper, and an ape, and so cast into the Tiber. The English and American law treat this crime as simple murder.

Par'rock, *n.* Same as PADDOCK, *q. v.*

Par'rot, *n.* (Zool.) See PSITHACIDÆ.

Par'rot-fish, *n.* (Zool.) See SCARUS.

Par'rotty, *n.* Servile imitation, after the manner of a parrot.

Parrott Gun, (Ord.) A rifled cannon invented by Capt. R. P. Parrott, an officer in the U. S. army, (D. 1877,) just previous to the late war with the South, and which differs from other rifled cannon in the mode of rifling and improvement in the projectiles. It is a cast-iron muzzle-loading gun, much lighter than ordinary, but having a cylinder of wrought-iron shrunk around the breach at the seat of the charge. The method of shrinking this cylinder on the cast-iron gun is by placing the gun nearly horizontal with its axis, with the muzzle slightly depressed, and when the cylinder is heated and slipped on, a continuous stream of water is forced into the bore, and from its slight depression flows out constantly. Thus the inner surface of the cylinder is soonest cooled, and contracts closely, also drawing the outer surface closer. The projectiles are conical in form, with a brass ring around the contracted base, making it cylindrical. The entrance of the gas between the iron and the brass forces the latter into the groove, giving a rotary motion to the projectile. The ring is prevented from slipping off by projections on the upper edge, which fit into corresponding notches in the metal of the shell. There are different calibres of this gun, the 8-inch, or 200-pounder, being used with effect by the government in the siege of Charleston, S. C., with a charge of 16 lbs. of powder, throwing a projectile of 150 lbs. a distance of 5 m. The great defect in this gun, however, is, that it is liable to burst after a brief service, as the experience of the late war has shown. The power of cast-iron to withstand the strain of a rifled projectile seeming to decrease very rapidly with the increase of size.

Parrsborough, a seaport-town of Colchester co., Nova Scotia, abt. 60 m. N. by W. of Halifax.

Par'ry, *v. a.* [Fr. *parer*, to ward off, as a blow; Sp. *parar*, to prevent; Lat. *paro*, *parare*, to get ready.] To ward off; to stop or put or turn by, as a blow or thrust, or anything menacing or harmful. — To evade; to shift off; to elude; as, to *parry* a question.

—*v. n.* To ward off strokes; to put aside thrusts or strokes; to fence; to evade.

Par'ry, SIR WILLIAM EDWARD, an English navigator, B. at Bath, 1790. He entered the navy in 1803, and in 1818 accompanied Sir John Ross, as second in command, to Baffin's Bay, in an expedition for the discovery of the N.W. Passage. This expedition returned to England unsuccessful. But the year following, Lieut. Parry was appointed to the command of the *Hecla* and *Griper* for a similar object; and this voyage resulted in the discovery of a considerable portion of the N.W. Passage, the ships wintering at Melville Island. Capt. Parry afterwards commanded two other expeditions of a similar kind, but the nature of the ice on both occasions obliged the ships to return. In 1827 he again commanded the *Hecla*, in an attempt to reach the North Pole. The ship was left at Spitzbergen, and *P.*, with his boats, succeeded in reaching the highest latitude attained up to that time (82° 45'), but the southerly drift of the ice prevented further advance. Died in 1855.

Par'ryville, in Pennsylvania, a post-borough of Carbon co., about 7 m. S.E. of Mauch Chunk.

Parse, *v. a.* [Lat. *pars*, a part.] (Gram.) To resolve, as a sentence, into its parts or elements, or to show the several parts of speech composing a sentence, and their relation to each other by government or agreement; to make grammatical analysis.

Parsee, *n.* [Hind. and Pers. *pārsi*, a fire-worshipper.] See GUEBER.

Parsee'ism, *n.* The Zoroastrian religion; the customs of the Parsees; fire-worshipping.

Pars'er, *n.* One who parses.

Parsimo'nious, *a.* Very sparing in the use or expenditure of money; covetous; niggardly; miserly; penurious; frugal.

Parsimo'niously, *adv.* In a parsimonious manner; with a very sparing use of money; covetously.

Parsimo'niousness, *n.* Sparingsness in the use or expenditure of money.

Par'simony, *n.* [Fr. *parsimonie*; Lat. *parsimonia*, from *parco*, to use sparingly.] Closeness in the expenditure of money or means; — usually in a bad sense; frugality; savingness; niggardliness; illiberality.

Pars'ley, *n.* (Bot.) See PETROSELINUM.

Pars'nip, *n.* (Bot.) See PASTINACA.

Parson, (pār'sn,) *n.* [L. Lat. *ecclesie persona*, the person of the church; so called because by his person, the church, which is an invisible body, is represented.] The rector, vicar, or incumbent of a parish; one who has the parochial charge or cure of souls. — A clergyman; one who is in holy orders, or has been licensed to preach.

Par'sonage, *n.* In England, the benefice of a parish;

a rectory endowed with a house, glebe, lands, &c., for the maintenance of the incumbent; the mansion or dwelling-house of a parson. — Money paid for the maintenance of a parson. (R.)

— In the U. States, the glebe and house belonging to a parish or ecclesiastical society, and appropriated to the support of the incumbent or settled pastor of a church. Webster.

Par'soned, (-sōnd,) *a.* Performed by, or suitable to, a parson. (R.)

Par'sonfield, in Maine, a post-township of York co.; pop. abt. 2,500.

Parson'ic, **Parson'ical**, *a.* Clerical; of, or belonging to, a parson.

Parson'ically, *adv.* In the manner of a parson. (R.)

Par'sonish, *a.* Characteristic of, or belonging to, a parson; — said in a sense of humor or derision.

Part, *n.* [Fr. = Sp. *parte*; Lat. *pars*, *partis*, a part, piece, portion, share; Heb. *paras*, to break, to divide.] A portion, piece, or fragment broken off or separated from a whole thing; a portion or quantity of a thing not separated in fact, but considered or mentioned by itself; a portion or component particle; a division; a fraction; a number; a constituent; something less than a whole. — A distinct species or sort belonging to a whole; an ingredient in a mingled mass; a portion in a compound, organic element. — Particular division; equal constituent portion; proportional ingredient.

"I am a part of all that I have met." — Tennyson.

— Share; lot; portion; proportional quantity. — Participation; interest; concern; share.

"Achilles had no part in his fault." — Pope.

— Side; party; interest; faction; clique.

"So quick to take the bully's part." — Prior.

— Prescribed duty; particular or special office or business; share of labor, action, or influence.

"Act well your part, there all the honour lies." — Pope.

— Character appropriate in a play or public performance; stage-speech, action, and characteristics of a single performance in a drama, &c.

"One man in his time plays many parts." — Shaks.

(Mus.) One set of the succession of sounds which constitute harmony.

(Math.) That portion of a given quantity, which, when taken a certain number of times, will exactly compose such quantity; as, 4 is a part of 16; — opposed to *multiple*.

— A line or other element of a figure.

— *pl.* Qualities; powers; faculties; accomplishments; frequently, remarkable mental talents; as, a man of *parts*.

— *pl.* Applied to place; quarters; regions; districts; as, in foreign *parts*.

For my part, so far as I am concerned; for my share. — For the most part, commonly; oftener than otherwise; as, we found them, for the most part, to be very decent people. — In good part, favorably; propitiously; acceptably; in a friendly manner; as, I took his excuses in good part. — In ill part, as ill done; unpleasantly; offensively.

In part, to some degree, extent, or measure; partly.

Part and parcel, an integral part or portion.

— *v. a.* To divide, separate, or break; to sever into two or more pieces. — To divide into portions; to allot; to distribute; to share. — To separate; to disunite, as things that are near each other; to sunder; to cause to break connection or contiguity; as, death *parts* all things. — To separate; to stand between; to intervene betwixt; as, to *part* combatants.

"The narrow seas that part the French and English." — Shaks.

— To secrete; to secrete.

"The liver parts the vital juices." — Prior.

— To disintegrate or purify, as metals.

To part a cable, rope, &c. (Naut.) To incur the breaking thereof.

— *v. n.* To be separated, broken off, or detached; to leave. — To quit each other; to break with each other; to take or bid farewell; to become divided.

"When we two parted in silence and tears." — Byron.

To part with, to quit; to surrender; to resign; to lose; to be taken away from; as, he is loth to *part* with his money.

Part'able, *a.* Same as PARTIBLE, *q. v.*

Partake', *v. n.* (imp. PARTOOK; pp. PARTAKEN.) To take a part, portion, or share in common with others; to participate; — generally preceding *of*, and sometimes *in*; as, we *partook of* his hospitality. — To have something of the properties, nature, title, or office; — generally before *of*. — To be admitted; not to be excluded.

"You may partake of anything we say; we speak no treason." — Shaks.

— *v. a.* To share; to participate in.

"Let every one partake the general joy." — Dryden.

Partak'er, *n.* One who partakes; one who receives a part, share, or portion, in unison with others; a participant; a sharer; — preceding *of* or *in*. — An accomplice; an associate; a partner; a comrade.

"Thou hast been partaker with adulterers." — Psalms i. 18.

Partak'ing, *n.* An associating; complicity in an evil intent.

Parta'na, a town of Italy, in Sicily, prov. of Trapani, 19 m. S.E. of Trapani; pop. 8,000.

Part'ed, or **Part'itic**, *a.* (Bot.) Said of a leaf when the segments extend nearly, but not quite, to the base of the blade or to the midrib.

Parten'ico, or **Partin'ico**, a town of Italy, in Sicily, 14 m. W.S.W. of Palermo. *Manuf.* Woollen and silk fabrics. Pop. 11,000.

Part'er, *n.* One who parts, divides, or separates.

Parterre, (pār-tair') *n.* [Fr.; Lat. *par*, equal, and *terra*, ground.] That part of a flower-garden which is laid out in beds of a fanciful form.

— The parquet or pit of a theatre.

Parthenay, (par-tel-nā') a town of France, dept. of Deux-Sèvres, on the Thou, 24 m. N.N.E. of Niort. *Manuf.* Cloth and leather. Pop. 5,500.

Parthen'ic, *a.* [From Gr. *parthenos*, a virgin.] Belonging, or relating to the Partheniæ, or sons of unmarried women, of Sparta.

Partheno-gen'esis, *n.* [Gr. *parthenos*, virgin, and *genesis*, generation.] (Physiol.) The procreation of offspring by a plant or animal independently of the immediate stimulus of the male principle, which is one of the phenomena of ALTERNATE GENERATION, *q. v.* The impregnated seed of a plant produces a *phyton* of the proper species, usually in the form of a leaf, with a stem and root; from this a succession of *phytons* may be developed by gemmation, most of them having the form of leaves; but in the higher species of plants, some may take the form of petals; others of stamens, developing the male principle, or *pollen*; others of pistils, forming the female principle, or *seed*. By the union of these two principles the seed is impregnated, and may germinate; but the series of individuals successively developed from the first individual from the seed are procreated by *partheno-genesis*. The different individuals being organically connected, according to a definite pattern for each species, form a compound whole, which is commonly regarded as the individual *tree* or *shrub*. For further information, see Steenstrup, *On Alternate Generation*; and Owen, *On Partheno-genesis*.

Par'thenon, *n.* (Grecian Arch.) A celebrated temple at Athens, consecrated to Athena or Minerva, the protectress of the city, (Fig. 2051.) The Parthenon was built on an elevated rock near the Acropolis, and has always been regarded as the most exquisite and perfect example of Grecian architecture; it was built in the Doric style, and is one of the noblest monuments of antiquity. The Parthenon was erected about 448 years B.C., in the time of Pericles, Phidias being the chief sculptor. It had a length of 228 feet, by a breadth of 100; it had eight columns beneath each pediment, and fifteen on each side, exclusive of those at each end of the pediments, with which they formed sixteen intercolumns, or forty-six columns in all, exclusive of those within the building. The principal objects of art were

Fig. 2051. — THE PARTHENON.

a statue of Minerva, twenty-six cubits high, made of ivory and gold, in an erect position, with a lance in her hand, a shield at her feet, and Medusa's head on her chest, — a work regarded as the masterpiece of Phidias. This magnificent fane had resisted the ravages of time down to the seventeenth century, being by turns a pagan temple, a Christian church, and a Turkish mosque, till at the siege of Athens by the Venetians, in 1687, a shell fell on the roof of the Acropolis or citadel, which, firing the magazine beneath, shattered that building and the Parthenon into blackened ruins. Early in the present century, it was mutilated by Lord Elgin, who removed to England its noblest sculpture.

Parthen'ope, *n.* [Lat. and Gr.] (Myth.) One of the Syrens who, from despair of being unable to charm Ulysses, threw herself into the sea.

(Zool.) A genus of decapodous, short-tailed crustaceæ.

(Astron.) An asteroid discovered by De Gasparis in 1850.

Par'thia, (Anc. Geog.) A celebrated country of ancient Asia, called by the Greeks Parthycæ and Parthylene, which was bounded N. by Hyrcania, S. by Carmania Deserta, E. by Asia, and W. by Media. *P.* was a wild and mountainous country of great extent, having 25 large cities, of which the chief, and capital of the country, was Hecatompylon — so named from having 100 gates. When *P.* rose in the scale of nations and became a powerful state, the empire of *P.* was made up of conquered kingdoms, extended from the Caucasus in the N. to the Erythrean Sea in the S., and from the Indus in the E. to the Tigris in the W. The Parthians, originally an offshoot from the Scythians, were noted for their love of war and martial glory; they were the most celebrated horsemen in the world, and such excellent marksmen with the bow and arrow that, though in full flight and shooting backwards, they could hit any object; their storm of arrows, discharged while flying from the field at full speed, being as fatal as those volleys poured on an advancing foe. The Parthians became subject to Persia; and their country, with Sogdiana and some other states, were formed into a province called a *satrapy*. When Alexander conquered Persia, he united Parthia and Hyrcania into one satrapy. After the dissolution of the Greek empire, the country became subject to Eumenes; next, to Antigonos and the Selencidæ — the Syrian kings — till B. C. 255, when, throwing off the yoke of their tyrant masters, the Parthians established their independence under one of their own chiefs,

Arsaces I., from whom all their succeeding monarchs received the name of Arsacidæ. Under this dynasty, the empire extended from the Indus to the Euphrates, and from the Oxus in the N. to the Persian Gulf in the S. This empire lasted for about 480 years, or from B. C. 256 to A. D. 226, when the last king, Artabanus, was murdered by a chief called Artaxerxes, a descendant of the first founder of the empire, who, usurping the throne, founded the new Persian empire, called the Sassanidæ.

Partial, (*pär'shal*), *a.* [Fr., from Lat. *pars*, *partis*, part.] Of, or belonging to a part or portion only; not total or entire; not general or universal; as, a *partial* dissolution of the earth. — Biassed to one side or party; inclined to favor one party in a cause, or one side of a question more than the other; as, a *partial* judge, a *partial* critic. — More strongly inclined to one thing than to others; having a predilection for one thing more than another; disposed to favor without reason; as, to become *partial* to a new acquaintance.

(*Bot.*) Applied to parts which are subdivisions of something similar; subordinate.

Partialism, *n.* (*Theol.*) The doctrine held by the partialists.

Partialist, *n.* One who exhibits partiality.

(*Theol.*) One who believes in the doctrine of atonement as applying to the elect only.

Partiality, (*par-shi-äl'ti*), *n.* [Fr. *partialité*.] State or quality of being partial; inclination to favor one party or one side of a question more than the other; an undue bias of mind toward one party or side, which is apt to warp the judgment. — Colloquially, a predilection, or stronger inclination to one thing than to another; as, a *partiality* for ladies' society.

Partially, *adv.* With undue bias of mind to one party or side; in a partial manner; with unreasonable favor or dislike; as, to look upon *partially*. — In part; not totally or generally; as, the accounts are *partially* true.

Partibility, *n.* Quality of being partible; capability of division, partition, or severance; divisibility; separability.

Partible, **Partable**, *a.* [It. *partibile*.] That may be parted or divided; susceptible of severance or partition; separable; divisible.

Participable, *a.* That may be participated, shared, or partaken.

Participant, *a.* Participating; sharing: — before *of*. — *n.* One who participates; a partaker; a sharer.

Participantly, *adv.* In a manner to share or participate.

Participate, *v. a.* [Fr. *participer*, from Lat. *pars*, *partis*, and *capio*, to take.] To partake; to have a share, in common with others; to have part of more things than one: — sometimes preceding *of* or *in*; as I *participate* in your joy.

— *v. a.* To partake; to share; to receive a part of. (*R.*)

Participation, *n.* [Fr., from L. Lat. *participatio*.] Act of partaking or participating; state of sharing in common with others; to have part of more things than. Distribution; division into shares; as, "convenient *participation* of the general store." — *Raleigh*.

Participative, *a.* Susceptible of participating.

Participator, *n.* A partaker; one who shares with another.

Participial, *a.* [Lat. *participialis*.] Having the nature and use of a participle; formed from a participle.

Participialize, *v. a.* To put into the form of participles.

Participially, *adv.* In the sense or manner of a participle.

Participle, (*par'ti-sipl*), *n.* [Lat. *participium*, from *pars*, *partis*, and *capio*, to take.] (*Gram.*) A part of speech which partakes both of the properties of an adjective and of a verb. It may be considered as an adjective with the idea of time added, or as a verb without the idea of affirmation. In English there are two participles, the present and past; the former ending in *ing*, the latter in *en*, *ed*, *d*, or *t*. The modern languages are much inferior to the ancient in the power and expressiveness derived from their participles.

Particle, (*par'ti-kl*), *n.* [Fr. *particule*; Lat. *particula*, dimin. of *pars*, *partis*.] A small or minute part or portion of matter; an elementary part of a body, or an assemblage of general atoms of which natural bodies are composed; as, a *particle* of sand.

— Any infinitesimal portion or part; as, he has not a *particle* of generosity in his nature.

(*Gram.*) A general term to express the subordinate or secondary parts of speech — the adverb, the preposition, and the conjunction. But it is more in accordance with grammatical precision to apply this term to those minor words to be met with in all languages which serve to give clearness and precision to a sentence. The term is also applied by grammarians to those words which cannot be used separately, but must form part of the preceding word, as the Latin *que* in *virumque*, and the English *ward* in *backward*.

(*Ecc.*) In the Roman Catholic Church, a crumb of consecrated bread; also, the smaller breads distributed in the communion of the laity.

Par'ti-colored, *a.* See PARTY-COLORED.

Particular, *a.* [Fr. *particulier*; Lat. *particularis*, from *pars*, a part.] Pertaining, or having reference to a part or particle; having the nature of a part, or of anything parted or separated; belonging to a single person or thing; individual; special; specific; not general. — Noting or designating a single person or thing by way of distinction; individual; not indefinite; as, a *particular* merit, a *particular* choice. — Noting some peculiar or extraordinary property or quality; notable; singular; removed from the common way or manner; not

ordinary; as, a *particular* dispensation of Providence. — Attention to things single or distinct; exact; precise; minute; scrupulous; — hence, uice; fastidious; difficult to please; as, a *particular* person in dress. — Odd; singular; having something that eminently distinguishes one above others.

(*Law.*) *P. average.* Every kind of expense or damage, short of total loss, which regards a particular concern, and which is to be wholly borne by the proprietor of that concern or interest alone. — *P. custom*, a custom which only affects the inhabitants of some particular district. To be good, a particular custom must have been used so long that the memory of man runneth not to the contrary; must have been continued; must have been peaceable; must be reasonable; must be certain; must be consistent with itself; must be consistent with other customs. — *P. estate.* An estate which is carved out of a larger, and which precedes a remainder; as an estate for years to A, remainder to B for life; or, an estate for life to A, remainder to B in tail: this precedent estate is called the particular estate. — *P. lien.* A right which a person has to retain property in respect of money or labor expended on such particular property. — *P. statement.* In Pennsylvania practice, a statement particularly specifying the date of a promise, book-account, note, bond (penal or single), bill, or all of them, on which an action is founded, and the amount believed by the plaintiff to be due from the defendant. It is founded on the provisions of a statute passed in 1806. It is an unmethodical declaration, not restricted to any particular form.

Particular Baptists. (*Ecc.*) See BAPTISTS.

Particular, *n.* A distinct, separate, or minute part; a single instance, point, or circumstance; a detail; as, he told me all the *particulars*. — A private person; an individual. (*R.*) — Individuality; special peculiarity, character, business, interest, &c.

"If the *particulars* of each person be considered." — *Milton*.

In *particular*, peculiarly; specially; distinctly; as, we must not, in *particular*, forget this.

Particularism, *n.* Detailed statement; minute description.

(*Theol.*) The doctrinal tenets of particular election.

Particularist, *n.* One who upholds particularism.

Particularity, *n.* [Fr. *particularité*.] State or quality of being particular; distinct notice or specification of particulars; petty account; minute incident. — Individual peculiarity or characteristic. — Minuteness in detail.

Particularization, *n.* Act of particularizing, or state of being particularized.

Particularize, *v. a.* [Fr. *particulariser*.] To make particular; to enumerate or specify in detail; to mention distinctly or minutely.

— *v. n.* To attend to or recount minute details or single particulars.

Particularly, *adv.* In a particular manner; singly; distinctly. — In an especial way or manner; as, he is *particularly* fond of his pipe.

Parting, *n.* Act of dividing; separating; any severance made by such an act; as, the *parting* of friends or lovers, the *parting* of one's hair, &c.

(*Naut.*) The breaking, as of a hawser, by undue strain or other violence.

(*Metall.*) The operation or process of separating gold and silver from each other.

(*Geol.*) A fissure, as in a coal-seam.

Partisan, *n.* [Fr., from Lat. *pars*, *partis*, part.] One who is a devoted adherent to a cause or party; a party man.

(*Mil.*) One skilled in the command of detached troops, who, being well acquainted with the country, is employed to gain intelligence, to surprise the enemy's convoys, and to perform other duties of desultory warfare. — *Worcester*.

— *a.* Steadfastly adhering to a party, or faction; biassed in favor of a particular cause or interest; as, *partisan* enthusiasm.

(*Mil.*) Prosecuting irregular or guerrilla warfare; as, a *partisan* corps.

Partisan ranger. (*Mil.*) A partisan; a member of a partisan force.

Partisan, *n.* [From O. Fr. *pertaiser*, to pierce.] A kind of halberd or pike.

"Shall I strike it with my *partisan*?" — *Shaks*.

Partisanship, *n.* State or condition of being a partisan; adherence to a cause, party, faction, or interest.

Partite, *a.* [From Lat. *partire*, to divide, from *pars*, *partis*.] (*Bot.*) Cleft nearly to the base; as, a *partite* leaf.

Partition, (*-tish'un*), *n.* [Fr.; Lat. *partitio*, from *partiri*, to distribute, divide.] Act of parting, dividing, or state of being divided, separated, division, separation.

"Seeming parted, but yet an union in *partition*." — *Shaks*.

— That which divides or separates; dividing line; especially, the wall dividing one apartment of a house from another.

"What thin *partitions* sense from thought divide." — *Pope*.

— Part where separation is made; hence, an apartment; as, "lodge in a small *partition*." — *Milton*.

(*Mus.*) A score.

(*Law.*) Division of an estate in which several are jointly interested.

— *v. a.* To divide into distinct shares or allotments. — To separate into distinct compartments by walls or bulkheads; as, to *partition* the ground-floor of a house.

Partitionment, *n.* Act of partitioning; division.

Partitive, *a.* [Fr. *partitif*.] (*Gram.*) Denoting a part; distributive; as, a pronoun *partitive*.

— *n.* (*Gram.*) A word denoting a part; a distributive.

Partitively, *adv.* In a partitive manner; distributively.

Part'ly, *adv.* In part; in some extent, measure, or degree; not wholly or entirely.

Partner, *n.* [From *part*.] One who partakes or shares with another; one who acts, enjoys, or suffers with another; an associate. (See PARTNERSHIP.) — A husband or wife; a consort. — One who dances with another, either male or female; as, my *partner* in the quadrille.

— *pl.* (*Naut.*) Thick pieces of wood fitted into a rabbet in the mast carlings, to receive the wedges of the mast; also, temporary pieces nailed to the deck around the pumps.

Partnership, *n.* (*Law.*) An agreement voluntarily entered into, by two or more individuals, to unite their capital, labor, and skill, all or any of them, for carrying on some business or undertaking in common, each deriving a certain share of the profits, and generally bearing a corresponding share of the loss arising therefrom. As commonly used, *P.* is only applied to the smaller associations of individuals, comprising usually a few members; — where an association, having gain for its object, consists of more than twenty members, it generally takes the shape of a chartered or joint-stock company; otherwise, in general, each partner would be liable, singly, for the debts of the whole partnership. A *P.* is commonly constituted by a written instrument, usually, by deed, the provisions of which are denominated articles of partnership. It may be either for a certain fixed time, or for an indefinite period, and may be dissolved either by the natural expiration of that period or the mutual agreement of the parties, or, in the event of disagreement, by decree of a court of equity. The mere consent of the parties is sufficient to constitute a *P.*; and they may distribute their profits and regulate their affairs in any way they please among themselves; but they cannot, by so doing, limit, defeat, or elude, their responsibility to others. In ordinary *P.*, each member, however small his share, is liable for all the debts of the company. To constitute a person a partner, he must be a participator in uncertain or casual profits depending upon the accidents of trade. Where the premium or profit he is to receive is certain and defined, he is not a partner; and if he is only to receive a portion of the profits as payment for his labor as a servant or agent of the company, he is not a partner. A participation in the profits without a participation in the losses, constitutes a *P.* as regards third parties. Partners are ordinarily divided into *ostensible*, *nominal*, or *dormant*. Partners whose names appear before the world as such are ostensible partners; but if they have no actual interest in the concern, then they are only nominal partners; those whose name and connection with a firm are purposely concealed from the world are dormant partners. A dormant partner is, in all cases, liable for the contracts of the firm during the time that he is actually a partner; and a nominal partner is, in the same manner, liable during the time that he holds himself out to the world as partner. The rights, duties, and obligations of the partners, *inter se*, are usually laid down in articles of *P.*; and each partner has a right to hold his co-partners to the specified purposes of their union while the *P.* continues. The powers of partners are very extensive, and the contract or other act of any member or members of the associated body in matters relating to the joint concern is, in point of law, the contract or act of the whole, and consequently binding upon the whole, to the extent of rendering each liable for it individually as well as in respect of the partnership property. This power or authority does not extend to matters extraneous to the joint concern, nor even to matters which, though connected with it, are, by the ordinary usage of business, transacted with the express and formal intervention of each partner. Partners, though they should act in a fraudulent manner as respects their co-partners, bind the firm in all matters connected with its peculiar dealings. Should one of the partners enter into a smuggling or other illegal transaction on the *P.* account, the other partners are liable for the duty and penalties. When one of the partners has been made liable for the debts of the firm, he has his relief against the others for a due portion of it. Partners cannot be relieved from future liabilities to third parties without notice to them, and the world in general, that the *P.* has ceased. — *Special P.* The laws of various states provide for the establishment of special partnerships, in which the liability of the special partner is limited in the manner provided in the law. To avoid the liabilities of a general partner, these provisions must be strictly observed. See LIMITED.

Partook, *imp.* of PARTAKE, *q. v.*

Partridge, an island of New Brunswick, in St. John's Harbor, S. of St. John.

Partridge, *n.* (*Zoöl.*) The common name of the *Perdix*, a family of birds, sub-order *Gallina*, differing from the grouse in being much smaller, and in their bare tarsi and naked nasal fossæ. This family includes the Quails, chiefly grouped in the genus *ORTYX*, *q. v.*, and the Partridges, a term so diversely and confusedly applied to birds of different genera, that it is almost impossible to give a satisfactory account of it. So the *Ortyx Virginianus* (Fig. 2009), which is a quail in New England and New York, becomes a partridge in Pennsylvania; the partridge of New England is the ruffed grouse, *Bonasa umbellus*; the spruce partridge is the Canada grouse, *Tetrao Canadensis*, &c. The typical partridge, composing the genus *Perdix* of Linnaeus, is an European bird, and is not represented in America. The common, or gray partridge, *Perdix cinerea*, is about 13 inches. The general color of its plumage is brown and ash, beautifully mixed with black, and each feather streaked down the middle with buff; the upper part of the neck is transversely varied with dusky.

Blaise Pascal

1623-1662

gray, and a tinge of red; the sides of the head are tawny; under each eye is a small saffron-colored spot, which has a granulated appearance, and between the eye and the ear a naked skin of bright scarlet, which is not very conspicuous but in old birds; the under part of the neck and breast are bluish-gray, marked with transverse black lines, and sprinkled with small reddish spots; on the lowest part of the breast is a rich gorge of deep chestnut, in form of a horse-shoe; the tail is short and drooping; the legs are greenish-white, and furnished with a small knob behind. Partridges pair early in the spring. The sexual ardor of the male has

Fig. 2052.—RED-LEGGED PARTRIDGE.
(*Perdix rufus*.)

been the theme of many writers on natural history; and there are instances out of number in which the parental solicitation of the female has justly called forth their eulogistic admiration. Gray partridges are found throughout nearly the whole of Europe; while the Red-legged Partridge, *Perdix rufus* (Fig. 2052), a very beautiful and delicate bird, and excellent for the table, chiefly distinguished by having red legs and feet with brown claws, is more common in Southern France and Spain.

Par'tridge, in Illinois, a township of Woodford co.; pop. abt. 946.

Par'tridge-berry, *n.* (*Bot.*) See MITCHELLA.

Par'tridge wood, *n.* (*Bot.*) A variegated wood of certain S. American and W. Indian trees, one of which is supposed to be *Andira inermis*.

Part-song, *n.* (*Mus.*) A song in two or more separate vocal parts.

Partu'riency, *n.* Same as PARTURITION.

Partu'rient, *a.* [*Lat. parturiens, parturio*—*pario, partus*, to bring forth.] Bringing forth, or about to produce young.

Parturition, (*-rîsh'un*), *n.* [*Late Lat. parturitio*.] The act of bringing forth, or of being delivered of young.

Par'ty, *n.* [*O. Fr. partie*; *Fr. parti*, from *Lat. pars, partis*.] A number of persons united by some distinguishing tie in opposition to the rest of the community; especially, a body or association of individuals who take a particular part or side in political or public affairs; a faction.—One of two litigants, the plaintiff or defendant in a law-suit, whether an individual, a firm, or an incorporated body; as, a *party* to an action.—One concerned or interested in an affair; a partaker or participator; as, I was not a *party* to the transaction.—A select company invited to an entertainment; a social assembly; a company made up for a given occasion; as, a dinner *party*.

—A single person distinct from or opposed to another; as, he was the *party* affronted.—Hence, an individual; a person; as, "a *party* of the name of Guppy."—*Dickens*.

(*Mil.*) A detachment of troops sent forth on some special service; as, a skirmishing *party*, a foraging *party*.

Par'ty, *n.* [*From O. Fr. partir*, to divide.] (*Her.*) The division of a shield by a line running in the direction of either of these ordinaries; as, in *party*, per pale, fell, &c.

Par'ty-colored, (*-kûl'urd*), **Par'ti-colored**, *a.* Variegated with divers colors; colored with different hues or tints; as, a *party-colored* costume, a *party-colored* flower.

Par'ty-fence wall, *n.* A wall separating the ground in one person's occupation from that of another.

Par'tyism, *n.* Devoted adherence to party or faction.

Par'ty-jury, *n.* (*Law*.) A jury empanelled of half natives and half foreigners.

Par'ty-verdict, *n.* A joint verdict.

Par'ty-wall, *n.* A brick partition erected between buildings in separate occupations to prevent the spread of fire.

Pa'ru, a river of Brazil, flowing into the Amazons, abt. 280 m. W. of Para; length, abt. 350 m.

Paru'lis, *n.* [*Gr. paroulos*.] (*Med.*) A gum-hoil.

Paru'ru, a town of Peru, cap. of a prov. of the same name, abt. 18 m. S.S.W. of Cuyco co.; pop. of the prov. 20,000.

Par us, *n.* (*Zoöl.*) A genus of birds, of the Titmouse family. See TITMOUSE.

Parusia, (*-ru'zhî-a*), *n.* [*Gr. parousia*.] (*Rhet.*) A figure of speech by which the present tense is used for the past or future.

Par va'gum, *n.* [*Lat.*] (*Anat.*) See PNEUMOGASTRIC.

Parvanim'ity, *n.* [*Lat. parvus*, small, and *animus*, mind.] Little-mindedness; state or quality of being of mean or ignoble disposition.

Par venu, *n.* [*Fr.*, from *parvenir*, to attain to.] An

upstart; one suddenly risen from vulgar obscurity into wealth and position.

Pas, *n.* [*Fr.*, from *Lat. passus*, pace.] A step.

Pascagou'la, in Mississippi, a post-village of Jackson co., abt. 175 m. S.E. by S. of Jackson.

Pascagou'la Bay, in Mississippi, an inlet of the Gulf of Mexico, in Jackson co., receiving the Pascagoula River.

Pascagou'la River, in Mississippi, formed in Greene co., by the union of the Chickasawhay and Leaf Rivers, and flowing S. enters the Mississippi Sound from Jackson co.

Pascal, BLAISE, (*pas'kal*), one of the most profound thinkers and accomplished writers of France, b. at Clermont, in Auvergne, 1623. His family was one of considerable distinction, his grandfather having been a treasurer of France at Riom, and his father president of the Court of Aids, in Auvergne. From his earliest childhood he exhibited precocious proofs of genius, especially in mathematics. Having been purposely kept in ignorance of geometry, lest his propensity in that direction should interfere with the prosecution of other studies, his self-prompted genius discovered for itself the elementary truths of the forbidden science. At 12 years of age, he was surprised by his father in the act of demonstrating, on the pavement of an old hall where he used to play, and by means of a rude diagram traced with a piece of coal, a proposition which corresponded to the 32d of the first book of Euclid. At the age of 16 he composed a small treatise on conic sections, which excited the untinged incredulity and admiration of Descartes. At 19 he invented his celebrated arithmetical machine, and at the age of 26 he had composed the greater part of his mathematical works, and made those brilliant experiments in hydrostatics and pneumatics, which have associated his name with those of Porricelli and Boyle, and ranked him among the first natural philosophers of his age. But a strong religious impulse having been imparted to his mind at this period, deepened, no doubt, by the attacks of disease, which he had suffered uninterruptedly from his 18th year, he suddenly renounced the career to which his genius so unequivocally invited him, and thenceforward devoted himself to theology and polemics, and to the promotion of the spiritual and temporal welfare of his fellow-men. After a short interval spent at Paris, he retired to Port Royal in 1654, where he spent the remainder of his days. The two works by which he is best known are, his *Provincial Letters*, a caustic satire upon the Jesuits, published in 1656, under the name Louis de Montalte, and his posthumous *Pensées*, which have always been regarded as among the richest repositories of eloquent thought and profound theology. D. 1662.

Pasch, **Pas'cha**, (*pâsk*), *n.* Same as PASSOVER, *q. v.*

Pasch egg. Same as PAAS-EGG, *q. v.*

Pasch flower. See PASQUE-FLOWER.

Paschal, (*pâsk'al*), *a.* [*Fr. pascal*; *Low Lat. paschalis*; *Heb. pîsch*, the passover.] Pertaining to the passover, or to Easter.

Paschal, *n.* (*Eccl.*) A stand or candlestick, of large size, used in Roman Catholic worship.

Paschal I., (*pâsk'al*), Pope, was a Roman, of the name of Paschasius, and succeeded Stephen V. in 817. He crowned Lothaire, the emperor, at Rome. D. 824.

PASCHAL II. was a native of Tuscany, and succeeded Urban II. in 1099. He had a contest with the Emperor Henry IV., and also with Henry I., king of England, respecting the right of investitures. The former visited Rome, to be crowned by the pope, who refused to perform the ceremony unless he yielded the matter in dispute. On this, Henry caused Paschal to be seized by his troops, which gave so much offence to the Romans that they rose in behalf of their pontiff, and Henry retired from Rome, but carried the pope with him. Paschal, after a captivity of two months, conceded his claim to the investitures. This concession was afterwards cancelled in two councils. D. 1118.

PASCHAL III. became Pope in opposition to Alexander III. in 1164, through the influence of the Emperor Frederick I. He remained in possession of the papal chair while Alexander was absent at Benevento. D. 1168.

Pas'co, or CERRO DE PASCO, a town of Peru, cap. of the prov. of its own name, dept. of Junin, abt. 130 m. N.E. of Lima. It is situated 11,000 ft. above sea-level, is badly built, and in a wretched condition. Its former importance was due to the rich silver mines in the vicinity, which have lately ceased to yield so abundantly. Pop. abt. 10,000.

Pas'co, in Missouri, a village of Dallas co., abt. 20 m. N.N.E. of Springfield.

Pas'co, (*Cerro*), a mountain-spur in Peru; unites two ranges of the Andes. Height, 16,000 ft.

Pas'coag, in Rhode Island, a post-village of Providence co., abt. 20 m. N.W. by W. of Providence.

Pascua'ra, or PASQUARO, or PATYQUARO, a town of Mexico, on a lake of the same name, abt. 28 m. S.W. of Valladolid. Pop. 6,000.

Pas-de-Calais', a dept. of the N. of France, between Lat. 50° and 51° N., Lon. 1° 35' and 3° 10' E., having N. the strait of Dover, N.E. and E. the dept. Du Nord, S. Somme, and W. the English Channel. Area, 2,624 sq. m. The surface is hilly, except along the coasts, which are low. The soil is fertile, and agriculture well conducted. *Rivers*. Scarpe, Lys, Aa, Liane, Canche, and Austic. *Prod.* Corn, wheat, hemp, flax, tobacco, and oleaginous plants. *Manuf.* Lace, tulle, linen and cotton stuffs, yarn, leather, glass, gunpowder, earthenware, beetroot-sugar, and spirits. *Chief towns* Arras, (the cap.) Bethune, Boulogne, Calais, Montrenil, St. Omer, and St. Pol. Calais and Boulogne are the principal seaports. Pop. 749,777.

Pasha, **Pacha**, (*pâ'shah*). A title of honor given in the beginning of the Turkish empire to the ministers and chief assistants of the Sultan, whether military or learned. In process of time the title was bestowed particularly on the governors of provinces styled *pashalics*. The distinction of rank between the two classes of pashas consists in the number of horse-tails which are carried before them as standards, the higher having three and the lower two. There were, until recently, twenty-five pashalics, subdivided into sandjakates, besides various independent jurisdictions scattered over the empire.

Pa'shalic, **Pa'chalic**, *n.* [*Turk. pâchâlyk*.] The jurisdiction or territory governed by a pasha.

Pasigraphy, *n.* [*Gr. pas*, all, and *graphein*, to write.] A system of universal writing.

Pas'ilaly, *n.* [*From Gr. pas*, all, and *lalê*, talk.] A form of universal language.

Pasiphaë. See MINOTAUR.

Pasita'no, a town of S. Italy, prov. of Principato Citeriore, on the Gulf of Salerno, 6 m. W. of Amalfi. Pop. 4,000.

Pas'kack, in New Jersey, a post-village of Bergen co., abt. 12 m. N.N.E. of Paterson.

Paskewitsch, IVAN FEODORIVITSCH, PRINCE, (*pas'ke-ritsch*), a Russian field-marshal, b. 1782. He distinguished himself in the campaigns against the French which led to the occupation of Paris by the allies. He was appointed by the Czar Nicholas to conduct the war of 1826 against the Persians, whom he thoroughly defeated. He had scarcely signed the treaty of Turkmanshai with them when he led a Russian army against the Turks, and took Kars and Erzeroum from them; he next crushed the Poles, and ruled over them with an iron heel for 16 years, when he was sent to stamp out in Hungary the efforts of another nationality to assert its rights. When the Crimean war broke out, he led the Russian forces into the Principalities, and laid siege to Silistria, but was wounded and obliged to retreat, and d. soon after, 1856.

Pas'palum, *n.* [*Gr. paspalos*, millet.] (*Bot.*) A genus of plants, order Gramineæ. *P. exile* yields the smallest known cereal grain, *Fundi* or *Fundungi*, which is used as food on the W. coast of Africa. In Sierra Leone it is commonly called millet. *P. scorbulatum* also yields a kind of grain known in India as the *Menya* or *Kodro*.

Pasque, (*pâsk*), *n.* See EASTER.

Pasque'-flower, or PASCHAL-FLOWER, *n.* (*Bot.*) The common name of several species of the genus *Anemone*.

Pasquil, (*pas'kwil*), *n.* Same as PASQUIN, *q. v.*

—*v. a.* To lampoon; to make pasquinades.

Pasquin, (*pas'kwîn*), *n.* [*It. pasquino*.] A mutilated statue at Rome, on which it was customary to paste satiric papers. It was so named from *Pasquino*, a satirical cobbler near whose shop it was dug up;—hence, a lampoon; a squib.

Pasquin, **Pasquinade**, *v. a.* To satirize; to lampoon.

Pasquinade', *n.* [*Fr.*; *It. pasquinata*.] A lampoon; a squib; a written satire.

Pas'quotank, in N. Carolina, a river rising in the Dismal Swamp, and flowing S.E. into Albemarle Sound, between Camden and Pasquotank cos.

—A N.E. co. bordering on Albemarle Sound; area, abt. 300 sq. m. *Rivers*. Pasquotank River and some less important streams. *Surface*, mostly level and low; soil, not very fertile; cap. Elizabeth City.

Pass, *v. n.* (*imp.* and *pp.* PASSED, or PAST.) [*Fr. passer*; *It. pasiare*; *Sp. pasar*, to pass; *Lat. pasus*, extending of the legs in walking.] To move; to go; to proceed from one place to another; to make a transit;—generally preceding a verb or preposition denoting the kind of motion; as, to *pass* on, out, in, into, from, &c.—To move from one state to another; to alter or change, or to be changed in condition; to undergo transition; to go from one owner to another.

"A power is passing from the earth."—*Wordsworth*.

—To be given and taken; hence, to circulate; to be current; not to be rejected as spurious and worthless; as, to *pass* bad money.—To be regarded; to be received in opinion or estimation; to possess current value or reputation;—usually preceding *for*; as, he *passes for* an honest man.—To proceed from one side to the other, of a person or place specified; to go by; to cross one's notice, &c.;—preceding a preposition, as *over*, *by*, &c.; as, to *pass over* a river, to *pass by* one in the street.—To go on or away progressively; to be spent; as, time *passes* on.—To happen; to take place; to occur or be present in fact; as, the thing came to *pass*.—To vanish; to disappear; to move or recede out of reach, view, &c.; hence, also, to die; to take leave of life;—with *from*, *away*, &c.

"Beauty's a charm, but soon the charm will pass."—*Dryden*.

—To go by certain progressive stages; to be accepted or ratified; especially, to receive the sanction of a legislative house or body by a majority of votes; to be enacted; as, the bill has *passed* the Senate.—To bear inspection; to submit to scrutiny with good effect; to be in a passable or receivable condition; to answer; to be in a tolerable state; as, he might *pass* muster in a crowd.—To suffer to go unheeded or neglected; to proceed without check or obstacle; as, to let an affront *pass* without resentment.—To surpass; to outvie; to be in excess, or beyond bounds.—To thrust; to make a lunge or push in fencing or fighting; as, he *passed* his sword through his adversary's body.

To *pass into*, to change by a gradual transition to, or by progressive absorption with; as, poison *passed* into the blood.—To *pass on* or *upon*, to come upon; to hap-

pen to; to concern. — To resolve; to determine; to deliver judgment; as, to *pass* sentence of death upon any one.

Pass, *v. a.* To go by, beyond, through, or over; hence, to spend; to live through; as, we *passed* the season in Paris. — To undergo; to derive experience from.

"She loved him for the dangers he had *passed*." — *Shaks.*

— To omit; to neglect either to do or to mention; to disregard; to go by without heed or notice; as, they *passed* him in selecting officers. — To transcend or go beyond; to surpass, exceed, or excel.

"Whose tender power *passes* the strength of storms." — *Byron.*

— To be carried through, as all the forms necessary to confer validity or ratification; to be enacted by; as, an Act *passed* by Congress. — To cause to move, to go, or to proceed; to deliver; to transmit; to make or transfer from one person, place, or condition to another; as, the troops were *passed* along by railroad. — To utter; to pronounce; to express orally; as, I *passed* my opinion about him long ago. — To approve and receive as valid and just, as accounts; as, to *pass* an amount to one's credit. — To strain; to cause to percolate or trickle; as, water *passed* through a filter. — To approve or sanction by a constitutional or legal majority of votes; to enact; to carry through all the forms necessary to give validity; as, the House *passed* the bill. — To make an end or finish of; to accomplish.

"This night

We'll *pass* the business privately and well." — *Shaks.*

— To give currency to; to place in circulation; as, to *pass* base coin, to *pass* a rumor. — To cause to get admission or conveyance; as, to *pass* a person into a theatre, to *pass* one along by railroad. — To heed; to take care or notice of; to regard; — usually before *for*.

Passed midshipman. (*Naut.*) A midshipman who, after passing his examination, is deemed eligible as a candidate for lieutenantcy.

To *pass off*. To impose fraudulently; to palm; as, he has *passed off* base money. — To *pass on* or *upon*. To practise insidiously or artfully; to put upon, as a cheat, &c.; to palm off; as, she *passed* the child upon him for his own. — To *pass over* or *by*. To overlook; to ignore; not to take heed, regard, or notice; as, to *pass* a thing by in silence, to *pass over* the work hurriedly.

Pass, *n.* That which may be passed through or along; a passage, road, or way; a narrow passage, entrance, or avenue; a narrow or difficult place of entrance or exit; as, a mountain-pass, the *Pass d'Oo* (Fig. 2053). — Per-

Fig. 2053. — PASS D'Oo, (Pyrenées.)

mission to pass, to go, or to come; a license to proceed; a passport: a voucher of free conveyance or admission; an order for sending vagrants or impotent persons to their places of abode; a safe-conduct; as, a railroad-pass, a *pass* for an exhibition or place of public amusement, a *pass* through the enemy's lines, &c. — State; condition or extreme case; conjuncture; extremity.

To *bring to pass*. To bring about; to effect; to cause to happen or occur.

"I am now brought to such a *pass* that I can see nothing at all." — *L'Estrange.*

To *come to pass*. To happen; to occur; to take place. (*Fencing.*) A thrust; a push; an attempt to pierce or strike.

Passable, *a.* [Fr.; It. *passabile*.] That may be passed, travelled, or navigated; that may be traversed, penetrated, or explored; accessible; as, the roads are not *passable*, owing to the snow. — Current; receivable; that may be passed or transferred from hand to hand; as, a *passable* slander, a *passable* opinion. — Supportable; tolerable; admissible; allowable; moderate; pretty good; as, a *passable* performance.

Passably, *adv.* In a passable manner; tolerably; moderately.

Passade, (*sād'*) **Passa'do**, *n.* [Fr., from Sp. *pasado*.] (*Fencing.*) A push; a thrust; a lunge.

(*Manege.*) A backward and forward course of a horse on the same limits of ground.

Passadum'keag, in *Maine*, a post-village and township of Penobscot co., abt. 100 m. N.E. of Augusta; pop. of township abt. 300.

Passage, (*pas'āj*) *n.* [Fr., from Lat. *passus*, a step, pace. See *PASS*.] Act of passing or moving by land or water, or through the air or other substance; motion of any sort from place to place or point to point; a going by, over, or through; as, the *passage* of a man or a vehicle, the *passage* of a ship or a bird, the *passage* of light or of a shooting-star, &c.; — hence, specifically, transit by means of conveyance; journey, as by land or water; travel; course; right of passing; as, a rough *passage* across the Atlantic. — Fare; price paid for liberty to pass; as, a free *passage*. — Transition from

life to death; decease; as, "mortal *passage*." (*Milton.*) — Way or course whereby men or things may pass or be conveyed; way; round; avenue; place of entrance or exit.

"A *passage* down to th' earth, a *passage* wide." — *Milton.*

— Specifically, a hall; a lobby; a corridor; an alley; that part of a building allotted for giving access to the different apartments. — Occurrence; event; incident; that which happens.

"It is no act of common *passage*." — *Shaks.*

— Management; manner of being conducted.

"The conduct and *passage* of affairs in former times." — *Davies.*

— Currency; circulation; reception; mental acceptance.

— Part of a book or writing; a single clause, place, or part of indefinite extent; an extract; an excerpt.

"How commentators each dark *passage* shun." — *Young.*

— The act of carrying through all the regular forms necessary to give validity; enactment; as, the *passage* of a bill into law by the legislature. — A pass or encounter; as, a *passage* at arms.

Of passage. Migratory; passing from one place to another; not permanently settled; as, a bird of *passage*, i. e., a bird which at certain seasons passes from one climate to another.

Passaic, in *New Jersey*, a river which rises in Morris co., and after forming the W. N., and a portion of the E. boundary of Essex co., enters Newark Bay between Essex and Hudson cos. Length, abt. 100 m.

A N. N. E. co., adjoining New York; area, about 197 sq. m. Rivers, Passaic, Pequannock, Ringwood, and Ramapo rivers. Surface, much diversified, and in the W. portion broken and mountainous; soil, in some parts fertile, but in general is better adapted to grazing. Min. Magnetic iron ore and limestone. Cap. Paterson. Pop. (1895) 133,227.

A thriving city of the above co., about 5 m. S. S. E. of Paterson. Pop. (1895) 17,894.

Passamaquoddy Bay, an inlet of the Atlantic Ocean, between Washington co., Maine, and Charlotte co., New Brunswick. It is about 15 m. in length, with an average breadth of 10 m. It receives the St. Croix River, is exceedingly irregular in outline, contains numerous islands, and has several good harbors. It has 3 entrances, called respectively East, Middle, and West passages, the last of which has an alarm-bell. The ordinary tides rise here 25 ft.

Passant, *a.* [Fr., from *passer*, to pass.] Cursory; careless; as, "passant view." — *Scott.*

(*Her.*) Applied to a beast when represented in a walking position. — *Passant guardant*. Walking with the full face turned towards the spectator.

En passant, (*añg' pas-sañg'*) [Fr.] In passing; by the way; casually.

Pas'sarowitz, a town of European Turkey, in Servia, on the Morava, 13 m. E.S.E. of Semeudria; pop. unascertained.

Pas'sau, a fortified town of Bavaria, cap. of the circle of Lower Bavaria, at the confluence of the Inn and the Danube, 92 m. E.N.E. of Munich. Manuf. Porcelain, leather, and tobacco. By the treaty of Passau, 1552, the Protestants of Germany received their religious liberty.

Pass-book, *n.* A book in which a merchant or trader enters the articles bought on credit, and then passes it to the customer for his information.

Pas'senger, *n.* A traveller; a wayfarer; one who travels in some established conveyance, as a stage-coach, steam-boat, railroad car, &c.

Pas'senger-pig'eon, or WILD PIGEON, the *Ectopistes migratoria*, a bird of the *Columbidae*, or Dove family, very abundant in N. America, E. of the high central plains, is 17 inches long, and the wing $8\frac{1}{2}$ inches; the upper parts blue, under parts purplish-red, passing into whitish behind, and the sides and back of the neck a glossy golden-violet. The female is smaller and much duller in color.

The Passenger-pigeon is extremely rapid in flight, being able to perform a long journey at an average speed of a mile a minute. The migrations are wholly for the purpose of procuring food, and hence do not take place at any particular season of the year. Pigeons go wherever they can find a supply of grain, rice, or nuts. The numbers that sometimes move together are vast beyond conception. Millions associate in a single roost, completely filling a forest for 30 or 40 miles in length and several miles in breadth, and literally loading and breaking down large trees. From their roosts they fly off hundreds of miles, in some cases, to feeding-grounds, and return at night. Sometimes, in their migrations, they fill the air like a cloud, and thus continue to pass for a whole day, and even for 2 or 3 successive days. The nest is built on high trees, and is composed of a few dry sticks and twigs crossing each other, and supported by the forks of the branches; and more than a hundred nests are sometimes placed on a single tree.

Passe-partout, (*pas-par-tō'*) *n.* [Fr., from *passer*, to pass, and *partout*, everywhere.] A master-key; a pass-key.

Fig. 2054. — CARRIER-PIGEON, (*Ectopistes migratoria*.)

(*Engraving.*) A plate or piece of wood, whose centre part is entirely cut out; round the interior edge of the outer part a border or ornamental design is engraved, and hence it serves as a frame to whatever may be placed in the centre.

Pass'er, *n.* One who passes; a passenger.

Pass'er-by, *n.* One who passes by; one who passes another on the road.

Pas'seres, *n. pl.* [Lat., sparrows.] (*Zoöl.*) An order of birds, also called Insesores, which is the term generally used in this work. — See INSESORES.

Pas'serine, *a.* [Fr., from Lat. *passer*, a sparrow.] (*Zoöl.*) Of, or belonging to the sparrows, passer, in-sesores, or perchers.

— *n.* A bird of the order *Passeres* or *Insesores*.

Passibility, *n.* [Fr. *passibilité*; Lat. *passibilitas*.] Quality or capacity of receiving impressions from external agents; aptness to feel or suffer.

Pas'sible, *a.* [Fr.; Lat. *passibilis*, from *patior*, to suffer.] Susceptible of feeling, or of impressions from external agents.

Pas'sibleness, *n.* Quality of receiving impressions from external agents.

Passiflora, *n.* [Lat. *flos passionis*; the several parts of the flower were superstitiously compared to the instruments of the Saviour's passion.] (*Bot.*) The typical genus of the order *Passifloraceae*, characterized by the curious structure of their corona, which is a circle or colored thread-like process surrounding the stigma. *P. carulea*, the common Passion-flower, is a native of Brazil, where it grows to the thickness of a man's arm, and the height of 30 feet. Flowers large and beautiful, blue externally, white and purple within, continuing

Fig. 2055. — PASSION-FLOWER, (*Passiflora carulea*.)

but one day. *P. incarnata*, the Flesh-colored Passion-flower, and *P. latea*, the Yellow Passion flower, are found from Virginia to Florida, and Ohio. The former bears an edible berry, pale-yellow, of the size of an apple, called Granadilla. Other species also bear eatable fruit, as the Water Lemon, Sweet Calabash, &c.

Passifloraceae, *n.* (*Bot.*) An order of plants, alliance *Violales*. DIAG. Polypetalous or apetalous corolla flowers, perigynous imbricated petals, stamens on the stalk of the ovary, simple terminal styles, arillated seeds, and stipulate leaves. — They are herbs or shrubs, usually climbing by tendrils; flowers perfect, or very rarely unisexual; sepals 5, united below into a tube, the throat of which bears a number of filamentous processes; petals 5, inserted in the throat of the calyx on the outside of the filamentous processes. Stamens usually 5, monadelphous. Ovary stalked superior; placenta parietal; fruit 1-celled, stalked, generally succulent. The plants of this order are chiefly native of S. America, though a few occur in N. America, the E. Indies, and Africa. The order contains 12 genera and 210 species. — See PASSIFLORA.

Pas'sim, *adv.* [Lat.] Everywhere.

Pass'ing, *adv.* Exceeding; surpassing; eminent. — Departing.

— *adv.* Exceedingly; surpassingly.

— *n.* Act of passing or going past. — The act of carrying through all the regular forms to give validity, as a bill in Congress.

Pass'ing-bell, *n.* The bell that is rung at the hour of death, originally designed to obtain prayers for the passing soul, also, one that is rung immediately after death.

Pass'ing-note, *n.* (*Mus.*) In passing from one chord to another, an intervening note, not belonging to either chord, and used to assist the progression.

Passion, (*pas'h'un*) *n.* [Fr.; It. *passione*; Lat. *passio*, from *patior*, *passus*, to suffer; Gr. *pathos*.] That which is suffered or received, the impression or effect of an external agent upon a body. — Susceptibility of effect by external action.

— Emphatically, the last sufferings of Christ, which he is described as having endured between the Last Supper and the moment of his death.

— The feeling of the mind, or the sensible effect of impression; excitement; perturbation, or agitation of the mind. — Violent emotion, agitation, or excitement of mind, particularly such as is occasioned by an offence,

injury, or insult; hence, violent anger; excessive feeling. — **Zeal**; ardor; vehement desire. — **Love**; affection; eager desire.

Passional, (*pāsh'unal*), *a.* [Fr. *passional*; Lat. *passionalis*.] Relating to the passions; passionate. (*r.*)

Passionary, *n.* [L. Lat. *passionarius*.] A book describing the sufferings of saints and martyrs.

Passionate, *a.* Feeling or expressing great commotion of mind; highly excited; vehement; warm. — Easily moved to anger; easily excited or agitated by injury or insult; irascible; choleric; hot-tempered.

Passionately, *adv.* With passion; with strong feeling; ardently; vehemently; angrily; with vehement resentment.

Passionateness, *n.* State of being subject to passion or anger; vehemence of mind.

Passion-flower, *n.* (*Bot.*) See *PASSIFLORA*.

Passionists, *n. pl.* (*Eccl. Hist.*) A congregation of Roman Catholic priests founded by Paul Francis (1694–1775), surnamed Paul of the Cross, in 1737. The first convent was established on the Celian Hill at Rome. It has been revived since 1830, and new houses have been founded in England, Ireland, Belgium, and Australia. They have been introduced lately in this country, where they now possess four monasteries. The special object of the institute was to instill into men's minds, by preaching, by example, and by devotional practices, a sense of the mercy and love of God, as manifested in the passion of Christ. Hence the cross appears everywhere as their emblem, in their churches, in their halls, and in the courts and public places of their monasteries. A large crucifix, moreover, forms part of their very striking costume. They go barefooted, and practise many other personal austerities, rising at midnight to recite the canonical hours in the church; and their ministerial work consists chiefly in holding what are called "missions," wherever they are invited by the local clergy, in which sermons on the passion of Christ, on sin, and on repentance, together with the hearing of confessions, hold the principal places.

Passionless, *a.* Not easily excited to anger; of a calm temper.

Passion-week, *n.* Same as *HOLY-WEEK*, *q. v.*

Passive, *a.* [Fr. *passif*; Lat. *passivus*, from *patior*, to suffer.] Receiving impression from some external agent; not acting. — Suffering without resistance; unresisting; not opposing.

(*Gram.*) See *VERB*.

Passive prayer. See *PRAYER*.

Passively, *adv.* In a passive manner; with a passive nature or temper; unresistingly. — After the form of a passive verb.

Passiveness, *n.* The quality of being passive, or of receiving impressions from external agents or causes. — Passibility; power of suffering. — Patience; calmness; unresisting submission.

Passivity, *n.* Passiveness.

Pass-key, *n.* A master-key; a key capable of opening several locks.

Pass-less, *a.* Without a pass or passage.

Pass-man, *n. pl.* *PASS-MEN.* In the University of Oxford, a student who succeeds in obtaining a degree, but without any special distinction.

Passo-do-Lu-miar, a town of Brazil, on the island of, and 20 m. S.E. of the city of, Maranhão.

Pass-over, *n.* (*Sacred Hist.*) A feast of the Jews, instituted to commemorate the providential deliverance of the Hebrews in Egypt, when the destroying angel, smiting the first-born of the Egyptians, passed over the houses of the Israelites, which had been previously marked with the blood of the paschal lamb. The *P.* was observed on the 14th day of the first month (Nisan), and on the 15th day commenced the seven days' feast of unleavened bread. Properly, the term *P.* applies only to the 14th day, but it was commonly used to include also the feast of unleavened bread which followed.

—The sacrifice offered at the feast of the passover; the paschal lamb.

Pass-parole, *n.* [Fr. *passé-parole*.] (*Mil.*) A command given at the head of an army, and passed, from mouth to mouth, to the rear.

Passport, *n.* [O. Fr. *pas-se-porte*, a bill of lading, *pas-se-port*, a safe-conduct. (*International Law*.)] A paper indispensably necessary, in time of war, for the safety of every neutral vessel, containing permission from the neutral state, to the captain or master of a ship or vessel, to proceed on the voyage proposed.

(*European Law*.) In most countries of Continental Europe, a letter, license, or document, given by an authorized officer of a state, granting liberty to the person or persons therein named, to pass or travel either generally, or through a country named, and to remain there for an indefinite or specified period. In general, the bearer then requires to take his passport to the minister or authorized agent of the country which he is about to visit, and have it signed by him. Such a document states the name, surname, age, and profession of the bearer, and entitles him to the protection of the authorities of the countries through which he may pass.

Passumpsic, in *Vermont*, a small river flowing into the Connecticut from Caledonia co.

—A post-vill. of Caledonia co., abt. 30 m. E. of Montpelier.

Pass-word, *n.* A secret word used by the military, secret societies, &c., which must be given or spoken before a person is allowed to pass; a watchword.

Pas-sy, formerly a suburb of Paris, France, adjoining the *Bois de Boulogne*; now included in the precincts of the metropolis.

Past, *a.* Gone by or beyond; not present; not future; spent; ended; accomplished.

—*n.* Past time. — Anything that is past; past state.

—*prep.* Beyond in time; out of the reach of. — Above; more than. (*r.*)

Pas'ta, JUDITH, a celebrated singer, B. in Italy, 1799. She appeared on the Paris stage in 1821, and she succeeded in winning a first-rate reputation. She first distinguished herself in the operas of Rossini, *Tancredi*, *La Donna del Lago*, &c., and later in Bellini's *Norma* and *Sonnambula*, Pacini's *Niobe*, (the last three being composed for her,) and *Anna Bolena*. She retired to her magnificent villa on the Lake of Como about 1835, and d. there 1865.

Pasta'ca, or *PASTAZA*, a river of Ecuador, S. America, flowing into the Amazons abt. 25 m. above the Huallaga River.

Paste, (*paist*), *n.* [Fr. *pâte*; It. and Sp. *pasta*, from Lat. *pastus*, food.] A soft composition of substances, as flour moistened with water or milk, and kneaded; or any kind of earth moistened and formed to the consistency of dough, as in making potter's ware. — Any kind of cement having the power of holding the particles together, as gum, boiled flour, &c.

(*Applied Chem.*) A glass made in imitation of precious stones. The base of all fictitious gems is a combination of silica, potash, borax, red oxide of lead, and sometimes arsenic. Pure boric acid and colorless quartz ought to be used, and Hessian crucibles in preference to porcelain. The paste requires to be fused in a potter's furnace for 24 hours; and the more tranquil and continued the fusion, the harder is the paste, and the greater its beauty. The proportions of paste, &c., for the principal artificial gems are as follows: *Ruby*—Paste, 2,580; oxide of manganese, 72. *Emerald*—Paste, 4,608; green oxide of copper, 42; oxide of chrome, 2. *Sapphire*—Paste, 4,608; oxide of cobalt, 68; fused for 30 hours. *Amethyst*—Paste, 4,608; oxide of manganese, 36; oxide of cobalt, 24; purple of cassius, 1. See *GEMS, ARTIFICIAL*.

(*Min.*) The mineral substance in which other substances are imbedded.

(*Com.*) An inspissated juice of licorice, or of other vegetables.

—*v. a.* To unite or cement with paste; to fasten with paste.

Paste-board, *n.* A species of thick paper, formed of several single sheets pasted one upon another, or by macerating paper, and casting it into moulds, &c. — A board on which dough is rolled out for pastry.

—*a.* Made of pasteboard.

Pastel, *a.* [Fr., from O. Fr. *paste*, paste.] (*Painting*.) A crayon formed with any color and gum-water, for painting on paper or parchment. The great defect of this mode of painting is its want of durability. Pastels must necessarily be protected by glass.

(*Bot. and Chem.*) *Isatis tinctoria*, and the dye that it yields. See *ISATIS*.

Pastern, *n.* [O. Fr. *pasturen*.] (*Furriery*.) The part of the horse's foot under the fetlock to the heel. [*foot*.]

Pastern-joint, *n.* The joint in a horse's leg next the

Pasticcio, (*-tīt'chē o*), *n.* [It., from *pasta*.] An olio; a medley; a mixture.

(*Painting*.) A work of art, of original conception as to design, but a direct copy of the style and manner of some other painter. Such were the pictures of David Teniers, in the manner of Rubens, often mistaken for originals.

Pastil, **Pastille**, (*pas-tēl'*), *n.* [Fr. *pastille*; Sp. *pastilla*, a pastil; Lat. *pastillus*, a little roll, from *pastus*, food.] (*Pharm.*) A dry composition of sweet-smelling resins, aromatic woods, &c., burned to clean and scent the atmosphere of a room. — An agreeable kind of bonbon, or sugar confection.

Pas'time, *n.* [*Pass and time*.] That which amuses and serves to make time pass agreeably; entertainment; diversion; amusement; recreation; sport; play; frolic.

—*v. a.* To sport; to practise diversion. (*r.*)

Pas'tinaca, *n.* (*Bot.*) The Parsnip, a genus of plants, order *Apiaceæ*. The Common Parsnip, *P. sativa*, (Fig. 2056,) is a biennial, with angular furrowed stem, 2–3 feet high, pinnate leaves with ovate leaflets, rather shining, cut and serrated, and a three-lobed terminal leaflet. The root of the wild plant is white, aromatic, mucilaginous, sweet, but with some acridness; and injurious effects have followed from its use. By cultivation it becomes more bland and is highly relished by many, though the flavor is disliked by many for its too great sweetness. The *P.* delights in a very open rich soil, but it succeeds well also in clayey soils far too stiff for the carrot. Cattle are very fond of it, and not only the flesh of cattle fed on it is of excellent quality, but the butter of dairy-cows fed on parsnips in winter is far superior to that produced by almost any other kind of winter-feeding.

Pas'to, a town of the U. S. of Colombia, in a mountainous region, 8,577 ft. above the sea, and abt. 148 m. N.N. E. of Quito; pop. 8,000.

Pas'tor, *n.* [Fr. *pasteur*; It. *pastore*; Lat. *pastor*, a herdsman, a shepherd, from *pasco*, *pastum*, to feed, to pasture.] A shepherd or herdsman; one who has the care of flocks and herds. — A minister of the gospel who has the charge of a church and congregation, whose people, by the same figure, are termed his flock.

Pas'torage, *n.* The office, state, or jurisdiction of a spiritual pastor; pastorate.

Pas'toral, *a.* [Fr.; Lat. *pastoralis*.] Of, or pertaining to shepherds; rustic; rural. — Descriptive of the life of shepherds.

(*Eccl.*) Relating to the care of souls, or to the pastor of a church. A *pastoral letter* is a circular letter, addressed by a bishop to his diocesans, for their religious instruction or guidance in matters of ecclesiastical discipline. The *pastoral staff* is the crosier of a bishop's staff, which, in his public ministrations, he is directed to have in his hand, or else borne or holden by his chaplain. (See *CROSIER*.) *Pastoral Theology* is that department of theology which has to do with the practical duties of a clergyman as the teacher and spiritual guide of his people.

—*n.* A poem descriptive of shepherds and their occupations, or in which the speakers have the names, and use the idiom of shepherds; an idyl; a bucolic.

Pastorale, *n.* (*Mus.*) A soft, rural air or movement, generally in 6-8 or in 12-8 measure, and proceeding much by alternate crotchets and quavers.

—A kind of dance. — A figure in the dance.

Pastorally, *adv.* In the manner of a pastor. — Belonging to, or living in the country.

Pastorate, *n.* The state, office, or jurisdiction of a spiritual pastor. — The body of pastors.

Pastorless, *a.* Without, or destitute of, a pastor.

Pastor-like, *a.* Resembling a pastor.

Pastorling, *n.* An inferior pastor, or minister.

Pastorly, *a.* Suitable to a pastor; becoming a pastor.

Pastorship, *n.* The office or rank of a pastor.

Pastoureaux, *n. pl.* [O. Fr., shepherds.] Insurgent peasants who took up arms in France during the absence of King Louis IX. on his crusade. They were led by a Cistercian monk, who took the name of "Jacob, Master of Hungary," and seduced them to follow him in his fanatical extravagance. They committed various excesses, from the frontier of Flanders, on which they at first assembled, to Bourges, where their leader was killed in a tumult, and his horde dispersed. Seventy years afterwards, a similar insurrection of people calling themselves Pastoureaux broke out under the same pretence of a crusade, and was distinguished by a grand massacre of the Jews.

Pas'try, *n.* [Fr. *pâtisserie*.] Articles of food in general which are made of paste or dough, or of which paste constitutes a principal ingredient, as pies, &c.

Pas'try-cook, *n.* One who makes and sells articles of food made of paste, as pies, &c.

Pas'try-man, *n.* A man who sells pastry.

Pas'turable, *a.* Fit for pasture.

Pas'turage, *n.* The business or act of feeding or grazing cattle. — Grazing-ground; land appropriated to grazing. — Grass for feed.

Pas'ture, *n.* [Fr.; Lat. *pastura*, a feeding-ground.] Grass for the food of cattle; the food of cattle taken by grazing. — Ground covered with grass to be eaten by cattle, horses, &c.; pasturage.

—*v. a.* To supply with pasturage; to feed on grass, or to supply with grass for food.

—*v. n.* To graze; to take food by eating grass from the ground.

Pas'ty, *a.* Like paste; of the consistence of paste.

—A pie made of paste, and baked without a dish.

Pat, *n.* [O. Fr. *bat*, a stroke or beating.] A light quick blow or stroke with the fingers or hand; a tap. — A small mass which is beat into shape by pats; as, a pat of butter.

—*v. a.* To strike gently with the fingers or hand; to tap.

Patagonia, an extensive country of S. America, comprising nearly the whole of that continent S. of Lat. 38° S., and having N. the territories of La Plata and Chili, S. the Strait of Magellan, separating it from Terra del Fuego, E. the Atlantic, and W. the Pacific. Little is known respecting this region beyond its coast outline. The Andes in Patagonia appear to consist of but one cordillera, the mean height of which may be estimated at 3,000 ft.; but opposite Chiloe there are some mountains probably from 5,000 to 6,000 ft. in height. The W. coast is abrupt, very much broken, and skirted with a great number of irregularly shaped rocky islands. The E. coast has been most explored. The surface of the country appears to rise from the Atlantic to the Andes, in a succession of terraces, all of which are alike arid and sterile, the upper soil consisting chiefly of marine gravelly deposits, covered with coarse wiry grass. No wood is seen larger than a small thorny shrub, fit only for the purpose of fuel, except on the banks of a few of the rivers subject to inundation, where herbage and some trees are occasionally found. This sterility prevails throughout the whole plain country of Patagonia, the complete similarity of which, in almost every part, is one of its most striking characteristics. It is stated, however, by the Indians on the Rio Negro, which forms the N. boundary of Patagonia, that near the Andes wheat, maize, beans, lentils, and peas are raised. This latter region is not, however, placed under the same circumstances as the country more to the eastward, nor is it subject to the causes which mainly occasion its sterility. Porphyry, basalt, sandstone, containing numerous organic remains, and a friable rock, greatly resembling, but not identical with, chalk, are among the mineral formations hitherto remarked as the most prevalent in E. Patagonia. The zoölogy of the country is as limited as its flora. Guanacos are met with sometimes in herds of several hundreds, and their enemy the puma, and a small kind of fox, are almost the only other wild quadrupeds at all abundant, except mice. The condor and the cassowary are included among the few species of birds. The Patagonian Indians are tall and bulky, and

Fig. 2056. — PARSNIP,
(*Pastinaca sativa*.)

though not absolutely gigantic, they may be said to be the tallest people of whom there are any accounts, the average height of the men being probably not under 6 ft. Their heads and features are large, but their hands and feet small; and their limbs are neither so muscular nor so large-boned as their height and apparent stoutness would induce one to suppose. Color, a dark cop-

Fig. 2057. — PATAGONIAN DANCERS.

per-brown; hair, black, lank, and coarse, and tied above the temples by a fillet of plaited sinews. These people live under petty chiefs, who seem to possess but little authority. *P.* was discovered by Magellan, in 1519. The territory has been in dispute between Chili and Argentine, but in 1875 the former made settlements on the Pacific Coast with the consent of the latter, who had a settlement at Santa Cruz for some years. The boundary between them was settled (1883), Chili prolonging her narrow strip on the W. coast to the S. point of the continent, Argentine taking the rest. An active volcano was discovered in 1878. *Pop.* about 25,000.

Pat'any, a seaport town of Siam, in Farther India, Lat. 7° N., Lon. 101° 40' E. *Pop.* estimated at 100,000.

Patapsco River, in Md., rises in Carroll co., flowing S.S.E., it expands into Patapsco Bay (an arm of Chesapeake Bay), bet. Baltimore and Anne Arundel cos.

Patch, *n.* [Etymology unknown; perhaps from *Fr. pièce*, a piece.] A piece of cloth sewed on a garment to repair it; a small piece of anything used to repair a breach. — A small piece of silk used to cover a defect on the face, or to add a charm. — A piece inserted in mosaic or variegated work. — A small piece of ground, or a small detached piece. — One who deceives by false appearances; a knave; a rogue; a paltry fellow.

v. a. To mend by sewing on a piece or pieces; to mend with pieces. — To adorn with a patch or with patches. — To repair clumsily; to repair with pieces fastened on; to make up of pieces and shreds. — To make suddenly or hastily. — To make without regard to forms; (in the two last senses followed by *up*.)

Patched, (*pacht*), *a.* Mended with a patch or patches. — Mended clumsily.

Patch'er, *n.* One who patches or botches.

Patch Grove, in Wis., a post-vill. and twp. of Grant co., abt. 25 m. N. by W. of Potosi.

Patchogue, (*pat-chog'*), in New York, a post-village of Suffolk co., abt. 60 m. E. of New York city.

Patchouly, (*-choo*) *n.* (*Bot.*) See *POGOSTEMON*.

Patch'work, *n.* Work composed of pieces of various figures sewed together. — Work composed of pieces clumsily put together.

Patch'y, *a.* Full of patches.

Pate, *n.* [*Ir. bathas*, the top of a thing, the pate; Sansk. *pātra*, a vessel, from *pa*, to preserve.] The head; or, rather, the top of the head (now used only in contempt). — The skin of a calf's head.

(*Fort.*) A kind of platform encompassed with a parapet, and having nothing to flank it.

Paté, *n.* [*Fr.*] A patty; a pie made of game or other meats; as, a *paté de foie gras*.

Pated, *n.* In composition, headed; having a pate.

Pat'ée, or **Patonee**, *n.* (*Her.*) A sort of cross, small at the centre and widening toward the ends, which are very broad.

Patel'ia, *n.* (*Anat.*) See *KNEE*.

Pat'en, *n.* [*Fr. patène*; Lat. *patina*, or *patena*.] (*Eccl.*) The plate employed for the elements of bread in the Eucharistic service. In the Roman Catholic Church, it is a small circular plate, always of the same material with the chalice. It is often richly chased or carved, and studded with precious stones. It is used only in the mass.

Pat'ent, *a.* [*Fr.*, from Lat. *patens*, from *pateo*.] Open to the perusal of all.

— Noting anything patented. — Appropriated by letters-patent, or open letters, granting some privilege or right. — Apparent; conscious.

n. A writing given by the proper authority and duly authenticated, granting a privilege to some person or persons, as, in England, a title of nobility.

(*American Law.*) The title-deed by which a government, state or federal, conveys its lauds.

— More usually, an instrument by which the United States secures to inventors for a limited time the exclusive use of their own inventions. The Act of Congress of July 4th, 1836, provides for the granting of a patent to the first inventor or discoverer of any new and useful art, machine, manufacture, or composition of matter, or of any new and useful improvement thereon. There are with us, according to the phraseology of the statute, four classes of inventions, which may be subjects of patents: 1, an art; 2, a machine; 3, a manufacture; and 4, a composition of matter. Although the word *discovery* is used in our statute as entitling the discoverer to a patent, still, every discovery is not a patentable invention. The discovery of a mere philosophical principle, or abstract theory, or elementary truth of science, cannot obtain a patent for the same, unless he applies it to some directly useful purpose. The patent can only be for such a principle, theory, or truth, reduced to practice and embodied in a particular structure or combination of parts. An invention, to be patentable, must not only be *new*, but must also be *useful*. But by this it is not meant that it must be more useful than anything of the kind previously known, but that it is capable of use for a beneficial purpose. A mere application of an old device or process to the manufacture of an article is held to constitute only a double use, and not to be patentable, if some new process or machinery is not used to produce the effect. No patent can be granted in the United States for the mere importation of an invention brought from abroad; although it is otherwise in England. The Constitution only authorizes Congress to grant these exclusive privileges to the inventors themselves. The mere fact of having obtained a patent for the same thing in a foreign country, will not prevent the obtaining of a patent here at any time within seventeen years after the date of the foreign patent. But if an invention has been introduced into public and common use in the United States, and if it has also been patented abroad more than six months prior to the date of the application here, the patent will be denied. The twelfth section of the Act of 1836 authorizes the inventor of anything patentable — provided he be a citizen, or an alien who has resided within the United States for one year next preceding his application, and has made an oath of his intention to become a citizen — to file a caveat in the Patent-Office for his own security. This caveat consists in a simple statement of his invention, in any language which will render it intelligible. It is always well to attach a drawing to the description, in order that it may be more easily and thoroughly understood; but this is not indispensable. A fee of ten dollars must be paid to the office at the same time. The right acquired by the caveat in this manner is that of preventing the grant of any interfering patent, or any application filed within one year from the day when the caveat was lodged in the Patent-Office, without his being notified of the same, and having an opportunity of contesting the priority of invention of applicant, by means of an *interference*. In this way an inventor can obtain a year to perfect his invention, without the risk of having the patent to which he is entitled granted to another in the meantime. He can, also, at any time before the expiration of one year, renew the caveat for another year, by paying another fee of ten dollars, and so on from year to year, as long as he feels disposed so to do. The caveat is filed in the confidential archives of the office, and preserved in secrecy. When the invention is complete, and the inventor desires to apply for a patent, he causes a specification to be prepared, setting forth in clear and intelligible terms, the exact nature of his invention, describing its different parts and the principle and mode in which they operate, and stating precisely what he claims as new in contradistinction from those parts and combinations which were previously in use. This should be accompanied by a petition to the Commissioner of Patents, stating the general nature of his invention and the object of his application. Duplicate drawings should be attached to the specification, where the nature of the case admits of drawings; and where the invention is for a composition of matter, specimens of the ingredients, and of the composition of matter, should be furnished. The specification, as well as the drawings must be signed by the applicant and attested by two witnesses; and appended to the specification must be an affidavit of the applicant, stating that he verily believes himself to be the original and first inventor of that for which he asks a patent, and also of what country he is a citizen. The whole is then filed in the Patent-Office. A model, not to exceed one foot in any of its dimensions, had also to be furnished in all cases admitting representation by model, but by the new rules of the P-office, issued in 1881, inventors may dispense with this expensive formality. As has been already observed, our law provides for an examination whenever an application is completed in the prescribed manner. And if on such examination it appears that the claim of the applicant is invalid, and would not be sustained by the courts, the application is rejected; which rejection is subject to revision on a new application, and to appeal. The rule that the applicant is entitled to a patent whenever he is shown to be the original and first inventor is subject to one important exception. If he has, either actively

or constructively, abandoned his invention to the public, he can never afterwards recall it and resume his right of ownership. The obtaining of foreign letters-patent does not prevent the granting of a patent here. But in that case the American patent will expire at the end of 14 years from the date of the foreign patent. This limit was thus fixed when the American patent was of only 14 years' duration; its extension to 17 years does not seem to enlarge this limitation. Patents were formerly granted for 14 years, the Commissioner of Patents being authorized in special cases to extend the same for seven years longer. But by the Act of 1861 the length of time for the patent to run was extended to 17 years, and the right to an extension on such patents was denied. The eleventh section of the Act of 1836 authorizes the assignment of a patent, either in whole or in part, by any instrument in writing, — which assignment must be recorded in the patent-office within three months from the execution thereof. But it has been held that this provision for recording is directory merely, for the protection of *bona fide* purchasers without notice, and not an absolute prerequisite to the validity of the assignment. Strictly speaking, the word *assignment* applies to the transfer of the entire interest running throughout the whole United States. A conveyance of an exclusive interest within and throughout any specified part or portion of the United States is more properly denominated a grant. A mere authority or permission to use, sell, or manufacture the thing patented, either in the whole U. States or in any specific portion thereof, is known as a license. But all three are sometimes included under the general term of an assignment. An assignment may be made prior to the granting of a patent. And when duly made and recorded, the patent may be issued to the assignees. The tenth section of the Act of 1836 provides that, where an inventor dies before obtaining a patent, his executor or administrator may apply for and obtain such patent, holding it in trust for the heirs at law or devisees, accordingly as the inventor dies intestate or testate. An alien who has resided one year in the U. States, and who has taken an oath of his intention to become a citizen, stands, so far as the patent laws are concerned, in the same position as a native-born citizen; but other foreigners have not in all respects the same rights and advantages. The fifth section of the Act of 1842 provides that any person or persons who shall place upon anything manufactured by him, the name or imitation of the name of another person holding a patent for the sole making and selling of such thing, without the consent of the patentee or his legal representatives, or who shall affix the words *patent*, *letters-patent*, or *patented*, or word of similar import, for the purpose of imitating or counterfeiting the trade-mark of the patentee, or to deceive the public, shall be liable to a penalty of not less than 100 dollars and costs to be recovered by action in any U. States circuit court, or U. States district court having the powers and jurisdiction of a circuit court, one-half of the penalty to be paid to the patent fund and the other half to any person who shall sue for the same. The Act of 1836 provides that whenever in any action for damages for infringement of the rights of a patentee, the verdict is rendered for the plaintiff, the court may render judgment to any sum above the amount found by such verdict as the actual damages sustained by the plaintiff, not exceeding three times the amount thereof, with costs. The actual damage is all that can be allowed by a jury. In 1870, a supplementary act was passed by Congress; it made but few changes, however. The total applications for patents have been nearly 1,000,000; patents granted, nearly 600,000.

Pat'ent, *v. a.* To grant by patent.

Pat'entable, *a.* That may be patented.

Pat'ented, *a.* Secured by patent, or by law, as an exclusive privilege.

Patentee, *n.* One who has a patent.

Pat'ent-leather, (*-leth'er*), *n.* Japanned or varnished leather, used for boots, shoes, and other purposes.

Pat'ent-office, *n.* An office for the granting and registry of patents for inventions.

Pat'ent-right, (*-rit*), *n.* An exclusive privilege to profit by an invention for a certain number of years.

Pat'ent-rolls, *n. pl.* The registers or records of patents.

Pa'ter, or **Pembroke Dock**, a town of S. Wales, co. of Pembroke, in Milford Haven, 1 m. N.W. of Pembroke. It has a government dock-yard of 60 acres, in which some of the largest ships are built. *Pop.* 6,500.

Patera, *n.* [*Lat.*, from *patero*, to be open.] (*Archæol.*) A shallow, circular, saucer-like vessel, commonly of red earthenware, sometimes of bronze and other metals, ornamented with a figured pattern. The *P.* was used for holding liquids, and especially employed to contain the wine with which a libation was poured over the head of a victim or on the altar. It is frequently represented in the hands of Roman emperors, to denote the junction of sacerdotal with imperial authority. Handles were occasionally fixed to them.

(*Arch.*) A circular flat ornament, used in classical, and also in Gothic and Italian architecture.

Pat'ernal, *a.* [*Fr. paternel*; Lat. *pater-nus*.] Pertaining, or re-

Fig. 2058. — PATERA.

Paternal, *adj.* In a paternal manner; father-like. **Paternalism**, *n.* [Fr. *paternité*; Lat., from *paternitas*, from *paternus*, *pater*.] The relation of a father to his progeny; fatherhood; fatherhood;—hence, source of origin; authorship.

Paterno, a town of Sicily, prov. of Catania, at the foot of Mount Etna, 10 m. N.W. of Catania; *pop.* 11,000. **Paternoster**, *n.* [Lat., our father.] The Lord's Prayer; a rosary; also every tenth bead in the rosary used by Roman Catholics in their devotions. (Arch.) A sort of ornament cut in the form of beads, either round or oval.

Paterson, in New Jersey, a city, cap. of Passaic co., on the Passaic River, abt. 13 m. N. of Newark; Lat. 40° 55' N., Lon. 74° 10' W. It is handsomely built, and contains many fine edifices. *Manuf.* Silk, machinery, locomotives, carriages, guns, paper, &c. *Pop.* (1900) 105,171. **Path**, *n.*; *pl.* PATHS, (*pathz.*) [A. S. *path*; Gr. *patos*, a trodden way, from *patōō*, to tread.] A way, track, road, route, or passage;—specifically, any narrow way beaten by the feet of man or beast; a foot-way.

"The dewy paths of meadows we will tread."—Dryden.

—Figuratively, course of action, procedure, or moral or social government.

"The paths of glory lead but to the grave."—Gray.

—The way, course, or track where a body moves in the atmosphere or in space; as, the path of a meteor.

—*v. a.* [A. S. *peðhian*.] To make a path or way for.

—*v. n.* To walk at large. (R.)

Pathematic, *a.* [From Gr. *pathēma*, an attack of sickness.] Pertaining to, or denoting emotional sensation or suffering.

Pathetic, *Pathetical*, *a.* [Fr. *pathétique*; Gr. *pathetikos*, from *pathos*, suffering.] Full of pathos; affecting; moving or exciting the tender sensibilities, as pity, sorrow, grief, or other emotional feeling; as, a pathetic appeal, a pathetic story.

Pathetic muscle, (*Anat.*) The oblique superior muscle of the eye. — **Pathetic nerves**, (*Anat.*) The four pairs of cerebral nerves, being a pair of small nerves, supposed to influence, by certain movements of the eyeball, the expression of the face.

—*n.* (*Painting and Sculp.*) The style or manner employed to awaken the tender or more sorrowful emotions of the soul, is called the *pathetic*.

Pathetically, *adv.* In such a manner as to excite the tender emotions.

Patheticalness, *n.* State or quality of being pathetic. **Pathetism**, *n.* [Fr. *pathétisme*.] Synonymous with MESMERISM, *q. v.*

Path-fly, *n.* A fly hovering about foot-paths.

Pathic, *a.* [Lat. *pathicus*, from Gr. *pathein*, to suffer.] Same as BARDASH, *q. v.*

Pathless, *a.* Having no path or beaten way; untrodden; as, a pathless waste or forest.

Pathogenic, *a.* [Gr. *pathos*, suffering, and *gennēin*, to generate.] Inceptive of diseases.

Pathogeny, *n.* (*Med.*) That branch of pathology which treats of, or has reference to, the inception, production, and development of disease.

Pathognomonic, *a.* [Gr. *pathos*, suffering, and *gnōmōn*, an examiner.] (*Med.*) Typical or characteristic of a disease; as, a pathognomonic symptom.

Pathognomy, *n.* [From Gr. *pathos*, and *gnōmē*, judgment.] The science of the signs or portents by which the passions of human nature are indicated.

Pathologic, **Pathological**, *a.* Pertaining to, or having reference to pathology or to diseases in general.

Pathologically, *adv.* In the manner of pathology. **Pathologist**, *n.* One who is versed in, or who treats of, pathology.

Pathology, *n.* [Fr. *pathologie*; Gr. *pathos*, suffering, and *logos*, treatise.] (*Med.*) The doctrine of human sufferings or diseases. As physiology teaches the nature of the functions of the body in a state of health, so *P.* relates to the various derangements of these functions which constitute disease. Its objects, therefore, are to ascertain the various causes which interfere with the normal action of each organ of the body, to determine the diagnostic and pathognomonic symptoms, which afford the means of discrimination between diseases closely resembling one another. An important branch of *P.* is that which treats of diseases of the fluids of the body, and more especially of the disordered states of the blood and of the urine (*humoral P.*). The science has made rapid strides during this century, owing chiefly to the advance of animal chemistry, and to the application of the microscope in the examination of diseased secretions and excretions.

Pathopœia, (*-pē'ya*), *n.* [Gr. *pathos*, passion, and *poiein*, to make.] (*Rhet.*) A figure of speech, calculated to arouse the passions.

Pathos, *n.* [Gr., suffering, sensibility, passion, natural taste, as for art.] (*Lit.*) Feeling; passion; that which excites emotions and passions, especially tender emotions, as those of pity, compassion, sympathy, &c.; hence, pathetic quality; expression of deep or strong feeling.

Pathway, *n.* A path; usually, a narrow path to be traversed on foot. — A course of life or action; as, the pathway of righteousness.

Patia, a river of the United States of Colombia, rising around the Andes Mountains, and flowing W. into the Pacific Ocean, abt. Lat. 2° N.

Patibulary, *a.* [Fr. *patibulaire*, from Lat. *patibulum*.] Having reference, or pertaining to the gallows, or to crucifixion.

Patience, (*pā'shens*), *n.* [Fr.; Lat. *patientia*.] The

quality of being patient, or of bearing suffering, or enduring; endurance without murmuring or fretfulness; the suffering of pain, toil, calamity, afflictions, provocation, or other evil, with calmness and equanimity of temper; the quality of enduring offences and injuries without manifestations of anger and a disposition to revenge; tranquillity under the sufferance of provocation.

"His rage was kindled, and his patience gone."—Harte.

—Act or quality of waiting long for justice or looked for good, without discontent or repining; long-suffering.

"'Tis all nuns' office to speak patience."—Shaks.

—Constancy in labor or exertion; persistence; perseverance.

"He learnt with patience, and with meekness taught."—Harte.

(Bot.) See RUMEX.

Patient, (*pā'shent*), *a.* [Fr.; Lat. *patiens*, from *patior*, to suffer. See PASSION.] Suffering or enduring any evil with equanimity or fortitude; bearing or supporting trials or reverses calmly; having the quality of sustaining afflictions of body or mind with a calm, unruffled temper; not easily provoked; calm under the sufferance of injuries or offences; not revengeful; not hasty; tranquilly diligent; as, a patient husband, a patient literary drudge. — Waiting or expecting with calmness or without discontent; not over-eager or impetuous.

—*n.* A person or thing that is the recipient of impressions from external agents; he who, or that which, is passively affected; as, "the patient or the subject of passion."—Watts.

—A sick person; one diseased or suffering bodily indisposition;—commonly used in a correlative sense to physician or nurse.

In-patient, a patient in a hospital or infirmary who receives board and lodging in addition to medical treatment. — Out-patient, one who receives only advice and medicine from an infirmary.

Patiently, *adv.* In a patient manner; with calmness or composure; without discontent or murmuring; with calm and constant diligence; without agitation, uneasiness, or repining; without undue haste or eagerness; as, to submit patiently to evils, to plod on patiently at work, to wait patiently till something good turns up.

Patile, *n.* A broad flat-bottomed cargo-boat employed on the river Ganges, India.

Patina, *n.* Same as PATEN, *q. v.*

Patina, *n.* [Fr. *patino*, from Lat. *patina*, a dish or pan.] (*Fine Arts*.) The fine rust with which coins become covered by lying in peculiar soils, and which, like varnish, is at once preservative and ornamental. It is, says Mr. Pinkerton, a natural varnish, not imitable by any effort of human art; sometimes of delicate blue, like that of a turquoise; sometimes of a bronze brown, equal to that observable in ancient statues of bronze; sometimes of an exquisite green, verging on the azure hue, which last is the most beautiful of all. It is also found of a fine purple, of olive, and of a cream color, or pale-yellow. The Neapolitan patina is of a light green; and, when free from excrescence or blemish, is very beautiful. — The term is also applied to the coat of dirt and varnish which, through time, covers the surface of pictures, and often gives to an old picture an adventitious harmony and effect which does not belong to it.

Patly, *adv.* [From *pat*.] Aptly; fitly; convenient; pat.

Patmos, or **Patmo**, an island of the Grecian Archipelago, off the W. coast of Asia Minor, 20 m. S. of Samos; Lat. 37° 17' N., Lon. 26° 35' E. It is 30 m. in circumference, and is famous as the place where St. John was banished by Domitian, and where he wrote the Book of Revelations.

Patna, a city of British India, pres. of Bengal, cap. of a district of same name, on the Ganges, 300 m. N.W. of Calcutta; Lat. 25° 37' N., Lon. 85° 15' E. It contains numerous mosques and temples; and was the first commercial station of the English East India Company. *Manuf.* Table-linen, lacquered-ware, talc goods, and bird-cages. It has a large trade in rice, opium, salt-petre, wheat, indigo, sugar, &c.

Patness, *n.* Appropriateness; especial suitability or convenience.

Patois, (*pat-wah'*), *n.* [Fr., from Lat. *pagus*, the country.] A rude and unpolished idiom; a rural dialect; a form of speech used in provincial districts, or by the lower orders of society; a corrupted vernacular; as, the patois of the Normans.

Pato'ka, in Illinois, a post-village of Marion co., abt. 14 m. S. of Vandalia.

Pato'ka, in Indiana, a creek rising in Orange co., and flowing W. enters the Wabash River from Gibson co. — A township of Crawford co. *Pop.* (1897) 1,980.

—A township of Dubois co. *Pop.* (1897) 4,315.

—A post-village and township of Gibson co., about 4 m. N. of Princeton. *Pop.* (1897) 6,620.

Pat'os, (*Lake*), or **LAGO DE LOS PATOS**, an expansion of the river Jacuhy, in the prov. of Rio Grande de Sul Brazil. It covers an area of 5,600 sq. m. It receives several streams, and has the city of Rio Grande de Sul at its S. extremity.

Patras', (*anc. Patræ*), a fortified seaport-town of Greece, in the Morea, cap. of the nomarchy of Achaia, on the Gulf of Patras, 13 m. S.W. of Lepanto; Lat. 38° 33' N., Lon. 21° 43' E. *Pop.* 8,000.

Patras', (*Gulf of*), an inlet of the Ionian Sea, on the N. coast of the Morea. *Ext.* 22 m. long, breadth 13 m. **Patres Conscripti**, *n. pl.* [Lat. *patres*, fathers — the name given by Romulus to the first senators chosen by him — and *conscripti*, the enrolled.] The senators of ancient Rome.

Pat'rial, *a.* [From Lat. *patria*, country.] (*Gram.*)

Pertaining, or relating to a family or lineage; designating a race or nation;—applied to a certain class of words.

Patriarch, (*pā'trī-ārk*), *n.* [Fr. *patriarche*; Gr. *patri-archēs*—*patria*, lineage, from *patēr*, a father, and *archē*, rule.] (*Jewish Hist.*) A name originally given to the heads of the first families who lived in the earliest ages of the world, as Abraham, Isaac, and Jacob, with his twelve sons, and Seth, Enoch, and others. They exercised the offices of priest and king in their respective families; and it has been supposed that the idea of hereditary power and honors was derived from the authority enjoyed by the patriarchs and their first-born after them. The term is also applied to a person invested with a dignity, the origin of which has been the subject of much discussion, some maintaining that it was of very ancient institution, and others that it was not older than the time of Nerva, the successor of Domitian. Whenever established, however, the authority of those who held this office came, in time, to be very considerable. Their chief duty being to instruct the people, they established schools in several cities; and having gained a great reputation for learning, zeal, and piety, at length ventured to levy a kind of tribute to support the charges of their dignity, and of the officers under them. According to the Jewish rabbin, the patriarchal dignity was in existence, in this sense, from 30 years before the birth of Christ down to the 5th century, when it was abolished.

(*Ecc.*) In the Greek Church, a dignitary superior to the order of archbishops, or somewhat analogous to the cardinal of the Roman Catholic Church; as, the patriarch of Constantinople.

Patriar'chal, **Patriar'chie**, *a.* Belonging, or relating to, or possessed by patriarchs; as, patriarchal age, patriarchal jurisdiction. — Subject to a patriarch; as, a patriarchal church.

Patriar'chal Cross, (*Her.*) A cross which, like the patriarchal cross, has its upright part crossed by two horizontal bars, the upper shorter than the lower.

Patriar'chate, *n.* [Fr. *patriarchat*.] The office, dignity, or jurisdiction of a patriarch in the Greek Church; as, the patriarchate of Syria. — The residence of a patriarch.

Patriarchdom, *n.* Power or jurisdiction of a patriarch.

Patriarchism, *n.* Government by a patriarch, or the head of a family, who was both ruler and priest, as Noah, Abraham, and Jacob. **Patriarship**, **Patriarchy**, *n.* Same as PATRIARCHATE.

Patrician, (*-trish'an*), *a.* [Fr. *patricien*; Lat. *patricius*, from *patres*, the fathers.] Originally, of or belonging to the fathers or first senators of Rome; hence, noble; senatorial; aristocratic;—correlative of *plebeian*; as, patrician blood, the patrician class.

—*n.* Primarily, a descendant of the fathers or first senators of Rome; hence, a person of high birth or gentle blood; a nobleman; an aristocrat.

—One versed in, or who adheres to, patristic theology.

Patricianism, (*-trish'an-izm*), *n.* The rank, status, or characteristic attributes of patricians; aristocracy of birth.

Patriciate, (*-trish'i-āt*), *n.* The nobility; the patrician order of society; the aristocracy.

Patricidal, *a.* Having reference to patricide.

Patricide, *n.* [Lat. *pater*, father, and *cædere*, to slay.] The murderer or assassin of a father.

Patrick, in Virginia, a S.W. co., bordering on N. Carolina; area, abt. 500 sq. m. *Rivers*, Dan, Smith's, North Mayo, and South Mayo rivers. *Surface*, finely diversified, and in the N.W. mountainous; soil, in general fertile. *Min. Iron*. *Cup. Stuart*. *Pop.* (1897) 14,900.

Patrick Court-House, in Virginia. See TAYLORSVILLE.

Patrick, (*St.*), or **PATRICIUS**, the apostle or patron saint of Ireland, said to be b. near the site of Kilpatrick, Scotland, whose zeal prompted him to cross the channel for the conversion of the pagan Irish. His arrival in Ireland took place probably between 440–460. His endeavors were crowned with great success, and he established there a number of schools and monasteries. Nennius states that his missions continued 40 years, and various miracles are attributed to him, particularly the expulsion of all venomous creatures from Ireland. He d. at an advanced age. His works, or at least those ascribed to him, were published, with remarks, by Sir James Ware, in 1658. There is a learned and valuable work on *The Life and Mission of St. Patrick*, recently published by J. H. Todd.

Patrick, (*St.*) (*Order of*) (*Her.*) An Irish order of knighthood, instituted by George III. in 1783, composed of the sovereign, princes of the blood-royal, a grand-master, and fifteen knights; the lord-lieutenant of Ireland for the time being is Grand-Master. The number of knights was increased to twenty-two in 1833.

Pat'ricktown, in Maine, a former township of Lincoln co.

Patrim'onial, *a.* [Fr.] Belonging to a patrimony; inherited from ancestors; as, a patrimonial estate.

Patrim'oniaily, *adv.* By inheritance.

Patrim'ony, *n.* [Fr. *patrimoine*; Lat. *patrimonium*, from *pater*, father.] A paternal inheritance; a right or estate inherited from one's ancestors. — A church estate or revenue; as, the patrimony of St. Peter.

Pat'riot, *n.* [Fr. *patriote*, from Lat. *patria*, one's fatherland or native country, from *pater*.] One who loves his country, and zealously and enthusiastically supports and defends it and its interests.

Fig. 2059.
PATRIARCHAL
CROSS.

—*a.* Patriotic; devoted to the honor and welfare of one's own country.

Pat'riot, in *Indiana*, a post-village of Switzerland co., on the Ohio River, abt. 48 m. below Cincinnati, Ohio.

Patriotic, *a.* [Fr. *patriotique*.] Full of patriotism; actuated by the love of one's country; inspired by affection for one's country; directed to the public welfare; as, *patriotic spirit*.

Patriotically, *adv.* In a patriotic manner.

Patriotism, *n.* [Fr. *patriotisme*.] Love of one's country; the passion which aims to serve one's country.

Patris'tic, **Patris'tical**, *a.* [Fr. *patristique*, from Lat. *pater*, father.] Pertaining to the ancient fathers of the Christian church; as, *patristic theology*, *patristic literature*. See **FATHERS** (THE.)

Patroci'nio, a town of Brazil, abt. 80 m. N. of Araxas; pop. 1,500.

Patro'clus, one of the Grecian chiefs during the Trojan war, son of Menecius, king of Opas, was slain by Hector, and avenged by his friend Achilles, *q. v.*

Patrol, *n.* [Fr. *patrouille*; Sp. *patrulla*.] (*Mil.*) A walking or marching round by a guard in the night, to watch and observe what passes, and to secure the peace and safety of a camp or other place. — The guard or persons who go the rounds for observation.

—*v. n.* [Fr. *patrouiller*.] (*Mil.*) To go the rounds on foot in camp or garrison; to march about and see what passes.

—*v. a.* To pass through; to go round, as a guard.

Pat'ron, *n.* [Fr.; Lat. *patronus*, from *pater*, a father.] One who countenances, supports, and protects, either a person or a work; one who specially countenances and supports, or lends aid to advance. — A protector; a defender; an advocate. — One who has the gift and disposition of a benefice or a church-living. — A guardian saint.

(*Naut.*) A name given, in the Mediterranean, to the master of a small vessel, or to the man who steers a ship's long-boat.

Pat'ronage, *n.* [Fr.] Special countenance or support; favor or aid afforded to second the views of a person or to promote a design.

—Guardianship, as of a saint.
(*Canon Law*.) The right of presentation to a church or ecclesiastical benefice.

Pat'ronal, *a.* [Lat. *patronalis*.] Protecting; favoring; supporting. (*R.*)

Pat'roness, *n.* A female who patronizes, or who favors, countenances, or supports. — A female guardian saint.

(*Canon Law*.) A female who has the right of presenting to a church living.

Patroniza'tion, *n.* Patronage. (*R.*)

Pat'ronize, *v. a.* To support; to countenance; to favor; to defend, as a patron his client; to promote as an undertaking.

Pat'ronizer, *n.* One who patronizes, or who supports, countenances, or favors.

Pat'ronless, *a.* Without a patron.

Patronym'ic, **Patronym'ical**, *a.* [Gr. *patronymikos*, from *pater*, a father, and *onoma*, a name.] Derived as a name from a father or an ancestor.

Patronym'ic, *n.* [From Gr. *pater*, and *onoma*, a name.] A name which designates a person in reference to some of his ancestors, either immediate or remote; as Pelides, *i. e.* Achilles, the son of Peleus; Æacides, *i. e.* Achilles, the grandson of Æacus. Such words do not occur in English, but they are common among the classic poets of antiquity.

Patroon, *n.* [Du., a patron.] A grantee of land to be settled under the original Dutch governments of New Jersey and New York.

Patsaliga Creek, in *Georgia*, enters Flint River in Macon co.

Patsaliga River, in *Alabama*, enters the Conecuh River in Covington co.

Pattée, *n.* [Fr. *patte*.] (*Her.*) A cross with its arms expanding towards the ends, and flat at their outer edges. Called also, *Cros Fermée*.

Pat'ten, *n.* [Norm. *patins*; Fr. *patin*.] A clog, from Gr. *patos*, a step. The foot, stall, or base of a pillar or column. — A wooden shoe with an iron ring, worn to keep the shoes from the dirt or mud.

Pat'ten, in *Maine*, a post-township of Penobscot co.; pop. abt. 639.

Pat'ten-maker, *n.* One who makes pattens.

Pat'ter, *v. n.* [Fr. *patte*, a paw, a foot.] To strike, as falling drops of water or hail, with a quick succession of small sounds.

Pat'tern, *n.* [Fr. *patron*; Du. *patroom*.] An original or model proposed for imitation; the archetype; that which is to be copied or imitated; an exemplar. — A specimen; a sample; a part showing the figure or quality of the whole. — Figure or style of ornamental execution. — An instance; an example. — Anything cut out in paper to direct the cutting of cloth.

—*v. a.* To model; to make in imitation of anything.

—To match; to serve the purpose of a pattern.

Pat'ter's Hill, in *Pennsylvania*, a post-village of Centre co.

Pat'terson, in *California*. See **CHEROKEE**.

Patterson, in *Missouri*, a village of Genevieve co., abt. 60 m. S. of St. Louis.

Patterson, in *New Jersey*. See **PATERSON**.

Patterson, in *New York*, a post-village and township of Putnam county, about 63 miles north-north-west of New York.

Patterson, in *Ohio*, a twp. of Darke co.; pop. abt. 1,100.

—A vill. of Delaware co., abt. 32 m. N.N.W. of Columbus.

—A village of Hardin co., abt. 68 m. S.W. of Sandusky.

Pat'terson, in *Pennsylvania*, a township of Beaver co.; pop. abt. 275.

—A post-village and township of Juniata co., about 50 m. N.W. of Harrisburg; pop. abt. 700.

—A village of Schuylkill co., abt. 68 m. N.E. of Harrisburg. **Pat'terson's Creek**, in *W. Virginia*, rises in Hardy co., and flowing N.E., enters the North Branch of the Potomac from Hampshire co.

Pat'tersonville, in *Louisiana*, a post-village of St. Mary's parish, abt. 15 m. S.E. of Franklin.

Pat'ti, ADELINA MARIA CLORINDA, prima donna, was born in Madrid, Spain, March 19, 1843. Her parents were both operatic singers. Her first teachers were her step-brother, Barili, and her brother-in-law, Maurice Strakosch; at 7 years of age she sang in a concert in New York city. She then made a tour of the British provinces with Strakosch and Ole Bull, and accompanied Gottschalk, the pianist, to the West Indies. In 1859 she made her debut in Italian opera, as *Lucia*, at the Academy of Music, New York; in 1861 she appeared in London as *Amina* in *La Sonnambula*. She afterward sang in all the great cities of Europe and North and South America. In 1868 she married the Marquis de Caux, from whom she was divorced in 1878; in 1886 she married Ernesto Nicolini, a tenor singer. During 1881-87 P. appeared in opera in the United States, and afterward in Mexico and South America. Her farewell tour in America was made in 1893. In 1894 she sang for the first time portions of Wagner's compositions. She built a theater at Craig-y-Nos, Wales, her favorite residence.

Pat'ti, (*Gulf of*) a semicircular bay of Sicily, 20 m. across, bet. Cape Calava and the promontory of Milazzo.

Pat'ton, in *Pennsylvania*, a township of Alleghany county.

—A township of Centre co.

Pat'tonsburg, in *Missouri*, a post-village of Daviess co., abt. 50 m. N.E. of St. Joseph.

Pat'tonsburg, in *Virginia*, a post-village of Botetourt co., abt. 180 m. W. of Richmond.

Pat'tonville, in *Ohio*, a village of Hocking co., abt. 38 m. E.N.E. of Chillicothe.

Patty, *n.* [Fr. *paté*.] A little pie; a pasty.

Patty-pan, *n.* A pan to bake patties in.

Pat'ulous, *a.* [From Lat. *pateo*, to be open.] Slightly spreading; expanded.

Paturages, (*pa-ti-razh'*) a town of Belgium, prov. of Hainault, 4 m. S.W. of Mons; pop. 7,000.

Pat'zun, or **PATSUN**, a town of Guatemala, abt. 40 m. W.N.W. of the town of Quatemala; pop. 6,000.

Pan, (*po*), a town of France, dept. of Basse-Pyrénées, former capital of the old Kingdom of Béarn and Navarre, and the birthplace of Henry IV., (*q. v.* p. 1199.) is beautifully situated at the foot of the Pyrénées and is noted for the salubrity of its climate and freedom from winds, and is a favorite winter resort. *Ar. Temp.* Nov., Dec., and Jan., 41°.

Paucartam'bo, a town of Peru, on river of same name.

Pancil'oquy, *n.* [Lat. *pauciloquum*.] The speaking or utterance of few words. (*R.*)

Pan'city, *n.* [Lat. *paucitas*, from *paucus*, little, few.] Fewness; smallness of number. — Smallness of quantity.

Paul, (*pole*), *n.* [It. *paolo*.] An Italian silver coin current in the former Papal States; value, 10 cents.

Paul I., (POPE), was the successor of Stephen, in 757. He engaged in dispute with Desiderius, king of the Lombards, but was taken under the protection of Pepin, king of the Franks. D. 768.

PAUL II. succeeded Pius II., 1464. He sought to organize a league of the Christian princes against the Turks, who at the time threatened to invade Italy, and also endeavored to establish peace among the different Italian States. He had a great dislike to profane learning, and shut up an academy which had been formed at Rome for the cultivation of Greek and Roman learning, many members of which were imprisoned and tortured. D. 1471.

PAUL III. His name was Alexander Farnese; and he was elected to the papal chair in succession to Clement VII., 1534. In his reign the Council of Trent was called. He established the Inquisition, confirmed the Society of Jesuits, condemned the interim of Charles V., and acted with rigor against Henry VIII. of England. D. 1550.

PAUL IV., Giovanni Pietro Caraffa, B. in Naples, 1476, succeeded Marcellus II., in 1555, and displayed an energy in his administration which had not been expected from his advanced age and previous studious habits. He established a censorship, and completed the organization of the Roman Inquisition; he took measures for the alleviation of the burdens of the poorer classes, and for the better administration of justice, not sparing even his own nephews, whom he banished from Rome on account of their corrupt conduct and profligate life. His foreign relations, too, involved him in much labor and perplexity. He was embroiled with the Emperor Ferdinand, with Philip II. of Spain, with Cosmo, grand-duke of Tuscany. Having condemned the principles of the Peace of Augsburg, he protested against its provisions. Under the weight of so many cares, his great age gave way, and he d. 1559.

PAUL V., Camillo Borghese, B. in Rome, 1552, was elected in 1605, after the death of Leo XI. He had a dispute with the senate of Venice, over which he pretended to have a right; but it was so firmly resisted that the pope excommunicated the doge and senate. He also raised forces against the republic; but by the interference of the emperor and other States, peace was restored in 1607. He embellished Rome with many excellent works of sculpture and painting, and an aqueduct. He was the founder of the Borghese family, one of the wealthiest in Italy. D. 1621.

Paul I., emperor of Russia, B. 1754. He was the only son of Peter III. and his wife Catharine II. He lost his father when 8 years old, and was brought up by his

mother with great harshness, and in entire seclusion from all public affairs. He married the Princess Mary of Würtemberg, in 1776, but did not escape from his solitude and rigorous treatment till, on the death of Catharine, in 1796, he was proclaimed emperor. The hopes excited by some liberal measures in the first days of his reign were soon extinguished; and with arbitrary edicts he made a complete revolution in the administration, interfering even with minute matters of dress and ceremony. He joined the second coalition against France; and Russian armies appeared in Italy under Suwarroff, in Switzerland, and in Holland. But he afterwards withdrew from it, and entered into friendly relations with Napoleon. His rule and all his conduct grew more and more intolerable, and seemed in fact, that of a madman. At length a conspiracy was formed against him, with Count Pahlen at its head; and he was murdered in his bed-room, March 24, 1801.

Paul de Loan'da, (*St.*) a seaport-town of S.W. Africa, cap. of the Portuguese dominions; Lat. 8° 48' S., Lou. 13° 13' E.

Paul'ding, in *Georgia*, a N.W. co.; area, about 300 sq. m. Rivers. Tallapoosa River, and Euharlee, Cedar, Pumpkinvine, and Sweetwater creeks. Surface, diversified, being traversed by a range of hills, called Dug-down Mountains; soil, in the valleys, generally fertile. Min. Limestone, freestone, and iron. Cap. Dallas. Pop. (1897) 12,640.

Paul'ding, in *Mississippi*, a post-village, capital of Jasper co., abt. 100 m. E. by S. of Jackson.

Paul'ding, in *Ohio*, a N.W. co., adjoining Indiana; area, about 414 sq. m. Rivers. Maumee, Auglaize, and Little Auglaize rivers, besides Blue and Crooked creeks. Surface, generally level and low; soil, very fertile, producing fruits and cereals in abundance. Cap. Paulding, abt. 30 m. E. by N. of Ft. Wayne.

Paul'ianists, *n. pl.* (*Ecccl. Hist.*) See **PAUL** or **SAMOSATA**.

Paulina, (*paw-lee'na*), in *New Jersey*, a post-village of Warren co., abt. 15 m. N.E. of Belvidere.

Paul'ina, in *New York*, a village of Delaware co., abt. 160 m. N.W. of New York.

Paul'ine, *a.* Relating to St. Paul.

Paulinskil', in *New Jersey*, a small river rising in Sussex co., and flows into the Delaware river from Warren co.

Paullin'ia, *n.* (*Bot.*) A genus of plants, order *Sapindaceæ*. The species *P. sorbilis* is the source of *Guarana*, or Brazilian cocoa. The dried seeds are deprived of their aril, and pounded and kneaded into a mass, which is afterwards made into cakes. These cakes constitute Guarana-bread, and is used precisely in the same manner as we use cocoa and chocolate. The beverage prepared from it is largely consumed in Brazil, on account of its nutritive qualities, and its stomachic, febrifugal, and aphrodisiac effects. It contains an alkaloid, to which the name *guaranine* has been given, but which appears to be identical with *cafféine*, the active principle of both tea and coffee.

Paul of Samosata, an heresiarch of the 3d century, who received his surname from the place of his birth, a city on the Euphrates, and became patriarch of Antioch in 260. Being entertained at the court of Zenobia, queen of Syria, he endeavored to gain her to the Christian faith, by explaining away its mysteries. For this purpose, he held that Christ was a mere man, and that the Trinity consisted not of persons, but attributes. His errors were condemned by the council of Antioch, A. D. 270, and Paul was excommunicated. His disciples were called Paulinists. Lived in the 3d century.

Paul, (*St.*) one of the apostles of Jesus Christ; originally called Saul; a Hebrew of the tribe of Benjamin, and a native of Tarsus, the capital of Cilicia, and was born at the beginning of the Christian era. His father was a Pharisee of the most rigid cast, and Paul himself, up to the time of his conversion, was a most bitter and intolerant persecutor of the Christian sect; even assisting at the martyrdom of St. Stephen; though his life, in other respects, was blameless, and he appears to have possessed a strong and vigorous mind and resolute will, that would carry out any duty he undertook with rigid probity and energy. The mode of his conversion is fully detailed in the New Testament. After his conversion, he was baptized at Damascus by Ananias; from whence, after a brief sojourn, he proceeded to Arabia, where he is supposed to have been fully instructed in the duties and doctrines of the new faith by special revelation, and where he received the Holy Ghost in a measure equal to the other apostles. The following chronological arrangement will enable the reader to connect the principal events in the life of St. Paul:

A. D.
Paul's conversion, (*Acts ix.*) 21st year of Tiberius, 36
He goes into Arabia, and returns to Damascus; (*Gal. i. 17*;) at the end of three years in all, he escapes from Damascus and goes to Jerusalem, (*Acts ix. 23*;) &c. 39
From Jerusalem Paul goes to Cilicia and Syria, (*Acts ix. 30*; *Gal. i. 21*;) From Antioch he is sent with Barnabas to Jerusalem to carry alms, (*Acts xi. 30*.) 45
The first missionary journey of Paul and Barnabas from Antioch, continued about two years, (*Acts xiii. xiv.*) commencing 45
After spending several years in Antioch, (*Acts xiv. 28*;) Paul and Barnabas are sent a second time to Jerusalem, to consult the apostles respecting circumcision, &c., (*Acts xv. 2*) 52
The Jews expelled from Rome, A. D. 52-54; Paul, on his second missionary journey, (*Acts xv. 40*;) after passing through Asia Minor to Europe, finds Aquila and Priscilla at Corinth, (*Acts xviii. 2*) 54
Paul remains eighteen months in Corinth. (*Acts*

xviii. 11.) After being brought before Gallio, he departs for Jerusalem the fourth time, and then goes to Antioch, (Acts xviii. 22.) 56
The apostle winters at Nicopolis, (Tit. iii. 12,) and then goes to Ephesus, (Acts xix. 1.) 57
After a residence of two years or more at Ephesus, Paul departs for Macedonia, (Acts xx. 1.) 59
After wintering in Achaia, Paul goes the fifth time to Jerusalem, where he is imprisoned (Acts xxi. xxi.). 60
The apostle remains two years in prison at Cesarea, and is then sent to Rome, where he arrives in the spring, after wintering in Malta, (Acts xxiv. 27; xxv. xxviii.) 63
The history in Acts concludes, and Paul is supposed by some to have been set at liberty 65
Probable martyrdom 66
Epistles of St. Paul. There are fourteen epistles in the New Testament usually ascribed to Paul, beginning with that to the Romans, and ending with that to the Hebrews. Of these the first thirteen have never been contested; as to the latter, many good men have doubted whether Paul was the author, although the current of criticism is in favor of this opinion. These epistles, in which the principles of Christianity are developed for all periods, characters, and circumstances, are among the most important of the primitive documents of the Christian religion, even apart from their inspired character; and although they seem to have been written without special premeditation, and have reference mostly to transient circumstances and temporary relations, yet they everywhere bear the stamp of the great and original mind of the apostle.

Paul, (St.) a fine bay of the island of Malta, 8 m. from Valetta, supposed to be the scene of the shipwreck of St. Paul.

Paul, (St. Vincent De.) See VINCENT DE PAUL, (St.)

Paulding, JAMES KIRK, an American writer, b. in Pleasant Valley, Dutchess co., N. Y., 1779. After a course of self-instruction, he removed to New York about the beginning of the 19th century, and in 1807 began a career of authorship in collaboration with his brother-in-law, Washington Irving. With this celebrated novelist he wrote a series of satirical papers, entitled *Salmagundi*. In 1813, he produced a burlesque poem, called *The Lay of a Scotch Fiddle*, and soon afterwards published a brilliant reply to some aspersions cast upon the American people in the "Quarterly Review." His next effort was an imitation of Swift, in a work entitled, *The Diverging History of John Bull and Brother Jonathan*, published in 1816. During the subsequent twenty years he continued to labor industriously with his pen, and in 1837 was appointed secretary of the navy, under the presidency of Van Buren; upon whose retirement, in 1841, P. resigned the post, and again took up his pen. His best works are: *Letters from the South*; *The Dutchman's Fireside*; *The Old Continental*; *John Bull in America*; *The New Pilgrim's Progress*, a Satire; *Tales of a Good Woman by a Doubtful Gentleman*; and *Westward Ho*. D. 1860.

Paul's, (St.) the cathedral church of London, and, in point of size and architectural grandeur, second only to St. Peter's, Rome, is built on the site of the old cathedral destroyed during the great fire of 1666. It was commenced under the auspices of the architect Sir Christopher Wren, in 1675, and completed in 1710. It is built in the form of a Latin cross, with an additional arm or transept at the W., and to give breadth to the front, and has a semicircular projection at the E. end for the altar, and semicircular porticos at either end

Fig. 2060. — ST. PAUL'S CATHEDRAL.

of the transepts. It is 510 ft. in length, E. to W., the length of the cross, exclusive of the circular porticos, is 250 ft., the breadth of the W. façade with the turrets,

180 ft., and the height of the walls, 110 ft. An immense dome or cupola, rising over the centre, is surmounted by a lantern and gilded ball and cross, the latter being elevated 362 ft. above the level of the floor, and 370 ft. above the pavement of the churchyard. The two turrets or belfries, in the W. front, are each 222 ft. in height. The walls are decorated by two stories of coupled pilasters, of the Corinthian and Composite orders, and the whole building, built of Portland stone, presents an ensemble of striking magnificence. The whole cost of this structure was \$3,739,770; a great part, however, of the internal decorations, as sketched by Sir C. Wren, having been left incomplete, a national fund, amounting to \$200,000, was subscribed for this purpose in 1869-70, and the work completed. The old graveyard was turned into a pretty public park in 1879. Within the cathedral are interred, among other celebrities, the remains of Cornwallis, St. Vincent, Nelson, Wellington, Howard, Dr. Johnson, Sir Joshua Reynolds, and Napier.

Paulus Æmilius. See ÆMILIUS.

Paunch, (pänch), n. [Fr. *panse*; It. *pancia*; Sp. *panza*; Lat. *pantex*, *particis*.] In ruminating quadrupeds, the first and largest stomach, into which the food is received before rumination; the abdomen; the belly.

(Naut.) A thick mat or rope-yarn placed in the slings of a yard, or elsewhere, to prevent chafing; — also called *paunch-mat*.

—v. a. To pierce or rip the belly of; to eviscerate.

Paup'ac, in Pennsylvania, a township of Wayne co.; pop. abt. 700.

Paup'er, n. [Lat.] A poor person; particularly one so indigent as to depend on the town for maintenance.

Paup'erism, n. The state of being poor or destitute of the means of support; the state of indigent persons requiring support from the community.

Paup'erize, v. a. To reduce to pauperism.

Pausanias, a general of Cleombrotus, king of Sparta, who distinguished himself at the battle of Platæa, and was afterwards detected in a treasonable attempt to deliver his country to the Persians. Having fled to the temple of Minerva, the sanctity of which secured him from violence, the Greeks surrounded the building with heaps of stones, and thus starved him to death, B. C. 467.

Pausanias, a Greek traveller and geographer of the 2d century, whose *Itinerary of Greece* is still extant.

Pause, (pauz), n. [Fr.; Lat. *pausa*; Gr. *pausis*, from *pauo*, to bring to an end.] A cessation or intermission of action, of speaking, singing, playing, or the like. — A temporary stop or rest; a temporary cessation in reading. — A mark of cessation or intermission of the voice. — Cessation proceeding from doubt; suspense. — Break or paragraph in writing.

(Mus.) The prolongation of a note, or a rest beyond the regular time of the composition; — a character thus [] placed over a note or a rest, to show that it may be prolonged at the pleasure of the performer; a hold.

—v. n. To make a short stop; to cease to speak for a time; to delay; to desist or forbear for a time. — To deliberate; to demur; to hesitate; to be intermitted.

Pauser, n. One who pauses.

Pausilippo, a celebrated mountain of Italy, about 5 m. from Naples, near the Lake of Agnano. This mountain is pierced by a subterranean gallery nearly a mile in length, from 25 to 30 feet in width, and from 30 to 60 feet in height. The gallery is known as the Grotto of Pausilippo, and is used as a road through the mountain, being lighted by a number of lamps, which are kept lighted day and night. Above the entrance of the grotto is the pretended tomb of Virgil, and, in a church on the top of the mountain, that of the poet Sannazar.

Pausingly, adv. After a pause; by breaks.

Pauwaygun, now Poygan, Lake, in Wisconsin, an expansion of Wolf river in Winnebago co. It covers an area of about 40 sq. m.

Pa'van, n. [Fr. *parane*; It. and Sp. *pavana*, from Pavia or Padu, where it is said to originate.] A grave and stately dance formerly practised in Italy, France, Spain, and England.

Pave, v. a. [Fr. *paver*, from Lat. *pavio*; Gr. *paio*, to strike.] To make into a hard, level surface, by beating, treading, or ramming down small stones, earth, lime, &c.; to floor with brick, stone, or other solid material.

Pave'ment, n. [Fr.; Lat. *pavimentum*.] A floor or covering of brick consisting of brick, stone, or other solid material.

Paver, n. One who paves or lays stones for a floor, or whose occupation is to pave; a pavier.

Pavesade, n. [Fr. *pavois*.] Canvas extended along the side of a vessel in an engagement, to prevent the enemy from observing the operations on board.

Pa'via, (anc. Ticinum), a city of N. Italy, cap. of a prov. of same name, on the Ticino, 19 m. S. of Milan; Lat. 45° 11' N., Lon. 9° 10' E. P. possesses numerous edifices of historical and artistical interest. In the cathedral, commenced in 1484, but never finished, are the ashes of St. Augustine, in a sarcophagus ornamented with 50 bassi-rilievi, 95 statues, and numerous grotesques. The Certosa of P., the most splendid monastery in the world, lies 4 miles N. of the city. It was founded in 1396, contains many beautiful paintings, and abounds in the richest ornamentation. The university of P. is said to have been founded by Charlemagne in 774, and was one of the most famous seats of learning during the Middle Ages. It consists of numerous colleges, and attached to it are a library of 120,000 volumes, a numismatic collection, anatomical, natural history, and other museums, a botanic garden, a school of the fine-arts, &c. The university is attended by about 1,600 students. It has numbered among its professors Alciati, Fidelfo, Spallanzani, Volta, Scarpa, Foscolo, and Monti. *Manuf.* Silk. Here,

Feb. 24, 1525, took place the *Battle of Pavia* (sometimes called the second battle of Marignano), in which the Imperialists, under Launey, defeated the French, and took François I. prisoner. Pop. 28,670.

Pavier, (pav'jur), n. A paver.

Pavilion, n. [Fr. *pavillon*; Lat. *papilio*, *papilionis*, a butterfly.] A tent.

(Arch.) A portion of a building, under one roof, of a tent-like form, with the slope of the roof either straight or curved. This form is much used in France. The higher parts of the new buildings at the Louvre are good examples of pavilions.

(Her.) A covering like a tent, investing the armory of a sovereign.

(Gems.) The under side and corner of a brilliant, between the girdle and the collet.

P. of the Ear. (Anat.) See EAR.

—v. a. To furnish with pavilions or tents. — To shelter with a tent.

Pavilion, in Illinois, a post-village of Kendall co., abt. 50 m. W.S.W. of Chicago.

Pavilion, in Michigan, a post-township of Kalamazoo co.

Pavilion, in New York, a post-village and township of Genesee county, about 53 miles south-east of the city of Buffalo.

Paving, n. The act of laying a pavement. — Pavement; a floor of stone or brick.

Pav'ior, n. A person who paves; a pavier.

Pav'o, n. [Lat., a peacock.] (Zool.) See PEACOCK.

(Astron.) A southern constellation between Sagittarius and the S. pole.

Pavonia, n. (Zool.) A genus of *Alcyonaria*, containing many foliated species of great beauty.

Pavoni'ne, n. pl. [Lat. *pavo*, a peacock.] (Zool.) A name for PHASIANINE, q. v.

Pav'online, a. [Lat. *pavoninus*.] Iridescent; resembling in colors the tail of a peacock.

—n. Peacock-tail taruish.

Paw, n. [W. *pawen*, a paw; Fr. *patte*; Lat. *pes*, *pedis*; Gr. *pous*, *podos*.] The foot of beasts of prey having claws. — The hand, in contempt.

—v. n. To draw the fore-foot along the ground; to scrape with the forefoot, as a horse.

—v. a. To scrape with the fore-foot. — To handle roughly; to scratch. — To fawn upon; to flatter.

Pawcatuck, in Rhode Island, a river formed in Washington co., by the union of Wood and Charles rivers, and flowing S. into Long Island Sound.

A village of Washington co., abt. 28 m. W.S.W. of New Port.

Pawed, (pawd), a. Having paws; broad-footed.

Pawing, n. Scraping with the fore-feet; the act of one who paws.

Pawk, n. A small lobster.

Pawk'y, a. [A. S. *pxcan*, to deceive.] Cunning; artful.

Pawl, n. [W.; Lat. *palus*, a poll or stake.] (Naut.) A piece which falls between the teeth of a ratchet-wheel; a click or detent; a short bar of iron or wood which prevents a windlass or a capstan from recoiling.

Paw'let, in Vermont, a post-village and township of Rutland co., abt. 77 m. S.W. by S. of Montpelier; total pop. abt. 1,900.

Paw'let River, rises in Bennington co., Vermont, and flowing N. and N.W. into New York, joins Wood Creek in Washington co.

Paw'ling, in New York, a post-village and township of Dutchess co., abt. 67 m. N.N.E. of New York city.

Pawn, n. [Lat. *pignus*; Ger. *pfand*.] Something given or deposited as security for the payment of money borrowed; a pledge for the fulfilment of a promise. — A common man at chess.

—v. a. To give or deposit in pledge, or as security for the payment of money borrowed; to pledge for the fulfilment of a promise.

Pawn'able, a. Capable of being pawned.

Pawn'broker, n. One who lends money on pledge, or the deposit of goods.

Pawn'ee, in Illinois, a post-village of Sangamon co., abt. 14 m. S. of Springfield.

Pawn'ee, in Nebraska, a S.E. co., adjoining Kansas; area, abt. 432 sq. m. *Rivers.* Nemaha River and its South Fork, besides many smaller streams. *Surface.* diversified; *soil*, generally fertile along the water-courses. *Minerals.* Coal and limestone. *Capital*, Pawnee City.

A village of Cass co., on the Platte River, abt. 10 m. above its mouth.

Paw'nee City, in Nebraska, a post-village, cap. of Pawnee co., abt. 38 m. S.W. of Brownville.

Paw'nees, a tribe of Indians inhabiting the country of the river Platte, and remarkable for endurance, daring, craft, and skill in horse-stealing. They are abt. 4,000.

Pawn'er, Pawn'or, n. One who pawns, or pledges anything as security for the payment of borrowed money.

Paw'paw, n. (Bot.) The *Caricacapaya*. See CARICA.

Paw Paw, in Illinois, a township of De Kalb co.; pop. abt. 2,000.

Paw Paw, in Indiana, a post-village of Miami co., abt. 13 m. N.E. of Peru.

Paw Paw, in Michigan, a small river rising in Van Buren co., and flowing W.S.W. into the St. Joseph River, near its mouth. — A post-village, cap. of Van Buren co., on the above river, abt. 70 m. W.S.W. of Lansing. It is situated in a fine farming region, and has several extensive manufactures. Pop. abt. 1,600.

Paw Paw, in West Virginia, a post-town of Morgan co., on the B. & O. R.R., about 48 m. S. E. of Wheeling.

Paw Paw Grove, in Illinois, a post-village of Lee co.; also called PAW-PAW.

Pawtuck'et, in *Massachusetts*, a township of Bristol co.

Pawtuck'et, in *Rhode Island*, a city of Providence co., on the Pawtucket River, abt. 4 m. above Providence. The river here has a fall of 50 ft., affording immense hydraulic power to the town, which ranks among the leading manufacturing places of New England. *Manuf.* Cotton and woollen goods, machinery, cabinet-ware, carriages, &c. Here was established, in 1790, the first American cloth factory moved by water.

Pawtuck'et River, rises in Worcester co., Massachusetts, and flowing a general S. and S.E. course into Rhode Island, enters Narragansett Bay between Kent and Bristol cos. Below the town of Pawtucket it receives the name of SEEKONE RIVER, while above it is often called Blackstone River.

Pawtux'et, in *Rhode Island*, a river flowing into Narragansett Bay between Kent and Providence cos.

—A post-village of Providence co.

Pawtux'et River, in *Maryland*, rises in Montgomery co., and flowing a general S.E. course, enters Chesapeake Bay between Calvert and St. Mary's cos.; length, abt. 90 m. Navigable 45 or 50 m.

Pax, *n.* [Lat. *peace*.] (*Archeol.*) A small plate of gold or silver, or copper gilt enamelled, or else of carved wood or ivory, overlaid with metal. It is a sacred utensil, employed in some of the solemn services of the Roman Catholic Church in the ceremony of giving the so-called "kiss of peace" during the mass.

Pax'lose, *a.* [Lat. *paxillus*, from Gr. *passalos*, peg.] (*Geol.*) Formed like a little stake.

Pax'o, (anc. *Paxos*), the smallest of the seven principal Ionian Islands, near the entrance of the Adriatic, 10 m. S.E. of Corfu; Lat. of its N. extremity 39° 14' N., Lon. 20° 9' E. Ext., 5 m. long from N. to S. and 2 m. broad. The surface is rocky and the soil poor. The climate is mild. *Prod.* Principally oil. *Cap.* Gavo, on the E. of the island. Pop. 6,000.

Pax'ton, in *Illinois*, a post-village, cap. of Ford co., abt. 103 m. S. by W. of Chicago.

Pax'ton, in *Massachusetts*, a post-vill. and twp. of Worcester co., abt. 50 m. W. of Boston.

Pax'ton, in *Ohio*, a twp. of Ross co.

Pay, *v. a.* (*imp.* and *pp.* PAID for PAYED.) [Fr. *payer*; Sp. *pagar*; It. *pagare*.] To satisfy, as a claim or claims resting upon a covenant or contract; to discharge a debt or money obligation; to give the equivalent for; to compensate; to reward; to liquidate that which is owing to another. — To retaliate or take revenge upon; to requite with what is deserved; in an ill sense, to punish. — To discharge, as a debt or obligation of moral, social, or religious duty; to make due return for; to render duly; to fulfil or perform, as what is promised or expected.

—[Fr. *poisser*, from *poi*, pitch.] (*Naut.*) To cover or smear over with tar or pitch, or other composition; to bream; as, to pay the seams of a ship.

To pay off, to settle the hire, wages, or compensation of, and discharge; as, to pay off a ship's crew. — To retort or retaliate upon; to requite; to take punitive revenge for. — To pay on, to lay on with successive applications, as blows. — To pay out, (*Naut.*) To slacken or cause to uncoil and run out; as, to pay out sixteen fathoms of cable.

—*v. n.* To make recompense; to render compensation or requital; to be remunerative or profitable; to be worth the cost of time, trouble, or money which it requires; as, the undertaking pays well so far.

To pay for, to atone or make amends for. — To render an equivalent for; to be mulcted in the cost of.

"A man . . . very punctual in paying for what he buys."—*Law*.

To pay off, (*Naut.*) To sag or fall to leeward; to lose headway; — said of a ship. — To pay on, to beat with successive blows. (Used colloquially.)

—*n.* An equivalent rendered for money due, goods purchased, or services performed; salary, stipend, or wages returned for services; hire; reward; compensation; recompense; as, the men receive their pay monthly.

Payable, *a.* [Fr.] That may or ought to be paid; that is justly due or legally enforceable; that has power to admit or demand payment; as, bills payable.

"Thanks are a tribute payable by the poorest."—*South*.

Pay'-bill, **Pay'-list**, **Pay'-roll**, *n.* A statement of sums of money placed against the names in a list or roll of persons entitled to payment, as soldiers, sailors, laborers, &c.

Pay'-day, *n.* The day on which wages are paid, or debts discharged; — hence, a day of reckoning or retribution.

Payee, *n.* The person entitled to receive payment of a bill drawn in his favor; — opposed to *payor*.

Pay'er, *n.* One who pays; one on whom a bill of exchange is drawn, and by whom the money is paid.

Pay'master, *n.* One from whom wages or compensation is received; an officer in the army or navy whose duty is to pay the officers and men their wages.

Pay'ment, *n.* [Fr. *paiement*.] Act of paying or making compensation. — The thing given in discharge of a debt, or fulfilment of a promise or obligation; reward; recompense; requital.

Payne, JOHN HOWARD, an American actor and dramatist, b. in New York, 1792. From childhood he was a prodigy. In his 13th year he was a writer for the press, and editor of the *Theatrical Mirror*. At 16 he appeared as *Norval* in *Dougllass*, at the Park Theatre, New York. At Boston he appeared, among other characters, in those of *Hastings*, *Rolla*, *Edgar*, and *Hamlet*. In 1812 he went to England, and made his *début* at Drury Lane, in his 21st year. In 1826 he edited a London dramatic paper called *The Opera Glass*. A great number of dramas were prepared by him when on the London stage, chiefly adaptations from the French, and in some of them Charles Kemble appeared. The air of *Home, Sweet*

Home first appeared in Payne's *Clari*, the maid of Milan. In his later years he occupied the post of consul of the United States at Tunis, where he d., 1852. His remains were removed to the U. S. in 1883, and interred in Oak Hill Cemetery, near Washington, D. C.

Payne's Point, in *Illinois*, a village of Ogle co.

Paynes'ville, in *Minn.*, a p. v. of Stearns co., abt. 32 m. W.S.W. of St. Cloud. — In *Mo.*, a p. v. of Pike co., abt. 92 m. E.N.E. of Jefferson City.

Pay'nim, *n.* An old term for a pagan; an infidel.

Payn'ize, *v. a.* [From Mr. Payne, inventor of a process of kyanizing wood, &c.] Same as KYANIZE, *q. v.*

Pay'-office, *n.* An office where payment is made.

Pay'or, *n.* (*Law*.) The payer of a note or bill of exchange, as distinguished from the *payee*.

Pay'-roll, *n.* See PAY-BILL.

Pay'son, in *Illinois*, a post-village and township of Adams co., abt. 92 m. W. of Springfield; total pop. abt. 4,000.

Pay'son, in *Utah*, a city of Utah co., about 18 m. S. by W. of Provo City.

Payta, (*p'ita*), a town of Peru, on Sechura Bay; Lat. 5° 5' 30" S., Lon. 81° 8' 30" W. It has an extensive commerce in cotton, bark, hides, drugs, &c. Pop. 6,000.

Pazaree, *n.* (*Naut.*) A rope attached to the clew of the foresail, and run through a block on the swinging-boom, used for guying the clews out when before the wind.

P. C. Abbreviation of privy councillor, parish-curate, or police-constable.

Pd. A contracted form of *paid*.

Pea, (*pē*), *n.* [A. S. *pisa*; W. *pys*, pease; Fr. *pois*, a pea; Lat. *pisum* = Gr. *pison*.] The common name of leguminous plants of the genera LATHYRUS and PISUM, *q. v.*

(NOTE. In the plural, we write *peas* for two or more individual seeds, but *pease* for an indefinite number or quantity in bulk.)

Pea'body, GEORGE, an American philanthropist, b. in Danvers, Mass., 1795. He was descended from an English family, and his parents being poor, George received but a scanty education, becoming grocer's clerk at the age of 11. Displaying excellent business qualities, he became chief clerk, and, afterwards, partner with his uncle John Peabody in Georgetown, D. C., in 1812. Not satisfied, however, with their business relations, George left his uncle and joined partnership with Mr. Elisha Riggs in the dry-goods business in Baltimore, in 1815. His business increasing, he found occasion to make frequent visits to England, where he finally settled in 1829, having previously become the head of the firm by the retirement of Mr. Riggs. In 1837 he withdrew from the firm, and established himself as banker in London, where he amassed that colossal fortune which enabled

Fig. 2061. — PEABODY.

him to fully carry out those benevolent ideas, which won the admiration of the world. He was particularly devoted to promoting education. Commencing with his native place of Danvers, Mass., where he bestowed \$270,000 for the cause of education, his purse was always open to assist the good work, not only in the land of his birth, but throughout the world. To the city of Baltimore he donated for this purpose the sum of \$1,400,000; to the Board of Trustees for the promotion of education in the South, he gave \$3,500,000; besides other munificent donations throughout the country. In 1862 he established a Board of Trustees for the amelioration of the condition of the poor of London, to which he contributed at various times the amount of \$2,500,000, having the satisfaction of seeing his plans in successful operation before his death. Mr. P., the most eminent philanthropist of modern times, d. in London, Nov., 1869. After his decease, his remains were, by command of Queen Victoria, temporarily interred in the royal vault in Westminster Abbey, and, subsequently, conveyed with state by the British ship of war "Monarch," escorted by an American war-steamer, to this country, to be finally deposited, amid imposing manifestations of international respect, at Danvers, (now Peabody,) Mass., in March, 1870.

Pea'-bug, **Pea'-weevil**, *n.* (*Zoöl.*) The *Bruchus pisi*. See BRUCHUS.

Peace, (*pēs*), *n.* [A. S. *pais*; Fr. *paix*; It. *pace*, from Lat. *pax*, *pacis*.] A state of quiet or tranquillity; freedom from agitation, perturbation, or turmoil, applicable to society, to individuals, or to the temper of the mind;

calm; repose. — Freedom from war with a foreign nation; freedom from intestine commotion or civil war; exemption from, or cessation of, hostilities.

"There never was a good war, or a bad peace."—*Franklin*.

—Public tranquillity; freedom from private quarrels, suits, or disturbance; as, to keep or break the peace. — Freedom from agitation or disturbance by the passions or emotions, as from fear, terror, anger, anxiety, and the like; quietness of mind; calmness; repose of conscience. — A state of reconciliation between parties at variance; harmony; concord; absence of discordant elements.

—*interj.* Silence; hush; be quiet; — used as an exclamation to command peace or order.

"I prythee, peace."—*Dryden*.

At peace, in a state of peace or tranquillity; not engaged in war, contention, disputation, intestine commotion, &c.; as, to be at peace with foreign countries. — Justice of the peace, a magistrate, or subordinate judicial functionary. — To be sworn of the peace, to be sworn in as a public officer. — To hold one's peace, to keep silence; to suppress one's thoughts.

"Let him now speak, or else hereafter forever hold his peace."—*Book Com. Prayer*.

To make one's peace, to become reconciled; to be restored to favor.

"I will make your peace with him."—*Shaks*.

To make peace, to bring about a cessation or termination of hostilities; to put an end to war, animosity, &c.

"Let him make peace with me."—*Is. xxvii. 5*.

Peace'able, *a.* [Fr. *paisible*.] Disposed to peace; as, the men are peaceable.

—Pacific; free from war, tumult, or public commotion; without private feuds or quarrels; not engaged in hostilities with others. — Peaceful; tranquil; quiet; undisturbed; serene; calm; without excitement; as, "a happy and peaceable death."—*Hale*.

Peace'ableness, *n.* State or quality of being peaceable; disposition to peace; quietness.

Peace'ably, *adv.* In a peaceable manner; without war, tumult, commotion, or disturbance; quietly; without discord, agitation, or interruption.

Peace Dale, in *Rhode Island*, a post-village of Washington county, abt. 30 m. S. by W. of Providence.

Peace'ful, *a.* Full of peace; quiet; undisturbed; not in a state of war, commotion, or disturbance; possessing or enjoying tranquillity. — Pacific; serene; calm; mild; without agitation or excitement.

Peace'fully, *adv.* Without war, disturbance, or anxiety; quietly; mildly; gently.

Peace'fulness, *n.* State or quality of being peaceful; peaceableness; quiet; tranquillity; freedom from war, tumult, discord, or disturbance; freedom from mental agitation; as, peacefulness of conscience.

Peace'less, *a.* Without peace; perturbed. (*R.*)

Peace'-maker, *n.* One who makes or promotes peace by reconciling persons or parties that are at variance.

Peace'-offering, *n.* Among the Jews, a voluntary offering made to God, in thankfulness for his benefits, or to ask favors from him, or merely to satisfy the desires of a devout mind, and pay him honor; — hence, satisfaction offered to a superior, to seek mitigation of anger.

Peace'-officer, *n.* A civil officer empowered to preserve the public peace, as a sheriff, constable, policeman.

Peace'-parted, *a.* Dismissed from the world in peace; as, "peace-parted souls."

Peace River, rises in British Columbia, and flowing a general E. course through the Rocky Mountains, enters Lake Athabasca at its W. extremity.

Peach, (*pēch*), *n.* [Fr. *pêche*; Lat. *persicum*, from *Persicus*, belonging to Persia.] (*Bot. and Horticult.*) The delicious fruit of *Amygdalus Persica*, the peach-tree, gen. AMYGDALUS, *q. v.* It is distinguished by oblongo-lanceolate serrulate leaves; solitary flowers, of a delicate pink color, appearing before the leaves; and the sarcocarp of the drupe succulent and tender, not fibrous as in the almond. Many varieties are cultivated in the United States, and form an important branch of commerce, chiefly in Pennsylvania, Maryland, New Jersey, Delaware, W. New York, and S. Illinois, which possess extensive orchards, sometimes containing no less than 20,000 trees. Much of the fruit is used for making a spirituous liquor called *Peach Brandy*; much of it is dried in ovens, or in drying-houses furnished with stoves, or, in the more Southern States, in the sun, each fruit being divided into two parts, and the stone taken out, and when dried it is sent to market to be used for pies; the refuse of the orchards is used for feeding swine. — The *P.* is a very pleasant and refreshing fruit, and in a stewed form is used in slight cases of constipation. The leaves, when fresh, have the smell and taste of bitter almonds; and by bruising them, mixing the pulp with water, and distilling, the *Peach-water* is obtained, which is so much esteemed by many for flavoring articles of cookery.

Peach, *v. a.* To inform against; to impeach of a crime or misdemeanor; — with *on* or *against*; as, to peach on an accomplice.

Peach'am, in *Vermont*, a post-village and township of Caledonia co., abt. 20 m. E. by N. of Montpelier; pop. abt. 1,247.

Peach Bottom, in *Pennsylvania*, a post-township of York co.; pop. abt. 2,250.

Peach'-color, *n.* The pale red color of the peach-blossom.

Peach'-colored, (*-kūl-erd*), *a.* Of the color of a peach-blossom; of a pale red color; as, peach-colored satin.

Peach Creek, in *Texas*, enters the San Jacinto River from Harris co.

—Enters the St. Bernard River from Matagorda co.

—Enters the Guadalupe River from Gonzales co.

Pea'-chick, n. The young of the peacock.

Peach-tree Borer, n. (Zool.) See *TROCHILUM*.

Peach'y, a. Resembling, containing, or consisting of, peaches.

Peacock, (pē'kok,) n. [*Pea*, in this word = A. S. *pawa*; Ger. *pfaue*; Icel. *pá*; L. Lat. *pavo*; Fr. *pau* = Gr. *taōs*.] (Zool.) This splendid bird, comprising the genus *Picus*, family of the *Phasianide*, is a native of India. It is said to have been brought to Palestine by the fleets of Solomon, and to Europe at a very early period. It is now dispersed in a domesticated state all over Europe and the United States. Its head is adorned with an aigrette or crest of the most exquisite green and gold; its body is brilliantly variegated; but its distinguishing feature is its train, which rises just above the tail, and, when erected, forms a circular fan of the most resplendent hues; the two middle feathers are sometimes four feet and a half long, the others gradually diminishing on each side, all spangled with eyes, which, when pleased or in sight of his females, he displays in all its loveliness, strutting slowly, and frequently turning round, as if conscious of his elegant dress, and desirous of exhibiting himself to the greatest advantage. The plumes are shed every year, and the bird, while moulting, keeps

Fig. 2062. — PEACOCK.

out of sight, as if ashamed. The *P.* in former times, has been served up at baronial feasts, but its flesh was never esteemed; and it more frequently was exhibited as an article of show or veneration; for sometimes, with the Holy Virgin, vows were addressed to it by chivalrous knights. Like other birds of the poultry kind, it feeds chiefly on corn, preferring barley; but at other times it seeks insects and worms, and is very mischievous, if it can find any admission into a garden. It always roosts high, and is a proud and quarrelsome bird. The female lays five or six eggs, which she hatches in twenty-seven to thirty days. The plumage is in its perfect state in the third year. It lives 25 years. The harsh cry of the *P.* seems to have been imitated in its Greek name *taōs*, and probably has given rise also to the Latin *pavo*, and the English *pea-cock*.

Pea'-fowl, n. The peacock or pea-hen.

Peage, n. Same as *PEDAGE, q. v.*

Pea'-hen, n. The hen or female of the peacock.

Pea'-jacket, n. A thick woollen overcoat worn by seamen, &c.

Peak, (peek,) n. [A. S. *peac*; Fr. *pique*.] To point; the end of anything that terminates in a point; especially, the top of a hill or mountain culminating in a point; as, the *peak* of Tenerife.

(Naut.) The upper, outer corner of a sail, which is extended by a gaff or yard; also, the extremity of the gaff or yard.

—*v. n.* To make a mean figure; to sneak.

—*v. a.* (imp. and pp. *PEAKED (peekt.)* (Naut.) To raise to a vertical position or thereabouts; as, to *peak* oars.

Peaked, (peekt,) a. Pointed; ending in a point.

Peak'ing, a. Mean; sneaking; paltry. (Vulgar.)

Peak'ish, a. Having a peak or peaks; acuminate.—Having weakened or angular features.

Peal, (peel,) n. A loud sound; usually, a succession of loud, reverberating sounds, as of thunder, bells, &c.

—*a.* the deep thunder, *peal on peal*, afar." — *Byron*.

—A set of bells harmonically attuned; also, the changes rung upon such bells.

—*v. n.* [Icel. *biatta*, a bell; *oyl*, or *bylia*, to resound. See *BELL*.] To utter loud and solemn sounds; to resound.

—*v. a.* To assail with noise.

"Nor was his ear less *peal'd* with noises." — *Milton*.

—To celebrate with resonant sounds; to cause to ring, reverberate, or sound.

Pea'nism, n. [From Gr. *paianzein*, to chant the psalm.] Songs of praise; shouts of acclaim or triumph.

Pea'-nut, n. Same as *EARTH-NUT, q. v.*

Pea'-ore, n. (Min.) Argillaceous oxide of iron, occurring in pea-like grains.

Pea'-pack, n. in *New Jersey*, a post-village of Somerset co., abt. 11 m. N.N.W. of Somerville.

Pear, (pēr,) n. [A. S. *pera*; Fr. *poire*; Lat. *pirum*.] (Bot.) See *PYRUS*.

Pear'-gauge, n. An instrument for measuring the exhaustion of a receiver.

Pea Ridge, in Arkansas, a post-village of Benton co., abt. 8 m. E. of Bentonville. Here, on March 6, 7, and 8, 1862, occurred one of the most desperate battles of the late civil war. Gen. Samuel B. Curtis, in command of abt. 11,000 Union troops, with 49 pieces of artillery, was attacked by a superior force of Confederates (said to number 20,000) under Gen. Earl Van Dorn, and a series of obstinate and sanguinary conflicts ensued; which lasting through three days, often favoring each army with temporary success, finally ended with the withdrawal of Van Dorn. The total Union loss was 1,351; that of the Confederates, though never officially reported, is supposed to have been more severe.

Pea Ridge, in Illinois, a township of Brown co.; *pop.* abt. 1,700.

Pea Ridge, in Tennessee, a village of Montgomery co., abt. 52 m. N.W. of Nashville.

Pea'-rifle, n. A small-bore rifle, carrying a bullet the size of a pea.

Pearl, (pērl,) n. [Fr. *perle*; It. and Sp. *perla*; A. S. *pearl*.] A substance formed by certain bivalve molluscs allied to the oyster, and consisting of alternate concentric layers of membrane and carbonate of lime. The true pearl-oyster, *Arlicula margaritifera*, has an equivalve shell, nearly semicircular in form, greenish in appearance without, and ornamented with the most beautiful nacre within. The shell is furnished with a rectilinear hinge, frequently extending into rings by its extremities, and furnished with narrow elongated ligaments, and occasionally with small notches near the mouth of the animal. In the interior side there is a notch for the byssus, a little beneath the angle of the mouth. The pearl oysters live in the warm seas of the E. and W. Indies, and they are found in large clusters, hanging on to rocks, and other substances at the greatest depths. The places which they inhabit are termed "pearl-banks," and the most famous of these are off the W. coast of Ceylon, at Tuticorein on the Coromandel coast, at the Bahrein Islands in the Gulf of Persia, at the Socool Islands, off the coast of Algiers, off St. Margaret in the W. Indies, and in the Bay of Panama. They have also been found off the Scotch coast, and indeed in various other places, but not in numbers sufficient to be noted, or to cause the fishery to be prosecuted. It used to be a popular superstition, before science was brought into play to destroy the illusion, that pearls are produced by the oyster swallowing the dew early in the morning, and that this dew was then converted by the marine animal into pearls. According to Dr. Baird, it appears, however, that the ultimate cause of the oyster forming this beautiful substance is to get rid of a source of irritation. "Sometimes," he observes, "this happens from a grain of sand, or some such small foreign body, which has insinuated itself between the mantle of the oyster and the shell, and which, proving a great annoyance, the animal covers with a smooth coat of membrane, over which it spreads a layer of nacre. At other times, it is caused by some enemy of the inhabitant of the shell perforating it from the outside to get within reach of its prey. With a plug of this same matter, the oyster immediately fills up the opening made, and shutting out the intruder, basks it of its nefarious design. In both these cases we find the pearl usually adhering to the internal surface of the shell. The best, however, and the most valuable specimens, are generally found in the body itself of the animal; and the source of irritation is here proved, according to the observations of Everard Home, who has paid great attention to this subject, to be the ovum or egg of the animal, which, instead of becoming ripe, proves abortive, and is not thrown out by the mother along with the others, but remains behind in the capsule in which the ova are generally contained. This capsule being still supplied with blood-vessels from the parent animal, goes on increasing in size for another year, and then receives a covering of nacre, the same as the animal spreads over the internal surface of the shell." The pearls found in the substance of the animal are generally round, but they are occasionally pear-shaped, in consequence of the pedicle by which the egg is attached being covered by the nacre as well as the egg itself. The pearl-fishery forms a source of considerable commercial speculation. As the Ceylon pearls are the most esteemed in England, a description of the fishery carried on in the Bay of Condatchy will be given. The banks here extend several miles along the coast, from Manaar southwards, off Aripoo, Condatchy, and Pomparipoo, the principal bank being opposite Condatchy, lying some 20 m. out to sea. After the banks have been surveyed, and a report made to government on the subject, they are sold for the season by auction to the highest bidder. The banks themselves are divided into five portions, which are fished annually in succession, in order that the oysters may have time to arrive at maturity, which they do in about six or seven years. The season for fishing commences in February, and ends about the beginning of April.

—In a figurative sense, something very estimable or precious; a gem; a jewel.

"Neither cast ye your *pearls* before swine." — *Matt. vii. 6*.

—Something round and pellucid, as a globule of water;—used in a poetical sense.

"Dropping liquid *pearl* before the queen." — *Drayton*.

—Cataract of the eye. See *CATARACT*.

(Printing.) A size of printing-type between Agate and Diamond.

(NOTE. This line represents the type called *Pearl*.)

Artificial pearls, small globules of thin glass, made to present the lustre and appearance of pearls.

—*v. a.* To set or embellish with pearls; as, "*pearled*

wrists." (*Milton*.) — To make to resemble pearls in form and appearance; as, to *pearl* barley.

—*v. n.* To resemble pearls.

—*a.* Relating to, or made of pearl, or mother-of-pearl; as, a *pearl* necklace.

Pearlaceous, (-ā'shus,) a. Like mother-of-pearl.

Pearl'-ash, n. Purified potash.

Pearl'-barley, n. A variety of pot-barley, produced by grinding off the husks.

Pearl'-button, n. A button manufactured of mother-of-pearl.

Pearl'-diver, n. A diver for pearls.

Pearl'-edge, (-ēj,) n. A selvage on some kinds of ribbon and thread.

Pearl'-eyed, (-īd,) a. Having cataract in the eye or eyes.

Pearl'iness, n. State or quality of being pearly.

Pearl'ins, Pearl'ings, n. pl. A kind of silken or thread lace.

Pearl Islands, a group belonging to the U. States of Colombia, in the Bay of Panama, abt. 60 m. S.E. of the city of Panama. They comprise the islands of Del Rey, San Jose, and Pedro Gonzales, besides several small islets. Pearl fishery is carried on here; hence their name.

Pearl Lagoon, an inlet of the Caribbean Sea, in the Mosquito Territory, about 30 m. N. of Bluefields. *PEARL KEYS* are off its entrance.

Pearl'-oyster, n. See *PEARL*.

Pearl'-powder, n. See *BISMUTH*.

Pearl Prairie, in Illinois, a township of Pike co., *pop.* abt. 900.

Pearl River, in Mississippi, rises in Winston co., and flowing a general S. course, enters the Gulf of Mexico through Lake Borgne, on the boundary line between Louisiana and Mississippi. *Length*, abt. 250 m.

Pearl'-sago, n. Finely granulated sago.

Pearl'-sinter, n. (Min.) A variety of opal; the same as *FIORITE, q. v.*

Pearl'-spar, n. (Min.) The name applied to rhombohedral crystallizations of dolomite, or magnesian carbonate of lime, when they have curved faces, and a pearly lustre.

Pearl'-stitch, n. An ornamental stitch on knit stockings.

Pearl'-stone, n. (Min.) A variety of Obsidian of a pearly lustre, and of various tints of gray, yellow, brown, or red.

Pearl'-studded, a. Studded with pearls. (Tautological.)

Pearl'-white, a. (Painting, &c.) A denomination applied to two pigments: one, falsely so called, prepared from bismuth, which turns black in sulphuretted hydrogen gas or any impure air, is employed as a cosmetic; the other, prepared from the waste of pearls and mother-of-pearl, is exquisitely white and of good body in water, but of little force in oil or varnish; it combines, however, with all other colors, without injuring the most delicate, and is itself perfectly permanent and innoxious.

Pearl'-wort, Pearl'-grass, n. (Bot.) See *SAGINA*.

Pearly, (pēr'le,) a. Containing pearls; abounding with pearls; as, a *pearly* stream.—Resembling pearls; clear; pellucid; pure; transparent.

Pear'main, n. A variety of the apple.

Pear'-shaped, (-shāpt,) a. Having the form of a pear; ovate-conical.

Pear't, (pērt,) a. [A corruption of *pert*.] Lively; brisk; frolicsome; active; — often applied to convalescent persons; as, a *pear't* young fellow.

Peasant, (pēz'ant,) n. [O. Fr. *paisant*; Fr. *paysan*; Sp. *paisano*, from Lat. *paganus*, from *pagus*, village.] A countryman; a rustic; a hind; one whose business is rural labor.

—*a.* Rustic; rural; countrified.

Peas'-ant-like, Peas'-antly, a. Clownish; rude; illiterate; rustic; after the manner of peasants.

Peas'-antry, n. The lower body of the country-people; rustics.

Peasants' War. (Hist.) A struggle, called the *Bundschuh*, broke out in 1502, and another, the War of Poor Conrad, in Würtemberg, in 1514. The peasants of the small towns rebelled in Swabia, and those of the Thurgau rose in arms in June, 1524, when many outrages were committed. After a temporary lull it broke out again early in 1525, on a more extended scale, the peasants of Alsace, Franconia, Lorraine, the Palatinate, and Swabia joining in the movement. They published a manifesto containing their demands, embodied in 12 articles. The insurgents, after some successes, were defeated by the army of the Archduke Ferdinand, May 2; again at Königshofen, June 2; and were put down after 100,000 persons had perished, in June, 1525. The Anabaptists (*q. v.*) took part in the movement. — See *JACQUERIE, PRAGUERIE, &c.*

Peas'-cod, n. The legume or shell of the pea.

Pease, (pēz,) n. pl. Peas collectively or in bulk, or used as food. See *PEA*.

Pease, in Ohio, a twp. of Belmont co.

Pea'-shell, n. Same as *PEAS-COD, q. v.*

Pea'-shooter, n. A small tin tube for blowing peas through.

Pea'-stone, n. (Min.) Same as *PISOLITE*.

Peat, (peet,) n. [A word of doubtful origin.] A substance composing the soil of swamps, and consisting of the twigs, leaves, and roots of trees, mixed with grass, plants, weeds, earth, &c., that have long lain in water, and thereby become decomposed into a blackish-brown mass that may be cut with a spade, and dried for fuel.

Peat'-bog, n. A peat-moss; a bog or morass containing peat. See *SECTION II*.

Pent'-moss, *n.* The vegetable substances which, after decomposition, form peat; a few or bog producing peat.
Peat'-reek, *n.* In Scotland, the smoke or reek of burning peat;—hence, the peculiar smoky flavor imparted to whisky by being distilled with peat as fuel.
Peat'y, *u.* Consisting of, containing, or resembling peat; as, a *peaty* soil.

Pea'-vine, *n.* (*Bot.*) See AMPICARPEÆ.

Pe'ba, *n.* (*Zoöl.*) A species of armadillo (*Dasypus peba*), also called *tatoohou*, *tutu*, and *tutu-peba*; found in South America.

Peb'ble, **Peb'ble-stouc**, *n.* [*A. S. pabob.*] A name given to roundish nodules and geodes, especially of silicious minerals, such as rock-crystal, agate, &c.; but commonly and more correctly applied to small fragments of rocks and minerals which have become rounded and water-worn, like the shingle forming the beach on a seashore. Thus, pebbles may be composed of any rock or mineral; as, for example, of sandstone, quartz, limestone, flint, &c. When of considerable size, they are called *boulders*, or *boulder-stones*. Pebbles of gold are known by the name of *nuggets* or *pepitas*. In a technical sense, the term *pebble*, among opticians, generally means the transparent and colorless rock-crystal or quartz (pure silica) which is used as a substitute for glass in spectacles; its extreme hardness renders it more durable, and less liable to become scratched.

Peb'ble-crystal, *n.* See PEBBLE.

Peb'bled, *a.* Full of pebbles.

Pebbles, in Ohio, a flourishing township of Pike co.

Peb'bly, *a.* Abounding with pebbles, or small, roundish stones; as, a *pebbly* brook.

Pecan, **PECANE**, or **PECAN-NUT**, *n.* (*Bot.*) The fruit of *Carya oliviformis*. See HICKORY.

Peccability, *n.* State of being peccable or subject to sin; capacity of sinning.

Peccable, *a.* [*Fr.*; *It.* *peccabile*, from *Lat. pecco*, *peccatum*, to transgress.] Liable to do amiss or to sin; subject to transgress or violate the divine law.

Peccadillo, *n.* [*Sp. peccadillo*, dimin. of *pecado*—*Lat. peccatum*, a fault, sin; *It. peccadiglio*. See PECCANT.] A slight trespass or offence; a petty crime or fault.

"'T is low ebb with his accusers, when such peccadillos as these are put in to swell the charge."—*Atterbury*.

Peccancy, *n.* [*Lat. peccantia.*] Bad quality; also, offence.

Peccant, *a.* [*Fr.*; *Lat. peccans*, from *pecco*, to go wrong, to err, to sin; akin to *W. pechawd*, sin.] Transgressing; sinning; guilty of sin or transgression; criminal; as, *peccant* angels. (*Milton.*)—*Morbid*; bad; corrupt; tainted; not sound or healthy; as, "bile *peccant* or deficient."—*Arbuthnot*.

Peccantly, *adv.* Criminally; corruptly; badly.

Peccary, **Peccary**, *n.* [*Sp.*] (*Zoöl.*) A pachydermatous quadruped allied to the hog; but generically distinguished by the absence of the outer toe of the hind foot, and the presence of a peculiar gland, which exudes its secretion by an orifice situated on the back; whence Cuvier devised the name *Dicotyles* (two navels) for the gen. The incisor and molar teeth resemble those of the hog, but the canines do not project from the mouth. The metacarpal and metatarsal bones of their two middle and largest toes are confluent, as in the Ruminants, with which their stomach also, divided into three compartments with caecal appendages, presents a marked analogy. Two species of peccary are known, both natives of South America; viz., the colored peccary (*Dicotyles torquatus*) and the white-lipped peccary (*Dicotyles labiatus*, Cuv.).

Pecca'vi, [*Lat.*, I have sinned.] I have sinned or transgressed;—a colloquialism employed to express acknowledgment of an offence.

Pecco, *n.* See PEKOE.

Peck'blende, *n.* [*Ger.*] (*Min.*) Same as PITCH-BLENDE, *q. v.*

Peck, *v. a.* (*imp.* PECKED (*pekt.*) [*It. beccare*, to peck, *becco*, the bill of a bird; *O. Fr. becquer*, from *bec*, the beak.] To strike with the beak; to thrust the beak into; as, a bird that *pecks* a hole in a fruit.—Hence, to strike with a pointed instrument, or to delve or dig with anything pointed, as with a pickaxe.—To strike with a repetition of light blows; as, two contrary factions are perpetually *pecking* at one another.—To pick up food with the beak, as fowls.

—*n. n.* To deal strokes with the beak, or something resembling such.—To *peck* at, to gird or carp at petulantly; to assail with petty criticism; as, to *peck* at trifles.

—*n.* [*Ir. pic*; *Fr. picotin*, a peck; *O. Fr. picotin*, the fourth part of a bushel. Etymol. uncertain.] The fourth part of a bushel; a dry measure of eight quarts; as, a *peck* of oats, a *peck* of potatoes.—Hence, a considerable amount or quantity; a great deal; as, to be in a *peck* of difficulties;—used colloquially.

Peck'er, *n.* He who, or that which, pecks; especially, a bird that pecks holes in trees; a woodpecker.—Stamina of body; appetite; spirit. (*Vulgar.*)

Peck'ham, a suburban village of London, England, co. of Surrey, 3 miles S.S.E. of St. Paul's cathedral; pop. 20,000.

Pecks'ville, in New York, a village of Dutchess co., abt. 80 m. S. of Albany.

Pecop'sen, in Pennsylvania, a township of Chester co.

Pe'cora, *n.* [*Lat.*, cattle.] (*Zoöl.*) The name given by Linnaeus to an order of Mammals corresponding with the Ruminantia of Cuvier.

Pec'tate, *n.* (*Chem.*) A compound of pectic acid with a base.

Pec'ten, *n.* [*Lat.*, a comb.] (*Zoöl.*) A genus of lamellibranchiate molluscs, commonly referred to the same family with the oyster. The shell has neither teeth nor laminae in the hinge; the valves are unequal, one of them being often much more convex than the other; the shape is regular; the hinge is extended by ears, and in most of the species both valves have ribs radiating from the umbo to the margin. The animal has a small foot; some of the species are capable of attaching themselves by a byssus; they are capable also of locomotion by opening and rapidly closing the valves, and in this way can even regain the sea from a short distance by leaping on the shore. Some of the larger species are often popularly called *Argus-shells*, and also *clams*, a name shared by other bivalves. *P. Jacobæus*, a native of the Mediterranean, is the *Scallop-shell*, which pilgrims were accustomed to wear in front of their hat, in token of their having visited the shrine of St. James at Compostella. It attains a size of about 4 inches long and 5 inches broad. It is sometimes eaten, but it is hard and indigestible.

(*Comparative Anatomy.*) The vascular membrane, in structure resembling the choroid, plicated with parallel folds like the teeth of a comb, and extending, in the eyes of birds, from the back of the retina through the vitreous humor to, or near to, the crystalline lens, where it mostly terminates in a point. This organ resembles a flattened conical bag, whence it is also termed *mar-supium*.

Pect'ic Acid, *n.* [*Gr. pektos*, coagulated.] (*Chem.*) A gelatinous principle has long been recognized as one of the proximate components of vegetables; it is derived, according to Frémy, from the presence of *pectose*, a substance usually associated with the cellular tissue, and which is insoluble in water, alcohol, and ether, but which under the influence of acids, aided by a gentle heat, becomes converted into a soluble gelatinous substance, *pectine*, represented by the formula $C_{64}H_{40}O_{56}$. *Pectine* is found ready formed in the juices of ripe fruits, in consequence of the action of their acids upon the original *pectose*. It may be obtained from the expressed juice of ripe pears or apples (after the lime which it contains has been precipitated by oxalic acid, and the albumen by a strong solution of tannin), by means of alcohol, which throws it down in gelatinous filaments. When pure it is white, neutral, not crystallizable, soluble in water, but insoluble in alcohol and ether; it is precipitated by subacetate, but not by neutral acetate of lead. When its aqueous solution is long boiled, it loses viscosity, and is changed into *parapectine*. *Pectine* and its modifications are changed into *pectic acid* by the action of weak alkaline solutions. *Pectic acid* is generally obtained by boiling the pulp of certain roots, of carrots, for instance, with a very weak solution of an alkaline carbonate, and precipitating by chloride of calcium; the precipitate, after having been well washed, is decomposed by dilute hydrochloric acid, which leaves the *pectic acid* in the form of a jelly, insoluble in cold water.

Pectic Fermentation. *Pectose* is always associated with a substance which Frémy calls *pectose*, having a special action upon it (as diastase has upon starch), and which he represents as the *ferment* of the gelatinous products. It is obtained by adding to fresh carrot-juice, alcohol, which throws it down in an insoluble form, but it retains its characteristic properties. It transforms *pectine* (at a temperature between 80° and 90°) into a substance insoluble in cold water (*pectosic acid*), and subsequently into *pectic acid*, as above described.

Pec'tinal, *a.* [*Lat. pecten*, comb, *pecto*—*Gr. pēkō*, or *pektō*, to comb.] Pertaining, or relating to, or resembling, a comb.

—*n.* (*Zoöl.*) Any fish whose bones resemble the teeth of a comb.

Pec'tinate, **PECTINATED**, *a.* [*Lat. pectinatus*, from *pecten*, a comb.] (*Bot.*) A term applied to that form of marginal division in which the segments are numerous, narrow, and closely placed, so as to resemble the teeth of a comb.

(*Zoöl.*) Edged like the tooth of a comb; as, a *pectinate* muscle.

Pectinate claw, a claw with a serrated edge.

Pectinately, *adv.* In a pectinate form or manner.

Pectina'tion, *n.* State or quality of being pectinated.—Combing of the head; a combing.

Pect'ine, *n.* [*Fr.*; from *Gr. pektos*, coagulated.] (*Chem.*) Vegetable jelly. See PECTIC ACID.

Pectinibranchiate, *a.* [*Lat. pecten*, *pectinis*, a comb, and *Lat. branchia*.] (*Zoöl.*) The name given by Cuvier to an order of Gasteropods. It includes almost

Fig. 2064.—SCALLOP-SHELL.
(*Pecten Jacobæus*.)

all the spiral univalve shells, as well as several which are merely conical. The animals of this order are so named from the comb-like form of the gills, which are usually situated in a cavity behind the head.

Pectization, (*pecti-zai'shun*.) *n.* [*Gr. pektos*, coagulated, thickened.] (*Chem.*) A term applied by Graham to the sudden change from the liquid to the solid form which takes place in certain solutions. The solution of hydrated silicic acid, for instance, may be preserved in a fluid state for days and weeks in a sealed tube, but it is sure at last to assume the *pectous* or gelatinous form.

Pec'tolite, *n.* [*Lat. pecten*, comb, and *Gr. lithos*, stone.] (*Min.*) A hydrated silicate of lime and soda, which occurs in white or grayish spheroidal masses, composed of an aggregate of acicular crystals, or of delicate fibres, arranged in a radiated or stellar form.

Pec'toral, *a.* [*Fr.*; *Lat. pectoralis*, from *pectus*, *pectoris*, the breast.] Pertaining or relating to the breast; as, the *pectoral* muscle.—Pertaining or having reference to the chest, or of diseases of the chest.

Pectoral fins, those fins belonging to a fish which are placed on the sides, behind the gills. (Sometimes called simply *pectoral*.)

—*n.* A breastplate worn by the Jewish high-priest.—A medicine calculated to cure or remedy diseases of the chest and lungs.

(*Zoöl.*) The pectoral fin of a fish.

Pec'torally, *adv.* By connection with the breast.

Pectorilo'qual, **Pectorilo'quous**, *a.* [*Fr. pectoriloque*.] Belonging, or relating to, or possessing the nature of pectoriloquy.

Pectorilo'quy, **Pectoril'oquism**, *n.* [From *Lat. pectus*, *pectoris*, the breast, and *loquo*, to speak.] (*Med.*) A peculiar sound emitted from the chest in speaking when the lungs are ulcerated, or cavities formed in their substance. One of the sounds indicated by the stethoscope, or to the ear, if placed over the part, and the patient is requested to speak, is that the voice to the listener seems to come from the chest instead of the mouth; hence the term *pectoriloquy*, speaking from the breast. See STETHOSCOPE.

Pec'tose, *n.* (*Chem.*) See PECTIC ACID.

Pec'ul, *n.* Same as PICUL, *q. v.*

Pec'ulate, *v. n.* [*Lat. peculium*, a small property.] To defraud the public of money or goods intrusted to one's care by appropriating the property to one's own use; to defraud by embezzlement; to steal.

Pecula'tion, *n.* [*Fr. peculat*; *Lat. Lat. peculatio*.] Act of peculating, or of defrauding the public by appropriating to one's own use the money or goods intrusted to one's care; embezzlement of public money or goods.

Pec'ulator, *n.* [*Lat.*] One who peculates.

Pec'uliar, (*kul'yer*.) *a.* [*Sp.*; *Lat. peculiaris*, from *peculium*.] Of or relating to private property; one's own; appropriate; belonging to a person, and to him only; belonging to a nation, system, or other thing, to the exclusion of all else; not general or universal.—Particular; special; individual.—Singular; phenomenal; unfrequent and striking. (*R.*)

—*n.* Private or exclusive property; that which pertains to a person in exclusion of others.

Peculiarity, (*pe-kul'yär'i-ty*.) *n.* [*Low Lat. peculiaritas*.] A quality of being peculiar; specialty; individuality.—Something peculiar to a person or thing; that which belongs to or is found in one person or thing, and in no other; particularity; distinctive characteristic or foible; as, *peculiarity* of appearance, speech, manner, temper, &c.

Peculiarize, *v. a.* To render peculiar; to appropriate.

Peculiarly, *adv.* Particularly; singly; in a manner not common to others; especially; as, their vanity is *peculiarly* their own.

Peculiarness, *n.* State of being peculiar; peculiarity. (*R.*)

Pec'ulium, *n.* [*Lat.*, private property.] (*Rom. Law.*) Private, exclusive, or separate property, more especially the property which a son or a slave might acquire independent of the control of his father or his master.—Hence, a particular fund for one's own private needs or uses.

Pecun'iarly, *adv.* In a pecuniary manner.

Pecuniary, (*pe-kün'yä-ry*.) *a.* [*Lat. pecuniarius*, from *pecunia*, property, money, from *pecus*, *pecorus*, sheep, cattle, because the wealth of the ancients consisted in their herds and flocks.] Pertaining or having reference to money, or to money's worth in property; as, *pecuniary* matters, *pecuniary* difficulties.—Consisting of money; as, a *pecuniary* compensation, a *pecuniary* penalty.

Ped'age, *n.* [*Lat. pedagium*, from *Lat. pes*, *pedis*, foot.] A toll paid by passengers to entitle them to safe-conduct.

Pedagog'ic, **Pedagog'ics**, *n. sing.* The art, science, or operation of successful scholastic instruction.

Pedagog'ic, **Pedagog'ical**, *a.* [*Gr. pedagogikos*.] Befitting or pertaining to a pedagogue, or to a teacher or instructor of children.

Pedagog'ies, *n. sing.* See PEDAGOGIC, (the noun.)

Pedagogism, *n.* Vocation, characteristics, and manners of a pedagogue.

Pedagogue, (*péd-a-gōg*.) *n.* [*Fr.*; *Gr. pedagogos*—*pais*, *paidos*, a child, a boy, and *agō*, to lead.] Primarily, one who led children to school, and brought them back again; in the modern and specific sense, a teacher; a preceptor; a schoolmaster; one whose occupation is to instruct young children.—Hence, one who by teaching has become dogmatic, precise, or pedantic in his manners or habits; a pedant; a precisian.

Ped'agogy, *n.* [*Gr. paidagogia*.] Office or practice of a pedagogue; pedagogism; as, "the *pedagogism* of tutors."—*South*.

Ped'al, *a.* [Fr. *pédale*, a large organ-pipe played with the foot; Lat. *pedalis*, belonging to the foot; from *pes*, *pedis* = Gr. *pous*, *podos*; Sansk. *pada*, a foot.] Pertaining to a foot, or to a pedal.

—*n.* (*Mus.*) A contrivance attached to the harp, organ, piano-forte, &c., acted upon by the foot, and designed to modify the tone or swell of the instrument. — On the organ, a row of keys intended to be played on with the feet, and which, in large instruments, actuate a separate organ, called the pedal organ. The invention of the pedals, or foot-keys of the organ, is attributed to a German named Bernhard, who lived in the 15th century. It was long, however, before their utility and importance were generally acknowledged. Within the last 20 years, the use of the foot-keys has been much extended, and few organs are now built without them.

Pedalia'ceæ, *n.* (*Bot.*) An order of plants, alliance *Bignoniales*. Dia. Parietal placenta, bony or capsular fruit, an amygdaloid embryo, and short radicle. — They are glandular herbs, found chiefly in the tropics, with entire exstipulate leaves and axillary flowers, usually large and irregular. Chiefly remarkable for their oily seeds. The fresh branches of *Pedaliu murex* render water or milk unclaginous. The order includes 14 genera and 25 species. See MARTYRIA and SEESAMUM.

Pedalian, *a.* Pedal; having reference to feet.

Pedaneous, *a.* [Lat. *pedaneus*.] Pedestrian; going a-foot.

Pedant, *n.* [Fr.; It. and Sp. *pedante*. See PEDAGOGUE.] A person who makes a vain and pretentious display of learning; one who assumes an air of superior knowledge in an awkward or unsuitable manner; a make-believe scholarly individual.

Pedant'ic, **Pedant'ical**, *a.* Pertaining or suitable to a pedant; ostentations of scholarship or learning; vainly parading or making exhibition of usually superficial knowledge; as, a *pedantic* speech or sentence.

Pedant'ically, **Pedant'ically**, *adv.* In the manner of a pedant; with a vain or inappropriate display of erudition.

Pedant'ism, *n.* Same as PEDANTRY, *q. v.*

Pedantize, *v. a.* [Fr. *pedantiser*.] To play the pedant; to employ erudite words or expressions; to act the pedagogue over pupils.

Pedantry, **Pedantism**, *n.* [Fr. *pedanterie*; It. *pedanteria*.] Manners, qualities, or character of a pedant; vain or ostentatious display of learning or erudition; the use of words or terms unsuitable to the time, place, and company; pedantic acts or practices.

Pedate, *a.* (*Bot.*) A palmate leaf, with the two lateral lobes themselves divided into smaller segments, the midribs of which do not run directly into the common central point; as in the leaf of *Dracunculus vulgaris* or *Helleborus foetidus*.

Pedat'ified, *a.* [Lat. *pedatified*, and *findere*, *fidi*, to cleave.] (*Bot.*) Irregularly lobed; — said of a leaf.

Peddle, (*ped'l*) *v. a.* [Probably from Fr. *ped*, the foot. See PEDAL.] To travel about the country on foot, and sell small wares, notions, &c. — To be busy about small matters or trifles.

—*v. a.* To go about and sell; to sell or retail, as small wares, &c., usually by travelling about the country on foot.

Ped'dler, **Ped'lar**, **Ped'ler**, *n.* One who carries about small commodities for sale; a peripatetic dealer in odds and ends, knick-knacks, &c.

Ped'dlery, **Ped'lary**, **Ped'lery**, *n.* Vocation or practice of a peddler; small wares, notions, &c., sold or carried about for sale by peddlers.

Pedee', in Iowa, a post-village of Cedar co., abt. 20 m. E. of Iowa City.

Pedee, (*Great*), or YADKIN, a river rising in Caldwell co., N. Carolina, and flowing a general N.E. course to Stokes co., turns to the S.E., and following this direction rather tortuously, receiving several small tributaries on its way, it enters S. Carolina, and takes the name of GREAT PEDEE. Thence S.S.E. through this State, it enters the Atlantic Ocean by Winyaw Bay in Georgetown dist. — LITTLE PEDEE rises in Richmond co., N. Carolina, and flowing S. by E. into S. Carolina, enters the main stream from Horry co.

Ped'erast, *n.* [Gr. *pais*, *paidos*, boy, and *eran*, to love.] One who commits pederasty.

Pederast'ic, *a.* [Gr. *paiderastikos*.] Pertaining or relating to pederasty.

Pederasty, *n.* [Gr. *paiderastia*.] Sodomy.

Pederna'les, in Texas, a small river flowing into the Colorado in Travis co.

Pederneira, (*pa-der-na'e-ra*) a seaport-town of Portugal, prov. of Estremadura, on the Bay of Pederneira, 5 m. W.N.W. of Alcobaza. Near it is a sanctuary of the Virgin Mary, much frequented by pilgrims. Pop. 2,000.

Pedestal, *n.* [Sp.; It. *pedestallo*—*picdo*, foot, and *stalla*, a standing.] (*Arch.*) The lower part of a column or pillar. It consists of three principal parts: a square trunk, dado, or base, which makes the body; a cornice, the head; and a base, the foot of the pedestal. The *Tuscan pedestal* is the simplest and lowest of all, and is only three modules high. The *Doric pedestal* is from four to five modules high, as made by the moderns. The *Ionic pedestal* is from five to seven modules high. The *Corinthian pedestal* is the richest and most delicate of all, and is from four to seven modules high.

(*Mach.*) An axle-guard. See JAW.

Pedes'trial, *a.* [Lat. *pedestris*, from *pes*, *pedis*, foot.] Pertaining or relating to the foot.

Pedes'trially, *adv.* In a pedestrian manner.

Pedes'trian, *a.* [Fr. *pédestre*; Lat. *pedestris*, from *pes*, *pedis*, a foot.] Going on foot; walking; performed on foot; as, a *pedestrian* tour.

—*n.* One who walks or journeys on foot; a foot-traveller.

—One who walks or runs for a wager; a person remarkable for speed and endurance in walking or running.

Pedes'trianism, *n.* Act or practice of a pedestrian; a going on foot; walking or foot-racing for a wager.

Pedetent'ions, *a.* [Lat. *pes*, *pedis*, foot, and *tendere*, to stretch out.] Advancing with caution; going forward step by step; as, a *pedetentous* pace.

Ped'ial, *a.* Pertaining or having reference to a foot, or anything called a foot.

Ped'icel, **Ped'icel**, *n.* [Fr. *pedicelle*; Lat. *pediculus*, from *pes*, *pedis*, foot.] (*Bot.*) One of the ultimate ramifications of that part of the inflorescence called the *peduncle*. Hence the term *pedicellate*, applied to stalked flowers borne on branched inflorescence.

Ped'icellate, **Ped'icelled**, (*-seld*), *a.* [Fr. *pedicelle*.] See PEDICEL.

Ped'icel'ates, *n. pl.* (*Zoöl.*) A division of echinoderms, comprehending those which have the vesicular pedicellate organs, which are termed feet in this class, but which project from various parts of the surface of the body.

Ped'icelled, *a.* (*Bot.*) Having, or growing upon a pedicel.

Ped'icle, (*ped'i-kl*) *n.* (*Bot.*) Same as PEDICEL, *q. v.*

Ped'icular, **Ped'iculous**, *a.* [Lat. *pedicularis*, from *pediculus*, a louse.] Lousy.

Ped'icularis, *n.* [Lat. *pediculus*, a louse; probably from its efficacy in destroying that insect.] (*Bot.*) A genus of plants, ord. *Scrophulariaceæ*. They are herbs, with alternate, rarely sub-opposite, often pinnatifid leaves, and spicate flowers. *P. Canadensis*, the Loosewort, is common in pastures and low grounds.

Ped'iculation, *n.* (*Med.*) Same as PHTHEIRIASIS, *q. v.*

Ped'iculus, *n.*; *pl.* **Ped'iculi'dæ**, (*Zoöl.*) See ANOPLURA.

Ped'igerons, (*-dij'-*) *a.* [Lat., from *pes*, *pedis*, foot, and *gerere*, to bear.] Possessing feet.

Ped'igree, *n.* [Probably from Fr. *per*, through, and *degré*, a stair, step—*de*, from, and *gradus*, a step. See GRADE.] An account of lineage through its different steps or degrees; line of ancestors from which a person, family, or tribe descends; descent; lineage; genealogy; an account or register of a line of ancestors; a genealogical chart.

"Few men of his time could show such a pedigree as the Earl of Oxford, himself the twenty-second peer of his line." Macaulay.

Ped'm'anons, *a.* [Lat. *pes*, *pedis*, foot, and *manus*, hand.] With the feet hand-shaped, as monkeys.

Ped'im'ent, *n.* [From Lat. *pes*, *pedis*.] (*Arch.*) The triangular termination used in Classical architecture at the ends of buildings, over porticos, &c., corresponding to a gable in Middle Age architecture: it is much less acute at the top than a gable. Most of the porticos on the fronts of Greek and Roman buildings support pediments (see Fig. 2039); in Roman work the dressings over doors and windows are sometimes arranged in a similar form, and called by the same name; in debased Roman work, pediments of this last-mentioned kind are occasionally circular instead of angular on the top, a form which is also common in Italian architecture. The term is sometimes applied by modern writers to the small gables and triangular decorations over niches, doors, windows, &c., in Gothic architecture.

Ped'ipal'pi, *n. pl.* [Lat. *pes*, *pedis*, a foot, and *palpare*, to touch gently.] (*Zoöl.*) The Scorpion family. See SCORPION.

Ped'lar, **Ped'ler**, *n.* Same as PEDDLER, *q. v.*

Pedobap'tism, *n.* [Gr. *pais*, *paidos*, a child, and *baptismos*, baptism.] The baptism of infants or of children.

Pedobap'tist, *n.* One who advocates or practises infant baptism.

Pedom'eter, *n.* [Fr. *pédometre*, from Lat. *pes*, *pedis*, foot, and Gr. *metron*, measure.] (*Mech.*) An instrument in the form of a watch, consisting of various wheels, with the teeth catching in each other, and which, by means of a string fastened to anything in motion, numbers the paces gone over from one place to another.

Pedomet'rie, **Pedomet'rical**, *a.* Belonging to, or measured by, a pedometer.

Pedot'rophy, **Pedot'rophy**, *n.* [Gr. *pais*, *paidos*, a child, and *trephein*, to nourish.] The theory of the nourishment of children.

Ped'ra-Bran'ea, a town of Brazil, about 90 m. W. N.W. of Bahia.

Ped'ra'za, a town of Venezuela, about 38 miles W. of Varinas. pop. 4,000.

Pedro I., (*Dom.*) ANTONIO JOSE D'ALCANTARA, (*pai'-dro*) Emperor of Brazil, was eldest son of John VI., king of Portugal, elder brother of Don Miguel, and nephew to Ferdinand VII., king of Spain. He was b. in 1798, and was taken, in 1808, with the rest of the royal family, to Brazil. In 1822, the Brazilians having proclaimed their independence, chose P. for their emperor. The death of John VI., in 1826, left Don Pedro the crown of Portugal; he soon afterwards established a liberal govt. in that country, and granted it a charter. After abdicating the crown of Portugal in favor of his daughter, Donna Maria, he nominated his brother, Don Miguel, regent; but scarcely had he quitted Portugal, than Don Miguel took possession of the throne. In 1831 he was compelled to abdicate the throne of Brazil in favor of his son, Don Pedro II. Returning to Europe, he raised troops in France and England, with which he, in 1833, drove Don Miguel from the throne of Portugal, and placed the crown upon the head of his daughter. He was twice married; his first wife being Maria Leopoldina, archduchess of Austria, and the second, Amelia, daughter of Prince Eugène de Beauharnais. D. 1834.

PEDRO II., was son of the preceding, who abdicated the

throne in his favor when he was only in his sixth year. The govt. was administered by a council of regency, and afterwards by one regent. In July, 1840, P. — although he had not attained his majority — was declared of age by the Chambers, and assumed the sovereign power when not quite fifteen. In 1843 he was married to the Princess Theresa Christina Maria, daughter of Francis I., King of Naples; from which union were born two princes, who died young, and two princesses. He was a liberal patron of industrial enterprises, encouraging public works, seeking to improve the navigation of rivers. His aid to Gen. Urquiza contributed to the overthrow of Rosas, the result being a territorial addition to Brazil and the free navigation of the Rio Plata. In 1865 a war began with Paraguay, which ended in 1870 with the death of Lopez. In 1889, a revolution having broken out in Rio Janeiro, P. was seized and sent to Europe, and Brazil was declared a republic, with the title of "United States of Brazil." He made no attempt to regain the throne, but resided quietly in Europe, where he died, Dec. 5, 1891. P. was an earnest patron of literature and the arts, and visited the U. S. in 1876, where he displayed intelligent interest in the Centennial Exhibition of arts and industries.

Ped'ro V., King of Portugal, born 1837, was the son of Donna Maria II. and Fernando of Saxe-Coburg-Gotha, king-consort. He ascended the throne in 1853, and d. 1861.

Pedro, (*THE CRUEL*) king of Castile and Leon, b. 1334. He succeeded his father, Alfonso XI., in 1350, and in 1353 married Blanche de Bourbon, sister of the king of France, but in 3 days deserted her, and devoted himself to his mistress, Donna Maria Padilla. Subsequently he poisoned his queen, and cruelly persecuted members of his own family and Castilian grandees, until an insurrection was raised against him under the lead of Harry of Trastamara, who finally defeated and slew him in the battle of Montiel, March 14, 1369.

Pedun'cle, *n.* [Lat. *pes*, a foot.] (*Bot.*) That part of an inflorescence which proceeds immediately from the stem, and forms the support of a solitary single flower. Hence *pedunculate*, applied to stalked solitary flowers, as petiolate is to stalked leaves. A P. supporting several flowers at its apex is called a *scape*.

(*Anat.*) A certain nervous strand of the brain.

(*Conch.*) A kind of foot or stem by which certain shells are attached to various objects.

Pedun'cular, *a.* Pertaining or relating to, or springing from, a peduncle.

Pedun'enlate, **Pedun'enlated**, *a.* Having, or growing on, a peduncle; as, a *pedunculated* bud.

Peebles, (*peel'els*) an inland co. of Scotland, having N. Mid-Lothian, E. Selkirk, S. Dumfries, and W. Lanark; area, 356 sq. m.; pop. 11,500.

Peebles, in Pennsylvania, a township of Alleghany co.; pop. abt. 2,770.

Peek, *v. a.* To peep; to peer; to look with the eyes half closed. (Used colloquially.)

Peeks'kill, in New York, a post-village of Westchester co., abt. 100 m. S. of Albany.

Peek'y, *a.* Having small decayed spots; affected with incipient decay; — said of timber when signs of decay first appear. (An Americanism.)

Peel, *v. a.* [Fr. *peler*; D. *pellen*; Sp. *pelar*, from Lat. *pellis*.] To strip off, as skin, bark, or rind, without the application of a cutting instrument; to strip by drawing or tearing off the skin off; to skin; to bark; to flay; to decorticate; as, to peel an orange.

(NOTE. When the knife-only is used, the operation is called *paring*; as, to *pare* an apple.)

—To strip or tear, as the skin of an animal, or bark of a tree; — preceding *off*.

[Fr. *pillér*; Lat. *pillare*.] To strip; to pillage; to plunder; to devastate by making bare; as, to peel a conquered territory.

—*v. n.* To lose the skin, bark, or rind; — frequently used in conjunction with an adverb; as, it *peels readily*.

—*n.* The skin, rind, bark, or integument; as, the peel of an orange.

Peel, *n.* [Fr. *pelle*; Lat. *pala*.] A baker's wooden shovel for putting in and withdrawing bread from an oven.

—A fortalice; a small fortress; — A term peculiar to the Scottish border; a peel-house.

Peel, SIR ROBERT, prime-minister of England, son of Sir Robert Peel, a wealthy manufacturer, was b. in 1788, and studied at Harrow and Oxford. When just 21 years of age he entered Parliament, and thenceforth the sphere of his exertions and triumphs was in the House of Commons, in the history of which his career will form a large feature. He was no orator, nor was he, properly speaking, a natural and simple debater. His manner was the artificial one of thorough training; but for an artificial manner it was a good one, and the House from his practice got to like it, though to a stranger it was generally unpleasant. He could state his case clearly and forcibly, but he seldom liked to abandon a subject until he had discussed it at great length. He avoided, in a marked manner, the statement of general principles, as if he feared that he might afterwards have to say or do something inconsistent with them, and he generally made out his case on the details of the matter, rather than on any wide rule or principle of political opinion. In 1811 he was made under-secretary for the Colonies, and in 1812, when only 24, he received the very responsible appointment of chief secretary for Ireland. After carrying his celebrated currency measure of 1819, he became, in 1822, home secretary. Refusing to take office under Canning, he joined the ministry of the Duke of Wellington in 1828. Here, by conceding Catholic emancipation (against which he had previously protested), he did one of those acts which have been

called tergiversation by some, and the result of honest conviction, rising above original prepossession, by others. He still, however, professed to belong to the Conservative party, and he became a strenuous opponent of Earl Grey's ministry, and the Reform Bill. When a Conservative government was, from mere accidental and personal causes not well explained, established in 1834, he gallantly undertook the attempt to work it, though conscious that the task was hopeless. He became prime-minister in 1841, with better prospects. The position in which he was placed was that of the head of a protectionist government, established to defeat and suppress the free-trade party. As circumstances developed themselves in the few critical years from 1841 to 1846, some indications of opinion created alarm among the thorough protectionists, and it was seen that the prime-minister, becoming convinced of the truth of free-trade, was determined to carry its principles into practice. After the repeal of the Corn Laws and other measures in the same spirit, he resigned office to a party to whom his later opinions legitimately belonged, in the summer of 1846. D. 1850, of internal injuries caused by a fall from a horse.

Peel, a seaport-town of the Isle of Man, on an inlet of its W. coast, 10 m. N.W. of Douglas; *pop.* 2,500.

Peel, a S. co. of pr. of Ontario, bordering on Lake Ontario; *area*, abt. 450 sq. m. *Cap.* Brampton.

Peel'er, *n.* One who peels, strips, or flays; — hence, a pillager; a plunderer.

—In England, a cant term for a policeman; — so called from Sir Robert Peel, the originator of the modern police force.

Peel River, rises on the W. slope of the Rocky Mountains in British N. America, and flowing N.W., then N. E., joins the estuary of the Mackenzie River.

Peep, *v. n.* [*D. piepen*; *Lat. pipo*, to pip, to chirp. Said to be transferred from the cry to the appearance and eluck of a chicken when it first breaks the shell.] To cry as a chicken; to utter a fine, shrill sound; to chirp. — To begin to appear; to make the first appearance; to issue or come forth from concealment; to look through a crevice or small opening; to look narrowly, closely, slyly, or furtively; to peer.

—*n.* The chirp or cry of a young chicken. — A sly, furtive look; a look through a hole or crevice; first appearance; as, to take a *peep*, the *peep* of day.

Peep'ee, in Ohio, a township of Pike co.

Peep'er, *n.* A chicken just breaking the shell; hence, one who peeps, or looks slyly or furtively; a spy; a prying person.

—A cant term for the eye; as, to damage one's *peepers*.

Peep'hole, **Peep'ing-hole**, *n.* A hole or crevice through which one may peep without being observed.

Peep'-o'-day Boys, *n. pl.* (*Hist.*) The name assumed by the members of a former secret society in Ireland, who sallied forth before the dawn of day to commit agrarian outrages.

Peep'-show, *n.* A small object or series of objects, to be inspected by applying the eye to a small orifice.

Peer, *n.* [*Fr. pair*; *Lat. par*, equal. See **PARITY**.] An equal; one of the same rank, grade, or condition; an equal in excellence or endowments; a match; a mate.

"Know, I am peer with any lord in Scotland here." — *Scott*.

—A companion; an associate, comrade, or fellow.

"Twelve were the *peers* of Charlemagne." — *Dryden*.

—A nobleman; as, a *peer* of the realm. — In England, a nobleman sitting in the House of Lords; as, *peers* spiritual and temporal.

House of Peers, in England, the House of Lords; the upper chamber of the legislative body.

—*v. n.* [*Lat. pareo*, to come forth, akin to *pario*, to bring forth.] To peep out, as the sun over a mountain.

"See how his gorget *peers* above his gown." — *Ben Jonson*.

—To look narrowly or furtively; to peep.

"Peering in maps for ports, and piers, and roads." — *Shaks*.

Peer'age, *n.* The collective body of peers.

"When Charlemagne with all his *peerage* fell." — *Milton*.

—Rank, dignity, or condition of a peer; as, a *peerage* was conferred on him. — A book containing the heraldic arms and genealogies of peers; as, "Burke's *Peerage* and Baronetage."

Peer'ess, *n.* The consort of a peer; a noble lady; as, a *peeress* in her own right.

Peer'less, *a.* Without a peer or equal; matchless; superlative.

"With such a *peerless* majesty she stands." — *Dryden*.

Peer'lessly, *adv.* In a peerless or unequalled manner; matchlessly.

Peer'lessness, *n.* State of being peerless, or of having no equal.

Peert, *a.* Same as **PEART**, *q. v.*

Peer'y, *a.* Looking sharply, furtively, or inquisitively; as, *peer'y* eyes.

Peev'ish, *a.* Fretful; querulous; apt to mutter, grumble, or complain; easily vexed or fretted; hard to please; morose; petulant; as, a *peevish* temper.

—Expressing discontent or fretfulness; silly; childish.

"I will not send such *peevish* tokens to a king." — *Shaks*.

Peev'ishly, *adv.* In a peevish manner; querulously; petulantly; fretfully; as, he is *peevishly* opinionative and proud.

Peev'ishness, *n.* Fretfulness; petulance; querulousness; disposition to murmur or grumble; sourness of temper; as, childish *peevishness*.

Peew'it, *n.* (*Zoöl.*) See **PEWIT**.

Peew'it, *n.* (*Zoöl.*) See **LAPWING**.

Peg, *n.* [Akin to *Gr. pegnumi*, Sansk. *pash*, to fix, to fasten together.] A small pointed piece of wood, used in fastening boards or other work of wood; a wooden

nail or pin; a pin on which to hang anything; as, a clothes *peg*. — One of the pins of an instrument on which the strings are strained.

"I'll let down the *pegs* that make this music." — *Shaks*.

To take a *peg* lower, or a *peg* down. To depress; to humble or mortify by reducing to a lower grade of rank, degree, or position.

"We took your *grandees* down a *peg*." — *Hudibras*.

—*v. a.* To fasten with pegs; — hence, to restrain, restrict, or limit.

Pega'sean, *a.* Pertaining or relating to, or resembling, Pegasus.

Peg'asus, *n.* [*Lat.*; *Gr. Pegasos*.] (*Myth.*) A winged horse, which sprang from the blood of the Gorgon Medusa when Perseus cut off her head. As soon as this animal came into existence, he flew up to heaven; though Ovid says *P.* lighted on Mount Helicon, where, on striking the earth with his foot, he raised the famous fountain called *Hippocrene*. *P.* became the pet of the gods; and Minerva and Neptune, having tamed him, gave him to Bellerophon as a charger when he went on his Chimera expedition. After the victory, *P.* threw his rider, and flew up to heaven, where Jupiter placed him among the constellations. Ovid makes Perseus to have been mounted on *P.* when he rescued Andromeda.

(*Astron.*) A constellation which occupies a large space in the N. hemisphere, between the Swan, the Dolphin, and the Eagle on the W., and the Northern fish and Andromeda on the E. It contains 89 stars, of which 4 are of the second magnitude.

Fig. 2065. — SEA-DRAGON, (*Pegasus draco*.)

(*Zoöl.*) A genus of lophobranchiate fishes, with large pectoral fins, by means of which they are enabled to take short saltatory flights through the air.

Peg'ger, *n.* One who makes fast with pegs.

Peg'matite, *n.* (*Min.*) Graphitic granite.

Pego, a town of Spain, prov. of Alicante, 38 m. N.E. of Alicante. *Manuf.* Woollens and basket-work. *Pop.* 6,000.

Pegu', a prov. of British Burmah, formerly a powerful kingdom, occupying the whole delta of the Irrawaddy. *Cap.* Pegu. *Pop.* Estimated at 70,000. — It was annexed to British India in 1853.

Pegu', a decayed city, cap. of the above prov., on the Pegu, a tributary of the Irrawaddy, 50 m. N.E. of Rangoon; *Lat.* 17° 40' N., *Lon.* 96° 12' E. It contains the famous *Shoe-madoo*, or Great Pagoda, the most celebrated temple of the former Burman empire. *Pop.* Unknown.

Peiho, (*pa-ho'*) ["white river,"] (called also *North River*.) a river in China, prov. of Chih-le, rising near the great wall, and after a S.E. course falling into the Gulf of Pecheelee, *Lat.* 38° 33' N. It is navigable for boats for 20 m. to Pekin.

Peipus, or **Peipous**, (*Lake of*.) (*pa'e-pooce*.) a lake of European Russia, between *Lat.* 57° 52' and 59° N., *Lon.* 26° 55' and 27° 55' E. *Ext.* 80 m. long, and 32 m. broad. It receives the Embach, Kosa, and other rivers, and discharges its surplus waters into the Gulf of Finland by the river Narova.

Peiramer, (*pi-ram'e-ter*), *n.* [*Gr. peira*, a test, and *metron*, measure.] An instrument for measuring the amount of resistance to wheel-carriages on roads of different construction.

Peiras'tic, *a.* [From *Gr. peira*, trial.] Tentative; experimental; making trial.

Pekah, (*pe'ka*), king of Israel, was captain in Pekahiah's army; but having slain that monarch, he ascended the throne in 759 B. C. He entered into an alliance with Rezin, king of Syria, and made war upon Abaz, king of Judah, whom he defeated and killed. In the 20th year of his reign, Hoshea formed a conspiracy against him, and slew him 759 B. C.

Pekahiah, king of Israel, succeeded his father Menahem, 761 B. C. Very little mention is made of him in the Holy Scriptures, further than that he "departed not from the sins of Jeroboam, the son of Nebat, who made Israel to sin." After a reign of only 2 years, he was slain by Pekah, a captain of his army, 759 B. C.

Pekalongan, a town of Java, dist. of Pekalongan, on the N. of the island; *Lat.* 6° 55' N., *Lon.* 109° 40' E. *Pop.* of the residency 224,000.

Pekaton'ica, in Illinois, a post-village of Winnebago co., abt. 14 m. W. of Rockford.

Pekaton'ica River, rises by two branches in Iowa co., Wis., and flowing S.E. into Illinois, turns to the E., then N.E., and enters Rock River in Winnebago co.

Peka'a, *n.* (*Bot.*) The same as **CARYOCAR**, *q. v.*

Pekin', or **PEKING'**. [*Chin. Pih-king*, meaning "the northern capital."] The cap. of the Chinese empire, prov. of Chih-le, or Pecheelee, in a vast sandy plain, between the Pei-ho and its important affluent, the Hoang-ho, 562 m. N.W. of Nankin, and 100 m. W.N.W. of the Gulf of Pecheelee in the Yellow Sea; *Lat.* 39° 54' 12" N., *Lon.* 116° 28' 54" E. It consists of two contiguous cities, each separately surrounded by walls, and together entered by 16 gates. The entire circumference

is 27 m. The N. city, which is nearly a perfect square (called *Nei-ting*, or the inner city, and sometimes the "Imperial" and "Tartar City"), consists of 3 enclosures. The outer one, formerly occupied by the Tartar garrison, is now used by Chinese traders. The second enclosure contains the residences of the dignitaries of the empire and foreign legations, the national literary institutions, and the temples of Ancestors and Peace, and is inhabited mostly by the Mantchoos. The inner enclosure, or "forbidden city," surrounded by walls of yellow tiles, 2 m. in circumference, hence called the "Yellow Wall," contains the palaces of the emperor and empress. The S. city, called the *Wai-ching*, or "outer city," is also square, and occupied by the Chinese, and is both the seat of business and the residence of most of the population. The wall is 30 ft. high, 25 ft. thick at the base, and 12 ft. at the top. That of the imperial city is 40 ft. high. Square towers project from the outer side at intervals of 70 yds. from each other; and each of the 16 gates is surmounted by a tower 9 stories high, with port-holes for cannon. The principal streets are very wide and regular, running between opposite gates. These are mostly filled with shops, extravagantly gilded and ornamented with blue and gold, flags, &c., and are almost always crowded, in consequence of the numbers of trades carried on in the open air. The houses are generally 1 story high, and built of brick. Of the ornamented buildings, the most conspicuous are those commonly called triumphal arches. They consist of a large central gateway, with small ones on each side, all covered with narrow roofs and like the houses are splendidly gilded, varnished, and painted. Besides these, there are numerous pagodas, a beautiful mosque, Greek church, and convent. *P.* is indebted for its importance to its being the residence of the emperor and the seat of government. It is not distinguished by any peculiar manufacture; nor has it any foreign commerce or trade other than that directed to the supply of its own wants. This, however, is necessarily very considerable. The country round the city being sandy and poor, a large portion of its supplies are brought from a distance, — partly from sea by the Pei-ho, but principally by the Grand Canal and the Lu-ho, which connect it with Nankin and most of the E. provinces. The early history of *P.* is involved in obscurity. It was besieged and taken by the Mongols, led by Zinghis Khan, when the inhabitants, for want of ammunition, are said to have discharged ingots of gold and silver upon their assailants. Kublai Khan rebuilt it, and made it his capital in 1260. The Mongol dynasty, founded by Kublai Khan, continued to occupy this city till it was expelled from China, in 1367. In 1421, the third emperor of the Chinese dynasty of Ming transferred his residence thither from Nankin, since which it has been the capital of the empire. It surrendered to the allied armies of France and England in 1860, on which occasion the *Fueng-ming*, or summer palace of the emperor, situated in the vicinity of the city, was destroyed. *Pop.* (1897) about 1,700,000.

Pe'kin, in Illinois, a thriving city, cap. of Tazewell co., on the Illinois river and 5 R. R. lines, 10 m. S. by W. of Peoria; has extensive manufactures, and a coal supply. *Pop.* (1897) about 7,500.

Pe'kin, in Indiana, a post-village of Washington co., abt. 24 m. N.W. of New Albany.

Pe'kin, in N. Carolina, a post-village of Montgomery co., abt. 56 m. E. of Charlotte.

Pe'kin, in New York, a post-village of Niagara co., abt. 10 m. W. of Lockport.

Pe'kin, in Ohio, a village of Carroll co., abt. 138 m. E. N.E. of Columbus.

Pe'kin, in Pennsylvania, a village of Jefferson co., abt. 6 m. N.N.E. of Brookville.

Pe'kin, in Tennessee, a village of Putnam co., abt. 64 m. E. of Nashville.

Pek'oe, **Pee'co**, *n.* [*Chin. Pih-hoan*.] A kind of black tea brought from China, and said to be scented with a shrub called *peko*.

Pelagian, *a.* Pertaining or relating to Pelagius or his doctrines. See **PELAGIANS**.

Pelagianism, *n.* The doctrines of Pelagius. See **PELAGIANS**.

Pelagians, (*pe-lai'jo-anz*). (*Ecccl. Hist.*) A sect of heretics that arose in the Church about the beginning of the 5th century. Their founder was Pelagius, a monk, a native of Britain, whose original name was Morgan. He is said to have been characterized by great earnestness of character and moral strictness of life. He was greatly scandalized by the gross sensualities and immoralities that prevailed in the Church, and was of opinion that they arose from a belief in the efficacy of the sacraments and the sufficiency of faith. The remedy for all, he thought, would be a creed holding man's salvation to be dependent on his own exertions. Pelagius went to Rome, and afterwards to Carthage, where he was condemned by a council as holding the following heresies: — 1. That Adam was by nature mortal, and would have died whether he had sinned or not; 2. that the consequences of Adam's sin were confined to himself, and did not affect the human race; 3. that newborn infants are in the same condition as Adam was before his fall; 4. that the law qualified men for heaven, as well as the gospel; and that before Christ some men had lived without sin; 5. that a man may keep the commandments of God without difficulty, and preserve himself in a state of perfect innocence; and that the grace of God is given in proportion to our merits. These are the chief errors which are generally reckoned under the name of Pelagianism, though it is doubtful how far they were held by Pelagius himself, as he always expressed himself very cautiously. Pelagius was arraigned before two ecclesiastical councils at Jerusalem and Diospolis,

to 415; but with sophistry and equivocation, he succeeded in baffling his accusers. One of his most powerful opponents was Augustine, and Pope Innocent I., in 417, was induced to anathematize the rising heresy. His successor, Zosimus, also condemned the obnoxious doctrine, and the emperor promulgated decrees of confiscation and banishment against them. Pelagius retired into exile, where he died. His followers never formed a sect properly so called; but Pelagianism, as a theological system, has never been without its advocates. The ninth article of the English Church is directed against the Pelagian error respecting original sin.

Pelagic, *a.* [From Gr. *pelagos*, sea.] Pertaining to the sea; marine.

Pelagius, (*pe-lai'ji-us*.) The founder of Pelagianism. See PELAGIANS.

Pelagius, (POPE,) was a native of Rome, and ascended the papal chair in succession to Virgilius, in 555. He endeavored to reform the clergy; and when Rome was besieged by the Goths, he obtained from Totila, their general, many concessions in favor of the citizens. D. 560.

PELAGIUS II., ascended the papal chair, in succession to Benedict I., in 578. He opposed John, patriarch of Constantinople, who had assumed the title of œcumenic or universal bishop. D. of the plague, 590.

Pelago, a town of Italy, in Tuscany, prov. of Florence, 12 m. E. of Florence. *Manuf.* Woollens. *Pop.* 5,000.

Pelargonium, *n.* [Gr. *pelargos*, a stork; from the resemblance of the beaked fruit to the stork's bill.] (*Bot.*) The Stork's Bill, a genus of plants, order *Geraniaceæ*. They are herbs or shrubs, with the lower leaves (in plants raised from the seed) opposite, upper ones alternate. It is an extensive genus, embracing more than 300 species and innumerable varieties, nearly all native of the Cape of Good Hope. They form, in fact, the *Geraniums* of our green-houses and summer garden flowers, though the true *Geraniums* are somewhat different. Few of our garden-flowers are more popular than these, which now appear in at least four principal sub-divisions, known as *Show P.*, in which the two upper petals are usually clouded or veined, and dissimilar from the three lower ones; *Fancy P.*, a smaller growing race, chiefly with lighter colored flowers; *French P.*, in which appear brighter tints of color, often shaded; and *Scarlet P.*, as they are called, but which vary with colors of almost every shade, the flowers of which are nearly whole colored, and the stems and leaves more succulent. In their properties they are generally astringent. One species, *P. triste*, has tubers, which are eaten at the Cape of Good Hope.

Pel'ecoid, **Pel'icoid**, *n.* [Gr. *pelekos*, a hatchet, and *eidos*, form.] (*Geom.*) A curve somewhat resembling the head of a hatchet, consisting of two inverted quadrantal arcs and a semi-circle.

Pele'te, *n.* See MANGANJA.

Pel'erine, *n.* [Fr., a tippet, from Lat. *peregrinus*, foreign.] A lady's tippet, with long ends coming down before.

Peleus, (*Myth.*) King of Thessaly. He married Thetis, one of the Nereids, and was the only one among mortals who married an immortal. Being accessory to the death of his brother Phocus, he retired to the court of Eurytus, who reigned at Phthia. He was purified of his murder by Eurytus, who gave him his daughter Antigone in marriage. Peleus subsequently killed Eurytus by accident, while in the chase of the Calydonian boar. This event obliged him to retire to Iolchos, when the wife of Acastus, king of the country, brought certain charges against him, which caused him to be tied to a tree on Mount Pelion, that he might become the prey of the wild beasts of the place; but Jupiter, aware of the innocence of Pelus, ordered Vulcan to set him at liberty. Peleus afterwards revenged himself upon Acastus, by driving him from his possessions, and putting to death his wife. After the death of Antigone, Peleus fell in love with Thetis, who rejected his suit because he was a mortal. Having offered a sacrifice to the gods, Proteus at length informed him, that to obtain Thetis he must surprise her asleep in her grotto, near the shores of Thessaly. This advice was followed; and Thetis, unable to escape from the grasp of Peleus, at last consented to marry him. Their nuptials were celebrated with the greatest solemnity by all the gods, who made them each the most valuable presents. The goddess of discord was the only one of the deities who was not present. From the marriage of Peleus and Thetis was born Achilles. The death of Achilles was the source of so much grief to Peleus, that Thetis, to comfort her husband, promised him immortality, and commanded him to retire to the grotto of the island of Leuce, where he would see and converse with the manes of his son.

Pelf, *n.* [Probably allied to *pilfer*, and originally signifying wealth or riches acquired by pilfering.] Money; riches; wealth; lucre;—generally in the sense of ill-gotten.

Pelham, in *Massachusetts*, a post-township of Hampshire co.

Pelham, in *New Hampshire*, a post-village and township of Hillsborough county, about 38 miles S.S.E. of Concord.

Pelham, in *New York*, a post-township of Westchester co.

Pelham, in *Tennessee*, a post-village of Grundy co., abt. 40 m. N. of Chattanooga.

Pelican, *n.* (*Zoöl.*) A genus of birds, family *Pelicanidae*, containing several large web-footed species of birds, residing on rivers, lakes, or along the sea-coast, and preying on fish. They have a long, straight, broad, and much depressed bill; upper mandibles flattened, terminated by a nail, or very strong hook, the lower formed by two bony branches, which are depressed,

flexible, and united at the tip; and from these branches is suspended a naked skin in form of a pouch; face and throat naked; nostrils basal, in the form of narrow longitudinal slits; legs short and strong; all the four toes connected by a web; wings of moderate dimensions. "The expansive pouch, whose elasticity is well known to all who have witnessed the shapes into which it is stretched and formed by the itinerant showmen, will hold a considerable number of fish, and thus enables the bird to dispose of the superfluous quantity which may be taken during fishing excursions, either for its own consumption or for the nourishment of its young. In feeding the nestlings—and the male is said to supply the wants of the female when sitting in the same manner—the under mandible is pressed against the neck and breast, to assist the bird in disgorging the contents of the capacious pouch, and during this action the red nail of the upper mandible of the bird appears to come in contact with the breast, thus laying the foundation, in all probability, for the fable that the *P.* nourishes her young with her blood, and for the attitude in which the imagination of painters has placed the bird in books of emblems, &c., with the blood spouting from the wounds made by the terminating nail of the upper mandible into the gaping mouths of her offspring."—*Broderip*. *P.* are gregarious, and fish is their favorite food; they store up their prey in their gular pouch, from which it is gradually transferred to the *œsophagus*, as the process of digestion goes on; but, when harassed, or pursued, they readily reject the contents of the stomach, like the Gull tribe. Though remarkable for their voracity, some of the species have been trained to fish in the service of man. The species are widely spread throughout the world, but are not numerous. The common *P.*, *Pelicanus onocrotalus* (Fig. 2066), is as large as a swan, white, and slightly tinged with flesh color. It is a native of E. Europe, Asia, and Africa. The Rufous-necked *P.*, *Pelicanus fuscus*, the prevailing color of which is white, is found in the United States.

Fig. 2066. — COMMON PELICAN, (*Pelicanus onocrotalus*.)

Pel'ican (or **ALCATRAZ**) *Island*, in *California*, a small rocky islet in the bay, and abt. $2\frac{1}{2}$ m. N. of the city of San Francisco. It has an elevation of abt. 140 feet above the sea, is strongly fortified, and commands the entrance of the Golden Gate.

Pelican'idæ, *n. pl.* (*Zoöl.*) A family of birds, order *Anseres* or *Natatores*, which have the bill long, hooked at the end, nostrils hardly perceptible, wings long, pointed, and tail rather short. They have a pouch under the lower mandible and opening into the throat, which is capable of great distention. The flight is heavy.

(*Surg.*) An instrument for extracting teeth, curved at the end as the beak of a pelican.

(*Chem.*) A kind of alembic from which two opposite beaks or tubes pass out and reënter at the belly of the cucurbit.

Pel'ion, *n.* (*Min.*) A smoky blue variety of iolite.

Pel'io'ma, *n.* (*Med.*) A livid spot on the skin.

Pel'ion, (*Anc. Geog.*) The ancient name of a wooded mountain range in Thessaly, extending along the east coast. Its eastern side descends in steep and rugged precipices to the sea. Further to the north, near the mouth of the Penens, is the steep conical peak of Ossa (*q. v.*), which, according to the classic myth, the Titans placed upon the summit of *P.*, in order to scale Olympus, the abode of the gods. The modern name is Zagorá, and as of old, its sides and summit are clothed with venerable forests of oak, chestnut, beech, elm, and pine.

Pelisse, (*pe-les'*), *n.* [Fr., from Lat. *pellis*, a skin, a hide.] Originally, a furled robe or coat, now a silken coat or habit worn by females.

Pelissier, AIMABLE JEAN JACQUES, duke of Malakoff, marshal of France, was b. near Rouen in 1794. He entered the army at the age of 19, and distinguished himself in Africa, and was created lieutenant-general in 1848, and was called in 1855 to take a command in the Crimea under General Canrobert, whom he soon superseded as commander-in-chief. He distinguished himself in the successful attack on Kerch, in the battle of the Tchernaya, and above all in the storming of the Malakoff Tower at Sebastopol, September 8, 1855. He was soon after created marshal and Duke of Malakoff. In 1858 he was ambassador to London; was subsequently appointed governor-general of Algeria, and d. there 1864.

Pell, *n.* [Lat. *pellis*, a skin or hide; It. *pelle*.] A skin or hide; also, a roll of parchment.

Pel'la, in *Iowa*, a city of Marion co., on the Chic., R. I. & Pacific R.R., 47 m. E.S.E. of Des Moines; has some manuf. and a fine trade. Seat of Central University of Iowa (Baptist). *Pop.* (1895) 2,606.

Pellag'ra, *n.* [Gr. *pellá*, skin, and *agra*, attack.] (*Med.*) A disease of the skin somewhat resembling *elephantiasis*, and occasionally producing great constitutional derangement.

Pel'let, *n.* [Fr. *pelote*, from Lat. *pila*, a playing-ball.] A little ball; a bolus; as, a *pellet* of bread crumb.

Pel'leted, *a.* Made of, resembling, or supplied with, pellets.

Pel'lew Islands, a group of the Carolines, in the N. Pacific Ocean, Lat. between 7° and 9° N., Lon. 130° and 136° E. They are about 20 in number, and extend 87 m. from N.N.E. to S.S.W.

Pellicle, (*pell'ikl*), *n.* [Lat. *pellicula*, dimin. of *pellis*, a hide, skin.] (*Surg.*) The first delicate formation of the skin that appears over a healing ulcer or open sore. (*Chem.*) The film that rises on certain fluid preparations, like that which may be observed forming on a bowl of boiled milk set aside to cool, before the firm skin is established, that is certain to rise when the milk becomes cold. Any very thin, transparent membrane, like that which encloses the yolk of an egg.

Pel'lico, SILVIO, the celebrated Italian patriot, and victim of Austrian tyranny, author of *Mie Prigioni*, was b. at Saluzza, in Piedmont, in 1789. In early life he gained considerable distinction as a writer for the stage; and his tragedy, *Francesca da Rimini*, may still be read with interest. In 1819 he became connected with the press, at the same time that he was tutor in the family of Count Porro; and in 1820 he was seized as a carbonaro by the Austrians at Milan, and confined in the fortress of Spielberg for ten years. The volume on which his fame rests tells the story of his imprisonment. His treatment was not distinguished by the most terrible hardships or tortures which other more illustrious persons have undergone, but it tells a tale of solitude, of patient endurance, and of pleasing sentiments continually keeping alive the strength of hope and affection, which has endeared the volume and the writer to numbers who could scarcely grasp the political idea involved. Released by the amnesty of 1830, he found shelter at Turin, and was employed as librarian in the house of the Marchesa Barolo until he died. His imprisonment had ruined his health, and he took no further part in politics. D. 1854.

Pellic'ular, *a.* Pertaining, or having reference to, a pellicle.

Pel'litory, *n.* (*Bot.*) See PARIETARIA.

Pel'litory of Spain, *n.* (*Pharmacy*.) The root of *Anthemis pyrethrum*. It has a pungent flavor, and when chewed promotes the flow of saliva, and is often useful in toothache.

Pell-mell, *n.* See PALL-MALL.

adv. [Fr. *pêle-mêle*.] In complete confusion or disorder; with confused violence; with mixture at random; helter-skelter; as, the troops retreated pell-mell.

Pellucid, *a.* [Lat. *pellucidus*—*per*, through, and *lucidus*, shining, from *lux*, *lucis*, light.] Perfectly clear; translucent; diaphanous; not opaque; as, a *pellucid* stream.

Pellucid'ity, **Pellucid'ness**, *n.* Perfect clearness; translucence; partial transparency.

Pellucidly, *adv.* With clearness; diaphanously.

Pelop'idæ, a valiant and patriotic Theban general, was the friend of Epaminondas and the associate of his victories. When the Spartans conquered Thebes, *P.* went to Athens, where he assembled his exiled countrymen, with whom he returned, seized upon Thebes, and expelled the invaders. Afterwards he defeated the Lacedæmonians at Tegyra, and shared with Epaminondas the victory of Leuctra. *P.* being sent ambassador to Alexander, the tyrant of Phææ, was thrown into prison; but on the appearance of Epaminondas he obtained his release. He went next to the court of Persia, and after his return commanded the forces sent to the relief of Thessaly, where he fell, b. c. 364.

Peloponne'sian, *a.* Relating or pertaining to Peloponnesus.

n. (*Geog.*) A native or inhabitant of the Peloponnesus.

Peloponne'sus, [Said to be so called from *Pelops*, son of Tantalus, king of Phrygia, who settled in that country.] The ancient name of the Morea (*q. v.*). Among its most important cities were Sparta in Laconia, and Argos the capital of Argolis. Sparta acquired, after the Messenian war, a decided supremacy over the other states, and disputed the supremacy with Athens in a war of almost thirty years' duration (431–404 B. C.)—the famous *Peloponnesian War*, of which the history has been written by Thucydides. After the Roman conquest, the *P.* formed part of the province of Achaia, and subsequently belonged to the Byzantine empire.—See MOREA.

Pel'oria, *n.* [Gr. *pelor*, a monster.] (*Bot.*) A term applied to those flowers which change from their usual normal irregular form to one which is abnormal in development as regards the particular family to which they belong. Instances occur in the Snapdragon and the Toad-flax, which, being normally irregular, sport to a regular form. The erect-flowered *Gloxinias* of modern times.

Pel'otage, *n.* Bales of Spanish wool.

Pelt, *n.* [Ger. *peltz*; Lat. *pellis*, a hide.] The skin of a beast with the hair on it; a raw hide.

(*Falconry*.) The quarry of a hawk all torn.

Pelt-rot, A disease which rots the hair or wool of a beast.

v. a. [Fr. *peloter*, from *pelote*, a pellet.] To strike with pellets, or with something thrown, driven, or falling; to drive by throwing something; as, to *pelt* with stones, a *pelting* storm.—To cast or use as a missile.

n. A blow or stroke from a pellet, or from something hard, solid, or semi-liquid; a knock; a blow or stroke from something thrown.

Pel'ta, *n.* [Lat., a shield] (*Bot.*) A term used in describing lichens, to denote a flat shield without any elevated rim.

Pel'tate, **Pel'tated**, *a.* (*Bot.*) A leaf or any other organ which is fixed to the stalk by the centre, or by some point distinctly within the margin.

Pelt'er, *n.* One who pelts or hurls missiles.

Peltig'era, *n.* (*Bot.*) The Ground-livewort, a genus of plants, order Lichenales. *P. canina* and *rufescens* were formerly officinal, and regarded as a specific for hydrophobia.

Pel'tinerved, *a.* (*Bot.*) Peltately veined.

Pelt'-monger, *n.* One who deals in pelts or raw hides.

Pel'tonville, in New York, a village of Steuben co., abt. 18 m. N. by E. of Bath.

Peltoph'orum, *n.* [*Gr. peltophoros*, shield-bearing.] (*Bot.*) A genus of plants, sub-order *Cuscutaceae*. The species *P. Linnei*, formerly *Cuscutina brasiliensis*, a native of the W. Indies, yields the orange-colored dye-wood called Brazilletto.

Pel'try, *n.* [Lat. *pellis*, a skin.] The name given to the skins of different kinds of wild animals found in high N. latitudes, particularly in America, such as the beaver, sable, wolf, bear, &c. When the skins of such animals have received no preparation, they are termed *pel'try*; but when the inner side has been tanned by an aluminous process, they are denominated *fur*.
—A mean or worthless object.

Pelt'-wool, *n.* Wool plucked from the pelts of dead sheep.

Pel'vic, *a.* Pertaining or having reference to the pelvis.

Pel'vis, *n.* [Lat., a laver.] (*Anat.*) The inferior part of the abdomen, the bony circumference of which is

Fig. 2067. — THE PELVIS.

1, the last Lumbar Vertebra; 2, the Ilium; 3, the Os Coccygis, slightly elongated, to show 6, the point or beak; 4, the Ischium; 5, the Symphysis, or junction of the two bones of the Pubes; 7, the Sacrum.

formed by the 2 *ossa innominata*, each composed of an *ilium*, an *ischium*, and *pubis*, the *sacrum*, and the *os coccygis*. It contains the rectum, the urinary bladder, and internal organs of generation.

Pemadum'cook, in Maine, a lake of Piscataquis co., receives the surplus waters of Lake Chesuncook, and discharges by a small outlet into Penobscot River.

Pem'aquid, in Maine, a post-village of Lincoln co., abt. 18 m. E. of Bath.

Pemberton, a township of England, co. of Lancaster, 2 m. W. of Wigan. *Manuf.* Cotton goods. *Pop.* 5,500.

Pemberton, in New Jersey, a post-village and township of Burlington county, abt. 20 m. E. by S. of Trenton, intersected by Rancocas creek.

Pemberton, in Ohio, a post-village of Shelby co., abt. 16 m. W. of Bellefontaine.

Pembina, in North Dakota, a lake of the salt-water region, giving rise to Pembina river, which flows E. into the Red River of the North.

—An extreme N.E. co.; area, 1,120 sq. m. It is bounded on the N. by the Red River of the North, and is intersected by the Pembina river. *Surface*, undulating prairie; *soil*, fertile. *Products*, Wheat, barley, corn; live stock; hay in considerable quantity. *Cap.* Pembina. *Pop.* (1890) 14,334.

—A city, cap. of Pembina co., on the Red River of the North, at the mouth of Pembina river, and the Northern Pacific R.R. Has a good local trade and is a grain shipping point. *Pop.* (1897) 1,000.

Pembroke, a seaport-town of S. Wales, cap. of the county of same name, on a navigable creek of Milford Haven, 7 m. S.E. of Milford. Most of the shipping-trade is carried on at Pater, or Pembroke Dock, 1 m. N.W. *Pop.*, including Pater, 15,500.

Pembroke, in Maine, a post-township of Washington co.

Pembroke, in Massachusetts, a post-village and township of Plymouth county, about 27 miles S.E. of Boston.

Pembroke, in New Hampshire, a post-village and township of Merrimack county, about 7 miles S.E. of Concord.

Pembroke, in New York, a p. v. of Genesee co.

Pembroke, in New York, a post-township of Genesee co.

Pemigewas'set, in New Hampshire, a small river joining the Winnipiseog River to form the Merrimack River, opposite Plymouth, in Grafton co.

Pemis'sot, in Missouri, an extreme S.E. co., adjoining Tennessee on the E. and Arkansas on the S.; area, abt.

300 sq. m. *Rivers*, Mississippi and Whitewater rivers. Lake Pemis'sot occupies in the central part of the co. an area of abt. 90 sq. m. *Surface*, level and generally low, occupied for the most part by shallow lakes and swamps. *Cap.* Gayoso.

Pem'maquid Point, in Maine, a promontory and light-house of Lincoln co., on the W. side of the entrance to George's River.

Pem'mican, **Pem'ican**, *n.* Among the N. American Indians, meat cut in long thin strips without fat, and dried in the sun; charqui. — Meat prepared by drying in the sun, pounded, and compressed into bags for use as an article of provision in long voyages, journeys, &c.

Pen, *n.* [A.S. *pin*; Dan *pen*; Ice. *penn*; It. = Lat. *penna*; Gr. *pelamud*.] A feather or quill prepared as an instrument for writing; an instrument used for chirography made of steel, gold, &c.; — also used figuratively for a person who uses a pen; a writer.

"The pen is mightier than the sword." — Bulwer-Lytton.

(*Manuf.*) Steel pens, which have almost superseded quill pens, are made in great quantities, and, like pins and needles, can only be produced, at a sufficiently low price to meet the requirements of the people, by those who have erected buildings and fitted up machinery so as to make the process sufficiently cheap and rapid. The steel is first selected of a proper quality, and rolled out into sheets of the thickness required, and of breadth sufficient for the length of a pen; these are punched out to the proper shape by a punch worked by a screw, which cuts out a piece at every blow, and also the perforation which terminates the split; the maker's name, or any other device, is stamped on this flat piece of steel, called a *blank*, which is then coiled up into the shape required, whether a *barrel* pen, or a *nib*, by a sort of press, worked by a girl. The pens have next to be tempered, by being made red-hot and then thrown into water or oil, and are afterwards polished by putting them into a barrel with fine sand, which is turned round for several hours; the nibs or points are then finished on an emery wheel, against which the pens are held as it revolves. They are then slitted, and varnished by dissolving shellac and asphaltum in naphtha, which keeps them from rusting. Pens are sometimes made of brass, zinc, silver, and gold. Those made of gold are, of course, too expensive for general use, but, as they are never corroded by ink, they last a very long time, and can always be cleaned by washing, and as the whole wear is at the point, this is tipped with an alloy which is exceedingly hard, composed of osmium and iridium. Steel pens were first produced in 1803 by Mr. Wise, of Great Britain, but it is to the improvements introduced in 1822 by Mr. Gillott, of Birmingham, that this branch of manufacture owes its immense development. There are in this country, chiefly in Philadelphia, Camden, and Meriden, Conn., extensive factories devoted to the production of steel pens. Diamond-pointed and iridium-pointed gold pens are produced in such perfection as to give them a large sale in Europe. A recent invention of great value is the fountain pen, in which a hollow barrel holds the ink and supplies it gradually to the point.

—*v. a.* (*imp.* and *pp.* PENNED, (*pend.*) To write; to compose and commit to paper.

Pen, *v. a.* (*imp.* and *pp.* PENNED, or PEND.) [A.S. *pyn-dan*, *gepyndan*.] To coop; to shut or close up; to confine in a small inclosure or narrow place.

"Where shepherds pen their flocks at eve." — Milton.

—*n.* A small inclosure for domestic animals, as for cows, or sheep. — A house with its offices and out-buildings within an inclosure; — used in Jamaica.

Pen'ae'cee, *n.* (*Bot.*) The *Pen'ae* or *Sarcocolla* family, an order of plants, alliance *Rhamnales*. *DIAG.* Apetalous flowers, an ovary composed of 4 carpels, a tubular calyx, with definite divisions, and rudimentary cotyledons.

Pen'al, *a.* [Fr.; Lat. *penalis*, from *pæna*, pain, expiation = *Gr. poînē*, penalty.] Pertaining or having reference to punishment; inflicting punishment; incurring punishment; enacting the punishment of offenders; subject to a penalty; as, a *penal* code, a *penal* offence, *penal* servitude.

Penal code, a code of laws having application to the punishment of criminals. — *Penal laws*, laws forbidding an act, and exacting punishment for committing it.

Pen'ally, *adv.* As a penalty.

Pen'al'ty, *n.* [Fr. *penalité*, from Lat. *pæna*.] Pain or punishment, suffered in person or property; which is annexed by law or judicial decision to the commission of a crime, offence, or trespass; penal retribution; — generally applied in a pecuniary sense; as a *penalty* of five thousand dollars, *penalty* of death. — Forfeiture; fine; mulct for non-performance of something stipulated.

"The penalty and forfeit of my bond." — Shaks.

On or under *penalty* of, on pain of; in case of transgression or non-performance.

Pen'ance, *n.* [O. Fr. = Fr. *penitence*, from Lat. *penitencia*.] The pain, suffering, or labor to which a person voluntarily subjects himself, or which is imposed on him by authority, as a punishment for his faults, or as an expression of penitence.

"When the torturing hour calls us to penance." — Milton.

Penanced, (*pèn'ant*.) *a.* Having performed or suffered penance.

Pen'anceless, *a.* Free from penance.

Penang', **Pinang**, or **Prince of Wales Island**, in the Strait of Malacca, off the W. coast of the Malay Peninsula, from which it is separated by a channel from 2 to 5 m. wide, and belonging to the presidency of Bengal; Lat. between 5° and 5° 16' N., Lon. 100° 9' and 100° 25' E. *Area*, 160 sq. m. The surface is hilly and well wooded, and the soil fertile. The climate is very healthy. *Prod.* Rice, cotton, tobacco,

coffee, sugar, indigo, cocoa-nuts and spices. *Cap.* George Town. *Pop.* 50,000.

Pen'annular, *a.* [Lat. *pene*, almost, and *annularis*, circular, from *annulus*, a ring.] Possessing very nearly the circular form of a ring.

Pen'ates, *n. pl.* [Lat.] The household gods of the ancient Romans, distinguished from the *lares* by their divine origin, and believed to have power over the events which happened in a household; they were thus controllers of fate, as the *lares* were protectors of property. The *Penates* take the figure of the gods, or are represented as old men in priestly costume. — See *LAR.*

Pen'case, *n.* A case or holder for a pen.

Pence, *n.*; *pl.* of PENNY, *q. v.*

Penchant, (*pòng'shòng'*) *n.* [Fr.] Predilection; inclination; preference; decided taste; as, a *penchant* for the fair sex.

Pen'cil, *n.* [Fr. *pinceau*; Sp. *pincel*; Lat. *penicillum*, from *peniculus*, dimin. of *penis*, a tail, from *pendeo*, to hang.] A name applied to instruments for writing, drawing, or painting, differing as much in their construction as in the use to which they are applied. There are now in use the following kinds of *P.*: *hair-P.*, *black-lead-P.*, *chalk-P.*, and *slate-P.* The first are used for painting or writing with fluid colors, either oil or water, and in China and Japan are employed almost entirely instead of pens for writing; the color used being the black or brown pigment obtained from various species of sepia or cuttle-fish. The well-known *black-lead-P.* is made by cutting black-lead or plumbago (see *BLACK-LEAD*) into thin plates with a saw, and again into strips as wide as the plate is thick. These strips are then laid in a groove in a piece of cedar, upon which is glued another and thinner piece; the whole is afterwards rounded by a plane adapted to that purpose. Some *P.* are filled with colored chalk instead of black-lead. The *ever-pointed P.* is an instrument for using cylindrical pieces of black-lead, which are forced forward in the *P.* just so far as to allow them to be used without breaking. The leads are manufactured of different thicknesses, and the *P.*-cases are marked with a letter to correspond with the lead required for it. The *P.* for using liquid colors or paints are of course wholly different from those just described. They are made of hog's bristles, camel's hair, fitch, sable, &c. Those of a large and common kind are described under *BRUSH*. The soft *P.* for artists are made as follows: — The tail of the animal (sable, badger, marten, &c.) is scoured in a solution of alum; then steeped for several hours in lukewarm water; then dried in linen cloths; and finally combed out regularly. The hairs are seized with pincers, and cut off near the skin; and the little parcels of hair are sorted into groups according to their length. A few hairs are then taken — enough for one pencil — and placed in a little receptacle, which holds them while a thread is bound round near the roots. The base of the *P.* is then trimmed flat by scissors. The hairs thus prepared are fitted either into quills or into tin tubes. The quills are those of swans, geese, ducks, lapwings, pigeons, or larks, according to the size of the pencil. Each quill is softened and swelled in hot water; and the bunch of hairs is introduced at the larger end, and pulled forward by a simple apparatus to the smaller end, where the shrinking of the quill binds the hairs closely. The great art in *P.*-making is so to arrange the hairs that their ends may be made to converge to a fine point when moistened and drawn between the lips. Females are generally more successful than men in preparing the small and delicate pencils. *Slate-P.*, for writing on slate, are made either by cutting slate into thin sticks, and rounding them, or by cutting it into fine square slips, and encasing them in wood, as in the case of black-lead, &c.

—Figuratively, art, capacity, or instrument of painting, drawing, or delineating.

"Nature's ready pencil paints the flowers." — Dryden.

(*Optics.*) An aggregate or collection of rays of light which converge to, or diverge from, the same point.

—*v. a.* To write or mark with a pencil; to paint or draw; to delineate.

Pencilled, (*pèn'sild*.) *a.* Painted, drawn, or marked with a pencil. — Radiated; having pencils of rays.

(*Bot.*) Characterized by fine lines, as if with a pencil.

Pen'cilling, *n.* The act of painting or sketching; a sketch.

Pen'craft, *n.* Chirography; handwriting; penmanship.

—Art of composing; authorship; literary writing.

Pen'-cutter, *n.* One who cuts or makes pens for use.

Pend, *n.* An Oriental term for oil-cake.

—*v. n.* To depend; to hang. (*R.*)

—To be unsettled; to be in process of adjustment; to be in abeyance.

Pen'dant, *n.* [Fr.; Lat. *pendens*, from *pendo*, to hang down.] Anything hanging, as by way of ornament; a hanging appendage; — also, an appendix or supplement. —

Fig. 2068. — PENDANT.
(From Henry VII.'s Chapel, Westminster, A. D. 1510.)

An ornament or jewel depending from the ear; an earring. — A picture, print, &c., which hangs as a match to a kindred piece of art.

(Arch.) A term applied in Gothic architecture to those pieces of ornamented stone hanging down from the intersections of a groined roof, and of which Fig. 2068 gives one of the finest examples.

(Her.) Anything hanging down, as the badge of an order pendant to the chain or ribbon.

(Naut.) A rope to which a purchase is hooked; also, a long, narrow piece of bunting. See PENNANT.

Pendency, *n.* [Sp. *pendencio*, quarrel, dispute, from Lat. *pendens*.] A hanging in uncertainty; suspense; state of being in doubt or undecided; as, the pendency of a law suit.

Pendent, *a.* [Lat. *pendens*.] Hanging from above; suspended; depending; pendulous. — Jutting out or over; projecting; overhanging; as, a pendent rock.

Pendente Lite, *n.* [Lat. (Law.) Pending the progress of a suit or action.

Pendentive, *n.* [Fr. *pendentif*, from Lat. *pendere*, to hang.] (Arch.) The portion of a vault resting on one pier, and extending from the springing to the apex. — The word pendentive is also applied to the portions of vaults introduced in the angles of rectangular compartments, in order to reduce them to a circular or other suitable form to receive a dome.

Pendently, *adv.* In a pendent or projecting manner.

Pendice, (*pend'is*), *n.* A sloping roof; a pentice; also, a pent-house.

Pendicle, (*pend'ik-l*), *n.* A Fig. 2069.—PENDENTIVE. pendant, appendage, or appurtenance. (Byzantine.)

Pendicler, *n.* In Scotland, a sub-tenant.

Pending, *p. a.* [Fr. *pendant*, during.] Remaining undetermined; in suspense; as, a pending suit.

—*prep.* During; for the time of the continuance of; as, pending the result of the battle.

Pendleton, EDMUND, an American statesman and jurist, b. in Virginia, 1721, who, after the inauguration of the commonwealth, was called to preside over the first house of delegates, and was appointed by that body, in conjunction with Chancellor Wythe and Jefferson, to revise the colonial laws. In 1777, by a fall of his horse, he received an injury which made him a cripple for life. In 1779 he became President of the Court of Appeals; and presided in 1788 at the State Convention in which was to be considered the proposed constitution of the U. S., and masterly advocated the national compact. D. 1803.

Pendleton, (*pend'el-ton*), a suburban village of Manchester, England, co. of Lancaster, 2½ m. W.N.W. of Manchester. *Manuf.* Cotton and silks. In the vicinity are numerous collieries. *Pop.* 15,000.

Pendleton, in Indiana, a post-village of Madison co., abt. 26 m. E.N.E. of Indianapolis.

Pendleton, in Kentucky, a N. co., adjoining Ohio. Area, abt. 300 sq. m. *Rivers.* Ohio, Licking, and South Licking rivers. *Surface*, level or gently undulating; *soil*, mostly fertile, and well adapted to the production of cereals. *Cap.* Falmouth.

Pendleton, in Missouri, a post-village of Warren co., abt. 63 m. W.N.W. of St. Louis.

Pendleton, in New York, a post-township of Niagara co.

Pendleton, in Ohio, a post-village of Putnam co., abt. 58 m. S.S.W. of Toledo.

Pendleton, in W. Virginia, an E. by N. co., adjoining Virginia. Area, abt. 620 sq. m. *Rivers.* South Branch of the Potomac River, and North and South Forks. *Surface*, elevated, mountainous, the main range of the Alleghany Mountain forming the N.W., as does the Shenandoah Mountain the S.E., boundary of the co.; *soil*, in some parts fertile. *Cap.* Franklin.

Pendleton Centre, in New York, a post-village of Niagara co., abt. 17 m. N.N.E. of Buffalo.

Pendulousity, *n.* State or quality of being pendulous; pendulousness.

Pendulous, *a.* [Lat. *pendulus*, from *pendeo*, to hang down.] Hanging; pendent; swinging; fastened at one end, the other being movable; depending.

Pendulously, *adv.* In a pendulous or swinging manner.

Pendulousness, *n.* Same as PENDULOSITY, *q. v.*

Pendulum, *n.* [It. *pendulo*, from Lat. *pendulus*, hanging down.] (Physics.) A heavy body so suspended that it may vibrate or swing backwards and forwards about a fixed point by the action of gravity, when it is once raised by an external force, to the right or left of its quiescent position. The regulation of the motion of clocks is effected by means of pendulums, that of watches by balance-springs. *P.* were first applied to this purpose by Huyghens in 1658, and in the same year Hooke applied a spiral spring to the balance of a watch. The manner of employing the *P.* is shown in Fig. 2070. The *P.*-rod passing between the prongs of a fork, *a*, communicates its motion to a rod, *b*, which oscillates on a horizontal axis, *o*. To this axis is fixed a piece, *m n*, called an escapement or crutch, terminated by two projections or pallets, which work alternately with the teeth of the escapement-wheel, *R*. This wheel being acted on by the weight tends to move continuously, let us say, in the direction indicated by the arrow-head. Now if the *P.* is at rest, the wheel is held at rest by the pallet, *m*, and with it the whole of the clockwork and

the weight. If, however, the *P.* moves and takes the position shown by the dotted line, *m* is raised, the wheel escapes from the confinement in which it was held by the pallet, the weight descends, and causes the wheel to turn until its motion is arrested by the other pallet, *n*; which, in consequence of the motion of the *P.* will be brought into contact with another tooth of the escapement-wheel.

In this manner the descent of the weight is alternately permitted and arrested—or, in a word, regulated—by the *P.* By means of a proper train of wheelwork the motion of the escapement is communicated to the hands of the clock; and consequently their motion, also, is regulated by the *P.* The peculiarly valuable property of the *P.* is called *isochronism*, and consists in its disposition to vibrate different arcs in very nearly the same time, provided the arcs are none of them large. In demonstrating the theory of the motion of the *P.*, mathematicians are obliged to assume that there is no rigidity in the cord, no friction at the axis of suspension, no resistance to motion made by the air, and no variation in the total length of the cord, arising from the variable temperature or moisture of the atmosphere; and if these assumptions were strictly correct, a *P.* once put in motion, would continue to move *ad infinitum*, without a further accession of external force: but when the pendulum is applied as the regulator of a clock, the assumptions just stated require an equal number of mechanical corrections. The wheelwork of a common clock is merely employed to produce a given number of oscillations in the *P.*; and as the period of those oscillations depends on the length of the pendulous body, it will be obvious that one of the first essentials in the construction of a clock is to make the *P.* of a determinate length. It must be observed, however, that the time does not vary as the length, but only as the square-root of the length, *i. e.*, a *P.* to vibrate 2 seconds must be four times as long as a second's pendulum. As the length of a *P.* increases with heat, and a brass rod equal in length to a second's *P.* will expand or contract 1-1000 part of an inch by a change of temperature of 1° in Fahr.'s thermometer, and since the times of vibration are in a subduplicate ratio of the lengths of the *P.*, an expansion or contraction of 1-1000 part of an inch will answer nearly to 1 second daily; therefore a change of 1° in the thermometer will occasion a difference in the rate of the clock equal to 1 second daily; hence the daily variation of the rate of the clock from summer to winter will be very considerable; and in order to avoid this several contrivances have been employed, among which is the *gridiron-pendulum*, composed of any convenient odd number of rods of different metals, as 5, 7, or 9, being so connected that the effect of one set of them counteracts that of the other set; this form of *P.*, however, is liable to several objections, and is now almost obsolete. If the expansion of wooden rods could be depended on, or if it were not modified by absorption of moisture, or something else, which renders their action uncertain, the simplest of all compensation pendulums would be a wooden rod with a lead-bob 14 inches long. But all attempts to make the rod damp-proof have failed. The most recent compensation-*P.* is one analogous to the *gridiron-P.*, and composed of zinc and iron, which would probably have been discovered long ago if the mode of working zinc had been known. In these *P.* the sum of the iron rods must be to the zinc as 17 to 7. The best mode of suspending clock-*P.* is by a thin spring; not that the elastic force of the spring is of any use; but it has the advantage of being perfectly free from friction. In common clocks, the cock from which the *P.* hangs is screwed to the back-plate of the clock-frame, and has merely a slit in it, through which the spring hangs by a pin or rivet through its top; but in all the better class of clocks, which have heavy *P.* for their size, the spring is screwed fast between two brass or iron chops, and there is a large pin through them and the spring, with shoulders, so that it will just drop tightly into V's in the two sides of the cock. A spring does not bend only at one point, as a string does; and therefore a *P.*-bob hung by a spring does not move exactly in a circle, but in a cycloidal curve; and it was the celebrated Huyghens, already mentioned, who first explained that *P.* swinging in this curve have greater isochronal properties than those vibrating in arcs of a circle. To explain this geometrical curve, however, would here be out of place. As the action of gravity is not the same in all latitudes, nor yet at all heights above the earth's surface in the same latitude, the vibrations of the *P.* are slower at the equator than at the poles, and increase in quickness with the latitudes N. or S., as the centrifugal force decreases, and *vice versa*.

Fig. 2070.

Penedo, (*pa-na'do*), a city of Brazil, on the São Francisco River, abt. 55 m. S.W. of Alagças. It is generally well built, and carries on an extensive trade. *Pop.* 14,000.

Penelope, a celebrated Grecian princess, daughter of Icarus, wife of Ulysses (*Odysseus*), and mother of Telemachus. According to the Homeric legend, Ulysses, during his long wanderings after the fall of Troy, was generally regarded as dead, and *P.* was vexed by the urgent suits of many lovers, whom she put off on the pretext that she must first weave a shroud for Laertes, her aged father-in-law. To protract the time, she waded by night the portion of the web which she had woven by day. When the suitors had discovered this device, her position became more difficult than before; but fortunately Ulysses returned in time to rescue his chaste spouse from their distasteful importunities.

(Zool.) See PENELOPIDÆ.

Penelopidæ, *n. pl.* (Zool.) A fam. of gallinaceous birds, peculiar to Guiana and Brazil. They are generally as large as turkeys, move in flocks, build their nests among, and often upon, the trees, and with proper care are capable of domestication. They are known under the names of Curassows, Iloccos, and Guans. The Common Guan (*Penelope cristata*), represented in Fig. 2071, may be taken as the type of this family, to which belong also the Chiacalaica (*Ortalis McCulli*) of New Mexico.

Fig. 2071. — GUAN. (*Penelope cristata*.)

Penetrability, *n.* [Fr. *penetrabilité*.] Susceptibility of being penetrated, or of being entered or passed through by another body.

Penetrable, *a.* [Fr.; Lat. *penetrabilis*.] That may be penetrated, entered, or pierced by another body. — Susceptible of moral or intellectual impression.

Penetrableness, *n.* State or quality of being penetrable; penetrability.

Penetrably, *adv.* In a penetrable manner.

Penetrance, **Penetrancy**, *n.* Quality or power of entering or penetrating.

Penetrant, *a.* [From Lat. *penetrans*.] Sharp; subtle; piercing; penetrating.

Penetrate, *v. a.* [Lat. *penetro*, *penetratus*.] To enter or pass into the interior of; to enter or pierce, as into another body. — To affect, as the mind; to cause to feel; to make sensible of. — To reach by the intellect; to understand.

"Things which were too subtle for us to penetrate." — Ray.

—*v. n.* To enter; to pass into; to pierce; to make way intellectually.

"We are not yet penetrated into the reality of the thing." — Locke.

Penetratingly, *adv.* In a penetrating manner; discerningly.

Penetration, *n.* [Fr.; Late Lat. *penetratio*.] Act of penetrating or of entering a body. — Mental entrance into anything abstruse; the power by which the mind sees through anything difficult or complex; acuteness; sagacity; discernment; discrimination; as, a man of great penetration.

Penetrative, *a.* [Fr. *penetratif*.] That penetrates; piercing; sharp; subtle; acute; discerning.

Penetrativeness, *n.* Quality of being penetrative.

Penerachi, in Iowa, a village of Dallas co., abt. 14 m. W. by S. of Iowa City.

Penfield, in Michigan, a township of Calhoun county.

Penfield, in New York, a post-village and township of Monroe co., abt. 7 m. E. of Rochester.

Penfield, in Ohio, a post-township of Lorain county, on Black river.

Penfield, in Pennsylvania, a post-village of Clearfield co., abt. 18 m. N.N.W. of Clearfield.

Pen-fold, *n.* A fold or corral for cattle.

Pen-gin, *n.* (Zool.) A genus of swimming birds, family *Alcidae*, which are in the Antarctic what the auks are in the Arctic regions. Their bills are similar, but they are even less capable of flying than the auks, their side appendages being mere apologies for wings, covered with scale-like vestiges of feathers, serving them, however, as paddles in the water, through which they skim with great celerity. They never venture to land except to breed, and can only reach their shallow nests on the shore by drawing themselves on their bellies. They hatch the one egg erect, and they cackle like geese. The largest, the Patagonian (*Aptenodytes Patagonica*, Linn., Fig. 75), is found in immense flocks near the Straits of Magellan, and as far as New Guinea. It is of the size of a goose, of a dark-ash color above and white beneath; the head and neck, which approach to black, are separated by a golden-colored spot at the ears. Its flesh is black and oily, but eatable.

Pen-holder, *n.* A handle or case for a pen.

Penicil, (*pen'-i-sil*), *n.* [Lat. *penicillus*, a tail, a roll of lint, &c.] (Zool.) A small tuft of diverging hairs.

(Med.) A pledget for wounds or sores.

Penicillate, **Penicilliform**, *a.* (Bot.) Tipped with a brush of hairs like a camel's-hair pencil.

Penicillium, *n.* (Bot.) A genus of plants, order *Fungales*. Certain moulds found on bread, preserves, &c., are produced by species of this genus. The so called Vinegar-plant, which, by its growth in saccharine liquids at moderate temperatures, converts them into vinegar, appears to be a mycelial state of *P. glaucum*; and the Yeast-plant, which by its vegetation at a high temperature, causes fermentation in bread, beer, &c., would seem likewise to be a mycelial state of a species of this genus.

Penin'sula, *n.* [Lat. *pæne*, nearly, and *insula*, island.]

A tract or tongue of land almost surrounded by the sea, or connected with the continent by a narrow neck or isthmus; a large extent of country joining the mainland by a part narrower than the tract itself, as the territory constituting Spain and Portugal.

Peninsula, in *Michigan*, a township of Grand Traverse co.

Penin'sula, in *Ohio*, a post-village of Summit co., abt. 136 m. N.E. of Columbus.

Penin'sular, *a.* In the form or state of a peninsula; pertaining to or inhabiting a peninsula; as, the *Penin'sular War*.

P. War. (*Hist.*) The name given to the struggle so long maintained between Spain and Portugal, aided by the British, and the French, at the commencement of the present century.

Penin'sulate, *v. a.* To form into a peninsula; to encompass almost with water.

Penis, *n.* [Lat.] The male organ of generation.

Pen'istone, a town and parish of England, co. of York, on the Don, 7 m. W.S.W. of Barnsley. *Manuf.* Woollen and cotton goods. *Pop.* 6,500.

Pen'itence, *n.* [Fr.; Lat. *pœnitentia*.] Sorrow or grief of heart for sins or offences; contrition; repentance; compunction; remorse.

Pen'itent, *a.* [Fr.; Lat. *pœnitens*.] Repentant; contrite; suffering pain or sorrow of heart on account of sins, crimes, or offences.

—*n.* One who repents of sin; one contrite or sorrowful on account of his transgressions. — One under church censure, but admitted to penance. — One under the direction of a confessor.

Order of Penitents of St. Magdalen. (*Eccl. Hist.*) An order established at Marseilles for the suppression of vice.

Peniten'tial, *a.* [Fr. *pœnitentiell*.] Proceeding from or expressing penitence or contrition of heart.

—*n.* (*Eccl.*) A Roman Catholic book containing the rules which relate to penance and the reconciliation of penitents.

Peniten'tially, *adv.* In a penitential manner; with contrition.

Penitentiary, (*ten'shi-à-ry*), *a.* [Fr. *pœnitentiaire*.] Relating to penitence or penance, or to the rules and measures of penance.

—*n.* One who prescribes the rules and measures of penance. — A penitent; one who does penance. — A place where penance is enjoined; — hence, a house of correction, or reformatory, in which prisoners are incarcerated for punishment and amendment, and compelled to labor; a workhouse or state-prison. See **PENITENTIARY SYSTEM**.

(*Eccl.*) An office at the Papal court, in which are examined and delivered out the secret bulls, graces, or dispensations relating to cases of conscience, confession, &c.

Peniten'tiaryship, *n.* Office or condition of a penitentiary.

Peniten'tiary System. There are notably two systems of penitentiaries in the United States, each of which is claimed to be the best by its partisans, — the Pennsylvania system and the New York system. By the former, convicts are lodged in separate, well-lighted, and well-ventilated cells, where they are required to work during stated hours. During the whole time of their confinement they are never permitted to see or speak with each other. Their usual employments are shoemaking, weaving, winding yarn, picking wool, and such like business. The only punishment to which convicts are subject are the privation of food for short periods, and confinement without labor in dark but well-aired cells; this discipline has been found sufficient to keep perfect order; the whip and all other corporeal punishments are prohibited. The advantages of the plan are numerous. Men cannot long remain in solitude without labor; convicts, when deprived of it, ask it as a favor, and, in order to retain it, use, generally, their best exertions to do their work well; being entirely secluded, they are of course unknown to their fellow-prisoners, and can form no combination to escape while in prison, or associations to prey upon society when they are out; being treated with kindness, and afforded books for their instruction and amusement, they become satisfied that society does not make war upon them, and more disposed to return to it, which they are not prevented from doing by the exposure of their fellow-prisoners when in a strange place; the labor of the convicts tend greatly to defray the expenses of the prison. The disadvantages which were anticipated have been found to be groundless. Among these were that the prisoners would be unhealthy; experience has proved the contrary; that they would become insane; this has also been found to be otherwise; that solitude is incompatible with the performance of business; that obedience to the discipline of the prison could not be enforced. These, and all other objections to this system, are by its friends believed to be without force. The New York system, adopted at Auburn, which was probably copied from the Penitentiary of Ghent, in Belgium, called *La Maison de Force*, is founded on the system of isolation and separation, as well as that of Pennsylvania, but with this difference, that in the former the prisoners are confined to their separate cells during the night only; during the working-hours in the daytime they labor together in work-shops appropriated to their use. They eat their meals together, but in such a manner as not to be able to speak with each other. Silence is also imposed upon them at their labor. They perform the labor of carpenters, blacksmiths, weavers, shoemakers, tailors, coopers, gardeners, wood-sawyers, &c. The discipline of the prison is enforced by stripes,

inflicted by the assistant keepers, on the backs of the prisoners; though this punishment is rarely exercised. The advantages of this plan are that the convicts are in solitary confinement during the night; that their labor, by being joint, is more productive; that, inasmuch as a clergyman is employed to preach to the prisoners, the system affords an opportunity for mental and moral improvements. Among the objections made to it are that the prisoners have opportunities of communicating with each other and of forming plans of escape, and, when they are out of prison, of associating together in consequence of their previous acquaintance, to the detriment of those who wish to return to virtue, and to the danger of the public, that the discipline is degrading, and that it engenders bitter resentment in the mind of the convict.

Pen'itently, *adv.* With penitence; with repentance, sorrow, contrition, or remorse for sin.

Penk, *n.* A minnow.

Pen'lyn, in *Pennsylvania*, a post-village of Montgomery co., abt. 17 m. N. of Philadelphia.

Pen'knife, (*-nif*), *n.*; *pl.* **PENKNIVES**, (*-nivs*.) A small knife used for making or mending pens.

Pen'man, *n.*; *pl.* **PENMEN**. A man who professes or teaches the use of the pen in writing or chirography, especially, one who writes a good hand; a calligrapher. — An author; a literary writer.

Pen'manship, *n.* The use of the pen in writing; art of writing. — Chirography; manner or style of writing; as, fine or bad *penmanship*.

Penn, **SIR WILLIAM**, an English admiral who greatly distinguished himself against the Dutch in the 17th cent. Admiral Penn was b. at Bristol in 1621, entered the navy at an early period, and was captain at the age of 23. After the restoration he was knighted, and d. in Essex in 1670.

PENN, William, an eminent member of the Society of Friends, and founder of the State of Pennsylvania, was the son of the preceding, and was b. at London, 13th October, 1644. He received a good education, which was completed at Christ Church, Oxford; but he disappointed his father's expectations by turning Quaker, and was discarded by him. Sir William afterwards repented, and sent his son abroad. Young Penn visited

Fig. 2072. — WILLIAM PENN.

France and Italy, and returned to his native country in 1664. He spent two years in the study of the law at Lincoln's Inn, and was then sent to Ireland to manage his father's estates; but, happening to hear a discourse at Cork, by Thomas Loe, a leading Quaker, he reverted to his former opinions, and travelled to propagate this new faith. He was taken up for preaching, and sent to prison; but was released through the interest of his father. After his return to England, he was sent to the Tower, on account of a book which he had written; and, while there, he composed his principal work, entitled *No Cross, no Crown*, intended to show the benefit of suffering. On his release, he resumed his former labors, and was apprehended, with some others, and tried for preaching at a conventicle in Gracechurch Street. The jury persisted in finding them not guilty, and were fined for acting contrary to the dictates of the judge. Admiral P. was reconciled to his son before his death, and left him all his property. He continued firm in his attachment to the Society of Friends, and, in 1677, went on a mission to Holland and Germany, with Fox and Barclay. In 1681 he obtained from the Crown, in lieu of the arrears due to his father, the grant of the province in N. America, and it was Charles II. who, in honor of P., proposed the name Pennsylvania. The code of laws which P. prepared for the province was exalted in aim, comprehensive in scope; yet with slender exceptions, its details were marvellously practical, and if Penn had not the genius of the ruler, he had, as few have had, the genius of the legislator. Accompanied by emigrants, P. sailed from Deal the 5th Sep., 1682, for America, and landed at New Castle, Del., Oct. 24th, and at Upland, Pa. (now Chester,) Oct. 29th, 1682. (o. s.) Nov. 8th. The work of organization was rapid. A few Swedes and Dutch had previously settled in Penn-

sylvania, but colonists from most various regions of the Old World now poured in. Universal toleration was proclaimed, a charter of liberties was solemnly consecrated, and a democratic government was established. In his dealings with the Indians and their chiefs, P. manifested his accustomed magnanimity and justice. The capital city, Philadelphia, was planned on a scale commensurate with Pennsylvania's expected greatness. P.'s family was in England. Hearing that his wife was ill; hearing that his friend Algernon Sidney had perished on the scaffold; hearing that the fury of fanaticism was rivalling with the fury of vice; he, intrusting his unfinished undertakings to such men as he deemed competent, hurried anxiously back. During the reign of James II. P. was continually at court, yet from no selfish or servile reasons. James had been his father's friend, and he had always been glad and prompt to help P. himself. P. therefore entered the palace that he might give the king wise counsels, and counsels tending toward mercy. Confiding both in P.'s fidelity and skill, James commissioned him to visit the Prince of Orange at the Hague, to ascertain the prince's views on some points, to furnish him with clearer, correcter notions on others, — a mission in which P. succeeded indifferently. The overthrow of James was in more than one respect a misfortune for P. In the spring of 1690 he was arrested on the charge of holding treasonable correspondence with the dethroned monarch. The absurdity of the charge being swiftly and glaringly evident, P. was set at liberty. Yet, though his conduct continued to be blameless, he was, by an order in council, stripped, March 14th, 1692, of his title to the Pennsylvanian government — a tyrannical act involving his utter ruin; for, besides that he had risked his whole substance in the Pennsylvanian experiment, his estates, both in England and in Ireland, had been grievously mismanaged by incompetent or dishonest overseers. An order in council capriciously restored to Penn, in 1694, that Pennsylvanian government of which an order in council had so capriciously robbed him. But the ownership of territories so extensive was almost barren to him. His agents were faithless, and the colonists, though profuse in expressions of regard, were in reality ungrateful and grasping. A visit to his Irish estates preluded P.'s second expedition to the New World. His family went with him to America, though rather from necessity than choice. P.'s residence in the colony was more beneficial to the colonists than to himself. He suggested, he promoted, many reforms; above all, he inculcated and gave the example of that humane spirit in which he was so far before his age. He branded as iniquitous negro slavery, and to the aged, the sick, and the destitute he was a bountiful almoner. In 1701 he returned to England, and, being encumbered with debts, endeavored to negotiate the sale of Pennsylvania to the crown for £12,000. This negotiation was interrupted in 1712, through his being attacked by an apopleptic fit, which, happening twice afterwards, greatly impaired his mental faculties. He survived for six years longer, but with a constitution much shattered, and quite unfitted

Fig. 2073.

FRIEND'S MEETING-HOUSE AT JORDAN'S, NEAR LONDON, WITH GRAVES OF WILLIAM PENN, THOMAS ELLWOOD, AND OTHERS.

for any serious employment. Penn died on the 29th of July, 1718; and he was buried at the village of Jordan, Buckinghamshire. Recent attacks on this great man have been victoriously refuted. Free from frailty no man is; free from vanity perhaps Penn was not. But his integrity is unimpeachable. Penn cried "No Cross, no Crown." He bore the cross, and let us not snatch from him the crown, which the unanimous veneration of mankind has bestowed. P. was twice married, and he left several children, to whom he bequeathed his

estates in England, Ireland, and what remained to him in America. The government and quit-rents of Pennsylvania devolved to the sons of the second marriage, and by their heirs were sold to the State of Pennsylvania, after the War of Independence, for \$650,000. Montesquieu calls Penn "the modern Lycurgus." Penn wrote a number of works, which were collected and published in two vols. in 1728.

Penn. in *Indiana*, a township of Jay county.—A township of Park county.—A township of St. Joseph county.

Penn. in *Iowa*, a village of Fayette county, about 22 miles north-east of Waterloo.—A township of Guthrie county.—A township of Jefferson county.—A township of Johnson county.—A township of Madison county.

Penn. in *Michigan*, a twp. of Cass co.

Penn. in *Minnesota*, a township of McLeod county.

Penn. in *Ohio*, a twp. of Highland co.

Penn. in *Pennsylvania*, a township of Berks county.—A township of Butler county.—A township of Centre county.—A township of Chester county.—A township of Clearfield county.—A township of Huntingdon county.—A post-township of Lancaster county.—A township of Lycoming county.—A township of Perry county.—A township of Westmoreland county.

Penn'-name, *n.* A *nom de plume*; a pseudonym; a fictitious name assumed by an author, as that of "Boz," employed by Dickens.

Pennant, Pennon, *n.* [Fr. *pennon*; Sp. *pennon*, from Lat. *penna*, a wing, a feather.] A small flag; a bannerol.

(*Naut.*) A long, narrow piece of bunting carried at the mastheads of ships of war. (Sometimes written *pennant*.) — A strap which serves to hook a purchase.

Broad pennant, a square piece of bunting hoisted at the main masthead of an admiral's or commodore's ship. **Pennar**, a river of British India, rising in Mysore, and after an E. course of 270 m. falling into the Bay of Bengal, in Lat. 11° 45' N., Lon. 79° 51' E.

Pennate, Pennated, *n.* [From Lat. *penna*, feather, wing.] Wing-shaped; plumed. (*Bot.*) See **PINNATE**.

Pennatula'cea, *n.* (*Zool.*) See **ALCYONARIA**.

Penned, (*pend*), *a.* Having wings or plumes.

Penn'er, *n.* A writer; one who uses a pen.

Penn Forest, in *Pennsylvania*, a township of Carbon co.

Penn Haven, in *Pennsylvania*, a post-village of Carbon co., abt. 7 m. N. of Mauch Chunk.

Penn'iform, *a.* [Lat. *penna*, feather, and *forma*, form.] Presenting the form of a plume or feather.

Penn'igerous, *a.* [Lat. *penna*, feather, and *gerere*, to bear.] Bearing feathers or quills.

Penn'iless, *a.* Moneyless; poor; destitute of money; poverty-stricken.

Penn'ilessness, *n.* The state of being without money; impecuniosity.

Penn'innerved, *a.* (*Bot.*) Same as pumately veined or nerved.

Penn'ington, in *Arkansas*, a township of Bradley co.

Pennington, in *New Jersey*, a post-village of Mercer co., about 8 m. N. of Trenton.

Penn'ingtenville, in *Pennsylvania*, a post-village of Chester co., abt. 48 m. W. of Philadelphia.

Penn'ing, *n.* Act or manner of writing. — Writing; composition.

Penn Line, in *Pennsylvania*, a post-village of Crawford co., abt. 24 m. W. of Meadville.

Penn'on, *n.* [Fr., from Lat. *penna*, a feather.] The flag of a knight, in the Middle Ages, who had not attained the dignity of banneret. It differed from the banner by being pointed at the end. — In modern times a banner; a streamer; a standard.

Penn Run, formerly **GREENVILLE**, in *Pennsylvania*, a post-village of Indiana co., abt. 147 m. W. of Harrisburg.

Penns'bury, in *Pennsylvania*, a township of Chester co.

Penn's Cove, in *Washington*, a village and port of Island co., on Whidby's island. It is said to have one of the finest harbors in the world.

Penn's Creek, in *Pennsylvania*, enters the Susquehanna, between Union and Snyder cos.

Penn's Grove, in *New Jersey*, a post-village of Salem co., abt. 12 m. N. of Salem.

Penn's Grove, in *Pennsylvania*, a village of Delaware co., abt. 3 m. S.W. of Media.

Penns'ville, in *Ohio*, a post-village of Morgan co., abt. 34 m. S. by E. of Zanesville.

Pennsville, in *Pennsylvania*, a village of Chester co., abt. 8 m. S. of West Chester. — A post-village of Fayette co., abt. 40 m. S.E. of Harrisburg. — A village of Lycoming co., abt. 3 m. N. of Muncy.

Pennsylvania, one of the largest and most important States of the American Union, between Lat. 39° 45' and 42° N., and Lon. 74° 40' and 80° 32' W., is bounded N. and N.E. by New York; E. New Jersey; S. Maryland, Delaware, and West Virginia; and W. by Ohio and West Virginia. Separated from New Jersey by the Delaware river, and the upper part of Delaware Bay, which also unites it with the Atlantic. The greatest length of the State is 303 m., and its maximum breadth 176 m.; or, in other words, it has an average length of 280 sq. m., with a general breadth of 158 sq. m., giving an area of 45,215 sq. m. — *Gen. Desc.* The surface of the State is level in the S.E., hilly and mountainous in the interior, and generally level or arable in the W. The Alleghany Mountains occupy all the central part, covering, with

their ramifications, more than half its area. These ridgy tracts all tend N.E. and S.W., those E. of the Alleghany range being abrupt and precipitous, while W. the surface declines toward the Ohio river and Lake Erie in graded slopes. The passes of this inner range are abt. 2,000 ft. above sea-level, the lower valleys of the Ohio where it leaves the State, and the plain skirting Lake Erie, being abt. 800 and 650 feet respectively. The inner valley by which the Susquehanna flows has but an inferior elevation above the sea, and it takes up a large area, dividing the mountainous belt. The mountains of P. are components of the great Appalachian chain, and form a succession of ridges, running in parallels, generally in a direction S.W. to N.E., and presenting, in some parts, summits elevated 3,000 ft. The principal valleys of the mountain region are those of Chester, Wyoming, Lackawanna, Juniata, Cumberland, and Monongahela. The chief rivers are the Susquehanna, traversing the centre of the State, and the largest stream flowing into the Atlantic in the U. States; the Delaware, with its affluents, the Lehigh and Schuylkill; the Juniata, tributary to the Susquehanna; and, in the W., the Alleghany and Monongahela, uniting at Pittsburg to form the Ohio. In the N.W., Lake Erie borders on the State a distance of 45 miles. *Clim.* The climate is changeable, though, upon the whole, one of the most agreeable and temperate in the Union. The season of frost and snow seldom exceeds three months, the winter commencing about the first two weeks of Dec., and terminating from the 1st to the 15th of March. The heat of summer is seldom oppressive, except in low situations. Near the sea-coast the temperature of winter is severe, varying in the months of Jan. and Feb. from 14° to 28° Fahr. — *Soil and Prod.* The soil in the E. part of the State is partly light and sandy, but in the interior plains and valleys it is a deep, rich loam; there are few absolutely sterile tracts, and, in general, this is one of the most productive parts of the Union, yielding most of the finer fruits of temperate climates in the greatest luxuriance. Almost every kind of grain is raised, but wheat is the staple, and P. may be said to be, emphatically, a wheat-growing country. — *Geol. and Min.* The geological formations of the State are limited to a few only of the great divisions of the rocks. These are metamorphic (including the gneissic as well as the altered lower palæozoic groups); the palæozoic series, from the Potsdam sandstone to the coal measures; and the middle secondary red sandstone. In P. the limestones, with the exceptions hereafter noticed, are confined to a well-defined belt running E.N.E. and W.S.W. across the State, bounded on the N.W. by the main range of the Alleghany, and on the S.E. by the ridge known as the South Mountains. In this belt the upper and the lower silurian lime-rocks appear in innumerable outcrops. So general is the distribution of limestone within the region indicated, that it would be hard to name a district, save in the anthracite coal basins, which does not possess a convenient source of lime of sufficient purity for agricultural use. S. of South Mountains there are three limestone regions — that known as the limestone valley of York and Lancaster counties; the marble formation of southern Montgomery, central Chester, and southern Lancaster; and a narrow belt entering the centre of Bucks co. at the Delaware, and extending nearly across the Delaware. Throughout the coal-fields of the W. section of the State carboniferous limestone is found outcropping along the borders of streams and in similar locations, in quantity very variable, but gradually increasing in proportion to the other carboniferous rocks until the Ohio line is reached. P. is rich in mineral wealth, possessing vast quantities of coal, iron, and salt, &c. Anthracite coal is found E. of the Alleghany, extending over 472 sq. m. (see **MINERAL COAL**). Bituminous coal is found nearly everywhere W. of the mountains, and large quantities are consumed at Pittsburg and elsewhere in the smelting of iron. The area of this coal-field embraces 8,750 sq. m., and extends through 30 counties. Block coal, a most valuable species of semi-cannel coal, is found in Mercer co. The product of coal for 1901 was 148,869,253 tons, of which 67,869,253 tons were anthracite. The discovery of **PETROLEUM** (*q. v.*) has added another great source of wealth, and immense quantities are exported to all parts of the world. The oil is conducted through pipes, laid underground, and delivered at shipping points at small cost. Natural gas, an accompaniment of petroleum, began to be used extensively for fuel in 1883, its employment for heating and manufacturing purposes proving of great advantage to the W. section of the State. Its production reached its highest level in 1888, when the value used was \$19,282,375. Since that date it has fallen off, and coal has been largely resumed as a fuel. In the production of iron and steel in blast furnaces, rolling mills, steel works, forges and bloomeries, P. takes the first rank. In the production of ore it has been surpassed by Michigan, but much of the product of the latter State is converted into pig and manufac-

Fig. 2074. — SEAL OF THE STATE.

tured iron in P. Zinc is a product of considerable importance, and there are large zinc works in South Bethlehem. Copper is mined to a small extent, and gold, silver and tin occur, though not in paying quantities. Marble, slate, limestone and other building stones occur in abundance. The State is largely wooded, nearly one-fourth its area being under forest. Lumbering is an active industry in the N., while the great hemlock forests of the S. and W. supply some of the largest tanneries in the world. There are still many of the smaller wild animals in the mountains and forests, and the black bear is occasionally seen. — *Agric.* In many field crops P. holds a high position among the States. The area in farms aggregates over 18,000,000 acres, of which more than 13,000,000 are improved, the estimated annual product being over \$125,000,000. The annual yield includes about 20,000,000 bushels of wheat, 40,000,000 of corn, and 35,000,000 of oats, with a large yield of rye and other crops. The tobacco product is also of great importance, reaching more than 25,000,000 pounds. Lancaster co. is the principal source of this product. Grazing is also a very important industry, particularly in the mountain regions and the western plateau, where horses, cattle and sheep are raised in large numbers. The dairy products of the State are noted for their excellence, and the wool clip is large. Market gardening is largely prosecuted in the vicinity of Philadelphia and the other large cities, and horticulture is an important occupation, all the fruits of the temperate zone being easily grown. Apples, pears and peaches are largely produced. — *Pol. Div.* The commonwealth is divided into 67 counties, as follows:

Adams,	Cluton,	Lackawanna,	Pike,
Allegheny,	Columbia,	Lancaster,	Potter,
Armstrong,	Crawford,	Lawrence,	Schuylkill,
Beaver,	Cumberland,	Lebanon,	Snyder,
Bedford,	Dauphin,	Lehigh,	Somerset,
Berks,	Delaware,	Luzerne,	Sullivan,
Blair,	Elk,	Lycoming,	Susquehanna,
Bradford,	Erie,	McKean,	Tioga,
Bucks,	Fayette,	Mercer,	Union,
Butler,	Forest,	Mifflin,	Venango,
Cambria,	Franklin,	Monroe,	Warren,
Cameron,	Fulton,	Montgomery,	Washington,
Carbon,	Greene,	Montour,	Wayne,
Center,	Huntingdon,	Northampton,	Westmoreland,
Chester,	Indiana,	Northumberland,	Wyoming,
Clarion,	Jefferson,	Perry,	York,
Clearfield,	Juniata,	Philadelphia,	

Cities and Towns. The chief centers of urban wealth and population are Philadelphia, Pittsburg, Allegheny, Scranton, Reading, Erie, Harrisburg (State cap.), Wilkesbarre, Lancaster, Altoona, Williamsport, Allentown, Johnstown, York, McKeesport, Chester, Norristown, Shenandoah, Lebanon, Easton, Shamokin, Pottsville, Pottstown, Hazleton, New Castle, Mahanoy City, &c., the populations being in the order named. — *Govt.* By the new constitution, adopted Dec. 16, 1873, the legislative power is vested in a general assembly, consisting of a senate and a house of representatives. The latter, apportioned according to the number of taxable inhabitants, are chosen every second year, and the number is limited to 200. The State is divided into 50 senatorial districts, as nearly equal in population as may be, and each district is entitled to elect one senator. The General Assembly meets on the first Tuesday of January every second year, and at other times when convened by the Governor. When the General Assembly is convened in special session, there is no legislation upon subjects other than those designated in the proclamation of the Governor calling such session. No law is passed except by bill, and all bills for raising revenue originate in the house of representatives. The executive department consists of a governor, lieutenant-governor, secretary of the commonwealth, attorney-general, auditor-general, state treasurer, secretary of internal affairs, and a superintendent of public instruction. The supreme executive power is vested in the Governor, who is chosen on the day of general election, by the qualified electors of the Commonwealth. He holds his office during four years, from the third Thursday of January next ensuing his election, and is not eligible to the office for the next succeeding term. The Lieutenant-Governor is chosen at the same time, in the same manner, for the same term, and subject to the same provisions as the Governor; he is president of the senate, but has no vote unless they be equally divided. The Governor is commander-in-chief of the army and navy of the Commonwealth, and of the militia, except when they are called into the actual service of the United States. He nominates, and, by and with the consent of two-thirds of all the members of the senate, appoints the officers of the Commonwealth. In case of the death, conviction or impeachment, resignation or other disability of the Governor, the powers, duties, and emoluments of the office, for the remainder of the term, devolve upon the Lieutenant-Governor. The judicial power is vested in a supreme court, in courts of common pleas, courts of oyer and terminer and general jail delivery, courts of quarter sessions of the peace, orphans' courts and magistrates' courts; the supreme court consists of 7 judges, who are elected for a term of 21 years, by the qualified electors of the State at large. The judge whose commission first expires is chief-justice. The judges of the county courts are chosen by the electors of the districts over which they are to preside for a term of 10 years. Justices of the peace, or aldermen, are elected for a term of 5 years. The right of suffrage is allowed to every male citizen of the age of 21 years, having resided in the State 1 year, and in the electoral district where he offers his vote 2 months immediately preceding the election, and having within 2 years paid a State or county tax, which shall

have been assessed at least 2 months before the election. The general election is held annually, on the Tuesday next following the first Monday of November. All elections for city, ward, borough, and township offices are held on the third Tuesday of February. The General Assembly, by general law, designates the courts and judges by whom the several classes of election contests shall be tried.—*The State* is represented in the National Congress by 2 Senators and 30 members of the Lower House.—*Public Works.* The commonwealth has a very extensive system of internal communication, by roads, railways, and canals. The Pennsylvania Central, connecting Philadelphia with Pittsburg, and thence with

Fig. 2075.—PENNSYLVANIA R. R. BRIDGE, ACROSS THE SUSQUEHANNA RIVER.

its numerous ramifications W. is perhaps the largest railroad corporation in the world, representing a total cash capital of \$250,000,000. The Reading R.R., from Philadelphia to Portsville, and thence with numerous lateral branches, and the Delaware, Lackawanna & Western R.R., from Scranton to New York, have the heaviest coal tonnage of any roads in the world. There are also numerous canals, in part constructed by private companies, and in part by the State. That between Philadelphia and Pittsburg, a distance of 395 miles, connecting the Delaware with the Ohio, with its various lateral branches aggregates a length of 590 miles, the total expense of completion having been nearly \$20,000,000. Among the canals are the Schuylkill Canal, from Philadelphia to Port Carbon, 108 miles long, with 129 locks, and completed at a cost of \$2,500,000; the Lehigh Canal, and the Lackawanna Canal, 25 miles long, with which a railroad is connected. The canal system of the State altogether aggregates 973 miles, constructed at a cost of \$38,660,397. The major part of the canals, however, have been either crowded out by railroads, or their importance seriously diminished by this competition. The manuf. interests of the State are both various and extensive, P. being celebrated not only for the working of iron and the manufacture of steel and glass, but also for her textile industries. Cotton-stuffs and yarn are extensively produced, bringing P. next in rank to Massachusetts in the manufacture of these fabrics. In the production of carpets, locomotives, and some other classes of goods the State holds a very high rank, while in the total value of products it is only surpassed by New York. In addition to the articles named, we may mention ships, steam-engines, machinery, cutlery, nails, stoves, leather, chemicals, &c. For a fuller statement of the manufacturing industries, see PHILADELPHIA. The principal foreign trade of the State centers in Philadelphia, though it is carried on to some extent through New York and Baltimore, and, via the Ohio and Mississippi, through New Orleans. Internal commerce is greatly promoted by the thousands of miles of railroads, and the canals and navigable rivers, while the Delaware affords access to the port of Philadelphia for the largest ships.—*Educ., &c.* The public school system of P. ranks high among those of the States, and is steadily improving. The State possesses no school fund, and the revenues for school purposes are derived from taxation in the various districts and State appropriations. The school property of the State is estimated to be worth nearly \$50,000,000, while the enrollment of pupils is over 1,000,000, and the average daily attendance about 800,000. The teachers number nearly 30,000. The State possesses 14 normal and a number of high and manual training schools. There is an Agricultural College at Bellefonte, Center co., with branches in some other counties, it being endowed with lands appropriated by the general government. The endowment reaches \$500,000, and the farm contains 400 acres. In addition to a preparatory course, this institution has 3 courses of 4 years each—classical, scientific, and agricultural—tuition being free to both sexes. Text books are supplied to the pupils of the public schools. Advantages for higher education are supplied by the University of Pennsylvania, located at Philadelphia, and the Lehigh University, at Easton, with about 35 other collegiate institutions, and 40 or 50 seminaries, academies, institutes, &c. The various medical and dental colleges of Philadelphia have a very high reputation. P. was a pioneer in providing schools for the orphans of soldiers, 3 of these being still kept up. In 1891 there were 351 libraries with more than 1,000 volumes each, their total contents being 2,318,456 volumes and 387,511 pamphlets. In the next decade there was a large increase. The charitable institutions of P. tally with her wonderful progress and prosperity, and her penitentiary system is conducted with admirable efficiency. (See PENITENTIARY SYSTEM.) Besides the several State Asylums for the Insane at Harrisburg, Norristown, &c., the State makes annually liberal appropriations to numerous philanthropic and charitable institutions; such as Asylums for

the Blind, the Deaf and Dumb, Insane, &c., located at Philadelphia; and also to Houses of Refuge for juvenile offenders, at Philadelphia and Pittsburg; and other institutions for which P. is celebrated, and in which the early Friends or Quakers acquired a notable reputation.—*Religion.* Almost all religious sects are to be found in P. The relative numerical superiority in the faith of the early settlers, the Friends, has disappeared, but their excellent example still animates this great commonwealth, and the name of Penn (q. v.) is held in veneration, as attested by the spontaneous efforts to celebrate his memory during the festivities of the Bi-Centennial of 1882.—*Hist.* The country about Delaware Bay was first settled by the Swedes, but they made comparatively little progress in the occupation of the country, and passed under the English jurisdiction generally established in 1664. In 1681, the territory W. of the Delaware was granted by royal charter to William Penn (q. v.), who colonized it; and, by the industry and high character of his co-religionists, the Society of Friends, by cultivating peace with the Indians, and encouraging emigration, founded a flourishing state, which, long before the Revolution, became the seat of learning, wealth, and refinement.

Fig. 2076.—SOLDIERS' MONUMENT, GETTYSBURG.

Under the charter granted to Wm. Penn, the region forming the present State of Delaware was included, and the two colonies continued to be so joined until the Revolution of 1776. During the War of Revolution, Philadelphia was the chief city and capital of the federation, and Brandywine, Germantown, Valley Forge, and other points, were the scenes of memorable events, which belong to the national history, and are noticed in this book under their different names. Independence was first proclaimed here, and the whole colony took a decided part in the final establishment of American liberty. In the Civil War, too, they were not less distinguished, the Commonwealth sending to the national army 270 regiments and several unattached companies of volunteers, numbering in all 387,284 men. P. was also the scene of one of the most important and most sanguinary battles of the last war, that of Gettysburg, the field of which has been converted into a national park, and abundantly adorned with statues and monuments. Next to the Friends, the most important immigration was that of the Germans, who have peopled almost entirely several counties adjoining Philadelphia, and still speak the *patois* known as "Pennsylvania Dutch." Pop. (1800) 602,365; (1840) 1,724,633; (1880) 4,282,891; (1890) 5,258,014. The census of 1900 gave a population of 6,302,115.

Pennsylvania Dutch. (*Philol.*) This is not, as some erroneously suppose, a corruption of German, originating in Pennsylvania, but a South-German dialect, brought from Europe, and due to a mixture of forms existing on the upper Rhine in Rhenish Bavaria, Baden, Darmstadt, Würtemberg, German Switzerland, and Alsace. In the U. S., but chiefly in Pennsylvania, the dialect has taken up an English element. The characteristics of the dialect may be learned from Haldeman's *Pennsylvania Dutch* (1872). A more correct name would be Pennsylvania German. Some excellent poems were written in it by the late H. Harbaugh, D. D. (1870).

Pennsylvania niaburg. (*Ind.*, a vil. of Ripley co. **Pen'ny.** *n.*; *pl.* PENCE, or PENNIES. [*A. S.* *penēn*, *peninc*; *Ger.* *pfennig*, half a farthing.] An English copper coin, the value of which is one-twelfth of a shilling, or about 2 cents.

—*Proverbially*, a small sum; a groat; a stiver.

Pen'ny-a-liner. *n.* One who writes for a public journal at so much a line; a venal writer.

Penn Yan. in *New York*, a post-village, cap. of Yates co., abt. 192 m. W. of Albany. It is an active manufacturing place, and carries on an extensive inland trade.

Pen'nypack Creek. in *Pennsylvania*, flows into the Delaware near Holmesburg.

Pen'nyroyal. *n.* (*Bot.*) See MENTHA and HEDEOMA.

Pen'nyweight. *n.* A weight equal to 24 grains, or the 20th part of an ounce troy. This was the weight of the silver penny in the time of Edward I.

Pen'ny-wise. *a.* Saving of small sums at the hazard of larger; niggardly on important occasions; hence, the phrase *penny-wise and pound foolish*.

Pen'ny-wort. *n.* (*Bot.*) See HYDROCOTYLE and OBOLARIA.

Pen'ny-worth. (*-worth*), *n.* As much as is bought for a penny.—A purchase; anything bought or sold for money; something advantageously purchased, or for less than its worth.—A small quantity.

Penobscot. in *Maine*, an important river, rising by several branches among the Green Mountains in Somerset co., and flowing E. and N.E. into Piscataquis co., expands into the Chesnecook Lake. Thence, receiving numerous streams and the surplus waters of several lakes, it flows S.E. to Mattawamkeag, in Penobscot co., where, receiving its largest affluent, the Mattawamkeag River, and turning to the S. by W., it enters the Atlantic Ocean by a large embouchure called Penobscot Bay, between Hancock and Waldo cos. Total length abt. 300 m.

—A central co., adjoining Aroostook co. on the N.; area, about 3,200 sq. m. *Rivers.* St. John, Penobscot, Aroostook, Piscataquis, Sebovis, and numerous smaller streams, besides many lakes. *Surface*, much diversified; soil, generally fertile, producing Indian corn, potatoes, wheat, and hay, in considerable quantities. *Cap.* Bangor. *Pop.* (1897) 73,450.

—A post-township and port of entry of Hancock co., on the E. side of Penobscot Bay, abt. 57 miles E. of the city of Augusta.

Penolog'ical. *a.* Belonging to, or descriptive of, public punishments.

Penology. *n.* [*Gr.* *poine*, punishment, and *logos*, discourse.] The science of public punishment; *pæno*-logy.

Penon de Velez. (*pen'yon de va'leth*), a fortified seaport-town belonging to Spain, on an elevated rock, on the African side of the Strait of Gibraltar, 80 m. S.E. of Ceuta.

Pen'-rack. *n.* A rack for pens; a pen-holder.

Pen'rith. a town of England, co. of Cumberland, 15 m. S.S.E. of Carlisle. *Manuf.* Woollen, cotton, and linen goods. *Pop.* 7,500.

Penryn'. a town of England, co. of Cornwall, at the head of Falmonth harbor, 2 m. from Falmonth; *pop.* 4,000.

Pensaco'la. in *Florida*, a town, port of entry, cap. of Escambia co., on the W. shore of Pensacola Bay, abt. 180 m. W. of Tallahassee. It has one of the safest and best harbors in the Gulf of Mexico, having 21 ft. of water on the bar, and a gradually rising sandy shore. The town is regularly laid out and generally well built. It is the U. States naval station, and has a marine hospital. Its trade in lumber and timber is very important. *Pop.* (1897) 14,890.

Pensaco'la Bay. in *Florida*, an inlet of the Gulf of Mexico, between Santa Rosa and Escambia cos. It is abt. 27 m. in length, by a maximum breadth of 12 m. It receives the Escambia River and several less important streams. The harbor is sheltered by Santa Rosa Island, and the entrance is defended by 3 forts—Fort Pickens, on the W. extremity of the island, and Forts McCrea and Barrancas, on the mainland.

Pensau'kee. in *Wisconsin*, a small river flowing into Green Bay from Oconto co.—A post-village and township of Oconto county, about 6 miles south-west of Oconto.

Pensau'kin Creek. in *New Jersey*, enters the Delaware River between Burlington and Camden co.

Pen'sile. (*-sil*), *a.* [*Lat.* *pensilis*, from *pendeo*, to hang.] Pendant; suspended; supported above the ground.

Pen'silence. *n.* The state of being pensile.

Pension. (*pen'shon*), *n.* [*Fr.*; *Lat.* *pensio*, from *pendo*, to weigh.] A payment made; as, rent, wages, &c.

—An annual allowance of a sum of money to a person by government in consideration of past services.—An annual payment by an individual to an old or disabled servant.—An annual allowance made by government to retired officers, disabled soldiers, or the families of soldiers killed or dying in the public service.—A French boarding-house, or boarding-school.

—*v. a.* To grant a pension to.

Pensionary. *a.* [*Fr.* *pensionnaire*.] Maintained by a pension; receiving a pension.—Consisting in, or pertaining to a pension.

—*n.* A pensioner; one who receives a pension.

Grand Pensionary. (*Hist.*) An appellation formerly given to the chief magistrate of Holland in its republican days. The Pensionary was the president of the council of state, or the legislature of the Seven United Provinces, and first minister of the republic. His term of election was for five years, but he was generally prolonged in his office, and often retained it for life.

Pensioner. (*pen'shun-er*), *n.* One who receives a pension.—A dependant.—A student of the second rank at Cambridge, England, who pays for his board and other charges.

Pen'sive. *a.* [*Fr.* *pensif*, from *Lat.* *penso*, to weigh, to ponder.] Thoughtful; employed in serious study or reflection; thoughtful and sad from care, trouble, or sorrow; sorrowful; melancholy.—Expressing thoughtfulness with sadness.

Pen'sively. *adv.* With thoughtfulness; with gloomy seriousness or some degree of melancholy.

Pen'siveness. *n.* Gloomy thoughtfulness; melancholy; seriousness from depressed spirits.

Hammond's 8 x 11 Map of Pennsylvania
C.S. Hammond & Co., New York

Pen'-slides, (-slīdz), *n.* An instrument for drawing maps or plans.

Pen'-stock, *n.* The barrel of a pump.—The handle of a pen.

Pent, *imp.* and *pp.* from *PEN*, *q. v.*

—*n.* A confined accumulation.

Pen'ta-cap'sular, *a.* [Gr. *pente*, five, and Lat. *cap'sula*, small box.] (*Bot.*) That has five capsules or cells.

Pen'taceros, *n.* (*Zoöl.*) See *ASTERIADÆ*.

Pen'ta-chord, *n.* [From Gr. *pente*, five, and *chordē*, a string.] (*Mus.*) An instrument of music with five strings.—An order or system of five sounds.

Pentacoe'cous, *a.* [From Gr. *pente*, five, and *coccus*, a berry, a kernel.] (*Bot.*) Having five cocci. See *Cocci*.

Pentacrinite, *n.* [Fr. from Gr. *pente*, five, and *crinon*, a lily.] (*Zoöl. and Pul.*) One of the genus *Pentacrinus*, containing radiata having five-angled joints. Most of them are found in a fossil state.

Pentacrostic, *a.* [From Gr. *pente*, five, and *acrostichon*, acrostic.] (*Pros.*) A set of verses so disposed as to have five acrostics of the same name in five divisions of each verse.

Pentagen, *n.* [Gr. *pente*, five, and *gonia*, an angle.] (*Geom.*) A plane figure having five angles, and consequently five sides.

Pentagonal, **Pentag'onus**, *a.* [Fr.; Lat. *pentagonus*.] Having five corners or angles.

Pentagonally, *adv.* With five angles.

Pentagraph, *n.* Same as *PANTOGRAPH*, *q. v.*

Pentagraphic, **Pentagraph'ical**, *a.* Pertaining to a pentagraph.

Pentagyn'ia, *n.* [Fr. *pentagynie*, from Gr. *pente*, and *gynē*, female.] (*Bot.*) An order of plants in the Linnæan system characterized by having five styles.

Pentahed'ral, **Pentahed'rons**, *a.* Having five equal sides.

Pentahedron, *n.* [Gr. *pente*, and *hedra*, a seat.] A solid figure having five equal sides or faces.

Pentahexahed'ral, *a.* [Fr. *pentahexedre*.] (*Crystallog.*) Exhibiting five ranges of faces, one above another, each range containing six faces.

Pentamer'ous, *a.* [Gr. *pente*, five, and *meros*, part.] (*Bot.*) Consisting of five parts, as a flower.

Pentam'eter, *n.* [Gr. *pente*, and *metron*, measure.] (*Poet.*) A verse of five feet, of which the first two are either dactyls or spondees, the third a spondee, and the last two anapaests.

—*a.* Possessing five metrical feet.

Pentandria, *n.* [Gr. *pente*, five, and *aner*, a man.] The fifth class in the artificial system of Linnæus, and so named from having five distinct and unconnected stamens on the same flower. This is the largest and most comprehensive class in the sexual system, number five prevailing more frequently than any other arrangement of stamens.

Pentangle, *n.* A pentagon. (*R.*)

Pentangular, *a.* [Gr. *pente*, and Eng. *angular*.] Having five corners or angles.

Pentapetal'ous, *a.* [Gr. *pente*, and *petalon*, petal.] (*Bot.*) Possessing five petals, as a flower.

Pentaphyll'ous, *a.* [Gr. *pente*, five, and *phyllon*, leaf.] (*Bot.*) Having five leaves.

Pentapody, *n.* [Gr. *pente*, and *pous*, *podos*, foot.] (*Pros.*) A measure comprising five feet taken together.

Pentapolis. (*Anc. Geog.*) A name given by the ancient Greek to certain countries which were remarkable for having five distinguished cities. The most celebrated was the Pentapolis Cyrenaica, of which the five cities were Berenice, Arsinoë, Ptolemais, Cyrene, and Apollonia.

Pentaptote, *n.* [Gr. *pente*, and *ptotos*, fallen, from *ptipem*, to fall.] (*Gram.*) A noun possessing five cases.

Pentarchy, *n.* [Gr. *pentarchia*, from *pente*, five, and *archē*, dominion.] A government in the hands of five persons.

Pentasper'ma, *a.* [Gr. *penta*, and *sperma*, seed.] (*Bot.*) Possessing five seeds.

Pentastich, (-stīk), *n.* [Gr. *pente*, and *stichos*, a line.] A composition comprising five verses.

Pentastyle, *n.* [Gr. *pente*, and *stylos*, a pillar.] (*Arch.*) A work in which there are five rows of columns.

Pentateuch, (-tūk), *n.* [Fr. *pentateuque*; Gr. *pente*, and *tuchos*, a book.] The five books of Moses, being the first five books of the Old Testament; viz., *Genesis*, *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy*.

Pentateuch'al, *a.* Relating to the Pentateuch.

Pentecost, *n.* [Gr. *pentecostos*, the fiftieth.] (*Eccl. Hist.*) A Jewish festival; so called because it was observed on the fiftieth day after the feast of unleavened bread; i. e. the fifteenth of the month Nisan, and next day after the feast of the Passover. Being celebrated seven weeks after the Passover, it also obtained the name of the Feast of Weeks. It occurred about the beginning of the harvest, and seems to have been instituted as an acknowledgment of the goodness of God in giving the fruits of the earth. It was also considered in later times as commemorating the giving of the law on Mount Sinai, according to the construction put on *Exod.* xix. The narrative of the descent of the fiery tongues upon the apostles on the same day, as given in *Acts* ii., has caused its observance to be continued among Christians. In England it is known by the name of *Whit-Sunday*; and in Germany by that of *Pfingsten*.

Pentecostal, *a.* Pertaining to Pentecost or to Whitsuntide.

Pentel'icau, *a.* Belonging or having reference to Mount Pentelics, near Athens, or to its fine marbles.

Penteli'sia, or **Pentene'sia**, a group of small islands in the Gulf of Ægina, Greece, 10 m. N.W. of Ægina.

Pent'-house, *n.* [Fr. *pente*, a slope, from Lat. *pendere*, to hang, and *house*.] A shed standing aslope from the main wall or building.

Pen'tice, *n.* [From Lat. *pendere*, to hang down.] (*Arch.*) A sloping roof. (*R.*)

Pen'tile, *n.* See *PANTILE*.

Pen't-roof, *n.* A roof whose slope is on one side only.

Pen't-trough, (-trof), *a.* A pen-stock.

Pentstemon, or **PENTES'TEMON**, *n.* (*Bot.*) A genus of plants, order *Scrophulariaceæ*. They are perennial herbs, rarely having woody stems, branching, paniculate, with opposite leaves; and showy red, violet, blue, or white flowers. *P. pubescens*, the Beard-tongue, is a handsome plant growing on river-banks, bluffs, hills, and barrens, in the Middle and Western States.

Pent Water, in *Michigan*, a post-village and township of Oceana county, about 24 miles north of Clay-bank.

Penult, **Penulti'ma**, **Penulti'mate**, *n.* [Lat. *penultimus*, from *pene*, almost, and *ultimus*, last.] (*Gram. and Pros.*) The last syllable of a word except one.

Penumb'ra, *n.* [Fr. *pénombre*, from Lat. *pene*, and *umbra*, a shade.] (*Astron.*) The partial shade or obscurity observed on the margin of the perfect shade in an eclipse. Round each of the larger black spots on the sun's surface there is almost always seen an extensive zone of a less dark tint, the contours of which are well-defined, like those of the dark spot. This zone is also called *penumbra*.

(*Painting*.) The boundary of shade and light, where the one blends with the other, the gradation being almost imperceptible;—called also *half-tint*.

Penumb'ral, *a.* Pertaining to, or resembling, a penumbra.

Penur'ious, *a.* [It. *penurioso*.] Excessively saving or sparing in the use of money; parsimonious; close; miserly; as, a *penurious* man.—Scanty; affording little; as, a *penurious* spring.

Penur'iously, *adv.* In a saving or parsimonious manner; with scanty supply.

Penur'iousness, *n.* The state or quality of being penurious; niggardliness; a sordid disposition to save money; scantiness; not plenty.

Pen'ury, *n.* [Fr. *pénurie*; Lat. *penuria*, from Gr. *peina*, hunger.] Need; indigence; want of the necessities of life; want of property; absence of means or resources.

Pen'-woman, *n.*; *pl.* **PEN-WOMEN**. An anchoress; a woman who writes.

Pen'za, a city of European Russia, cap. of a govt. of same name, on the Sura, 130 m. W.N.W. of Saratov; Lat. 53° 11' N., Lon. 45° 38' E. *Manuf.* Leather and soap. *Pop.* 27,263.

Penzance, a seaport-town of England, co. of Cornwall, on the N.W. of Mount's Bay, 7 m. N.E. of the Land's End, and 96 m. W.S.W. of Exeter; *pop.* 9,500.

Peon, *n.* [Fr., a foot-soldier in India.] A pedestrian; a foot-soldier; especially, in India, a native policeman.—In Mexico, a debtor held in servitude till his debt is discharged.—In chess, a pawn.—A hive of bees.

Peonage, **Peonism**, *n.* In Mexico, the condition or state of a peon or temporary slave.

People, (pē'pl), *n.* [Fr. *peuple*; It. *popolo*; Lat. *populus*.] The body of individuals who constitute a community, tribe, nation, or race; an aggregate of persons uniting to form a whole;—employed as a collective noun, construed, in most cases, with a plural verb, and only occasionally used plurally in the sense of nations or races.

"Prophecy again before many peoples and nations."—*Rev.* x. 11.

—Hence, individuals generally; an indefinite class or number; population, or a number of folks as forming part of a population;—often employed as the indefinite subject of a verb, like the French *on*, or German *man*.

"People in adversity should preserve laudable customs." *Richardson*.

—The community at large, as distinguished from a special class, as the nobility, clergy, or military; the promiscuous crowd; the populace; the commonality; the vulgar.

"Here shall the Press the People's right maintain."—*Story*.

One's people, or *one's own people*. (*Script.*) Kindred; relations; ancestors; descendants.

—*v. a.* To supply with population; to stock with inhabitants; to populate.

"He peopled heaven with angels, earth with man."—*Dryden*.

Peoria, *n.* See *BAAL*.

Peoria, in *Illinois*, a N.W. central co.; *area*, abt. 650 sq. m. *Rivers*. Illinois and Spoon rivers, and Kickapoo, Elbow, and Copperas creeks. Peoria Lake forms a portion of the S.E. boundary of the co. *Surface*, level or gently undulating; *soil*, very fertile, producing all the fruits and farm crops of that latitude in abundance. *Cap.* Peoria. *Pop.* (1890) 70,378.

—An important city and railroad center, cap. of Peoria co., on the Illinois river and Ill. & Mich. canal, 160 m. S.W. of Chicago; the meeting point of 11 railroads, and one of the largest inland grain markets. Here are immense distilleries and other extensive industries. *Pop.* (1897) about 51,200.

Peoria, in *Indiana*, a village of Miami co.

Peoria, in *Iowa*, a post-village of Mahaska co., about 15 m. N.N.W. of Oskaloosa.

Peoria, in *Kansas*, a post-village and township of Franklin county, about 24 miles south by east of Lawrence.

Peoria, in *New York*, a post-village of Wyoming co., abt. 11 m. N.E. of Warsaw.

Peoria Lake, in *Illinois*, an expansion of the Illinois River, between Peoria, Woodford, and Tazewell cos. Its greatest width is 3 m., by 20 m. in length.

Peos'ta, in *Iowa*, a post-village of Dubuque co., about 15 m. W. of Dubuque.

Peo'tone, in *Illinois*, a post-township of Wili county.

Pépin, (THE SHORT,) king of France, was the first of the Carolingian kings. He was at first mayor of the palace under Childeric III.; but in 752 he dethroned that monarch and confined him in a monastery. Having requested and obtained the sanction of the Pope, *P.* was constituted king. He assisted Pope Stephen III. against the Longobards, defeated the Saxons, Bavarians, and other German nations, and united Aquitaine to his crown. After a reign of 16 years, he died at St. Denis, 768. His son Charlemagne succeeded him as king of the Franks.

PEPIN, grandson of Charlemagne, and son of Louis le Débonnaire, became king of Aquitaine in 817. *D.* 833 or 839.

Pépin, in *Wisconsin*, a W. co., adjoining Minnesota on the S.W.; *area*, abt. 250 sq. m. *Rivers*. Mississippi and Chippewa rivers, and numerous smaller streams. Lake Pepin washes a portion of the S.W. border. *Surface*, finely diversified; *soil*, very fertile. *Cap.* Onrand. *Pop.* (1895) 7,567.

—A post-village of Pepin co.

Pépin, (Lake), (pip'in), an expansion of the Mississippi River between Wisconsin and Minnesota. It is 25 m. in length by a maximum breadth of 3 m.

Pépin, or **Pépinus**, *n.* [Gr. *peplos*.] (*Antiq.*) An upper garment anciently worn by the Greek, and especially by the Athenian, females. It was without sleeves, and fastened by a clasp on the arm or shoulder. The *P.* corresponded to the *Pallium* (*q. v.*), or outer garment worn by men.

Pépo, *n.* [Lat. *piper*.] (*Bot.*) A 1-celled, many-seeded, inferior fruit, with parietal placentæ and a pulpy interior, as the Melon, the Gourd, &c.

Pepper, *n.* [Lat. *piper*; Gr. *peperi*.] The *P.* of commerce consists of the fruits of *Piper nigrum*, which, as prepared with or without their skin, form respectively black and white *P.* Other sorts of *Piper* possess properties for which they are valuable in medicine. The name of *P.* is also given to several other vegetable products. Thus, Bell Pepper, Bird Pepper, Bonnet Pepper, and Guinea Pepper are various kinds of *Capsicum*, the fruits of which dried and ground yield Cayenne Pepper. — See *PIPER*, *CUBEBA*, *CHAVICA*; and *PEPPER*.

Pepper-box, *n.* A small box with a perforated lid, used for sprinkling pulverized pepper over food, &c.

Pepper-brand, *n.* A kind of mildew which affects grain.

Pepper-cake, *n.* A kind of spiced cake.

Pepper-corn, *n.* The berry or fruit of the pepper-plant.—Something of inconsiderable value; as, a *pepper-corn* rent.

Pepper-dulce, *n.* (*Bot.*) See *LAURENTIA*.

Pepperell, in *Massachusetts*, a post-vill. and twp. of Middlesex co., abt. 37 m. N.W. of Boston.

Pép'ertown, in *Indiana*, a post-village of Franklin co., abt. 45 m. W.N.W. of Cincinnati, Ohio.

Pepper-grass, **Pepper-wort**, *n.* (*Bot.*) See *LEPIDIUM*.

Pepperidge, *n.* (*Bot.*) Same as *Tulepo*. See *TUPELO-TREE*.

Peppering, *a.* Hot; pungent; angry; acrid.

Peppermint, *n.* (*Bot.*) See *MENTHA*.

Peppermint-tree, *n.* (*Bot.*) *Eucalyptus piperita*, a lott tree, native of New Holland, belonging to the genus *EUCALYPTUS*, *q. v.*

Pepper-pot, *n.* A West Indian stew or bouilli of cassareep and vegetables.

—A table utensil with a perforated lid, used to contain and distribute ground-pepper.

Pepper-sauce, *n.* A table condiment made by steeping red peppers in vinegar.

Pepper-saxifrage, *n.* (*Bot.*) A species of the gen. *Cnidium*.

Peppery, *a.* Having the qualities of pepper; pungent.—Easily made angry; choleric; irascible; as, a *peppery* temper.

Pepp'sine, *n.* [Gr. *pepsis*, from *peplein*, *pesslein*, to cook, digest.] (*Physiol. and Med.*) A peculiar animal principle, contained, but only in very minute quantity, in the gastric juice, and which, in conjunction with acid matter, also present in that secretion, confers upon it its solvent or digestive powers in regard to certain components of the food, and more especially in respect to the nitrogeniferous or plastic nutriment, such as albumen, fibrin, casein, and their modifications. It is especially characterized by its power of coagulating milk (see *RENNET*), and afterwards acting upon and dissolving the coagulum. It has no such solvent power over fatty or amylaceous matters. Various means of isolating this principle have been suggested, but none of them very satisfactory. Certain preparations represented as containing *P.* (such as *pepsine wine*, &c.) have been supposed to be medicinally useful, as promoters of digestion; but, even if they do contain *P.*, their therapeutic powers are very doubtful.

Pép'tic, *a.* [Gr. *peptikos*.] Promoting digestion; relating to digestion.

—*n.* (*Med.*) An agent that promotes digestion or is digestive.

Pép'tics, *n. sing.* The doctrine of digestion.

Pequan'nock, or **PEQUON'NOCK**, in *Connecticut*, a small river flowing into Bridgeport Harbor from Fairfield co. —A vill. of Hartford co., abt. 12 m. N. by W. of Hartford.

Pequan'nock, in *New Jersey*, a creek rising in Sussex co., and flowing S.E. joins the Ringwood and Ramapo near Pompton, to form the Pompton River.

Pe'quea, in *Pennsylvania*, a creek flowing into the Susquehanna River from Lancaster co. —A post-township of Lancaster co.

Pe'quest Creek, in New Jersey, enters the Delaware River from Warren co.

Pe'quot, in Connecticut, a village of New London co., abt. 8 m. N.E. by E. of New London.

Pe'quot, in Wisconsin, a village of Calumet co., about 100 m. N.E. of Madison.

Per, *prep.* [Lat.] Through; by means of; for; by; as, his pay is twelve dollars *per* week, send me the money *per* bearer; — frequently employed in composition as a prefix denoting passing through or over the entire extent, as in *perambulate*.

(*Chem.*) A prefix to chemical compounds, and the opposite of *pro*, the former signifying *more* or the *most*, the latter *less* or the *least*; thus a *per-oxide* indicates one alone, or the smallest proportions of oxygen the article can absorb; while a *per-oxide* signifies *two*, *three*, or more atoms, the utmost amount of oxygen it can take up.

Per annum, yearly; by the year; as a thousand dollars *per annum*. — *Per centum* (usually abbreviated *per cent.*), by the hundred; as, ten *per cent.* interest money.

Per curiam. (*Law.*) By the court. — *Per diem*, by the day. — *Per pais*. [O. Fr.] (*Law.*) By the country, or, in otherwise, by a jury, as representing one's country. — *Per pares*. [Lat.] By one's peers or equals in rank. — *Per saltum*. [Lat.] By a sudden spring or movement.

Pe'ra, a suburb of Constantinople, *q. v.*

Pera, in Illinois, a village and township of Champaign co., abt. 109 m. S. by W. of Chicago.

Peracute, *a.* Very sharp; very violent; very acute. (*R.*)

Peradventure, *adv.* Perchance; perhaps; it may be; possibly.

"Peradventure, I will with you to court." — *Shaks.*

Without peradventure, indubitably; without doubt or question.

Perak, a river of Malacca, rising in the S. of Perak, and after a W.S.W. course of 80 m. falling into the Strait of Malacca.

Perambulate, *v. a.* [Lat. *perambulo*, *perambulus*, from *per*, and *ambulo*, to go or walk about.] To walk through or over; to traverse; to pass through or over for the purpose of surveying or examining something; to visit as overseers.

Perambulation, *n.* Act of passing or walking through or over; a travelling survey or inspection. — A district within which a person has the right of inspection; jurisdiction. — Annual survey of the bounds of a parish, or the like.

Perambulator, *n.* An instrument for measuring distances on roads. See *PEDOMETER*. — A child's hand-carriage.

Per'bend, *n.* A PERPENT-STONE, *q. v.*

Per'ca, *n.* (*Zoöl.*) See *PERCH*.

Percarburetted, *a.* (*Chem.*) Containing the utmost possible quantity of carbon.

Perceivable, *a.* Capable of being perceived; perceptible; that may fall under perception, or the cognizance of the senses.

Perceivably, *adv.* In such a manner as to be perceived.

Perceive, (*per-seev'*) *v. a.* [Fr. *percevoir*; Lat. *percipio*, from *per*, and *cipio*, to take.] To have knowledge or receive impressions of external objects through the medium or instrumentality of the senses or bodily organs. — To take thoroughly, or comprehend by the mind; to have mental knowledge of; to understand; to discern; to distinguish; to feel; to be affected by.

Perceiver, *n.* One who perceives, feels, or observes.

Percentage, *n.* (*Com.*) The allowance, duty, or commission on a hundred.

Per'cept, *n.* Anything which is the subject of perception.

Perceptibility, *n.* The state or quality of being perceptible. — Perception; the power of perceiving.

Perceptible, *a.* [Fr.] That may be perceived; that may impress the bodily organs; that may come under the cognizance of the senses.

Perceptibly, *adv.* In a manner to be perceived.

Perception, (*-sep'shun*) *n.* Act of perceiving or of receiving a knowledge of external things by impressions on the senses; that act or process of the mind which makes known an external object, and is consequent upon sensation.

(*Psychol.*) That power or faculty of the mind by which we are conscious of external objects. As commonly used, it is not without ambiguity, denoting either the *perceiving faculty*, the *perceiving act*, or the *object perceived*. The last is the most important, and in order to get rid of ambiguity it is proposed to employ *percept* in this sense, leaving *perception* to signify both the faculty and the act, which it is rarely necessary to distinguish.

Perceptive, *a.* [Fr. *perceptif*.] Having the power or faculty of perceiving or noting with the senses; having reference or relation to the act or power of perception; employed in perception.

Perceptivity, *n.* Faculty of perception; quality of being perceptive.

Perch, *n.* [Lat. *perca*.] (*Zoöl.*) A genus of acanthopterygious fish, fam. *Percidae*. The American Yellow Perch, *Perca flavescens*, almost identical to *Perca flaviventris* of Europe, is one of the most common and beautiful of the fresh-water fishes of the U. States. It is 6 to 12 inches long; the upper part of the body is of a greenish-brown,

Fig. 2077.

AMERICAN YELLOW PERCH.

subsiding into golden below, with 6 to 8 dark traveste bands extending over the back; the pectorals, ventrals, and anal orange. To this genus belongs also the Black-Tail, *Perca cornua*. The perch usually spawns in the early part of the spring; it is extremely voracious; bites eagerly at the bait, and is fond of frequenting deep holes in rivers which flow with a gentle current. Its flesh is firm and delicate.

Perch, *n.* [Fr. *perche*; Sp. *pucha*; Lat. *pertica*.] A staff; a pole; a long rod. — A linear measure of $5\frac{1}{2}$ yards; — otherwise written *pole*. — In land measure, a square rod, or the fortieth part of an acre. — In solid measure, a mass of 16 cubic feet.

— A roost for fowls.

(*Arch.*) A small projecting beam, corbel, or bracket, near the altar of a church.

— *v. n.* (*imp.* and *pp.* *PERCHED*, (*percht*.) To sit on a perch; to roost, as a bird; to light or settle on a fixed body.

— *v. a.* To place on a fixed object or perch.

Perchance, *adv.* [per and chance.] By chance; perhaps; peradventure.

Perchers, *n. pl.* [From Lat. *pertica*, a rod.] A name for the order of birds INSESSORES, *q. v.*

Perchlorate, *n.* (*Chem.*) A combination of perchloric acid with a base.

Perchloric Acid, *n.* (*Chem.*) An acid formed by heating chlorate of potash in a tube until one-third of the oxygen contained in it is expelled. The mass assumes a pasty condition at this stage, and contains perchlorate of potash, which may be separated by taking advantage of its sparing solubility, by distilling the perchlorate with twice its weight of sulphuric acid, diluted with one-tenth of water. If the receiver is kept cold within, the first portions of the acid crystallize. It is a very stable acid, forming crystallizable deliquescent salts with the bases. The perchlorates are all decomposable by heat, with the evolution of oxygen, a chloride remaining behind.

Perch River, in New York, enters Black River from Jefferson co.

— A post-vill. of Jefferson co., abt. 175 m. N.W. of Albany.

Per'cidæ, *n. pl.* (*Zoöl.*) A family of acanthopterygious fishes, of which the *Perch*, *q. v.*, is the type.

Perception, *n.* Perception; state, quality, or act of being percipient.

Percipient, *a.* [Lat. *percipiens* — *percipio*.] Perceiving; possessing the faculty of perception; as, animals are percipient beings.

— *n.* One who possesses the faculty of perception.

Perclose, *n.* [O. Fr.] An inclosure; a railway; a screen, sometimes used to protect a tomb, or to separate a chapel from the main body of the church.

Per'cid, *a.* [From Gr. *perkē*, a perch, and *eidōs*, form.] (*Zoöl.*) Like a perch; having reference to the *PERCIDÆ*, *q. v.*

Per'colate, *v. a.* [Lat. *percōlo*, *percolatus* — *per*, and *cōlo*, to strain.] To strain through; to filter; to cause to pass through small interstices, as a liquor.

— *v. n.* To pass through by filtration; to strain through.

Percolation, *n.* [L. Lat.] A straining through or filtering; filtration; act of passing through small interstices, as liquor through a sieve, or porous paper, stone, &c.

Percolator, *n.* A filter.

Percursory, *a.* [From Lat. *percurrere*, *percursum*, to run through.] Cursory; running over hastily or desultorily.

Percuss, *v. a.* [Lat. *percurrere*, *percursum*, from *per*, through, and *currere*, to strike.] To collide with; to strike against in a violent manner. (*R.*)

Percussion, (*-kūsh'un*) *n.* [Fr.; Lat. *percussio*, from *percutio* — *per*, and *quatis*, to shake.] A striking against, so as to shake thoroughly or give a violent shock to; act of striking one body against another with some violence; a forcible stroke given by a moving body. — The shock produced by the collision of bodies; the impression one body makes on another by impinging or falling on it, or striking it; hence, the impression or effect of sound on the ear.

(*Med.*) The effect of striking or tapping upon the chest, abdomen, &c., in order to produce sounds by which the state of the subjacent parts may be ascertained. — See *STETHOSCOPE*.

Centre of percussion. See *CENTRE*.

P. bullet or ball. (*Mil.*) A bullet formed by inserting a small quantity of percussion powder in a copper receiver in the point of an ordinary rifle or musket bullet. — *P. cap*, a small copper containing fulminating powder, and used in the lock of a gun to explode the charge of gunpowder. — *P. gun*, a gun discharged by a *P. cap*. — *P. match*, a match igniting by means of *P. cap*. — *P. powder*, fulminating powder.

P. stop. (*Mus.*) A piano-forte stop in a melodeon, which renders the touch like that of the piano-forte.

Percussive, *a.* Producing percussion; striking against; as, *percussive* force or agency.

Percutient, (*-shent*) *a.* [From Lat. *percutere*.] That which strikes or possesses percussive power.

Percy, (*per'se*) the family name of a follower of William the Conqueror, from whom sprang the lords of Alnwick, in Northumberland. The members of this family best known to history are — WILLIAM DE PERCY, whose granddaughters were married to the Earl of Warwick, and to the brother-in-law of Henry I. After him a HENRY DE PERCY, reign of Edward I. A second HENRY was married to the Princess Mary of Lancaster, in the reign of Edward III., and it was his sons whom Richard II. created respectively Earl of Northumberland and Earl of Worcester. The latter was beheaded after the victory of Henry IV., near Shrewsbury, while the son of the former, HENRY PERCY, called "Hotspur," fell gallantly

in the battle; and his father, Northumberland, was killed in Yorkshire, 1408. The son of Hotspur was restored by Henry V. to the title of Earl of Northumberland, and was killed in the battle of St. Albans, 1455.

Per'ey Islands, a group off the E. coast of Australia, extending from Lat. $21^{\circ} 32'$ to $21^{\circ} 45'$ S., Lon. $150^{\circ} 18'$ E. The largest is 12 m. in circumference.

Perdic'cas, one of the generals of Alexander the Great, killed while aiming at the sovereignty after the death of Alexander, 322 B. C.

Perdido River, (*per-dree'do*), rises in Baldwin co., Mississippi, and forming the boundary line between that co. and Florida, flows S. into Perdido Bay.

Per'difoil, *n.* (*Bot.*) A tree or other plant which periodically sheds its leaves. Used in contradistinction to *evergreen*.

Perdi'sidæ, *n. pl.* (*Zoöl.*) See *PARTRIDGE*.

Perdition, (*-dish'un*) *n.* [Lat. *perditio*.] State of being wholly given up or over, or of being forlorn, abandoned, or lost; entire loss or ruin; utter destruction. — The utter loss of the soul, or of final happiness in a future state; future misery or eternal damnation.

Perditionable, (*-dish'un-a-bl*) *a.* That may be utterly ruined; deserving of perdition.

Perdu', **Perdue'**, *a.* [Fr. *perdu*, from *perdre*; Lat. *perdo*, to lose.] Abandoned; forlorn; engaged in or accustomed to dangerous enterprises.

— *n.* A soldier placed on a forlorn hope; one who is placed on the watch or in ambush.

— *adv.* In a situation or post of danger; close; in ambush or concealment.

Per'egrinate, *v. n.* [Lat. *peregrinatus*.] To travel from place to place, or from one country to another; to live in a foreign country.

Peregrination, *n.* [Lat. *peregrinatio*, from *per*, and *ager*, land.] A being or living abroad; a travelling in foreign parts; a journeying from one country to another; a wandering about.

Per'egrinator, *n.* [Lat.] A traveller over foreign countries; a wanderer.

Per'egrine Falcon, *n.* (*Zoöl.*) A species of long-tailed falcons, much used for sport in the middle ages. The changes which the young of the Peregrine Falcon, like that of most raptorial birds, undergoes, have caused much confusion as to the nomenclature of the genus. Thus the Stone Falcon (*Falco lithofalco*) forms only one phase of the development of the Peregrine Falcon.

Perejasslavl, **Pereiaslav'**, or **Pereslavl'**, a town of Russia, govt. of Poltava, 150 m. W.N.W. of Poltava; pop. 10,047.

Per'ekop, a town of S. Russia, govt. of Taurida, on the Isthmus of Perekop, which joins the Crimea with the mainland of European Russia; Lat. $46^{\circ} 8' 57''$ N., Lon. $33^{\circ} 42' 9''$ E.; pop. 4,000.

Per' Marquette, (*pair-mar-kett'*) in Michigan, a village and township of Mason co., abt. 56 m. N. by W. of Muskegon.

Per'emptorily, *adv.* In a peremptory manner; absolutely; positively; in a decisive manner; so as to preclude further discussion or debate.

Per'emptoriness, *n.* State or quality of being peremptory; positiveness; dogmatism; imperative or absolute decision.

Per'emptory, *a.* [Fr. *péremptoire*; Lat. *peremptorius*, from *per*, and *emo*, to buy over. In a manner to exclude discussion, debate, or expostulation; absolute; final; determinate; decisive; express; authoritative; as, a *per'emptory* command. — Positive or magisterial in opinion or judgment; dogmatical.

Per'emptory challenge. (*Law.*) A challenging of jurors without showing cause.

Per'ennial, *a.* [It. and Sp. *perenne*; Lat. *perennis* — *per*, and *annus*, year.] Lasting or continuing without cessation throughout the year; hence, perpetual; unceasing; never-failing; as, *perennial* fountains. — Continuing without intermission, as a fever.

— *n.* (*Bot.*) One of those plants whose roots remain alive more years than two, but whose stems flower and perish annually. Gardeners generally call them herbaceous plants. They differ from annuals and biennials, not only in the time of their duration, but also in this, that the two former perish as soon as they have flowered, the act of reproduction exhausting their vital energies. Notwithstanding this distinction, it is not at all times easy to say whether the plant is a perennial or not; as, for instance, in the American Aloe, *Agave Americana*. This plant is herbaceous, and lives for many years; but when it flowers it dies; so that in one respect it is annual, its whole life being regarded as only one season of growth; in another respect it is truly perennial. Such perennials are called by De Candolle *monocarpic*.

Per'ennially, *adv.* Continually; unceasingly.

Perennibranchiæ, *n. pl.* [Lat. *perennis*, perpetual, and *branchiæ*, gills.] (*Zoöl.*) A division of Batrachian reptiles including the species which preserve the external branchiæ or branchial apertures throughout life: as the Siren, Proteus, and Menopoma.

Per'ennuity, *n.* [Lat. *perennitas*.] The quality of being perennial; lasting continuance.

Peres'kia, *n.* (*Bot.*) A genus of plants, order *Cactaceæ*, distinguished by its fully developed leaves, and hard woody stems. The yellow fruit of *P. aculeata*, the Barbadoes Gooseberry, is used in the W. Indies for making preserves.

Per Fas et Nefas. [Lat.] By right or wrong; to accomplish by any means.

Per'fect, *a.* [Fr. *parfait*; Lat. *perfectus*, from *per*, and *facio*, to make.] Made or done wholly, entirely, or completely; finished; completed; carried through; brought to consummation. — Not defective; having all that is

requisite to its nature and kind; fully informed; completely skilled; manifesting perfection; without deficiency or blemish; as, a *perfect* likeness; a *perfect* figure, a *perfect* system. — Specifically, pure; blameless; immaculate; complete in moral excellence. — Sane; in full possession of one's mental faculties.

(Bot.) Having both stamens and pistils.

P. cadence. (Mus.) A complete harmonical close. — *P. chord*, a perfect consonance of sounds.

P. number. (Arith.) A number equivalent to the sum of all its divisors, as the number 6.

P. tense. (Gram.) That form of the verb marked in English by the auxiliary *have*, which designates an action finished at the time when we speak of it.

Perfect, *v. a.* To make or do wholly, thoroughly, or completely; to make complete; to accomplish; to consummate, to finish; to raise to the highest state, so as to leave nothing wanting; to give to anything all that is requisite to its nature and kind; to instruct fully; to make entirely skillful.

Perfector, *n.* One who makes perfect.

Perfectibility, *n.* An upholder of perfectibility.

Perfectibility, *n.* [Fr. *perfectibilité*.] The capability of becoming or being made perfect. The theory of the indefinite perfectibility of the human faculties constitutes the basis of many modern systems of philosophy.

Perfectible, *a.* [Fr.] Capable of becoming or being made perfect, or of arriving at the utmost perfection of the species.

Perfection, (-fel'shon.) *n.* [Fr.; Lat. *perfectio*.] State or condition of being perfect or complete, so that nothing is defective or wanting; perfectness; finished culture, skill, or moral excellence; as, *perfection* in an art, science, or system of morals or polity. — A quality, endowment, or acquirement completely excellent, or of great worth; an inherent or essential attribute of supreme or infinite excellence, or one perfect in its kind.

To *perfection*, perfectly; to the highest grade or degree of worth or excellence; as, he looked the character to *perfection*.

Perfectional, *a.* Belonging or having reference to perfection.

Perfectionate, *v. n.* To make perfect. (R.)

Perfectionation, *n.* The act of making perfect.

Perfectionism, *n.* The doctrinal theories of the Perfectionists.

Perfectionist, *n.* A believer in the theory of moral perfection attainable by persons in this life.

Perfectionment, *n.* Act of perfecting; state of being made perfect.

Perfective, *a.* Tending to perfect; calculated to render perfect or complete; conducive to a state of finished excellence.

"Actions suitable to and *perfective* of their natures." — Ray.

(Gram.) Denoting completed action; — used of some forms of the verb.

Perfectively, *adv.* In a perfective manner.

Perfectly, *adv.* In the highest degree of excellence; consummately; totally; completely; exactly; accurately; as, I *perfectly* understand you.

Perfectness, *n.* State or quality of being perfect; completeness; consummate excellence; perfection; the highest degree of goodness or holiness of which man is capable in this life; accurate or finished skill or acquirement.

Perficient, (-fish'i-ent.) *a.* Efficient. (R.)

n. [From Lat. *perficere*, to perform.] One who endows a charity.

Perfidious, *a.* [Fr. *perfidie*; Lat. *perfidus*.] Guilty of perfdy; breaking or violating good faith or vows; false to trust or confidence reposed; false; treacherous; faithless; as, a *perfidious* friend. — Proceeding from treachery, or consisting in breach of faith.

— Guilty of violated allegiance; traitorous; disloyal; as, a renegade *perfidious* to his country.

Perfidiously, *adv.* In a perfidious manner; traitorously; treacherously; by breach of faith or allegiance.

Perfidiousness, *n.* Perfdy; quality of being perfidious; treachery; faithlessness; infidelity; disloyalty; traitorousness.

Perfdy, *n.* [Fr. *perfidie*; Lat. *perfidia*; from *perfidus* — *per*, and *fides*, faith.] Act of breaking or violating faith, a promise, vow, or allegiance; violation of a trust reposed; treachery; disloyalty; faithlessness; perfidiousness.

Perfoliate, *a.* [Lat. *per*, through, and *folium*, a leaf.] (Bot.) When the bases of two opposite leaves are so united that the stem appears to pass through the substance of the leaf itself, as in Fig. 2078.

Perforate, *v. a.* [Lat. *perforo*, *perforatus* — *per*, and *foro*, to bore, to pierce.] To bore, pierce, or penetrate through; to puncture with a pointed instrument; to make a hole or holes through anything by boring or driving.

Perforate, **Perforated**, *a.* (Bot.) Pierced with holes, or having transparent dots which look like holes.

Perforation, *n.* [Fr.; L. Lat. *perforatio*.] Act of perforating, or of boring or piercing through. — A hole or aperture passing through any-

thing, or into the interior of a substance, whether natural or made by an instrument.

Perforative, *a.* That has power to perforate, bore, or puncture.

Perforator, *n.* [L. Lat.] An instrument that pierces or perforates; a borer; a drill.

Perforce, *adv.* [Per, and force.] By force or violence; by necessity; absolutely.

Perform, *v. a.* [Lat. *per*, and *formo*, to form.] To form thoroughly or completely; to complete; to execute; to accomplish; to carry through; to effect; to achieve; to do. — To execute; to discharge, as a duty; to fulfil, as an obligation; as, to *perform* a contract or covenant.

— *v. n.* To do; to act apart; to acquit one's self in any undertaking; particularly, to go through with a public part, as in a stage play, orchestral piece, &c.; as, he is an actor who *performs* in light comedy, she *performs* well on the harp.

Performable, *a.* That may be performed or done, executed, or fulfilled; practicable.

Performance, *n.* Act of performing, or condition of being done or performed; execution or completion of anything; achievement; as, the *performance* of a work or duty. — Thing done; production, work accomplished; act performed, especially an act of a studied or public character; composition; acting or exhibition of feats, &c.

"Few of our comic *performances* give good examples." Richardson.

Performer, *n.* One who performs anything, particularly in an art or accomplishment.

Perfumatory, *a.* Yielding perfume or odor.

Perfume, *n.* [Fr. *parfum*; Sp. *perfume*; Lat. *per*, and *fumus*, smoke, vapor.] A substance which affects agreeably the organs of smell by emitting a fragrant scent or odor. — The scent, odor, or volatile particles emitted from sweet-smelling substances; a pleasant scent or smell; fragrance; incense; aroma.

— *v. a.* [Fr. *parfumer*, from Lat. *per*, and *fumo*, to smoke, to fume.] To scent with perfume; to fill or impregnate with a fragrant or grateful odor.

"A bridegroom . . . perfumed like a milliner." — Shaks.

Perfumer, *n.* He who or that which perfumes. — One who vends perfumes; a seller of, or dealer in, fragrant oils and essences.

Perfumery, *n.* Perfumes in general. — Preparation of scents or perfumes.

Perfunctorily, *adv.* In a perfunctory manner; in a manner to show superficially; mechanically; carelessly; negligently; slovenly.

Perfunctory, (-fungl'to-ry.) *a.* [Low Lat. *perfunctorius* — Lat. *per*, and *fungor*, *functus*, to get rid of, to perform.] Done as a matter of routine; performed hurriedly, carelessly, or superficially; done only for the sake of getting rid of the duty; hence, slight; careless; negligent; slovenly.

Perfuncturate, *v. a.* To perform in a perfunctory or mechanical manner; to do carelessly or indifferently.

Perfuse, *v. a.* [Lat. *per*, through, and *fundere*, to pour.] To sprinkle or pour over; to overspread. (R.)

Perfusion, (-fash'on.) *n.* Act of perfusing, or of pouring or sprinkling over.

Perfusive, *a.* Calculated or adapted to spread, pour, or sprinkle.

Pergameneons, *a.* [Lat. *pergamena*.] Resembling parchment.

Pergamino, (-per-ga-mee'no.) a town of the Argentine Confederation, abt. 155 m. N.W. of Buenos Ayres.

Pergamus, (Anc. Geog.) An ancient city of Mysia, in Asia Minor, noted for the magnificence of its buildings, and as the place where parchment was first made, and tapestry, called by the Romans *aulæa*, first worked. After the battle of Issus it became the capital of a kingdom, and flourished for more than 150 years, till conquered by the Romans, 120 B. C. It was destroyed during the Turkish wars, but its extensive ruins are still visible, and have been explored with great success. See *P.*, by Grote (Berlin, 1880).

Pergola, **Per'gula**. [Ir. *pergola*; Lat. *pergula*.] (Arch.) A kind of gallery or balcony attaching to a house.

Pergolesi, GIOVANNI BATTISTA, a distinguished musical composer, was b. in the kingdom of Naples, early in the 18th century, and d. in 1737. Among his most celebrated works are, the *Stabat Mater*, *Olimpiade*, an opera, *Orfeo e Euridice*, and *Salve Regina*.

Perhaps, *adv.* [Lat. *per*, and Eng. *hap*.] By hap or chance; it may be; perchance; peradventure; possibly.

Peri, a prefix from the Gr. *peri*, around, and employed in many phrases derived from the Greek, and corresponding with *around*, *about*, *near*, *with*, &c.

Peri, *n.*; pl. PERIS. [Pers. *peri*, a fairy.] (Pers. Myth.) An imaginary being of the female sex, resembling a fairy, defined as the representative of a fallen angel, excluded from paradise till the allotted time of her penance be at an end.

Perianther, who is one of the seven reputed sages of Greece, was a tyrant of Corinth, who succeeded his father, Cypselus, B. C. 633, and died with the reputation of an able ruler, B. C. 563. He was a man of licentious manners, and, in the latter part of his reign, became a cruel ruler.

Perianth, PERIANTHIUM, *n.* [Gr. *peri*, around, and *anthos*, a flower.] (Bot.) A calyx and corolla, the limits of which are undefined, so that the parts cannot be satisfactorily distinguished from each other; as in many monocotyledonous plants, the Tulip for example.

Periblepsis, *n.* [Gr. *peri*, around, and *blepein*, to look.] (Med.) The look of wildness accompanying delirium.

Peribolos, *n.* [Gr. *peri*, around, and *ballein*, to throw.] (Arch.) A walled court around a temple.

Pericardiac, **Pericardial**, *a.* Pertaining or relating to the pericardium.

Pericardian, **Pericardic**, *a.* Having reference to the pericardium.

Pericarditis, *n.* (Med.) See HEART (DISEASES OF).

Pericardium, *n.* (Anat.) See HEART.

Pericarp, *n.* [Gr. *peri*, and *carpos*, fruit.] (Bot.) Fruit is divided into two distinct parts: the seed, and the pericarp or investing substance. The pericarp is composed of three parts or layers, one within the other: for example, the pericarp of the apple consists of an external layer or skin, *epicarp*; the internal layer, *endocarp*; and the fleshy substance, *sarcocarp*, lying between them. Thus, the outer skin is the epicarp; the pulpy substance, the *sarcocarp*; and the tough thick covering to the seeds, the *endocarp*. The same relation is found in *stone fruit* (Fig. 940), the shell of the nut being *endocarp*.

Pericarpial, **Pericarp'ic**, *a.* (Bot.) Pertaining to a pericarp.

Perichatium, (-kê'shî-um.) *n.* [Gr. *peri*, around, and *chaitê*, foliage.] (Bot.) The foliated involucre encircling the seta of mosses.

Periclase, *n.* [Gr. *peri*, around, and *klasis*, fracture.] (Min.) A native magnesia, with from 5 to 8 per cent. of protoxide of iron, found at Monte Somma, near Naples, in ejected masses of white limestone. It occurs in octahedrons and in grains of a dark-green color. The name has reference to the cleavages at the angles.

Pericles, the great Athenian statesman, was b. of a noble and wealthy family, and received a careful education from the most eminent teachers. He applied himself to the study of philosophy under the guidance of Anaxagoras, who had a most powerful influence on him, and remained one of his most intimate friends. To his other acquirements he added that of extraordinary eloquence, and thus prepared, he began to take part in public affairs about B. C. 469, and the popular party soon recognized him as their chief. He effected a great change in the constitution of the Areopagus, the stronghold of the aristocratic party, by which its authority was much limited, and Cimon, the head of that party, was immediately ostracized. — *P.* was great as a general, and he displayed extraordinary valor at the battle of Tanagra; he commanded the expedition against Sicily and Acarnania; recovered Delphi from the Spartans, and quelled the revolt of Eubœa. In B. C. 444 he became sole ruler of Athens, and the aim of his policy was to extend and strengthen her empire, and to make the people worthy of their position. Under his administration the navy was increased, commerce extended, general prosperity advanced, and Athens adorned with noble buildings. Phidias was the friend of *P.*, and under his direction the Parthenon, the Propylæa, the Odeon, and the other temples and monuments, the admiration of all time, were erected. In B. C. 440, *P.* established a democratic constitution in Samos, and a counter-revolution taking place, he besieged the town, and after nine months reduced it, a success which procured him extraordinary honors on his return. His personal enemies, hopeless of success in any direct attack on him, aimed their blows at his friends; Phidias was imprisoned, Anaxagoras banished, and Aspasia was only saved by the most earnest intercession of her husband. *P.* directed Athens during the first two years of the Peloponnesian war, in the second year of which the plague broke out at Athens, and the popular discontent vented itself in the prosecution of the great ruler. He was fined, but soon regained his influence. The plague carried off many of his friends and relatives, and, last of all, his favorite son, Paralus. This loss broke his heart, and after a lingering sickness he d., B. C. 429. He left a son by Aspasia, who took his father's name, and was legitimated by the people.

Fig. 2079. — PERICLES.
(From an ancient bust.)

Pericope, (-rik'o-pe.) *n.* [Lat.; from Gr. *peri*, around, and *koptein*, to cut.] An extract from a book or published work; particularly, an excerpt from the Gospels or Epistles, serving as a subject for religious comment and discourse.

Perieranium, *n.* [Fr. *perierâne*; Gr. *peri*, and *kranion*, the skull.] (Anat.) The tough fibrous membrane that covers the external surface of the bones of the skull.

Peridio'la, *n.* [Gr. *perideo*, I bind round.] (Bot.) The membrane by which the sporules of algae are immediately covered.

Peridimm, *n.* (Bot.) A term used for the outer coat, or coats, immediately enveloping the sporules in some fungi.

Perieciau, (-ê'shan.) *n.* [From Gr. *peri*, around, and *oikos*, a dwelling.] A dweller on the opposite side of the globe, in the same parallel of latitude.

Periergy, *n.* [Gr. *peri*, over, and *ergon*, work.] (Rhet.) An inflated or bombastic style.

Perigean, *a.* Having reference to the perigee.

Perigean tides, those spring tides happening soon after the moon passes her perigee.

Fig. 2078.
BAPTISIA PERFOLIATA.

Per'igee, Perige'um, n. [Fr. *périgée*; Gr. *peri*, about, and *gē*, the earth.] (*Astron.*) That point of the moon's orbit which is nearest to the earth. Anciently the term *perigee* was applied to the orbits of the sun and planets, as well as the moon, because they were supposed to circulate round the earth. Since the true centre of motion has been discovered, the term *perihelion* is used to denote the corresponding points.

Per'igone, Perigo'neum, n. (*Bot.*) Same as *PERIANTH, q. v.*

Per'igord Pie, n. (*Cookery.*) A French pie made of fattened geese livers and truffles, esteemed a delicacy by epicures; a *paté de foie gras*.

Per'igueux, a town of France, cap. of the dept. of Dordogne, on the Ille, 68 m. E.N.E. of Bordeaux. It has an old cathedral in the Byzantine style. Manuf. Paper, woollen cloth, hosiery, cutlery, and nails. Pop. 16,422.

Peri'gynium, n. [Gr. *peri*, and *gynē*, a female.] (*Bot.*) The urceolate body formed in the genus *Carex* by two bracts, which become confluent at their edges, and inclose the pistil, leaving a passage for the stigmas at their apex. The term is also used occasionally to denote the organ commonly called the disc.

Peri'gynous, a. (*Bot.*) A term applied to stamens or petals which originate from the sides of a calyx.

Perile'ion, n. [Gr. *peri*, and *hēlios*, the sun.] (*Astron.*) See *APSID*.

Peril, n. [Fr.; It. *periglio*; Lat. *periculum*.] Imminent risk or danger; immediate hazard or jeopardy; particular exposure of person or property to injury, loss, or destruction, from any cause whatever.

At one's *peril*, with hazard or danger to one; in jeopardy.

—*v. a.* To hazard; to risk; to expose to danger or destruction.

Per'illa, n. (*Bot.*) A genus of plants, order *Lamiaceæ*, chiefly interesting from its containing a species, *P. nankinensis*, with deep purple leaves, which is much used in the planting of modern summer flower gardens, leaf-color being largely employed to produce pictorial effects.

Perilous, a. [Fr. *perilleux*.] Dangerous; hazardous; full of risk; as, a *perilous* enterprise, a *perilous* position. —Portentous; parlous. (*R.*)

Perilously, adv. Dangerously; with hazard or risk.

Perilousness, n. State or quality of being perilous or hazardous; danger; jeopardy.

Perilymph, (-līm'f,) n. [Gr. *peri*, around, and Lat. *lymphā*, water.] (*Anat.*) A transparent, slightly viscid fluid, in the cavities of the internal ear.

Perim, ISLE OF. See *BABELMANDEB*.

Perimeter, n. [Fr. *perimètre*; Gr. *peri*, around, about, and *metron*, measure.] (*Geom.*) The boundary of any figure, being the sum of all the sides in right-lined figures, the same as circumference or periphery in those of a circular form.

Perinæum, (-nē'ūm,) n. [Gr. *perinaion*.] (*Anat.*) The space between the pubes and the fundament, so named from the medial line or seam that exists there.

Perine'al, a. Pertaining or relating to the perinæum.

Per'iod, n. [Fr. *période*; Lat. *periodus*; Gr. *periōdos* — *peri*, and *hodos*, way, path.] A circuit; a revolution; the time which is taken up by a planet or comet in making its revolution round the sun; any series of years or of days in which a revolution is completed, and the same course is to recommence.

—Any specified portion of time; a revolution or series of years by which time is measured; a cycle.

"We style a lesser space a cycle, and a greater by the name of *period*." — *Holder*.

—Generally, an interval of time stated; a time; an age; an epoch; an era; an indefinite portion of any continued state, existence, or series of events. — State at which anything terminates; time at which anything ends; conclusion; limit; end.

"Our world . . . from chaos to the last *period*." — *Burnet*.

—Length, or usual length of duration.

"To make plants more lasting than their ordinary *period*." — *Bacon*.

(*Rhet.*) A complete sentence from one full stop to another; hence, clause; phrase.

(*Math.*) One of a congeries of figures or terms, marked by points or commas in regular order after a certain number, as in numeration, in the cube and square roots, and in circulating decimals.

(*Print.*) A full stop; the point that marks the end of a complete sentence, thus (.).

(*Med.*) One of the different phases or revolutions of a disease, or one of the epochs which are distinguished in the course of it. Three periods are usually enumerated: — 1. The augmentation, increase, or progress. 2. The acme, or height. 3. The decline.

(*Mu.*) A complete musical sentence.

Period'ic, Period'ical, a. [Fr. *périodique*.] Performed in a circuit, or in a regular revolution in a certain time, or in a series of successive cycles; as, the *periodical* motion of the moon round the earth. — Happening by revolution, at a fixed time; occurring or returning regularly in a certain period of time; performing some action at a stated time; acting, appearing, or recurring at stated intervals; as, a *periodical* change of government.

(*Rhet.*) Belonging, or having reference to, a period; forming a complete sentence.

Period'ical, n. A magazine or serial publication which appears at regular intervals.

Period'icalist, n. The publisher of a periodical.

Period'ically, adv. At stated periods; in a periodical manner.

Period'icalness, n. Periodicity; state or condition of being periodical.

Periodicity, (-is'i-tē,) n. [Fr. *periodicité*.] The disposition of certain phenomena to recur at stated times or periods; any change or event that occurs at stated times.

(*Med.*) The regularity with which the stages of an acute or intermittent fever return is called the *periodicity* of the disease.

Periœ'ci, n. pl. [From Gr. *peri*, and *oikeo*, I dwell.] (*Geog.*) Those inhabitants of the globe who live under the same parallel of latitude, but on opposite meridians; that is, in places which have the same latitude, but differ in longitude by 180°.

Perios'teum, n. [Gr. *peri*, around, and *osteon*, a bone.] (*Anat.*) A tough fibrous membrane that covers the external parts of every bone, and is the means by which the osseous substance it covers receives its nourishment and vitality of blood and nerve. Every bone in the body is supplied with this close-fitting vesture, only that on the bone of the skull is called *Pericranium*.

Periostit'is, n. (*Med.*) Inflammation of the periosteum.

Perios'tracum, n. [Gr. *peri*, around, and *ostrakon*, a shell.] (*Zoöl.*) The layer of animal substance, or cuticle, which covers the outer surface of shells.

Peripatetic, a. [Gr. *peripatētikos*, from *peri*, and *pateō*, to walk.] A term applied to the philosophy of Aristotle, either because it was his custom to teach while walking, or because the place where he taught was a walk planted with trees. See *ARISTOTELIANISM*. — Hence, given to walking about; as, a *peripatetic* individual.

—*n.* A follower of Aristotle. — Hence, in a ludicrous sense, one who is obliged to go on foot, or cannot afford to ride.

Peripatet'icism, n. [Fr. *péripatétisme*.] The notions or philosophical system of Aristotle and his followers. See *ARISTOTELIANISM*.

Peripet'alous, a. [Gr. *peri*, around, and *petalon*, leaf.] (*Bot.*) Situated about the corolla; — applied to nectaries.

Peripheral, Peripheric, Peripherical, (-rif'er-al,) a. [Fr. *peripherique*.] Belonging to, or constituting, a periphery.

—External; around the exterior of an organ; as, the *peripheral* elements of a vertebra.

(*Bot.*) Applied to the position of the embryo when it is external, or nearly so, and curved circularly around the albumen, as in Goosefoot, Chickweed, and Mirabilis.

Periphery, (-rif'er-y,) n. [Fr. *périphérie*; Gr. *peri*, and *phērō*, to carry.] (*Geom.*) The line that is carried round a circular body; the circumference of a circle, ellipse, or other curvilinear figure.

Periphrase, Periphrasis, (-frāz, frā'sis,) n. [Gr. *periphrasis* — *peri*, and *phrazō*, to speak.] (*Rhet.*) Circumlocution; the use of more words than are necessary to express the idea.

Periphrase, v. a. To express in a circumlocutory manner.

Periphras'tic, Periphras'tical, a. [Gr. *periphrastikos*.] Containing periphrase; circumlocutory; expressing or conveyed in more words than are necessary; delivering the sense of one word in many.

Periphras'tically, adv. With circumlocution or verbiage; in a periphrastical manner.

Periplo'ca, n. [Gr. *peri*, around, and *ploke*, a binding or twining.] (*Bot.*) A gen. of plants, ord. *Asclepiadaceæ*. The *P. græca* (see Fig. 208), naturalized in the State of New York, and cultivated in gardens, is a climbing shrub, 10–15 ft. long, giving in Aug. dark-purple flowers, in long, branching, axillary peduncles. The remarkable color, and rich, velvety appearance of the flowers, the elegant form of the leaves, and the facility with which the plant can be made to cover an extensive space, render it useful for arbors, &c.; but the odor of the flowers is considered unwholesome.

Periplus, n. [Lat.; Gr. *peri*, round, and *plous*, a voyage.] Circumnavigation. (*R.*)

Peripneumon'ic, n. [Gr. *peripneumonikos*.] (*Med.*) Belonging, or relating to, peripneumony.

Peripneum'ony, Peripneumonia, n. [Gr. *peri*, around, about, and *pneumōn*, a lung.] (*Med.*) An inflammation of the lungs.

Peripolyg'onal, a. [Gr. *peri*, around, about, *polys*, many, and *gōnia*, angle.] (*Crystallog.*) Many-angled.

Perip'teral, a. Presenting a range of columns all round; — said of a building.

Perip'tere, n. (*Arch.*) Same as *PERIPTERY, q. v.*

Perip'terous, a. [Gr. *peri*, around, and *pteron*, wing.] Feathered all round.

Perip'tery, Perip'tere, n. [Gr. *peripteros*.] (*Arch.*) A colonnade all round the exterior of a temple or other edifice.

Periscian, (-rish'i-an,) n. [Gr. *periskioi* — *peri*, and *skia*, a shadow.] (*Geog.*) An inhabitant of a frigid zone, or within a polar circle, whose shadow moves all round in the twenty-four hours, and in the course of the day falls in every point of the compass.

—*a.* Having the shadow making a revolution.

Peris'cii, n. pl. Same as *periscians*. See *PERISCIAN*.

Periscope, a. [Gr. *peri*, around, and *skopein*, to view.] A view on all sides; a general view.

Periscop'ic, a. [Fr. *périscopique*.] Viewing on all sides; — a term applied to spectacles having concavo-convex glasses, for the purpose of increasing the distinctness of objects when viewed obliquely.

Perish, v. n. [Fr. *périr*; ppr. *périssant*; Lat. *pereo* — *per*, and *eo*.] To die; to lose life in any manner; to become defunct. — To be destroyed; to come to nothing; to fail entirely, or to be extirpated; to be lost irrevocably or eternally; to be lost or ruined. — To lose vital power; to wither and decay gradually.

"Thy leaf has *perished* in the green." — *Tennyson*.

—*v. a.* To destroy; to cause to decay or pass away.

Perishabil'ity, n. Perishableness; liability to decay and destruction.

Perishable, a. Liable to perish or pass away; subject to decay and destruction; susceptible of speedy death.

Perishableness, n. State of being perishable; liability to decay; perishability.

Perishably, adv. In a perishing or dying manner.

Perisperm, n. [Gr. *peri*, round, and *sperma*, seed.] (*Bot.*) The albumen of a seed.

Perispheric, Perispherical, (-sfēr'ik,) a. Ball-shaped; globular.

Perissological, (-lōj-) a. Exuberant in words; verbose.

Perissol'ogy, n. [Gr. *perissos*, superfluous, and *logos*, discourse.] Redundancy of words; verbosity; superfluous talk. (*R.*)

Peristalt'ic, a. [Gr. *peri*, and *stallein*, to place in order.] (*Anat.*) A term applied to that peculiar vermicular motion of the intestines, by means of which their contents are carried onwards. It is a series of contractions and relaxings, the different parts of the bowels rising and falling alternately, so as to resemble the motions of a worm or snake.

Peristome, Peristomium, n. [Gr. *peri*, and *stoma*, a mouth.] (*Bot.*) The fringe of teeth seen round the edge of the cup in the capsule of a Moss, when the lid is broken off. The teeth of which it is composed are various in number and character.

Peristrefic, (-strēf'ik,) a. [Gr. *peri*, around, and *strephōin*, to turn.] Undergoing rotation; revolving; turning round.

Peristyle, n. [Gr. *peristylon* — *peri*, and *stylos*, a column.] (*Arch.*) An open court within a house, having a colonnade around it, by which the principal apartments were reached (see Fig. 231); — the exact reverse of the *periptery*, though the same in character — the one being inside, the other outside a building.

Perisystole, n. [Fr., from Gr. *peri*, around, and *systolē*, a contraction.] (*Med.*) The time of rest between the two actions of the heart, or between its contraction (*systole*) and its dilatation (*diastole*); the momentary pause that occurs between these two actions of the heart.

Perithecium, (-thē-si-ūm,) n. [Gr. *peri*, around, and *thēkē*, a box.] (*Bot.*) An organ in certain fungi and lichens, surrounding and enveloping the masses of fructification.

Perit'omous, a. [From Gr. *peri*, around, and *temnein*, to cut.] (*Min.*) Cleaving in more directions than one parallel to the axis.

Peritone'al, a. Belonging or relating to the peritoneum.

Peritone'um, n. [Lat., from Gr. *peri*, around, and *temnein*, to stretch.] (*Anat.*) The *P.* is one of the most difficult parts in the human anatomy for a teacher to explain intelligibly to his pupils, and the last that the student is able thoroughly to understand. Yet, as it is a very important structure, and a knowledge of its function and action explains many doubtful circumstances, we will endeavor to give our readers an idea of what the *P.* is like, and how it performs its duties. From birth till death, the bowels are constantly moving and gliding over each other, in a worm-like perpetual motion, called *peristaltic motion*. It will be self-evident to every comprehension, that this day and night *friction* of such delicate textures as those composing the integuments would, in the seventy years of man's life, wear out, or at least in time most seriously injure them. To prevent this friction, nature has provided the *P.*, an immense slant-bag, like a man's closed night-cap. The *inside* — that portion out of sight — presents, when cut open, a smooth, glairy surface, studded with innumerable vessels, always pouring out a thin, smooth fluid, like the liquid white of an egg, allowing the two sides, when rubbed together, to glide over each other, as if oiled, without check or the slightest friction. The *outside* of this peritoneal night-cap is rough and granulated, not unlike the uneven texture of the actual article. The peculiarity of the inner and outer sides of this immense bag lies in this, that the surface of the first is close, smooth, moist, and shiny, and, however firmly pressed, can never grow together, or keep long in contact; while that of the other is rough, dry, and *adheres* firmly to all with which it comes in contact. This external side, then, adheres to the muscles of the abdomen, and to every portion of the intestines, but in such a manner that between every convolution, or twist of the bowels, a fold of *P.* accompanies it, so that between the bowel above or below there is always the two glairy sides rubbing against each other, and allowing the intestines to glide about without let or hindrance, the bowels being always on the *outside* of the bag, but always gliding over the *two inner* sides. The *P.* is a serous membrane, and, in the same way as it covers the bowels, lines and invests every organ in the abdominal and pelvic cavities.

Peritonit'is, n. (*Med.*) Inflammation of the peritoneum is exceedingly painful and dangerous, from its extent and connection with important organs. *P.* may exist either as an acute or chronic disease. In the former there is usually great pain and tenderness of the abdomen, accompanied with fever, and a frequent, small, and hard pulse. Sometimes, at first, the pain is confined to one spot, but it generally soon extends over the whole of the abdomen. It is very severe, and much increased by any motion, even coughing, sneezing, or drawing a long breath. Even the weight of the bed-clothes is sometimes unbearable. It is acute and cutting, and sometimes occurs in paroxysms; and the patient usually lies on his back with his knees drawn up. The bowels are usually constipated, but sometimes the reverse; and commonly there are present nausea, vomiting, and hic-cough. Its causes are various, as by cold, mechanical

injuries of the peritoneum, the development of tumors, &c. Women in childbed are peculiarly liable to it. After the disease has continued for a certain time, it is attended with tension and swelling of the belly; and if not checked, it usually terminates in from five to ten days. The appropriate treatment, when the state of the patient admits of it, is copious general bleedings, followed by the application of leeches to the abdomen, together with warm fomentations; frequently the latter is all that the state of the patient admits of. As internal remedies, most reliance is usually placed upon mercury and opium. After a time, *P.* sometimes assumes a chronic form. Here the symptoms are less marked. The pain is slight, or only discoverable on pressure, and the fever low; but the skin is hot and dry, the tongue foul, and appetite impaired. The treatment is local bleedings, with blisters and other counter-irritants applied over the abdomen. A nourishing, but unstimulating diet, and attention to the state of the bowels, are likewise necessary; and some recommend iodine, either taken internally, or applied as ointment to the part.

Peritrochium, *n.* [N.Lat., from Gr. *peri*, around, and *trochos*, a wheel.] (*Mech.*) A wheel or circle concentric with the base of a cylinder, and movable, together with it, about an axis; the axis, with the wheel and levers fixed in it, to move it, constitute that mechanical power called *axis in peritrochio*.

Peritrop'al, *a.* [Fr. *péritrope*; Gr. *peri*, around, and *trepein*, to turn.] Revolving; rotatory; circuitous.

(*Bot.*) With the axis of the seed vertical to the axis of the pericarp to which it belongs.

Perivisceral, *a.* [Gr. *peri*, and Lat. *viscera*, the bowels.] Situate about the viscera; as the *perivisceral* cavity.

Per'wig, *n.* [Fr. *perruque*, probably from Gr. *pur-richos*, for *purros*, red, from *pur*, fire, the ancients having been partial to red or auburn hair.] A small wig; a peruke; a scratch; a kind of head-covering, formed by an intermixture of false hair, worn by men, either for ornament or to hide baldness of the cranium.

—*v. a.* To dress with false hair; to sport a periwig.

"Discord periwig'd with snakes."—*Swift*.

Per'iwinkle, *n.* [Fr. *periwèche*.] (*Bot.*) See VINCA.

—[A.S. *wincle*, a shell-fish.] (*Zoöl.*) The common name of the family *Litorinidæ*, containing Gasteropods which have the shell spiral, turritated, or depressed, the aperture rounded, and the operculum horny. They inhabit the sea near the shore, and feed on algae. The living species are more than 300, and the fossil more than 200.

Fig. 2080.—PERIWINKLE. (*Litorina palliata*.)

Perjure, (*per'jūr*), *v. a.* [Lat. *per jūrō*—*per*, and *juro*, to swear.] To forswear; to swear falsely; wilfully to make a false oath when administered by lawful authority, or in a court of justice;—used with a reciprocal pronoun; as, he *perjured himself*.—To deceive by false oaths or insincere protestation.

Perjured, *a.* Guilty of perjury; having or being sworn falsely; as, a *perjured* witness.

Perjurer, *n.* One who wilfully takes a false oath lawfully administered.

Per'jurious, **Per'jurous**, *a.* [Lat. *perjuriosus*.] Guilty of perjury; involving perjury.

Perjury, *n.* [Lat. *perjuriam*.] (*Law.*) The taking of a wilful false oath or affirmation, by a witness lawfully required to depose the truth in a matter of some consequence to the point in question. A false oath, therefore, taken before no court, or before a court incompetent to try the issue in question, does not constitute the offence of perjury at common law. But many statutes, passed by the general government or the several States on the matter, provide that a false oath or declaration made on some specified occasions, or for some particular purposes, shall be considered to be perjury, and punishable accordingly. Perjury is a misdemeanor at common law, and by several statutes punishable by fine and imprisonment, and by penal servitude for a term not exceeding seven years.

Perk, *a.* [W. *perc*.] Pert; smart; trim; vain; brisk; airy; as, "*perk* as a peacock."—*Spenser*.

—*v. n.* [W. *perca*.] To hold up the head with an assumption of briskness or smartness.

—*v. a.* To dress up stylishly; to prank; to make trim, smart, or modish.

Per'kin, *n.* Ciderkin; a kind of weak cider.

Per'kins, JACOB, an American inventor, b. at Newburyport, Mass., in 1766. He early became distinguished for his ingenuity, and when 21 years of age, he was employed by the commonwealth of this State to make new dies for copper coinage. He next became noted for his improvements in the engraving of bank notes, and, in 1818, went to England with the expectation of obtaining a contract for supplying the Bank of England with plates. Failing in this, he, however, procured a contract for serving the Bank of Ireland, and carried on business in London for a number of years. Becoming interested in the subject of steam artillery, *P.* constructed a gun in which steam generated at an enormous pressure, operating as the propelling power instead of gunpowder. His invention was satisfactorily tested in presence of the Duke of Wellington and a number of artillery officers, but was finally condemned as being inapplicable to modern warfare. D. in London, 1849.

Per'kins, in *Maine*, a township of Sagadahoc county.

Per'kins, in *Ohio*, a twp. of Erie co.

Per'kins' Grove, in *Illinois*, a village of Bureau co., abt. 68 m. N.N.E. of Peoria.

Perkinsville, in *Indiana*, a post-village of Madison co., abt. 10 m. W.N.W. of Anderson.

Perki'omen, in *Pennsylvania*, a creek flowing into the Schuylkill River, abt. 7 m. above Norristown.—A township of Montgomery co.

Perk'y, *a.* Perk; jaunty; spruce; stylish; trim.

Perlaccous, (*-lā'shus*), *a.* Pearly; resembling pearl.

Perlite, *n.* (*Min.*) Same as PEARL-STONE, *q. v.*

Perlustration, *n.* [Lat. *perlustrare*.] The act of viewing on all sides.

Perm, a govt. of Russia, situated chiefly in European, but partly in Asiatic Russia, having W. the govt. of Viatka, and E. that of Tobolsk; Lat. between 55° 40' and 62° N., Lon. 53° 10' and 65° E. Area. Estimated at 130,000 sq. m. It is traversed by the Ural Mountains, and is more than half covered with dense forests. The soil is generally unfertile, and the climate very severe. *Min.* Gold, silver, copper, iron, and salt; the mines giving employment to over 100,000 workmen. *Cap.* Perm. *Pop.* 2,138,548.

PERM, cap. of the above government, on the Kama, 240 m. E.S.E. of Viatka; *pop.* 14,500.

Permanence, **Permanency**, *n.* [Fr. *permanence*; It. *permanenza*.] State of being permanent; continuance in the same state or condition, or without a change that destroys the form or nature of a thing; duration; fixedness; continuance in the same place or atrest.

Permanent, *a.* [Fr.; Lat. *permanens*, from *permaneo*—*per*, and *maneo*, to stay, remain, last.] Lasting, holding out, or continuing to the end; durable; not decaying; of long continuance; remaining in the same state, or without any change that destroys the form and nature of the thing.

P. way, the road-bed and superstructure of a line of railroad;—so called in England, as being the finished road, in distinction from the contractor's temporary way.

Permanently, *adv.* With long continuance; durably; in a fixed state or place.

Permeability, *n.* [Fr. *permeabilité*.] Quality or state of being permeable.

Permanganate, *n.* See PERMANGANIC.

Permanganic Acid, *n.* (*Chem.*) A solution of manganate of potash largely diluted with water. It gradually changes from green to violet, from the manganic acid passing to a higher state of oxidation, and permanganate of potash is formed. It is, however, best prepared by mixing 4 parts of black oxide of manganese with 3½ parts of chlorate of potash; to this mixture are added 5 parts of hydrate of potash dissolved in a small quantity of water, and the whole is heated to dull redness for an hour. When cold, the permanganate of potash may be separated by treating the excess with a large quantity of water and crystallizing. It crystallizes in fine dark-purple prisms, soluble in 16 parts of water, and forming a magnificent crimson solution. Permanganate of potash has lately received a most important application in the hands of Mr. Condy, of Battersea, as a deodorizing and disinfecting agent. From the experiments of this gentleman, it seems to contain oxygen in the ozonic form, which is immediately liberated on the approach of organic matter in the process of decomposition. *Form.* MnO₇.

Permeable, *a.* [Fr.; Lat. *permeabilis*, from *permeo*.] That may be passed through without rupture or displacement of its parts, as solid matter.

Permeably, *adv.* In a permeable manner; penetrably.

Permeate, *v. a.* [Lat. *permeo*, *permeatus*, from *per*, through, and *meo*, to go.] To pass through, as the pores or interstices of a body; to penetrate and pass through, as a substance, without rupture or displacement of its parts;—applied to fluids particularly.

Permeation, *n.* Act of permeating.

Permian Period, *n.* (*Geol.*) The name given to the closing era of the Carboniferous age (see Fig. 1142), which was a time of decline for Palæozoic life, and of transition towards a new phase of geological history. In the U. S., the *P.* rocks are confined to the interior continental basin, and occurs in the portion of it W. of the Mississippi, especially in Kansas. The rocks are limestones, sandstones, red, greenish, and gray marls or shales, gypsum beds, and conglomerates, among which the limestones in some regions predominate. The *P. P.* was so called by Murchison, because he found them largely developed in that portion of Russia which composed the ancient kingdom of Perm, of which the actual govt. of Perm forms a part.

Permissibility, *n.* The quality of being permissible.

Permissible, *a.* That may be permitted or allowed.

Permissibly, *adv.* In the way of permission; by permission.

Permission, *n.* [Fr.; Lat. *permissio*.] Act of permitting; allowance; leave, license, or liberty granted.

Permissive, *a.* That permits; granting permission or liberty; allowing.—Granted; suffered without hindrance.

Permissively, *adv.* By allowance; without prohibition or hindrance.

Permit, *v. a.* [Fr. *permettre*; Lat. *permitto*, from *per*, through, and *mitto*, to send.] To allow; to grant; to suffer; to concede; to give leave or liberty to by express consent; to give consent to by silence or by not prohibiting.

—To give in charge; to commit. (*R.*)

—*n.* (*Law.*) A written license or permission from an officer of the customs to transport goods from one place to another, showing the duty on them to have been paid.—Leave; permission.

Permit'ance, *n.* Permission. (*R.*)

Permit'tee, *n.* A person to whom a permit or permission is granted.

Permit'ter, *n.* He who permits.

Permixtion, (*per-miks'tyun*), *n.* The act of mixing; the state or quality of being mixed.

Permut'able, *a.* That may be changed one for another; exchangeable. (*R.*)

Permutableness, *n.* State or quality of being changed or permutable. (*R.*)

Permut'ably, *adv.* By interchange.

Permuta'tion, *n.* [Fr.; Lat. *permutatio*, from *per*, through, and *mutō*, to change.] Exchange of one thing for another; barter; the exchange of one benefice for another.

(*Algebra.*) The name given to the different orders which can be formed out of any number of things, with regard to position, when all are taken at once. It is based upon the following formula:—Since the number of variations of *m* things taken *r* together—

$$m(m-1)(m-2) \&c. (m-r+1);$$

and as in permutation, when the things are taken all together, $m=r$ ∴ the permutation of *m* things will equal the numbers multiplied into one another; or,—

$$P=m(m-1)(m-2) \dots\dots 3.2.1.$$

For instance, if we want to find the different number of changes which may be rung upon seven bells, taken all together, we multiply the order of bells into one another, and the changes will be equal to—

$$1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 = 5040.$$

Permute, *v. a.* [Lat. *permuto*.] To exchange.

Permut'er, *n.* One who exchanges. (*R.*)

Pern, *n.* (*Zoöl.*) The honey-buzzard.

Perna'goa, a town of Brazil, abt. 260 m. S.W. of Oeiras; *pop.* 5,000.

Pernambuco, an E. prov. of Brazil, bordering on the Atlantic Ocean, and lying chiefly between Lat. 7° and 14° 35' S., and Lon. 34° 50' and 47° 20' W.; area, 80,082 sq. m. *Rivers.* Capibaribe, Ipojuca, and Unma rivers. *Surface*, elevated, and traversed by several mountain ranges; *soil*, generally fertile, producing large quantities of sugar and cotton. *Expls.* Sugar, cotton, timber, dye-woods, hides, drugs, gold, and gems. *Chief towns.* Pernambuco (the capital), Saint Antonio, and Formosa. *Pop.* 1,380,000.

—A city of Brazil, cap. of the above prov., on the Atlantic Ocean; Lat. 8° 3' 6" N., Lon. 34° 51' 7" W. (See Fig. 411.) Properly speaking, *P.* consists of the towns of Olinda (the former capital) and Recife, the latter of which is in turn composed of 3 small towns or villages—San Pedro Gonçalves, São Sacramento, and Boa Vista. This irregular collection of towns are situated on and near the rivers Biberibe and Cassibaribe. The harbor is sheltered by a reef of rocks and defended by 4 strong forts. *P.* has an extensive trade (chiefly European) in cotton, sugar, and dye-wood. *Pop.* 30,000.

Pernambuco-wood, *n.* (*Bot.*) The wood of *Casalpinia echinata*. See CESALPINIA.

Per'nancy, *n.* [O. Fr. *perner*, from *parner*, to take.] (*Law.*) A taking or receiving, as of rents.

Per'nau, a fortified seaport-town of Russia, govt. of Livonia, at the entrance of the Pernau, in the Gulf of Riga, 99 m. N.N.E. of Riga; *pop.* 7,000.

Per'nel, *n.* (*Bot.*) Same as PIMPERNEL.

Pernicious, (*-nish'us*), *a.* [Fr. *pernicieux*; Lat. *per-niciosus*—*per*, and *neco*, to kill, to destroy.] Producing great injury or mischief; destructive; ruinous; deadly; noxious; tending to injure or destroy.

Perniciously, *adv.* Destructively; with ruinous tendency or effects.

Perniciousness, *n.* Quality of being pernicious or very injurious, mischievous, or destructive.

Per'nio, *n.* [Lat.] (*Med.*) A chilblain.

Per'nis, *n.* (*Zoöl.*) A genus of birds, family *Falconidæ*, including the Honey-buzzards, characterized by having the space between the eye and the bill covered with small, scale-like feathers.

Pernoct'ian, *n.* A person who watches all night.

Pernoctation, *n.* [Lat. *pernoctatio*, from *per*, through, and *nox*, *noctis*, night.] The act of watching or tarrying through the night.

Peron'ate, *a.* (*Bot.*) Covered with a woolly substance ending in a sort of meal.

Per'one, *n.* [Gr. *pérone*; Fr. *péroné*.] (*Anat.*) The fibula; the long, small bone, situated at the outer part of the leg.

Perone'al, *a.* (*Anat.*) Belonging or relating to the fibula; as, the *peroneal* muscles.

Peronne, (*pa-roun'*), a fortified town of France, dept. of Somme, on the river Somme, 21 m. S.W. of Cambrai; *pop.* 5,000.

Perora'tion, *n.* [Fr. *péroration*; Lat. *peroratio*, from *per*, and *oratio*.] (*Rhet.*) The concluding part of a speech or an oration, in which the speaker enforces the principal points of his discourse, and brings it to a conclusion.

Pe'rot, in *Louisiana*, a small bayou connecting Lake Washa with Little Lake.

Pe'rote, a town of Mexico, abt. 88 m. W.N.W. of Vera Cruz; *pop.* 3,000.

Perows'kite, *n.* (*Min.*) A titanate of lime, found in cubes of an iron-black color in chlorite slate in the Ural Mountains.

Perox'ide, *n.* (*Chem.*) The highest degree of oxidization of which a metal or other substance is susceptible without becoming an acid.

Perpen'dicle, *n.* [Lat. *perpendicularum*.] A plumb-line. (*R.*)

Perpendic'ular, *a.* [Fr. *perpendiculaire*; from Lat. *per*, and *pendeo*, to hang down.] Vertical, or at right angles with the plane of the horizon.

(*Geom.*) A straight line is said to be *P.* to another straight line when the adjacent angles formed by their

intersection are equal, and, consequently, each is a right angle. A straight line is *P.* to a curve at a given point when it is *P.* to the tangent to the curve at that point. In this case the *P.* is usually called a *normal* to the curve. A straight line is *P.* to a plane when it is at right angles with every straight line in the plane passing through the point of intersection. A plane is *P.* to a plane when any straight line in the first, which is *P.* to the common intersection of the two planes, is also *P.* to the second plane.

(*Port.*) A line drawn perpendicularly from the point of bisection of the exterior side towards the place.

—*n.* A line falling at right angles with the plane of the horizon.

(*Geom.*) A line falling upon, or intersecting another line or a plane at right angles.

Perpendicular Style. (*Arch.*) The last of the styles of Gothic architecture, which flourished in England towards the close of the 14th century, at the latter portion of the reign of Edward III. It prevailed until Gothic architecture sank into disuse. — The principal characteristics of this style of architecture are the exuberance and redundancy of its ornaments, while it wants the simplicity of the *Decorated* style. In the earlier examples this enrichment is not carried beyond bounds; but in latter times it becomes excessive, and the chief aim of the architects

Fig. 2081. — ST. MICHAEL'S, OXFORD, 1460.

seems to have been to employ as much labor as possible in ornamentation. At length this practice proved fatal, and Gothic architecture may date its decline from the commencement of the 15th century. The terms *Third-pointed* and *Florid* are applied by some writers to this style. The term *Perpendicular* was given to it on account of the peculiar arrangement of the tracery in the window-heads (Fig. 2081), which forms a peculiar character of the style.

Perpendicularity, n. The state of being perpendicular.

Perpendicularly, adv. In a perpendicular manner.

Perpent-stone, n. (*Arch.*) A stone that goes through the walls, and is dressed on both sides as a common piece of ashlar.

Perpetrate, v. a. [*Lat. perpetro, perpetratus*, from *per*, and *patro*, to execute, to accomplish.] To achieve; to consummate; to do; to commit; to perform. (In an ill sense, or generally used to express an evil act.)

Perpetration, n. [*Lat. perpetratio*.] The act of perpetrating or committing a crime.

Perpetrator, n. One who commits a crime.

Perpetual, (per-pet'yu-al.) a. [*Fr.*; *Lat. perpetuus*, from *per*, and *peto*, to direct one's course to.] Continuing or continued without intermission; continued; unceasing. — Destined to be eternal; everlasting; endless.

P. motion. See MOTION (LAWS OF).

Perpetually, adv. Constantly; continually; uninterruptedly.

Perpetuate, v. a. [*Fr. perpétuer*; *Lat. perpetuo, perpetuus*, from *perpetuus*.] To make eternal; to make perpetual; to cause to endure or be continued indefinitely.

—To preserve from extinction or oblivion; to continue by repetition without limitation.

Perpetuation, n. [*Fr.*; *Lat. perpetuatio*.] Act of making perpetual; act of permanently continuing in knowledge and remembrance.

Perpetuity, n. [*Fr. perpétuité*; *Lat. perpetuitas*, from *perpetuus*, perpetual, *q. v.*] Uninterrupted or continued duration or succession; endless duration; continuance to eternity. — Something of which there will be an end; that which continues indefinitely.

(*Law.*) Quality or class of an estate by which it becomes inalienable, either perpetually or for an indefinitely long period of time; also, the estate so perpetuated.

(*Annuities.*) The number of years in which the simple interest of any sum invested in an annuity or annuities becomes equivalent to the principal; also, the amount which will purchase an annuity payable forever.

Perpignan, (per-pen'yong.) a fortified town of France, dept. of Pyrénées-Orientales, on the Tet, 34 m. S. of Narbonne. It is a place of great strength, and is considered one of the keys of the kingdom on the side of Spain. *Manuf.* Woollens, silk, paper, hats, and soap. *Pop.* 25,264.

Perplex, v. a. [*Lat. perplexus* — *per*, and *plecto*, *plexus*, to plait, to intertwine.] To entangle; to involve; to make intricate; to make complicated or difficult to be

understood or unravelled. — To embarrass; to confuse; to puzzle; to distract; to harass with suspense, anxiety, or ambiguity. — To plague; to annoy; to torment; to vex.

“Chloe's killing eyes perplex my flame.” — *Granville*.

Perplexedly, adv. In a perplexed or intricate manner.

Perplex'edness, n. State of being perplexed; intricacy; involution; difficulty from want of order or precision; embarrassment of mind from doubt or uncertainty.

Perplex'ity, n. [*Fr. perplexité*; *Lat. perplexitas*.] Entanglement; intricacy; complication; embarrassment of mind; disturbance or distraction from doubt, confusion, anxiety, or difficulty.

Perquimans, (per'kwim-anz.) (from a tribe of Indians inhabiting this region.) in *N. Carolina*, a river rising in the Dismal Swamp and flowing S. into Albemarle Sound through Perquimans co.; *length*, abt. 60 m., of which 45 a. e. navigable.

—An E.N.E. co., bordering on Albemarle Sound; *area*, abt. 250 sq. m. *Rivers.* Perquimans River and several smaller streams. *Surface*, generally level; *soil*, in some parts fertile. In this co. was made the first permanent settlement in the state (1662). *County-seat*, Hertford.

Perquisite, (pér'kwiz-it.) n. [*Lat. perquisitum*, something diligently inquired after, from *perquiro* — *per*, and *quiro*, to look or search for.] Profit, gain, emolument, fee, &c. obtained or allowed for services beyond ordinary salary or settled wages; something in lieu of regular wages or salary; according to law, whatever a man gets by industry, and purchases with his own money.

Perquisition, (-zish'un.) n. An accurate search or investigation. (*R.*)

Perrault, CLAUDE, (pér'rolte.) a celebrated French architect, b. at Paris, 1613, constructed many noble works, the principal of which is the façade of the Louvre. D. 1685.

Per'rin, in Pennsylvania, a township of Union county.

Per'rineville, in New Jersey, a post-village of Monmouth co., abt. 20 m. E. of Trenton.

Per'rington, or PERRINTON, in New York, a village and township of Monroe co., abt. 12 m. E.N.E. of Rochester.

Per'ron, n. [*Fr.*, from *pierre*; from *Lat. petra*, stone.] (*Arch.*) A staircase outside of a building, or the steps in front of a building, leading up to the first story.

Per'roquet, n. (*Zoöl.*) See PAROQUET.

Per'rot, or PERROTT, an island of Lower Canada, in the St. Lawrence River, S.W. of the island of Montreal.

Perruquier, (per-ru'ke-er.) n. [*Fr.*, from *perruque*, a peruke.] A maker of wigs or perukes; also, a hair-dresser.

Per'ry, n. [*Fr. poiré*, from *Lat. pyrum*, a pear.] The fermented juice of pears, prepared in the same way as cider, and used as a beverage.

Per'ry, OLIVER HAZARD, an American naval officer, b. in Newport, Rhode Island, 1785. He entered the navy as midshipman at the age of 14, and was on board the frigate General Greene, 28 guns, commanded by his father, Capt. C. R. Perry, during its important cruise on the W. India station in 1799-1800. At the commencement of the war of 1812, *P.* was in command of a division of gunboats at Newport, R. I., and in Feb., 1813, at his own request, he was transferred to the command of Commodore Isaac Chauncey, on the lakes, where he superintended the equipment of a naval force on Lake Erie. It was while this operation was being carried out, that he was called to aid in the attack upon Fort George; and, at the head of a body of seamen, performed his part with such valor and gallantry, as to elicit the highest praise from his countrymen. In the following August he gained the famous battle of Lake Erie (see ERIE, BATTLE OF LAKE), which at once elevated him to the highest naval renown. He afterwards aided Gen. Harrison in taking Detroit, and at the close of these operations, resigned his command. A gold medal was awarded him by Congress for his eminent services, and he also received a captain's commission dated from the day of the battle, Sept. 10, 1813. In Aug., 1814, he was assigned to the command of the frigate Java, 44 guns, then lying at Baltimore, under equipment; but as the British had the Chesapeake closely blockaded, it was impossible to get her to sea. *P.* did not remain idle, however, but continued to harass and annoy the enemy at every possible point until peace was declared. In 1819, he was appointed to the command of a squadron stationed on the coast of Colombia, where he was attacked with the yellow fever, and d. at Port Spain. Subsequently, his remains were transferred to his native town. On Sept. 18, 1860, amid imposing ceremonies, a marble statue, by Walcutt, (Fig. 1985,) was erected at Cleveland, Ohio, near the scene of his great battle.

Perry, in Alabama, a W. central co.; *area*, abt. 950 sq. miles. *Rivers.* Cahawba River, and numerous smaller streams. *Surface*, undulating or hilly; *soil*, very fertile. *Cap.* Marion.

Perry, in Arkansas, a central co.; *area*, abt. 580 sq. m. *Rivers.* Arkansas and Fourche La Pave. *Surface*, somewhat hilly; *soil*, moderately fertile. *Cap.* Perryville. —A township of Johnson co.

Perry, in Florida, a post-town and capital of Taylor county.

Perry, in Georgia, a post-village, cap. of Houston co., abt. 33 m. S. by W. of Macon.

Perry, in Illinois, a S. co.; *area*, abt. 420 sq. m. *Rivers.* Beaucoup Creek and several smaller streams. *Surface*, mostly level prairies; *soil*, fertile. *County-seat*, Pickneyville.

—A post-village and township of Pike co., about 62 m. W. of Springfield.

Per'ry, in Indiana, a S. co., adjoining Kentucky; *area*, about 380 sq. m. *Rivers.* Ohio river, and several less important streams. *Surface*, uneven and hilly, except near the rivers; *soil*, fertile. *Min.* Coal and sandstone. *Cap.* Cannelton. *Pop.* (1890) 18,240.

—A post-village and township of Allen co., about 13 miles N. by W. of Fort Wayne.—A township of Boone co.—A township of Clay co.—A township of Clinton co.—A township of Delaware co.—A township of Lawrence co.—A township of Marion co.—A township of Martin co.—A township of Miami co.—A township of Monroe co.—A township of Noble co.—A township of Tippecanoe co.—A township of Vanderburg co.—A township of Wayne co.

Perry, in Iowa, a prosperous city of Dallas co., on the C., R. I. & Pac. and C., M. & St. P. R.Rs., 34 m. W.N.W. of Des Moines; has some manuf. and good local trade with the rich farming region surrounding. *Pop.* (1895) 3,750.

Perry, in Kansas, a post-village of Jefferson county.

Perry, in Kentucky, an E. by S. co.; *area*, abt. 700 sq. m. *Rivers.* North and Middle Forks of Kentucky River, and several creeks. *Surface*, finely diversified; *soil*, in some parts fertile, but rather adapted to wool-growing. *Cap.* Hazard.

Perry, in Maine, a post-township of Washington county.

Perry, in Michigan, a post-township of Shiawassee co.

Perry, in Mississippi, a S.S.E. co.; *area*, abt. 1,040 sq. m. *Rivers.* Leaf River, Black Creek, and many less important streams. *Surface*, uneven; *soil*, moderately fertile. *Cap.* Augusta.

Perry, in Missouri, an E.S.E. co., adjoining Illinois; *area*, abt. 430 sq. m. *Rivers.* Mississippi River, and Apple, Saline, and Cape Cinque Homme creeks. *Surface*, diversified; *soil*, generally fertile. *Min.* Iron and lead in abundance, and also marble and blue limestone. *Cap.* Perryville.

—A post-village of Ralls county.

Perry, in New York, a post-village and township of Wyoming county, about 50 miles east by south of Buffalo.

Perry, in North Carolina, a post-village of Gaston county.

Perry, in Ohio, a S.E. county; *area*, about 400 square miles. *Rivers.* Jonathan and Rush creeks. *Surface*, undulating or hilly; *soil*, fertile, and well adapted to the usual products of that region. *County-seat*, New Lexington.

—A township of Allen county.—A township of Ashland county.—A township of Brown county.—A township of Carroll county.—A township of Columbiana county.—A township of Coshocton county.—A township of Fayette county.—A township of Franklin county.—A township of Gallia county.—A township of Hocking county.—A post-township of Lake county.—A township of Lawrence county.—A township of Licking county.—A township of Logan county.—A township of Monroe county.—A township of Montgomery county.—A township of Morrow county.—A township of Muskingum county.—A township of Pickaway county.—A township of Pike county.—A township of Putnam county.—A township of Richland county.—A township of Shelby county.—A township of Stark county.—A township of Tuscarawas county.—A township of Wood county.

Perry, in Pennsylvania, a S.E. central co.; *area*, abt. 540 sq. m. *Rivers.* Susquehanna and Juniata rivers, and Sherman's Creek. *Surface*, mountainous, being bounded N.W. and S.E. by Tuscarora and Blue Mountains respectively; *soil*, in some parts remarkably fertile, producing fruits, vegetables, and cereals in abundance. *Cap.* New Bloomfield. *Pop.* (1897) 27,180.

—A township of Armstrong county.—A township of Berks county.—A township of Clarion county.—A township of Fayette county.—A township of Greene county.—A township of Jefferson county.—A township of Lawrence county.—A township of Mercer county.—A village and township of Snyder county, about 40 m. S. of Williamsport.—A post-office of Forest co.

Perry, in South Carolina, a post-village of Oconee county.

Perry, in Tennessee, a W. central co.; *area*, abt. 600 sq. m. *Rivers.* Tennessee and Buffalo rivers. *Surface*, diversified; *soil*, fertile. *Cap.* Linden.

Perry, in Texas, a post-village of Falls county.

Perry, in Wisconsin, a post-township of Dane co.—A township of Pierce co.

Perry Centre, in New York, a post-village of Wyoming co., abt. 50 m. E. by S. of Buffalo.

Perryman'sville, in Maryland, a post-village of Harford co., abt. 27 m. E.N.E. of Baltimore.

Perryopolis, in Pennsylvania, a post-village of Fayette co., abt. 35 m. S. of Pittsburgh.

Per'rysburg, in Indiana, a post-village of Miami co., abt. 78 m. N. of Indianapolis.

Per'rysburg, in New York, a post-township of Cattaraugus co.

Per'rysburg, in Ohio, a village of Ashland co., abt. 45 m. S.S.W. of Cleveland.—A post-village, former cap. of Wood co., about 140 m. N.N.W. of Columbus.

Per'ry's Mills, in New York, a post-village of Clinton co., about 170 m. N. by E. of Albany.

Per'rysville, in Indiana, a post-town of Vermilion co., about 90 m. W.N.W. of Indianapolis.

Per'rysville, in Pennsylvania, a post-village of Allegheny co., about 8 m. N. by W. of Pittsburgh.—A village

Oliver Hazard Perry

1785-1819

of Jefferson co., about 18 m. S. of Brookville.—A village of Venango co., about 16 m. N.E. of Oil City.—A village of Westmoreland co., about 30 m. E. by N. of Pittsburgh.

Perryville, in Ohio, a post-village of Ashland co., about 2 m. E. of Millintown.—A village of Mifflin co., about 12 m. N. of Lewistown.

Perryville, or **PERRYVILLE**, in West Virginia, a post-village, the former cap. of McDowell co.

Perryville, in Maryland, a post-village of Cecil co., about 40 m. E.N.E. of Baltimore.

Perryville, in Missouri, a post-village, cap. of Perry co., about 75 m. S.S.E. of St. Louis.

Perryville, in New Jersey, a village of Hunterdon co., about 33 m. N.N.W. of Trenton.

Perryville, in New York, a post-village of Madison co., about 20 m. E. by S. of Syracuse.

Perryville, in Tennessee, a post-village of Decatur co., 100 m. W.S.W. of Nashville. In this vicinity, Oct. 8, 1862, occurred one of the most desperate and sanguinary battles (in proportion to numbers) of the late Civil War. Gen. Buell, at the head of 100,000 Union troops, encountered Gen. Bragg with 85,000 Confederates, and after a severe engagement, which lasted all day, the latter was compelled to retreat. The total Union loss was 4,348. That of the Confederates, though not reported, was probably as great.

Per'sante, a river of Prussia, prov. of Pomerania, rising near the village of Persanzig, and after a N.W. course of 70 m., flowing into the Baltic at Colberg.

Perscrutatio, *n.* [Lat. *perscrutatio*.] A searching thoroughly; minute search or inquiry.

Per'sea, *n.* (Bot.) A genus of plants, order Lauraceæ. *P. indica*, a native of Madeira, yields timber somewhat resembling mahogany. The fruit of *P. gratissima*, the Avocado or Alligator pear, common in the W. Indies and South America, are highly esteemed in the countries where they are produced, though not at first relished by strangers.

Per'secot, *n.* (Also written *persicot*.) A liqueur or cordial made of the kernels of apricots, quinces, nectarines, &c.

Per'secute, *v. a.* [Fr. *persécuter*.] To pursue in a manner to injure, vex, or afflict; to harass with unjust punishment; to inflict pain upon from hatred or malignity.—To afflict, harass, or destroy for adherence to a particular creed, or system of religious principles, or to a mode of worship.

Persecution, *n.* [Fr.; Lat. *persecutio*.] Act or practice of persecuting; state of being persecuted.

(Ecc. Hist.) The early Christians were subjected by the Roman emperors to ten general persecutions, which are as follows:

64. The Christians are first persecuted by Nero, on a charge of having set fire to Rome. Tacitus enumerates crucifixion, burning alive, and baiting by dogs and wild beasts, among their tortures.
95. The second, under Domitian, commences with the banishment of his niece Domitilla, and the execution of the consul Clemens.
106. The third under Trajan.
166. The fourth by Marcus Aurelius.
193. Septimius Severus publishes his edict against the Christians.
235. The favorites of Alexander Severus are barbarously massacred by Maximin I. As there were many Christians among them, it is styled the sixth persecution.
250. The Emperor Decius exceeds all his predecessors in the severity of his persecutions.
258. Valerian adopts severe measures against the Christians.
275. Aurelian publishes edicts against Christianity.
303. Feb. 24. Diocletian publishes his first edict against the Christians, ordering the demolition of their churches, and the execution of all who refused to renounce their worship. The persecution thus commenced was continued with great barbarity for ten years.

Persecutive, *a.* Following after; persecuting.

Per'secutor, *n.* One who pursues another unjustly and vexatiously, particularly on account of religious principles.

Per'secutrix, *n.* A female who persecutes.

Persepolis, a celebrated city of antiquity, and during a considerable period cap. of Persia, prov. of Faristan,

Fig. 2082. — RUINS OF PERSEPOLIS.

in a fine plain, at the foot of a mountain, on the Araxes, or *Bundemir*, 30 m. N.E. of Shiraz; Lat. 29° 59' 30" N., Lon. 53° 20' E. It was taken by Alexander the Great B. C. 331, and some ancient historians have reported that it was burnt by him, but the ruins of *P.*, which are very extensive, and attest its ancient magnificence (Fig. 2082), show no traces of fire, and it is certain that *P.*, under its primitive name of Istakhar, remained an important place to a comparatively recent time.

Per'serin, or **Prisrend**, a town of European Turkey, pashalic of Albania, on the Drin, 72 m. E.N.E. of Scutari. *Manuf.* Fire-arms.

Per'seus, (Greek Myth.) The son of Zeus and Danaë, was rescued from the sea and brought up by the king of Seriphos, Polydectes, who afterwards, wishing to get rid of him for private reasons, sent him, when yet a youth, to bring the head of the Gorgon Medusa, believing that the enterprise would end in the ruin of *P.* But the innocence of *P.* was patronized by the gods. Pluto lent him his helmet, Minerva her buckler, and Mercury his wings and a short dagger. With these arms, and after numerous wonderful adventures, he reached the abode of Medusa, who dwelt near Tartessus, on the coast of the ocean, and succeeded in cutting off her head, which he put into a bag, and carried off. On his return, he visited Ethiopia, where he liberated and married Andromeda, and arrived at Seriphos in time to rescue his mother from the annoyance of the too ardent addresses of Polydectes, whom, along with some of his companions, he changed into stone. He then returned with his wife and mother to Argos, and his great father Acrisius remembering the oracle (see *DANAË*), fled to Larissa. *P.* following him in order to persuade him to return, is said to have accidentally killed him with a discus, in the course of public games. Unwilling to return to Argos, he exchanged that kingdom for the govt. of Tirgus. He presented the gorgon's head to Minerva, who placed it on her shield. He received divine honors after his death, like the rest of the ancient heroes.

Per'seus, or **PERSUS**, last king of Macedonia, was son of Philip V. From jealousy of his younger brother, Demetrius, he accused him falsely to his father, and induced him to put him to death. He came to the throne on the death of Philip, B. C. 178. The great event of his reign was the war with the Romans, which, long expected, began in 171 and ended in 178, by the total defeat of *P.* at Pydna, by L. Æmilius Paulus. *P.* escaped with his children and treasures to Samothrace, but soon gave himself up, and after being led in triumph to Rome, was cast into prison. He was, however, allowed to spend his last years at Alba. Macedonia became a Roman province.

(Astron.) A northern constellation, situated between Andromeda on the W., and Auriga on the E. Its mean declination is 46° N. It is on the meridian the 24th of Dec. It contains, including the Head of Medusa, which forms part of it, 59 stars, 2 of which are of the 2d magnitude.

Persever'ance, *n.* [Lat. *perseverantia*, from *persevero*.] Act of persisting in anything undertaken; continued pursuit or prosecution of any business or enterprise begun.

(Theol.) Continuance in a state of grace to a state of glory.

Persevere', *v. n.* [Lat. *persevero*, from *perseverus*, from *per*, and *severus*, serious, grave.] To persist or continue in any business or enterprise undertaken; to pursue steadily any design or course commenced; not to give over or abandon what is undertaken.

Persever'ingly, *adv.* With perseverance or continued pursuit of what is undertaken.

Persia, (*per'she-â*.) [in Persian *Iran*.] an extensive country of Asia, bounded on the N. by the Caspian Sea, the Transcaspian and Transcaucasian provs. of Russia; S. by Pers. Gulf and Ind. Ocean; E. by Russian territory, Afghanistan and Beloochistan; and W. by Asiatic Turkey; lies between Lat. 25° and 40° N., Lon. 44° and 62° E. Its greatest length obliquely from N.W. to S.E. is 1,300 m.; area abt. 600,000 sq. m. Upon the N.W. and S., several lofty mountain-ranges—some of considerable length, others short and abrupt—intersect the land in many directions, the centre of the country consisting in general of a vast plain or table-land. The lowest or most level portions of the country lie along the bed of the Tigris and the shore of the Persian Gulf. *P.* possesses many extensive plains and barren deserts, and the interior is generally bare, bleak, and arid. The mountains appear to be a confused heap of hills piled upon hills, in grand but indefinite order; while each individual hill appears a mass of gray rock reared block on block, or starting in huge boulder abruptly from the face of the plains or plateaux. The plains, again, are vast naked steppes, destitute of trees or foliage; and it is only on the margin of water-courses, or the banks of rivers, that either villages or vegetation of any abundance is found. The provinces, however, along the S. and W. margin of the Caspian are an exception to the rest of the country, and present some of the most beautiful and fruitful pictures of richness and abundance to be found in *P.* It has been computed that barely a third of the entire kingdom is fit for cultivation; and, though husbandry is well attended to, and the advantages of copious irrigation are thoroughly understood, so little encouragement is given by the state to agriculture, that but a small part of the capable soil is under tillage. The most important rivers are the Aras, Murghab or Bendemir, Atrek, Serid-Rud, and the Tigris. The lakes of most note are, Uremiyah or Shalu, Bakhtegan, and Mahdigla; from these, and from minor streams and bodies of water, an elaborate system of irrigation is effected all over the cultivated grounds, while vast sub-

terranean aqueducts convey the water to more remote situations. The vegetable productions of *P.* embrace all kinds of legumes and cereals, except rye, oats, and rice; barley and wheat are the most abundant crops. Drugs of various kinds are obtained, such as senna, rhubarb, gums, opium, &c.; as also oils, cotton, indigo, sugar, madder, dates, pistachio nuts, and tobacco; while in flowers, and the perfumes extracted from them, especially the attar of roses, no country in the world can compare with *P.* for beauty, fragrance, and abundance. Silk is an important item; and plantations of mulberry-trees of great extent are very numerous. Vast flocks of sheep and goats are pastured over the country, the property and wealth of the wandering tribes of the interior, the *Elauts*, a kind of Bedouins, devoting themselves to pastoral habits. The animals for which *P.* is famous, are camels, horses, mules, oxen, asses, and buffaloes. The mineral wealth consists of silver, copper,

Fig. 2083. — MILK-WOMAN AND ARABS CROSSING THE RIVER BY MEANS OF INFLATED SKINS.

lead, iron, antimony, salt, precious stones—especially turquoise—bitumen, and springs of naphtha. One of the features of Persia is the abundance of salt in the soil, and the large number of its salt lakes; about 30 pure *salinas* have no outlet; and one, the largest, Uremiyah, is 280 m. in circumference, and, though supplied by 14 rivers, its water is so dense, bitter, and loaded with salt, that no fish can live in it. Another, called the Bakhtegan, is 42 m. long. Situated near the former are some remarkable ponds, whose waters are petrifying. The climate of *P.* embraces the rigors experienced on the mountains of the snowy N., and the heats felt on the sandy plains of Africa. Cyrus the younger told Xenophon that his father's empire was so vast that in the N. the people perished of cold, and in the S. were suffocated with heat. The manufactures of Persia are numerous and important, and embrace all kinds of silk fabrics, satins, taffetas, textures of silk and cotton, silk and goat's hair, or silk and camel's hair: brocades, camel's-hair shawls, gold tissues, gold velvet, camlets, carpets, cottons, leather, fire-arms, sword-blades, saddlery, and jewelry. Its principal trade is carried on with Russia; and, though the foreign export trade is insignificant, the internal traffic is very great, and is entirely carried on by caravans. The government was formerly a complete despotism; an edict of the sovereign was beyond appeal, and his word was irrevocable, his ministers, the Vizier and the Lord-Treasurer, aiding in his labors. Through all degrees and classes of officials venality was the rule and justice the exception. In 1906 the despotism was replaced by a constitutional government, in establishing which the Shah was deposed in 1909. The religion of the Persians is Mohammedanism, but, being of the sect of Ali or Sheahs, is much more tolerant than that of the Turks. In physical appearance, the Persians are inclined to corpulence, have black hair, a high forehead, an aquiline nose, and a largely-developed chin; and in color present every variety, from the dark-brown of the Indian to the light-olive of the colder regions. The men are strong, robust, fond of exercise and martial glory, shave their heads, but dye their beards black, preserving them with an almost religious veneration. The Persians are regarded as a gay and hospitable race, but prone to sudden anger and treachery. They are greatly addicted to the use of tobacco, which they smoke incessantly. The system of bribery and corruption is so universal, that it has eaten into the very manners of the people; and no one can ask the slightest favor without first pre-facing his request with a present, which must be in value according to the service sought to be rendered. In their domestic occupations, they do not recline like the Turks, but sit erect on the *humud*, a mass of folded felt. The women are dressed in a black turban, from

Fig. 2084. — ANCIENT PERSIAN KING ON THRONE.

which depends a rich Cashmere shawl, reaching almost to the termination of the robe, which is only a little shorter than the men's, and fastened in front by large gold buttons. Each Persian is restricted to four legal wives, though the number of his concubines is only regulated by the amount of his coffers; in this respect they resemble the Turks. The Persian language is the most celebrated of all the Oriental tongues, for strength,

copiousness, beauty, and melody, and is written from the right to the left. *P.* is divided into 12 provinces, namely: Azerbaijan, Kurdistan, Luristan, and Khnsistan, on the W.; Faristan, Laristan, and Keruman, on the shores of the Persian Gulf, or S.; Irak-Izeme and Khorassan, in the interior; and Ghilan, Mazanderan, and Astrabad, in the N., or along the Caspian shores. The modern capital is Teheran. The earliest account we possess of Persia is from the Bible, from which we learn that, in the time of Abraham, B.C. 1921, that portion of modern *P.* known as Elam, or Susiana, Southern Persia, was a powerful monarchy. But the Persians, as a nation, first rose into notice on the ruins of the great empires founded on the Euphrates. Babylon was taken by Cyrus, and his empire extended wider than any before established in the world. It comprised, on one side, the west of India; on the other, Asia Minor, Syria, and Egypt; and was only bounded by the prodigies of valor with which the Greeks defied their small territory. After a feeble struggle, it succumbed to the brave and disciplined armies of Alexander. It was then split into fragments by the decease of its founder; but Greeks and Greek sovereigns continued, during several centuries, to reign over Asia. About two centuries before Christ, Arsaces founded the monarchy of the Parthians; and in the third century arose the dynasty of the Sassanids, who restored the name, with the religion and laws, of ancient *P.* They were overthrown by the Mohammedan invaders, who suffered in their turn from the successive invasions by the descendants of Genghis, Timur, and by the Turks, who entirely changed the aspect of Western Asia. At length, in 1501, a native dynasty again arose, under Ismail, who placed himself on the throne. His posterity having sunk into voluptuousness, Persia, in the beginning of the last century, was overrun by the Afghans, who carried fire and sword through its remotest extremities, and reduced its proudest capitals to ashes. The atrocities of the Afghans

Fig. 2085. — ANCIENT PERSIAN GUARDS.

were avenged, and the independence of *P.* vindicated by Nadir Shah (see Fig. 336); but though the victories of this daring chief threw a lustre on his country, after his death it was almost torn to pieces by civil war, till the fortune of arms gave a decided superiority to Kerim, or Kurreem Khan. His death gave rise to another disputed succession, with civil wars as furious as before. At length, Aga Mahommed, a eunuch, raised himself, by crimes and daring, to the sovereignty, and not only swayed it during his lifetime, but founded a dynasty represented by Nasr-ed-Din, who was born in 1831 and ascended the throne in 1848. During his reign, *P.* acquired from Turkey the city and district of Khotour but lost some territory to Russia in a frontier treaty. The Shah was assassinated in 1896 and was succeeded by his son Muzaffer-ed Din. The latter was a man of liberal ideas and in 1906 granted his people a constitution and a representative government. He died Jan. 8, 1907, his son Mohammed Ali Mirza succeeding. The new Shah sought to overthrow the constitution and regain absolutism, the result being a revolution. In July, 1909, the revolutionists occupied Teheran, and on the flight of the Shah to the Russian embassy he was dethroned on July 16, and his young son, Ahmed Mirza, proclaimed Shah in his stead, under the regime of his uncle, Azad ul Mulk. Pop. 7,653,000.

Persian, (*per'shan*), *n.* A native of Persia.

(*Anc. Arch.*) A male figure employed to support an entablature, as distinguished from a female figure.

Persian Gulf, an extensive arm of the Indian O., sep. Persia from Arabia; 550 m. long, 220 its widest, its entrance only 40 m. It has many islands.

Persia'ni, *n. pl.* [It., literally the Persians.] Venetian blinds; jealousies.

Persian Wheel, *n.* (*Mech.*) A contrivance for raising water to some height above the level of a stream. In the rim of a wheel turned by the stream a number of strong pins are fixed, from which buckets are suspended. As the wheel turns, the buckets on one side go down into the stream, where they are filled, and return up full on the other side till they reach the top. Here an obstacle is placed in such a position that the buckets successively strike against it and are overset, and the water emptied into a trough. As the water can never be raised by this means higher than the diameter of the wheel, it is obvious that this rude machine is capable of only a very limited application.

Pers'ic, *n.* The Persian language.

Persiflage, (*par'se-flazh*), *n.* [Fr. *persifler*, to quiz, from Lat. *per*, through, and Fr. *siffler*, to whistle, to hiss.] Banter; idle, frivolous talk; badinage; vulgarly, chaff.

Persimmon Tree, *n.* (*Bot.*) See DIOSPYROS.

Persist, *v. n.* [Fr. *persiste*; Lat. *persisto*, from *per*,

and *sisto*, to cause to stand.] To persevere; to continue steadily in the pursuit of any business or course commenced.

Persis'tence, Persis'tency, *n.* Act or state of persisting; steady pursuit of what is undertaken; perseverance; constancy; continuance; duration; obstinacy; contumacy.

(*Optics.*) The duration of the impression of light on the retina after the luminous object has disappeared. The persistence on the human retina is about one-tenth of a second. Thus, if a lighted torch is whirled round rapidly, a continuous circle of light is seen.

Persistent, *a.* Steady; constant; persevering; continuing; remaining.

(*Bot.*) Remaining through winter, as the leaves of evergreens.

Persis'tently, *adv.* In a persistent manner.

Persistingly, *adv.* In a persisting way; steadfastly.

Persis'tive, *a.* Same as PERSISTENT.

Per'sius, FLACCUS AULUS, a Roman satirical poet, was B. A. D. 34, at Volterra, in Etruria, and D. in 62, aged 28. His six *Satires*, which present a picture of prevailing corruption, are distinguished for vigor, conciseness, and austerity of tone. They have been frequently translated into English.

Per'son, *n.* [Fr. *personne*; Lat. *persōna*, a mask, character, part played by a person.] A human being represented in dialogue, fiction, or on the stage. — Character or characters of office; as, the *person* of a prince or magistrate. — A human being considered with respect to the living body or corporeal existence. — An individual human being, consisting of body and soul; a man, woman, or child, considered as opposed to things, or distinct from them: a self-conscious being; a moral agent; an individual of the human race; — also, among Trinitarians, one of the three subjects constituting the godhead, or the trinity of the Father, Son, and Holy Ghost. — A human being indefinitely; one; an individual.

"For there is no respect of persons with God."—Rom. ii. 11.

(*Gram.*) The subject, or anything affirmed by a verb; also, that modification of the verb which is used in connection with the subject.

Artificial person. (*Law.*) A corporation or body politic. (*Blackstone.*) — *In person*, by one's self; not by agent or representative.

Per'son, in *N. Carolina*, a *N. co.*, adjoining Virginia; area, abt. 370 sq. m. Rivers, Hycootee and Neuse rivers. Surface, moderately hilly; soil, generally fertile. Cap. Roxborough.

Personable, *a.* Having a well-formed body or person; graceful; of good appearance.

Personage, *n.* [Fr.] A man or woman of distinction. — Exterior appearance; stature; air.

— Character assumed or represented.

Personal, *a.* Belonging to men and women, not to things not real; relating to an individual; affecting individuals; peculiar or proper to him or her, or to private actions or character.

— Pertaining to the corporeal nature; exterior; corporeal; direct or in person; without the intervention of another; applying to the character and conduct of individuals in a disparaging manner.

(*Gram.*) Denoting the person.

P. action. (*Law.*) An action which is brought to try the right to damages for breach of contract, or for injuries to the person or personal estate; in contradistinction to real actions, which were designed to try the right and title to real property. — *P. property*. The right or interest that a man has in personal. The right or interest less than a freedom which a man has in reality, or any right or interest which he has in things movable.

Personalism, *n.* The quality of being personal.

Personality, *n.* [Fr. *personnalité*; Lat. *personalitas*.] Individuality; that which constitutes an individual a distinct person, or that which constitutes individuality.

— An application of remarks to the conduct and character of individuals by way of disparagement; as, to avoid personalities.

Personalize, *v. a.* To make personal.

Personally, *adv.* In person; by bodily presence; not by substitute or representative; as, he *personally* protested against the measure. — With respect to an individual; particularly; individually; with regard to numerical existence; as, I do not object to him *personally*.

Personality, *n.* Personality; state or condition of being a person.

(*Law.*) Personal estates or effects.

Per'sonate, *v. a.* [Lat. *personatus*, assumed; L. Lat. *persōno*, to become a person.] To represent by a fictitious or assumed character, so as to pass for the person represented; to represent by imitative action or appearance; to feign; to counterfeit; as, *personated* scepticism (*Glanville*). — To disguise; to mask; to exhibit in an artificial or unreal character.

Personate, *a.* [Lat. *persona*, a mask.] (*Bot.*) A term applied to that form of monopetalous corolla, in which the limb is unequally divided in a two-lipped manner, the upper lip being arched, and the lower prominent and pressed against it, as in the *Linaria* (Fig. 2086).

Personation, *n.* Act of personating, or of assuming the appearance or manner of another.

Fig. 2086.

COROLLA OF LINARIA.

Personator, *n.* One who personates another.

Personality, *n.* Personality. (R.)

Personification, *n.* Act of personifying.

(*Rhet.*) The giving or ascribing to an inanimate being the figure or the sentiments and language of a rational being. Thus, when we say, "the morning smiles," or "the ground thirsts for rain;" when we speak of a "disease's being deceitful," or of "ambition's being restless," such expressions show the facility with which the mind can accommodate the properties of living creatures to inanimate things, or to abstract conceptions of its own forming. The figure called by rhetoricians *prosopopæia* is, literally, *personification*.

Personify, *v. a.* [Fr. *personifier*; Lat. *persona*, and *facio*, to make.] To represent with the attributes of a person; to give animation, as to inanimate objects; to ascribe to an inanimate being the sentiments, action, or language of a rational being or person.

Personize, *v. a.* To personify. (R.)

Personnel, (*pär-so-nél'*), *n.* [Fr.] The collective number of persons engaged in some public service, as the army, navy, &c., as distinguished from the MATERIAL, *q. v.*

Perspective, *a.* [Fr. *perspectif*, from Lat. *perspicio*, *perspectus* — *per*, and *specio*, to view.] Pertaining or relating to the art of perspective; made or delineated by perspective.

— *n.* [Fr.] A view through; a view; a vista; a prospect.

(*Fine Arts.*) The art which enables us, by fixed rules, to represent truly on a plane surface that which appears to the sight in every variety of form and distance, and which is done by imaginary lines traversing such plane, and arranging the shape and position of every object with regard to the point of sight determined upon. *P.* is either *linear* or *aerial*. *Linear P.* is an art based upon a knowledge of mathematical and optical principles; which teach us to delineate solid bodies on a plane surface, as they appear to the eye from the particular point from which they happen to be viewed. The *P. plane* is the surface upon which the objects are delineated, or the picture drawn, and is supposed to be placed vertically between the eye of the spectator and the object. *Foreshortening* of objects is one of the most difficult parts of *P.*, and the degree in which it exists depends upon the angles at which the objects are viewed; thus, a long cylinder may be so placed before the eye that its entire length is concealed, and only the plane of its diameter visible; and, in the same manner, a recumbent full-length human figure may be depicted within the compass of a few inches. *Aerial P.* is the faintness of outlines and blending of colors, produced by the thicker or thinner stratum of air which pervades the optical image viewed; it requires of the painter a knowledge of the mode of arranging the direct and reflected lights, shades, and shadows of a picture, so as to give to each part its requisite degree of tone and color, diminishing the strength of each tint as the objects recede, until, in the extreme distance, the whole assumes a bluish-gray, which is the color of the atmosphere. It can only be learned by careful study of nature.

Perspectively, *adv.* According to the rules of perspective. — Optically; through a glass. (R.)

Perspectograph, *n.* [From Lat. *perspectus*, and Gr. *graphein*, to write.] An instrument for procuring, or transferring to a picture, the points and outlines of original objects.

Perspectography, *n.* The theory of perspective.

Perspicacious, (*kä'shus*), *a.* [Lat. *perspicax*, *perspicacis*, from *per*, and *specio*, to view, to look at.] Sharp of sight; keen-sighted. — Of acute discernment.

Perspicaciously, *adv.* In a perspicuous manner; with discernment.

Perspicaciousness, *n.* Perspicacity.

Perspicacity, (*-spik'as-i-ty*), *n.* [Fr. *perspicacité*; Lat. *perspicacitas*.] Acuteness or quickness of sight, discernment, or understanding; state or quality of being perspicacious.

Perspicuity, *n.* [Fr. *perspicuité*; Lat. *perspicuitas*, from *perspicuo*.] That quality of a substance which renders objects visible through it; transparency; clearness; easiness to be understood; freedom from obscurity or ambiguity; that quality of writing or language which readily presents to the mind of another the precise ideas of the author; plainness; distinctness.

Perspicuous, *a.* [Lat. *perspicuus*, from *perspicuo*.] That may be seen through; transparent; translucent; diaphanous. (R.) — Clear or plain to the understanding; that may be easily understood; not obscure or ambiguous.

(*NOTE.* *Perspicuous* is commonly applied to intellectual objects of view, and *conspicuous*, to things of ocular perception.)

Perspicuously, *adv.* Clearly; plainly; in a manner easily to be understood.

Perspicuousness, *n.* State or quality of being perspicuous; plainness; freedom from obscurity or ambiguity.

Perspirability, *n.* Quality of being perspirable.

Perspirable, *a.* [Fr.] Susceptible of being perspired, or exuded through the pores of the skin. — Exuding perspiration. (R.)

Perspiration, *n.* [From Lat. *perspiro*, I breathe.] (*Physiol.*) The vapor secreted by the ramification of the cuticular arteries over the surface of the body. In the healthy state it is slightly acid and saline. According to Lavoisier and Seguin, the greatest amount of *P.* exceeds six pounds in the 24 hours, and the smallest two pounds; it is at its maximum immediately after taking food, and decreases during digestion. Whatever quantity of food is taken, or whatever are the variations of the atmosphere, the same person, after having increased in weight by all the food he has taken, returns

In 24 hours nearly to the same weight he was the day before, provided he is not growing and has not indulged in any excess. The substances perspired are water, carbonic acid, saline substances, lactic acid, and some organic matter. In certain cases of disease, the *P.* is not only greatly modified as to quantity, but often as to quality. The perspiration is secreted by the *sudoriferous* or sweat glands, which are situated in small pits in the deep parts of the corium, or in the subcutaneous areolar tissue, surrounded by a quantity of adipose tissue. Their size varies; they are most numerous on the palm of the hand, and their total number is estimated by Kränke to be 2,381,248 in the human frame. — *Insensible P.* is the exhalation continually going on at the surface of the skin or membrane. *Sensible P.* is called *sweat*.

Perspirative, a. Perspiring; performing the functional act of perspiration.

Perspiratory, a. Pertaining, or belonging to, or promoting perspiration.

Perspire, v. n. [Lat. *per*, and *spiro*, to breathe.] To emit the vaporous moisture of the body through the pores of the skin; to sweat; as, one *perspires* freely. — To be emitted or excreted through the pores of the skin, as sweat.

—*v. a.* To emit or exude through the pores of the skin.

Perstringe, (-strinj') v. a. [Lat. *per*, through, and *stringere*, to bind closely.] To criticise with severity; as, to *perstringe* errors.

Persuadable, a. That may be persuaded.

Persuadably, a. In a manner susceptible to persuasion.

Persuade, (-swād') v. a. [Lat. *persuadeo* — *per*, and *suadeo*, *suasum*, to advise.] To influence by argument, advice, entreaty, or exhortation; to draw or incline, as the will to a determination by presenting motives to the mind. — To convince by argument, or by evidence presented in any manner to the mind. — To inculcate by argument or exhortation. (R.)

Persuadably, adv. In a persuaded manner.

Persuader, n. One who uses or practises persuasion.

Persuasibility, n. Capability of being persuaded.

Persuasible, a. [Fr.; Lat. *persuadibilis*.] That may be persuaded or influenced by reasons offered or motives advanced.

Persuasible/ness, n. State or quality of being persuadable.

Persuasion, (-swā'zhun.) n. [Fr.; Lat. *persuasio*.] Act of persuading; act of influencing the mind by argument, reasons offered, or motives advanced. — State of being persuaded or convinced; settled opinion or conviction. — A creed or belief, or a sect or party adhering to a creed or system of opinions; as, people of all *persuasions*.

Persuasive, a. [Fr. *persuasif*.] Having the power of persuasion, or calculated to persuade; influencing the mind or passions.

—*n.* That which has power to persuade; an incitement; an exhortation.

Persuasively, adv. In such a manner as to persuade or convince.

Persuasiveness, n. State or quality of being persuasive, or having influence on the mind or passions.

Pert, a. [W.; Lat. *apertus*, open, free.] Indecorously free; bold; saucy.

—*n.* A forward, saucy, assuming person.

Pertain, v. n. [Lat. *pertineo*.] To belong; to be the property, right, or duty. — To have relation to; to relate.

Perth, a co. of Scotland, having N. the cos. of Inverness and Aberdeen, E. Forfar, Fife, and Kinross, S. Stirling and Clackmannan, and W. Argyle and Dumbarion; area, 2,834 sq. m. The surface is generally mountainous, with extensive fertile tracts along the banks of the rivers. The Grampians traverse it from N.E. to S.W. *Rivers.* The Tay and Forth are the principal. *Lakes.* Lochs Tay, Erchie, Nannoch, Tummel, Lydock, Garry, Lyon, and Dochart. *Prod.* Wheat, barley, oats, beans, potatoes, turnips, and fruits. *Min.* Coal, limestone, granite, and freestone. *Manuf.* Linen, woollen, and cotton stuff, leather, and paper. *Cap.* Perth. *Pop.* (1897) 121,890.

PERTH, cap. of the above co., on the Tay, 33 m. N. N. E. of Edinburgh; Lat. 56° 23' 50" N., Lon. 3° 26' 20" W. *Manuf.* Colored cotton stuffs, gingham, shawls, cutlery, &c. *Pop.* (1897) 29,750.

Perth, a town, cap. of Victoria co., New Brunswick, on the Tobique river, about 75 m. N.W. of Fredericton.

Perth, a S.W. co. of prov. of Ontario; area, about 698 sq. m. *Cap.* Stratford. *Pop.* (1897) 47,770.

PERTH, a town of prov. of Ontario, cap. of Lanark co., about 45 m. S.W. of Ottawa.

Perth, in New York, a post-township of Fulton co. *Pop.* (1897) 820.

Perth Amboy, in New Jersey, a city and township, port of entry of Middlesex co., about 36 m. N. E. of Trenton. It is a place of much business activity and ships great quantities of coal. It has a good harbor at the head of Raitan Bay. *Pop.* (1895) 13,030.

Pertinacious, a. [Lat. *pertinax*, *pertinacis*, from *per*, and *tenax*, from *tenere*, to hold.] Holding or adhering to any opinion, purpose, or design with obstinacy or fixed resolution; obstinate. — Resolute; determined; inflexible.

Pertinaciously, adv. Obstinate; with firm or perverse adherence to opinion or purpose.

Pertinaciousness, Pertinacity, n. The quality of being pertinacious; obstinacy; perseverance (in a good sense).

Pertinax, PUBLICUS HELVIUS, a Roman emperor, was elected by the soldiers after the death of Commodus, 193. Was killed by the Prætorians after having reigned only a few months.

Pertinence, Pertinency, n. [Lat. *pertinentia*.] Quality or state of being pertinent; justness of relation to the subject or matter in hand; fitness; appositeness; suitability.

Pertinent, a. [Fr.; Lat. *pertinens*.] Related to the subject or matter in hand; adapted to the end proposed. — Belonging; pertaining.

Pertinently, adv. Appositely; to the purpose.

Pertinentness, n. Appositeness.

Pert'ly, adv. Saucily; with prompt boldness; saucily; with indecorous confidence or boldness.

Pert'ness, n. Quality of being pert; briskness; smartness; sprightliness without force, dignity, or solidity.

Pertuis, (-part'we,) a town of France, dept. of Vaucluse, on the Durance, 38 m. E.S.E. of Avignon; pop. 4,800.

Perturb, v. a. [Lat. *perturbare*, from *per*, through, and *turbare*, to disturb.] To disquiet; to disturb; to deprive of tranquillity. — To disorder; to confuse.

Perturbance, n. Perturbation.

Perturbation, n. Disquiet or agitation of mind; disorder; confusion; commotion.

(*Astron.*) The deviation of a celestial body from the elliptic orbit which it would describe if acted upon by no other attractive force than that of the central body about which it revolves. If the planets exercised no attraction on each other, the orbit described by each of them would be accurately an ellipse, having the sun in one of its foci; and the law of the motion would be such that the area described by a straight line joining the centre of the sun and the planet would describe equal areas in equal times. But in consequence of the universal gravitation of matter, every body in the system is more or less affected by the attractive influence of all the others, and is consequently forced to deviate from the path it would describe in virtue of the central force acting alone. The forces which cause these deviations are called the *perturbing* forces; and the determination of their effect on each orbit is the great problem of physical astronomy.

Perturbator, n. One who raises commotions (R.)

Perturber, n. One who disturbs or raises commotions.

Pertuse, Pertused, a. Bored; pierced with holes; punched. (*Bot.*) Having slits or holes.

Pertusion, n. The act of piercing or punching.

Pertusis, n. Hooping-cough.

Peru (*pe-roo'*), a Republic in South America, on the west side of that continent, extending from Lat. 3° 30' to 17° 20' S., with a coast line of 1,400 m. and a width of 300 m. It is bounded by Ecuador on the north, Chile on the south, Bolivia and Brazil on the east, and the Pacific Ocean on the west. Area, about 440,000 sq. m. *P.* is divided into departments and these into provinces (the Amazonas, Ancash, Apurimac, Arequipa, Ayacucho, Cajamarca, Callao, Cuzco, Huancavelica, Huanuco, Ica, Junin, Lambayeque, Libertad, Lima, Loreto, Moquegua, Piura, Puno, Tacna, Tarapacá). The chief towns are Lima (cap.), Cuzco, Iquique, Arica, Islay, Caillao, Huanacabo, San Jose, and Payta. The double Cordillera, or chain of the Andes, traverses the country from the S.E. to the N.W., separating the republic into 3 portions. The central, or Montana region, has an elevation of 12,000 ft. above the sea-level, and forms a portion of the great central plain of S. America. The Andes occupy nearly 200,000 sq. m., or more than a third of the whole surface of *P.*, the highest peak in the country being at the Nevado de Chuquibambá, 21,000 ft. above the sea. The chief rivers are tributaries to the Amazonas, — the Marañon, Huallaga, and Ucayali on the W. and Pilcomayo flowing E. The principal lake is that of Titicaca, half of which only appertains to *P.* Nearly the whole coast-region is arid and barren, and almost destitute of trees. Rain seldom falls on the coast; but fogs and heavy dews are common. The climate is consequently very unhealthy along the line of shore, though inland it is bracing and salubrious. The soil in the uplands and valleys is extremely fertile, and yields in abundance all the fruits, crops, and vegetables of Europe. *P.* possesses several important volcanoes, the chief of which is Omati, 18,000 ft. in height, lying between the parallels of Arica and the river Loa. The others are all of great altitude, but less stupendous than that of Omati. Besides the range of the Andes, there are 6 other mountain-chains, running parallel with the Andes, but of much less elevation, between each of which are long, narrow plains of extremely fertile soil, wide pampas, and luxuriant valleys, all of them being abundantly watered, clothed in dense woods, and remarkably rich in the quality of the soil. All the water-courses and streams rising in the mountains and flowing through the plains and valleys collect and form 3 chief rivers — Tunguragua or Upper Marañon, the Huallaga, and the Ucayali, which eventually become the 3 main branches of the Amazonas. The lakes of most importance are the Lauri, Vilque, Villafra, Chincay, Chiquiaco, Cocoma, and the great lake of Titicaca, situated in the valley of Desaguadero, one of the most beautiful spots in *P.* The climate varies with the locality. On the coast it is temperate and dry; on the Sierras mild and humid; while on the Andes it is piercingly cold, attended by frequent and terrible storms; and on the plains or pampas it is both excessively hot and remarkably moist. The climate on the sierras, or elevated grounds, is regarded as the most delightful in the world. On the E. side of the Andes, the clouds passing from the Atlantic and across the vast breadth of Brazil, charged with moisture and electricity, meeting and obstructed by the towering Andes, dissolve in tempests of rain or storms of thunder and lightning, while on the W. side of the same range, from shore to mountain, for a length of nearly 1,500 m., thunder and lightning are unknown, and rain never falls on the earth. At Lima, the cap., spring begins in December, summer in

February, autumn in May, and winter sets in in August, the temperature being 60° of Fahr. as a minimum in winter, and 85° in summer as a maximum. If western *P.* however, has neither rain, hail, nor thunder, it may emphatically be called the region of volcanoes and earthquakes, no country on the face of the globe being so subject to subterranean convulsions as *P.*, as exemplified in our time by the terrible earthquake of August, 1868, which destroyed several towns, and caused the loss of several thousand lives. The absence of rain is compensated for in a great measure along the western side of the country by heavy and soaking dews, that nightly settle on the earth in those arid tracts. The wild animals common to the southern continent are found in *P.* The puma and jaguar are by far the most fierce and dangerous; while the condor, among the birds, is the largest of the fowls of prey. The domestic animals are the horse, mule, horned cattle, sheep, the llama, and pigs. Agriculture is much neglected, though the land is remarkably fertile. The most noted products, besides the cereals, are cotton, cocoa, coffee, cinnamon, pimento, and more than 25 other varieties of pepper, tobacco, Peruvian bark, indigo, sarsaparilla, jalap, several other drugs, balsams, and gums, caoutchouc or India-rubber, vanilla, and many dye-stuffs. The vegetable riches of *P.* are not surpassed by any other country in the world. The gigantic fennel, growing to an enormous size, and yielding a wood of great strength, close texture, and 4 times specifically lighter than fir, is only one of the indigenous and valuable trees of the Andean forests. The mineral wealth of *P.* was the first motive that induced the so-called Spaniards to undertake the dangers of a journey from the isthmus to the fabled region of gold and silver. Exaggerated as the reports seemed which the Indians made to Pizarro of the abundance of the white and yellow metals to be found in a region to the S., a moon's journey from Panama, rumor had for once not erred; and the invaders found inexhaustible mines of both gold and silver, which, though since worked for centuries with all the eagerness of covetous ambition, are probably now, after 400 years of incessant rifling, as inexhaustible as when first opened by the rude soldiers of the Castilian adventurer. Indeed, it is reported, and generally believed to this day among the Peruvians themselves, that the richest mines have never yet been worked by Europeans. Of the mineral products of *P.*,

Fig. 2087. — CITY OF CUZCO.

after gold and silver, the most valuable are quicksilver, copper, iron, lead, sulphur, saltpetre and salt. The manufactures are leather, soap, and sugar. The principal exports, before the disastrous war with Chili, were leather, gold, saltpetre, sugar and guano, of which upwards of 100,000 tons were annually exported, and of which the country once possessed deposits on the principal Chincha Island attaining a thickness of 160 feet; but these are now exhausted. The Peruvian Indians, a highly civilized and industrious race, speaking a language known as that of the Incas, inhabit the districts of Las Valles and Montana; and the independent tribes live in the low country east of the mountain region. The Indian empire of *P.* is supposed to have existed for 400 years before the arrival of Pizarro, under a dynasty of twelve native emperors, or Incas. In February of the year 1529 or 1530, three small vessels, called *caravels*, carrying 155 soldiers, 37 horses, two or three cumbersome pieces of ordnance, and a few servants, under the command of Francisco Pizarro, landed on the Peruvian coast, about 100 leagues to the north of Tumbez. Having previously obtained a general knowledge of the politics and manners of the country, with this slender force they commenced those cruel, unprovoked, and barbarous hostilities on the natives which finally, after a frightful amount of bloodshed and treachery, resulted in the total subjugation of the Peruvian empire. The people whom Pizarro found inhabiting this new region of a new world were a nation which had made some progress in the arts of civilization, and, though destitute of the art of writing, having an advanced system of agriculture, domestic animals, and a communistic industrial system under which they seemed to enjoy great happiness. Much progress had been made in architecture and engineering, vast buildings existed, and military roads traversed the country. Civilization had attained the greatest height existing in prehistoric America; the kingdom had extended through conquest; the people were

living under the government of an absolute ruler, half human, half divine in his functions and attributes, being considered as much a god as a mortal. This temporary sovereign, god, and high-pontiff was called *Inca*, *q. v.* At the time of Pizarro's invasion, *P.* was distracted by a civil war, and the Spaniards taking advantage of this circumstance, the country soon fell entirely into their possession; for, though the natives flocked in multitudes round their princes and leaders, and more than once brought 200,000 men into the field, the surprise and wonder with which they observed the precision of the Spanish discipline and military tactics, with the terror inspired by the few cannon and the musketry, and the amazement expressed on beholding the war-horses, induced such apprehension and dread in their simple minds, that Pizarro's little band of infantry, and his demi-troup of cavalry, put their largest armies to confusion and flight; and *P.* fell an easy but sanguinary prey to the rapacious Spaniards. After the conquest, *P.* was very soon settled; and great numbers flocking from the mother-country, the colony was erected into a vice-royalty, and for about 300 years remained a faithful dependant to the European parent. After the restoration of peace in 1815, and the return to their thrones of the several exiled monarchs, the rule of the Spanish sovereign in the South American colonies became so oppressive and tyrannical that the different colonists took up arms, all their propositions for an arrangement having been treated with contumely, and, after a few years of an irregular and badly-conducted warfare, eventuated in the independence of every colony in South and Central America that had previously belonged to Spain. In 1864 new difficulties arose with Spain in consequence of the latter country seizing the Chincha Islands in reparation of some alleged outrages by Peruvian subjects. The war ended in an agreement by *P.* to pay an indemnity of 60,000,000 reals, in consequence of which the Chincha Islands were restored. In 1879 a disastrous war broke out with Chile, which country coveted the nitrate deposits in the Peruvian coast province of Tarapaca. During the war *P.* put 16,000 men in the field. Her fleet consisted of 18 vessels, including two old-style ironclads, while the Chileans had 2 armored vessels of superior strength. The Peruvian fleet fought bravely, but was defeated and captured or destroyed. Two well-contested battles ended in the occupation of Tarapaca by the Chilean army; a third sealed the fate of the department of Tacna, and in 1881 the two severe battles of Chorrillos and Miraflores gave Chile the possession of Lima, the Peruvian capital. A treaty of peace was signed in 1883, by whose terms Tarapaca was ceded to Chile, and Tacna and Arica left in Chilean hands for 10 years, after which a popular vote was to decide to which country they should belong, this country to pay the other \$10,000,000. The Chileans evacuated *P.* in August, 1884, and in June, 1886, General Caceres, who had kept up a gallant resistance till the last moment, was elected President of *P.* Payment of the interest of the foreign debt had become impossible, but a proposal was offered and accepted under which the foreign bondholders were to have control of all the railways for 475 years, with mining and other privileges. They were, in return, to complete the railway system, and cancel the debt through the profits derived from their concession. Colonel Bermudez succeeded Caceres in 1890, and General Pierola became President in 1895.—*Govt.* *P.* is at present governed by a President, with his subordinate functionaries, and by a Senate; the Senate, or chamber of deputies, consisting of representatives of the people elected by the electoral colleges of the parishes and provinces; the Senate deputing the executive authority to the President, who governs in the name of the people, and has a ministry to assist him in the different branches of government. The inhabitants belong to the Roman Catholic Church, there being few, if any, Protestant congregations, and fewer missionaries. In addition to the universities of San Carlos, at Lima, of San Antonio Abad, at Cuzco, of San Geronimo, at Arequipa, and others of old date, there have been founded colleges in all the large towns, and numerous schools in the villages. Yet education is at a low grade among the common people, there being but about one child at school for every 80 inhabitants. *Pop.* 2,800,000.

Peru, in Illinois, a city of La Salle co., about 100 m. S.W. of Chicago. Coal is abundant. Factories have been established and the town is thriving rapidly. *Pop.* (1897) 5,970.—In Ind., a town, cap. of Miami co., about 68 m. N. of Indianapolis.—In Iowa, a vill. and twp. of Dubuque co., abt. 7 m. N. of Dubuque.—A p. v. of Madison co., abt. 10 m. S.S.E. of Winterset.—In Maine, a p. twp. of Oxford co.—In Mass., a p. twp. of Berkshire co.—In New York, a p. vill. and twp. of Clinton co., abt. 10 m. S.S.W. of Plattsburg.—A vill. of Onondaga co., abt. 8 m. W. of Syracuse.—In Ohio, a p. v. and twp. of Huron co., abt. 94 m. N. by E. of Columbus.—A twp. of Morrow co.—In Penn., a twp. of Clearfield co.—A vill. of Juniata co., abt. 20 m. S.W. of Millintown.—In Vt., p. twp. of Bennington co.—In Wis., a p. twp. of Dunn co.

Perugia, a town of central Italy, cap. of a prov. of same name, 10 m. E. of the Lake of Perugia, and 85 m. N. of Rome. *Manuf.* Carpets, silks, hats, cream of Tartar, &c.

Perugia Lake, (anc. *Thrasymene*, or *Trasimene*), in central Italy, 10 m. W. of Perugia, inclosed on all sides by the Apennines. It is 30 m. in circumference, and contains several islands. Near this lake, Hannibal defeated the Romans under Flaminius, B. C. 217.

Perugino, PIETRO, (*pai-roo-jé-no*), a celebrated Italian painter, B. at Leitta Della Pieve, about 1446. His real name was PIETRO VANUCCI, but becoming a citizen of

Perugia, he acquired the name by which he is best known. He studied under Verrocchio, and soon attained great distinction as a painter in oil by his rich coloring. He was employed for ten years in the Sistine Chapel and the Stanze of the Vatican, and on his return to Perugia opened a school, and had Raphael among his pupils. *P.* was a sordid and eccentric man; adhered obstinately to the stiff conventional forms of the fifteenth century, and in his latter years produced many works, unworthy of him, for gain. His *chef-d'œuvre* is the *Pietà*, in the Pitti Palace. Among his best works are an *Ascension*, at Lyons; the *Infant Christ Adored by the Virgin*, at Rome; *Madonna Enthroned*, at Bologna; and the fresco of the *Baptism* in the Sistine Chapel. D. 1524.

Peruke, *n.* A periwig; an artificial cap of hair.

Perule, *n.* [Lat. *perula*.] (*Bot.*) The cover of a seed.

Perusal, *n.* Act of perusing or of reading.—Careful view or examination. (*R.*)

Peruse, *v. a.* [From Lat. *per*, and *utor, uti*, to use.] To read through; or, to read with attention.

Peruser, *n.* A reader; one who peruses.

Peruvian, *a.* (*Geog.*) Belonging to Peru.

P. balsam. See MYROSPERMUM.—*P. bark.* See CINCHONA.

Peruville, in New York, a post-village of Tompkins co., abt. 14 m. N.E. of Ithaca.

Peruwels, a town of Belgium, prov. of Hainault, 16 m. W.N.W. of Mous. *Manuf.* Linen goods. *Pop.* 8,000.

Pervade, *v. a.* [Lat. *pervado*, from *per*, and *radio*, to go.] To pass through, as an aperture, pore, or interstice; to permeate.—To pass or spread through, as the whole extent of a thing, and into every minute part; to be diffused through.

Pervasion, (*-ā-zhun*), *n.* The act of passing through the whole extent of a thing.

Pervasive, *a.* Tending, or having power to pervade.

Perverse, *a.* [Lat. *perversus*.] Turned aside; distorted from the right.—Obstinate in the wrong; disposed to be contrary; stubborn; forward; untractable. Petulant; peevish; cross; disposed to be cross and vexed.

Perversedly, *adv.* Perversely; in a perverse manner.

Perversely, *adv.* In a perverse manner; crossly; peevishly.

Perverse'ness, *n.* Quality of being perverse; untractableness; crossness of temper.

Perversion, *n.* [Fr.; Lat. *perversio*.] A turning from truth or propriety; a diverting from the true intent or object; change to something worse; misapplication.

Pervers'ity, *n.* [Fr. *perversité*; Lat. *perversitas*.] Perverseness; crossness; disposition to thwart, or cross.

Perv'sive, *a.* Tending to corrupt or pervert.

Pervert, *v. a.* [Lat. *pervertō*, *perversus*.] To turn from truth, propriety, or from its proper purpose; to distort from its true use or end.—To turn from the right; to corrupt.

—*n.* A person who has turned from virtue to an evil course.

Pervert'er, *n.* One who changes anything from good to bad; one who distorts, misinterprets, or misapplies.

Pervertible, *a.* That may be perverted.

Pervious, *a.* [Lat. *pervius*, from *per* and *via*, a way.] Affording or admitting passage; that may be penetrated by another body or substance; permeable; penetrable.—That may be penetrated by the mental sight.—Pervading; permeating. (*R.*)

Perviousness, *n.* Quality of being pervious, or of admitting passage, or of being penetrated.

Pesade, *n.* [Fr. from *peser*, to weigh.] (*Man.*) The motion which a horse makes in raising his fore-quarters, without advancing.

Pescadero, in California, a post-village of Santa Cruz co., abt. 30 m. W.S.W. of San José.

Pescadero's, a group of islands in the Pacific Ocean, off the coast of Peru, Lat. 11° 47' S., Lon. 77° 20' W.

Pescl'erais, *n. pl.* A tribe of Indians, inhabiting Terra del Fuego, and both borders of the Straits of Magellan, from the island of Elizabeth and Port Famine, towards the E. as far as the group of islands which spread out to the N. and S. of the Straits of Magellan. Their complexion is olive, and have huge forms and large chests, though otherwise well formed. They are a nomadic people, and only subsist by the chase and fishing.

Peschiera, (*pais-ke-ai'ra*), a town and strong fortress of Austrian Italy, in the province of Verona, near where the Mincio issues from the Lake of Garda, 20 m. from Mantua; *pop.* 2,600.

Pescia, (*pesh'a*), a town of Italy, prov. of Florence, 30 m. E. of Florence. *Manuf.* Woollen cloth, silk-twist, and paper. *Pop.* 5,000.

Peshawur, (*pesh-our*), a city of Afghanistan, formerly cap. of a principality now a prov. of the Punjab, belonging to the British, 18 m. E. of N. extremity of Khyber Pass, and 150 m. E.S.E. of Cabul; Lat. 34° 6' N., Lon. 71° 13' E. It is strongly fortified. *Pop.* 53,000.

Pesh'tigo, or PESHTIGO, in Wisconsin, a river flowing into Green Bay from Mariette co.—A post-village of Marinette co., on the above river, about 16 m. N.N.E. of Oconto.

Pesky, *ad. and adv.* [Probably from *pestilent*.] Mischievous; troublesome.—Great; much.—Very. (Colloquial and vulgar, U.S.)

Pe'so, *n.* [Sp.] A Spanish coin, weighing one ounce; the dollar of exchange.

Peso'tum, in Illinois, a post-village of Champaign co., abt. 14 m. S. of Champaign.

Pes'sary, *n.* [Fr. *pessaire*; Gr. *pessos*.] (*Surg.*) A solid instrument, made of boxwood or Indian-rubber, and of various shapes. Some are completely round,

others oval or oblong, while some resemble flat discs, perforated in the centre; others, again, are shaped somewhat like a small pestle. The object for which the *P.* is employed is to support the neck of the womb in the diseases known as *prolapsus* and *procurtina uteri*, the implement being passed up the vagina to support the organ, or answer the purpose of a plug.

Pessimism, *n.* [Lat. *pessimus*, worst.] The doctrine which maintains that anything is for the worst in the world;—used in opposition to *optimism*.

Pessimist, *n.* A general complainer;—opposed to *optimist*.

Pest, *n.* [Fr. *peste*; Lat. *pestis*, a plague.] A fatal epidemic disease; plague; pestilence.—Anything very noxious, mischievous, or destructive; bane.

Pes'ter, *v. a.* [Fr., from *peste*; Lat. *pestis*.] To plague; to trouble; to harass with little vexations.—To encumber.

Pes'terer, *n.* One who pests or disturbs.

Pes'terment, *n.* The state of being troubled or annoyed; the act of disturbing or harassing.

Pesth, (*pest*), a city of Hungary, on the E. side of the Danube, 135 m. E.S.E. of Vienna, immediately opposite Buda (*q. v.*), with which it is connected by a magnificent suspension bridge. It is generally well built, with wide streets, and numerous public squares. Its university is the only one in Hungary. *Manuf.* Silk, cotton, leather, jewelry, musical instruments, oil, tobacco and meerschaum pipe-bowls. *Pop.* (1897), including Buda, under the name of Buda-Pesth, 525,550.

Pest'-house, *n.* A house or hospital for persons infected with any contagious and mortal disease.

Pest'iduct, *n.* [Lat. *pestis*, pest, and *ductus*, from *duco*, *ducere*, to lead.] Anything that brings contagion, or infection.

Pestiferous, *a.* [Fr. *pestiféré*; Lat. *pestis*, and *fero*, to carry, to bring.] Pestilential; noxious to health; malignant; infectious; contagious.—Noxious to peace, to morals, or to society; mischievous; destructive.

Pestiferously, *adv.* In a pestiferous manner.

Pest'ifence, *n.* [Fr.; Lat. *pestilentia*, from *pestis*.] Plague, appropriately so called; any contagious or infectious disease that is epidemic and mortal.—Corruption or moral disease destructive to happiness.

Pes'tilent, *a.* [Fr.; Lat. *pestilens*.] Producing plague or other malignant or contagious disease; mischievous; noxious to morals or society; destructive; troublesome.

Pestilen'tial, *a.* Partaking of the nature of the plague or other infectious disease; producing or tending to produce infectious disease.—Mischievous; pernicious; destructive.

Pestilen'tially, *adv.* By means of pestilence.

Pest'ilently, *adv.* Mischievously; destructively.

Pestle, (*pest'l*), *n.* [Lat. *pistillum*, from *pistis*, from *pinso*, to beat.] An instrument used for pounding and breaking substances in a mortar.—A short staff carried by a bailiff or a constable.

Pes'tle, *v. a.* To pound or break with a pestle; to use a pestle.

Pes'tle of pork, *n.* A gammon of bacon.

Pet, *n.* [A contraction of *petulant*.] A slight fit of peevishness or fretful discontent.

—*n.* A little darling or favorite; a little child spoiled by fondling.—A lamb brought up by hand.—A fondling; any animal fondled and indulged.

—*v. a.* To treat as a pet; to fondle; to indulge.

Petal, *n.* [Fr. *pétale*; Gr. *petalon*, from *petao*, to expand.] (*Bot.*) A modified leaf forming a part of the corolla. Flowers in which the divisions of the corolla are all united are called *monopetalous* or *gamopetalous*; those in which they are all separate are *polypetalous*. Petals are frequently of the richest colors; by which character, and by their more delicate nature, they may be usually distinguished from the sepals, or parts of the calyx. See COROLLA and BOTANY.

Petal'ed, *a.* (*Bot.*) Having petals.

Petalif'erous, *a.* [Lat. *petalum*, and *ferre*, to bear.] (*Bot.*) Bearing petals.

Petal'iform, *a.* (*Bot.*) Petal-shaped.

Petal'ine, *a.* (*Bot.*) Pertaining to a petal.

Petal'ite, *n.* (*Min.*) An anhydrous silicate of alumina, soda, and lithia, of a white-grayish, or greenish color, often with a tinge of red.

Petal'oid, *a.* (*Bot.*) Petal-like in color and texture.

Petaloid'æ, *n. pl.* (*Bot.*) A name for the order CERA-MIACEÆ, *q. v.*

Petal'ous, *a.* Having petals.

Petaluma, in California, a city of Sonoma co., on Petaluma Creek, abt. 45 m. N. by W. of San Francisco. It is the chief town and port of the co., contains many fine edifices, and is thriving rapidly. *Pop.* abt. 4,000.

Petard, *n.* [Fr. *petard*, from *peter*, to crack.] (*Mil.*) An engine formerly used for breaking down gates, barricades, &c.

Petardeer, **Petardier**, *n.* (*Mil.*) One who manages a petard.

Petaurus, *n.* [Gr. *petauristes*, a rope-dancer.] (*Zool.*) The flying phalanger, a marsupial animal which bears the same relationship to the true phalanger as the flying squirrel does to the ordinary squirrel. By means of the skin which is extended between the fore and hind limbs, the animal can partially sustain itself in the air; and its aerial evolutions, when favored by the shades of evening, are considered peculiarly graceful. It is destitute of the prehensile tail of the true phalangers.

Peteho'ra, a river of European Russia, rising in the W. slope of the Ural Mountains, and after a N.E. course of 940 m., flowing into the Arctic Ocean in Lat. 68° N., Lon. between 53° and 54° E. It is said to be navigable for large river-boats for 700 m.

Petec'chiæ, *n. pl.* [Lat. *petecchia*, from *petigo*, a scab.]

(Med.) Small spots, similar in shape and color to fleabites, which occur spontaneously upon the skin, in the course of severe fevers, &c.

Pete'chial, or **Pete'chial**, *a.* (Med.) Resembling or accompanied by petechiae.

Peten, a lake of Central America, abt. 190 m. N. of Guatemala. It is about 65 m. in circuit, 30 fathoms deep in some places, and contains many islands, the largest of which, Peten, was formerly the capital and stronghold of the Itzax Indians.

Peter, ALEXEIEVITCH, usually styled PETER THE GREAT, Czar of Russia, was b. in 1672; and in 1689 he obtained the sole authority, on the retirement of his brother Ivan, with whom he had been before associated in the government of the empire. After having suppressed a conspiracy of the Strelitzes against his life, in which he displayed much personal courage, he travelled in foreign countries, not in the character of czar, but as a member of an embassy. At Amsterdam he worked, *incognito*, in a shipyard, went to the village of Saardam, where he caused himself to be enrolled among the workmen, under the name of Peter Michaeloff. Here he lived in a little hut (Fig. 2088) for 7 weeks, made his own bed, and prepared his own food, corresponded with his min-

Fig. 2088. — HOUSE IN WHICH PETER LIVED AT SAARDAM.

isters at home, and labored at the same time in ship-building. Induced, by his love for the sea, to accept the invitation of William III. to visit London, he spent some weeks there, keenly observing and learning all that he could of trade, manufactures, and the arts. Having proceeded to Vienna, he there received intelligence of a new rebellion of the Strelitzes, on which he returned home, crushed the insurrection, and visited the rebels with fearful severity. In 1700 he entered upon a war with Sweden, which lasted till 1721. He was defeated by his great rival, Charles XII., at the battle of Narva, and the war went on with various results till 1709, when he completely defeated Charles at Pultawa. In the following year the Sultan declared war on him, and he narrowly escaped capture by the Turks in the campaign of 1711. This war ended in 1713. Not satisfied with his immense power as czar, P. had suppressed the patriarchate, and made himself head of the church as well as of the state. In 1703 he founded St. Petersburg, and began the fortifications of Cronstadt. Three years later he privately married Catherine, a girl of low origin and immoral character; married her publicly in 1710, and had her crowned in 1722. P. extended the limits of the empire both in Europe and Asia; changed the face of Russia by his zealous promotion of trade, navigation, manufactures, and education; effected an immense change in the manners and customs of the Russians; and after the conclusion of peace with Sweden, received the title of Emperor of all the Russias, and Father of his Country. Reforming others, he failed to reform himself, but remained to the last an ignorant, coarse, brutal savage, indulging in the lowest vices, and gloating over scenes of cruel suffering. He would sometimes put his victims to the torture, play judge and executioner too, and, drunk with wine, strike off 20 heads in succession, proud of his horrid dexterity. His state policy has been adhered to by his successors. Peter I. d. at St. Petersburg, after very severe suffering, Jan. 28, 1725.

PETER II, Emperor of Russia, b. 1714, was the son of Alexis and grandson of Peter the Great. He succeeded, in 1727, the Empress Catherine, who had declared him Grand-Duke of Russia the year preceding. The most remarkable event of his reign was the disgrace of the prime-minister Menschikoff, who was banished to Siberia. D. 1730.

PETER III. the son of Anne, eldest daughter of Peter the Great, was b. 1728, and succeeded Elizabeth in 1761. He married the Princess Sophia Augusta of Anhalt, whose name he changed to Catherine, and, being inspired with grand and martial thoughts, attempted to govern his empire on the model of Frederick the Great; but, wanting capacity, energy, and courage, he signally failed in all his schemes. His empress, being apprised of his intention of divorcing her and bastardizing his son Paul, anticipated his design, and, exciting a revolution, entirely defeated his scheme, took him prisoner, and compelled him to sign a most humiliating abdication. After this, being sent to the fortress of Robschka, he there mysteriously disappeared, like many of the Russian monarchs, by poison or the bowstring, 1762.

Peter, king of Hungary, reigned 1038-1047.

Peter I. king of the Bulgarians, succeeded his father 927. His reign was troubled with internal dissensions, and wars with the Russians and Greeks; d. 970. **PETER II.** obtained the royal power, in association with his brother Asan, 1186, and they were both slain abt. 1195.

Peter of Clugny, an abbot of that monastery, called also *Peter the Venerable*, and by his proper name *Peter Maurice*, a distinguished theologian and Latin poet. He was born 1092 or 1094, became abbot after Hugh II. in 1122 or 1123, and in 1140 gave shelter to the unfortunate Abelard, and interceded for him at Rome. D. 1156. His works were published in 1522.

Peter, (St.), one of the apostles, originally named SIMON, was a native of Bethsaida, on the Lake of Gennesaret. His father was called Jonas; and the name by which P. is known in Christian history was given to him by Jesus Christ, who changed his name of origin (Bar-Jona) into *Cephas*, a Syro-Chaldaic word, which means "rock" or stone, and for which *Petra*, or, in the masculine form, *Petros*, is the Greek equivalent. P. was a fisherman, with his brother Andrew, at Bethsaida, when called to be a disciple of Jesus Christ. He was remarkable for his zeal, which he displayed on many occasions, particularly in the garden, when his master was apprehended; on which occasion he drew his sword, and cut off the ear of the servant of the high-priest. But when he entered the hall of Caiaphas, and was recognized as one of the disciples, he repeatedly denied the charge, till the cock crew, and then, remembering our Lord's prediction that before the cock crew twice he would deny him thrice, Peter went out and wept. After the ascension of Jesus Christ, he preached a famous sermon at Jerusalem, by which some thousands were converted. Herod Agrippa threw him into prison, A. D. 44; but he was released by an angel. He was crucified with his head downwards, in the persecution under Nero, abt. A. D. 66. Two of his epistles are in the sacred canon.—P. appears frequently in the gospels as the spokesman for his companions, and it is the opinion of most, among the critics, that he enjoyed a certain pre-eminence among the apostles, upon which, coupled with the injunction given to him by Christ to feed his flock, and the declaration, "Thou art Peter, and upon this rock I will build my Church," the Roman Catholics found the doctrine of the supremacy of the popes as Peter's successors.

Peter the Hermit, a French gentleman of Amiens, in Picardy, who renounced a military life to embrace that of a pilgrim. At the end of the 11th century, a general alarm was spread that the last day was approaching; on which numbers of persons flocked to the Holy Land from all countries, with a view of ending their days near the holy sepulchre. Peter was of the number, and on his return to Europe made so pathetic a representation of the state of the Christians in Palestine to Pope Urban II., that he gave Peter leave to preach up the necessity of a crusade throughout Christendom. The appearance, zeal, and eloquence of the hermit, produced a prodigious effect, and all ranks and ages, of both sexes, pressed eagerly into the service. With a motley army, estimated at 100,000 men, Peter passed through Hungary. In his absence, his followers attacked Solymán's army at Nicea, and all, except a few thousands, perished, "and," says Gibbon, "a pyramid of bones informed their companions of the place of their defeat." Peter remained in Palestine, and was at the siege of Antioch in 1097; but on his attempting to make his escape, shortly afterwards, was brought back, and compelled to take a new oath of fidelity and obedience to the holy cause. Two years later he was present at the siege of Jerusalem, where he displayed great bravery, and when the place was taken, was made vicar-general. Peter, on his return to France, founded the abbey of Neufmoustier, at Huy, in Liège, where he died, 1115.

Peter's, (St.), Church. (Arch.) The largest cathedral in Christendom, built at Rome, on the site of a much older basilica, founded by Constantine, A. D. 306, over the reputed grave of St. Peter, and near the spot where he is said to have suffered martyrdom. The foundation-stone was laid in 1406; and the works

Fig. 2089. — ST. PETER'S CHURCH.

carried on with great activity by Bramanté till the death of Julius II. In 1546, the superintendence was given to Michael Angelo, who designed the dome; and

had the satisfaction, before his death, in his ninetieth year (1564), of seeing the most arduous part of the task completed; and he left such complete models of the remainder that it was carried out exactly in conformity with his design by his successors, Vignola and Giacomo della Porta, and successfully terminated by the latter in 1590, in the pontificate of Sixtus V. The design of Michael Angelo was in the form of a Greek cross, but the building was actually completed as originally designed by Bramanté, as a Latin cross, under Paul V., by the architect Carlo Maderno. The portico and façade were also by him. He is much blamed for altering Michael Angelo's plan, because the result is that the projecting nave prevents the dome (the great part of the work) from being well seen. The façade is considered paltry, and too much cut up into small pieces. Maderno's nave was finished in 1612, and the façade in 1614, and the church dedicated by Urban VIII. in 1626. In the front of the portico is a magnificent atrium in the form of a piazza, enclosed on two sides by grand semicircular colonnades. This was erected under Alexander VII. by the architect Bernini. The façade of the cathedral is 368 feet long and 145 feet high. Five open arches lead into a magnificent vestibule, 439 feet long, 47 feet wide, and 65 feet high, and adorned with statues and mosaics. The central bronze doors are relics saved from the old church. On entering the interior of the cathedral, its enormous size does not produce the impression its grandeur of proportions should do on the spectator. This arises from the details being all of an excessive size. The pilasters of the nave, the niches, statues, mouldings, &c., are all such as they might have been in a much smaller church, magnified. There is nothing to mark the scale, and give expression to the magnitude of the building. The figures supporting the holy-water fountain, for example, appear to be those of cherubs of a natural size, but when more closely approached, turn out to be six feet in height, and the figures in the niches are on a still more colossal scale. The cathedral is 613 feet long, and 450 feet across the transepts. The arch of the nave is 90 feet wide, and 152 feet high. The diameter of the dome is 195½ feet. From the pavement to the base of the lantern is 405 feet, and to the top of the cross 434¾ feet.

Peterborough, a town of England, co. of Northampton, on the Nen, 37 m. N.E. of Northampton, and 76 m. N.N.W. of London.

Peterborough, a N. central co. of prov. of Ontario; area, abt. 1,005 sq. m. Rivers, Gall and Otanabee rivers, and several less important streams, besides many large lakes. Cap. Peterborough on the Otanabee River, abt. 75 m. N.E. of Toronto. The co. is divided into East and West Peterborough.

Peterborough, in New Hampshire, a post-village and township of Hillsborough co., abt. 34 m. S.W. of Concord.

Peterborough, in New York, a post-village of Madison co., abt. 110 m. W. N.W. of Albany.

Peter-ham, *n.* A kind of rough, woollen cloth, used for over-coats.

Peterhead, a seaport-town of Scotland, co. of Aberdeen, on a peninsula, the most E. point of land in Scotland, 44 m. N.N.E. of Aberdeen. Lat. 57° 30' 1" N., Lon. 10° 46' W.

Peter-le-Port, (St.), a town and cap. of the island of Guernsey; Lat. 49° 27' 2" N., Lon. 20° 32' W. It has an excellent harbor, defended by two castles. Pop. 13,500.

Peter-pence, *n.* (Eccl. Hist.) The popular name of an impost, otherwise termed the *fee of Rome*, or, in the Anglo-Saxon, *Romescot*; originally a voluntary offering by the faithful to the see of Rome; afterwards a due levied in various amounts from every house or family in a country. Peter-pence were paid in France, Poland, and other realms. In England it finally ceased in the reign of Henry VIII.

Peters, in Pennsylvania, a township of Franklin county.

—A village and township of Washington co., abt. 15 m. S. S.W. of Pittsburg.

Petersburg, (St.), a govt. of European Russia, between Lat. 58° and 60° 30' N., Lon. 28° and 34° E., having N. the Gulf of Finland, the govts. of Wyborg, Olonetz, and Lake Ladoga, E. and S.E. Novgorod, S. Pskof, and W. Lake Peipus, and the govt. of Revel. Area, 15,000 sq. m. The surface is level, the soil sandy, and the climate damp, severe, and unhealthy. Rivers, Neva, Narova, Luga, Volklov, Sias, and Svir. Prod. Rye, oats, barley, wheat, hemp, and flax. Cap. St. Petersburg.

Petersburg, (St.), an important city, cap. of the Russian empire, at the mouth of the river Neva, in the E. extremity of the Gulf of Finland, 15 m. E. of Cronstadt. It is of a circular form, and stands partly on the mainland S. of the Neva, and partly on islands formed by its branches, and is remarkable for the width and regularity of its streets, the length and magnificence of its quays, and the elegance of its squares and public buildings. The most prominent among the latter are the Winter Palace, the Marble Palace, the Palace of Anitchkoff, the Taurida Palace, the Admiralty, the Academy of Fine Arts, the Exchange, the palace of the Senate, and the *Hôtel de Petal Major*. The gilt tower of the admiralty, 360 feet high, erected in 1734, is one of the most striking objects in approaching the city. The citadel, founded by Peter the Great, stands on an island in the centre of the city. The principal churches are the cathedral of St. Peter and St. Paul, containing the tombs of the Russian sovereigns, the Church of our Lady of Kasan, the Church of St. Alexander Nefski, and the Church of St. Isaac. P. contains some noble monuments, the principal of which are the equestrian statue

of Peter the Great by Falconet, erected on a gigantic rough block of granite, and a column erected in honor of the emperor Alexander I., 150 feet in height, with a pedestal of granite and bronze. The shaft of the column consists of a single piece of red granite, 84 feet in length, and 14 feet in diameter. There are numerous literary and scientific institutions, and the imperial library contains 500,000 printed vols., besides 20,000 MSS. *Manuf.* Silks, cottons, woollens, sail-cloth, porcelain, paper, leather, tapestry, gunpowder, tobacco, glass, &c. *P.* has the most extensive foreign trade of any city in the N. of Europe, arising principally from its being the only great inlet on the Gulf of Finland, and from its vast and various communications with the interior. *P.* is unhealthy, owing to its low and swampy situation, and to the severity and variety of the climate. It is also subject to inundations, which frequently cause great damage. *P.* was founded by Peter the Great in 1703, and notwithstanding its disadvantageous situation, continues to increase in prosperity. In the great inundation of 1824, more than 15,000 persons perished. A ship canal connecting *P.* with Cronstadt was begun in 1878. *Pop.* (1905) 1,429,000.

Petersburg, in Illinois, a city, cap. of Menard co. *Pop.* (1897) 2,525.

Petersburg, in Indiana, a post-town, cap. of Pike co., about 110 m. S.S.W. of Indianapolis.

Petersburg, in Kentucky, a post-village of Boone co., on the Ohio river, about 25 m. below Cincinnati.

Petersburg, in Michigan, a post-village of Monroe co., about 10 m. E. of Adrian.

Petersburg, in Missouri, a village of Boone co., about 50 m. N. of Jefferson City.

Petersburg, in New York, a post-village and township of Rensselaer co., about 25 m. E. by N. of Albany. *Pop.* (1897) 1,510.

Petersburg, in Ohio, a village of Ashland co., about 8 m. E. of Mansfield.

—A post-vill. of Mahoning co., abt. 16 m. S.E. of Canfield.

Petersburg, in Pennsylvania, a village of Adams co., about 13 m. S. of Carlisle.

—A post-borough of Huntingdon co., about 97 m. W. N. W. of Harrisburg.

—A small village of Lancaster co., about 4 m. N.N.W. of Lancaster.

—A borough and township of Perry co., about 15 m. N.W. of Harrisburg.

—A village of Somerset co., about 154 m. W. by S. of Harrisburg.

Petersburg, in Virginia, a city and port of entry of Petersburg City co., on Appomattox river, 20 m. S. of Richmond; Lat. 37° 14' N., Lon. 77° 20' W. *P.* is finely located, well built, and ranks the third town in the State in point of population. It has extensive manufactures, chiefly cotton and woollen goods, machinery, &c., and commands an active and increasing trade. In the late Civil War *P.* constituted one of the most important military points in the defence of Richmond, and was the scene of many severe encounters between the Union and Confederate forces. On June 10, 1864, it resisted a combined attack, which was planned by Gen. Butler, and consisted of 3,500 infantry, 1,500 cavalry, and 2 gunboats; five days later a still stronger assault was repulsed, and these, with some minor attempts planned by the same general, caused a great Union loss, while the enemy was found to be even more strongly fortified than at first. On June 16, Gen. Grant moved from north of the James with his entire available army and begun a siege of *P.*, which had been made too strong by earthworks to be taken by assault. Gen. Early was sent by Lee on a raid up the Shenandoah Valley, with the vain hope of drawing off his antagonist, who continued his siege without intermission until the last days of the war. In July, 1864, an attempt was made to take *P.* through the explosion of a mine, but the effort failed, after a heavy loss on the part of the assailants. On April 2, 1865, an assault in force was made which resulted in the capture of *P.*, followed by the evacuation of Richmond by the Confederate army, and its pursuit and surrender. *Pop.* (1897) 25,000.

Petersburg, in Wisconsin, a post-village of Crawford co., about 22 m. N.E. of Prairie du Chien.

Petersfield, a town of England, county of Hants, 17 m. N.N.E. of Portsmouth. *Pop.* 6,000.

Petersham, in Massachusetts, a post-village and township of Worcester co., about 67 m. W. by N. of Boston.

Peter's Mountain, a summit of the Alleghenies, on the boundary between Monroe co., West Virginia, and Giles co., Virginia.

Peterson, in Iowa, a post-village, former cap. of Clay co., about 115 m. W. of Des Moines.

—A township of Clay co.

Peterstown, in W. Virginia, a post-village of Monroe co., abt. 186 m. S. of Wheeling.

Petersville, in Maryland, a post-village of Frederick co., abt. 37 m. N. by W. of Washington, D. C.

Petersville, in Pennsylvania, a post-village of Northampton co., abt. 15 m. W. by N. of Easton.

Peterwardein, a strongly-fortified town of Austria, in Slavonia, 44 m. N.W. of Belgrade. It derives its name from Peter the Hermit, who here organized the first crusade. The Turks were defeated here in 1716 by the Austrians under Prince Eugene. *Pop.* 7,000.

Peter-wort, *n.* (Bot.) Same as *St. Peter's-wort*. See ASCRUM.

Petiolar, PETIOLARY, *a.* (Bot.) Borne on the petiole.

Petiolate, PETIOLATED, PETIOLED, *a.* (Bot.) Having a petiole.

Petiole, *n.* [Lat. *petiolus*, dim. of *pes, pedis*, a foot.] (Bot.) See LEAF.

Petiolute, *a.* (Bot.) Applied to a leaflet supported on its own partial leaf-stalk.

Peti'olule, *n.* (Bot.) The stalk of a leaflet.

Petit Cailion Bayou, (*peh-tee' kah-yoo' bi'oo*), in Louisiana, a small stream flowing S. into the Gulf of Mexico, from Terre Bonne parish.

Petit-grain, *n.* An essential oil obtained from the fruit and leaves of the Seville orange, *Citrus bigaradia*.

Peti'tion, *n.* [Fr.; Lat. *petitio*, from *peto*, to beseech.] An asking or seeking; a request, entreaty, supplication, or prayer; appropriately, a solemn or formal supplication; a prayer, or branch of prayer, addressed by a person to the Supreme Being. — A formal request or supplication from an inferior to a superior; the paper containing a supplication or solicitation.

—*v. a.* To make a request to; to ask from; to solicit; particularly, to make supplication to, as to a superior for some favor or right.

Peti'tionarily, *adv.* By way of begging the question. (R.)

Peti'tionary, *a.* Supplicatory; coming with a petition. — Containing a petition or request.

Peti'tioner, *n.* One who presents a petition, either verbal or written.

Peti'tioning, *n.* Act of asking or soliciting; solicitation; supplication.

Petit Jean (zhong) River, in Arkansas, flows into the Arkansas river from Yell co.

Petit-maitre, (*mā'tr*), *n.* [Fr.] A spruce fellow that dangles about females; a fop; a coxcomb. — Webster

Peti'tony, *a.* [Lat. *petitorius*, from *petere*, to ask.] Petitioning; claiming the property of anything.

Petiveriaceæ, *n.* (Bot.) An order of plants, alliance *Sapindales*. DIAG. Apetalous flowers and a solitary carpel. They are under-shrubs or herbs, native of the W. Indies and tropical America. *P. alliacea*, the Guinea-hen weed of the W. Indies, has a strong garlic-like odor, and is excessively acrid; it is a reputed sudorific and emmenagogue, and is used in warm baths to restore motion to paralyzed limbs, and also as a remedy for toothache.

Petong', *n.* (Chem.) Chinese white copper, an alloy of copper and nickel.

Petoskey, in Michigan, a city of Emmet co., on Little Traverse Bay and G. R. & I. R. R. *Pop.* (1897) 4,100.

Petra, [Gr., a rock; Heb. *sela*, a rock.] (*Anc. Geog.*)

An ancient city of Arabia Petraea, situated in the Desert of Edom, about half way between the Dead Sea and the Arabian Gulf, 72 m. N.E. of Akabah, near Mt. Hor, and supposed to be the same as *Sela*, several times mentioned in Scriptures. Successively possessed by the Horim (*dwellers in caves*), the Edomites or Idumeans, the Nabatheans, and the Romans, it was finally destroyed by the Mohammedans, and its ruins were discovered by Burckhardt in 1812. These ruins stand in a small open irregular basin, about half a mile square, and are best approached by an extraordinary chasm or ravine, called the Sik, narrowing as it proceeds, till in some places the width is only 12 feet, while the rocky walls of red-sandstone tower to the height of 300 feet. All along the face of the rocky walls are rows of cave-tombs, hewn out of the solid stone, and ornamented with facades. These are also numerous elsewhere (see Fig. 181). Originally, they were probably dwellings of the living, and were afterwards abandoned, and then set apart as family-sepulchres. Among the principal ruins are *El-Khuzneh* ("the treasure-house"), (Fig. 2090), believed by the natives to contain, buried somewhere in its sacred inclosure, the treasures of Pharaoh. It directly faces the month of the gorge we have described, and was the great temple of the Petreans.

Petra, in Missouri, a post-village of Saline co., abt. 75 m. N.W. of Jefferson City.

Petrarch, (FRANCESCO PETRARCA,) (*pe'trark*.) One of the most illustrious poets and scholars of Italy, b. at Arezzo, 1304. His father, a friend of Dante, and, like him, an exile from Florence, settled afterwards at Avignon, and brought him up to the law, for which he had no relish. He studied at Montpellier and Bologna, and afterwards returned to Avignon, where his hopeless passion for the beautiful *LAURA*, *q. v.*, gave shape and color to the rest of his life. *P.* took part in the political affairs of his time, was the friend of popes and princes, and was employed in many important negotiations. He rendered very great service to literature and learning

by his diligent researches for, and collections of, ancient manuscripts and other remains; and by the gift of his books to the church of St. Mark, Venice, he became the founder of its famous library. He was the friend of Boccaccio, who shares with him the honor of reviving classical literature; and the friend of Rienzi, with whose enterprise, as tribune of Rome, he warmly sympathized. In 1341 *P.* received the highest testimony of the renown which he had acquired as poet and scholar, by being crowned as laureate in the capitol of Rome.

Fig. 2091. — TOMB OF PETRARCH.

P. was at Rome during the Jubilee of 1350; lived afterwards at Vacluse, Milan, Padua, Venice, and, in 1370, removed to Arqua, in the lovely Euganean Hills, where, after long-continued ill-health, he b. sitting among his books, July 18, 1374. *P.*'s works are partly in Italian and partly in Latin. The latter were those on which his reputation in his own day rested; but the former are those by which he is now most known. His Italian *Sonnets*, *Canzoni*, and *Triumphs*, all sweet, exquisite, glowing variations on one theme, *Laura*, have placed him as one of the most celebrated of poets. He modelled the Italian sonnet, and gave to it, and to other forms of lyrical poetry, not only an admirable polish of diction and melody, but a delicacy of poetic feeling which has hardly ever been equalled, and a play of rich fancy which, if it often degenerates into false wit, is as often delightfully and purely beautiful.

Petre'an, *a.* [From Gr. *petra*, a rock.] Pertaining to rock.

Petrel, *n.* [Fr., from Lat. *petrus*, probably in allusion to its walking on the sea, as St. Peter.] A genus of celebrated oceanic birds, family *Procellariæ*. The Stormy Petrel, *Thalassidroma leachi*, (Fig. 2092,) so well known and universally dreaded by sailors as the harbingers of a storm, are the least of all the web-footed birds, being only about six inches in length. The bill is half an inch long, hooked at the top; the nostrils are tubular. The upper parts of the plumage are black, sleek, and glossy, with bluish reflections; the brow, cheeks, and under parts are a sooty-brown; the legs are slender, black, and scarcely an inch in length from the knee-joint to the extremities of the toes. In the length of its wings and swiftness of flight it resembles the chimney-swallow. It is met with in every part of the ocean, diving or swimming, quite at ease and in security, over the heavy rolling waves of the most tempestuous sea, and yet it seems to foresee and fear the coming storm before the seamen can discover any appearance of its approach, flocking together and making a clamorous piercing cry, as if to warn the mariner of his danger. They feed on small marine animals and seeds of sea-weed, and appear very fond of fat and grease, to obtain which they will follow in the wake of ships for great distances. They breed in the fissures of rocks and the female lays two eggs. They fly rapidly, and generally close to the water, and when in pursuit of food they suspend themselves by extending their wings, and appear to run on the surface of the waves.

Fig. 2092. — STORMY PETREL.

Petres'cence, *n.* The state of being petrescent, or process of changing into stone.

Petres'cent, *a.* [From Gr. *petros*, a stone.] Converting into stone; changing into stony hardness.

Petrification, *n.* [Fr. *pétrification*.] (*Nat. Hist.*) A general term used to designate the conversion of vegetable or animal materials into a stony substance.

Petrifactive, *a.* Having power to convert vegetable or animal substances into stone. — Pertaining to petrification.

Petrific, *a.* Having power to convert into stone.

Petrificate, *v. a.* To petrify. (R.)

Petrification, *n.* [Fr.] Petrification. — Obduracy; callousness.

Francesco Petrarch

1304-1374

Petrify, *v. a.* [Gr. *petra*, and Lat. *facio*, to make.] To make or turn into stone, or stony substance, as an animal or vegetable substance. — To make callous or obdurate; to fix in amazement.

—*v. n.* To become stone, or of a stony hardness.

Petrine, *a.* Relating to St. Peter.

Petrographic, Petrographical, *a.* Pertaining to petrography.

Petrography, *n.* [Gr. *petra*, and *graphein*, to describe.] The art of writing on stone.

Petroleum, **PETROL**, **ROCK-OIL**, *n.* [Gr. *petra*, a rock, and *elaion*, oil.] A liquid inflammable substance of a dark color, exuding from the earth, and containing certain liquid and solid hydrocarbons, such as benzol, naphtha, eupion, paraffin, ethalin, and asphaltum, mixed together in a state of solution in different proportions. It varies considerably in density and color, according to its composition; some qualities being dark and thick like treacle, while others are perfectly limpid and of a light-brown tint. It is found in different parts of the world, but principally at Baku, on the Caspian Sea, where it has been used for lighting purposes from time immemorial; at Rangoon, in Burma; at Amunio, in Parma; in Bavaria; in the island of Trinidad; in the United States, and in Canada. The existence of *P.* about the head-waters of the Alleghany River in New York and Pennsylvania was known to the Indians and to the early settlers; and in consequence of the appearance of oil on their banks, two streams in Alleghany co., N. Y., and Venango co., Pa., received the name of *Oil Creek*; but the quantities collected were unimportant, and it was not known that by distillation and chemical treatment the quality of *P.* could be greatly improved. The credit of first distillation of *P.* seems to belong to Dr. Kier of Pittsburgh, who, in 1850, and on the indication of Prof. Booth, of Philadelphia, distilled the *P.* exuding from his salt-wells near Tarentum, on the Alleghany River, burned it in lamps of his invention, and opened business in Pittsburgh. In 1859, Col. E. L. Drake, of New Haven, bore at Titusville, on Oil Creek, the first wells, from which he obtained a supply of oil amounting to 1,000 gallons a day. This success gave rise to an oil fever, and wells were sunk by thousands, chiefly in the valley of the Alleghany from below Franklin up into Warren co., and the banks of French Creek. Since that time oil-wells have been discovered in many parts of Ohio, in Virginia, and other States, and *P.* is now annually exported from the U. S. in millions of barrels. *P.* differs greatly in composition, some samples containing solid paraffin and benzol in large quantities, while others contain none. *P.* is separated into its various products by careful distillation at different temperatures. The crude material is first heated in a retort to a temperature of about 100° Fahr.; this causes a light oil, having a strong odor, to pass over into the condenser. The residue is then distilled at about 120° to 160°, the result being burning oil. When this is distilled off, steam is forced into the retort, and a heavy oil, fit for lubricating purposes, comes over, a black tarry mass being left behind. The light oil is now used as mineral turpentine, and as a grease solvent. It is often of a dark color, which is easily removed by agitation, first with sulphuric acid and afterwards with soda-lye and water. In the case of the coal-oils (see **PARAFFIN OIL**), this light oil consists almost entirely of benzol, which is used as a source of aniline in the manufacture of the magenta and mauve dyes; the light *P.* oil, however, in the majority of instances, contains no benzol, and cannot be used for this purpose. The burning oil is also frequently colored; but experience seems to prove that the colored oil is possessed of a higher illuminating power than that which has been treated with sulphuric acid and soda-lye. The heavy lubricating oil, when cooled down to 30° Fahr., often yields paraffin in large quantities, which is separated by straining and pressure. The asphaltum remaining may be used for pavements, or mixed with grease as a lubricant for heavy machinery. The most important product is, however, the burning oil, which is now used as a cheap and efficient illuminating agent in nearly every household in this country. Certain samples contain notable proportions of the light oils, which, evaporating at ordinary temperatures, mixes with the air and forms an explosive mixture. As the operation of filling the lamps used with the oil is generally performed at night, with a light close at hand, many lamentable accidents occur, which would be avoided if the light oils were ever carefully extracted from the burning compound, as it is done by any honest manufacturer. *P.* is sold in very great quantities under the names of petroleum, naphtha, saxoline, lencaline, cazeline, belmontine, and a hundred other cognomens, more or less euphonic. Several theories as to the origin of *P.* have been offered, one being that it is a product of inorganic chemistry, another that it is of animal origin, arising from chemical change in the bodies of marine animals, a third that it is of vegetable origin. It seems probably due to distillation of both animal and vegetable organisms. The cause of the *P.* rising to the surface is easily accounted for by the infiltration of water, which, being heavier than the oil, naturally replaces it, causing it to rise to the surface, and exude from the soil. An average sample of *P.* contains, according to Mr. W. B. Tegetmeier, 20 per cent. of mineral turps, 50 per cent. of burning oil, 22 per cent. lubricating oil, and 8 per cent. of carbonaceous and tarry matter. *P.* in the crude state has been used by the Seneca Indians for ages past as a remedy for rheumatism, and has been used by the surgeons of the United States army for washing gangrenous wounds with very great success. When the light oil which first passes over in the dis-

tillation of *P.*, or of coal-gas, is rectified by a second distillation, it is sent into commerce under the name of *coal naphtha*. This coal naphtha may be further purified by shaking it with sulphuric acid, which removes several of the impurities, while the pure naphtha collects on the surface when the mixture is allowed to stand. When this is again distilled it yields the *rectified coal naphtha*. *P.* is by no means confined to the U. S., but has been found in various other parts of the earth, there being fields of commercial importance in Baku, Burma, Canada, Galicia, Peru, and Japan. Of these, the Baku field is the most formidable rival to the U. S. This lies on the W. shore of the Caspian Sea, and yields immense quantities of heavy oil, which gives only a small percentage of burning oil, though its cheapness renders its distillation profitable.

Petroleum Centre, in *Penn.*, a p. v. of Venango co.

Petrolin, *n.* (Chem.) A substance analogous to paraffine, obtained by distilling the petroleum of Rangoon.

Petrology, *n.* [Gr. *petra*, and *logos*, a discourse.] A treatise on rocks.

Petromyzonidae, *n. pl.* (Zool.) A family of fishes, belonging to the order of *Suckers* or *Cyclostomes*, and comprising the Lampreys and their allies. The American Sea Lamprey, *Petromyzon Americanus*, is from 2 to 3 ft. long behind, ending in a sharp tip. It ascends rivers, and piles up heaps of stones, among which it lays its eggs.

Petronius Arbiter, **TITUS**, a Roman poet, notorious for his licentiousness and obscenity, was born at Marselles, and lived at the court of Nero. He was, for a time, the favorite of the emperor, who made him master of his voluptuous banquets and revelries. When he finally fell a victim to the suspicions of the tyrant, and was condemned to death, he avoided the ignominy of a public execution by opening his veins as he sat in the bath conversing with his friends, A. D. 66. It is uncertain whether the book entitled *Satyricon* is the work of this or some other Petronius.

Petropolis. See **RIO JANEIRO**.

Petrosal, *a.* (Anat.) Resembling stone; having the hardness of stone; relating or belonging to the petrous portion of the temporal bone.

—*n.* The ear-capsular bone in a fish.

Petroselinum, *n.* [Gr. *petros*, rock, and *selinon*, parsley; in allusion to the habitation of the species.] (Bot.) A genus of plants, order *Apiaceæ*. They are European biennial herbs, with perfect umbels, few-leaved involucre, and many-leaved involucre. *P. sativum* is the common parsley of our gardens. The delicate green of its curled leaves has made it a favorite herb in garnishing and ornamenting dishes. See **FOOL'S PARSLEY**.

Petrosilex, *n.* [Lat., from *petra*, and *silex*, flint.] (Min.) A compact impure felspar.

Petrons, *a.* [From Lat. *petra*] Hard; resembling stone. (Anat.) Petrosal; having the hardness of stone.

Petrowsk, or **Petrowsk**, a town of Russia, on the Medvicta, 65 m. N.N.W. of Saratov; pop. 7,000.

Petrozavodsk, a fortified town of Russia, cap. of the govt. of Olonetz, on the Lake of Onega, 185 m. N.E. of St. Petersburg; pop. 8,000.

Petsh, or **PEK**, a town of European Turkey, in Albania, 73 m. E.N.E. of Scutari. *Manuf.* Arms. *Pop.* 12,000.

Pettidly, *adv.* Peevishly; pettishly.

Petticoat, *n.* [Fr. *petit*, small, petty, and Eng. *coat*.] A loose under-garment worn by females, and covering the lower limbs.

Petticoated, *a.* Having on, or wearing, a petticoat.

Pettifog, *v. n.* To have small or mean business, as a lawyer. (Colloq.)

Pettifogger, *n.* An inferior attorney or lawyer, who is employed in small or mean business.

Pettifoggery, *n.* The practice of a pettifogger; tricks; quibbles.

Pettily, *adv.* In a petty manner.

Pettiness, *n.* Smallness; littleness.

Pettis, in *Missouri*, a W. central co.; area, about 668 sq. m.; watered by La Mine river. *Surface*, mostly undulating prairie; soil, fertile. *Min.* Coal in large deposits. *Cap.* Sedalia. *Pop.* (1897) 37,300.

—A township of Platte co.

Pettish, *a.* Fretil; peevish.

Pettishly, *adv.* In a pet; with a freak of ill temper.

Pettishness, *n.* State or quality of being pettish; fretfulness; petulance; peevishness.

Pettitoes, *n. pl.* The feet of sucking pigs. — Feet; — used in contempt.

Petto, *n.* [It.] The breast.

In *petto*. In reserve or privacy.

Petty, *a.* Little; diminutive; inconsiderable. — Inferior; trifling; trivial.

Petty average. (Law.) Several petty charges which are borne partly by the ship and partly by the cargo, such as the expense of tonnage, beaconage, &c.

—*Petty constable*. In England, the ordinary constable, as distinguished from the high-constable of the hundred.

Petty, in *Illinois*, a township of Lawrence co.; pop. abt. 2,000.

Petty-rice, *n.* (Bot.) See **CHENOPODIUM**.

Petulance, Petulancy, *n.* [Fr.; Lat. *petulantia*.] State or quality of being petulant; freakish passion; peevishness; pettishness; sauciness.

Petulant, *a.* [Fr.; Lat. *petulans*, from *peto*, to go to, to attack.] Manifesting petulance; proceeding from pettishness. — Wanton; freakish in passion.

Petulantly, *adv.* With petulance; with saucy pertness.

Petunze, **Petunze**, *n.* (Min.) A felspathic rock containing an admixture of quartz, and used in China, when mixed with kaolin, for making porcelain.

Petzite, *n.* (Min.) A variety of Hessian or telluric silver, in which a part of the silver is replaced by gold.

Peucedanum, *n.* (Bot.) ¹ Grasswort, order *Apiaceæ*. The Masterwort (*P. ostracium*), has a stem 1-2 feet high, broad biternate leaves, and large flat umbels of whitish flowers. The root of Hog's-beenel or Sulphurwort (*P. officinale*) contains a crystalline principle called *peucedanine*.

Pen'cycle, *n.* (Chem.) A liquid found by the action of hydrochloric acid upon oil of turpentine, and distilled with quicklime.

Pev'ely, in *Missouri*, a post-village of Johnson co., abt. 28 m. S. by W. of St. Louis.

Pew, *n.* [Lat. *podium*, an elevated place.] An inclosed seat in a church.

—*v. a.* To furnish with pews.

Pewabic, (*pe-wau'bik*) in *Michigan*, a village of Ontonagon co., abt. 16 m. W. by S. of Ontonagon.

Pewamo, (*pe-wau'mo*) in *Michigan*, a post-village of Ionia co., abt. 45 m. E. of Grand Rapids.

Pewau'kee, in *Wisconsin*, a post-village and township of Waukesha county, about 19 miles west of Milwaukee.

Pewau'kee Lake, in *Wisconsin*, a small sheet of water in Waukesha co.; area, abt. 4 sq. m. From the immense number of small shells found in the sand of the shores, it was called by the Indians *Peewau'kee-weening*, or Lake of Shells.

Pe'wet, Pe'wee, Pe'wit, *n.* (Zool.) See **LAPWING**.

Pew-fellow, *n.* One who sits in the same pew.

Pewter, *n.* (Metal.) An alloy variously composed of different metals, but more usually of 4 parts tin and 1 lead.

—Vessels or utensils made of pewter.

Pezenas, (*pa-za-na'*) a town of France, dept. of Hérault, 25 m. S.W. of Montpellier; pop. 7,500.

Pe'iza, *n.* (Bot.) A genus of plants, order *Fungales*. See **ASCOMYCETES**.

Pex'ity, *n.* [From Lat. *pezus*, to comb.] The nap of cloth.

Pforzheim, (*fors'hime*) a town of Germany, in Baden, at the junction of the Wurm and the Nagold, 16 m. from Carlsruhe. *Manuf.* Linen, trinkets, and hardware articles. *Pop.* 8,264.

Phae'olite, *n.* [Gr. *phakós*, bean, and *lithos*, stone.] (Min.) A variety of chabasite, occurring in grayish-white or pinkish crystals at New York Island.

Phædon, (*fed'on*) a Greek philosopher of Elis, who flourished about 400 B. C., was originally a slave, but obtained his freedom by the interest of Socrates, whose disciple he became, and remained with him till his death. After this he settled at his native place, where he founded a school of philosophy.

Phæ'dra, (*Heroic Hist.*) A daughter of Minos and Pasiphaë, and the wife of Theseus. Having formed an illicit love for her husband's friend Hippolytus, who rejected her addresses, she on the death of her lover confessed her guilty affection, and in despair terminated her life by hanging.

Phædrus, (*fed'rus*) an elegant Latin poet, was a native of Thrace, and appears to have been the freedman of Augustus. Under Tiberius he was persecuted by Lejanus, to which circumstance he has alluded in his *Fables*, which are written with great purity of style.

Phænogamia, Phænogams, *n.* (Bot.) See **CRYPTOGAMIA**.

Phænogamons, *a* [Gr. *phæno*, to appear, and *gamos*, marriage.] Noting flowering plants.

Phæ'ton, (*fat'-ton*) [Gr., from *phætheron*, to shine.] (Myth.) According to Ovid, a son of the sun, or Phæbus. Venus became enamored of him, and entrusted him with the care of one of her temples. This favor of the goddess rendered him vain and led to his asking his father's permission to drive his chariot for one day. Phæbus represented the dangers to which this would expose him; but in vain. He undertook the aerial journey; and the explicit directions of his father were forgotten. No sooner had *P.* received the reins than he betrayed his ignorance of guiding the chariot. The flying horses became sensible of the confusion of their driver, and immediately departed from the usual track. *P.* started too late of his rashness; and already heaven and earth were threatened with a universal conflagration, when Jupiter, who had perceived the disorder of the horses, struck the rider with a thunderbolt, and hurled him headlong from heaven into the river Po. His body, consumed with fire, was found by the nymphs of the place.

—*n.* An open carriage like a chaise, on four wheels, and drawn by two horses.

Phæ'ton, *n.* *pl.* **Phæto'nidae**. (Zool.) The Tropic-bird, a gen. and fam. of the ord. *Natatores*, comprising birds characterized by a long bill, long wings, tail with central feathers extremely elongated, tarsi short. The genus *P.* is represented in this country by the Yellow-billed Tropic-bird, *P. flavirostris*, which is 30 inches long, and the wings 11 inches; the general color white, the wings banded with black.

Phagedæ'na, *n.* [Lat. *phagedæna*; Gr. *phagadaina*, from *phag-in*, to eat.] (Med.) An ulcer which rapidly eats and corrodes the neighboring parts. — A canine appetite; an almost insatiable hunger.

Phageden'ic, *a.* Pertaining to phagedæna; eating; corroding.

—*n.* (Med.) A substance used for destroying fungous granulations in ulcers, &c.

Phalacro'sis, *n.* [Gr. *phalakrosis*.] (Med.) Absence of hair, particularly at the top of, and behind, the head. It has of late been ascribed to bacteria, and treatment has been devised accordingly.

Phalæ'nidae, *n. pl.* (Zool.) The Geometrid family comprises moths whose larvæ seem to measure the surfaces over which they pass. The necessity of this sort

of movement results from the fact that they have only

ten legs; six true ones under the fore part of the body, and four prop-legs at the hind extremity; three intermediate pairs of prop-legs being wanting. Some, however, have 12 or 14 legs, but in such cases the additional prop-legs are too short to assist much in creeping, so that these also creep

Fig. 2093.—GEOMETER, OR SPAN-WORM.

like those above described. Geometrids live upon trees, and in most cases undergo their transformation upon or in the ground, which they reach by letting themselves down by a silken thread, which they spin from their mouth while descending. They are generally smooth, and when at rest, many of them stand on the two hind pairs of legs, with the body extended, and thus may be easily mistaken for a little twig. Often, when disturbed, they let themselves down, and, when no danger is apprehended, return to the tree again by the same thread by which they descended. In the perfect state these insects are mainly slender-bodied moths, with tapering antennæ, and large wings.

Phalan'gal, Phalan'geal, a. (Anat.) Relating to the small bones, or phalanges, which form the fingers and toes.

Phalan'ger, n.; pl. Phalangis'tidæ. (Zool.) A genus and family of Marsupial animals, varying in size from that of a mouse to that of a cat, and distinguished by having the second and third toes of the hind feet united as far as the last phalanx in a common cutaneous sheath. The *Phalangista Cuvieri* (Fig. 2094) may be taken as an example.

Fig. 2094.—LONG-EARED PHALANGER. (P. Cuvieri.)

Phalan'ges, n. pl. of PHALANX, q. v.

Phalan'gial, Phalan'gian, a. Having relation to a phalanx; phalangeal.

Phalan'gita, n. (Zool.) The Long-legs family, embracing tracheary arachnids, which are popularly known as Daddy-long-legs, or Harvest-men, and are at once distinguished by the round oval body and long slender legs, which are very easily detached.

Phalan'gium, n. (Zool.) The Shepherd Spider, a genus of Arachnids, including those in which all the legs are very long and slender; the tarsi sometimes consisting of more than 50 joints.

(Bot.) See CAMASSIA

Phalan'sterian, n. An advocate of Phalansterianism.

Phalan'sterianism, Phalan'sterism, n. The system of Fourier. See FOURIERISM.

Phalan'stery, n. See FOURIERISM.

Phalanx, (fal'anks), n.; pl. Lat. PHALANXES; pl. Eng. PHALANXES. [Gr. phalagx.] (Greek Antiq.) A body of troops among the ancient Greeks, armed with spears, and arranged in the form of a square. It first consisted of 4,000 men; but Philip of Macedon doubled that number, and it was afterwards quadrupled. In the Macedonian phalanx, the men stood close together, sometimes with their shields locked, in ranks of several men in depth, displaying in front a row of extended spears.

—Any body of troops or men formed in close array, or any combination of people distinguished for firmness and solidity of union.

(Anat.) The small bones which form the fingers and toes, so called because placed along side of each other like a phalanx.

Phalaris, a. a cruel tyrant of Agreantum, in Sicily, who acquired his power about 572 B. C., and was put to death by one of his own horrible devices, that of the brazen-bull, 556 B. C.

Phalaris, n. (Bot.) A gen. of grasses. *P. canariensis*, Canary Grass, is cultivated largely for its grain, which is employed as food for song-birds, under the name of Canary-seed. Its straw is also valued as fodder for horses.

Phalaro'pidæ, n. pl. (Zool.) The Phalarope family, including Grallatores birds which have the lateral groove of the bill extending nearly to the tip, toes with a lateral margin, the hinder with a feeble lobe, and the feathers of the breast compact. The genus *Phalaropus* has the membrane generally more or less scalloped at the joints.

Phal'lus, n. [Lat., from phallos, the penis.] (Bot.) A genus of the *Fungales*, of which *P. impudicus* is one of the most disgusting, on account both of its appearance and its smell.

Phals'bourg, a. town of Germany, in the department Lorraine, at the foot of the Vosges Mountains, 49 m. E. of Nancy. Pop. (1897) 5,960.

Phanerogam'ic, Phanerog'amous, a. See PHENOGAMOUS.

Phan'tascope, n. [Gr. phantasma, image, and skopein, to view.] (Optics.) The name given by the American Professor Locke to an apparatus for enabling persons to converge the optical axis of the eyes, or to look

cross-eyed, and thereby observe certain phenomena of binocular vision.

Phan'tasm, n. [Gr. phantasma, from phantazo, to make visible.] That which appears to the mind; the image of an external object; an idea or notion — An apparition; a spectre; a phantom; especially, an airy appearance.

Phantasmag'oria, Phantas'magory, n. [Gr. phantasma, and ágora, an assembly, from ageirein, to gather.] A MAGIC LANTERN. *q. v.*

Phantasmag'orial, Phantasmag'oric, a. Relating to phantasmagoria.

Phantas mascope, n. Same as PHANTASCOPE, *q. v.*

Phantasmatic'al, a. Pertaining to a phantasm.

Phantasmatog'raphy, n. [Gr. phantasma, phantasm, and graphê, description.] A description of celestial appearances, as the rainbow, &c.

Phan tom, n. [Fr. fantôme, from Gr. phantasma.] An apparition, a spectre; a fancied vision.

Phantomat'ic, a. Pertaining to a phantom.

Phaon, (fa'ion.) (Myth.) Boatman of Mitylene, in Lesbos, who received a small box of ointment from Venus, with which he rubbed himself, and became one of the most beautiful men of his age. Many were captivated with him, and, among others, Sappho, the celebrated poetess. Phaon at first appeared to return Sappho's passion, but soon, however, conceived a disdain for her, whereupon, the mortified poetess threw herself into the sea.

Phar'amand, a. mythical personage, who, according to many of the older historians, was the first king of France, and reigned at Treves, about A. D. 418. He is, however, supposed by others to have been only the general of an army, or the chief of a military society of Franks. To him is attributed also the celebrated Salic law, by which females were excluded from the succession to the throne.

Pharaoh, (fa'ro.) [Egypt. Phrah, the sun.] The name borne in the Bible by ten kings of Egypt; the best known of which are, the monarch to whom Joseph explained his dream, and who loaded him with honors; he who commenced the persecution of the Hebrews, and who put to death all the male children; and he who was summoned by Moses to permit of the departure of the Hebrew people, and who was afterwards drowned, with all his host, in the waters of the Red Sea.

Pha'raoh, Pha'raon, n. (Games.) Same as FARO, *q. v.*

Pharaon'ic, a. Relating to the Egyptian Pharaohs.

Pharisa'ic, Pharisa'ical, a. Pertaining to, or resembling the Pharisees.

—Making a show of religion without the spirit of it.

Pharisa'ically, adv. In the manner of Pharisees; hypocritically.

Phar'isism, n. The notions, doctrines, and conduct of the Pharisees, as a sect.

—Rigid observance of external forms of religion, without genuine piety; hypocrisy in religion.

Phar'isee, n. [Heb. parush, separated, from parash, to cleave, divide, separate.] A sect among the Jews, whose name is derived from *pharas*, a Hebrew word signifying *separated* or *set apart*, because they separated themselves from the rest of the nation, and pretended to the distinction of peculiar holiness. The time of their origin is not accurately determined. They are not mentioned in the Old Testament, but are thought by some to be the same as the Assideans of the Books of Maccabees. Besides being strict interpreters of the written law, their sect superinduced upon it what they called the tradition of the elders, and asserted that Moses delivered an oral law as a supplement to that of the Scriptures. They are frequently reproached in the Gospels with so explaining the latter by the former, as in effect frequently to destroy the validity of the written law. They also observed many outward ceremonies with a studied ostentation, which gained for them the veneration of the multitude. They maintained, in opposition to the Sadducees, the popular doctrine of the resurrection, with which they mingled some wild notions touching the transmigration of souls.

Phar'iseism, n. Pharisaism.

Pharmaceu'tic, PHARMACEUTICAL, a. [Gr. pharmakēutikos, from pharmakēnē, to use medicine.] Pertaining to the knowledge or art of pharmacy.

Pharmaceu'tically, adv. In the manner of pharmacy.

Pharmacen'tics, n. sing. The science of preparing drugs or medicine.

Pharmacen'tist, n. An apothecary; a person skilled in pharmacy.

Phar'macist, n. A pharmacist.

Pharmacodyn'amics, n. sing. [Gr. pharmakon, medicine, and dunamis, power.] (Med.) A division of pharmacology, which considers the effects and uses of medicines.

Pharmac'olite, n. [Gr. pharmakon, medicine, and lithos, a stone.] (Min.) A hydrous arseniate of lime, found with arsenical ores of cobalt and silver.

Pharmacol'ogist, n. One who writes upon drugs, or is skilled in their preparation.

Pharmacol'ogy, n. [Gr. pharmakon, a medicine, and logos, discourse.] The doctrine, or science, or knowledge of drugs, or the art of preparing medicines. — A treatise on the art of preparing medicines.

Phar'macon, n. [Gr.] A medicine; a poison.

Pharmaceu'cia, n. [Gr. pharmakon, medicine, and poieo, to make.] A book or treatise describing the preparations of the several kinds of medicines, with their uses and manner of application.

Pharmacop'olist, n. [Gr. pharmakopōles, from pharmakon, medicine, and pōlein to sell.] An apothecary; one who sells medicines.

Phar'macy, n. [Gr. pharmakeia, from pharmakon, medicine.] The art or practice of preparing, preserving, and compounding substances for the purpose of medicine; the occupation of an apothecary.

Pharnaces, (far'na-sees), king of Pontus, was the son of Mithridates V., and grandfather of Mithridates the Great. He made war against the king of Pergamus, and reigned between 190–157 B. C.

PHARNACES, king of the Cimmerian Bosphorus, was son of Mithridates VI., king of Pontus, and revolted with the army against his father, who slew himself in despair, B. C. 63. Pharnaces cultivated the friendship of the Romans, and, in the war between Cæsar and Pompey, he remained neutral; but Cæsar declared war against and defeated him, B. C. 47, after a struggle of three days only. It was on that occasion that Cæsar wrote to the Roman senate, in allusion to his easy triumph: "I came, saw, and conquered" (*Veni, vidi, vici*). Pharnaces D. shortly afterward.

Pha'ro, n. Same as FARO, *q. v.*

Pha'ros, n. [Gr.] A light-house or tower which anciently stood on a small island of that name, adjoining the Egyptian shore, over against Alexandria — Any light-house for the direction of seamen; a watch-tower; a beacon.

Pharsa'lia, (anc. Phersalus, now Fersala, or Satalge), a town of Thessaly, 18 m. S. of Larissa, and rendered famous as the place where Pompey was defeated by Julius Cæsar, B. C. 48.

Pharsa'lia, in Mississippi, a village of Panola co., abt 150 m. N. of Jackson.

Pharsalia, in New York, a post-township of Chango co.

Pharyn'geal, a. Pertaining to the pharynx.

Pharyn'geals, n. pl. (Anat.) The muscles, vessels, and nerves of the pharynx.

Pharyngit'is, n. (Med.) Inflammation of the pharynx.

Pharyngo'graphy, Pharyngol'ogy, n. [Gr. pharynx, and graphen, to write, logos, a discourse.] (Anat.) A description of the pharynx.

Pharyngot'omy, n. [Fr. pharyngotomie, from Gr. pharynx, pharyngos, and temnein, to cut.] (Surg.) An incision made in the pharynx for the purpose of removing obstructions, opening abscesses, &c.

Pharynx, (far'inks), n. [Gr. pharynx, pharyngos.] (Anat.) A species of musculo-membranous symmetrical canal, on the median line, irregularly funnel-shaped, and situate between the base of the cranium and the oesophagus, in front of the vertebral column.

Phase, (fāz), n.; pl. PHASES. [Fr.; Gr. phasis, from phainomai, to appear.] That which is exhibited to the eye; appearance which anything manifests, especially one among varying aspects of the same object.

(Astron.) Aspect or appearance with regard to form of illuminated disc at any time in a cycle of changes: — said of the moon or a planet. — *Phases of the Moon.* The constant and regular change of the illuminated surface of the moon from a thin crescent to a circle, and *vice versa*, and a corresponding change in the time of her appearance above the horizon, depends upon the position of the moon relative to the earth and the sun, for it is only the half of the moon facing the sun that is illuminated by his rays, and the whole of this illuminated portion can only be seen from the earth when the sun, earth, and moon are in a straight line, *the line of Syzygies* and the earth is between the sun and the moon. When the moon is in the line of the Syzygies, but between the earth and the sun, no part of her illuminated disc can be seen from the earth. In the former case the moon is said to be *full*, and in the latter, *new*. A few hours after a *new moon*, the moon appears a little to the east of the sun, as a thin crescent, with the horns pointing towards the east, and as she increases her angular distance from the sun at the rate of about 12° daily, the crescent of light becomes broader, till, after the lapse of a little more than seven days, at which time she is 90° in advance of the sun, she presents the appearance of a semicircle of light. The moon is then said to have completed her *first quarter*. Continuing her course, she becomes *gibbous* (*q. v.*); and at the 15th or 16th day from new moon, attains a position of 180° in advance of the sun, again appearing gibbous; and after a third period of more than seven days, reaches a point 90° west of him, and enters her *last quarter*. Here, again, she appears as a semicircle of light, the illuminated portion being that which was not illuminated at the end of the first quarter. The moon, now rapidly approaching the sun, resumes the crescent form, but this time with the horns pointing westward, the crescent becoming thinner and thinner, till the moon reaches the position of new moon, and disappears. From *full moon* to *new moon*, the moon is said to be *waning*; and from *new moon* to *full moon*, *waxing*.

(Physics.) In any doctrine of the vibrations of particles, the position of a particle with reference to the entire range of its vibration.

(Min.) Transparent green quartz.

Phase'oleæ, n. pl. (Bot.) A tribe of plants, order *Fabaceæ*, characterized by having filaments all or 9, connate; legume continuous, bivalve; cotyledons fleshy; leaves usually pinnately trifoliate.

Phase'olus, n. [Lat.] (Bot.) The Beans, a genus of plants, tribe *Phaseoleæ*, mostly of climbing habit, the leaves usually with thin, largish leaflets, and the flowers remarkable for the keel terminating in a twisted point. There are numerous species, natives of hot climates, and many of them have long been cultivated as food for man. See BEAN.

Phasia'niæ, n. pl. (Zool.) The Pheasant family, order *Rasores*, comprising birds which have the legs,

toes, and nasal fosse bare, the tarsus in the male with one or more spurs, the hind-toe elevated above the others, and the tail-feathers more than twelve. It includes the Turkeys, Peacocks, Guinea Fowls, Jungle Fowls, Domestic Fowls, and Pheasants. All except the Turkeys are indigenous to the Old World, although many of them are now widely distributed over the globe. — The genus *Phasianus*, or Pheasants, has the tail excessively long, the feathers of which overlap like tiles. All the species are in very high esteem for the table. The Common Pheasant, *P. colchicus*, of Europe, is 32 inches long, the head and neck of metallic lustre, and the rest of the plumage golden-fawn color, with markings of green. The female is smaller and brownish. This bird, now found throughout temperate Europe, is said to have been brought from the banks of the Phasis, a river of Colchis. — The Golden Pheasant, *P. pictus*, of China (Fig. 2095), so remarkable for its magnificent plumage, has a golden-colored crest, the neck orange speckled with black, the back green, the rump yellow, the lower parts and wings red, the latter with a blue spot, and the long tail brown spotted with gray.

Fig. 2095. — GOLDEN PHEASANT, (*Phasianus pictus*.)

Phasis, *n.*; *pl.* PHASES. Same as PHASE, *q. v.*

Phasis, (*fai'sis*), a river of Asiatic Russia, anciently considered the boundary between Asia and Europe, rising in a spur of the Caucasus, and after a W. course, entering the Black Sea at its E. extremity, near Poti, 34 m. N. of Batoum. It gives its name to the European pheasant.

Phasm, (*fāzm*), **Phasma**, (*fāz'ma*), *n.* [Gr. *phasma*.] A PHANTASM, *q. v.* (R.)

Phasmidae, (*fāz'mi-de*), *n. pl.* (Zool.) The Walking-stick family, comprising orthopterous insects, which are at once distinguished by their very close resemblance to vegetable structure. Some are found in N. America, but they inhabit principally in warm regions. Some of the tropical species are very large, even a foot long. — (Tmney.) — See PHYLLIUM.

Phas'sachate, *n.* [Gr. *phassa*, the wood-pigeon, and *achates*, the agate.] (Min.) The lead-colored agate.

Pheasant, (*fēz'ant*), *n.* [Fr. *faisan*.] (Zool.) See PHASIANIDÆ.

Pheasant Branch, in Wisconsin, a post-village of Dane co., abt. 8 m. W. of Madison.

Pheasant Island, in the Bidassoa River, between France and Spain, where the treaty of the Pyrenees was concluded in 1659.

Pheasantry, (*fēz'ant-rī*), *n.* A place for rearing and keeping pheasants.

Phese, (*fēz*), *n.* Same as FEAZE, *q. v.*

—*v. a.* To comb; to fleece; to curry, as an animal's coat. —To belabor; to chastise; also, to feaze.

Phesy, *a.* Fretful; cross; peevish; petulant.

Phelloplasties, *n. sing.* [Gr. *phellos*, cork, and *plassein*, to mould.] The art of making models in cork.

Phelps, in Missouri, a S.E. central co.; area, abt. 600 sq. m. Rivers, Gasconade, Piney, and Maramec rivers. Surface, uneven and hilly; soil, fertile, and well adapted to the cultivation of Indian corn and stock-raising. Min. Copper, iron, and lead. Cap. Rolla.

—A village of Lawrence co., abt. 34 m. W. of Springfield.

Phelps, in New York, a post-township of Ontario county.

Phenacite, (*fēn'a-sīt*), *n.* [Gr. *phenax*, *phenakos*, an impostor.] (Min.) A mineral resembling quartz, and chiefly composed of silica and glucina.

Phenakism, (*fēn'a-kīzm*), *n.* [Gr. *phenakismos*, deceit.] The methodical uttering of something contrary to that which is mentally intended.

Phenakiscope, *n.* [Gr. *phenakismos*, deceit, and *skopein*, to see.] A philosophical toy, which illustrates the principle of the persistence of impressions on the retina of the eye in a very ingenious manner.

Phengite, (*fēn'jīt*), *n.* [Fr.; Lat. *phengitis*; Gr. *phengites*, from *phengen*, to shine.] (Min.) A variety of mica.

Phenic Acid, *n.* (Chem.) See CARBOLIC ACID.

Phenician, (*fē-nish'an*), *n.* [Written also PHENICIAN.] (Geog.) A native or inhabitant of Phenicia.

—*a.* Pertaining or having reference to Phenicia.

Phenicine, (*fēn'i-sīn*), *n.* [Fr., from Gr. *phenax*, an impostor.] (Chem.) The purple powder which is precipitated when sulphuric solution of indigo is diluted with water. It appears to be hydrate of indigo.

Phenyl Group, *n.* (Chem.) Phenyl (C_6H_5) is an organic radical, which has not yet been isolated. Its most important compounds are, 1. Carbolic or Phenic Acid, known also as Phenol, Hydrated Oxide of Phenyl, and Phenyl-alcohol. (See CARBOLIC ACID). 2. Hydride of Phenyl, known also as Benzole, Benzine, and Phene; (see BENZOLE). 3. Phenylamine, or Phenylia, better known under the name of ANILINE, *q. v.* 4. Trinitrophenic Acid, known also as Picnic Acid, and CARBAZOTIC ACID, *q. v.*

Phenix, (*fēniks*), *n.* See PHENIX.

Phenix, or PHENIX, in Illinois, a township of Henry co.

Phenom'enal, *a.* Pertaining to a phenomenon, or appearance.

Phenom'enally, *adv.* As a phenomenon; after the manner of a phenomenon.

Phenomenology, *n.* [Gr. *phainomenon*, and *logos*.] A description of phenomena; a history of phenomena.

Phenom'enon, *n.*; *pl.* PHENOMENA. [Gr. *phainomenon*, from *phainomai*, to appear.] An appearance; anything visible; whatever is presented to the eye by observation or experiment, or whatever is discovered to exist; as, *phenomena* of heat, *phenomena* of imagination. — Occasionally, a singular or unusual appearance, or an appearance whose cause cannot be at once accounted for. — In mental philosophy, the term is applied to the various and changing states of the mind.

Pheon, *n.* (Her.) The barbed head of a dart. It is represented as engraved on the inner side, and its position is with the point downwards, unless otherwise blazoned.

Phial, (*fī'al*), *n.* [Lat. *phala*; Gr. *phialē*.] A small glass vessel used for holding liquors and medicines. — See VIAL.

—*v. a.* To place or keep in a phial.

Phialia, in Palestine. See BANIAS.

Phidias, the great Greek sculptor, was b. at Athens, probably between 490–480 B. C. Little is certainly ascertained about the circumstances of his life. He began to distinguish himself about 464, and was employed in public works at Athens under the administration of Cimon. He was one of the most intimate friends of Pericles, under whose rule he was appointed director of all the great temples and monuments which were to be erected in the city. Of these the most important were the Parthenon, or temple of Athena, on the Acropolis, and the Propylæa. He executed a colossal statue of the goddess for the interior of the temple with his own hand. The well-known *Elgin Marbles* of the British Museum were the sculptured decorations of that unrivalled temple. P. spent some years at Olympia, and there he executed the most magnificent of all his works — the statue of the Olympian Zeus. Like the Athena, it was of ivory and gold, was nearly 60 feet in height, although a seated figure, and was deemed the greatest production of Greek art. It was destroyed by fire at Constantinople, whether it had been carried by the Emperor Theodosius. P. was charged with peculation, and when the charge broke down, he was accused of impiety on the ground of having introduced portraits of himself and Pericles on the shield of Athena. According to the generally received account he was thrown into prison, and d. there, B. C. 432. This attack was made on him as the friend of Pericles, whom his enemies sought to wound indirectly. The prevailing characteristic of the works of P. appears to have been an ideal sublimity of form which has never since been equalled.

Philadelphia'ceæ, *n. pl.* [From *Philadelphus*, one of the genera.] (Bot.) An order of plants, alliance *Grossales*. DIAG. Capsular fruit, axile placentæ, disunited styles, and valvate calyx. There are 4 genera, and 25 species, natives of N. America, S. Europe, Japan, and India. See PHILADELPHUS.

Philadelph'ia, [Gr. *phileo*, I love, and *adelphos*, a brother.] A town of Asia Minor. See ALA SHEHR.

Philadelphia, The metropolis of the State of Pennsylvania, the third city in the U. S., and the ninth in the world in population, is situated between the Delaware and Schuylkill rivers, extending to their point of junction, 96 m. by water route from the Atlantic, 87 m. S. W. of New York city, 136 m. N. E. of Washington, Lat. 39° 57' N., Lon. 75° 10' W. The surface is generally level, though rising gradually toward the N., the city limits being the same as those of the county, and embracing an area of 129 sq. m., the city being 22 m. in extreme length, and from 5 to 10 m. in width. About one-eighth of this area is closely built

Fig. 2096. — THE OLD STATE HOUSE.

upon, while in the rural sections are a number of partly-detached towns and villages, and a multitude of handsome suburban residences. The area of P. was until recently greater than that of any city in the U. S. except New Orleans, but late accessions of territory by Chicago and New York have given them a larger area. West Philadelphia, the section west of the Schuylkill, once a small suburb, is now a large and thickly settled portion of the city. Germantown, Manayunk, and Frankford form its most important suburbs. They have large and growing populations and many handsome residences. — *Plan*. The city was originally laid

out in the form of a parallelogram, with streets extending from river to river, and others crossing them at right angles, its extent being about 2 m. E. and W., and 1 m. N. and S. Market Street, running E. and W., and Broad Street, running N. and S., divided the city into 4 nearly equal portions. For a long time, however, the occupied portion of the city lay near the Delaware, its westward extension taking place but slowly. The original plan has been somewhat closely adhered to in the construction of the newer portions, the only diagonal streets of importance being old country roads which have been invaded by the expansion of the municipal limits. The principal streets average from 50 to 80 ft. in width. Market Street, however, is 100 ft. wide, and Spring Garden Street, Girard Avenue, and others of the new streets are of equal or greater width. Of the north and south streets, Broad Street, 113 ft. wide, opened for a length of 12 m., and paved with asphalt through most of its length, forms one of the finest and most spacious avenues in the U. S., forming a magnificent avenue for carriages and processions. There are on the city plan about 2,000 m. of streets, of which more than 1,300 m. are paved. The old cobblestone pavements have nearly disappeared, being replaced by Belgian block, asphalt, and vitrified brick pavements, and P. is to-day one of the best-paved cities in the U. S. The provision for rapid movement through this widely-extended area is unsurpassed, nearly every one of the main streets having its electric railway, some of which extend far into the suburban districts and for many miles into the adjoining counties. In addition, the steam railroads make their way, largely by elevated or depressed tracks, to the very center of the city, giving rapid access from all points to the vicinity of the City Hall, and providing terminal stations with scarce an equal for size, convenience, and attractiveness in the world. The total length of passenger railways within the city limits is

Fig. 2097. — MASONIC TEMPLE.

more than 350 m., and of steam railroads 145 m. — *Dwellings*. P. is notably a "city of homes," in which respect it is doubtful if it has its equal in the world. The tenement house, so common elsewhere, is almost absent from its limits, the rule being one house for one family, and no city elsewhere possessing so many comfortable single residences, largely owned by their occupants, great numbers of them being neat two-story structures, each with its bath-room and other modern conveniences. These are mainly built of brick, the long rows of red-brick houses giving the city a monotonous aspect. Of late years, however, other materials have been largely employed, and the architecture has varied, so that in its business and newer residence streets P. presents numerous examples of striking and effective architecture. This is notably the case with its public edifices. In 1890 the people of P. dwelt in 187,000 houses, a number which has since been added to at the rate of 8,000 to 10,000 yearly, the result being that no other city in the world contains so many comfortable single residences. In the lighting of the streets electricity is rapidly replacing gas, there being more than 5,000 arc lights within the city limits. — *Public Buildings*. P. is rich in public and business edifices of fine and often imposing architecture. One of the most striking of these is Girard College, a magnificent example of Corinthian architecture, than which ancient Greece had nothing superior to show. (See GIRARD, and Fig. 1160). The Custom House and Sub-Treasury (formerly the U. S. Bank) is a chaste specimen of Doric architecture, modelled on the Parthenon (Fig. 2102). The City Hall, a great marble edifice in the center of the city, erected at a cost of about \$20,000,000, is the largest municipal edifice in America, and the loftiest example of architecture in the world, its height to the top of the Penn statue, which crowns its dome, being 573 ft. The Post Office, of granite, has no superior as a postal edifice; while its U. S. Mint, whose erection began in 1897, is unequalled in its facilities for its special pur-

pose. The State House (Fig. 2096)—“the cradle of American liberty”—a plain brick edifice of antique aspect, yet the most notable building in the U. S., is situated on the Chestnut Street front of Independence Square, and consists of an oblong, two-storied structure, surmounted by a spire furnished with a clock and bell. On its first floor is INDEPENDENCE. ALL, a large apartment decorated with quaint carvings, adorned with pictures of famous Americans, and containing many of the chairs used by the Congress of 1776, when from this Hall issued the memorable Declaration of American Independence. In this edifice is kept the most sacred of American treasures, the LIBERTY BELL, and one of its rooms is used as a museum of colonial relics. Other historical monuments are Carpenters' Hall, in which the First Colonial Congress sat; the William Penn Mansion, now removed to Fairmount Park; Christ Church, in which Washington worshipped when President; the Old Swedes' Church, a memento of the early colonial days, and others of less interest. Among the notable edifices of later erection may be named the Masonic Temple, an imposing granite structure without a peer among temples of the order; the Academy of the Fine Arts, containing the pioneer art collection of America; the Academy of Natural Sciences, possessing the oldest and one of the most extensive of natural history museums in this country; the massive Doric structure of the Ridgway Library, the U. S. Naval Asylum, the magnificent Pennsylvania and Reading railroad stations, the Bourse Building, Wagner Institute of Science, Drexel Institute, the buildings of the University of Pennsylvania, and Memorial and Horticultural Halls in Fairmount Park, two handsome souvenirs of the Centennial Exhibition. P. is liberally supplied with theaters and places of public amusement. Of these the Philadelphia Academy of Music is one of the first edifices of its kind in the U. S. The hotels, including the Continental, Girard, Lafayette, Aldine, Colonnade, Walton, Stratford, &c., are among the best conducted in the Union. Many of the public and private edifices are very attractive, including the Union League and other club buildings, many handsome banking, newspaper and other business edifices, libraries, hospitals, office buildings, &c. In many of these edifices the recent custom of building lofty iron-framed structures has been followed, and P. possesses many striking examples of this class of edifices, all of them far overtopped by the lofty spire of the City Hall. The ecclesiastical architecture of the city presents many striking examples of architecture, such as the Roman Catholic Cathedral, the Jewish Synagogue, Rodef Shalom, St. Mark's (Prot. Episcopal), Keneseth Israel Synagogue, Grace Baptist Church, and numerous others. The environs of the city comprise many handsome cemeteries, such as Laurel Hill, Woodland, Mount Vernon, Mount Moriah, Glenwood, &c. Of the buildings connected with the social wants of the community are the gas and water-works, prisons, Almshouse, House of Correction, &c. The institutions devoted to benevolent purposes include the Pennsylvania, Episcopal, German, St. Joseph's, City, Philadelphia, University, Jefferson, Jewish, Presbyterian, Germantown, Orthopedic, and Woman's Hospitals; Will's Hospital for the treatment of the eye, Preston Retreat, or Lying-in Hospital, houses of industry, several dispensaries, asylums for the insane and feeble-minded, Blind Asylum, Widows' Asylum, Christ Church Hospital, Burd Asylum, Deaf and Dumb Asylum, Colored Orphan Asylum, Union Benevolent Association, Western House of Employment, News Boys' Home, Humane Society, Eye and Ear Infirmary, Magdalen Asylum, House of the Good Shepherd, and numerous other charitable and philanthropic institutions. The public establishments applying to the intellectual and artistic requirements of the Philadelphians are on a corresponding scale of magnitude and efficiency. The University of Pennsylvania, possessing the oldest medical college in the U. S., founded in 1765, has long been celebrated for the superior advantages it offers to students from all quarters of the Union. The Jefferson Medical College is a younger, but widely known institution. The Woman's, Hahnemann, Medical-Chirurgical, and other medical colleges, the Philadelphia College of Pharmacy, and several dental colleges add to the advantages offered by the city for professional education.—*Libraries, Museums, &c.* P. possesses the oldest public library in America, the Philadelphia Library, founded by Benjamin Franklin, and incorporated in 1742, and containing about 175,000 volumes. The imposing Ridgway Library building, with its contents, is a branch of this institution. The Mercantile Library possesses approximately an equal number of volumes, though much less rich in treasures of the literary past. The Public Library of Philadelphia, of late origin, has already

gained the largest annual circulation of any public library in the country. The city is about to erect for it a \$1,000,000 building, and it has a valuable endowment left by the will of the late George S. Pepper. There are many smaller libraries, and several valuable scientific and professional ones, such as those of the Franklin Institute, the Academy of Natural Sciences, the Philosophical Society, the College of Physicians, the Pennsylvania Historical Society, the Law Association, the University of Pennsylvania, &c. Of the museums and art collections of older date many be named those of the Franklin Institute, the Academy of Natural Sciences, and the Academy of the Fine Arts. More recent are the Museum of Industrial Art and the gallery of paintings in Memorial Hall; the Museums of Pathology and Archaeology, at the University; the Builders' Exchange and Bourse museums of manufactures; and the recent institution known under the collective name of the Philadelphia Museums, and comprising a Commercial, an Economic, and an Educational Museum. The two former of these are displayed, and present a collection of raw and manufactured

Fig. 2098.—WASHINGTON MONUMENT, FAIRMOUNT PARK.
Erected by the Society of the Cincinnati, and dedicated May 15, 1897.

materials nowhere surpassed, and looked upon as of national importance. The collection of educational material is no less important and comprehensive. These invaluable collections will probably soon be installed in a building expressly erected for them by the city.—*Parks.* The city is abundantly provided with small parks. Of these William Penn provided for 5 in the original plan (of which the central one is now occupied by the City Hall). Several others were subsequently added, and recently 26 others, with a total area of 477 acres, have been laid out in all parts of the city. To these must be added the famous Fairmount Park, of nearly 3,000 acres in extent, which for picturesque beauty has no counterpart among the parks of the world. Through its midst, for 5 m., flows the Schuylkill river, bordered by attractive bluffs and ravines, while in its Wissahickon extension it possesses miles of scenery as wild and grand as that of a mountain ravine. This great pleasure ground has 150 m. of carriage and footways, is abundantly wooded, ornamented with many fine examples of art, chief among them being the costly and magnificent statue of Wash-

ington donated by the Society of the Cincinnati, and possesses the handsome Memorial and Horticultural Halls, the latter surrounded by a handsome landscape garden and containing a remarkably fine collection of tropical and semi-tropical plants, forming probably the most complete public conservatory in the country.—*Gas and Water.* P. owns its own gas-works, which are extensive, but not very economically administered. The daily manufacturing capacity of the works is about 20,000,000 cubic ft. Its water supply is principally drawn from the Delaware River, on whose banks a system of slow sand filtration has been recently introduced, the capacity of the system being nearly 400,000,000 gallons daily.—*Navigation.* The facilities for navigation possessed by the city are excellent, the Delaware having a frontage of 20 m. within the city limits, of which more than 5 m. are occupied by continuous wharves. On the Schuylkill to Fairmount Dam there are 8 m. of navigable water, and 4 m. of wharfage on the 2 sides of the stream. The Delaware is broad and deep opposite the city, and the islands which formerly occupied the center of the river have been removed, greatly improving the harbor facilities. The wharf lines are in process of extension into the stream, deepening the water at the pier heads, and affording wharfage for the largest vessels. The shoals of the Delaware, which prevent heavily loaded vessels of large tonnage from reaching the city, are being removed, with the purpose of providing a low-tide channel of 26 ft. throughout its course. The Schuylkill is crossed by about 18 bridges, some of them strikingly handsome, while a railroad bridge spans the Delaware in the upper section of the city.—*Commerce.* The facilities for ocean navigation, and the many railroads which enter the city, notably the extensive Pennsylvania Railroad and its branches, present highly favorable opportunities for commercial activity, and P. possesses a large and important internal and foreign trade. At one time its commerce was the most extensive of any city of the country, and though this is no longer the case, it still possesses a commerce, foreign and domestic, of nearly \$100,000,000. The coal, petroleum, and grain trade are very extensive; the city is connected by lines of steamship with the principal Atlantic and Gulf ports, and with Liverpool and other European ports; while the Pennsylvania Railroad gives it direct communication, via Pittsburg, with the Mississippi valley, and enables it to extend its trade throughout the wide West. The Reading and Lehigh Valley Railroads supply iron and coal in cheap abundance, to which fact is due the location of a U. S. navy yard at League Island, at the mouth of the Schuylkill.—*Manufactures.* It is, however, rather as a manufacturing than as a commercial city that P. stands prominent, it being one of the leading manufacturing cities of the world, while almost every imaginable class of goods is produced within its limits. The value of the annual

product is fully \$600,000,000, and the capital employed in manufacture more than \$300,000,000. This city is the greatest center of the carpet manufacture in the world, and it has the largest of all locomotive works, and the finest and most extensive plant for construction of war vessels on the Western Continent. Of the substances produced, the most prominent are iron and steel goods, woollen, worsted, and upholstery fabrics, and refined sugar, one-third of all the sugar sent to the Atlantic ports being landed here. P. also receives over 40 per cent. of all the petroleum exported from the country, and has very extensive refining factories.—*Educ.* The facilities for education are very great, P. possessing one of the best systems of public schools in the Union, and with abundant provision for high, normal, and industrial education. Over \$10,000,000 are invested in

school property, while, in addition to the public school system, there are numerous endowed educational institutions, including the Girard College, Drexel Industrial Institute, Cahill Roman Catholic High School, the schools of the Franklin Institute, Spring Garden Institute, and Industrial Arts Institution; the School of Design for Women, and the Academy of Fine Arts school of art; Temple College, Wagner Institute of Science, the Williamson Free School of Industrial Arts (outside the city limits), numerous private schools, theological seminaries and professional schools, and to crown the educational system, the University of Pennsylvania, instituted as a college in 1765, and now one of the most flourishing educational institutions in the country, with about 250 instructors, 2,750 students, and a library of 135,000 volumes.—*Govt.* The city government is largely directed by the mayor through various departments, while the legislative branch consists of a select council of 35 members (one for each ward), elected for 3 years, and a common council, elected for 2 years. The judiciary embraces 12 judges of the courts of common pleas, and judges of the orphans' courts

each elected for 10 years.—*Hist.* *P.* was located and planned by William Penn, as the chief city of his province of Pennsylvania, and was first settled by a colony of English "Friends." The name, which signifies *Brotherly Love*, was given by Penn, both in reference to the ancient city of the same name in Asia Minor and as an expression of his religious sentiments. In 1701, he granted the town a charter of privileges which constituted it a city. It early became a place of importance, and long remained the leading city in the U. S. Franklin, who dwelt in it during most of the 18th century, originated many of its institutions, such as its library, fire department, &c. The First Continental Congress met here in 1774, and Congress continued to sit there during most of the Revolution, though of course absent

Fig. 2102.—CUSTOM HOUSE.

during the interval of British occupation, from Sept., 1777, to June, 1778. *P.* was the seat of the U. S. government from 1790 to 1800. The Bank of Pennsylvania was established in 1780, the U. S. Mint in 1792, the U. S. Bank about the same time, the Philadelphia Agricultural Society in 1785 and the Pennsylvania Horticultural Society in 1827, both being the earliest of their kind in this country. Of late events may be named the Centennial Exhibition of 1876, the celebration of the adoption of the Constitution in 1887, and the Peace Jubilee of 1898. *Pop.*, 1890, 1,064,964; 1900, 1,293,697.

Philadel'phia, in Iowa, a village of Van Buren co., about 8 m. N. of Keosauque.

Philadel'phia, in Mississippi, a post-village, cap. of Neshoba co., about 80 m. E.N.E. of Jackson.

Philadel'phia, in Missouri, a post-village of Marion co., abt. 95 m. N.N.E. of Jefferson City.

Philadel'phia, in New York, a post-village and township of Jefferson county, about 20 miles north-east of Watertown.

Philadel'phian, *a.* [Gr. *philadelphos*, from *philos*, friendly, loving, and *adelphos*, brother.] (*Geog.*) Pertaining to Philadelphia, or to Ptolemy Philadelphus.

—*n.* A native or inhabitant of Philadelphia. (*Ecol. Hist.*) One of the Family of Love. See LOVE (FAMILY OF).

Philadelphus, (*fil-á-del-fus*), *n.* (So called because it attaches itself to whatever is near.) (*Bot.*) The *Syringa*, a genus of plants, order *Philadelphiceæ*. The large-flowered *Syringa*, *P. grandiflorus* (Fig. 2103), a native of the S. States, is cultivated in shrubberies. The flowers somewhat resemble those of the orange in appearance and odor; hence the plant is called the mock-orange. The odor is due to the presence of a volatile oil, which may be readily obtained from the flowers by distillation with water. The leaves have a cucumber flavor.

Fig. 2103.

LARGE-FLOWERED SYRINGA.

Phile, an island of Upper Egypt, in the Nile, above the first cataract, 6 m. S.S.W. of Assuan. It is only 400 yards long, but contains some fine remains of antiquity.

Philan'der, *v. n.* [Gr. *philandros*, fond of men.] To flit; to coquet; to trifle; to make love in an airy, affected manner.

Philanthrop'ic, **Philanthrop'ical**, *a.* Relating to philanthropy; benevolent; humane; exhibiting love for mankind.

Philanthrop'ically, *adv.* In a philanthropic manner; with philanthropy; benevolently.

Philanthrop'inism, *n.* A peculiar educational system founded on so-called natural principles, set afoot in Germany during the 18th century.

Philan'thropist, *n.* [Fr. *philanthrope*, from Gr. *philos*, loving, and *anthropos*, man.] One who practises or advocates philanthropy; one who wishes well to his fellow creatures, and who exerts himself in doing good.

Philanthropist'ic, *a.* Relating to a philanthropist; characteristic of or derived from a philanthropist.

Philan'thropy, *n.* [Fr. *philantropie*.] The love of man or of mankind; benevolence towards the human race; practical humanity of disposition.

Philemon AND BAUCIS. See BAUCIS.

Phile'mon, EPISTLE TO. One of the canonical books of the New Testament, and one of the Epistles written by St. Paul. See PAUL (ST.).

Philesia'ceæ, *n. pl. Bot.* A small and unimportant order of twining shrubs, class *Dictyogens*. They are natives of Peru. See PHILESIA.

Philharmon'ic, *a.* [Gr. *philos*, loving, and *harmonia*, harmony.] Loving harmony or music.

Philhellen'ic, *a.* Professing or exhibiting love for Greece.

Philhellenist, **Philhel'lene**, *n.* [Gr. *philos*, a friend, and *Hellên*, a Greek.] A lover of Greece, especially one who espoused the Greek cause during the war of independence.

Phil'ibeg, *n.* Same as FILLIBEG, *q. v.*

Philip, the name of 5 kings of Macedon, the most celebrated of whom was PHILIP II., father of Alexander the Great, and son of Amyntas II., b. 359 B. C. He was brought up at Thebes, and educated by Epaminondas, and began to reign after the death of his brother, Perdiccas III., in 359. With great ability, energy, and success, he first secured the internal peace and order of his kingdom, improved the discipline of his army, and created the famous *phalanx*, which contributed to so many Macedonian victories. He cherished vast schemes of conquest; aspired first to make himself master of all the states of Greece, and then to invade and conquer Persia. The siege and capture of Amphipolis, Pydna, and Potidaea took place between 358-356. Four years later, after taking Methone, and subduing Lycophron, tyrant of Phærgæ, he advanced towards Greece, but his course was stayed at Thermopylae by the Athenians. The same year Demosthenes delivered the first of his famous orations (*Philippics*) against the Macedonian conqueror. Philip took Olynthus in 347, after a war of three years; soon after made peace with the Athenians, conquered Phocis, and closed the Sacred War, and was admitted into the Amphictyonic Council. In 346 he besieged Perinthus and Byzantium, but the Athenians, roused by the successive appeals of their great orator, and alarmed by facts, sent an expedition under Phocion, and Philip had to raise the sieges in the following year. But the crisis of Greek independence was at hand; the victory of Chæronea, over the allied Athenians and Thebans, 338, made Philip master of Greece. He soon after assembled a congress at Corinth, and was named general of the Confederate Greeks in the war to be undertaken against Persia. But in 336 he was assassinated at Egea, and that war was reserved for his son.

Philip, emperor of Rome, was b. in Arabia about 204, and having entered into the military service of the Romans, became prætorian præfect 243. The emperor Gordian was compelled to receive him as a colleague on the throne by the army which had conquered Sapor, king of Persia; and in the following year, 244, Philip assumed the whole authority by putting his rival to death. He was killed in battle by the soldiers of Decius, 249.

Philip, emperor of Germany, was the second son of Frederick Barbarossa. He was b. 1178, became king of Swabia and Tuscany after the death of his father, 1190, and emperor after the death of his brother, Henry VI., 1198. He was assassinated 1208, and succeeded by Otto IV.

Philip I., [Fr. *Philippe*.] king of France, son of Henry I. and Anne of Russia, was b. 1052, and succeeded to the throne under the guardianship of Baldwin V., count of Flanders, 1060; died, after a troubled reign, mixed up with the affairs of William the Conqueror, 1108.

Philip II., surnamed *Augustus*, son of Louis VII. and of Alix, daughter of Thibault, count of Champagne, was b. 1165, succeeded his father 1180, accompanied Richard Cœur de Lion to the Holy Land, 1190, invaded Normandy during Richard's captivity, 1193, confiscated the possessions of King John in France, after the supposed murder of Arthur, 1205, prepared to invade England at the instance of the pope, 1213, turned his arms against Flanders, and gained the celebrated battle of Bouvines, 1214, and d. 1223. Philip Augustus was one of the ablest princes that ever reigned in France, both as a commander and an administrator.

Philip III., called the *Hardy*, was the son of Louis IX. and Margaret of Provence. He was b. 1245, and succeeded his father 1270. In 1271 he possessed himself of Toulouse on the death of his uncle Alphonse; in 1272 he repressed the revolt of Roger, count of Foix, and in 1276 sustained a war against Alphonse X., king of Castile. The invasion of Sicily by Peter of Aragon, and the massacre of the French, known as the "Sicilian Vespers," caused him to make war against that prince, in the course of which he died, 1285.

Philip IV., called the *Fair*, or Handsome, son of the preceding by his first wife, Isabella of Aragon, was b. 1268, and succeeded his father 1285. He was engaged in wars with the English and Flemings, and in a quarrel with the Pope, in the course of which he was excommunicated. In 1303 the States-General were first assembled. In 1312 he suppressed the Templars (see MOLA); d. 1314. He was an able but most despotic sovereign.

Philip V., called the *Long*, second son of the preceding, was b. about 1293, and succeeded to the throne in virtue of the Salic law, which excluded the daughter of his brother Louis X., who died in 1316. In his reign a cruel persecution began against the Jews, in the midst of which he died, 1322.

Philip VI., called *De Valois*, was son of Charles, count of Valois, a younger son of Philip the Hardy. He was b.

1293, and succeeded Charles le Bel, 1328. In his reign occurred the wars with Edward III. of England, who claimed the French crown, as grandson, by his mother, of Philip the Fair. *P.* lost the battle of Cressy in 1346, when 30,000 men, and the chief of his nobility, were slain. He d. during a truce with the English, 1350.

Philip I., king of Spain, surnamed the *Handsome*, b. 1498, was the son of Maximilian I., emperor of Germany; and by his marriage with the heiress of Ferdinand V., king of Aragon, and Isabella, queen of Castile, he obtained the Spanish crown. D. 1506.

Philip II., king of Spain, son of the emperor Charles V. and Elizabeth of Portugal, b. at Valladolid, 1527. Of a cold and gloomy nature, he was educated by ecclesiastics, who did their best to make him both a bigot and a despot, and his reign an inexorable crusade against political and religious freedom. He married, in 1543, his cousin Mary of Portugal, who became the mother of Don Carlos, and d. in 1545. (See CARLOS, DON.) In 1554, he received from his father the kingdom of Naples, and the same year, after troublesome negotiations, married Mary, queen of England. He was disliked in England, and soon quitted it. His father gave up to him the Netherlands in October, 1555, and the kingdom of Spain early in the following year. He declared war on France, and induced Queen Mary to join him; won, by his troops under the duke of Savoy, the memorable victory of St. Quentin over the French, in 1557, and was present in person at the capture of the town, which followed. He vowed never to witness another battle; and he never did. He vowed also to show his gratitude for his success by building a monastery, which he more than fulfilled in the magnificent Escorial. A second victory over the French at Gravelines, in 1558, was followed by the peace of Cateau-Cambresis. Immediately on his return to Spain, he began a terrible persecution of "heretics," and was the pitiless spectator at an *auto-da-fé* at which 40 persons perished at the stake. The most momentous event of his reign was the revolt of the Netherlands, first excited by his edict against heretics, and his attempt to establish the Inquisition there in 1565, and resulting, after long years of war and desolation, in the establishment of the Dutch Republic. During this conflict, the successive governors of the Netherlands under *P.* were his sister Margaret (duchess of Parma), the duke of Alva, Don Luis de Requesene, Don Juan of Austria, and Alexander Farnese (duke of Parma). In 1565, he persecuted the Christian Moors of Granada, and provoked a revolt, which began in 1569; and after the greatest atrocities on both sides, ended by the flight or submission of the Moors in 1571. On the death of Henry, king of Portugal, in 1580, *P.* conquered that country and annexed it to Spain. He made immense preparations for an invasion of England; and in 1588, the year after Drake's attack on Cadiz, his great fleet, which he named "the Invincible Armada," sailed from Lisbon; but a great storm and contrary winds damaged and threw it into disorder, and it was defeated by the English. *P.* carried on intrigues in France against Henry III. and Henry IV.; but his aim was defeated by the conversion of the latter to the Roman faith. *P.* died at the Escorial, after severe sufferings, the fruit of his debaucheries, Sept. 13, 1598. He had lived to see the failure of his designs on the Netherlands, on France, and on England. It was *P. II.* who removed the seat of government from Toledo, and made Madrid the capital of Spain.

Philip III., king of Spain, son of Philip II. and his fourth wife, Anne Mary of Austria, was born in 1578. He succeeded his father in 1598, and the following year married the Princess Margaret of Austria, by whom he had 7 children. He continued the war in the Netherlands; and his general Spinola took Ostend in 1604, after a siege of 3 years. But these successes were too costly, and *P.* was compelled to recognize the independence of the United Provinces, and to make a truce with them in 1609. The king was indolent, and took little part in the government, and his favorite and prime minister, the duke of Lerma, had little capacity for his task. One of the most memorable, and for Spain most disastrous, of his measures was the expulsion of the Moors,—industrious farmers and traders, most of them. Whole provinces were depopulated. D. 1621.—From the reign of this king the decline of the Spanish nation may be dated.

Philip IV., king of Spain, son of Philip III. and Margaret, was b. at Valladolid, in 1605, married Elizabeth, daughter of Henry IV. of France, and succeeded his father in 1621. He chose for his first minister the Count of Olivarez, whose ambitious policy and despotic administration brought so many calamities on the kingdom. War was renewed with the Dutch, and only ended at the peace of Westphalia; war with France began in 1635, and lasted till 1659, when the peace of the Pyrenees was concluded, and the Infanta Maria Teresa was married to Louis XIV.; and a formidable revolt broke out in Catalonia, which was finally reduced by Don Juan in 1652. It was in the third year of this reign that the strange visit of Prince Charles of England, with the Duke of Buckingham, to Madrid took place, for the purpose of wooing the Infanta. Portugal threw off the yoke of Spain in 1640, and war followed, which was terminated by the victory of the Portuguese at Villaviciosa, in June, 1665. This last of the long series of losses and calamities broke Philip's heart, and he died in September of the same year. His queen Elizabeth died in 1644, and five years after he married the princess Mary Anne, daughter of the emperor Ferdinand III., who long survived him. It is said that *P.* was only seen to smile three times in his whole life. The great painter Velazquez was court-painter to *P. IV.*

Philip V., Duke of Anjou, the second son of Louis, dauphin of France, and of Mary Anne of Bavaria, b. 1683, assumed the title of king of Spain in 1700, by virtue of the will of Charles II. His claim, however, was contested by the house of Austria, in favor of the Archduke Charles. This produced the great War of the Spanish Succession, in which Austria was supported against France and Spain by England, Holland, Savoy, Portugal, and Prussia. The beginning of this war was very disastrous to P., who lost Aragon, Gibraltar, and the islands of Minorca and Majorca, also Sardinia and the kingdom of Naples. The victories of the Duke de Vendôme, and those of Marshal Villars in Flanders, confirmed P. on the throne, and restored peace to Europe by the treaty of Utrecht, in 1713. The war was renewed in 1717, and the Spanish fleet was defeated in the Mediterranean by Sir George Byng. Peace was restored in 1720, after which P. became a victim to domestic melancholy, and in 1724 abdicated the throne to his son Louis, and retired to a monastery. Louis died a few months after, of the small-pox, and P. was compelled to resume the government. His subsequent conduct was characterized by greater spirit and judgment. In 1733, he entered into an alliance with France against the Emperor, and his son Don Carlos conquered Sicily and Naples, of which he became king. In 1744, the royal palace was burnt, and a great number of fine paintings destroyed. In 1763, peace was concluded; but a new war broke out in 1763. D. 1745.

Philip. KING. See MASSACHUSETTS.

Philip. THE GOOD, Duke of Burgundy, one of the most powerful sovereigns of his time, was son of John "Sans-Peur," and was b. at Louvain in 1418. He succeeded in the assassination of the Duke, his father, 1419, and at once formed an alliance with Henry V. of England, and joined in the treaty of Troyes, which declared Henry right, and heir of France. He fought on the English side for several years, and gave his sister Anne in marriage to the Duke of Bedford. But jealousy and dissension arose, and P. abandoned the English alliance, and he reconciled with Charles VII. of France was elected at the great Congress of Arras, 1435, attended by legates of the Pope and the Council of Basle, and ambassadors from almost all the states of Christendom. He had married, in 1430, for his third wife, Isabella of Portugal, in whose honor he instituted the Order of the Golden Fleece, long the highest in Christendom. P. extended his dominions by the conquest of Brabant, Holland, and Hainault, but revolts broke out in several of the great towns, which were only suppressed by the most severe measures. Then, when his dominions were being stormed, burnt to ashes, and all its inhabitants massacred, P. being present to see this act of vengeance. He died at Bruges, June 15, 1467, and was succeeded by his son, Charles the Bold.

Philip, St. one of the twelve apostles, was a fisherman of Bethsaida, a city of Galilee, on the Lake of Tennesareth, when he was called by Jesus Christ. Ecclesiastical historians relate that he was married and had several children, and that he preached the gospel in Phrygia. He is enrolled among the martyrs by some ancient writers. His feast is celebrated with Philip the Deacon, mentioned in the Acts, who converted the eunuch of Candace, Queen of Ethiopia. Suffered martyrdom at Hierapolis; it is supposed about 70.

Philippville. a fortified town of Algeria, on the Gulf of Stora, 35 m. W. of Bône.

Philippi. (Lat. *G. G.*) A city in the E. extremity of Macedonia, where the army of Brutus and Cassius was defeated by that of Octavius and Antony, B.C. 42, thus ending the republican government. Here, too, St. Paul first preached the gospel on the continent of Europe, A.D. 50. The site is now strewn with ruins.

Philippi. in W. Virginia, a post-village, cap. of Barlow co., abt. 25 m. S.E. of Wheeling.

Philippic. *n.* The title of several orations of Demosthenes against Philip, king of Macedonia, the spirit and animosity of which has caused the name to be transferred to similar compositions by other orators. Thus, Cicero gave this name to the orations which drove Marc Antony from Rome, and compelled the senate to prosecute the war against him after the murder of Julius Cæsar.

Philippine Islands (77°-120°). An extensive group of islands, lying between 1° and 13° N. lat., and extending from 120° to 127° E. long., and from 117° to 127° E. lat. The total land area is estimated at about 114,000 sq. miles. This is mainly made up by the two large islands Luzon and Mindanao, while there are about ten others of some importance, and very many small islands, supposed to number 1,000 or more. Most of the islands are mountainous, the soil is fertile, and the climate is temperate, being tropical, but not intense. *Products.* Sugar, tobacco, rice, and Manila hemp are the leading products; others are coffee, indigo, coconuts, diamonds, and tin. There is a great variety and abundance of excellent timber. The principal minerals are iron, coal, sulphur, and gold. The industries are mainly agricultural, farming being the principal occupation. Sugar, hemp, and tobacco are the chief exports. The inhabitants are divided into over 80 tribes, mainly of Malay origin, some of them in a savage state, but the largest tribes civilized. The capital and principal city is Manila (Fig. 1792), in the island of Luzon.

History. The Philippines were discovered by Magellan in 1511, and fell under the dominion of Spain. Many insurrections broke out against the Spanish rule, which was just and oppressive, the last of these beginning in 1896. In 1898, during the war between the

United States and Spain, a Spanish fleet was sunk in the harbor of Manila and the city was taken by the Americans. In the subsequent treaty of peace the Philippines were ceded to the United States. Early in 1899 the Filipinos began a war for independence, under the leadership of Emilio Aguinaldo, a native of Luzon and the leader in the late insurrection. By the end of the year their armies were defeated and dispersed, but they retired to the mountains and an annoying guerilla war succeeded, which continued until 1901. In March of that year Aguinaldo was captured by a clever ruse, brought to Manila, and there convinced of the hopelessness of the struggle. In consequence he took the oath of allegiance to the United States and advised those still in arms to surrender. Many of the leaders accepted his advice, and the struggle seemed at an end. Meanwhile a commission had formulated a system of government which gave the Filipinos a large measure of self-rule, while American industry and energy promised to bring to the islands an unprecedented era of prosperity. A promising future seems dawning for the Philippines.

Philippo'poli. a town of European Turkey, in Macedonia, on a small island formed by the Maritza, 86 m. from Adrianople. *Manuf.* Woollen, silk, and cotton fabrics, leather, tobacco, and soap. *Pop.* 40,000.

Philips, in Arkansas, an E. co., adjoining Mississippi; area, about 65 sq. m. *Rivers.* Mississippi and St. Francis rivers, besides many less important streams. *Surface,* generally level; *soil,* fertile. *Cap.* Helena. *Pop.* (1890) 25,341.

Philipsburg, in New Jersey, a city of Warren co., about 40 m. N.W. of Trenton. *Pop.* (1890) 9,001.

Philipsburg, in Ohio, a village of Jefferson co., abt. 75 m. N.E. by N. of Marietta.

Philipsburg, in Pennsylvania, a post-borough of Center co., about 25 m. W. of Bellefonte. *Pop.* (1890) 3,401.

Philips River, in New Hampshire, enters the Ammonoosuck River from Coos co.

Philisburg, or GRANDE BAIE, a village of the island of St. Martin, W. Indies, cap. of the Dutch portion; *pop.* 2,404.

Philistine. (*-tin*). *n.* (*Geog.*) One of the Philistines, *q. v.* — In England, a cant term for a bailiff or sheriff's officer. — In Germany, a Philister.

Philistines. *n. pl.* This ancient people, descended from Ham, the son of Noah, emigrated at a very early date from Egypt into Syria, called after them Philistia, and afterwards Palestine, though they possessed only the portion on the S. coast bounded by the hilly countries of Ephraim and Judah, and extending S.W. to the confines of Egypt. Their chief city, Gaza, is mentioned as early as B.C. 2218. They reduced the Israelites to subjection B.C. 1116 (*Judges* xiii. 1), but were compelled to set them at liberty by Samson, who destroyed their chief nobility by pulling down the temple where they were assembled, B.C. 1117 (*Judges* xvi. 30). In the time of Elisha, B.C. 1116 (1 *Sam.* iv. 11), they seized the ark of the Lord, which they were compelled to restore by the miraculous plagues it brought upon them; and they sustained a severe defeat from Samuel at Mizpeh, B.C. 1036 (1 *Sam.* vii. 2-15). In the reign of Saul they harassed the Israelites (1 *Sam.* xiv. 34), and the death of that monarch occurred while fighting against them in Mount Gilboa, B.C. 1055 (1 *Sam.* xxxi. 4). David gained several victories over the Philistines, and Jehoshaphat made them tributary to him, B.C. 912 (2 *Chron.* xvii. 11). In the reign of Jehoram they invaded Judah, and carried away the king's wives and sons into captivity, B.C. 887 (2 *Chron.* xxi. 17). They again invaded Judah, and took Bethshemesh and Ajalon, B.C. 740 (2 *Chron.* xxviii. 18). Their country was invaded by the Assyrians and the Egyptians, who took their strong city of Ashdod. Pompey incorporated Philistia in the Roman province of Syria, B.C. 62.

Philistinism. *n.* Manners or habits of the ancient Philistines.

Philips, in Maine, a post-township of Franklin co., *pop.* abt. 2,000.

Philipsburg, in New York, a village of Orange co., abt. 110 m. S.S.W. of Albany.

Philipsburg, in Pennsylvania, a borough of Beaver co., abt. 25 m. S.W. of Pittsburgh.

Philipsburgh, a village of Mississippi co., Upper Canada, abt. 22 m. S.E. of St. John's.

Phillipsite. *n.* (*Min.*) A lime-Harmotome found in white translucent crystals near the Giant's Causeway, and in minute flesh-colored crystals in amygdaloid at Magee Island, Londonderry, at Veensvins, &c. It was named after William Phillips the mineralogist.

Philipsport, in New York, a post-village of Sullivan co., abt. 30 m. S.S.W. of Albany.

Phillipston, in Massachusetts, a post-township of Worcester.

Phillipstown, in Illinois, a post-village of White co., abt. 105 m. S.E. of Springfield.

Phillipstown, in New York, a township of Putnam co.

Phillip's Village, in Maine, a village of Franklin co., abt. 55 m. N.W. of Augusta.

Phill's Creek, in Illinois, a township of Jersey co.

Phillyrea. *n.* (*Bot.*) A genus of European evergreen shrubs, order *Oleaceæ*, introduced from the region of the Mediterranean, and much used for planting in shrubberies. There are two or three species and several varieties, all of close bushy habit, and with neat persistent foliage.

Philo, in Illinois, a post-village of Champaign co.

Philocarpine. See JACOBANDI.

Philogyny. *n.* [*Gr.* *philos*, loving, and *gynê*, woman.] Exorismos.

Philologic. **Philological.** *a.* Pertaining to philology, or to the study and knowledge of language.

Philologically. *adv.* In a philological manner.

Philologist. **Philologue.** *n.* A critic; a grammarian; one versed in philology.

Philogize. *v. n.* To criticize.

Philology. *n.* [*Gr.* *philologia*, from *philos*, loving, and *logos*, discourse.] In antiquity this word was used to designate the whole circle of the sciences considered, not with respect to their respective subject-matters, but to the language in which they were conveyed. A philologist was one who studied or taught the elegance of diction, as applicable to every branch of human learning; nor can the meaning of the designation be very accurately distinguished from that of the *ῥαππαριστίας*, or grammarian; while sometimes the term *philology* was usurped in a wider sense, so as to comprehend learning in general. After the revival of letters, the word was introduced into modern European languages, but in a much more restricted signification. It then comprehended grammatical criticism and etymology, and some branches of archæology; and as these studies were almost confined to the ancient languages, and other relics of classical antiquity, which alone were then studied in a scientific manner, the only philologists were the learned investigators of the Greek and Latin idioms and literature. Commentaries on ancient authors, etymological works, and glossaries of their language, grammar, &c., were then the class of writings usually denominated philological; and although the field of philology, considered in this sense, is now more extensive, as the modern European and non-European languages have also become the subjects of accurate investigation, it is with this general meaning that the word has chiefly been used by English writers. It is defined by Johnson, *criticism, grammatical learning*. In this popular sense philology may be said to embrace: 1. Etymology, or the science of the origin of words; 2. Grammar, or the science of the construction of languages in general and of individual languages; 3. Literary criticism, or the investigation of merits and demerits in style and diction. Of late years, however, a new and very extensive province has been added to the domain of philology; viz., the science of language in a more general sense, considered philosophically with respect to the light it throws on the nature of the human intellect and progress of human knowledge; and historically, with reference to the connection between different tongues, and the connection thus indicated between different nations and races. In this sense the term comprehends: 1. *Phonology*, or the knowledge of the sounds of the human voice; which appears to include orthography, or the system to be adopted when we endeavor to render, by our own alphabet, the sounds of a foreign language; 2. *Etymology*; 3. *Idiology*, or the science of the modification of language by grammatical forms, according to the various points of view from which, when contemplating the words which words are used to express.

Philomela. **Philomel.** *n.* [*Lat.* and *Gr.* *Philomela*, the name of a daughter of Pandion, king of Athens, who was transformed into a nightingale.] (*Zool.*) A genus of birds, order *Insectores*, of which the *Nightingale*, *q. v.*, is the type.

Philomusical. *a.* [*Gr.* *philos*, loving, and *musikê*, music.] Having a love for music.

Philopœna. [*Low Ger.* *φιλοπαινη*, much loved.] A small present made in accordance with a custom said to have been introduced from Germany. A person who in eating almonds, finds one containing two kernels, presents one of them to a person of the opposite sex, and whichever, when they next meet, shall first say *Philopœna*, is entitled to receive from the other a present bearing this name.

Philopœmen. (*fil-o-pœ-men*) called the last of the *Greeks*, was really their last great commander. He was born in Arcadia, B.C. 253, became, in 210, generalissimo of the Achæian League, and conquered the Spartans — at which time he abolished the laws of Lycurgus. The greatest of his victories in this long struggle was the battle of Mantinea. He was put to death by poison when a prisoner of the Messenians, B.C. 183, the same year that proved fatal to Hannibal and Scipio.

Philopolemic. **Philopolemic.** *a.* [*Gr.* *philos*, loving, and *polemos*, war.] Having sway over antagonistic natures; — an epithet of Minerva.

Philoprogenitiveness. *n.* [*Gr.* *philos*, loving, and *lat. progenies*, offspring.] (*Phys.*) Love of offspring.

Philosophaster. *n.* [*Lat.*, a bad philosopher.] A spurious philosopher.

Philosopher. *n.* [*Gr.* *philosophos*, from *philos*, and *sophos*, wise, *sophia*, wisdom.] A person versed in philosophy, or in the principles of nature and morality; one who devotes himself to the study of physics, or of moral or intellectual science; one who is profoundly versed in any science.

Philosophic. **Philosophical.** *a.* Pertaining to, or proceeding from philosophy.

—Regulated by philosophy or the rules of reason; calm; temperate; rational; such as characterizes a philosopher.

Philosophically. *adv.* In a philosophical manner; calmly; wisely; rationally.

Philosophistic. **Philosophistical.** *a.* Pertaining to the practice of sophistry.

Philosophize. *v. n.* To reason like a philosopher; to search into the reason and nature of things; to investigate phenomena, and assign causes for their existence.

Philosophizer. *n.* One who philosophizes.

King Philip

Philosophy, *n.* [Fr. *philosophie*, from Gr. *philos*, loving, and *sophia*, wisdom.] Literally, a love of wisdom or knowledge. The origin of the term is attributed to Pythagoras, who, in place of calling himself *sophos*, a wise man, assumed the more modest title of a lover of wisdom. The term was commonly used to include the three great branches of knowledge: viz., physics, ethics, and dialectics or metaphysics. In the present day, *P.* is used rather indefinitely in several senses. All *P.* is knowledge, but all knowledge is not philosophy. Knowledge is of two kinds, — 1, the knowledge of a thing is called historical or empirical knowledge, — the knowledge of the fact; and 2, the knowledge why or how a thing is, is called philosophical, scientific, rational knowledge, — the knowledge of the cause. Philosophical knowledge, then, in its widest sense, is the knowledge of effects as dependent on their causes; and hence all sciences occupied in the research of causes may be viewed as so many branches of *P.* In a more limited sense, the term philosophy is used to denote the science of mind by way of preeminence, as being the highest of all knowledge. In fact, there are not a few of the special sciences that can only be considered as the science of mind, in particular aspects, or in special applications; and there are none of them that do not suppose it as their preliminary, and borrow from it their light. Thus logic is the science of the laws of thought; ethics, the science of the laws which govern our moral nature; politics, the science of man in his social and civil relations. The fine arts have their foundation in the theory of the beautiful; and even religion, theology itself, is not independent of the same *P.* *P.* appears to have flourished in India and China in the most remote ages; and the earliest authentic histories of the Egyptians and Assyrians represent their priesthood as highly versed in natural and speculative science, which they used to strengthen their power over the superstitious and the ignorant. Greek philosophy comprises the following schools: — the Academic, Alexandrian, Aristotelian or Peripatetic, Cynic, Cyrenaic, Eclectic, Eleatic, Epicurean, Ionic, Megarian, Peripatetic, Platonic, Pythagorean, Socratic, and Stoic. The philosophy of the Romans was derived from that of the Greeks, but never attained equal celebrity. Domitian expelled all the philosophers from Rome in 90. Mediaeval philosophy commences with Boetius, born about 475. The Scholastic school originated in the 9th century, and for many years was the only system of orthodox philosophy. During the 10th century the influence of Arabian learning was felt throughout the civilized world, and Cordova became celebrated as a seat of learning. The Speculative school commenced about 1520, and the inductive method of Lord Bacon was published in the treatise on the *Advancement of Learning*, in 1605. In more modern times, German thinkers have been specially active in the more speculative domains of thought; French and English in the practical applications of philosophical conceptions. Kant perhaps stands first among these for the depth and logical consistency of his thought, while Descartes, Locke, Heine, Hegel, Schelling, Comte, Spencer, and others have attained eminence. Spencer's system, unlike those of his predecessors in general, is based almost wholly on the results of scientific demonstration, a fact which has given it a strong hold on this actively scientific age.

Philter, (*fil'tr*), *n.* [Fr. *philtre*; Lat. *philtrum*, from Gr. *philttron*, from *phileo*, to love.] A drug or preparation supposed by the ancients to have the power of exciting love. Nothing certain is known respecting the composition of these potions; but their operation was so violent that many persons lost their lives and their reason by their means. The Thessalian philters were in the highest celebrity. (*Juv.* vi. 610.)

— *v. a.* To impregnate with a love-potion. — To charm by love; to excite to love or animal desire by a prepared potion.

Phimos, *n.* [Gr. *phimosis*, from *phimos*, muzzle.] (*Med.*) A constriction of the extremity of the prepuce, so close and firm as to prevent its being drawn back.

Phippsburg, in *Maine*, a post-village and twp. of Sagadahoc co., abt. 40 m. S. of Augusta.

Phiz, (*fiz*), *n.* [A contraction of *physiognomy*.] The face or visage. (In sport or contempt.)

Phlebitis, *n.* [Gr. *phleps*, *phlebos*, a vein.] (*Med.*) Inflammation of the inner membrane of a vein.

Phlebography, *n.* [Gr. *phleps*, a vein, and *graphê*, description.] (*Med.*) A description of the veins.

Phlebolite, *n.* [Gr. *phleps*, a vein, and *lithos*, stone.] (*Med.*) A loose concretion, varying in size from that of a currant to that of a pea, occasionally found in the veins.

Phlebotomy, *n.* [Gr. *phleps*, a vein, and *logos*, a discourse.] (*Med.*) That part of anatomy which treats of the veins.

Phlebotomy, *n.* [Gr. *phleps*, a vein, and *logos*, a discourse.] (*Med.*) That part of anatomy which treats of the veins.

Phlebotomist, *n.* One who practises the art of phlebotomy; a blood-letting.

Phlebotomize, *v. a.* To let blood.

Phlebotomy, *n.* [Fr. *phlebotomie*; Gr. *phlebotomia*, from *phleps*, *phlebos*, a vein, from *phleo*, to gush, to overflow.] (*Surg.*) The act or practice of cutting or opening a vein for letting blood; blood-letting.

Phlegm, (*flem*), *n.* [Gr. *phlegma*, *phlegmatos*, flame, inflammation, from *phlego*, to turn.] (*Physiol.*) Among the ancient physicians this was regarded as one of the four primary humors of the body. Phlegm is a viscid mucus, expectorated from the throat and fauces in colds and bronchial affections. Scientifically, the word phlegm is used in the sense of nervous and sanguineous,

to express a peculiar temperament or condition of the body, a *phlegmatic* or *phlegmatical* temperament being regarded as a cold, dull, apathetic state of mind and body.

— Dullness; coldness; sluggishness; indifference; apathy.

Phlegmatic, *a.* [Fr. *phlegmatique*] Abounding in phlegm; as, a *phlegmatic* humor. — Generating phlegm; as, a *phlegmatic* substance. — Not easily excited into action or passion; dull; sluggish; cold; as, a *phlegmatic* person.

Phlegmatically, *adv.* Coldly; heavily; in a phlegmatic manner.

Phlegmon, *n.* [Gr. *phlegmonê*, from *phlegmîn*, to burn.] (*Med.*) Inflammation of the areolar texture.

Phlegmonous, *a.* Having the nature or qualities of phlegmon.

Phlegon, (*fle'gon*), surnamed the Trallian, from Tralles in Caria, his birthplace. He was the freedman of Adrian, and wrote a *History of Marvellous Things*; also a *History of the Olympiads*, part of which is extant. He is said to have mentioned the darkness at our Saviour's crucifixion. This passage caused a controversy between Whiston, Chapman, and others, in the 18th century. The best edition of his remains is that of Westermann, 1839. Flourished in the 2d century.

Phlemin, *n.* [Gr. *phlemin*.] (*Bot.*) A genus of plants, order *Graminaceæ*, remarkable for the close cylindrical form of the spike-like panicles. *P. pratense* is the Timothy, Cat's-tail grass or Herd's-grass, perhaps the more valuable of all grasses. It is extensively cultivated in this country, and is probably native.

Phlogistian, *n.* [Fr. *phlogisticien*.] One who believes in the existence of phlogiston.

Phlogistic, *a.* [Fr. *phlogistique*.] (*Chem.*) Partaking of phlogiston.

(*Med.*) Inflammatory; sthenic.

Phlogisticate, *v. a.* To associate phlogiston with.

Phlogistication, *n.* Act or process of combining with phlogiston.

Phlogiston, *n.* [Gr., from *phlogistos*, from *phloz*, *phlogos*, a flame.] (*Chem.*) An imaginary substance, which was regarded by old writers as the basis of all fire, and the principle of combustion.

Phlorizin, *n.* (*Chem.*) A substance extracted from the root-bark of the apple, pear, plum, and cherry tree; *Form.* $C_{21}H_{24}O_{10}$. It crystallizes readily, is slightly bitter, and, when boiled with dilute acids, yields grape-sugar and a resinous substance called *phloretine* ($C_{15}H_{14}O_6$). When exposed to the joint influence of air and ammonia, it forms a red compound, called *phloridzine*, which combines with ammonia to form a purple mass, which dissolves in water with a firm blue color.

Phlox, (*floks*), *n.* [Gr. *flame*.] (*Bot.*) A highly ornamental N. American genus of plants, order *Polemoniaceæ*, distinguished by its leaves mostly opposite, sessile, simple, entire; flowers in terminal corymbs or panicles. As usually happens with popular flowers, the species themselves, once cultivated for their own sakes, have given way before the more showy hybridized varieties, and at the present day are rarely met with, the garden phloxes being all productions of the florist, and of a most ornamental character. A few well-marked dwarf-habited sorts are still grown as rock-plants; and *P. drummondii*, which has sported into a variety of beautiful colors, is one of the most showy of cultivated annuals.

Phoca, (*fô'ka*), *n.* (*Zoöl.*) See SEAL.

Phocæan, *n.* (*Zoöl.*) An animal of the genus *Phoca*; a seal.

Phocal, (*fô'kal*), *a.* Belonging, or relating to the seal.

Phocas, emperor of the East, was at first a centurion in the army of the emperor Maurice. In 602 he took advantage of the grievances and discontent of the soldiers to get himself elected emperor; a revolt at Constantinople followed, and Maurice and his five sons were murdered at Chalcedon, whither they had fled. *P.* was of low origin, and of equally low nature: ignorant, cowardly, and cruel, with no ambition as sovereign, but to indulge the more freely in lust and drunkenness. The empress Constantina, accused of conspiracy, was tortured, and with her three daughters beheaded at Chalcedon; and numberless meaner victims perished without trial, and amid refinements of cruelty and torture. Yet *P.* was acknowledged both in the East and West, and his image, with that of his wife, Leontia, were set up in the Lateran by Pope Gregory, who stooped basely to flatter him. Chosroes, king of Persia, declared war on him and conquered several provinces of the empire, and at length the tyrant was overthrown and the empire delivered by Heraclius, son of the exarch of Africa, who led an expedition to Constantinople in 610. *P.* was seized, put in chains, tortured, and beheaded, and his body burnt.

Phocenic, (*fô'nîk*), *a.* (*Chem.*) Belonging, or relating to, or obtained from, phocenic; — said of a certain acid.

Phocénine, *n.* [Fr., from Gr. *phokaina*, a porpoise.] (*Chem.*) An adipose substance formed in the oil of the porpoise. When liquefied, it yields a volatile odoriferous acid called *phocenic acid*.

Phocidæ, *n. pl.* (*Zoöl.*) The seal family. See SEAL.

Phocion, (*fô'shi-on*), a celebrated Athenian general and statesman, was B. about 400 B. C. He was a disciple of Plato and Xenocrates, served under Chabrias at the naval battle of Naxos, and became subsequently head of the peace party at Athens, steadily opposing Demosthenes and all bold patriots who were ready to fight for the independence of their country against the Macedonian invaders. He was a brave and successful soldier, and was 45 times appointed general; his private character was above suspicion, and that alone saved him

from the infamy which his political course deserved. He was twice sent on embassies to Alexander the Great, and acquired his friendship. He is said to have advised that Demosthenes and other leading men should be given up to the Macedonians. When Athens was occupied by Polysperchon, *P.* fell one of the first victims to the enemies of his country whom he had aided. He was tried and sentenced to death, and met his end with philosophical composure, B. C. 317.

Phocæna, *n.* (*Zoöl.*) See DELPHINIDÆ.

Phœbus, (*fē'bus*), *n.* [Lat., from Gr. *phoibos*, bright.] (*Myth.*) A son of APOLLO, *q. v.*

Phœnicia, [Gr. *Phoinike*, from *phoinos*, purple, or *phoiniz*, palm-tree; Heb. *kanaan*, low land.] *P.* in its largest sense, designated a narrow strip of country extending nearly the whole length of the E. coast of the Mediterranean Sea, from Antioch to the borders of Egypt. But *P. Proper* was included between the cities of Laodicea, in Syria, and Tyre, comprehending mainly the territories of Tyre and Sidon, and forming then only a part of the country of Canaan. Before Joshua conquered Palestine, this country was possessed by Canaanites, sons of Ham, divided into eleven families, of which the most powerful was that of Canaan, the founder of Sidon, and head of the Canaanites, properly so called, whom the Greeks named Phœnicians, probably from the beautiful purple color known as the Tyrian dye. Some authorities state that Agenor was the first king of *P.*, B. C. 1497; but all agree that the country itself was the seat of a great nation, and renowned for its naval enterprise at a much earlier period. A colony of Phœnicians, led by Elissa or Dido, settled in Africa B. C. 878, and founded Carthage, (*q. v.*) *P.* was invaded by Salmanser IV., king of Assyria, B. C. 723; by Nebuchadnezzar, king of Babylon, B. C. 587; and by Cyrus, king of Persia, B. C. 536. The Phœnicians subsequently assisted the Persians in their wars with the Greeks, and sustained a total defeat from Cimon, at the naval battle of the Eurymedon, B. C. 466. They revolted from Persia B. C. 352, and were conquered by Alexander III. (the Great) B. C. 331. After his death, B. C. 323, *P.* was annexed to the dominions of Ptolemy (I.) Soter, king of Egypt. It was seized by Antigonius of Phrygia, B. C. 315, and passed under the protectorate of Tigranes I., king of Armenia, B. C. 83. It formed part of the Roman province of Syria B. C. 62, and was deprived of all its liberties by Augustus, B. C. 20.

Phœnicopterns, *n.* (*Zoöl.*) See FLAMINGO.

Phœnix, (*fē'nîks*), *n.* (*Myth.*) A fabulous bird of antiquity, which is described as being, in outline and bulk, very like an eagle, and as having part of his plumage gold-colored and part crimson. It was said to live 500 years in the wilderness, and then return to Egypt, where, having built itself a nest, it was consumed, and from the ashes of the old bird sprang its successor. The phœnix has been a fertile subject for the imagination of the poets of all ages; and even by some of the early Christian writers this myth was advanced as evidence of the resurrection.

(*Ast.*) A southern constellation near Acherner.

(*Bot.*) A genus of palms. *P. dactylifera* is the date-palm, one of the most important food-bearing plants. In some parts of Africa and Arabia, dates may be said to form the daily bread of the inhabitants. They are imported into this country, and are here used as an article for the dessert. This tree is the palm commonly referred to in Scripture. Sugar and toddy are prepared from its juice. *P. sylvestris*, the wild-date palm, is the plant from which most of the palm-sugar used in the East is obtained. It is a native of India, where it is said 130,000,000 lbs. of sugar are obtained from it annually. *P. farinifera* yields an inferior kind of sago, used as food in some parts of India.

Phœnix, in *New York*, a post-village of Oswego co., abt. 150 m. W. N. W. of Albany.

Phœnix, in *Oregon*, a post-village of Jackson co., abt. 8 m. S. E. of Jacksonville.

Phœnix, in *S. Carolina*, a post-vill. of Edgefield dist.

Phœnixville, in *Penna.*, a post-borough of Chester co., on the Schuylkill river, about 27 m. N. W. of Philadelphia. *P.* is a place of much business importance, and contains, besides several large cotton and woollen factories, some of the most extensive iron-works in the U. States. Iron-ore is abundant in the vicinity, as well as profitable lead and copper mines.

Pholinite, *n.* (*Min.*) A hydrated silicate of alumina, resembling kaolin in composition.

Pholias, *n.*; *pl.* PHOLADIDÆ. (*Zoöl.*) A genus and fam. of marine lamellibranchiate Molluscs, embracing *Acalepia* which have the shell open at both ends, thin, white, exceedingly hard, and armed with rasp-like imbrications. Fifty or sixty species are living, and as many more are fossil.

Phonascetics, *n. sing.* [Gr. *phonaskein*, from *phonê*, the voice, and *askein*, to practise.] A plan of treatment for the restoration of the voice.

Phonation, *n.* The physiology of the voice.

Phonetic, (*fô-nê'tîk*), *a.* [Gr. *phonetikos*, from *phonê*, a sound.] Relating or appertaining to sound, or to the voice, or their uses. — Representing sounds; as *phonetic* characters; — opposed to *ideographic*.

P. writing. That writing in which the signs used represent sounds; in opposition to *ideographic*, in which they represent objects, or symbolically denote abstract ideas, as in the figurative part of the Egyptian hieroglyphics. The signs representing sounds are usually arbitrary, or at least have become so in process of time; as in the ancient Roman alphabet, of which the letters are for the most part derived from the Hebrew or Phœnician, in which languages they may have originally had a symbolical character. But, in a species of

phonetic writing which is intermixed with the figurative hieroglyphics in Egyptian inscriptions, every letter is denoted by a figure representing some object, the name of which begins with that letter.

Phonetically, *adv.* In a phonetic manner.

Phonetics, *n. sing.* [Gr. *phōnetikos*, belonging to sound, from *phōnē*, sound.] The doctrine or science of sounds — especially of the human voice; the representation of sounds; phonology.

—The art of combining musical sounds.

Phonics, *n. sing.* Same as **PHONETICS**, *q. v.*

Phonocamp'ic, *a.* [Fr. *phonocampique*, from Gr. *phōnē*, sound, and *kamptein*, to bend.] Having the power to alter sound by inflection of its course.

Phonograph, *n.* A distinct letter or character to denote a sound, and invariably one and the same sound in writing. See **SECTION II**.

Phonographer, **Phonographist**, *n.* One skilled in phonography.

Phonograph'ic, **Phonograph'ical**, *a.* Relating to phonography.

Phonographically, *adv.* In a phonographic manner.

Phonography, *n.* [Gr. *phōnē*, sound and *graphein*, to write.] A method of writing short-hand, invented by Isaac Pitman, of Bath, in 1837; since that time, however, it has been considerably modified. The system professes to be founded on the analysis of the sounds of the English language; from which circumstance it derives its name. All the consonants are represented by straight lines and curves. In the table given by Pitman, the first sixteen consonants are in pairs, represented by light and by heavy straight lines and curves, corresponding with their relative sounds. Thus the sounds of *p* and *b* at the commencement of the words *pin* and *bin* are made by the same articulations, the lips being first compressed together, and then thrown suddenly apart by the expulsion of the breath. The first is a whispered sound, the latter a sub-vocal, in which the muscles of the larynx are called into play. In *P*, the *p* is represented by a light line, inclining from left to right; and a *b* by a similarly sloping heavy line. The same principle is applied to the other pairs; *t* and *d* being represented by perpendicular lines, one thin and the other thick. The articulations of the next pair, *ch* and *j*, resemble each other in a similar manner, as in *chest* and *jest*; the same holding good for *k* and *g*, as in *Kate* and *gate*; for *f* and *v*, as in *feel* and *veal*; of the pair marked *th*, as in *thought* and *thus*; of *s* and *z*, as in *seal* and *zeal*; and of *sh* and *zh*, as in *sure* and *azure*. The vowels are represented by dots and short dashes, which are made heavy and light, to represent long and short vowels. Two monthly periodicals in phonographic characters are published in the U. States, where *P* is the system generally adopted by reporters.

Phonolite, *n.* (*Min.*) Same as **CLINESTONE**, *q. v.*

Phonolog'er, *n.* A phonologist; a person versed in phonology.

Phonolog'ic, **Phonolog'ical**, *a.* Pertaining to phonology.

Phonologist, *n.* A phonetist; one learned in phonology.

Phonology, *n.* [Gr. *phōnē*, sound, and *logos*, discourse.] A treatise on sounds, or the science or doctrine of the elementary sounds uttered in speech.

Phonotype, *n.* [Gr. *phōnē*, sound, and *typos*, type.] A character employed in phonotypy.

Phonotyp'ic, **Phonotyp'ical**, *a.* Pertaining to phonotypy.

Phonotypist, *n.* One skilled in phonotypy.

Phonotypy, *n.* [Gr. *phōnē*, and *typos*, a type.] A proposed mode of printing in which each sound of the voice shall be represented by a distinct letter or type.

Phormium, *n.* [Gr. *phormos*, a basket, alluding to the use made of the plant in its native country.] (*Bot.*) A genus of plants, order *Liliaceæ*. *P. tenax* is a native of New Zealand. The fibre obtained from its leaves has great strength, and is much used for cordage, and, to a limited extent, for linen. It is called New Zealand flax.

Phosgene, (*fos'jēn*), *a.* [Gr. *phōs*, light, and *gonein*, to produce.] (*Chem.*) Chlorocarbonic acid, so called from the circumstance of its being formed by the action of light on a mixture of carbonic oxide and chlorine.

Phosphate, *n.* [Fr.] (*Chem.*) A salt formed by the union of phosphoric acid with a salifiable base.

P. of lime. The most important of the phosphates, and the universal basis of all bones and horns, forms the principal constituent of several minerals, and especially of *Apatite*. This mineral, when crystallized, occurs in six-sided prisms, usually of a green or greenish color. The amorphous varieties are used for manure. *Apatite* usually occurs in crystalline rocks; but it is also found in granular limestone, and sometimes in serpentine.

Phosphatic, (*fos-fāt'ik*), *a.* Belonging, or relating to the phosphates; containing phosphate.

Phosphenes, *n. pl.* [Gr. *phōs*, light, and *phainein*, to show.] (*Surg.*) A false perception of light, as of sparks, flashes of fire, &c., occasioned by certain conditions of the retina and brain, and by pressure on the eyeball.

Phosphite, *n.* [Fr.] (*Chem.*) Same as **PHOSPHATE**, *q. v.*

Phospholite, *n.* [Eng. *phosphorus*, and *lithos*, a stone.] (*Min.*) An earth in combination with phosphoric acid.

Phosphorate, *v. a.* To combine with phosphorus.

Phosphor-bronze. See **SECTION II**.

Phosphoreous, *a.* Luminous.

Phosphoresce, *v. n.* To shine, as phosphorus, by exhibiting a faint light, without sensible heat.

Phosphorescence (*fos-for-es'ens*), *n.* [See **PHOS-**

PHORUS.] A property which certain bodies possess of becoming luminous under certain conditions, without undergoing combustion. This luminosity is usually faint, and emitted continuously rather than by flashes, for a period varying from a small fraction of a second to several minutes, or even hours. *P.* is observed not only among organized matter, living and dead, but also among a large number of mineral bodies in the solid state, after they have been exposed to extraneous sources of light. Two pieces of quartz on being rubbed together emit light; and a phosphorescent light is seen when two pieces of loaf-sugar are rubbed together in the dark. A variety of blende (sulphide of zinc), on being scratched with a knife, emits a fine yellow light. It has been found that the phosphorescent light of minerals has the same properties as the direct light of the sun. Among those mineral substances which emit light in consequence of the action of extraneous light, the most powerful is Canton's phosphorus. It is formed by mixing three parts of powdered oyster-shells with one part of sulphur, and ramming the mixture into a crucible, and igniting it for about half an hour. On exposure to sunlight, or to ordinary daylight, or to an electrical explosion, the bright parts will acquire the property of shining in the dark, so as to illuminate the dial of a watch, and make its figures legible. When an electrical discharge is passed along the surface of certain bodies, or a little above them, *P.* is produced. Thus sulphate of barytes gives a bright-green light; acetate of potash also a bright-green light; and rock-crystal first a red, and then a white light. Of all luminous organisms, however, the marine animals are the most remarkable; and to them in chief is attributable the general phosphorescence of the ocean. In warm regions and more southerly latitudes, this phenomena often attains a high degree of brilliancy and beauty; and it would appear that all this light emanates from vast numbers of light-giving animalcules. Certain land-insects also, such as the lightning-bug and the glow-worm, emit light. Another kind of *P.* is that which appears during the decomposition of animal and vegetable matter, and especially observable during the putrefaction of fishes.

Phosphores'cent, *a.* [Fr.] Emitting phosphoric light.

Phosphoric Acid, *n.* (*Chem.*) An acid produced by the rapid combustion of phosphorus in oxygen or atmospheric air. When the oxygen is perfectly dry, it is obtained as a mere white flocculent but very deliquescent powder, hissing when thrown into water, and forming with it hydrated phosphoric acid. When once dissolved, it cannot again be deprived of its water of hydration, except it be combined with a base. There are three different hydrates of phosphoric acid, each of which forms separate salts with the bases. The first of these, $H_2O.P_2O_5$, is the *monobasic* or *metaphosphoric acid*. It forms with the bases only one class of salts, of which metaphosphate of soda may be taken as the type, $Na_2O.P_2O_5$. The second, $2H_2O.P_2O_5$, is dibasic, and is known as *pyrophosphoric acid*. It forms two classes of salts with the bases, the soda salts being $NaO.H_2O.P_2O_5$ (acid pyrophosphate), and $2Na_2O.P_2O_5$. The third acid is the *tribasic* or ordinary *phosphoric acid*, $3H_2O.P_2O_5$. It forms three classes of salts—the neutral, common, and acid tribasic phosphates. The soda salts are $3Na_2O.P_2O_5$ (neutral tribasic phosphate), $2NaO.H_2O.P_2O_5$ (ordinary tribasic phosphate), and $NaO.2H_2O.P_2O_5$ (acid tribasic phosphate). Besides these three, there are other modifications of phosphoric acid which cannot be described here. *Form.* $H_2O.P_2O_5$.

Phosphorite, *n.* (*Min.*) A massive native phosphate of lime.

Phosphorous Acid, (*Chem.*) This acid is produced by placing sticks of phosphorus in tubes open at both ends, the lower aperture being contracted to prevent the phosphorus from falling through. A number of these tubes being placed in a tunnel, the acid, which is highly deliquescent, gradually drains through into the vessel placed beneath. Phosphorous acid is obtained in a pure hydrated form by sending a stream of chlorine through a layer of phosphorus melted under water. Terchloride of phosphorus is formed, and is decomposed at once into hydrochloric and phosphorous acids. Phosphorous acid forms three classes of salts, of which the following are the soda representatives: Na_2PO_3 , trisodic salt; Na_2HPO_3 , disodic salt, and NaH_2PO_3 , monosodic salt. An equivalent of water is essential to the composition of this acid, as of oxygen acids in general, its formula being $H_2OP_2O_3$.

Phosphorus, *n.* [Gr. *phosphoros*, from *phos*, light, and *phero*, to bring.] The morning star.

(*Chem.*) *P.* is found in nature only in a state of combination, chiefly in the form of phosphate of lime, which forms the principal constituent of apatite, phosphorite, coprolites, &c. It seems to be essential to the life of plants, and is found to be concentrated in their seeds. It exists in large proportions in the bodies of animals; in the blood, in the urine, in the hair, in the nervous tissues, and in the bones, of which phosphate of lime forms a large constituent. It was first discovered in urine by Brandt, in 1669. It is now, however, extracted from bones. The bones are burned to whiteness in an open fire, and 3 parts of the bone-ash are mixed with 2 of concentrated sulphuric acid, and 18 or 20 of water. The mixture is allowed to stand for two or three days, after which the acid liquid is separated by filtration and pressure. The acid solution, which contains acid phosphate of lime, is evaporated to a syrup, mixed with charcoal, and heated to low redness in an iron pot. When dry, the mass is distilled in an earthen retort, the combustible gases passing out by an opening, and the phosphorus passing through another into water, in

which it collects in yellow drops. It is purified by being melted under water and ammonia, and lastly under a solution of bichromate of potash in sulphuric acid. *P.* is a soft waxy-looking solid, burning in the air, and emitting white vapors having an alliaceous odor. Its specific gravity is 1.83 at 50° Fahr. It fuses at 111.5°, and may be distilled unchanged, in close vessels, at 550°. It is insoluble in water, slightly soluble in ether, but more so in naphtha. It is freely dissolved in bisulphide of carbon and chloride of sulphur. It becomes luminous from slow combustion in dry air, and frequently inflames spontaneously. Great care should be taken in handling it, as the slightest friction, when dry, causes it to burst into flame. It may, however, be cut and handled with impunity under water. *P.* is capable of assuming several allotropic forms, the most important of which is that generally known as *amorphous P.* This form may be procured by the process of the discoverer, Professor Schrötter, of Vienna, by heating ordinary phosphorus to 450° or 460° for thirty or forty hours in a current of carbonic acid. Amorphous *P.* is of a dark-purple or brilliant-red, according to the temperature at which it is prepared, and differs from the ordinary kind in being unflammable by the strongest friction, by being inodorous, unchangeable in the air, and insoluble in the ordinary solvents of phosphorus. If rubbed with chlorate of potash, peroxide of lead, or peroxide of manganese, the slightest friction is sufficient to inflame it. It is restored to the ordinary variety by heating it up to 450° or 500°, when it immediately bursts into flame. It has been applied, with perfect success, to the manufacture of matches. The method adopted by Messrs. Bryaut & May in the manufacture of their *safety lights* was to tip the match with a mixture of chlorate of potash and oxide of lead or manganese, the friction-tablet on the box being composed of powdered amorphous *P.*, mixed with fine sand or powdered emery. By this means, the elements necessary for frictional combustion are separated, and the danger arising from the accidental inflammation of the match is entirely gone away with. The tearful effects produced on the human frame by the vapor of *P.* are also obviated, the workpeople engaged in the manufacture being free from the attacks of caries of the jawbone, so frequent among the makers of matches by the ordinary process. The making of matches by the ordinary form is, however, still carried on on a large scale, many tons of *P.* being annually consumed for the purpose. Owing to its great affinity for oxygen, a solution of *P.* in bisulphide of carbon is used to reduce silver upon objects about to be electrotyped. *P.* is occasionally used in medicine in the form of the hypophosphites of the different bases. It unites with oxygen in four proportions, forming oxide of *P.*, hypophosphorous acid, phosphorous acid, and phosphoric acid. The two latter are described under their respective headings. There are two oxides of *P.*— P_2O_3 and P_2O_5 —formed by burning *P.* in dry air or in oxygen. *Equiv.* 31; *sp. gr.* of vapor, 4.355; *symbol*, *P.*

Hypophosphorous acid has never yet been obtained in an anhydrous form. It is procured, in a hydrated condition, by boiling *P.* with baryta and water. Hypophosphate of baryta is formed, which may be afterward decomposed by cautiously adding sulphuric acid. Hypophosphorous acid forms an uncrystallizable syrup, with feebly marked acid properties. It is interesting from forming a series of salts much used in medicine. A mixture of the hypophosphites of lime, soda, and iron is known as *chemical food*. The acid itself has a remarkable action on sulphate of copper. If an excess be added to a solution of the last-named salt, and warmed to about 130° Fahr., a solid insoluble hydride of copper is precipitated. With chlorine, *P.* forms a terchloride and a pautachloride; with iodine, a biniodide and teriodide. It also forms a compound with nitrogen, which has not been investigated. It also forms several compounds with sulphur, one of which is remarkable as containing 12 equivalents of sulphur to 1 of *P.* With methyl, ethyl, and several other bodies, *P.* seems to play the part of nitrogen, forming with them substances analogous to the compound ammonias, ethylamine, diethylamine, &c. *Form.* H_3PO_2 .

Phosphuret, or **Phos'phide**, *n.* (*Chem.*) A compound resulting of the direct union of phosphorus with another substance.

Phosphuretted Hydrogen (*fos-fu-ret'ed*), *n.* (*Chem.*) There are three substances known under this name, having the following formula: P_4H_{12} solid, P_2H_4 liquid, and PH_3 gaseous. The latter only needs be described. It may be obtained by boiling fragments of phosphorus in milk of lime, heated in a flask to which a delivery tube is attached. As soon as the gas escapes, it inflames spontaneously in the air, and may be collected over water. It owes its spontaneous inflammability to the formation of a small quantity of the liquid gas P_2H_4 , which becomes decomposed by keeping. Its spontaneously inflammable properties may also be destroyed by hydrochloric acid, and restored by an oxidizing agent, such as binoxide of nitrogen. The analogy of this substance to ammonia is remarkable. It unites with hydriodic acid, forming a compound similar to chloride of ammonium. It also unites with the higher oxides of tin, antimony, and other metals, forming white saline compounds. It is frequently called phosphamine from this property.

Phosphyt'rite, *n.* (*Min.*) Phosphate of yttria.

Pho'tius, patriarch of Constantinople in the 9th cent. was a native of that city. He rose to the highest offices of the state before he entered into orders, which took place on the deposition of Ignatius in 857. *P.* was de-

prived in his turn by Basilus in 867, but after living in exile 11 years, he forcibly regained his seat, which he kept till 886, and was then deprived by the Emperor Leo, who sent him into Armenia, where he died. His *Bibliotheca* contains the substance of nearly 300 ancient authors. He had great talents, but was fond of intriguing, and it was principally through his conduct that the separation of the Eastern and Western churches took place.

Photizite, n. A mixture of silicate and carbonate of manganese.

Photochemical, a. Relating to the chemical action of light.

Photogalvanography, n. A process (now little used) for transferring drawings, &c., to metal by means of light. A plate is rendered sensitive by gelatine and bichromate of potash (see **PHOTOGRAPHIC ENGRAVING**), and exposed to light in contact with the photograph or drawing. A mould is then taken from this plate after exposure, and an electrolytic impression taken from the mould. This electrolytic is used for printing. The process is tedious, requiring some weeks for its completion.

Photographic Engraving, n. An improved process invented by Mr. Fox Talbot, by which, through the agency of light, photographic and other transparent designs can be transferred to metal plates. It is performed as follows: A solution of one part of gelatine in 40 parts of water is mixed with 4 parts of a saturated solution of bichromate of potash, and the mixture is poured over the steel or copper plates, and allowed to dry. It is then exposed, in contact with the object which it is desired to copy, in a printing frame, to the action of light for several minutes. After this exposure to light, a little finely-powdered copal is strewn over the surface, and melted by the aid of heat. The design is now etched in by means of hydrochloric acid, saturated with peroxide of iron, and diluted with water. This attacks only the parts unacted on by light. When a sufficient depth has been obtained, the etching liquid is washed off, and the plate cleaned with soft whiting. It can then be employed for printing.

Photograph, n. A picture obtained by photography.

Photographic, Photographical, a. Pertaining to photography.

Photographer, n. One who practises photography; a photographer.

Photographometer, n. [Gr. *phōs*, *photos*, light, and *graphō*, to write, and *metron*, measure.] (*Photog.*) An instrument for determining the sensibility of each tablet employed in the photographic process, in respect to the amount of luminous and chemical radiation.

Photography, n. [Gr. *phōs*, *photos*, light, and *graphō*, to write.] The art or practice of producing representations or *fac similes* of objects by the action of light on chemically prepared grounds or surfaces; of impressing images upon metal or other surfaces by means of the actinic or chemical rays of the sun's light.

The first step in the development of the photographic art was made by the alchemists of the 16th century, in their discovery that horn silver (native chloride of silver) becomes blackened on exposure to light. The camera obscura, discovered in 1569, added to the chemical principle the necessary mechanical instrumentality. Other discoveries were made in the succeeding centuries, but the first to produce pictures by the action of light on a sensitive surface was Thomas Wedgwood, who described his method in 1802. He employed nitrate of silver as the sensitive agent, but seems to have made no attempt to fix the picture—that is, to prevent light from subsequently acting on the uncolored portions. Nicéphore Niepce, a French chemist, was the first to produce a permanent picture (1814), using asphaltum, which was exposed for several hours. The portions of the asphaltum acted on by the light became insoluble, while the shadowed parts could be dissolved out, the lights being represented by the insoluble asphaltum remaining. Daguerre began his experiments in 1824, and entered into partnership with Niepce in 1829, their joint labors resulting in the discovery of the Daguerreotype process in 1839. For an account of this method, see **DAGUERRE**. Others were laboring in the same direction, and in 1839, before the published announcement of Daguerre's discovery, Mr. Fox Talbot described a process named by him "photogenic drawing," which formed the first crude step in photography. Paper treated with nitrate of silver (partly converted to chloride by the action of common salt) was exposed to light, the object to be pictured, as an ivy leaf, being first laid upon it. The result was a reversed copy of the leaf, which he named a negative. A positive, in which the lights and shades appeared as in nature, could be produced by permitting the light to pass through this paper to a similar sensitive paper below. In 1841 he invented an improved process which he named the Calotype, and in which iodide of silver was employed, while the paper negative was rendered translucent by wax for the purpose of printing.—**Collodion process.** A great impetus was given to the photographic art in 1851 by the introduction of collodion, the name given to the solution in a mixture of ether and alcohol of pyroxylin—a substance allied to gun cotton. The use of this, first suggested by M. Le Gray (who had perfected an iodized albumin process), was employed by Mr. Scott Archer, who developed the wet collodion photographic method, the one almost exclusively used by photographers for a quarter of a century afterward. The collodion was employed on glass, and to some extent on leather and other non-fragile materials; modifications were afterward introduced which brought it still more extensively into use.

In this process a clean glass plate is coated with col-

lodion, to which have been added bromide of cadmium and iodide, either of potassium or ammonium. The plate is then "sensitized" by immersion in a bath of nitrate of silver. In the production of the picture, the plate is exposed in the camera to the object to be photographed, the result being a latent image, which is made visible by flooding the plate with a solution of sulphate of iron or of pyrogallol acid, with the addition of some acetic or citric acid. The image is fixed by immersing the plate in cyanide of potassium (hyposulphite of soda is employed in more modern processes), which dissolves and removes those parts of the sensitive surface on which the light has not acted. The defect of the wet collodion process was the necessity of exposing the plate very shortly after its preparation. This difficulty was overcome in the dry collodion process, in which a solution of albumin or other organic substance was made to flow over the sensitive surface, which could then be dried and kept till needed. Dry plates may also be made by the emulsion process, in which the sensitive silver salt is held in suspension in the collodion. Such an emulsion can be prepared by adding bromide of cadmium or other soluble bromide to the collodion, and afterward an alcoholic solution of nitrate of silver. The glass plates are coated with this emulsion and set aside to dry, the soluble salts being removed by washing with water.—**Gelatino-bromide process.** The collodion dry plate is now rarely employed, it being replaced by the more sensitive gelatine emulsion which has come into almost universal use. This method was first employed in 1871, and was improved at intervals until 1878, when the great capabilities of silver bromide when held in suspension in gelatine became widely known. Mr. Charles Bennett, in the latter year, showed that if the gelatine emulsion was kept liquid at a low temperature for as long as seven days, some change appeared to take place in the silver bromide, whose sensitiveness was remarkably increased. By boiling the emulsion for half an hour a like increase in its sensitiveness was achieved, so that the time of exposure could be reduced from thirty seconds to a single second. Dry plates produced by some form of the gelatino-bromide process are now manufactured on a large scale. When properly made they will keep good for years, and may be developed months after exposure, though the best results are produced when there has not been much delay. Since the date last given many improvements in the photographic art have been made, leading to the development of what is known as instantaneous photography. A statement published in 1884 gives the following tabulation of the relative rapidities of processes up to that date:

Daguerreotype, originally	30 minutes' exposure.
Calotype	2 or 3 minutes' exposure.
Collodion	10 seconds' exposure.
Collodion emulsion	5 seconds' exposure.
Rapid gelatine emulsion	1/2 second exposure.

At the present time a photographic image can be taken in so minute a fraction of a second that the camera may be held in the hand during the operation, and hand cameras have come into extensive use by tourists and others, what is known as amateur photography being now remarkably common, the prepared requisites to the art being so easily manipulated that the merest tyro can soon attain some degree of proficiency. "Flash lights" can also be employed for photographing dark interiors for instantaneous pictures.—**Photographic apparatus.** A leading necessity of the photographer is the camera, a form of the camera obscura (*q. v.*). This has in its front a lens by whose aid the image of the object to be photographed is brought to a focus on a ground glass screen. The sensitized plate is placed in a thin flat box with a movable "shutter." When the image has been focussed on the screen, this is withdrawn and the "back," as the box is called, is inserted in its place. The shutter is then drawn out and the image allowed to fall on the plate. After a brief exposure—dependent in length on the degree of light—the shutter is replaced, and the back or slide removed to a room lighted by red, orange, or some other light that is chemically inactive, in which the process of development takes place. The methods employed in developing, together with the various processes in use in printing positives from the negative, and the various forms of lenses and cameras in use, are technical subjects too varied and intricate in character to be dealt with here. The employment of paper films, produced by applying a gelatine emulsion to paper, was introduced by Messrs. Morgan & Kidd, of Richmond, England, and was improved until the films were sold in spools containing sufficient material for 40 or 50 negatives, which were introduced into the camera by means of a roller slide. Film photography has since been greatly developed, its present form being the employment of transparent and flexible celluloid in sheet form, the great transparency of this substance rendering it an excellent substitute for glass in negatives. This material is made thin enough to be wound on spools and used in roll holders, and has the several advantages of lightness, portability, freedom from breakage, &c. For the advantages which photography has gained from rapidity of action and the use of continuous films, and for color and astronomical photography, see **SECTION II.**

Photologic, a. Referring to photology.

Photology, n. [Gr. *phōs*, *photos*, light, *logos*, discourse.] The science of the nature and phenomena of light.

Photo-magnetism, n. Relation of magnetism to light.

Photometer, n. An instrument to indicate the dif-

ferent quantities of light, as on a cloudy or a bright day, or for measuring the relative intensities of light or illumination. *P.* have been invented by Count Rumford, M. de Saussure, Professors Leslie, Ritchie, Wheatstone, and others. The essential principle of Leslie's instrument is a glass tube, like a reversed siphon, whose two branches should be equal in height, and terminated by two balls of equal diameter, one of which is of black enamel, and the other of glass, into which some liquid is placed. The use of this instrument depends upon the principle that, when light is absorbed by a body, it produces a heat proportional to the absorption of light. The rays of light absorbed by the dark color heat the interior air, which reacts upon the liquid; and the motion of the liquor is measured by a graduated scale, the zero of which is placed towards the top of the branch that is terminated in the enamelled ball. Wheatstone's photometer is a small sphere with a reflecting surface, which, being placed between the two lights to be compared, the spectator sees each light on it, the two being reflected from different points in the sphere's surface. By an ingenious contrivance, a rapid looped motion is given to the ball, and, by the principle of the *persistence of impressions*, the spectator immediately sees two looped curves of different degrees of brightness. The brighter light is then removed till both the curves seem of equal brightness, when the intensities of the luminous points are as the squares of the distances.

Photometric, Photometrical, a. Pertaining to photometry, or to a photometer.

Photometry, n. [Fr. *photométrie*.] The science which relates to the measurement of the intensity of light.

Photophobia, (-fō'bi-ā), n. [Gr. *phōs*, *photos*, light, and *phobos*, fear.] (*Med.*) An intolerance or dread of light;—it is a symptom of internal ophthalmia.—Morbid sensibility of the eye to light.

Photopsia, Photopsy, n. [Gr. *phōs*, *photos*, light, and *opsis*, sight.] (*Med.*) A false perception of light, as of sparks, flashes of fire, &c., occasioned by certain conditions of the retina and brain, and by pressure on the eyeball. When pressure does not influence the luminous appearance, the existence of amanrosts may be inferred.

Photosphere, (-fō'to-sfēr-ē), n. [Gr. *phōs*, *photos*, light, and *sphaira*, sphere.] A sphere of light; specifically, the luminous envelope of the sun.

Phototype, n. A type or plate resembling an engraved plate, and capable of being printed from in the same manner, produced from a photographic picture by a peculiar process; also the process by which such a plate is produced.

Photozineography, n. A process for transferring accurate copies of manuscripts or drawings to metal or stone. Paper is washed over with a solution of gum containing bichromate of potash, and allowed to dry in a dark room. It is then placed in contact with the manuscript or design, and exposed to the action of light in a photographic printing-frame. After exposure, the whole surface of the prepared paper is quoted with lithographic ink, and then a stream of hot water is sluiced over it. The parts that have been exposed to light have become insoluble in water, and remain unaffected, while the remainder is washed off. The outline thus obtained can then be at once transferred to stone or zinc.

Phrase, (-frāz-ē), n. [Fr.; Gr. *phrasis*, from *phrazō*, to speak.] A short sentence or expression; two or more words constituting an expression by themselves, or forming a portion of a sentence.—A particular idiom or mode of speech peculiar to a language; diction; style. A pithy, peculiar, or idiomatic expression.

(*Mus.*) A short portion of a composition, occupying a distinct rhythmical period of one, two, or four bars.

—*v. a.* To call; to style; to express in words or in peculiar words.

—*v. a.* To employ phrases or peculiar expressions.

Phrase-book, n. A book giving the explanation of difficult phrases.

Phraseless, a. That may not be described in phrases or language.

Phraseogram, n. [Gr. *phrasis*, phrase, and *gramma*, a letter.] (*Phonography*.) A combination of short-hand letters representing a phrase or sentence.

Phraseologic, Phraseological, a. Pertaining or having reference to phraseology; that may be defined by a phrase.

Phraseologist, n. A stickler for a particular form of words or phraseology.

Phraseology, n. [Fr. *phraseologie*; Gr. *phrasis*, and *logos*, discourse.] Mode of speech or expression; manner of giving words to a thought; peculiar words used in a sentence; diction; style; expression.—A collection of phrases in a language.

Phrasing, n. Mode of expressing by phrases.

(*Mus.*) The art or the manner of grouping together notes or syllables, in singing or playing.

Phrenetic, a. [Lat. *phreneticus*; Gr. *phrenetikos*.] Same as **FRENETIC**, *q. v.*

—*n.* A person of aberrated mind. (*R.*)

Phrenetically, adv. In a phrenetic or frantic manner.

Phrenic, (-frēn'ik-ē), a. [Gr. *phrenōs*, the diaphragm.] (*Anat.*) Pertaining to the diaphragm.

Phrenitis, n. [Gr. *phrenes*, from *phren*, the mind.] (*Med.*) Inflammation of the brain or its membranes. The term was formerly applied to inflammation of the diaphragm or midriff, when that organ was supposed to be the seat of the immortal principle.

Phrenologist, n. Same as **PHRENOLOGIST**, *q. v.*

Phrenologic, Phrenological, a. Pertaining or having reference to phrenology.

Phrenolog'ically, *adv.* By the principles of phrenology.

Phrenolo'gist, Phrenol'oger, *n.* One versed in phrenology.

Phrenology, *n.* [Gr. *phrēn*, *phrēnos*, the seat of the mental faculties.] That system of philosophy which professes to find in the outward configuration of the skull an index of the faculties of the mind. The founder of this system was Dr. Gall, (q. v.) Many of the principles which he was the first to advance are now generally acknowledged by scientific men. To such a degree of perfection did he bring the science of P., that up to this time his successors, who are as numerous in this country as in Europe, can scarcely be said to have done more than popularize it. Gall's fundamental maxims are as follows: 1. Moral qualities and intellectual faculties are innate. 2. The exercise or manifestation of these faculties and qualities depend on our organization. 3. The brain is the organ of all our appetites, sentiments, and faculties. 4. The brain is composed of as many special organs as there are original and independent appetites, sentiments, and faculties in human nature. 5. The form of the head or skull, which in the main corresponds with the shape of the brain, suggests the means of discovering by observation what are any one's primary faculties and qualities. Of these maxims the last two alone are peculiar to Gall: they contain the germs of his new philosophy, and suggested his method of observation. The philosophy, as distinguished from all previous physiologies, represents the brain not as an organ, but an apparatus; to each convolution or independent part of which, a distinct mental function belongs; and the task of allocating our various functions is reduced to that of eliminating, by aid of multitudes of instances, that special cranial organ, which always coexists and varies with one special intellectual power or tendency. In conducting Observation, Gall rightly resorted to the method of extreme instances, — seeking the meaning of an organ from the mental accompaniments of its great excess or signal defect. It is impossible in this place to criticise phrenology: its subdivision of the skull, however, into a region of the appetites and sentiments, a region of the emotions and moral powers, and a region of the intellectual faculties—these last subdivided into powers of observation and powers of combination,—is in striking consistency with all the dynamic phenomena of the human mind as manifested through history. Gall enumerated nearly thirty primitive mental faculties, which have since been augmented by his successors to thirty-five. These faculties are divided into three classes,—the intellectual or perceptive, the sentiments or emotions, and the animal propensities. To the first of these is assigned the anterior portion of the head; the second occupies the middle and upper;

emotions and ideas in the mind. (*Abuses*): Morbid dwelling on internal emotions and ideas. 3. (*a.*) *Inhabitiveness*.—(*Uses*): It produces the desire of permanence in place. (*Abuses*): Aversion to move abroad. 4. *Adhesiveness*.—(*Uses*): Attachment, friendship, and society result from it. (*Abuses*): Clanship for improper objects, attachment to worthless individuals. 5. *Combattivitàness*.—(*Uses*): Courage to meet danger and overcome difficulties. (*Abuses*): Love of contention, and tendency to provoke and assault. 6. *Destructiveness*.—(*Uses*): Desire to destroy noxious objects, and to kill for food. (*Abuses*): Cruelty, murder, desire to torment. 7. *Secretiveness*.—(*Uses*): Tendency to restrain within the mind the various emotions and ideas that involuntarily present themselves, until the judgment has approved of giving them utterance; it is simply the propensity to conceal, and is an ingredient in prudence. (*Abuses*): Cunning, deceit, duplicity, and lying. 8. *Acquisitiveness*.—(*Uses*): Desire to possess, and to accumulate articles of utility to provide against want. (*Abuses*): Inordinate desire of property; selfishness; avarice; theft. 9. *Constructiveness*.—(*Uses*): Desire to build and construct works of art. (*Abuses*): Construction of engines to injure or destroy, and fabrication of objects to deceive mankind. 10. *Self-esteem*.—(*Uses*): Self-respect, self-interest, love of independence, personal dignity. (*Abuses*): Pride, disdain, love of dominion. 11. *Love of Approbation*.—(*Uses*): Desire of the esteem of others, love of praise, desire of fame or glory. (*Abuses*): Thirst for praise independently of praiseworthiness. 12. *Cautiousness*.—(*Uses*): It gives origin to the sentiment of fear, and is an ingredient in prudence. (*Abuses*): Excessive timidity. 13. *Benevolence*.—(*Uses*): Desire for the happiness of others. (*Abuses*): Profusion; injurious indulgence of the appetites and fancies of others; facility of temper. 14. *Veneration*.—(*Uses*): Tendency to venerate or respect whatever is great and good. (*Abuses*): Senseless respect for unworthy objects consecrated by time or situation. 15. *Firmness*.—(*Uses*): Determination, perseverance, steadiness of purpose. (*Abuses*): Stubbornness, infatuation, tenacity in evil. 16. *Conscientiousness*.—(*Uses*): It gives origin to the sentiment of justice, or respect for the rights of others, openness to conviction, the love of truth. (*Abuses*): Scrupulous adherence to noxious principles when ignorantly embraced. 17. *Hope*.—(*Uses*): Tendency to expect future good; it cherishes faith. (*Abuses*): Credulity with respect to the attainment of what is desired. 18. *Wonder*.—(*Uses*): The desire of novelty. (*Abuses*): Love of the marvellous and occult; belief in prodigies, magic, and other absurdities. 19. *Ideality*.—(*Uses*): Love of the beautiful. (*Abuses*): Extravagance and absurd enthusiasm. 19. (*a.*) The organ of *Sublimity*; but not sufficiently ascertained. 20. *Wit*.—Gives the feeling of the ludicrous, and disposes to mirth. 21. *Imitation*.—Copies the manners, gestures, and actions of others. 22. *Individuality*.—Takes cognizance of existence and simple facts. 23. *Form*.—Renders man observant of form. 24. *Size*.—Gives the idea of space, and enables him to appreciate dimension and distance. 25. *Weight*.—Communicates the perception of momentum, weight, and resistance, and aids equilibrium. 26. *Coloring*.—Gives perception of colors and their harmonies. 27. *Locality*.—Gives the idea of relative position. 28. *Number*.—Gives the talent for calculation. 29. *Order*.—Communicates the love of physical arrangement. 30. *Eventuality*.—Takes cognizance of occurrences or events. 31. *Time*.—Gives rise to the perception of duration. 32. *Tune*.—The sense of melody and harmony arises from it. 33. *Language*.—Gives facility in acquiring a knowledge of arbitrary signs to express thoughts, readiness in the use of them, and the power of investing and recollecting them. 34. *Comparison*.—Gives the power of discerning analogies, resemblances, and differences. 35. *Causality*.—Traces the dependences of phenomena, and the relation to cause and effect.

Phrenomagn'etism, *n.* [Gr. *phrēn*, *phrēno*, and Eng. *magnetism*.] The power of exciting the cranial organs by magnetic influence.

Phrensy, (*frēn'zy*), *n.* and *v.* Same as FRENZY, q. v.

Phry'gaudea, *n. pl.* (Zööl.) A fam. of insects, ord. *Neuroptera*. The typical species, Caddice-worm, Caddice-fly, Cad-bait, or Cadew (*Phrygia grandis*), (Fig. 1937,) which reside in the water in cases, which they form of various substances, such as bits of stick, grains of seed, small stones, &c., held together by a silken thread, secreted in their bodies in the same manner as in the silkworm. The perfect insect has a body of a leathery consistence, and thickly clothed with hair; head small, with semi-globular eyes; antennæ as long as the body; anterior wings elongated, lanceolate in the females, but rather more obtuse in the males. They are very active, moving with a gliding motion; but their flight is awkward. They frequent damp and marshy situations. When handled, they emit a very unpleasant odor. Their colors are ordinary brown and gray.

Phrygia, (*Anc. Geog.*) An inland province of Asia Minor, bounded N. by Bithynia and Galatia, E. by Cappadocia, S. by Lycia, Pisidia, and Isauria, and W. by Mysia, Lydia, and Caria. It was called *Phrygia Pacatiana*, and also *Phrygia Major*, in distinction from Phrygia Minor, which was a small district of Mysia near the Hellespont, occupied by some Phrygians after the Trojan war. The eastern part of Phrygia Major was also called *Lycania*. This region was a high table-land, fruitful in corn and wine, and celebrated for its fine breed of cattle and of sheep. Of the cities belonging to Phrygia, Laodicea, Hierapolis, Colosse, and Antioch of Pisidia, are mentioned in the New Testament. The Phrygians were regarded as one of the most ancient nations of Asia Minor, being by some regarded as Thra-

ians, by others as Armenians. They were conquered by Croesus, king of Lydia, and finally fell into the hands of the Romans, B. C. 133.

Phrygian, (*frī-jē*), *a.* Pertaining or relating to Phrygia; — applied particularly to a martial kind of music common to the ancients.

Phrygian cap, a figurative expression for the *bonnet rouge*, or emblematic cap of liberty.

Phryma, *n.* (Bot.) A genus of herbs with opposite leaves, and flowers opposite, spicate, deflexed in fruit, belonging to the order *Verbenaceæ*. *P. leptostachya*, the slender-spiked Phryma or Lopsed, found in rocky woods in the U. S., is 2-3 ft. high, leaves large, flowers small, light purpled, in very long and slender spikes, blossoms in July.

Phryne, (*frī-ne*) A famous courtesan of Greece, and mistress of Praxiteles, who employed her as a model for his statues of Venus. She acquired immense wealth, and offered to rebuild Thebes, provided this inscription should be placed upon the walls: "Alexander destroyed this city, and the courtesan Phryne restored it;" but her offer was rejected.

Phrynosoma, *n.* (Zööl.) See HORNE-TOAD.

Phthiriasis, *n.* [Gr., from *phthēin*, loose.] (Med.) A disease which consists in the excessive multiplicity of lice on the human body, in spite of cleanliness. It has been asserted that the affection has often caused death.

Phthysical, (*thīz'ik-al*), *a.* [Gr. *phthisikos*.] Having or belonging to phthisis, or to wasting away; breathing hard; consumptive.

Phthisicky, (*thīz'ik-jē*), *a.* Same as PHTHISICAL, q. v.

Phthisiology, (*thīz-i-ol'o-jy*), *n.* [Gr. *phthisis*, and *logos*, treatise.] (Med.) A treatise upon phthisis.

Phthisipneumonia, **Phthisipneumony**, (*thīz-ip-*), *n.* [Gr. *phthisis*, and *pneumones*, lungs.] (Med.) Pulmonary consumption.

Phthisis, or **Consumption**, (*thīz'is*), *n.* [Gr., from *phthēin*, to decline, decay, waste away.] A disease which spares neither age nor sex, and whose attacks, at first so insidious as almost to escape notice, too frequently lead to a fatal issue. It is the result of the formation and development of tubercles on the lungs. These first appear in the form of small gray semi-transparent granulations, which gradually enlarge and become opaque, and after a time empty themselves into the bronchial tubes, and thus gradually destroy the substance of the lung. The causes of this disease are divided into remote and exciting: of the former, the most important is hereditary predisposition. It is not, however, an actual cause of the disease; and hence there are many cases in which the children of consumptive parents do not fall a prey to this disease; but it renders those who are in that condition much more liable to be affected by the exciting causes. Whatever weakens the strength of the system, or interferes with the oxygenation of the blood, tends to the production of this disease. Hence living in bad air, insufficient and unwholesome food, and sedentary pursuits, tend to it. Among the more exciting causes, are exposure to cold or damp, especially after the body has been previously heated, intemperance of any kind, profuse evacuations, and exposure to the reception of dust into the lungs, as in the case of certain artificers, needle-pointers, stone-cutters, and the like. The earliest symptom of consumption that usually manifests itself is a short dry cough, exciting no particular attention, being attributed to a slight cold. It, however, continues, and after a time increases in frequency. The breathing is more easily hurried by bodily motion, and the pulse becomes more frequent, particularly after meals and toward evening. Towards evening, there is also frequently experienced a slight degree of chilliness, followed by heat and nocturnal perspirations. The patient becomes languid and indolent, and gradually loses strength. After a time, the cough becomes more frequent, and is particularly troublesome during the night, accompanied by an expectoration of a clear frothy substance, which afterwards becomes more copious, viscid, and opaque, and is most considerable in the morning; the *sputa* are often tinged with blood, or hæmoptysis occurs in a more marked form, and to a greater extent. As the disease advances, the breathing and pulse become more hurried; the fever is greater, and the perspirations more regular and profuse. The emaciation and weakness go on increasing; a pain is felt in some part of the thorax, which is increased by coughing, and sometimes becomes so acute as to prevent the patient from lying on the affected side. All the symptoms increase toward evening; the face is flushed; the palms of the hands and soles of the feet are affected with a burning heat; the feet and ankles begin to swell; and in the last stage of consumption there is nearly always profuse diarrhoea. The emaciation is extreme; the countenance assumes a cadaverous appearance, the cheeks are prominent, the eyes hollow and languid. Usually the appetite remains entire till the end, and the patient flatters himself with the hope of a speedy recovery, often vainly forming distant projects of interest or amusement, when death puts a period to his existence. Tubercular deposits are also usually found in other organs of the body; the liver is enlarged and changes in appearance, and ulcerations occur in the intestines, the larynx, and trachea. These are so frequent and uniform as to lead to the belief that they form part of the disease. The constitutions that are most liable to its attack are generally characterized either by a fair, delicate, rosy complexion, fair hair, clear skin, and great sensibility, or by dark complexion, large features, thick and sallow skin, and heavy general expression. The development of the disease is preceded by a peculiar form of indigestion, known as "stomach dyspepsia." It is specially characterized by a dis-

Fig. 2104.

while the posterior region and the cerebellum are assigned to the third and lowest division. The organs, it must further be remarked, are double, each faculty having two organs, lying in corresponding situations of the hemispheres of the brain; except in those organs, such as *individuality*, *eventuality*, *benevolence*, &c., represented in the accompanying fig. by 22, 30, 13, &c., which occupy the central part of the skull. The faculties generally recognized by phrenologists are the following: 1. *Amativeness*.—Produces sexual love. 2. *Philoprogenitiveness*.—(*Uses*): Affection for young and tender beings. (*Abuses*): Pampering and spoiling children. 3. *Concentrativeness*.—(*Uses*): It renders permanent

of fatty food, sometimes also of sugar and alcohol, and is accompanied with heart-burn and acid eructations after taking food. Unlike inflammation, tubercles almost invariably commence at the apex of the lungs, and it is here that they are usually most advanced. In its earliest stage, the further development of this dreadful disease may, in certain cases, be prevented by a skillful physician; but where the disease is once established, little except palliation can be effected. Change of country, diet, habit, and occupation will sometimes seem to suspend its progress; it has also been checked by other diseases, and not unfrequently it lies dormant in females who breed quickly; but at a later period it again shows itself, and proceeds to its fatal end. The duration of this disease depends upon a great variety of circumstances, and varies from a few months up to four, five, or more years; the average, however, may be taken at about two years; but many of the cases terminate fatally between the fourth and ninth month. The question as to the contagiousness of phthisis has been settled in the affirmative since the discovery that it is a microbic disease, its bacterial germ having been discovered. Contagion is believed to arise from the dried sputum, whose bacterial contents are taken up by the air, and much care is now taken in hospitals to prevent dissemination of the germs in this manner, while a strong public sentiment has arisen against the practice of spitting in public conveyances or on footways. The same bacterium produces diseases in other parts of the body, including the serious skin disease known as Lupus. No method of cure by inoculation has yet been satisfactorily demonstrated.

Phylactery, Phylacter, n. [Gr. *phylaktērion*, from *phylassō*, probably akin to Sansk. *pal*, or *pīl*, to watch, to guard.] Any charm, spell, or amulet worn as a protection or preservative from danger or disease. —Among the Hebrews, a slip of parchment inscribed with some text of Scripture, worn by devout persons on the forehead, breast, or neck, as a mark of their religion. —Among the early Christians, a case for preserving the relics of the dead.

Phyllis, (Myth.) The beautiful daughter of Siphon, King of Thrace, who, being betrothed to Demophoon on his return from the sack of Troy, fell into a languishment because he did not return in due time from a journey, and died of grief, or, by some accounts, hanged herself in despair, upon which her body was changed into an almond-tree.

Phyllium, a genus of Orthopterous insects, family Phasmida, natives of tropical countries, having wings extremely like leaves, not only in color, but in the way in which they are ribbed and veined. The joints of the legs are also expanded in a leaf-like manner.

Phyllotaxis, n. [Gr. *phyllon*, a leaf, and *taxis*, arrangement.] (Bot.) The science of the arrangement of leaves on the stem.

Phyllum, Phyllo'dium, n. (Bot.) A term applied to the petiole or leaf-stalk in the case of certain leafless plants, in which this part becomes so much developed as to assume the appearance and perform the functions of a leaf.

Phyma, n. [Gr., from *phyo*, I produce.] (Med.) A slow, unsatisfactory suppuration; a kind of carbuncle or boil, in which the cellular tissue is involved, but in consequence of the tardy action the abscess is a long time coming to maturity.

Physalia, n. (Zool.) A genus of aculephs, sub-order Siphonophora, containing the Portuguese man-of-war, *P. arethusa*, one of the most remarkable and best known of this group. It consists of a pear-shaped and elegantly crested air-sac, floating lightly upon the surface of the water, and giving off from its under surface numerous long and varied appendages. These appendages are the different members of the community, and perform different functions, some of them eating for the whole, others producing medusa buds, and others being the locomotive members, — the latter having tentacles that stretch out behind the floating community even to the length of 30 feet. The air-sac is 3 or 4 inches long, or more. It is found in the S. coast of the U. S.

Physalis, n. [Gr.] (Bot.) A genus of plants, order Solanaceae. They are herbs, rarely shrubs, with axillary or supra-axillary flowers. *P. viscosa*, *pubescens*, or *Pennsylvanica*, the Yellow Henbane, or Ground-cherry, found in dry fields, roadsides, &c., has a stem more or less decumbent, about 1 foot high, often viscid as well as the whole plant; corolla twice as long as the calyx, greenish-yellow, with 5 brownish spots at base inside; fruit yellow or orange-colored, not unpleasant to the taste, inclosed in the enlarged calyx *P. alkekengi*, the

Fig. 2105. — PORTUGUESE MAN-OF-WAR.

Physalis, n. [Gr.] (Bot.) A genus of plants, order Solanaceae. They are herbs, rarely shrubs, with axillary or supra-axillary flowers. *P. viscosa*, *pubescens*, or *Pennsylvanica*, the Yellow Henbane, or Ground-cherry, found in dry fields, roadsides, &c., has a stem more or less decumbent, about 1 foot high, often viscid as well as the whole plant; corolla twice as long as the calyx, greenish-yellow, with 5 brownish spots at base inside; fruit yellow or orange-colored, not unpleasant to the taste, inclosed in the enlarged calyx *P. alkekengi*, the

Winter-cherry, is a native of S. Europe, has the fruit red or reddish, and is cultivated for ornament.

(Zool.) One of the *Physalia*, q. v.

Physalite, n. [Gr. *physao*, to blow.] (Min.) A coarse and almost opaque variety of topaz, which swells when heated.

Physeter, n. [Gr., a blow-pipe.] (Zool.) The CACHALOT, q. v.

—A kind of filtering apparatus.

Physianthropy, n. [Gr. *physis*, nature, and *anthrōpos*, man.] The doctrinal philosophy of the diseases incidental to human life and their cure.

Physic, (fiz'ik.) n. [Gr. *physikos*, natural, from *physis*, nature.] The art of healing diseases, originally practised by those who pretended to a special knowledge of nature and her powers. — Medicines or remedies for diseases, to be applied internally. — A cathartic; a purgative medicine; — a term colloquially and popularly used.

—v. a. To treat with physic; to purge the bowels with a cathartic. — To treat with remedies; to cure; to heal.

Physical, (fiz'ik-al.) a. Pertaining to nature or natural productions, or to material things, as opposed to things moral or imaginary; pertaining to the material part or structure of an organized being, particularly man; material; natural; as, a *physical* body, *physical* force. — Belonging, or having reference to physics; treating of, or pertaining to the causes and relations of natural phenomena; as, *physical* laws. — Perceptible to the senses; corporeal; external.

P. Education. See GYMNASIACS.

P. Geography. An account of the earth in all its present relations to organic and inorganic nature. The organic subjects belonging to *P. G.* fall under the headings *Zoology*, *Botany*, and *Ethnology*. The history of the past, if inorganic, is *Geology*, if organic, *Paleontology*. Of other departments, *Meteorology* and *Climate* have reference to the phenomena of the atmosphere, and *Hydrology* to those of water. The remainder will be considered in a general way in the present article, and details will be found under various headings here designated. *Descriptive geology* does not come within the scope of the present undertaking; and the astronomical problems, of which there are several that bear on the subject, are considered independently. Under the term *P. G.*, limited as above, are included accounts of the various phenomena of the land. Thus, the distribution of the land, the form of the land, the division of the land into *continents* and *islands*, the *mountains*, *table-lands*, *plains*, and *valleys* of the larger tracts, and the various details connecting these, are discussed in distinct articles. *P. G.* regards the human race and human interests in their relations to external nature only. *P. G.* is the history of the earth in its material organization, as a planet, in so far as it affects and is affected by other bodies of the solar system; as a mass of mixed mineral matter, of which the external crust is varied in its composition, and is subject to certain mechanical and chemical changes, which modify its condition and fitness for life; as the seat of vegetable and animal organization, infinitely varied, and all adapted to the circumstances in which they are placed. As a science including many departments, *P. G.* has risen into great importance within a comparatively brief period, and it is not easy to over-estimate its importance. It is, above all, the only fit and reasonable introduction to geology, for both the organic and inorganic world are undergoing great change around us, and the history of this change is the clue to those other and greater changes that have brought about the existing condition of things.

Physicalist, n. A believer in the theory that human thought, action, volition, &c., are governed by the physical constitution of man.

Physically, adv. Naturally; according to nature; by natural power or the operation of natural laws.

Physician, (fiz'ish'an.) n. [Fr. *physicien*; It. *fisico*, from Gr. *physikos*.] Primarily, one who investigated nature and its laws; a naturalist.

—Specifically, a person skilled in the art of healing; one whose profession is to prescribe medicines for physical diseases.

—One who heals moral diseases.

(Law.) A person who has received the degree of doctor of medicine from an incorporated institution; one lawfully engaged in the practice of medicine. Although the *P.* is civilly and criminally responsible for his conduct while discharging the duties of his profession, he is in no sense a warrantor or insurer of a favorable result, without an express contract to that effect. Every person who offers his services to the public generally impliedly contracts with the employer that he is in possession of the necessary ordinary skill and experience which are possessed by those who practise or profess to understand the art or science, and which are generally regarded by those most conversant with the profession as necessary to qualify one to engage in such business successfully. This ordinary skill may differ according to locality and the means of information. The physician's responsibility is the same when he is negligent as when he lacks ordinary skill, although the measure of indemnity and punishment may be different. In England, a *P.* cannot maintain an action for his fees for anything done as *P.* either while attending to or prescribing for a patient; but a distinction is taken when he acts as a surgeon or in any other capacity than that of a *P.*, and in such cases an action for fees will be sustained. All acts of a *P.* as such are considered strictly honorary, and therefore without compensation except when there exists an express contract. In this country, the various states have statutory enactments regulating the collection of fees and the practice

of medicine. In some of the states, as Georgia, Alabama, Missouri, &c., a non-licensed *P.* cannot recover for professional services.

Physicist, (fiz'is-sist.) n. One versed in the science of physics.

Physicologic, n. [Gr. *physikos*, physical, and Eng. *logic*.] Logic interpreted or demonstrated by natural philosophy.

Physiologic'al, a. Relating to physiologic.

Physico-mathematics, n. sing. Mixed mathematics. See MATHEMATICS.

Physico-philosophy, n. The philosophy of physics or nature.

Physico-theology, n. Theology illustrated by natural philosophy.

Physics, (fiz'iks.) n. sing. [Fr. *physique*; Gr. *hē, physikē*.] The science of nature. In modern language, however, the term has a less general signification than its derivation implies. Nature signifying the assemblage of all the bodies of the universe, the *science of nature*, comprehends every species of knowledge, which regards the external world. But bodies may be studied under three different points of view; they may be examined with relation to their different properties, with relation to their constituent parts, and with relation to their appearances and exterior qualities. Then these distinct views give rise to the three great divisions of natural science: namely, *chemistry*, *physics*, and *natural history*. Physics has for its object the theory of the properties of bodies and the motions of masses; chemistry studies the motion of their elementary principles, and natural history observes their physiognomy or external appearance.

Physiognomic, Physiognom'ical, a. Belonging or relating to physiognomy.

Physiognomist, Physiognomer, n. One who is skilled in physiognomy. — One who tells fortunes by observations of the lineaments of the face.

Physiognomy, n. (Sometimes written *physiognomics*.) [Gr. *physiognōmia* — *physis*, and *gnō-mē*, from *gignōskō*, *gnōnai*, to know.] The art or science of judging of a person's nature or character by his outward look, especially by his facial features and characteristics. That the mental character of an individual tends to stamp itself upon the countenance there can be little doubt; though it is very difficult, or perhaps impossible, to lay down any fixed rules upon the subject. In the ordinary business of life, all men are more or less influenced by the belief that the character and disposition of a person may, in some measure, be judged of by his physical appearance, and more particularly by his features; and none have more confidence in this way of judging than those who have most frequent occasion to act upon it. Young children are also striking physiognomists, and it is very remarkable how very early they manifest likings and dislikings to individuals, judging intuitively, as they must do, from their appearance and manner. Certain feelings and passions of the mind manifest themselves by certain expressions of the face; and as these come to be frequently indulged in, they come to give a permanent cast to the countenance. Where these passions are of a bad or gross nature, most people endeavor to conceal them; and hence the difficulty of laying down rules that will apply to every case. Some persons, too, may receive a peculiar expression of countenance from their parents, or they may unconsciously acquire it from the imitation of others; all of which causes tend to interfere with all attempts to raise physiognomy to the rank of a science. The great writer on this subject is Lavater, to whose curious and interesting work we would refer those who wish for further information on this subject.

—Art of foretelling the future fortunes of individuals by the lineaments of the face.

Physiognotype, n. [Gr. *physiognōmonia*, physiognomy, and *typos*, type.] An apparatus used in taking casts of the human countenance.

Physiography, n. [Gr. *physis*, nature, and *graphein*, to write.] A description of nature.

Physiologic, Physiolog'ical, a. Pertaining, or having reference to physiology.

Physiolog'ically, adv. According to the principles of physiology.

Physiologist, n. (Also written *physiologer*.) One who is versed in the science of physiology; one who treats of physiology.

Physiology, n. [Fr. *physiologie*; Gr. *physiologia* — *physis*, and *logos*, discourse.] Literally, the doctrine or science of nature, comprehending a knowledge of all the physical and natural sciences; and this was the meaning which it originally bore. But as these, in course of time, came to be more particularly studied, they received distinct names, as physics, or natural philosophy, chemistry, astronomy, zoology, geology, &c. To the science which treats of the functions of living beings, the term *P.* is still applied, though its meaning is becoming more and more restricted as its various branches become better defined. It is divided into animal, or comparative *P.*, which treats of animals, and human *P.*, which deals with man. By *P.*, as at present used, is generally understood the science of the different functions of which life is the manifestation; i. e., of circulation, nutrition, excretion, respiration, sensation, muscular contraction, digestion, absorption, generation; with other subordinate faculties, as the maintenance of equable temperature, the production of vocal sounds, the mental phenomena. To explain these functions, we must first know the instruments by which they are performed; secondly, the matters which they attract, those which they reject, and the nature of that which remains; thirdly, by what forces these matters

are transported, attracted, retained, and rejected; and finally, the nature of the stimuli appropriate to each part, and the mode in which such part reacts when stimulated.

Physiology, (Vegetable). See BOTANY.

Physique, (*fiz'èk*), *n.* [Fr.] The natural or physical constitution of a person; as, a man of powerful physique.

Physo-graphes, *n. pl.* [Gr. *physis*, and Lat. *gradior*, I proceed.] (*Zoöl.*) A group of Acalephæ, comprehending those which swim by means of air-bladders.

Physonyctes, *n.* (*Bot.*) An order or group of Fungales, including those whose spores are surrounded by a vesicular veil, or sporangium.

Physostegia, *n.* [Gr. *physis*, a bladder, and *stegē*, a covering; from the inflated corollas.] (*Bot.*) A genus of plants, order *Lamiaceæ*. The Lion's Heart, *P. Virginiana*, is a beautiful plant, native in Penna., S. and W. States, and often adorning our gardens, where it spreads rapidly. It is 2-3 feet high, very smooth, dark green; stem square, thick, rigid; leaves opposite, closely sessile; flowers in 4-rowed spikes, numerous, dense; corolla pale purple, about an inch long, spotted inside, blossoming in August.

Physostigma, *n.* (*Bot.*) A genus of plants, order *Eubacæ*. See CALABAR-BEAN.

Phytelephas, (*fi-to-le-fas*), *n.* [Gr. *phyton*, a plant, and *elephas*, elephant, because it affords a milk which hardens into a substance like ivory.] (*Bot.*) A genus of trees, order *Palmaceæ*. The hard albumen of the seed of *P. macrocarpa* constitutes the vegetable ivory of commerce; it is extensively used by turners. The fruit which contains the seed presents some resemblance to a negro's head.

Phytivorous, *a.* [Gr. *phyton*, and Lat. *vorare*, to devour.] Subsisting on plants or herbage; as, a phytivorous animal.

Phytochemistry, **Phytochemistry**, *n.* [Gr. *phyton*, and Fr. *chimie*, chemistry.] The chemistry of plants.

Phytocrene, (*fi-to-kreen*), *n.* (*Bot.*) A genus of plants, order *Artocarpacæ*. The species are termed water-vines, on account of the large quantity of watery juice they yield when wounded. By many botanists this genus is considered to constitute a distinct natural order, called *Phytocrenaceæ*. The plants are climbing shrubs, natives of the West Indies, with dichlamydeous unisexual flowers, and seeds with a large quantity of albumen.

Phytogeny, (*-tøj*), *n.* [Gr. *phyton*, and *gēnein*, to produce.] The doctrine of the generation of plants.

Phytogeography, *n.* [Gr. *phyton*, *gē*, earth, and *graphein*, to describe.] The geography of plants.

Phytoglyphy, *n.* [Gr. *phyton*, and *glyphein*, engraving.] Nature-painting. See NATURE.

Phytography, *n.* [Gr. *phyton*, and *graphein*, to write.] The art or science of describing plants systematically. — A description of plants.

Phytolacca, *n. pl.* [Gr. *phyton*, and *lakha*, gum-lac.] (*Bot.*) The *Phytolacca* fam., an order of plants, alliance *Chenopiales*. *Diag.* Separate flat sepals, stamens alternate with the sepals, and one or several carpels. Herbs or under-shrubs. Leaves alternate, entire, exstipulate. Flowers perfect, racemose. Calyx 4-5-parted. Ovary superior; styles and stigmas distinct, and equal in number to the carpels. Fruit dry or succulent, each carpel of which it is composed containing 1 ascending seed; embryo curved round mealy albumen, with radicle next the hilum. The plants of this order are natives principally of America, India, and Africa. The most noteworthy of them is *Phytolacca decandra*, commonly called poke, or pokeweed. Its roots are emetic and purgative. Its ripe berries have been used medicinally in chronic rheumatism and syphilitic affections. Its young shoots are sometimes boiled and eaten as asparagus.

Phytolite, *n.* [Gr. *phyton*, a plant, and *lithos*, stone.] A fossil plant or vegetable.

Phytolithology, *n.* [Gr. *phyton*, a plant, *lithos*, stone, and *logos*, treatise.] That department of science which treats of fossilized plants.

Phytology, *n.* [Gr. *phyton*, a plant, from *phyō*, to grow, and *logos*, discourse.] A discourse or treatise on plants; a description of the kinds and properties of plants; botany.

Phyton, *n.* [Gr., a plant.] (*Bot.*) A name used to designate the pieces which, by their repetition theoretically, make up a plant, as a joint of stem with its leaf or pair of leaves.

Phytonomy, **Phytonomy**, *n.* [Gr. *phyton*, and *nomos*, law.] The science of the origin and growth of plants.

Phytopathology, *n.* [Gr. *phyton*, *pathos*, disease, and *logos*, discourse.] An account of diseases peculiar to plants.

Phytophagous, (*-tof'a-gus*), *a.* [Gr. *phyton*, and *phagēin*, to eat.] Subsisting on plants.

Phytozoa, *n. pl.* of PHYTOZOON. [Gr. *phyton*, and *zōon*, an animal.] A term almost corresponding to SPERMATIZOA, *q. v.*

Pi, **Pie**, *n.* (*Typog.*) A mass of printers' types confusedly mixed or unsorted.

Piacaba, *n.* (*Bot.*) See LEOPOLDINIA.

Piacenza, (anc. *Placentia*), (*pe-a-chen'za*), a fortified city of N. Italy, cap. of a prov. of same name, at the junction of the Po and the Trebbia, 37 m. W.N.W. of Parma, and 37 m. S.E. of Milan. *Manuf.* Silk stuffs, woollens, hosiery, hats, and earthenware. *Pop.* 39,318.

Piacular, **Piacular**, *a.* [Lat. *piacularis*, from *piā*, to appease.] Expiatory; atoning; having power to atone.

—Requiring expiation; criminal; atrociously bad.

Pia Mater, *n.* [Lat., tender mother.] (*Anat.*) The innermost membrane of the brain, which, dipping into all the convolutions or lobes of the brain, protects and supports the organ in every direction.

Pianissimo, *a.* [It., superl. of *piano*.] (*Mus.*) Very soft; — a direction to perform a certain movement in the gentlest manner.

Pianist, *n.* A performer on the pianoforte.

Piano, *a.* [It.] (*Mus.*) Soft; a direction to a musical performer to diminish the volume of tone in certain places.

Piano, **Pianoforte**, *n.* [It. *piano*, soft, and *forte*, strong.] (*Mus.*) A stringed instrument of the keyed species. Its name, signifying *soft* and *loud*, was probably given to it to distinguish it from the harpsichord and spinet, in which no lightness of touch could lessen the strength of the sound produced, from the quills always striking the strings with equal force; whereas, in the *P.*, the strings are put in vibration by means of small hammers connected by levers with the key or finger-board, which hammers quit the string directly it is struck, a damper falling down upon it the moment the finger quits the key. The invention of the pianoforte is ascribed to a German named Schröder, who lived at the beginning of the last century. Within the present century this instrument has received many useful and valuable improvements; so that it may now be fairly regarded as, next to the organ, the noblest and most elegant instrument in the whole compass of musical practice. The *P.* is made in three distinctive forms: the *grand*, or *concert-grand*, the *square*, and the *upright*; in the first two, the strings run horizontally; in the third, vertically or obliquely upward. Of these, the upright is the form most common in England. The square, long the favorite form in the U. S., is being replaced by the upright, whose advantage lies in its economy of space. The U. S. has long been noted for the perfection in tone and workmanship of its pianos, and possesses some of the largest manufacturing establishments in the world. The number of instruments exported is constantly increasing.

Pianograph, *n.* [Gr. *graphein*, to write.] (*Mus.*) A machine which, attached to a pianoforte, transcribes, on paper prepared for the purpose, anything played by the pianist.

Piano'sa, an island of the Mediterranean, 10 m. W. of Cape Elba. It is $3\frac{1}{2}$ m. long, and $2\frac{1}{2}$ broad. It formed part of the territory of Elba.

Piarists, BRETHREN OF THE PIOUS SCHOOLS, or SCOLOPINI, a religious congregation founded at Rome in 1599 for the education of the poor, was patronized by Paul V. in 1617, and was approved as a religious order by Gregory XV. in 1621.

Piasava, *n.* (*Bot.*) See LEOPOLDINIA.

Pias'tre, *n.* [Fr.: It. and Sp. *piastre*.] An Italian coin of variable value, generally worth about 80 cents; also, a Spanish coin, equal to the American dollar.

Piatt (*pi'at*), in Illinois, an E. central co.; area, about 440 sq. m. *Rivers*. North Fork of Sangamon river, and some less important streams. *Surface*, mostly level; soil, fertile. *Cap.* Monticello. *Pop.* (1897) 18,750.

Piatt, in Pennsylvania, a township of Lycoming county.

Pianhy, a N.E. prov. of Brazil, bordering on the Atlantic Ocean. It lies between Lat. $2^{\circ} 42'$ and $11^{\circ} 20'$ S., and Lon. $40^{\circ} 30'$ and 47° W. Area, about 82,595 sq. m. *Surface*, an elevated plain, bounded on all sides but the N. and N.W. by mountains; soil, not very fertile, but adapted to pasturage. *Cap.* Paralyba. *Pop.* abt. 255,000.

Piave, a river of Italy, rising in the Alps near Lienz, and after a S.E. course of 125 m. flowing into the Adriatic, 22 m. E.N.E. of Venice.

Piazza, *n.* [It.] An open area surrounded by buildings; a square.

Piazza, a town of Italy, prov. of Caltanissetta, 18 m. E.S.E. of Caltanissetta. *Manuf.* Woollen cloth and caps. *Pop.* 14,551.

Pica, *n.* (*Zoöl.*) A genus of birds, order *Insessores*; the Magpie, *q. v.*

(*Med.*) A depravation of taste which causes the patient to desire substances which are noxious or not eatable.

(*Print.*) A kind of printing-type of two sizes, *Small Pica*, and *Pica*, the former of which is next in size above Long Primer.

This line is printed in *Pica*.

And this line in *Small Pica*.

Pi'ca, sometimes *TICA*, a river in the extreme S. of Peru, rises in the Andes, and flows S.W. into the Pacific Ocean. Its estuary is called Pica Bay.

Picador, *n.* [Sp.] See BULL-FIGHT.

Picamar, *n.* [Lat. *pix*, *picis*, pitch, and *amarus*, bitter.] (*Chem.*) The bitter principle of tar.

Picardy, an old prov. of the N.W. of France, now forming the dept. of Somme, and part of the depts. of Oise, Aisne, Pas-de-Calais, and Yonne.

Picaroon, *n.* [Sp. *picarón*; It. *piccaro*, from *picare*, to plunder.] One who pickeers or plunders, particularly a wrecker; a pirate; a corsair; a sea-rover.

Picayune, *n.* The Spanish half-real, a silver coin equal to $6\frac{1}{4}$ cents. The term is of common use in Louisiana.

Picayune, in Illinois, a village of Warren co., abt. 45 m. N.E. of Nauvoo.

Piccadilly, *n.* A street of London, Eng., so called from a ruff or collar of points like spear-heads, worn in the time of James I.

Pic'calilli, *n.* A kind of mixed East India pickle, made of vegetables and hot spices.

Piccini, NICOLA, (*pe-che'ne*), a celebrated Italian musical composer, b. at Bari, 1728; went to Paris in 1776, where a spirited contest was maintained for years between Gluck and him. His principal operas are *Roland*, *Atys*, *Iphigenia in Tauris*, and *Dido*. D. at Passy, near Paris, 1800.

Pic'colo, *n.* [It., small.] (*Mus.*) An octave flute.

Piccolomini, (*pi'ko-lo-me'ne*), the name of a noble family of Sienna, who, in 1538, succeeded the Petrucci as chief of the republic. Their power was but short-lived, however, for in 1541 they were deposed at the instance of Spain. This family has given two popes, Pius II. and III., and a celebrated imperialist general, Octavius P., who chiefly distinguished himself during the Thirty Years' War.

Pichegru, CHARLES, (*peezh'groo*), a French general, b. at Arbois, 1761, of humble parents, but receiving a good education under the monks of his native town, he entered the army, and rose to be sergeant. The revolution elevated him to the rank of general, and, in 1794, he succeeded General Hoche in the command of the army of the north. He shortly after relieved Landau, and compelled the English to evacuate the Netherlands. He next marched into Holland, of which he made a complete conquest, and, in 1797, was elected a member of the Legislative body; but his opposition to the Directory, and his speeches in favor of the royalist emigrants, occasioned an accusation against him as designing to restore royalty. He was ordered without trial to be transported to Cayenne, from whence he escaped to England, where he remained till the spring of 1804, when he returned to Paris, was again apprehended and sent to the Temple; three weeks afterwards he was found strangled in his bed.

Pichin'cha, a volcano of Ecuador, S. America, in the W. Cordillera of the Andes, abt. 11 m. W.N.W. of Quito; height, 15,924 feet.

Picidae, *n. pl.* (*Zoöl.*) A family of birds, order *Scansors*. See WOODPECKER.

Pick, *v. a.* [A. S. *pycan*; Ger. *picken*; Sp. *picar*; Gr. *pekō*, to pull or pluck out.] To pierce; to peck or strike with the bill or beak; to puncture; to open by a pointed instrument; to pull or separate with the teeth, beak, or claws; as, to *pick* a lock, to *pick* oakum, &c. — To pull off or pluck with the fingers something that grows or adheres to another thing; to separate by the hand; as, to *pick* fruit from a tree. — To clean by the teeth, fingers, or claws, or by a small instrument, by separating something that adheres; as, to *pick* one's teeth, to *pick* the meat from a bone. — To take up suddenly; to take away by a rapid or unexpected movement; to steal by taking out with the fingers or hands; as, our riflemen *picked* off the enemy's officers, to *pick* a pocket, &c. — To choose; to select; to cull; — frequently before out; as, he was *picked* out for the duty; — hence, to cause or seek industriously; to get into; as, to *pick* a quarrel. — To gather here and there; to collect; to bring together; — frequently with *up*.

"This fellow *picks* up wit as pigeons peas." — *Shaks.*

— *v. n.* To eat slowly or by morsels; to nibble. — To do anything nicely or leisurely, or by attending to small things — To pilfer; to steal.

— *n.* [Fr. *pique*; W. *pig*; D. *pik*.] A sharp-pointed tool for digging, loosening, or removing in small quantities, as stones, earth, &c.; a pickaxe. — A sharp-pointed hammer used in dressing stones. — A tooth-pick. — Choice; selection; right of selection; as, to take one's *pick*. (*Typog.*) Foul matter which collects on printing types from bad ink and other causes.

Pickaninny, *n.* [Perhaps from Sp. *picado niño*.] A negro or mulatto infant. (Southern States.)

Pick'apack, *adv.* In the manner of a pack. (Vulgar.)

Pick'away, in Ohio, a S. central co.; area, abt. 510 sq. m. *Rivers*. Scioto River, and Darby, Deer, and Walnut creeks. *Surface*, mostly level; soil, remarkably fertile, especially that of the Pickaway Plains, abt. 3 m. S. of Circleville, which is said to be the richest in the State. *Cap.* Circleville. *Pop.* (1897) 28,250.

— A township of the above co.

Pick'back, *a.* On the back; as, mounted *pickback*. (Low.)

Picked (*pikt*), *a.* Sharp; having a point.

Pick'edness, *n.* The state or quality of being picked.

Pickeer, **Piqueer**, *v. a.* [From It. *picare*, to plunder.] To pirate; to pillage; to rob. — To make a flying skirmish, as soldiers.

Pick'ens, in Alabama, a W. co., adjoining Mississippi; area, about 934 sq. m. *Rivers*. Tombigbee and Sipsey rivers. *Surface*, undulating or hilly; soil, fertile. *Cap.* Carrollton. *Pop.* (1890) 22,470.

Pickens, in Georgia, a N. co.; area, about 276 sq. m. *Rivers*. Etowah river, and several smaller streams. *Surface*, hilly or mountainous; soil, in some parts fertile. *Cap.* Jasper. *Pop.* (1897) 8,730.

Pickens, in South Carolina, a N. W. co., adjoining North Carolina on the N.; area, about 464 sq. m. *Rivers*. Tugaloo, Chattooga, Saluda, and Kiowee rivers. *Surface*, much diversified, and in some parts mountainous. The Blue Ridge forms a portion of the N.W. boundary, and Table Rock Mountain, in the N. part, is 4,000 feet high. Soil, generally fertile. *Products*. Corn, cotton, live stock, &c. *Cap.* Pickens. *Pop.* (1897) 17,120.

Pickens, (Fort.) See PENSACOLA BAY.

Pick'er, *n.* One who picks or culls; as, a *picker* of cotton.

(*Mech.*) A machine for separating fibrous substances; as, a wool-picker. — A pickaxe; an instrument to pick or separate with. — One who instigates a quarrel between himself and another.

Pick'ere, *n.* [Dim. of *Pikē*, *q. v.*] (*Zoöl.*) See *Pike*.

Pick erel Lake, in Minnesota, a township of free-born Sw.;

Pick'ering, a town of England, co. of York, 18 m. S. W. of Whitby; pop. 4,300.

Pick'ering Creek, in Pennsylvania, flows into the Schuylkill River from Chester co.

Pick'erington, in Ohio, a post-village of Fairfield co., abt. 15 m. S.E. of Columbus.

Pick'et, *n.* [Fr. *piquet*, from *piquer*, to pierce.] (*Fortif.*) A stake sharpened or pointed, used in laying out ground, to mark any required point. — A narrow board pointed, used in making a fence; a paling.

(*Mil.*) A guard posted in front of an army, to give notice of the approach of the enemy; — otherwise called *outlying picket*. — A game at cards. Same as PIQUET, *q. v.* — A mode of punishment wherein the offender stands on a pointed stake.

— *v. a.* To fortify with pointed stakes. — To inclose or fence with narrow-pointed boards. — To fasten to a picket or stake stuck in the ground, as a horse.

Pick'et-fence, *n.* A fence made with pickets or palings.

Pick'et-guard, *n.* (*Mil.*) A guard consisting of both infantry and cavalry, kept in readiness for immediate service in the event of a surprise from an enemy; an inlying picket.

Pick'ing, *n.* The act of plucking; selecting; gathering; gleanings. — That which is left to be picked, gleaned, or gathered; as, cotton-pickings. — The ground shells of oysters used in making garden-walks. — A hard-burned brick. — Act of pilfering; also, the thing or things stolen; as, pickings and stealings.

Pickle, (*pik'l*), *n.* [*Du. pekkel*; *Ger. pökel*, pickle.] Brine; a solution of salt and water, or any kind of salt or acid liquor in which fish, flesh, or other substances are preserved. — A vegetable or fruit preserved in pickle. — A state or condition of difficulty or disorder; — in contempt or ridicule. — An impish or mischievous child; as, a little pickle.

— *v. a.* To preserve in brine or pickle; as, pickled cucumbers. — To season in pickle; as, a pickled tongue. — To imbue highly with anything bad; as, a pickled cheat. — To prepare by imitation and sell as genuine; — said of copies of paintings by the Old Masters. — To subject to a chemical process during manufacture; — said of pins, needles, &c.

Pick'le-herring, *n.* [*Du. pekkelharing*; *Ger. pickel-haring*.] A jack-pudding; a merry-andrew; a zany; a buffoon.

Pick'lock, *n.* A pointed instrument for opening locks without the key. — A person who picks locks. — A description of superior woe.

Pick'penny, *n.* A sharper; a person who cheats.

Pick'pocket, *n.* One who steals from the pocket of another.

Pick'purse, *n.* A pickpocket; one who steals a purse from the pocket of another.

Pick'sy, *n.* Same as PIXY, *q. v.*

Pick'wick, *n.* A sharp-pointed instrument for picking the wick of a lamp. — In England, a common penny cigar; — named after *Pickwick*, the hero of one of Dickens' novels.

Pic'nic, *n.* [*Fr. piquenique*, from *piquer*, to stick, and *nique*, a small coin.] Originally, an entertainment at which each person contributed some dish or article for the general table; now, entertainment carried with them by a party on an excursion of pleasure into the country, and also the party itself. — A kind of small sweet biscuit.

— *v. n.* To go on a picnic.

Pico, (*pe'ko*), *n.* [*Sp.*] The peak or pointed head of a mountain.

Pico, a mountainous island of the Azores, near the W. coast of Africa: Lat. 38° 28' N., Lon. 28° 25' W. Area, 254 sq. m. Its highest peak is 7,613 feet. Its sides are covered with vineyards and varied cultivation. *Chief towns*. Lagos, Magdalena, and San Bocco. Pop. 38,000.

Picotee, *n.* (*Bot.*) See DIANTHUS.

Picquet, (*pik'et*), *n.* Same as PIQUET, *q. v.*

Pic'ra, *n.* [*Lat.*; *Gr. pikros*, sharp, bitter.] (*Med.*) Powder of aloes with canella.

Pieras'na, or **Pierse'na**, *n.* [*Gr. pikros*, bitter.] (*Bot.*) A genus of plants, order *Simarubaceæ*. The species *P. excelsa*, a native of Jamaica, yields the official quassia-wood of the *Materia Medica*. It is much used as a tonic, febrifuge, and stomachic. It is said to be largely employed by dishonest brewers as a substitute for hops. Cups formed of quassia-wood are used to impart agreeable bitter to liquids which have been allowed to remain in them for some time. An infusion of quassia, sweetened with sugar, is much used as a fly-poison. The active properties of quassia-wood are due chiefly to the presence of an intensely bitter crystalline substance called *quassin*. In Jamaica, the plant is known as the bitter-ash or bitter-wood. — See QUASSIA.

Pi'crate, or **CARBAZOTATE**, *n.* (*Chem.*) A compound of picric or carbazotic acid with a base.

P. of potash. A salt of a beautiful yellow color, crystallizing into prismatic needles, and possessing a brilliant reflexion. It is insoluble in alcohol, but soluble in about 260 parts of water at 15°, or 14 parts of boiling water. Heated with care, it becomes orange-red at the temperature of 300°, but, on cooling, it assumes its original color. Heated to 310°, it detonates with violence. New explosive powders, almost entirely composed of picrate of potash, and nitrate of potash, have been used in the Franco-Prussian war of 1870 with the most appalling effect.

Pic'ric Acid, *n.* (*Chem.*) See CARBAZOTIC ACID.

Pic'ris, *n.* [*Gr.*, a bitter plant resembling lettuce.] (*Bot.*) A genus of plants order *Asteraceæ*.

Pic'romel, *n.* [*Fr.*, from *Gr. pikros*, and *meli*, honey.] (*Chem.*) A peculiar substance, of a sweetish-bitter taste, which exists in bile.

Pic'ropharmac'olite, *n.* [*Gr. pikros*, pharmac'olite, drug, and *lithos*, stone.] (*Min.*) A native hydrated arseniate of lime and magnesite, with a large excess of magnesite.

Pic'rophyll, **Pic'rophyl'lite**, *n.* [*Gr. pikros*, and *phyllon*, leaf.] (*Min.*) An altered Angite, occurring in dark-grayish-green foliated-fibrous matters, resembling serpentine in appearance.

Pic'rosmine, *n.* [*Gr. pikros*, and *osme*, odor.] (*Min.*) A hydrated silicate of magnesite, named from the bitter argillaceous odor which it yields when breathed upon.

Picrotox'ine, (*Chem.*) See COCCULUS INDICUS.

Pict'ish, *a.* Relating, or pertaining to the Picts.

Pict'on, a town, cap. of Prince Edward co., prov. of Ontario, abt. 40 m. S.E. of Kingston. It has an active trade.

Pict'orial, *a.* [*Lat. pictorius*, from *Lat. pictor*, a painter.] Pertaining to pictures; illustrated by pictures; forming pictures or engravings.

Pict'orially, *adv.* By pictures; in a pictorial manner.

Pict'on, a semi-town of Nova Scotia, cap. of a co. of same name, at the head of Pictou harbor, 85 m. E. of Halifax; pop. 3,500.

Picts, *n. pl.* (*Hist.*) The Picts, or the painted, so called from their custom of painting their bodies, are regarded as a Scythian tribe which landed in Ireland about the time of the first peopling of the British islands, and, being expelled thence, settled in the northern parts of Britain. Everything connected with the history of the Picts has been made a matter of controversy, and even the existence of such a people has been contested.

Pict'urable, *a.* That may be painted or pictured.

Pict'ural, *a.* Relating to pictures.

Pict'ure, (*pikt'ur*), *n.* [*Lat. pictura*, from *pingo*, *pictus*, to paint.] That which is painted; a likeness drawn in colors; hence, any graphic representation. — The art of painting. (*r.*) — Any resemblance, representation, or image that, by its likeness, vividly recalls some other thing; as, the boy is the picture of his father.

(*NOTE*. Picture is sometimes employed in the form of certain self-explaining compounds; as, *picture-book*, *picture-gallery*, *picture-cleaner*, &c.)

— *v. a.* To paint a resemblance of; to represent; to form or present an ideal likeness of.

Pict'ure-frame, *n.* The frame which is placed around a picture to make it appear to advantage.

Picturesque, (*-esk*), *a.* [*Fr. pittoresque*; *Lat. pictura*, a picture.] In the strict sense of the word, all objects which afford fit combinations of form and color for the imitation of the painter, are called *picturesque*. In literary composition, this term is applied to a style which represents objects and events in such a manner as to call up vivid impressions of visible reality. Commonly, however, the word is employed by many writers to denote such natural objects as have a somewhat rugged appearance, in contradistinction to those objects which have a *sublime* or *beautiful* character. Thus, among trees, not the smooth young beech, nor the fresh and tender ash, but the rugged oak or knotty wych-elmi, is *P.* Among animals, the ass is generally thought to be more *P.* than the horse; and among horses, it is the wild and rough forester, or the worn-out cart-horse, to which that title is applied. In our own species, objects merely *P.* are to be found among the wandering tribes of gipsies and beggars. Such objects are neither beautiful nor sublime; but are, nevertheless, endowed with qualities of their own, which are not only highly suited to the painter and his art, but attractive also to the rest of mankind whose minds have been at all cultivated or improved; and to such objects the term *P.* ought to be exclusively applied.

Picturesque'ly, *adv.* In a picturesque manner.

Picturesque'ness, *n.* The state or quality of being picturesque.

Picturize, (*pikt'yur-iz*), *v. a.* To form into or represent by pictures; to embellish with pictures.

Pic'ul, **Pec'ul**, or **Pec'al**, *n.* [*Malay pikul*, a man's burden.] In China and the E. Indies, a weight of 133½ pounds.

Pid'dle, *v. n.* To urinate; — a childish word.

Pid'dler, *n.* One who piddles.

Pid'dling, *a.* Trivial; insignificant.

Pie, (*pi*), *n.* [*Fr. pi*, or *pieghe*.] An article of food, consisting of paste baked with something in it or under it, as apple, minced-meat, &c.

— [*Fr.*; *Lat. pica*.] (*Zoöl.*) The MAGPIE, *q. v.*

(*Printing*.) Same as PI, *q. v.*

Pie, *n.* [*W. pi*, and *pia*; *Ir. and Gael. piogh*; *Fr. pie*; *Lat. pica*, a magpie; *Sansk. pika*, the Indian cuckoo.] (*Zoöl.*) Same as PICA, *q. v.*

(*Eccl.*) See PICA.

Pie'bald, *a.* Of various colors; diversified in color; mottled; as, a *piebald* horse.

Piece, *n.* [*Fr.*; *L. Lat. pecia*, *petia*, a fragment; *It. pezzo*, a bit, piece.] A part or portion of anything separated from the whole in any manner; a share; a fragment. — A part of anything, though not separated, or separated only in idea; as, a *piece* of information. — An individual article; a portion of a thing considered as distinct from other things of the same kind or class; a definite performance; a single effort; — particularly a literary or artistic composition; as, a *piece* of poetry or music, a *piece* of statuary. — A musket, gun, or cannon; as, a *piece* of artillery, a fowling-piece. — A coin; as, a four-penny *piece*. — An individual person — sometimes used in contempt.

"Thy mother was a piece of virtue." — *Shaks.*

Apiece, piece by piece; singly. "Creatures who have only one eye and one ear *apiece*." — *Of a piece*, of the same sort or kind; like; sometimes before *with*.

"A poet must be of a piece with the spectators." — *Dryden.*

Piece of eight. See PIASTRE. — *To pieces*, to destruction; as, the ship was dashed to *pieces*.

— *v. a.* To enlarge or mend by the addition of a piece; to patch. — *To unite*; to join.

— *v. n.* To unite by coalescence of pieces or parts; to be compacted, as parts into a whole. — *To piece out*, to enlarge, by adding a piece or pieces.

Piece'-broker, *n.* One who purchases remnants of cloth, &c., to sell again.

Piece'-goods, *n. pl.* Dry-goods generally sold in the piece, as sheetings, shirtings, muslins, &c.

Piece'less, *a.* Not made of pieces; consisting of an entire thing.

Piece'meal, *adv.* In pieces or fragments. — By little and little in succession.

— *a.* Made of parts or pieces; single; separate.

— *n.* A fragment.

Piece'mealed, *a.* Divided into small fragments or parts.

Piece'mer, *n.* One who, in a manufacture, supplies the rolls of wool to the slubber.

Piecer, *n.* One who pieces; a patcher.

Piece work, *n.* Work done by the piece or job.

Pied, (*pid*), *a.* Variegated with spots of different colors; spotted; parti-colored.

"Meadows trim, with daisies *pied*." — *Milton.*

Piedad', a town of Mexico, abt. 1½ m. S.W. of the city of Mexico. During the Mexican War, it was taken and occupied as an advance-post by the American army, previous to the assault on Chapultepec.

Piedimonte, a town of S. Italy, prov. of Terra di Lavoro; 20 m. N.E. of Caserta. *Manuf.* Cloth and paper. Pop. 5,700.

Piedmont, (*peed'mont*), a N.W. division of Italy, formerly the most important part of the kingdom of Sardinia, now forming the N.W. portion of the kingdom of Italy; having N. the Pennine Alps, E. the Ticino and Parua, S. the Maritime Alps and Genoa, and W. the Graian and Cottian Alps. Area, 11,867 sq. m. The surface is a succession of hills and fertile valleys. The climate is mild in winter, but in the summer the heat is excessive. *Rivers*. The Po, Tararo, and the two Doras, are the principal. *Prod.* Wheat, rye, barley, rice, and fruits. Numerous cattle are raised, and the vineyards are extensive. *Min.* Iron, lead, copper, sulphur, marble, cobalt, &c. *Manuf.* Silks, hosiery, woollen and linen goods, brandy, liquors, glass, and earthenware. *Chief towns*. Turin (the cap.), Alessandria, Asti, Coni, Novara, Vercelli, Pinerolo, Susa, and Aosta. Pop. 3,535,736.

Piedmont, in Georgia, a village of Harris co., abt. 115 m. W.S.W. of Milledgeville.

Piedmont, in West Virginia, a post-village of Mineral co., 28 m. S.W. of Cumberland, Md.

Piedmont Station, in Virginia, a village of Fauquier co., about 61 m. W. of Alexandria.

Pied'ness, *n.* Variegation; diversity of color.

Piedouche, (*pe-ä-dösh'*), *n.* [*Fr.*] (*Arch. and Sculp.*) A little pedestal for supporting a bust, &c.

Piedras, (*pe'a-dras*), a promontory of S. America, in the estuary of the Rio de la Plata, abt. 90 m. S.E. of Buenos Ayres.

Pie'dras, a promontory on the E. coast of Mexico, abt. 65 m. N.W. of Vera Cruz.

Piedroit, (*pe-droit'*), *n.* [*Fr. pied-droit*, straight-foot] (*Arch.*) A pier or square pillar, hidden partly within a wall, for the purpose of receiving the downward thrust of a vault, or of a girder. It is without base or capital, and therein differs from a pilaster.

Pieds-Noirs, a tribe of North American Indians. See BLACKFEET.

Piel, (*pēl*), *n.* An iron wedge for boring stones.

Pield, (*peeld*), *a.* Bald; naked; bare.

Pielis, or **Pielisjärvi**, (*pe-a-lis*, or *pe-a-lis-jar'vee*), a lake of E. Finland, 60 m. E.N.E. of Kuopio, between Lat. 62° 55' and 63° 35' N., Lon. 29° and 30° 20' E. Length 57 m., breadth varying from 6 to 14 m. It communicates with Lake Oruvesi by the River Pielis.

Pieno, (*pe-ä'no*), *a.* [*It.*, from *Lat. plenus*, full.] (*Mus.*) Full; with all the instruments.

Pier, (*peer*), *n.* [*A.S. per*, *perre*; *Fr. pierre*, a stone, from *Gr. petra*, a rock.] (*Arch.*) The strong columns on which the arch of a bridge is raised; the solid mass between doors, windows, and other openings in buildings. (*Engineering*.) The mass of building erected for the purpose of forming harbors, landing-places, or other similar works; a mole.

Pier'age, *n.* The rent or toll paid for using a pier or wharf; wharfage.

Pierce, (*peers*), *v. a.* [*Fr. percer*, from *Lat. pertundo*, *peritum*, to make a hole through.] To thrust into with a pointed instrument; to perforate. — To penetrate; to enter; to force a way into; as, a bullet *pierced* his brain. — To penetrate deeply, as the heart; to touch, as the passions; to excite or affect, as the passions. — To dive or penetrate into, as a secret or purpose.

— *v. n.* To enter, as a pointed instrument. — To penetrate; to force a way into or through anything. — To dive or penetrate, as into a secret; to enter. — To affect deeply; as, *piercing* eloquence.

Pierce, FRANKLIN, the 14th President of the United States, son of Brigade-major Benjamin Pierce, who held several political offices in the State of New Hampshire, born in Hillsborough, N. H., 1804, after completing his academical studies, went to Bowdoin College, Maine. On leaving college, he entered the office of Judge Howe, of Northampton, Massachusetts, but returned to his native

State, and finished his studies at Amherst. He was admitted to the bar, and commenced practice in his native town; before the end of two years he was elected a representative in the State Legislature, and during his second year's service was chosen Speaker. In 1833 he was elected to Congress, and remained a member of the House of Representatives for four years. Although a firm supporter of Democratic measures, he seldom distinguished himself as a debater. In 1837 he was elected a member of the U. S. Senate, and at the end of five years resigned his seat, intending to devote himself wholly to his profession, when he settled in Concord, and, resuming his practice at the bar, was successful as an advocate. President Polk offered to make him Attorney-General or Secretary of War, but he refused both of these offices. On the breaking out of the Mexican War, Mr. Pierce enrolled himself as a private soldier in a New England regiment; President Polk sent him a colonel's commission, and raised him to the rank of brigadier-general in March, 1847. On the restoration of peace, he lived in comparative retirement until the proceedings of the Baltimore Democratic Convention in 1852 brought him once more before the public, and he was nominated by that body, with but few dissentient votes, the Democratic candidate for the Presidency of the United States, and in due course was elected to that office; though a man of marked ability, he did not succeed in giving satisfaction to any party. He was succeeded by Mr. Buchanan in 1857. Soon after he travelled extensively in Europe, from which he returned in 1860, but from that time took no part in politics. D. 1869.

Pierce, in *Georgia*, a S.E. co.; *area*, abt. 500 sq. m. *Rivers*, Satilla River, and Hurricane Creek. *Surface*, mostly level; *soil*, sandy and barren. *County-seat*, Blackshear.

Pierce, in *Illinois*, a twp. of De Kalb co.

Pierce, in *Indiana*, a township of Washington county.

Pierce, in *Iowa*, a township of Page co.

Pierce, in *Ohio*, a twp. of Clermont co.

Pierce, in *Washington*, a W. central co., bordering on Puget Sound; *area*, about 1,376 sq. m. *Rivers*, Nesqually, White, and Puyallup rivers. *Surface*, diversified, and in the E. mountains. Mount Rainier, a peak of the Cascade Range in the S.E., has an elevation of about 12,000 feet; *soil*, generally fertile. *Cap.* Tacoma. *Pop.* (1897) about 64,500.

Pierce, in *Wisconsin*, an extreme W. co., adjoining Minnesota; *area*, about 570 sq. m. *Rivers*, Mississippi, St. Croix, Menominee, and Rush rivers. Lake Pepin forms a portion of the S. boundary of the co. *Surface*, generally level; *soil*, fertile. *Cap.* Ellsworth. *Pop.* (1895) 23,040.

Pierceable, *a.* That may be pierced.

Pierce City, in *Idaho*, a post-village, former cap. of Shoshone co., about 90 m. E. of Lewistown.

Piercel, *n.* A piercer; a gilet or other instrument for forming a vent in a barrel of liquor.

Pierce Point, in *Iowa*, a post-village of Dallas co., abt. 27 m. W.N.W. of Des Moines.

Piercer, *n.* An instrument that pierces, penetrates, or bores.—One who pierces or perforates.

Piercetown, in *Indiana*, a post-town of Kosciusko co., about 9 m. E. S. E. of Warsaw.

Pierreville, in *Indiana*, a post-village of Ripley co., abt. 45 m. W. of Cincinnati, Ohio.

Piercingly, *adv.* In a piercing manner; with penetrating force or effect; sharply.

Piercingness, *n.* The power of piercing.

Pier-glass, *n.* A glass or mirror which hangs against a pier, between windows.

Pierian, *a.* [Lat. *pietius*, from Gr. *pietios*, from Mount *Pierus*, in Thessaly, sacred to the Muses.] Relating to the Muses; as, the *Pierian* spring.

Piermont, in *New Hampshire*, a post-village and township of Grafton county, about 5 miles S. of Haverhill.

Piermont, in *New York*, a post-village of Rockland co., abt. 24 m. N. of New York city.

Pierpont, in *New York*, a post-township of St. Lawrence co.

Pierpont, in *Ohio*, a post-village and township of Ashland co., abt. 218 miles North East of the city of Columbus.

Pierre Bayou, in *Mississippi*, flows into the Mississippi River from Claiborne co.

Pierrepont Manor, (*peer'pont*), in *New York*, a post-vill. of Jefferson co., abt. 18 m. S.S.W. of Watertown.

Pierrier, *PETRARI*, *n.* [Gr. *petros*, a stone.] (*Mil.*) Anciently, an engine for casting stones; afterwards a small kind of cannon; and in modern times a mortar used in sieges for firing stones.

Pier'son, in *Indiana*, a twp. of Vigo co.

Pierson, or *PEARSON*, in *Michigan*, a post-township of Montcalm co.

Pier-table, *n.* A table placed between windows.

Piet, *n.* (*Zoöl.*) Same as *Pica*, *q. v.*

Pietism, *n.* The religion of the German Pietists.

Pietist, *n.* (*Eccl. Hist.*) One of a sect of religious reformers that sprung up in Germany in the 17th cent., noted for strict piety and great purity of life;—often so called in contempt.

Pietis'tic, *Pietis'tical*, *a.* Relating to the Pietists; affectedly religious.

Piety, *n.* [Fr. *piété*; It. *pieta*; Lat. *pietas*, from *pius*, pious.] Filial reverence or veneration toward God as the Father of all; a sense of dependence on the Supreme Being, accompanied with love, habitual reverence, and a disposition to know and obey His will and laws.—Reverence of parents or friends, accompanied with affection and devotion to their honor and happiness.

Pietraper'zia, a town of Italy, in Sicily, 5 m. S.E. of Caltanissetta; *pop.* 8,500.

Piezometer, *n.* [Gr. *piezin*, to press, and *metron*, measure.] An instrument for ascertaining the compressibility of liquids.

Piffero, *n.* [It.] (*Mus.*) A fife.

Pig, *n.* [Du. *big*, pig; Norm. *piges*, pigs.] A young sow or boar.—An oblong mass of unforged iron, lead, or other metal, so called because it flows in the melted state into channels branching off from the main channel, called the *Sow*. See *IRON*.

—In Scotland, an earthen ewer or vessel.

—*c. a. or v. n.* To farrow; to bring forth pigs; to bring forth in the manner of pigs.—To lie together like pigs.

Pig-bed, *n.* (*Founding*.) The bed of moulded sand into which molten iron is run, in order to be cast into pigs.

Pigalle, JEAN BAPTISTE, an eminent sculptor, b. at Paris, 1714. He studied in Italy, and on his return to France became sculptor to the king, chanceller of the Academy of Painting, and a knight of the order of St. Michael; d. 1785.

Pigeon, (*pij'an*), *n.* [Fr.; Sp. *pichon*; Lat. *pipio*, a young piping or chirping bird.] (*Zoöl.*) A name common to all the birds composing the family *Columbidae*, *q. v.* As the Ring-Dove, Stock-Dove, Passenger-Pigeon, and Turtle-Dove will be found described under those names respectively, we shall notice here exclusively the tame or domesticated *P.*, the tenants of the dove-cot. These are the willing attendants on man, and depend on his bounty, seldom leaving the dwellings provided for them, and only roaming abroad to seek amusement, or to procure subsistence; but when we consider the lightness of their bodies, the great strength of their wing, and the amazing rapidity of their flight, it is a matter of wonder that they should submit even to a partial domestication, or occupy those tenements fitted up for the purpose of breeding and rearing their young. *P.* occur in every climate, and although they thrive best in warm countries, yet with care they succeed also in very northern latitudes. Their manners are gentle and lively; they are fond of society, and have always been held emblematic of peace and innocence; they are faithful to their mates, whom they solicit with the softest cooings, the tenderest caresses, and the most graceful movements. The exterior form of the *P.* is elegant: the bill is weak, straight, slender, somewhat curved at the point, and has a soft protuberance at the base, in which the nostrils are placed; the legs are short and red, and the toes divided to the origin. They moult once, and the sexes do not differ in plumage. It would be as fruitless as unnecessary to attempt to describe all the varieties of the tame *P.*; for human art has so much altered the color and figure of this bird, that pigeon-fanciers, by pairing a male and female of different sorts, can, as they express it, "breed them to a feather." Hence we have the various names of *Carriers*, *Tumblers*, *Jacobins*, *Croppers*, *Pouters*, *Runts*, *Turbits*, *Shakers*, *Fantails*, *Owls*, *Nuns*, &c., all birds that at first may have accidentally varied from the stock-dove. Of all the varieties, the finest is the *Carrier-P.* or *Messenger*,—so called from its being used to convey letters from one place to another. These birds are rather larger than most of the common-sized *P.*; their feathers lie very close and even, and their necks are long and straight; so that when they stand upright on their legs, they show more gentility of shape than most other *P.* From the lower part of the head to the middle of the lower chap there grows out a white, naked, fungous flesh, which is called the wattle, and is generally met by two small protuberances of the same luxuriant flesh, rising on each side of the under chap. The eyes are surrounded with the same sort of corrugated flesh; and the circle around the black pupil of their eyes is commonly of a red brick-dust color, though more esteemed when it is of a brilliant red. When the luxuriant flesh around the eye is thick and broad, it is considered that the *Carrier* will be a good breeder, and rear very fine young ones. Extraordinary attention was formerly paid to the training of these *P.* An actual post-system, in which *P.* were the messengers, was established by the Sultan Nonreddin Mahmoud, who died in 1174; which flying-post lasted till 1258, when Bagdad fell into the hands of the Mongols, and was destroyed by them. At present they are kept only by some persons as a curiosity, much time and attention being required to train them properly. As soon as the young are fledged, a cock and a hen-bird are made as tame as possible, and accustomed to each other's society. They are then sent, in an uncovered cage, to the place whither they are usually to carry messages. If one of them should be lost, or carried away, after having been well treated for some time, it will certainly return to its mate. A small letter is written on the finest kind of thin paper; then placed lengthwise under one wing, or fastened to the leg.

—*c. a. or v. n.* To farrow; to bring forth pigs; to bring forth in the manner of pigs.—To lie together like pigs.

Pig-bed, *n.* (*Founding*.) The bed of moulded sand into which molten iron is run, in order to be cast into pigs.

Pigalle, JEAN BAPTISTE, an eminent sculptor, b. at Paris, 1714. He studied in Italy, and on his return to France became sculptor to the king, chanceller of the Academy of Painting, and a knight of the order of St. Michael; d. 1785.

Pig-bed, *n.* (*Founding*.) The bed of moulded sand into which molten iron is run, in order to be cast into pigs.

Pigalle, JEAN BAPTISTE, an eminent sculptor, b. at Paris, 1714. He studied in Italy, and on his return to France became sculptor to the king, chanceller of the Academy of Painting, and a knight of the order of St. Michael; d. 1785.

Pigeon, (*pij'an*), *n.* [Fr.; Sp. *pichon*; Lat. *pipio*, a young piping or chirping bird.] (*Zoöl.*) A name common to all the birds composing the family *Columbidae*, *q. v.* As the Ring-Dove, Stock-Dove, Passenger-Pigeon, and Turtle-Dove will be found described under those names respectively, we shall notice here exclusively the tame or domesticated *P.*, the tenants of the dove-cot. These are the willing attendants on man, and depend on his bounty, seldom leaving the dwellings provided for them, and only roaming abroad to seek amusement, or to procure subsistence; but when we consider the lightness of their bodies, the great strength of their wing, and the amazing rapidity of their flight, it is a matter of wonder that they should submit even to a partial domestication, or occupy those tenements fitted up for the purpose of breeding and rearing their young. *P.* occur in every climate, and although they thrive best in warm countries, yet with care they succeed also in very northern latitudes. Their manners are gentle and lively; they are fond of society, and have always been held emblematic of peace and innocence; they are faithful to their mates, whom they solicit with the softest cooings, the tenderest caresses, and the most graceful movements. The exterior form of the *P.* is elegant: the bill is weak, straight, slender, somewhat curved at the point, and has a soft protuberance at the base, in which the nostrils are placed; the legs are short and red, and the toes divided to the origin. They moult once, and the sexes do not differ in plumage. It would be as fruitless as unnecessary to attempt to describe all the varieties of the tame *P.*; for human art has so much altered the color and figure of this bird, that pigeon-fanciers, by pairing a male and female of different sorts, can, as they express it, "breed them to a feather." Hence we have the various names of *Carriers*, *Tumblers*, *Jacobins*, *Croppers*, *Pouters*, *Runts*, *Turbits*, *Shakers*, *Fantails*, *Owls*, *Nuns*, &c., all birds that at first may have accidentally varied from the stock-dove. Of all the varieties, the finest is the *Carrier-P.* or *Messenger*,—so called from its being used to convey letters from one place to another. These birds are rather larger than most of the common-sized *P.*; their feathers lie very close and even, and their necks are long and straight; so that when they stand upright on their legs, they show more gentility of shape than most other *P.* From the lower part of the head to the middle of the lower chap there grows out a white, naked, fungous flesh, which is called the wattle, and is generally met by two small protuberances of the same luxuriant flesh, rising on each side of the under chap. The eyes are surrounded with the same sort of corrugated flesh; and the circle around the black pupil of their eyes is commonly of a red brick-dust color, though more esteemed when it is of a brilliant red. When the luxuriant flesh around the eye is thick and broad, it is considered that the *Carrier* will be a good breeder, and rear very fine young ones. Extraordinary attention was formerly paid to the training of these *P.* An actual post-system, in which *P.* were the messengers, was established by the Sultan Nonreddin Mahmoud, who died in 1174; which flying-post lasted till 1258, when Bagdad fell into the hands of the Mongols, and was destroyed by them. At present they are kept only by some persons as a curiosity, much time and attention being required to train them properly. As soon as the young are fledged, a cock and a hen-bird are made as tame as possible, and accustomed to each other's society. They are then sent, in an uncovered cage, to the place whither they are usually to carry messages. If one of them should be lost, or carried away, after having been well treated for some time, it will certainly return to its mate. A small letter is written on the finest kind of thin paper; then placed lengthwise under one wing, or fastened to the leg.

—*c. a. or v. n.* To farrow; to bring forth pigs; to bring forth in the manner of pigs.—To lie together like pigs.

Pig-bed, *n.* (*Founding*.) The bed of moulded sand into which molten iron is run, in order to be cast into pigs.

Pigalle, JEAN BAPTISTE, an eminent sculptor, b. at Paris, 1714. He studied in Italy, and on his return to France became sculptor to the king, chanceller of the Academy of Painting, and a knight of the order of St. Michael; d. 1785.

Pigeon, (*pij'an*), *n.* [Fr.; Sp. *pichon*; Lat. *pipio*, a young piping or chirping bird.] (*Zoöl.*) A name common to all the birds composing the family *Columbidae*, *q. v.* As the Ring-Dove, Stock-Dove, Passenger-Pigeon, and Turtle-Dove will be found described under those names respectively, we shall notice here exclusively the tame or domesticated *P.*, the tenants of the dove-cot. Franklin Pierce

1804-1869

cobalt, stone coal, and alabaster. *Cap.* Murfreesborough. *Pop.* (1897) 9,150.

Pike, in *Georgia*, a W. central co.; *area*, about 262 sq. m. *Rivers*, Flint river, and Big Potato, Elkins, Flat, Rose, and South Towaliga creeks. *Surface*, diversified; *soil*, moderately fertile. *Min.* Iron. *Cap.* Zebulon. *Pop.* (1897) 16,940.

Pike, in *Illinois*, a W. co., adjoining Missonri; *area*, about 795 sq. m. *Rivers*, Mississippi and Illinois. *Surface*, undulating prairies partly covered with forests. *Soil*, remarkably fertile. *Min.* Coal in abundance. *Cap.* Pittsfield. *Pop.* (1890) 31,000.

—A township of Livingston co.

Pike, in *Indiana*, a S. W. co.; *area*, about 310 sq. m. *Rivers*, White river and Patoka creek, besides several smaller streams. *Surface*, nearly level; *soil*, very fertile. *Min.* Coal in abundance and of superior quality. *Cap.* Petersburg. *Pop.* (1897) 19,360.

—A township of Jay co.

—A township of Marion co.

—A township of Ohio co.

—A township of Warren co.

Pike, in *Iowa*, a township of Muscatine co.

Pike, in *Kansas*, a township of Lyon co.

Pike, in *Kentucky*, an extreme E. co., adjoining West Virginia on the N. E., and Virginia on the S. E.; *area*, about 780 sq. m. *Rivers*, Tug Fork and West Fork of Big Sandy river. *Surface*, uneven and hilly, being bounded on the S. E. by Cumberland Mountain; *soil*, generally fertile. *Min.* Bituminous coal in large deposits. *Cap.* Pikeville. *Pop.* (1897) 17,705.

Pike, in *Mississippi*, a S. co., adjoining Louisiana; *area*, about 720 sq. m. *Surface*, level; *soil*, not very fertile. *Cap.* Magnolia. *Pop.* (1897) 22,150.

Pike, in *Missouri*, an E. by N. co., adjoining Illinois; *area*, about 620 sq. m. *Rivers*, Mississippi, Salt, and Cuivre rivers, and Spencer's, Ramsey's, and Buffalo creeks. *Surface*, mostly level prairies; *soil*, generally fertile. *Min.* Limestone and sandstone. *Cap.* Bowling Green. *Pop.* (1890) 26,321.

—A township of Stoddard co.

Pike, in *New York*, a post-village and township of Wyoming county, about 45 miles east southeast of Buffalo.

Pike, in *North Carolina*, a post-office of Cumberland co.

Pike, in *Ohio*, a S. co.; *area*, about 436 sq. m. *Rivers*, Scioto river, and Beaver and Sunfish creeks. *Surface*, generally hilly; *soil*, very fertile. Producing the usual fruits and cereals of that region in abundance. *Cap.* Waverly. *Pop.* (1897) 18,430.

—A township of Brown county.—A township of Clarke county.—A township of Coshocton county.—A township of Fulton county.—A township of Knox county.—A township of Madison county.—A township of Perry county.—A township of Stark county.—A post-office of Pike county.

Pike, in *Pennsylvania*, an E. by N. co., adjoining New York on the N. E. and New Jersey on the S. E.; *area*, abt. 600 sq. m. *Rivers*, Delaware River, and Lackawaxen, Shohola, and Bushkill creeks. *Surface*, hilly and broken; *soil*, moderately fertile; *Minerals*, excellent building, flagging, and other stone. *Cap.* Milford.

—A township of Berks county.—A post-township of Bradford county.—A township of Clearfield county.—A township of Potter county.

Piked, *a.* Acuminated; ending in a point.

Pike'let, **Pike'lin**, *n.* In England, a light tea-cake.

Pike man, *n.*; *pl.* PIKEMEN. A soldier armed with a pike.

Pike Mills, in *Pennsylvania*, a post-village of Potter co., abt. 25 m. E. of Coudersport.

Pike-perch, *n.* (*Zoöl.*) An acanthopterygious fish, genus *Labrax*, from *Percidae*. It inhabits the Great Lakes of N. America, is 12 to 18 inches long, cylindrical and tapering, and is popularly known as the Common Pike, Glass-Eye, and Yellow Pike.

Pike's Peak, in the State of *Colorado*, one of the highest summits of the Rocky Mountains, in El Paso co., abt. Lat. 38° 35' N., Lon. 105° 15' W.; *height*, as ascertained by Hayden's U. S. explorations, 1876, 14,146 feet. There is a U. S. signal station here.

Pike'staff, *n.* The shaft of a pike.—An alpenstock.

Pikesville, or **PIKEVILLE**, in *Maryland*, a village of Baltimore co.; mail BALTIMORE.

Pike'ton, in *Indiana*, a village of Marion co.; now a suburban part of Indianapolis.

Pikeville, or **PIKEVILLE**, in *Kentucky*, a post-village, cap. of Pike county, about 160 miles south southeast of Frankfort.

Piketon, in *Ohio*, a post-village, former cap. of Pike co., about 65 m. S. of Columbus.

Pikeville, in *Alabama*, a post-village, former cap. of Marion co., about 68 m. N. N. W. of Tuscaloosa.

Pikeville, in *Mississippi*, a village of Chickasaw co., abt. 14 m. E. of Houston.

Pikeville, in *Tennessee*, a post-village, cap. of Bledsoe co., abt. 112 m. E.S.E. of Nashville.

Pilage, *n.* [From Lat. *pilus*, hair.] The natural coat of hair on animals.

Pilao Areado, (*pe-loung ar-ka'do*), a town of Brazil, on the São Francisco River; Lat. 11° 30' S., Lon. 42° 40' W.; *pop.* 5,000.

Pilar, or **NEEMBUCU**, a town, port of entry, and military depôt of Paraguay, on the Parana River, abt. 170 m. W. S.W. of Asuncion.

Pilar, in Brazil, a town abt. 50 m. W. of Parahyba; *pop.* 4,000.—Another town, about 170 m. N. of Goyaz; *pop.* 1,800.

Pilares, (**Capo de los**), a cape of S. America, forming the N.W. extremity of Terra del Fuego.

Pilas'ter, *n.* [It. *pilastro*; Fr. *pilastre*, from Lat. *pila*, a pillar.] (*Arch.*) A square column or pillar, used in classical architecture, sometimes disengaged, but generally attached to a wall, from which it projects a third, fourth, fifth, or sixth of its breadth. The Greeks formed their pilasters of the same breadth at the top and bottom, (Fig. 2107,) and then gave them capitals and bases different from those of the orders with which they were associated; the Romans usually gave them the same capitals and bases as the columns, and often made them diminish upwards in the same manner.

Pilas'tered, *a.* Having pilasters.

Pilate, (*PONTIUS*), a Roman, who became governor of Judaea A. D. 26. He commanded in that country ten years. The Jews brought Jesus Christ before Pilate, who, perceiving that envy and malice occasioned their charges, would have scourged the prisoner and dismissed him, but being threatened with the wrath of Caesar, Pilate delivered Jesus, whom he pronounced innocent, to be crucified. He is said to have subsequently treated the Samaritans with great cruelty, for which he was recalled by Tiberius, and banished to Gaul, where he slew himself, A. D. 37 or 38.

Pilat'ka, in *Florida*, a post-village, cap. of Putnam co., 200 m. E.S.E. of Tallahassee.

Pil'au, *n.* See **PILLAU**.

Pilaya, or **TUPIZA**, (*pe-li'a*), a river of Bolivia, rises on the E. slope of the Eastern Andes, and flowing a general E. course of abt. 300 m., joins the E. branch of the Pilcomayo, abt. Lat. 20° 50' S., Lon. 63° 50' W.

Pilch, **Pilch'er**, *n.* [From It. *pellicia*, from Lat. *pellis*, a skin.] Anything lined with fur, as a robe.

Pilchard, *n.* (*Zoöl.*) The *Clupea pilchardus*, a species of herring very common on the shores of the S.W. of England, but differing from the common herring in many zoölogical characters, among which the larger size of the abdominal region is the one most prominent to ordinary observers.

Pilch'er, *n.* [From It. *pellicia*, a furred coat; Lat. *pellis*, a skin.] Anything lined with fur, as a robe.

(*Zoöl.*) See **PILCHARD**.

Pilcomayo, or **ARAGUAL**, (*pil-ko-m'yo*), a river of S. America, rises between the provinces of Chuquisaca, Potosi, and Tarija, in Bolivia, and flowing S.E. into Paraguay, joins the Paraguay River by two embouchures, a few m. below Asuncion; *length*, abt. 1,000 m.

Pile, *n.* [A. S. *pil*; Fr. *pîle*, a heap; Lat. *pila*, a ball.] A heap; a mass or collection of things in a roundish or elevated form; as, a pile of stones, a pile of wood.—A collection of combustibles for incineration; as, a funeral pile.—An edifice; a large building or mass of buildings; as, a noble pile.—A series of iron bars for reheating.—A heap of balls or shot laid in horizontal courses, rising into a pyramidal form.

(*Elect.*) See **VOLTAIC ELECTRICITY**.

Pile, *n.* [A. S. *pil*; Ger. *pfohl*; Lat. *palus*, a stake, a prop.] (*Engineering*.) A beam of timber or stakes of wood driven firmly into the ground for various purposes; such as forming the foundation for buildings, piers of bridges, &c. Piles may be either round or square, and formed of any timber which is not likely to rot under water. They are generally made of fir; but oak and elm are also largely employed. The end of the pile which enters the ground is pointed and shod with iron, while the top is bound with a strong iron hoop to prevent the wood from splitting under the violent blows required to drive it home. Foundations are never constructed with piles unless the ground is suspected of being unsound, or the weight to be borne is exceedingly great. Piles of cast-iron are now often used, chiefly in the formation of harbors.

(*Coinage*.) One side of a coin;—the opposite of *cross*. Originally, a punch or punchon used in stamping figures on coins, and containing the figures to be impressed.

(*Her.*) An ordinary which is represented of a wedge-shape, tapering from the chief downwards towards the point; said to represent the piles on which bridges and other erections are founded.

Pile, *n.* [Lat. *pilus*, hair.] A hair; hence, the fibre of textile fabrics; hence, also, the fine hairy substance on the surface of cloth, &c.; as, velvet pile.

Pile, *v. a.* To heap; to lay, throw, or collect into a pile or mass; as, to pile wood; to accumulate; to amass; as, to pile money, to pile comments or quotations.—To fill above the brim or top; as, piled measure.—To drive piles in; to furnish or fill with piles.

To shut pile, to drive a piling of planks edge to edge in. (See **PILING**).—To pile arms. (*Mil.*) To place three muskets together in such an upright manner as to afford each other support in common.

Pilente, **Pileated**, *a.* [From Lat. *pileus*, a felt hat.] (*Bot.*) Possessing the shape of a head-covering, as a mushroom.

Piled, (*pild*), *a.* Re-heated; as, piled iron.

Pile-driver, **Pile-engine**, *n.* An engine for driving down piles into the earth.

Pileorhi'za, *n.* [Gr. *pilos*, felt cloth, and *riza*, a root.] (*Bot.*) The cap of a root. It is well represented in the ends of the roots of *Nuphar*, where it is seen to form a membranous hood, distinct from the spongiole.

Pil'cons, *a.* Covered with, or consisting of hair; pillose.

Pile-plank, *n.* One of a number of planks with

sharpened points, driven into the ground after the manner of piles.

Piler, *n.* One who piles a heap.

Piles, *n. pl.* [Lat. *pila*, a ball.] (*Med.*) See **HÆMORRHOIDS**.

Piles grove, in *New Jersey*, a township of Salem county.

Pileus, *n.* [Lat. and Gr., a felt hat.] (*Antiq.*) A kind of felt cap worn by the ancients, and fitting close to the head; a skull-cap.

(*Bot.*) The expanded disc of certain fungi, as the mushroom.

Pilfer, *v. n.* [Fr. *piller*; Lat. *pilore*, to pillage; primarily to deprive of hair, from *pilus*, a hair.] To steal in small quantities; to practise petty theft.

—*v. a.* To filch; to steal by petty larceny.

Pilferer, *n.* One who pilfers; one who commits petty theft.

Pilferingly, *a.* With petty theft; filchingly.

Pilfery, *n.* Petty theft.

Pilgar'lic, *n.* One who has lost his hair by disease;—hence, a poor, neglected wretch.

Pil'grim, *n.* [Ger. *pilger*; Fr. *pèlerin*; Sp. *peregrino*; It. *pellegrino*; Lat. *peregrinus*, a foreigner.] A wanderer; a traveller; specifically, one who travels to a distance from his own country to visit a holy shrine, or to pay his devotion to the remains of dead saints.

(*Script.*) One who has only a temporary residence on earth.

—*a.* Pertaining or having reference to pilgrims.

Pil'grimage, *n.* A long journey, particularly a journey to some place deemed sacred and venerable, in order to pay devotion to the relics of some deceased saint.—Hence, any undertaking requiring the exercise of time and patience; time irksomely passed.

"In prison hast thou spent a pilgrimage."—*Shaks.* (*Script.*) The journey of human life.

Pilid'ium, *n.* (*Bot.*) The orbicular hemispherical shield or apothecium of a lichen, the outside of which changes to powder, as in calycium.

Piliferous, *a.* [Lat. *pilus*, hair, and *ferre*, to bear.] Beset with hairs; bearing a single hair, as a plant.

Piligerous, *a.* [From Lat. *pilus*, hair, and *gerere*, to bear.] Covered with, or bearing hair.

Piliform, *a.* [Lat. *pilus*, hair, and *forma*, form.] Having the appearance of hair or down.

Piling, *n.* Act of heaping, or of throwing into a heap.—Act of driving piles.—Piles in place, considered collectively.

Shut piling, a series of piles made of planks or half logs driven edge to edge.

Pill, *n.* [Lat. *pila*, *pilula*.] A medicine in the form of a little ball, to be swallowed entire;—hence, anything nauseous.

—*v. a.* [Fr. *piller*, to strip off.] To pillage; to peel.—To dose with pills.

—*v. n.* To be peeled; to come off in flakes.—To pillage. See **PEEL**.

Pillage, (*pill'aj*), *n.* [Fr.] A stripping or depriving of property by violence; act of plundering.

"Thy sons make pillage of her chastity."—*Shaks.*

—Plunder; spoil; that which is taken from another by open force, particularly and chiefly from enemies in war.—*v. a.* To plunder; to spoil; to strip of money or goods by open violence; as, soldiers pillage the towns of an enemy.

Pillager, *n.* One who plunders by open violence.

Pillar, *n.* [Fr. *pilier*; Sp. *pilar*, from Lat. *pila*.] A support to the arch, differing from the column which is always round, whereas the pillar may be of any shape.

Fig. 2108.

LADY CHAPEL, SALISBURY CATHEDRAL, (England.)

In Gothic architecture, also, the pillars are of different forms at the various epochs of that style. First, in the Norman period, we have plain massive pillars, square, circular, and octagonal, frequently ornamented with

zigzag ornaments, spiral bands, &c., on the surface. As vaulting progressed, the system of breaking the plain surface, and giving to each portion of the vaulting a separate little column, or detached shaft, to support it, was introduced, as in the splendid example shown in Fig. 2108. But, more frequently, shafts were attached to the circular pillars, or little shafts set in nooks cut in the pillar. In the perpendicular buildings the mouldings of the piers occasionally run up into the arches, and form part of the archivolt, and in some cases the mouldings of the pillars are continued in the arches without any capital or impost between them.

—Hence, a supporter; that which sustains or upholds; that on which some superstructure rests; also, a character which resembles a pillar in stability and strength.

"He seemed a pillar of state."—Milton.

—Anything which resembles a pillar in appearance.

"The Lord went before them . . . by night in a pillar of fire." Ex. xiii. 21.

(Munge.) The centre of the mane ground around which a horse turns.

Pillared, (-lurd), *a.* Supported by pillars; as, a pillared dome.

—Having the form or embodiment of a pillar or pillars.

Pillaret, *n.* A little pillar.

Pillarist, *n.* (Eccl. Hist.) A stylite. See **STYLITE**.

Pillau, *n.* (Pers. and Turk. *pillaw*.) A Turkish ragout, consisting of boiled rice flavored with mutton fat.

Pillau, a seaport-town of E. Prussia, at the extremity of a narrow peninsula, between the Baltic and the inlet called Frische-Haff; Lat. 54° 38' 4" N., Lon. 19° 54' E. Pop. 4,000.

Pillibheet, **Pillibhit**, **Pillibeet**, a town of British India, Upper Provinces, presidency of Bengal, 30 m. N.E. of Bareilly.

Pillion, (*pill'yun*), *n.* [Ir. *pillin*; Gael. *pilléan*.] A cushion for a woman to ride on behind a man on horseback; a pad; a pannel; a low saddle; the pad of a saddle that rests on the horse's back. The head-dress of a priest.

Pillorize, *v. a.* To punish by setting in the pillory.

Pillory, *n.* [Fr. *pillori*; Low Lat. *piloria*, *pilorium*, a kind of collar, like a pigeon-hole; *pillierum* = Lat. *pila*, a pillar, a column.] A frame of wood erected on posts, with movable boards and holes, through which were formerly put the head and hands of a criminal, to be exposed to public view, and generally to public insult, as a mode of punishment.

—*v. a.* [Fr. *pillorier*.] To punish with the pillory.

Pillow, *n.* [A. S. *pyl*.] A cushion stuffed with hair, &c.; a bag or cushion of hair, feathers, &c., or other soft substance, to support the head of a person when reposing in a bed;—hence, something that bears or supports.

(Mech.) A bearing or journal-box. See **JOURNAL-BOX**.

(Naut.) The block supporting the inner end of a bowsprit.

—A kind of plain, coarse fustian.

Pillow of a plough, a cross-piece of wood serving to raise or lower the beam.

—*v. a.* To rest or lay on for support, as on a pillow.

Pillow-bier, *n.* Same as **PILLOW-CASE**, *q. v.*

Pillow-block, *n.* (Mech.) Same as **JOURNAL-BOX**, *q. v.*

Pillow-case, *n.* The movable covering which is drawn over a pillow; a pillow-bier; a pillow-slip.

Pillow-slip, *n.* See **PILLOW-CASE**.

Pil lowy, *a.* Resembling a pillow.

Pill-tile, *n.* A corrugated plate of metal or earthenware, used in rolling pills to regulate their size.

Pilnitz, a small town on the Elbe, 4 m. from Dresden. Here, in 1791, the convention which was to maintain the rights of the Bourbons to the throne of France was concluded.

Pillon, GERMAIN, a celebrated French sculptor, b. at Loué, near Mans, and d. about 1590. Among his most admired works are—the Group of the Graces, now in the Louvre; the bronze statues of Henry II. and Catherine de' Medici, forming part of the monument to Henry at St. Denis; the mausoleum of Du Bellay, &c.

Pilose, *a.* [Lat. *pilosus*, from *pilus*, hair.] Hairy; pilous. (Bot.) Covered with long, separate hairs.

Pilos'ity, *n.* [Fr. *pilosité*; It. *pilosità*.] Hairiness.

Pilot, *n.* [Fr. *pilote*; It. *pilota*; Du. *pijoot*.] A person qualified and appointed by proper authority to conduct ships in and out of particular harbors or along certain coasts, at a certain fixed rate, depending on the draught of water. The pilot has the charge of the vessel while in pilot water, and the captain or master neglects or opposes the pilot's advice on his own responsibility.

—A guide; a director of one's course.

—*v. a.* To direct, as the course of a ship in any place where navigation is dangerous.—To guide, as a person through dangers or difficulties.

Pilot, in Illinois, a township of Kankakee co.—A post-village and township of Vermilion co., abt. 42 m. N.W. of Paris.

Pilot, in Iowa, a township of Cherokee co.

Pilotage, *n.* The compensation made or allowed to a pilot for directing the course of a ship.—The duty or office of a pilot.

Pilot-balloon, *n.* A balloon sent up to learn the direction of the wind.

Pilot-bread, *n.* Ship-biscuit; a hard bread used on shipboard.

Pilot-cloth, *n.* A strong, coarse cloth used for overcoats.

Pilot-engine, *n.* A locomotive sent in advance of a railroad train to clear the way, &c.

Pilot-fish, *n.* (Zool.) An acanthopterygious fish, of which there are several species composing the genus *Naucrastes*, family *Scombridae*. This fish is in size and

shape like the mackerel, and may be immediately recog-

nized by certain conspicuous bands which surround its body. The *P. F.* will frequently attend a ship during its course for weeks or months together. It is frequently found in company with the shark.

Fig. 2109.—PILOT-FISH (*Naucrastes ductor*.)

Pilot Grove, in Illinois, a township of Hancock county.

Pilot Grove, in Minnesota, a post-township of Faribault co.

Pilot Hill, or CENTREVILLE, in California, a post-village of Eldorado co., abt. 16 m. N.W. of Placerville.

Pilot Knob, in Indiana, a post-village of Crawford co., abt. 30 m. W. of New Albany.

Pilot Knob, in Missouri, a post-village of Iron co., abt. 87 m. S. by W. of St. Louis. Here is the remarkable Pilot Knob, a hill about 500 feet high, which is an almost solid mass of iron.

Pilot Mound, in Iowa, a post-township of Boone co.

Pilot Mound, in Minnesota, a post-village and township of Fillmore county, about 26 miles south-west of Winona.

Pilot Mountain, or ARARAT, in N. Carolina, a spur of the Alleghanies, in Surry co., between the Ararat and Dan Rivers. Height, abt. 1,400 feet.

Pilot Peak, in California, a summit of the Sierra Nevada, in Plumas co.; Lat. 39° 55' N. Height, 7,300 feet.

Pilous, *a.* Hairy; pilose.—Made of hair.

Pil'sen, a town of Bohemia, on the Beraun, a tributary of the Elbe, 52 m. S.W. of Prague. Manuf. Woollens, cottons, and leather. Pop. 15,000.

Pilular, *a.* That relates to pills; as, "pilular form."

Pima, in Arizona, a S. co., adjoining Mexico on the S.; area, about 10,596 sq. m. Rivers, Gila, Santa Cruz, San Pedro, and San Domingo rivers. Surface, generally hilly and mountainous; soil, in the valleys fertile. Products, Barley, wheat, corn, hay, live stock. Min. Silver and copper. Cap. Tucson. Pop. (1897) 14,750.

Pimelite, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pimenta, **Piment**, *n.* [Fr. *piment*.] (Bot.) See **EUGENIA**.

Pimos, a tribe of Indians inhabiting the valley of the Gila, in Arizona Territory. Their number is abt. 2,700, and closely resemble their neighbors the Coco-Maricopas. They are of a dark-brown complexion, thus differing from the olive-featured Indians of California and the redskins E. of the Rocky Mountains. The men have slender forms, but the women, who perform most of the labor, are well made. They show a courageous spirit, and are the most civilized of any of the N. American Indians. They make cotton fabrics, pottery, and other useful articles with much skill, and are noted for their simplicity of character, peacefulness, and honesty. Their only weapon is the bow and arrow.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pimenta, **Piment**, *n.* [Fr. *piment*.] (Bot.) See **EUGENIA**.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Pim'elita, *n.* [Gr. *pimele*, fat, and *lithos*, stone.] A hydrated silicate of alumina, magnesia, &c. It is of a greenish color and translucent, with a greasy feel.

Fig. 2109.—PILOT-FISH (*Naucrastes ductor*.)

Fig. 2110.
SECTION OF PART OF A
STEM OF PINE, HIGHLY
MAGNIFIED.

cones; the ovules are usually in pairs on the face of the scales, either inverted or erect. The fruit is either a cone—the scales of which sometimes become fleshy, and are incorporated into a berry-like fruit—or a solitary naked seed. The seed has a hard crustaceous integument; the embryo is in the midst of fleshy oily albumen; the cotyledons are either two, or numerous and whorled. The mode of branching is peculiar, numerous buds proceeding from the side of the main stem, so as generally to form whorls of branches, which are generally almost horizontal in their direction, while the central vertical shoot runs up often with admirable straightness, and some of the *P.* attain a height unrivalled among other forest-trees. The wood consists of punctated cells; the sides of the tubes or elongated cells which form it, and which are nearly of equal diameter, being marked by circular discs, which, when highly magnified (Fig. 2110), exhibit a small internal circle, surrounded by a larger external one. This peculiarity of the wood of the *P.* is important, as enabling us to recognize it in a fossil state, and to refer many fossils, particularly of the coal formation, to this order. By far the greater number of them belong to the northern hemisphere. The *P.* are very long-lived; some of them are supposed to be capable of attaining an age of 2,000 or 3,000 years. When the stem of a coniferous tree is cut across, it does not sprout again from the root. The *P.*, besides the great usefulness of the timber of many, are remarkably productive of turpentine and resins. Astringent substances are also found in their bark, and fixed oil in their seeds. The seeds of some species of *Pine* and *Araucaria* are used as food.—See **ABIES**, **ARAUCARIA**, **LARCH**, **PINUS**, &c.

Pinacotheca, *n.* [Gr. *pinakothekē*, from *pinax*, a picture.] In ancient architecture, an apartment reserved for the exposition of paintings. This term has been applied by the Germans to signify the buildings erected to serve as a national gallery of the works of their best artists, as in Munich.

Pin'afore, *n.* A child's apron.

Pin'cers, *n. pl.* [O. Fr. *pinces*, a pair of pincers.] An instrument for squeezing or gripping anything to be held fast; an instrument for drawing nails from boards and the like.

Pinch, *v. a.* [Fr. *pincer*; It. *pizzicare*, to pinch.] To press hard or squeeze between the ends of the fingers, the teeth, claws, or with an instrument, &c.; to squeeze, as the flesh till it is pained or livid.—To squeeze, gripe, or compress between two hard substances.—To straiten; to oppress with want; to pain by constriction; to press; to distress; to straiten by difficulties; as, *pinched* with the cold, *pinched* with hunger.

—*v. n.* To act with pressing force; to bear hard.—To spare; to be straitened.

—*n.* A close compression with the ends of the fingers; also, that which is taken between the ends of the fingers, as snuff.—Distress inflicted or suffered; pressure; oppression; straits; difficulty.

Pinch'beck, *n.* [From the name of its inventor.] (Chem.) An alloy of copper and zinc, resembling gold in its appearance.

Pinch'er, *n.* The person or thing that pinches.

Pinch'ers, *n. pl.* An instrument for gripping things to be held fast, drawing nails, &c.

Pinch'ist, *n.* A miser; a pinch-penny.

Pinch'ingly, *adv.* In a pinching manner.

Pinch'penny, *n.* A penurious person; a miser.

Pinck'ney, the name of an ancient family of S. Carolina, which, from the time of the Revolutionary War, has produced several members distinguished in the military and political history of the U. States.

Pinck'ney, in Michigan, a post-village of Livingston co., abt. 45 m. S.E. of Lansing.

Pinck'ney, in Missouri, a post-village of Warren co., abt. 55 m. E. by N. of Jefferson City.

Pinck'ney, in N. Carolina, a village of Rutherford co., abt. 200 m. W. by S. of Raleigh.

Pinck'ney, in New York, a post-township of Lewis co.

Pinck'neyville, in Georgia, a village of Gwinett co., abt. 90 m. N.W. of Milledgeville.

Pinck'neyville, in Illinois, a city, cap. of Perry co., about 134 m. S. of Springfield. Pop. (1897) 1,450.

Pinck'neyville, in Mississippi, a village of Wilkinson co., abt. 135 m. S.W. of Jackson.

Pinck'neyville, in S. Carolina, a village of Union dist., abt. 70 m. N.N.W. of Columbia.

Pin-cushion, *n.* A small cushion into which pins are stuck for safety and preservation.

Pin'dar, the great Greek lyric poet, b. at or near Thebes, in Boeotia, about B. C. 522. He was of a noble family, said to have been skilled in music, and he learned his father's art of flute-playing. At Athens he was a pupil of Lasus of Hermione, and on his return he was assisted by the advice of his celebrated countrywomen, Myrtis and Corinna, who were also his competitors—frequently successful ones—at the public festivals. *P.* made poetry

—*v. a.* To fasten with a pin, or with pins of any kind; to join and fasten together.—To inclose; to confine; to pen.

Pina'eeæ, **CONIFERÆ**, *n. pl.* [Lat. *pinus*, the pine.] (Bot.) An order of plants, class *Gymnogens*. DIAG. A repeatedly branched continuous stem, simple acerose leaves, and females in cones.—They are noble trees or evergreen shrubs, including the Pines, Firs, Juniper, Yew, &c. They have flowers unisexual, the male flowers have either one stamen or one bundle of stamens, the anthers often crested; the female flowers are in cones or solitary; the place of ovaries is supplied by the flat scales of the

Pimpernel, *n.* (Bot.) See **ANAGALLIS**.

Pimpinella, BURNET-SAXIFRAGE, *n.* (Bot.) A genus of plants, order *Apiaceæ*. The species *P. anisum* is the anise so much esteemed for its carminative fruits or seeds. See **ANISE**.

Pimple, (*pim'pl*), *a.* [A. S. *pimpe*; Lat. *papula*, pimple.] (Med.) A small acuminated elevation of the cuticle, with an inflamed base; very seldom containing a fluid, or suppurating, and commonly terminating in scurf or desquamation.

Pimpled, **Pimply**, *a.* Having pimples on the skin; full of pimples.

Pin, *n.* [A. S. *pin*; Lat. *penna*, a feather.] A small pointed instrument, commonly made of brass wire blanching and headed, used chiefly in fastening articles of dress. Among the most

and music the business of his life, and composed choral songs for princes and states in all parts of Greece; for which, as was the custom, he received money and gifts. Yet he did not become a mere hireling, but maintained such a dignified position as befitted him as poet and man, and spoke truth fearlessly to all. He did not live at courts, nor take part in public affairs. *P.* excelled in all varieties of choral poetry, hymns to the gods, pæans, odes for processions, drinking-songs, &c. But the only poems of his now extant, are the *Epinikia*, or *Triumphal Odes*, composed in celebration of victories at the great public games—the Olympian, Pythian, Nemean, and Isthmian. The praises of the victor, of his family, and his state, are intermixed with mythical narratives and sententious maxims and admonitions; and the odes—sublime, enthusiastic, and full of lofty thought and sentiment—are marked by an extraordinary variety of style and expression. No two odes have the same metre. *P.* attained the highest renown in his own age, and as a lyrical poet has no rival. When Thebes was destroyed by Alexander, the conqueror spared the house of *P.* *D.* probably 442.

Pindaric, *n.* An ode in the style and manner of Pindar, the Greek poet.

Pine, *n.* [A.S. *pin*; Fr. *pin*; Lat. *pinus*.] (*Bot.*) See **PINUS**.

—*v. n.* [A.S. *pinan*, to languish; O. Ger. *pinan*, labor.] To languish; to wither; to decay, with pain, grief, anguish, &c.—To lose flesh or wear away under any distress or anxiety of mind; to waste away with longing for something.

—*v. a.* To grieve for; to bemoan in silence.—To make to languish.

Pine, in *Indiana*, a township of Benton county.—A township of Porter county.—A township of Warren county.

Pine, in *Minnesota*, an E. co., adjoining Wisconsin; area, about 1,400 sq. m. Rivers, St. Croix, Snake, and Kettle rivers. Surface, uneven and hilly; soil, not very fertile. Cap. Pine City. Pop. (1895) 8,631.

Pine, in *Pennsylvania*, a township of Alleghany county.—A township of Armstrong county.—A township of Columbia county.—A township of Crawford county.—A township of Indiana county.—A township of Lycoming county.—A township of Mercer county.

Pineal, *a.* [Fr., from Lat. *pinna*, the cone of a pine.] Relating to, or resembling, a pine-cone or pine-apple.

Pineal Eye, *n.* (*Anat.*) Recent research has proved that the Pineal Gland, found in the brain of man and all mammals and reptiles, is the aborted remnant of an eye possessed by some very ancient vertebrate animal. It has been found, in a non-functional state, in some low lizards, and was probably of use in earlier forms. This interesting discovery proves that the earliest vertebrates had a single central eye of the invertebrate type, which became aborted when the two vertebrate eyes developed, but left a relic in the Pineal Gland. *q. v.*

Pineal Gland, *n.* (*Anat.*) A small, heart-shaped protuberance of the brain, hanging by two peduncles from the beds of the optic nerves immediately over the corpora quadrigemina. Some fanciful physiologists have asserted that it is the seat of the soul.

Pine-apple, *n.* (*Bot.*) See **ANANASSA**.

Pine-apple-oil, *n.* (*Chem.*) A solution of butyric ether in alcohol, has the odor of the pine-apple, and is prepared for the use of confectioners as a flavoring material.

Pine Bar'ren Creek, in *Alabama*, enters the Alabama River between Wilcox and Dallas cos.

Pine Bar'rens, *n. pl.* A term applied to level, sandy tracts, covered with pines, in the Southern States.

Pine Bend, in *Minnesota*, a post-village of Dakota co., abt. 15 m. S. by E. of St. Paul.

Pine Bluff, in *Arkansas*, an important city, cap. of Jefferson co., on Mo. Pac. and St. L. S. W. R.Rs., 46 m. S.E. of Little Rock; has very large shipments of cotton and hides. Pop. (1897) 12,500.

Pine-clad, **Pine-crowned**, *a.* Covered or crowned with pine-trees.

Pine Creek, in *Illinois*, a township of Ogle county.

Pine Creek, in *Indiana*, enters the Wabash River from Warren co.

Pine Creek, in *Michigan*, enters St. Joseph's River from Berrien co.

Pine Creek, in *Pennsylvania*, enters the West Branch of the Susquehanna River near Jersey Shore.—A township of Clinton county.—A township of Jefferson county.

Pine-finch, *n.* (*Zoöl.*) A North American bird, fam. *Fringillidae*.

Pine Grove, in *California*, a post-village of Amador co., abt. 9 m. N.E. of Jackson.—A village of Sierra co., abt. 65 m. N.E. of Marysville.

Pine Grove, in *Michigan*, a township of Van Buren co.

Pine Grove, in *Pennsylvania*, a village of Cumberland co., abt. 15 m. S.W. of Carlisle.—A village of Mercer co., abt. 10 m. E.S.E. of Mercer.—A post-borough and township of Schuylkill co., abt. 40 m. N.E. of Harrisburg.—A township of Venango co.—A township of Warren co.

Pine Grove, in *W. Virginia*, a post-village of Wetzel co., abt. 40 m. S. of Wheeling.

Pine Grove, in *Wisconsin*, a township of Portage co.

Pine Grove Mills, in *Pennsylvania*, a post-village of Centre co., abt. 90 m. N.W. of Harrisburg.

Pine Hill, in *Georgia*, a village of Talbot co., abt. 25 m. E.N.E. of Columbus.

Pine Island, in *Minnesota*, a post-village and township of Goodhue co., abt. 16 m. N.N.W. of Rochester.

Pinel, **PHILIPPE**, a celebrated French physician, b. at St. André, Tarn, 1745, was admitted a member of the Institute in 1803, and d. 1826. His most valuable works were his *Traité Médico-philosophique de l'Aliénation Mentale* (1791), and *La Nosographie Philosophique* (1798), with its commentary *La Médecine Clinique* (1802). *P.* gained for himself undying fame by his reformation of the old barbarous methods of treating the insane. The physicians brought up under the old system were not ashamed to offer a vigorous opposition to *P.*'s philanthropic opinions; but he fortunately succeeded in thoroughly establishing their correctness, and his system in a few years prevailed over the whole of Europe.

Pine Lake, in *Michigan*, a village of Oakland co., abt. 25 m. N.W. of Detroit.

Pine Lake, in *Wisconsin*, a small sheet of water of Waukesha co.—A village of Waukesha co., abt. 26 m. W.S.W. of Milwaukee.

Pine Log, in *California*, a village of Tuolumne co., abt. 12 m. N.N.E. of Sonora.

Pine-marten, *n.* (*Zoöl.*) The *Martes abietum*, a species of marten which inhabits the pine forests of N. Europe.

Pine Meadow, in *Connecticut*, a post-village of Litchfield co., abt. 23 m. W. by N. of Hartford.

Pine-needle Wool, **PINE-WOOD WOOL**, *n.* A fibrous vegetable substance obtained by treating the bnds and leaves of trees of the order *Pinaceæ* with a strong solution of carbonate of soda.

Pine Plain, in *Michigan*, a post-township of Allegan co.

Pine Plains, in *New York*, a post-village and township of Dutchess county, about 50 miles S. by E. of Albany.

Pine River, in *Michigan*, flows into the Tittibawassee River in Midland co.

—A township of Gratiot co.

Pine River, in *New Hampshire*, enters Ossipee Lake in Carroll co.

Pine River, in *Wisconsin*, enters Wisconsin River in Richland co.

—A post-township of Waushara co.

Pine Rock, in *Illinois*, a twp. of Ogle co.

Pinerolo, (*pi-nai-ro-lo*), a town of Italy, prov. of Turin, 22 m. S.W. of Turin. Manuf. Woollens, silks, paper, and leather. Pop. 15,404.

Pine Run, in *Michigan*, a post-village of Genesee co., abt. 11 m. N. of Flint.

Pinery, *n.* A pine forest.—The place where pine-apples are grown.

Pine-sap, *n.* (*Bot.*) See **HYPOPTHIS**.

Pine Valley, in *Wisconsin*, a township of Clark county.

Pineville, in *Georgia*, a village of Marion co., abt. 30 m. S.E. of Columbus.

Pineville, in *Missouri*, a post-village and township, cap. of MacDonald county, about 175 miles south-west of Jefferson City.

Piney, *a.* **Piny**.

—*n.* The resin of *Vateria Indica*.

Piney, or **PINY**, in *Pennsylvania*, a post-township of Clarion co.

Piney Creek, in *Arkansas*, flows into the Arkansas river from Johnson co.

Piney Fork, in *Arkansas*, a prosperous township of Sharp co.

Piney Point, in *Maryland*, a headland and light-house on the E. side of the Potomac River, about 14 m. from its mouth. It exhibits a fixed light 25 ft. high.

Piney (or **Big**) **River**, or **PINEY FORK**, in *Missouri*, rises by several branches in Texas co., and flowing N., enters the Gasconade River in Pulaski co.

Piney River, in *Tennessee*, enters Duck River from Hickman co.

Piney-var'nish, *n.* The resin of *Vateria Indica*.

Pinguicula, (*pin-gwick'-u-la*), *n.* [Lat., from *pinguis*, fat.] (*Bot.*) A genus of plants, order *Lentibulariaceæ*. The herb called the Butter-wort (*P. vulgaris*), from its property of coagulating milk, belongs to this genus.

Pin-feather, (*-feth'-er*), *n.* The short feathers of a bird just beginning to grow, and which resemble a pin in form.

Pin-feathered, *a.* Having pin-feathers; having feathers yet only beginning to shoot.

Pin-fold, (written also *pen-fold*), *n.* A place in which beasts are confined.

Pin-footed, *a.* Having toes or feet bordered by a membrane.

Pin-ster, **Pink-ster**, *n.* [Du. *pinkster*; Ger. *pfingster*.] Pentecost; Whitsuntide.

Pinguid, (*ping'-gwid*), *a.* [Lat. *pinguis*, fat.] Fat; unctuous; oleaginous.

Pinguite, *n.* (*Min.*) A variety of chloropal resembling bole. It is a hydrated silicate of iron, occurring in dark-green masses, which are soft like new soap, and feel greasy.

Pinguitudo, *n.* [Lat. *pinguitudo*, from *pinguis*, fat.] Fatness; unctuousness. (*R.*)

Pin-hole, *n.* A place where a pin holds or fastens anything.

Pin-hole, *n.* A small hole made by the puncture or perforation of a pin; a very small aperture.

Pinic Acid, *n.* [Lat. *pinus*, the fir-tree.] (*Chem.*) The principal resinous constituent of common resin or colophony.

Pinion, (*pin'-yun*), *n.* [Lat. *penna*, or *pinna*, a feather.] A wing.—The joint of a bird's wing the remotest from the body.—A tetter for the arms.

—*v. a.* To bind or confine the wings of; to confine by binding the wings.—To cut off, as the first joint of the wings.—To bind or confine, as the arm, or arms, to the

body.—Figuratively, to confine; to shackle: to chain, as with rules; to bind; to fasten to.

(*Mech.*) A small wheel that plays in the teeth of a larger one, or sometimes into an arbor, or a spindle, having notches or leaves, which are caught successively by the teeth of the wheel, the motion being thereby communicated to the rest of the machinery.

Pin'ite, *n.* (*Min.*) An alkaline variety of altered feldspar. It occurs in six-sided or twelve-sided prisms, with their lateral (sometimes with their terminal) edges replaced. It is named after the mine *Pini*, in Saxony, where the first specimens were discovered in granite.

Pink, *n.* [Du.] An eye; commonly a small eye, or narrow and long, or narrowed by the contraction of lids; as, *pink-eyed*;—used only in composition.

(*Bot.*) See **DIANTHUS**.

—A light-red or rose-color used by painters, so called from the color of the flower.—Anything supremely bright or excellent.

(*Zoöl.*) A little fish; the minnow.

(*Naut.*) A kind of heavy narrow-sterned ship.

—*v. a.* To work in eyelet holes; to pierce with small holes.—To stab; to pierce.—To dye of the color of pink.

Pink-eye, (*-i*), *n.* A small eye.

Pink-eyed, (*-id*), *a.* Having small eyes.

Pink-ing-iron, *n.* A cutting instrument for scolloping the edges of ribbons, &c.

Pink'-needle, *n.* A shepherd's bodkin.

Pink'ney (or **Pinck'ney**) **City**, in *Washington*, a post-village, the former cap. of Spokane co., about 200 m. N. of Walla-Walla.

Pink'-root, *n.* (*Bot.*) See **SPIGELIA**.

Pink-ster, *n.* See **PINKSTER**.

Pink-stern, *n.* (*Naut.*) Narrow-stern.

Pink'-sterned, *a.* (*Naut.*) Having a narrow stern.

Pink'-money, *n.* A sum of money allowed or settled on a wife, as for pins, that is, for her private expenses.

Pin'na, *n.* [Lat., a feather.] (*Zoöl.*) A gen. of lamelli-branchiate mollusca, commonly called *wing-shells*, remarkable for the size of the byssus, by which they adhere to the rocks, and which the natives of Sicily manufacture into gloves, socks, and other articles of sale and ornament.

(*Bot.*) A primary branch of the petiole of a bipinnate or tripinnate leaf.

Pinnace, (*pin'-näs*), *n.* [It. *pinaccia*, dim. of *pino*, a ship.] (*Naut.*) Formerly, a small light vessel with sails and oars; but now generally understood as the second in point of size of the boats belonging to a ship of war.

Pinnacle, (*pin'-na-kl*), *n.* [Lat. *pinnaculum*, dim. of *pinna*.] (*Arch.*) A small square or polygonal pillar, generally, but not necessarily, applied at the angles of a building, terminating upwards pyramidally, and embellished with foliage at the angles of the pyramidal part. It is much used in mediæval architecture, as a termination to buttresses, the tops of gables, &c.; in these positions it is in the form of a spire, with crockets and a finial, and is sometimes surrounded with small shafts, and highly ornamented.

—*v. a.* To build or furnish with pinnacles.

Pin'ate, **Pin'ated**, *a.* (*Bot.*)

See **LEAF**.

(*Zoöl.*) Applied by Linnæus to the feet of those birds which have the toes bordered by a scalloped membrane, as the coots.

Pin'ately, *adv.* In a pinnate manner.

Pinnat'ifid, *a.* [Lat. *pinnatus*, feathered, and *findere*, to split.] (*Bot.*) Divided in a pinnated manner. See **LEAF**.

Pinnatilo'bate, *a.* (*Bot.*) Pinnately lobed.

Pinnat'iped, *a.* [Lat. *pinnatus*, and *pes*, *pedis*, foot.] (*Zoöl.*) Fin-footed; having the toes bordered by membranes.

Pin'ner, *n.* One who pins or fastens; also, a pound-keeper.—A pin-maker.

—The lappet of a head-dress which flies loose.

Pin'niform, *a.* [Lat. *pinna*, and *forma*, a form.] Having the shape of a feather or pin.

Pin'nipeds, *n. pl.* [Lat. *pinna*, and *pes*, *pedis*, a foot.] (*Zoöl.*) The name of a section of crabs (*Brachyurous Decapod Crustaceæ*), in which are comprehended those that have the last pair of feet, if not more, terminated by a flattened joint fitted for swimming.

Pin'nonade, *n.* A confection made chiefly of almonds and pines.

Pin'ulate, *a.* (*Bot.*) That is subdivided into leaflets.

Pin'ule, *n.* (*Bot.*) A secondary division or leaflet of a pinnate leaf.

Pin Oak, in *Iowa*, a post-village of Dubuque co., abt. 80 m. N.E. by N. of Iowa City.

Pinos (*pee'-noce*), an island of the Republic of Colombia, in the Gulf of Darien; Lat. 9° 1' 30" N., Lon. 77° 48' W.

Pin'-rack, *n.* (*Naut.*) An apparatus at various parts of the upper deck of a ship. It consists of a frame containing sheaves or pulleys, around which ropes can be worked, and pins or cleats to which they can be belayed.

Pint, *n.* [A.S. *pynt*; Fr. *pinte*.] A measure of capacity, being the eighth part of a gallon.

Fig. 2111.
PINNACLE.
(13th century.)

Pinta'do, n. (Zool.) See GUINEA-FOWL.

Pintail Duck, or SPRIGTAIL, n. (Zool.) A species of

birds, belonging to the *Anatinae*, and forming the genus *Dafila*, characterized by the bill long and narrow, tail pointed. The *P.* is a shy and cautious bird, feeding in the mud-flats and shallow fresh-water marshes, but rarely resides on the coast. The male is 26 inches in length and 34 inches in extent.

Fig. 2112.
PINTAIL DUCK, (*Dafila acuta*.)

Pinta'la, or Pintela'la, in Alabama, a creek flowing into the Alabama River from Montgomery co.

Pintle, (pin'tl), n. [Dimin. of pin.] A little pin.

(Art.) A long iron bolt to prevent a cannon from recoiling.

(Naut.) On ship-board, the hook or upper half of each hinge by which the rudder is hung. The *pintle* projects from the fore-edge of the rudder, as the brace into which it works is fastened to the after-face of the sternpost.

Pint'-steup, (-stoup), n. A vessel of measure containing about 3 English pints.

Pinus, n. (Bot.) The Pine, a genus of trees, order *Pinaceae*, distinguished from allied genera by the male catkins being crowded and racemose, and by the scales of the cones being thickened and angular at the end. Several species are valuable timber-trees; as *P. sylvestris*, the Scotch fir, which yields the timber known as Dantzic, or Riga fir and Russian deal; *P. strobus*, yielding the white-pine, or deal, of the United States; *mitis* and *palustris*, yielding the yellow pine or deal; *P. rigida* (see Fig. 662), *P. lambertiana*, and many more. Pine timber is used to an enormous extent in this country and elsewhere for house-carpentry, joinery, &c. Many valuable products besides timber may be traced to this genus. *P. sylvestris*, the Scotch fir (Fig. 2113), or wild pine, is the source of common turpentine; this yields, by distillation, the useful liquid known as oil, spirits, or essence of turpentine. When subjected to destructive distillation, the wood yields wood-tar and pitch. The inner bark is used in Norway for making the remarkable alimentary substance called *bark-bread*. From the leaves of this species the fleecy substance termed pine-wool, or fir-wood, is prepared; it is used for stuffing mattresses, and is said to be repulsive of vermin. An oil called *fir-wood oil*, said to be obtained

Fig. 2113.—PINUS SYLVESTRIS.

from this substance, has lately been introduced into this country from Germany, and recommended as an external application in rheumatism, neuralgia, &c. *P. pinaster*, or *maritima*, the Cluster-pine, yields Bordeaux turpentine, galipot tar, and pitch. *P. australis*, the Pitch-pine, forms a great portion of the *Pine barrens* of the Southern States, and, along with *P. palustris*, the Swamp or Long-leaved pine, furnishes the greater proportion of the turpentine, tar, &c., consumed in this country, or exported into other countries. *P. taeda*, the Frankincense-pine, also yields turpentine. *P. pinea*, the Stone-pine, has edible seeds, which are used as a dessert under the name of pine-nuts. *P. cembra*, the Siberian stone-pine, has also edible seeds; its young shoots, on being distilled, furnish the so-called Carpathian balsam. *P. pumilio*, the Mugho, or Mountain-pine, yields, by spontaneous exudation, an oleo-resin, called Hungarian balsam. *P. geradiana*, a native of Thibet

and Afghanistan, has seeds which are edible. *P. longifolia*, which flourishes in the Himalayas, yields a remarkably fine turpentine.

Pin'weed, n. (Bot.) See LECHEA.

Pin'y, a. Abounding with pine-trees.

Pin'zon, ALONZO, VINCENT YAÑEZ, and MARTIN, three brothers, Spaniards, who had commands in Columbus' first voyage, and by whose exertions mainly it was that a sufficient number of men were induced to risk their lives on this perilous enterprise. Vincent Yañez was the most distinguished of the brothers; he made several voyages, on the most important of which he sailed in December, 1499, and discovered Brazil and the river Amazon, three months before Cabral took possession of South America for the crown of Portugal.

Piom'bo, SEBASTIANO DEL, a celebrated Italian painter, b. at Venice. He was a disciple of Giorgione, and painted historical and portrait pieces. One of his finest works,—"The Raising of Lazarus"—is in the National Gallery in London. Later in life, he quitted his profession to assume the functions of keeper of the signet to Pope Clement VII.; whence arose his name Del Piombo, "of the lead," in allusion to the lead of the seal. Many of the designs of his pictures were furnished by Michael Angelo; Sebastiano supplying the fine coloring, which characterized his style. D. at Rome, 1547.

Pioneer, v. a. To go before and prepare, as the way for others.

—*n.* [Fr. *pionnier*, from Lat. *pedito*, to go on foot.] (Mil.) The name given to certain soldiers, in all infantry regiments, whose business is to assist in clearing the road before an army, in sinking mines, and throwing up works and fortifications. Pioneers are provided on a march with shovels, axes, spades, pickaxes, and all other necessary implements.

—One who goes before to remove obstructions or prepare the way for another.

Pioneer, in Iowa, a township of Cedar co.

Pioneer City, formerly HOGAM, in Idaho, a village of Boise co., about 12 m. N.N.W. of Idaho City.

Pioneer Grove, in Iowa, a village of Cedar co., abt. 25 m. N.E. of Iowa City.

Pionied, (-nid), a. Abounding with pionies.

Piony, Peony, or Paony, n. (Bot.) See PEONIA.

Pious, a. [Fr. *pieux*; It. *pio*; Lat. *pius*.] Reverencing and honoring the Supreme Being in heart, and in the practice of the duties He has enjoined; godly.—Dictated by reverence to God; proceeding from piety.—Having due respect and affection for parents or other relatives.—Practised under the pretence of religion; as, *pious* frauds.

Piously, adv. In a pious manner; with reverence and affection for God; with due regard for natural and civil relations.

Pious-minded, a. Of a pious or religious disposition.

Pip, n. [Du.; Fr. *pépé*, from *pepier*, to pip, to chirp; Lat. *pipire*; formed from the sound.] A disease of fowls in which a horny pellicle grows on the tip of their tongue. This pellicle, if not removed, proves fatal, as it hinders the birds from feeding.

—A spot on cards.—The seed of an apple, orange, or similar fruit.

—*v. n.* To cry or chirp, as a chicken.

Pipa, n. (Zool.) A genus of Batrachian reptiles, closely allied to the common toad, but distinguished by the body being horizontally flattened, the head large and triangular, tongue wanting, tympanum concealed beneath the skin, the eyes small, placed near the margin of the upper jaw. The best known species is the Surinam Toad, *Pipa Surinamensis* (the *Bulo pipa* of Linnaeus), which is considerably larger than the common toad. The *P.* lays its eggs in the water, after which they are collected by the male, and placed on the back of the female, the skin enlarging in such a manner as to enclose the eggs in cells; here the development goes on till the young come forth as perfectly formed toads.

Fig. 2114.—SURINAM TOAD,
(*Pipa Surinamensis*.)

Pipe, n. [A. S.] A circular or square artificial channel, used for the conveyance of watery fluids, either under pressure or not; or for the passage of æiform fluids, or of sound. Pipes are made of wood, iron, both cast and wrought, of lead, copper, tin, stone, stoneware, brick, glazed brick, &c.; according to the situation in which they are to be employed, or according to the uses to which they are to be converted.

—A wine measure, usually containing very nearly 105 imperial or 126 wine gallons. Two pipes, or 210 imperial gallons, make a tun. But, in practice, the size of the pipe varies according to the kind of wine it contains.

(Mus.) A tube in which air is caused to vibrate, so as to produce musical sounds. See ORGAN.

—A long tube or hollow body.

—A tube of baked clay, or other material, with a bowl at one end, used in smoking tobacco. (See TOBACCO-PIPES.)

—The organs of voice and respiration.—The key or sound of the voice.

(Mining.) Ore running endwise into a hole, and not sinking downwards or in a vein.

—*v. n.* To play on a pipe, flute, fife, or other tubular wind-instrument of music.—To have a shrill sound; to whistle.

—*v. a.* To play on a pipe or wind-instrument.—To call by means of a pipe or whistle, as in ships.

Pipe'-clay, n. A species of clay used to make earthen vessels, tobacco-pipes, &c.

Pipe Creek, in Ind., affluent of Wabash and White R.—In *Md.*, affluent of Monocacy R.

Pipe'-fish, n. The common name of the genus *Syngnathus*, family *Syngnathidae*. Characteristics: the body greatly elongated, slender, and covered with a series of indurated plates, arranged in parallel lines; the nose is long and tubular; the gills are arranged in small round tufts along the branchial arches; and there are no ventral fins.

Fig. 2115.—PIPE-FISH,
(*Syngnathus*.)

Pipe-lines, lines of pipes conveying petroleum to shipping points, connected with tanks in the oil districts, and after gauging, run it into storage tanks, whence it is flowed to the terminus. Pipes for main line are 4 to 6 in. in diam. A 6 in. pipe will convey abt. 20,000 bbls. per day.

Piper, n. [From Gr. *pipto*, I digest, because it promotes digestion by its stimulating capacity.] (Bot.) The typical gen. of the nat. ord. *Piperaceae*. The dried unripe fruits of the pepper-vine, *P. nigrum* (Fig. 2116), constitute the black pepper of the shops. White pepper is the same fruit in a ripened state, divested of its external pulpy covering. The former is the more pungent and acrid, as the peculiar acrid resin, upon which the properties of the pepper partly depend, disappears

Fig. 2116.—PEPPER-VINE,
(*Piper nigrum*.)

to some extent in the process of ripening. Besides this acrid resin, both black and white pepper contain the alkaloid called *piperine*. Both kinds of pepper are extensively employed as condiments, and medicinally as stimulants and correctives. A spoonful of black pepper mixed with a little water and swallowed, generally gives relief in cases of flatulency. The pepper-vine is a native of India and the Indian islands. *P. tricoicum*, and some other species, also produce good pepper.

Piperaceae, n. pl. (Bot.) The Pepper family, an order of plants, alliance *Piperales*. DIAG. Solitary carpel, an erect ovule, an embryo lying in vitellus, and opposite or alternate leaves, with or without stipules.—They are herbs or shrubs with jointed stems. Flowers spiked, perfect, without floral envelopes, bracteated; stamens 2 or more; anthers 1-2-celled; ovary simple, 1-celled, with 1 erect orthotropous ovule; stigma sessile. Fruit more or less fleshy, 1-celled, 1-seeded; seed erect. The peppers are exclusively natives of tropical regions, especially in America and the Indian Archipelago. There are 20 genera and 600 species. They are remarkable for acrid, pungent, aromatic, and stimulant properties. See ARTANTUE, CHAVICA, CUBEBA, MACROPIPER, and PIPER.

Piperales, n. pl. (Bot.) An alliance of plants, subclass *Hypogynous Erogenae*. DIAG. Achlamydeous flowers, and a minute embryo, at or near the outside of a large quantity of mealy albumen. The alliance includes 3 orders—PIPERACEAE, CHLORANTHACEAE, SAURURACEAE, q. v.

Piperine, n. [Lat. *piper*.] (Chem.) A white crystallizable substance extracted from black pepper. It is tasteless, and free from pungency, the acrimony of pepper residing in a peculiar fixed oil. It is regarded as a feeble alkaloid.

Pipe'stone, n. (Min.) A grayish-blue or black variety of Argillite or clay-slate, found in N. Oregon, and carved by the Indians into bowls of tobacco-pipes.

Pipe'stone, (pip'ston), in Michigan, a post-township of Berrien co.

Pipe'stone, in Minnesota, a S.W. co., adjoining South Dakota; area, about 430 sq. m. Rivers. Redwood and Rock rivers, and Pipestone creek. Surface, nearly level; soil, in some parts fertile. Products. Wheat, oats, barley, hay, live stock. Cap. Pipestone. Pop. (1895) 7,115.

Pipette, n. [Fr. dimin. of *pipe*.] A small glass pipe used by chemists.

Pip'ing, a. Weak; feeble; sickly;—from the weak or piping voice of the sick.—Boiling; from the sound of the boiling fluids. (Colloq.)

—*n.* A kind of cord-trimming for ladies' dresses.

—*pl.* (Bot.) Pieces cut off; cuttings.

Pip'it, n. (Zool.) See ANTHUS.

Pip'kin, n. A small pipo or earthen boiler.

Pippin, n. [Du. *pippeling*.] (*Bot.*) A kind of tart apple, so called from the pips or dots on it.

Pippula Moola, n. See CHAVICA.

Pipra, n.; pl. Pi-prae. (*Zool.*) The Manakins, a genus and family of birds, order *Insectores*. They are generally small and of brilliant colors, and inhabitants of the warmer parts of S. America. They have a moderate or short bill, depressed, with broad base, curved ridge, compressed sides, and toothed tip; the nostrils are hidden by the frontal feathers; the wings generally short and pointed; tail short and even; tarsi moderate and slender; toes long; claws acute.

Pipsis'ewa, n. (*Bot.*) See PYROLA.

Piqua, n. in Indiana, a village of Stark co., abt. 40 m. N.W. of Logansport.

Piqua (pik'wa), n. in Ohio, a fine manufacturing and trading town of Miami co., on the Miami river, about 76 m. W. of Columbus. Pop. (1897) 10,750.

Piquancy, (pik'an-sy), n. The state or quality of being piquant; sharpness; pungency.

Piquant, (pik'ant), a. [Fr., from *piquer*, to prick.] Stimulating to the tongue.—Sharp; tart; pungent; severe.

Piquantly, adv. With sharpness or tartness.

Pique, (peek), n. [Fr., from *piquer*.] Vexation; wounded pride; pet or slight anger.—A strong desire.—Point; nicety; punctilio.

—*v. a.* To irritate; to offend; to excite a degree of anger in.—To excite to action; to touch with envy, jealousy, or other passion.—To pride or value one's self (with the reciprocal pronoun).

Piqueer, (pik-eer'), v. a. Same as PICKEER, *q. v.*

Piqueer'er, n. Same as PICKEERER, *q. v.*

Piquet, (pe-kel'), n. [Fr.] (*Games*.) This game is of French origin, and is named from the Fr. word *pique*, equivalent to the English "point." It is played by two persons with thirty-two cards, namely: ace, king, queen, knave, ten, nine, eight, and seven, of each suit; and these cards rank according to the succession in which they are here placed,—the ace being higher than the king, the king than the queen, and so on. In reckoning what is called the *point*, the ace counts eleven, the king, queen, and knave, ten each; and the other cards according to the number of their respective pips. In cutting for the deal, he that cuts the lowest piquet card deals; and having shuffled the pack, he presents it to his adversary, who, if he pleases, may shuffle it also. Should he do so, the dealer may shuffle again; and, having done so, places them before the other, who cuts them. The number of points in each game is now one hundred; fifty saves the lurch. The cards are to be dealt two by two, and in no other numbers. In this manner each player is to have twelve cards dealt him, and there will then remain eight cards, which are called the *stock*, and are to be placed on the board directly before the two players. From this, the elder hand has the right to draw five cards in their natural order, and must then discard the same number from his own hand. It is imperative for the elder hand to discard at least one card, but not the whole five. If he discard less than five, he has the privilege of looking at the cards left. His own discard is optional with the dealer, and if chosen, follows after every other hand. Tricks are taken in the usual manner by the superior cards of the same suit. The various denominations of the score are as follows: 1. *Carte Blanche*, which is, when a hand dealt contains no picture-card. This hand enables the holder to count ten, and is counted before any other. 2. *Point*, which is reckoned by the player who has the greater number of cards in any suit, or, if both have an equal number, by the one who has the greater number of pips. Whoever has point counts one of each card he holds. 3. *Sequence*, which is several cards in the same suit following consecutively, as ace, king, queen, or knave; ten, nine, eight, &c. 4. The *Quatorze*, which occurs when a player has four cards of equal value in the four different suits; that is to say, four aces, kings, queens, knaves, or tens, no lower cards counting. Whichever player holds the highest quatorze counts fourteen; those which are highest taking precedence, and preventing any inferior quatorze from being of value. 5. The *Cards*. Two cards, one from each player, make a trick; if each player has six tricks, the cards are divided; but if either wins seven or more tricks, he has "the cards;" that is, he counts ten beyond the number he has already scored. 6. The *Cipot*. Whichever player wins all the tricks, wins what is called a *capot*, and instead of ten, adds forty to his score.

Piraeru'a, n. a town of Brazil, abt. 85 m. S. of Parnaiba; pop. 2,600.

Piracy, n. [Fr. *piraterie*; It. and Sp. *pirateria*.] The act, practice, or crime of a pirate.

(*Law.*) *P.* consists in committing those acts of robbery and depredation upon the high seas, or other places where the Admiralty has jurisdiction, which, if committed upon land, would have amounted to felony there. This is substantially the definition of this offence by the law of nations, which, on conviction, is punished with death in the United States (Act of Congress, March 3, 1819, made perpetual by Act of May 15, 1820).

—The publishing of the writings of another without permission; the robbing of another by copying his writings.

Piræ'na, n. a town of Greece in Attica, the port of Athens, and 5 m. from the city. In the neighborhood are still to be seen the ruins of the tomb of Themistocles. Pop. 6,000.

Pirahy, (pe-ra-hee'), n. a town of Brazil, on a river of the same name, abt. 52 m. W.N.W. of Rio de Janeiro.

Piram'eter, n. [Gr. *peira*, trial, and *metron*, measure.] An instrument for ascertaining the power required to draw carriages over roads.

Piran'has, n. a river of Brazil, rises in the Serra dos Cairas, and flowing N.E. and N., enters the Atlantic Ocean by 3 months.

Pirate, n. [Fr.; It. *pirato*; Lat. *pirata*.] A robber on the high seas.—An armed ship or vessel which sails without a legal commission, for the purpose of plundering other vessels indiscriminately on the high seas.—One who borrows from or publishes the writings of others without permission.

—*v. n.* To rob on the high seas.

—*v. a.* To take by theft, or without right or permission, as books or writings.

Pirate, a. Same as PIRATICAL, *q. v.*

Piratical, a. Pertaining to, or consisting in, piracy; robbing or plundering by open violence on the high seas.

Piratically, adv. By piracy.

Piratin'um, n. a town of Brazil, about 75 m. W.N.W. of Rio Grande; pop. 3,673.

Pirating, n. a river of Brazil, flows N.W. into the Uruguay abt. Lat. 28° 10' S.

Piretib'bi, or PIRETIEBE, n. a lake of British N. America, about Lat. 51° 30' N., Lon. 69° W.

Pirl, v. a. To twist or twine, as in forming horse-hair into a fishing-line.

Pirma'sens, n. a town of Rhenish Bavaria, 13 m. E.S.E. of Deux Ponts. *Manuf.* Tobacco, straw hats, glass, and musical instruments. Pop. 6,900.

Pirna, n. a fortified town of Saxony on the Elbe, 11 m. S.E. of Dresden. *Manuf.* Cotton, linen, and woollen goods. Pop. 6,200.

Pirogue, (pi-rög'), n. [Fr.; It. *piroga*; Sp. *piragua*.] A kind of canoe, made of the trunk of a tree hollowed out, and used in the Southern and Eastern seas; a dug-out.—In some parts of the U. States a narrow ferry-boat with two masts and a leeboard.

Pirouette, (pir-oo-et'), n. [Fr.] A whirling or turning about on the toes in dancing.
(*Man.*) The circunvolution of a horse on the same ground.

—*v. n.* To make a pirouette to whirl or turn about on the toes in dancing.

Pisa, (pi'sah), (anc. Pise), n. a city of Central Italy, cap. of the prov. of Pisa, on the Arno, 8 m. from its mouth, 13 m. N.E. of Leghorn, and 50 m. W. of Lucca; Lat. 43° 43' 11" N., Lon. 10° 23' 58" E. The walls are 5 m. in circuit. The Arno flows through the city, and is crossed by several bridges, the principal one being of fine marble. The cathedral, with its attendant buildings—the baptistry (Fig. 169), the cemetery, and the belfry—is, perhaps, the finest specimen that exists of the style of building called by the Italians the *Gotico-Moresco*. The most remarkable buildings in Pisa are the *Campo Santo*, *q. v.*, and the belfry, or campanile, a cylindrical tower, 178 feet in height, constructed of successive rows of pillars, chiefly of marble; it is extremely graceful in its proportions, but its chief peculiarity consists in its inclination about 13 feet out of the perpendicular, whence it is commonly called the *Leaning Tower of Pisa*. Besides the cathedral, the city contains several other elegant churches. In the square of the university are several handsome buildings, chiefly built of marble, and among the public establishments the hospital is the most conspicuous. The University of Pisa is one of the oldest in Italy, and has four colleges, with forty professors, a library, a botanical garden, a cabinet of natural history, and an observatory. It is the birthplace of Galileo. The mildness of the climate in the winter renders it a great resort for invalids, and the celebrated baths in the vicinity attract visitors from a great distance. *P.* is supposed to have been founded shortly after the Trojan war. It became a Roman colony about B. C. 179, but did not attain to distinction before the 10th century, when it became the leading commercial republic of Italy. During the 11th cent. it maintained its superiority in the Mediterranean, materially assisting the French in the Crusades. Becoming involved in a war with Genoa, it ended in the ruin of *P.* in 1284. *P.* afterwards became the prey of various factions, until finally united to Florence in 1406. Pop. 50,341.

Pisano, n. the surname of several distinguished artists of Pisa, very important in the early history of art in Italy. GIUNTA PISANO, or GIUNTA DI GIUSTINO DI PISA, is the earliest known Tuscan painter, and a crucifixion painted by him in the church of Santa Maria degli Angeli, at Assisi, about the year 1236, is still preserved; it is admirable in impasto, and absolutely great as a work of art, compared with anything we know of this early period in Italy. Giunta was anterior to Cimabue, and to him belongs the merit of reviving painting in Italy.—NICCOLA PISANO was equally distinguished as sculptor and architect, and must hold the same rank in the former art that Giunta does in painting. He distinguished himself as early as 1225 at Bologna, where he executed the celebrated tomb of San Domenico. Nicola was also a great architect; he executed the church of the Frari at Venice; he was the pioneer of the *Renaissance* in Italy, in sculpture and in architecture; D. 1278.—GIOVANNI PISANO, the son and assistant of Niccola, and likewise one of the greatest of the early sculptors and architects of Italy, D. at Pisa in 1320, and was placed in the same tomb with his father in the Campo Santo.—ANDREA PISANO was another early artist of Pisa, but nearly a century later than Giunta; he was a sculptor and architect, and the friend of Giotto, a few years his senior. Andrea was born about 1250. Of several works still extant by Andrea, the bronze gates of the Baptistery of St. John at Florence are the most important. These two gates are still perfect; the exact date of their execution is disputed, whether they were finished in 1330, or only commenced in that year. The

gates of Andrea were originally in the centre of the Baptistery, opposite to the cathedral, but were afterwards removed to the side, to give place to the more beautiful work of Ghiberti, in the year 1424. Andrea was made citizen of Florence, and died there in 1345.

Piscary, n. [From Lat. *piscis*, a fish.] (*Law.*) The right of fishing in the waters of another.

Piscas'sick River, n. in New Hampshire, a small stream flowing into the Lamprey River from Rockingham co.

Piscataqua River, n. formed by the Salmon Falls and Cocheco, and several other streams on the E. boundary of Stafford co., New Hampshire, and flowing S.E. enters the Atlantic Ocean between Maine and New Hampshire.

Piscataquis, n. in Maine, a river rising in the S.W. part of Piscataquis co., and flowing E. enters the Penobscot river in Penobscot co.

—A N. co.: area, about 3,600 sq. m. *Rivers*. Penobscot, Piscataquis, Aroostook, and Kennebec rivers, besides many smaller streams and numerous lakes, as Moosehead, Chesuncook, Sebec, &c. *Surface*, much diversified, and in some parts mountainous; *soil*, in general fertile. *Cap. Dover*. Pop. (1897) 17,120.

Piscataquog River, n. in New Hampshire, enters the Merrimack River from Hillsborough co.

Piscataway, n. in Maryland, a post-village of Prince George co., abt. 16 m. S. of Washington, D. C.

Piscataway, n. in New Jersey, a village and township of Middlesex county, about 5 miles east of New Brunswick.

Piscatorial, Pis'catory, a. [Lat. *piscatorius*, from *piscis*, a fish.] Relating to fishes, or to fishing.

Pis'ces, n. pl. [Lat. pl. of *piscis*, a fish.] (*Zool.*) See FISH.

(*Astron.*) The first in order of the twelve constellations of the Zodiac, usually represented by two fishes tied a considerable distance apart, at the extremity of a long undulating cord or ribbon. It is bounded N. by Andromeda, W. by Andromeda and Pegasus, S. by the Cascade, and E. by the Whale, the Ram, and the Triangles. Its principal star, El Risha, is of 2d magnitude.

Pisciculture, (si-kap'lyur), n. [Lat. *piscis*, and *captura*, capture.] Angling; the taking of fishes.

Piscicult'ure, n. [Lat. *piscis*, and *cultura*, culture.] The art of breeding, rearing, and cultivating fish.

Pisciculturist, n. One who rears fish.

Piscid'ia, n. [From Lat. *piscis*, and *cado*, to kill.] (*Bot.*) A genus of plants, order *Fabaceæ*.

The Dog-wood tree, *P. Erythrina*, of the West Indies, is much esteemed as a hard wood. Its leaves and branches are a poison for fishes; hence its name.

Pis'ciform, a. [Lat. *piscis*, and *forma*, a form.] Resembling a fish.

Pisc'ina, n. [Lat., a fish-pond.] (*Arch.*) A water-drain in a church, (Fig. 2117.) near the altar on the south side, and usually enriched with ornament. Some churches have double piscinas.

Pis'cinal, a. Pertaining to a fish-pond.

Pis'cine, a. Relating to fish, or fishes.

Piscivorous, a. Subsisting on fish.

Pisco, (pees'ko), n. a seaport-town of Peru, on a river of its own name, abt. 130 m. S.S.E. of Lima.

Pise, (pe-za'), n. [Fr. *pise*.] (*Arch.*) A wall constructed of stiff clay, or other earth, rammed into moulds that give the form of the building, and are removed when the wall is carried up.

Pise'co, or Pizeco, n. in New York, a village of Hamilton co., on a small lake of its own name, abt. 73 m. N.N.W. of Albany.

Pis'gah, n. in Iowa, a village of Union co., abt. 150 m. S.W. by W. of Iowa City.

Pisgah, n. in Missouri, a post-village of Cooper co., abt. 17 m. S. by E. of Booneville.

Pis'gah, (Mount), n. a ridge in the land of Moab, Palestine, in which was Mount Nebo. See NEBO.

Pish', interj. A word expressing contempt;—sometimes spoken and written *pshaw*.

Pish'ou's Ferry, n. in Maine, a post-village of Kennebec co., abt. 11 m. N. of Waterville.

Pis'iform, a. [Lat. *pisam*, a pea, and *forma*, a form.] Of the form of a pea.

Pisistratus, n. a citizen of Athens who raised himself to the sovereign authority in the time of Solon, to whom he was related, B. C. 560. Compelled to retire from the city by the conspiracy of Megacles and Lycurgus, he returned soon after by effecting a compromise, but was obliged to retire again, and suffer an exile of eleven years, which he spent in making preparations to recover his authority. In the eleventh year he reappeared at the head of an army and regained his power, which he retained till his death, B. C. 527. He was a beneficent ruler, and did much to promote the rise of Greek literature. We owe to him the poems of Homer in their present form, Pisistratus having collected them, as they were scattered in detached parts throughout Greece, and digested them into order.

Fig. 2117.—PISCINA (A. D. 1150.)

Pi'so, an eminent Roman family, which produced some great men; as — **Piso**, **LUCIUS CALPURNIUS**, surnamed *Frugalis*, on account of his frugality, was consul 149 n. c., and terminated the war in Sicily. He composed annals and orations, which are lost. — **Piso**, **CAIUS**, consul 67 B. C., was the author of a law to restrain the factions which usually attend the election of the chief magistrates. — **Piso**, **CNEIUS**, was consul under Augustus, and governor of Syria under Tiberius, in which situation he behaved with great cruelty. He was charged with poisoning Germanicus; on which account he destroyed himself, A. D. 20. — **Piso**, **LUCIUS**, a senator, who attended the emperor Valerian into Persia in 258. On the death of that emperor he assumed the imperial title; but was defeated by Valens, who put him to death in 261.

Pis'olite, *n.* [Gr. *pisos*, a pea, and *lithos*, a stone.] (*Geol.*) A rock of which the component particles are rounded stones about the size and shape of peas. Pisolite is generally a limestone, differing only from oolite in the greater size of the egg-like particles of which it is made up. Not unfrequently, however, valuable iron-stones are found in a pisolitic form in rocks belonging to the oolitic period.

Piso'nia, *n.* (*Bot.*) The *Fingrigo*, a genus of plants, order *Nyctaginaceæ*, consisting of trees or shrubs which have generally emetic and purgative roots.

Piss, *v. n.* [Du. and Ger. *pissen*.] To discharge urine; to make water; to urinate.

Pis'sasphalt, *n.* [Gr. *pissasphaltos*.] (*Min.*) Mineral pitch; a soft bitumen, of the consistence of tar, and intermediate between petroleum and asphalt.

Pis sophane, *n.* [Gr. *pissa*, pitch, and *phainein*, to seem.] (*Min.*) A hydrated sulphate of alumina and peroxide of iron, found in transparent, stalactitic or amorphous masses, of an olive-green or liver-brown color, resembling pitch in color and fracture.

Pista chia, *n.* (*Bot.*) A genus of plants, order *Anacardiaceæ*. The concrete resin called *mastic* or *mastic*, much used, dissolved in alcohol or turpentine, as a varnish and cement, is obtained from the species *P. lentiscus*. It is principally imported from the island of Chio, where the plant is much cultivated. The liquid oleo-resinous matter called *Chian turpentine* is produced by the species *P. terebinthus*, and is imported from the same island. *P. vera* (Fig. 118.) produces the fruit known as *pistachio*, or *pistacia-nut*, the kernels of which are of a green color, and have a very agreeable flavor. They are highly esteemed by the Turks and Greeks, and are occasionally imported into this country.

Pista'chio, *n.* (*Bot.*) See **PISTACHIA**.

Pis'tacite, *n.* (*Min.*) A variety of **EPIDOTE**, *q. v.*

Pistareen, *n.* A small Spanish silver coin of the value of \$0.16 to \$0.18.

Pis'te, *n.* [Fr.; It. *pesta*, from Lat. *pistare*, to pound, to bruise.] (*Man.*) The track or tread a horseman makes upon the ground he goes over.

Pistia'ceæ, *n. pl.* (*Bot.*) The Duckweed family, an order of plants, alliance *Arales*. *DIAG.* No spadix, a one-celled ovary, erect ovules, and a slit embryo. They are floating, aquatic plants, with lenticular or lobed leaves or fronds. The species are found in all regions; their properties are unimportant.

Pisticeio, (*pis-tich'e-o*), a town of S. Italy, prov. of Potenza, 20 m. S. of Matera. *Manuf.* Woollen cloth. *Pop.* 6,500.

Pis'til, *n.* [Fr.; Lat. *pistillum*.] (*Bot.*) The female system of the flower, or the ovary, style, and stigma, taken together (Fig. 2014). It occupies the centre of the flower, the stamens and floral envelopes being arranged around it, when they are present; the envelopes alone in the unisexual pistillate flower; or it stands by itself when the flower is pistillate and naked. It consists of one or more modified leaves called *carpels*, which are either distinct from each other, as in the columbine and stone-crop, or combined into one body, as in the primrose and tobacco-plant. When there is but one carpel, as in the pea, the pistil is said to be *simple*; when there is more than one, as in the example cited above, it is *compound*. Each carpel consists essentially of a hollow inferior part called the *ovary*, which contains the *ovules*, and a cellular part called the *stigma*, to which the *pollen*, or fertilizing dust from the *anthers*, adheres. The stigma is either placed directly on the ovary, in which case it is said to be *sessile*, as in the barberry, or it is elevated on a stalk prolonged from the ovary, called the *style*, as in the primrose. At the period of fecundation, the stigma becomes moistened by a viscid fluid, which renders the surface more or less sticky, and thus admirably adapted to retain the pollen-grains, which are thrown upon it at the time of the dehiscence of the anther. The style is traversed by a very narrow canal, which communicates below with the cavity of the ovary, and above with the stigmas. The walls of the canal are formed of a loose humid tissue, called the *conducting tissue*, from its function of conducting the pollen to the ovules. The terms *apocarpous*, *syncarpous*, &c., are used, when describing the pistil, in the same sense as when they are applied to the fruit, which is, in fact, the mature pistil. See **CARPEL**, **FRUIT**, **OVARY**, **OVULE**, and **PLACENTA**.

Pistilla'ceous, *a.* (*Bot.*) Growing on a pistil.

Pis'tillate, *a.* (*Bot.*) Having, or consisting of a pistil.

Pistillid'ium, *n.* (*Bot.*) The body which, in mosses, liverworts, &c., answers to the pistil.

Pistilliferous, *a.* (*Bot.*) That has a pistil.

Pistoja, (*pis-to'ya*), a town of Italy, prov. of Florence, on the Ombrone, 20 m. N.W. of Florence. *Manuf.* Woollens, silk, leather, hardware, and fire-arms. Pistols are said to receive their name from being first manufactured in this town.

Pis'tol, *n.* [Fr. *pistolet*; It. *pistoletta*. See **PISTOJA**.] The smallest description of fire-arm, with a curved stock for use with one hand. The latest improvement on the pistol is the **REVOLVER**, *q. v.*

Pistolade, *n.* A pistol-shot; the firing of a pistol.

Pistole, *n.* [Fr.; It. *pistola*, from *piastrola*, dimin. of *piatra*, a piaster.] A gold coin formerly current in some European countries. The Spanish *P.* was worth \$3.60; the German *P.* was equivalent to about \$2.15.

Pis'tolet, *n.* A little pistol.

Pis'ton, *n.* [Fr. and Sp., from Lat. *piusere*, *pistum*, to pound.] (*Mach.*) A short cylinder of metal or other solid substance, which fits exactly the cavity of a pump or barrel, and works up and down in it alternately, so as to press or force some fluid into or out of the tube which it fills, as in pumps, fire-engines, steam-engines, &c.

Pis'ton-rod, *n.* The rod with which the piston is moved, as in a pump, &c.

Pisuer'ga, a river of the N. of Spain, rising in the Cantabrian Mountains, and after a S.S.W. course of 140 m., falling into the Douro, 10 m. below Valladolid.

Pisum, *n.* [Lat., pea.] (*Bot.*) A genus of plants, order *Fabaceæ*. The species *P. sativum* is the common pea, the most valuable of culinary legumes.

Like most domestic plants of great antiquity, its native country is unknown, though it is commonly referred to the S. of Europe. The different varieties of garden-pea and the gray pea, which is cultivated in fields, are all regarded as varieties of *P. sativum*.

Pit, *n.* [A. S. *pyt*, *pytt*; Ir. *pit*; Lat. *puteus*, a well.] An opening or hole in the earth; a hollow; a cavity; a cavity made in the earth by digging; a deep hole in the earth.—An abyss; profundity; hell; as, the bottomless *pit*.—The grave.—An area for cock-fighting.—The part on the ground-floor between the lower range of boxes and the stage of a theatre.—A depression of the body at the stomach.—The cavity under each shoulder; as, the arm-pit.—A dint made by impression on a soft substance, as by the finger, &c.—A little hollow in the flesh, made by a pustule, as in small-pox.—A hollow place in the earth excavated for catching wild beasts.—In some parts of the U. S., the stone of a fruit, as plum, cherry, &c.

(*Gardening*.) An excavation in the ground, intended to be covered by a frame, and to afford protection to tender plants in winter, or for the forcing of vegetables, fruits, &c. Pits are often walled on all sides, although, in many cottage gardens, excellent use is made of pits which are mere excavations. The ventilation of pits, as much as the weather will permit, is of the greatest importance.

Pit, *v. a.* To press into hollows; to indent.—To mark with little hollows.—To set or place against each other in the same *pit* or area; to set in competition, as in combat.

Pita-Hemp, *n.* See **AGAVE**.

Pit-a-pat, *adv.* In a flutter with palpitation or quick succession of pats or beats; as, his heart went *pit-a-pat*.

Pit, *n.* A light, quick sound, as of a footstep, rain, &c.

Pit'cairn, in *New York*, a township of St. Lawrence co.

Pitcairn's Island, in the S. Pacific Ocean, Lat. 25° 3' 6" S., Lon. 130° 8' W. It has a circumference of 7 m., and was discovered by Carteret in 1767.

Pitch, *n.* [A. S. *pic*; Ger. *pech*; Gr. *pissa*, or *pitta*; Fr. *poix*.] The residuum which remains after tar has distilled or boiled in an open pot, so as to drive off the volatile matter. It is largely used in ship-building, &c. See **BURGUNDY PITCH**.

Pitch, *v. a.* To smear or cover over with pitch.

Pitch, *n.* Height or degree of elevation.—The point where a declivity begins, or the declivity itself; descent; slope; the degree of descent or declivity.—A descent; a fall.

(*Mus.*) A term applied when speaking of the acuteness or gravity of any particular sound or instrument. For instance, if we wish to express that any sound is less acute, or lower than another, we would say it is of a lower *pitch*, and *vice versa*. The *opera pitch* is much higher than the common *concert pitch*.

(*Wheel-work*.) The distance between the centres of two contiguous teeth. *Pitch-line* is the circle, concentric with the circumference, which passes through all the centres of the teeth.

(*Arch.*) The inclination of the sloping sides of a roof to the horizon. It is usually designated by the ratio of its height to the space covered.

(*Naut.*) The rising or falling of a vessel in a heavy sea.

(*Mining*.) The limit of ground.

Pit'ic, *v. a.* [W. *piciau*, to throw, to dart.] To throw, cast, or fling; to thrust, as a long pointed-object.—To

fix; to plant; to set in array.—To arrange the value of price of.

(*Mus.*) To regulate or set the key-note of a tune in music.

Pitch, *v. n.* To light; to settle, as something thrown or flying; to come to rest from flight.

—To fall headlong; to plunge; to fall.

—To fix the choice; — with *on* or *upon*.

—To fix a tent or temporary habitation; to encamp.

(*Naut.*) To rise and fall, as the head and stern of a ship passing over waves.

Pitch-black, *a.* Black as pitch. (*Tautological*.)

Pitch-blende, *n.* [Ger. *pechblende*.] (*Min.*) An oxide of uranium, composed of 84.78 per cent. of uranium, and 15.22 oxygen. It is opaque, of a grayish-greenish or brownish-black color, and very brittle. It occurs amorphous, generally massive and disseminated, also botryoidal and reniform, with a columnar or curved lamellar structure. The chief use to which this ore is applied is for the preparation of oxide of uranium, which is employed, under the name of *Uranium Yellow*, for imparting to glass the pale opalescent sea-green color, which is much admired in Turkey. It is also used in porcelain painting, and in a new photographic process, the *Wothlytype*.

Pitch-coal, *n.* A kind of bituminous coal; caking coal.

Pitch-dark, *a.* Very dark; dark as tar or pitch.

Pitch'er, *n.* [Armor. *pitcher*.] An earthen vessel with a spout for pouring out liquors.—An instrument to pierce the ground in which anything is to be fixed.—A person who pitches anything.

(*Bot.*) See **ASCIDIUM**.

Pitch'er, in *New York*, a post-village and township of Chenango county, about 16 miles west north-west of Norwich.

Pitch'er-plant, *n.* (*Bot.*) See **NEPENTHACEÆ**.

Pitch'er Springs, in *New York*, a post-village of Chenango co., abt. 125 m. W. of Albany.

Pitch-farthing, *n.* A play in which a coin is pitched or thrown into a hole; — called also *chuck-farthing*.

Pitch-field, *n.* A pitched battle.

Pitch-fork, *n.* A fork or farming implement used in pitching or throwing hay or sheaves of grain.

Pitch'iness, *n.* Blackness; darkness. (*R.*)

Pitch'ing, *n.* Act of throwing, as with a pitch-fork.—A kind of paving with small stones.

(*Naut.*) The raising and falling of the head and stern of a ship.

Pitch, *a.* Declivous; descending; sloping, as a hill.

Pitch'-ore, *n.* (*Min.*) Pitch-blende.

Pitch'-pine, *n.* (*Bot.*) The *Pinus picæ*, from its abundance in resinous matter yielding pitch.

Pitch'-pipe, *n.* (*Mus.*) A wind instrument used by choristers in finding the pitch or elevation of the key.

Pitch'stone, *n.* (*Min.*) A form of Obsidian or Volcanic glass, the lustre of which resembles that of pitch or resin, rather than glass. It is of various colors, and is less glassy than Obsidian, from having cooled more slowly.

Pitch'y, *a.* Smeared with pitch.—Having the qualities of pitch.—Black; dark; dismal.

Pit'-coal, *n.* Mineral coal, as distinguished from charcoal.

Pit'ea, a river of N. Sweden, which, after a S.E. course of 180 m., enters the Gulf of Bothnia near *Pitea*, a small seaport-town, cap. of a län of same name. 110 m. N.N.E. of Umea; *pop.* 1,500.

Pit'eous, *a.* That may excite pity; sorrowful; mournful; wretched; miserable.

—Deserving compassion; affected by pity; compassionate.

—Pitiful; paltry; poor.

Pit'iously, *adv.* In a piteous manner; sorrowfully; mournfully.

Pit'consness, *n.* State or quality of being piteous; sorrowfulness; tenderness; compassion.

Pit'fall, *n.* A pit slightly covered for concealment, and intended to catch wild beasts or men by their falling into it.

Pith, *n.* [A.S. *piþa*.] (*Bot.*) The cylindrical or angular column of cellular tissue, arising at the neck of the stem of an exogenous plant, and terminating at the leaf-buds, with all of which, whether they are lateral or terminal, it is in direct communication. It forms the centre of a stem, and is covered over by the wood. Its use is to act as a reservoir of nutritious matter for the young leaves when first developing.

—Marrow.—Strength or force; energy; power.—Closeness and vigor of thought and style.—Importance; weight; moment.

—*r. a.* To sever, as the spinal chord.

Pith'ily, *adv.* With strength; with close or concentrated force; cogently; with energy.

Pith'iness, *n.* State or quality of being pithy; concentrated force; strength.

Pith'less, *a.* Destitute of pith; wanting strength.—Wanting cogency or concentrated force.

Pit Hole City, in *Pennsylvania*, a decayed town of Venango co., 15 m. N.E. of Oil City. It has several oil-wells, one of which formerly yielded 7,000 barrels in a day. It once contained more than 10,000 inhabitants, but it is now nearly deserted.

Pith'y, *a.* Consisting of, containing, or abounding in, pith.—Containing concentrated force; forcible; energetic.—Uttering energetic words or expressions.

Pit'iable, *a.* Deserving pity; worthy of compassion, sorrowful; affecting; lamentable; mournful; miserable.

Pit'iability, *n.* State of being pitiable; state of deserving compassion.

Pit'iably, *adv.* In a pitiable manner; wofully.

Pitie, or **PETIC**, (*pee'tik*), a town of Mexico, abt. 95 m. S.W. of Arippe; *pop.* 5,500.

Fig. 2118. — PISUM SATIVUM.

Pit'iedly, *adv.* In a situation to be pitied.
Pit'iful, *a.* Full of pity; tender; compassionate. — Miserable; moving compassion. — To be pitied for its littleness or meanness; palty; contemptible; despicable.
Pit'ifully, *adv.* With pity; compassionately; in a manner to excite pity; contemptibly; with meanness.
Pit'ifulness, *n.* State or quality of being pitiful; tenderness of heart that disposes to pity; mercy; compassion.
Pit'iless, *a.* Feeling no pity; hard-hearted. — Exciting no pity.
Pit'ilessly, *adv.* Without mercy or compassion.
Pit'ilessness, *n.* The state or quality of being pitiless; unmercifulness; insensibility to the distress of others.
Pit'man, *n.*; *pl.* PITMEN. A man who works in a coal-pit. — The piece of lumber which connects the saw of a saw-mill with the wheel that moves it.
Pit'pan, *n.* A long and narrow canoe, with thin and flat projecting ends, used in the W. Indies.
Pit'pat, *n.* and *adv.* Same as PIT-A-PAT, *q. v.*
Pit'saw, *n.* A large saw used by two men, of whom one is in a pit.

Pitt, WILLIAM, an English statesman, and second son of the celebrated Lord Chatham, b. at Hays in Kent, 1759. He was educated at home, under private tuition, until at the age of 14 he entered at Cambridge, and was taught from his earliest youth by his haughty father to consider himself the hope of the country. He thus acquired, at the age when young men are just ridding themselves of boyish shyness, an austere self-possession, which imparted to everything he did an air of wisdom and authority. He never knew the nature of diffidence, and the easy assurance with which he took whatever duty or office presented itself, is supposed, not without good reason, to have deceived the world as to the extent of his capacity. In 1781, he was returned to Parliament for Appleby, and at once threw himself into the business of the session with the confidence of an old debater. He boldly adopted the projects of reform, then raising into shape in Britain side by side with the discontents in France, and in 1782 brought on his motion for a reform in the representation of the people. On the accession of Lord Shelburne's administration in July, he was made Chancellor of the Exchequer, and this invitation to retire from the party, who were deemed utopian theorists, showed that a well-founded reliance was placed in his ambition, overcoming his reforming prop-

grew old before his time, and he died of a broken and exhausted constitution, January 23, 1806.

Pitt, in *North Carolina*, an E. co.; *area*, abt. 650 sq. m. *Rivers*, Tar and Neuse rivers, and Contentny Creek. *Surface*, nearly level; *soil*, not very fertile. *Cap.* Greenville.

Pitt, in *Ohio*, a twp. of Wyandot co.

Pitt, in *Pennsylvania*, a township of Alleghany county.

Pit'tacal, *n.* [Gr. *pitta*, *pissa*, pitch, and *kalos*, beautiful.] (*Chem.*) A dark-blue solid substance that has been but little studied. It is one of the products of the destructive distillation of wood.

Pit'tacus, one of the seven sages of Greece, was b. at Mytilene, in the island of Lesbos, about 650 B. C. He was a warrior as well as a philosopher, expelled the tyrant Melanthus from Lesbos; and on becoming its sovereign, B. C. 590, he discharged the duties of his station in the most exemplary manner; retired after a reign of 10 years, and died B. C. 570.

Pit'tance, *n.* [Fr. *pitance*; L. Lat. *picantia*, *pitantia*, food in general.] Originally, a portion of food allowed to a monk; an allowance of food given in charity. — A very small quantity, as of money, &c.

Pitt'hem, a town of Belgium, prov. of W. Flanders, 15 m. S.E. of Bruges; *pop.* 5,500.

Pittosporaceæ, *n. pl.* [Gr. *pitta*, pitch, *sporos*, seed.] (*Bot.*) An order of plants, alliance *Berberales*. *DIAG.* Regular symmetrical flowers, axile and parietal placenta, stamens alternate with the petals, ascending or horizontal ovules, and imbricated petals. — They are trees or shrubs, chiefly found in Australia, but occasionally in Africa and some other parts of the globe. Lindley enumerates 12 genera, which comprise 78 species. They are remarkable for resinous properties. Some, as certain species of *Billardiera*, have edible fruits, and some are cultivated in this country on account of the beauty of their flowers.

Pitt River, in *California*, enters Sacramento River in Shasta co.

Pitt's Archipelago, a group of islands in the Pacific Ocean off the coast of British N. America, between Lat. 53° and 54° N., and abt. Lon. 130° W.

Pittsborough, in *Indiana*, a post-village of Hendricks co., abt. 19 m. N.W. of Indianapolis.

Pittsborough, in *Mississippi*, a post-village, cap. of Calhoun co., abt. 55 m. W. by N. of Aberdeen.

Pittsborough, in *N. Carolina*, a post-village, cap. of Chatham co., abt. 34 m. W. of Raleigh.

Pittsburg, in *Arkansas*, a village of Johnson co., abt. 70 m. E. of Fort Smith.

Pittsburg, in *California*, a village of Shasta co., abt. 25 m. N.E. of Shasta.

Pittsburg, in *Indiana*, a post-village of Carroll co., abt. 65 m. N.W. of Indianapolis.

Pittsburg, in *Iowa*, a post-village of Van Buren co., abt. 78 m. S.S.W. of Iowa City.

Pittsburg, in *Missouri*, a post-village of Hickory co., abt. 55 m. S.W. of Jefferson City.

Pittsburg, in *New Hampshire*, a post-township of Coos co.

Pittsburg, in *Ohio*, a village of Darke co., abt. 25 m. N.W. of Dayton.

Pittsburg, the second city of *Pennsylvania*, is frequently called the "Smoky City," and the "Iron City." These two sobriquets are derived from the manufacturing which has given the city its reputation. The city is situated 750 feet above the level of the ocean, and 180 feet above the level of Lake Erie, on the head-waters of the Ohio, 354 m. W. by N. of Philadelphia, 148 m. S. of Erie, and 193 m. E. of Columbus, Lat. 40° 26' 34" N.; Lon. 80° 2' 38" W. Within the angle formed by the rivers Alleghany and Monongahela, where they meet and give birth to the Ohio (the three rivers forming a water-line which, viewed from the W., resembles a letter Y, except that the Ohio trends somewhat to the N.), lies the original Pittsburg, the inner point being the site of the old Fort Du Quesne of the French, later of Fort Pitt, the nucleus of the city; looking inland from the point the land widens rapidly, and at the same time rises slowly, but quite perceptibly, from the high-water level to an elevation of from 400 to 500 feet. Mostly upon this slope lies the closely-built portion of the city, with river-frontage on both the N.W. and the S.W., extending about 8 m., with but a slight inclination northward then southward, in that of the Monongahela. Until 1872 the city was bounded by the two rivers, but during that year it crossed the S.W. boundary

Fig. 2120—SUSPENSION BRIDGE UNITING PITTSBURG AND ALLEGHANY

by the annexation of the extensive manufacturing district formerly comprised in the boroughs of Temperanceville, Union, West Pittsburg, Allentown, Mount

Washington, Birmingham, East Birmingham, Lower St. Clair, South Pittsburg and Ormsby. In 1874 the city was further enlarged by annexing Wilkins township on the E. Efforts to consolidate Pittsburg and Alleghany City became effective in 1907, after long legislative endeavor, the two cities, practically one in their business, dwellings, churches and factories, their being made one politically. Though separated in territory by the two rivers, they are connected by numerous bridges, amounting practically to continuous streets, over which the street-railway cars run, as from ward to ward in cities not divided by rivers running through their settled area. The first settlement of *P.* was in the stockade erected by Ensign Trent, in Feb., 1754. In April, 1754, it passed into the hands of the French by surrender. In Nov., 1758, it repossessed into the possession of the English, under Gen. Forbes, being abandoned by the French. In Jan., 1759, the construction of the first Fort Pitt, from whence the city takes its name, was commenced. In 1764, the first plan of lots, now embraced in four squares of the city, was laid out near the fort. In 1769, a warrant was issued for the survey of the *Manor of Pittsburg*. In Jan., 1784, the first sale of lands by John Penn and John Penn, Jr., the proprietors of the Manor, was made. In July, 1786, the first number of the first paper published west of the Alleghany Mts., was issued at *P.* In Oct., 1790, the postage at *P.*, for the year ending that date, were \$110.99. Pittsburg in 1786 contained 36 log-houses, 1 stone, 1 frame, and 5 small stores. In 1788 the population was estimated at about 500, which had increased to 1,565 in 1800, the growing settlement being made a borough in 1804 and a city in 1816, at which date its population was about 6,000. Its development, which continued at an increasing rate, was due to the abundance of coal and iron in its vicinity, which quickly brought it into prominence as a manufacturing city, particularly in iron and steel.

Fig. 2121.—CITY HALL.

Coal surrounds the city, exposed in the river bluffs, where the soft shales and sandstones have in the past ages been worn away by the waters to a depth of some 600 feet. In the face of these hills horizontal layers of coal appear, the great *P.* coal layer, over 6 feet in thickness, extending like a broad black band at a height of about 300 feet. This abundant outcrop of coal renders mining operations remarkably easy, and has been an important agent in the prosperity of *P.* In 1784, when, as above said, the Penns made their first sale of lands at *P.*, they also granted rights of mining coal, and the business has steadily continued from that day to this. The manufacture of glass began here in 1796, the establishment being the pioneer in the thriving glass-making business that has grown up in this city and elsewhere in the West. In 1797-98 two national vessels, the armed galleys *President Adams* and *Senator Ross*, were constructed at *P.* Other vessels, ships, brigs and schooners, suitable for sea navigation, followed, and in 1811 the first steamboat for the navigation of the western rivers was built, at a cost of \$40,000. Between 1814 and 1836, 252 steamboats were built, and from 1850 onward they were produced at the rate of over 100 annually. The first iron foundry was erected in 1804, and here, in the War of 1812, cannon were cast for Perry's Lake Erie fleet and also for the defence of New Orleans.—*Manuf.* *P.* is preëminently a manufacturing city, it being provided by nature in abundance with the requisites of industrial production, particularly in goods of iron and steel, there being produced in this city and its vicinity about one-fifth of all the yield of the United States. In the last census year the city contained 21 blast furnaces, their output being 1,293,435 tons of pig iron, and 33 rolling mills, largely devoted to steel, their output being 1,105,573 tons of steel and 638,450 of iron. There were 49 iron foundries, with a capital of about \$10,000,000, while the production of structural iron and steel was 65,000 tons,

Fig. 2119.—WILLIAM PITT.

pensities. It was in December of 1783 that King George dismissed the coalition ministry, and placing young Pitt at the head of the cabinet, conducted with his able championship that battle in which the crown defeated the political aristocracy. Among the statesmen of the day, Dundas, afterwards his right hand man, had the sagacity to see beforehand that he would be victorious, and to sacrifice other prospects for a participation in his fortune. Once established in power, he ruled through seventeen of the most eventful years of European history. When his reign began he had not quite abandoned his old reforming views, and being well versed in the newly promulgated philosophy of Adam Smith, he was partial to the principle of free trade. But the French Revolution drove him back from all progressive projects, and the frightened country submitted to a sort of ministerial and parliamentary despotism. The great conflict, in which the young minister of a constitutional country measured his strength with the young military despot of France, is matter of history familiar to all. That Pitt, although perhaps his powers have been somewhat exaggerated by the panegyrists, showed great resources, cannot be denied. His readiness in debate and promptness in comprehending business have seldom been equalled. What chiefly surprises people of the present day in the history of his career, is the vast amount of dissipation, and especially of drinking, with which his great labors were diversified; but perhaps his frailties have, like his abilities, been exaggerated. It was said of him that he never was truly young, that he never had the freshness, naturalness, and openness of youth; it is certain that he

and of wrought-iron pipe 350,000 tons. In truth, almost everything that can be made of iron, from tacks and fine wire to masses of many tons in weight, is produced here, while steel goods of every description are made. The other manufactures include glass and glassware of all kinds; silver and nickel-plating; Japan and Britannia ware; tin, brass and aluminum goods; bricks, crucibles and earthenware; wagons, carriages and furniture; brushes, bellows, white lead, lead-paint, shot, and numerous other articles. Of glass factories alone, 34 were devoted to the making of window-glass, 37 to flint and lime glass, 10 to lamp chimneys, 5 to green bottle-glass, and 15 to prescription vials. There are also large concerns for the production of air brakes, electric light apparatus, &c., there being 8 of these concerns, with a capital of over \$23,000,000. There is no other city in this country, and few in the world, in which production is so large in comparison with population. This is a natural result of its situation in the midst of one of the richest coal fields on the continent, and the ease with which iron can be supplied, not only the mines of Pennsylvania, but those of Michigan, feeding the P. furnaces and forges. The P. coal regions extend for 50 miles in each direction, or 2,500 sq. m., the seams varying in thickness from 2 feet in the extreme N.W. to 6 feet at P., 10 feet up the Monongahela, and 12 feet up the Youghiogheny. It is estimated that these seams hold 10,000,000,000 tons of bituminous coal, of which fully half is available for mining. Another advantage possessed by P. is the vicinity of the rich Pennsylvania petroleum wells, while the natural gas, which is so frequent an accompaniment of the oil, has for years past proved of the highest value as a cheap, clean and convenient fuel. About 1883 it was brought in pipes to P., and for many years was used for manufacturing and domestic purposes alike, 1,200 miles of pipe being used in its conveyance, and about 7,500,000 cubic feet of gas used daily. During the reign of gas, the application of the title of "Smoky City" became a misnomer, but the growing exhaustion of the supply has forced many firms to return to coal as a fuel and the old aspect of the city is returning. In addition to coal, coke is an important product, there being in the vicinity 15,000 coke-ovens, with a capacity of 6,000,000 tons.—*Commerce.* In addition to its manufactures, P. has a large commerce, both domestic and foreign, the Allegheny and Monongahela rivers affording excellent natural channels for the reception of iron and coal from the mines, oil from the wells, and lumber from the forests, while the Ohio forms an equally excellent outlet for the transportation of these raw materials and of the products of manufacture to the various markets along this stream and the Mississippi, and via the Gulf to foreign shores. Still more important is the complete system of railroads with which this city is provided; the Pennsylvania, the Baltimore & Ohio, the Pittsburg, Fort Wayne & Chicago, the Pittsburg, Cincinnati & St. Louis, and various branches of the Pennsylvania, 12 railroads in all, form a complete network of rails, giving this city communication with all parts of the Union. As a commercial city, P. is a port of delivery of the district of New Orleans, so that a considerable portion of its foreign commerce cannot be identified, but its domestic and foreign trade steadily increases, year by year. Over \$10,000,000 are invested in the river transport business, 4,000,000 tons of coal being shipped in 1890 by river alone. Within recent years a system of dams has been constructed by the U. S. government on the Monongahela and Ohio rivers, by means of which a deep-water harbor may be maintained at P. at all seasons. A projected improvement is a ship-canal to connect P. with Lake Erie; but at this writing (1897) no actual work has been done, although two or more routes have been partially surveyed as a preliminary measure. P. is fortunate in its healthy location and the absence of malarial disease. While built principally in the valley of the rivers, it is surrounded by rolling grounds from 200 to 400 feet in height, upon which elevations, in all directions, are built the finer residences of its citizens, above the smoke of the vast array of workshops below. Of its public buildings, the Court-house, of Quincy granite, was erected at a cost of \$2,500,000. In addition, there is a Government building which cost \$1,500,000, a City Hall, of white sandstone (Fig. 2121), an Exposition building, and numerous churches, of which may be named the Roman Catholic Cathedral and Trinity Church (Episcopal). The Carnegie Free Library, dedicated in 1890, is richly endowed, and is an important addition to the literary facilities of the city. The system of education is well developed, the city possessing excellent public schools and various institutions for the higher education. There are 27 National and 20 State banks, with a total capital of about \$15,000,000, while the assessed valuation of taxable property is \$287,322,894. *Pop.* (1900) 321,616; Allegheny City 129,896; joint pop. (1900) 451,512.

Pittsfield, in Georgia, a village of Henry co.

Pittsfield, in Illinois, a post-town and township, cap. of Pike co.

Pittsfield, in Maine, a post-township of Somerset co.

Pittsfield, in Massachusetts, a post-town and township of Berkshire co., about 151 m. W. of Boston. It is regularly laid out, and generally well built. *Manuf.* Cotton goods, machinery, fire-arms, &c. *Pop.* (1895) 20,447.

Pittsfield, in Michigan, a village and township of Washtenaw co.

Pittsfield, in New Hampshire, a post-village and township of Merrimack co. *Manuf.* Cotton goods, boots and shoes.

Pittsfield, in New York, a post-township of Otsego co.

Pittsfield, in Ohio, a post-township of Lorain co.

Pittsfield, in Pennsylvania, a post-village and township of Warren co.

Pittsfield, in Vermont, a post-township of Rutland co.

Pittsfield, in Wisconsin, a township of Brown co.

Pittsford, in Iowa, a township of Butler co.

Pittsford, in Michigan, a post-village and township of Hillsdale co.

Pittsford, in New York, a post-village and township of Monroe county, about 10 miles south-east of Rochester.

Pittsford, in Vermont, a post-village and township of Rutland county, about 45 miles south-west of Montpelier.

Pitt's Grove, in New Jersey, a post-township of Salem co.

Pitts-ton, in Maine, a post-village and township of Kennebec co., abt. 7 m. S. by E. of Augusta.

Pittston, in Pennsylvania, a post-borough and township of Luzerne co., about 10 m. N. E. of Wilkesbarre, on the E. bank of the Susquehanna river. A bridge connects P. with West Pittston. An immense coal business is carried on here. *Pop.* (1897) 12,320.

Pitts-town, or **Pitt's Point**, in Kentucky, a village of Bullitt co., about 60 m. W. S. W. of Frankfort.

Pittstown, in New Jersey, a post-village of Hunterdon co., about 8 m. N. W. of Flemington.

—A village of Salem co., about 28 m. S. of Camden.

Pittstown, in New York, a post-village and township of Rensselaer co., about 22 m. N. E. of Albany.

Pittsylvania, in Virginia, a S. co., adjoining North Carolina; area, about 914 sq. m. Rivers, Staunton, Dan, and Banister rivers. Surface, diversified; soil, very fertile. *Min.* Iron and limestone. *Cup.* Chatham. *Pop.* (1897) 61,250.

Pittsylvania Court-House, the former name of CHATHAM, in Virginia, a post-village, cap. of Pittsylvania co., on the Southern Railroad, 16 m. N. of Danville; has a large business in tobacco. *Pop.* (1897) 920.

Pituitary, a. [Lat. *pituita*, phlegm.] (*Anat.*) Secretory phlegm or mucus; as, the *pituitary membrane*.

Dunglison.

P. gland. (*Anat.*) A gland situated within the cranium, between a fold of the *dura mater*, in the *sella turcica* of the sphenoid bone.

P. membrane. (*Anat.*) The mucus membrane of the nose.

Pituite, n. [Fr.; Lat. *pituita*.] Phlegm; mucus.

Pituitous, a. Consisting of phlegm.

Pity, n. [Fr. *pitié*; It. *pieta*; Lat. *pietas*, from *pius*, pious.] The feeling or suffering of one person, excited by the distresses of another; compassion; commiseration; sympathy.—The ground or subject of pity; cause of grief; thing to be regretted.—A cry or call for pity.

—*v. a.* To feel pain or grief, as for one in distress; to have sympathy for; to have tender feelings, as for one excited by his unhappiness.

—*v. n.* To exercise pity; to be compassionate.

Pityingly, adv. Compassionately; tenderly.

Pityriasis, n. [Gr. *pitura*, bran.] (*Med.*) A cutaneous disease consisting of irregular scaly patches, unattended by inflammation. When it affects infants, it is called *dandruff*. A similar exfoliation of the cuticle in reddish patches is not uncommon in adults. Soap and water, and mild cooling lotions, or very weak nitromuriatic lotion, are the best applications.

Pityroid, a. [Gr. *pitura*, bran, and *sidos*, form.] Resembling bran.

Più, (*pe-oò*), adv. [It., from Lat. *plus*.] (*Mus.*) A word frequently applied to another, to increase the strength of its meaning; as, *più allegro*, a little quicker.

Piunhi, or LIVRAMENTO, (*pe-oön-yee'*) a town of Brazil, abt. 58 m. W. S. W. of Formiga.

Piura, (*pe-oò'ra*), a town of Peru, on a river of its own name, abt. 120 m. N. N. W. of Lambayeque; *pop.* 22,000.

Pius I., POPE, succeeded Hyginus in 142. D. 157.

PIUS II., (*Aeneas Sylvius Piccolomini*), was B. in Tuscany in 1405, of an ancient and illustrious family. In 1431 he assisted at the Council of Basle as secretary; was afterwards secretary to the anti-pope Felix V., and then to the Emperor Frederick III., who sent him on various embassies, and gave him the poetic crown. Eugenius IV. chose him for apostolic secretary, Nicholas V. made him a bishop, and sent him as nuncio to Bohemia, Moravia, and Silesia, and Calixtus III. created him cardinal. P. had by this time given up the more liberal opinions on church matters with which he started, and had become a zealous supporter of the power of the Pope, both in opposition to the secular power and to the authority of councils. He was one of the most learned men of his time, and notwithstanding the great change in his views, he distinguished himself by moderation and a conciliatory spirit. He was chosen to succeed Calixtus III. in 1458, and in the following year assembled a congress at Mantua for the purpose of arranging a crusade against the Turks. He soon after published a bull against appeals to a council, which occasioned some dispute with Louis XI. In 1463, by another bull, he retracted his former sentiments respecting the Council of Basle, condemning his defence of it, and praying to be condemned as Aeneas Sylvius, but listened to as Pius II. D. at Ancona, August, 1464, whither he went to hasten preparations for war with the Turks. Among the writings of Pius II. are a *History of the Council of Basle*; *History of Frederick III.*; *History of Bohemia*; *Cosmographia*, &c.

PIUS III., (*Francesco Piccolomini*), was nephew to the preceding pontiff. He was elected pope in 1503, but D. in less than a month afterwards.

PIUS IV., (*Cardinal de Medici*), B. at Milan, 1499. He rose

by merit to several high employments, and, in 1540 obtained the cardinalship, and, on the death of Paul IV., in 1559, was elected Pope. He confirmed the decrees of the Council of Trent, after the closing of that assembly in 1564. In the following year a conspiracy was formed against his life by Benedict Accolti and others, who were executed. This Pope was not of the celebrated Medici family of Florence. D. 1565.

PIUS V., (*Michèle Ghislieri*), was B. in Redmont in 1504, and early entered the Dominican order. He so distinguished himself by his austere life, and his zeal against "heretics," that he was appointed inquisitor in Lombardy, and afterwards inquisitor-general. He was created cardinal in 1557, and was chosen to succeed Pius IV. in 1566. He set himself to effect reforms, both in morals and discipline, excited terror in Italy by the seizure, imprisonment, and burning of those convicted or suspected of heresy, among whom were several persons of note; revived the bull, "In cœnam Domini," but found it impossible to put it in execution; enforced strictly the authority of the Index Expurgatorius; and expelled the Jews from the States of the Church, excepting only the cities of Rome and Ancona. The great victory over the Turks at Lepanto was the result in good part of the efforts of Pius V. His death, in May, 1572, was a matter of general rejoicing, and was publicly celebrated at Constantinople during three days.

PIUS VI., (*Giovanni Angelo Braschi*), was B. at Cesena, in 1717, and succeeded Clement XIV., in 1775. His first act was to make a reform in the public treasury; he then completed the museum in the Vatican; but the greatest work of his pontificate was the draining of the Pontino marshes,—a project which baffled several of the emperors, and many Popes. When the Emperor Joseph II. decreed that all the religious orders in his dominions were free from Papal jurisdiction, Pius, apprehensive of the consequences of such a measure, went in person to Vienna in 1782; but though he was honorably received, his remonstrances were ineffectual. The French Revolution, however, was of more serious consequence to the Papal See. The Pope having favored the allies, Bonaparte entered the ecclesiastical territory, and compelled him to purchase a peace by a contribution of several millions, and delivering up the finest works of painting and sculpture. Basseville was then sent as envoy from the republic to Rome, where he behaved with so much insolence, that the people assassinated him in 1793. General Duphot entered the city with his troops to restore order, but the Papal soldiers routed them, and Duphot was slain. On this Bonaparte again entered Italy, and made the Pope prisoner in the Capitol, which was plundered. The venerable pontiff was carried away by the victors, and hurried over the Alps to Valence, where he D., August 29, 1799.

PIUS VII., (*Gregorio Barnaba Chiaramonti*), B. at Cesena, 1742, became a Benedictine monk, was created cardinal in 1785, and after the death of Pius VI. was chosen, after long deliberations of the conclave, to succeed him, March, 1800. In the following year a concordat with France was concluded at Paris; in 1804 the Pope went to Paris and crowned Napoleon emperor, returning to Rome in May, 1805. Soon after Ancona was seized by the French, and the great quarrel between Napoleon and the Pope began. The occupation of the castle of San Angelo in 1808 was followed by the annexation of the States of the Church to the French empire; on which the Pope published a bull of excommunication against the perpetrators of the invasion. P. was then arrested by the French officer Miollis and sent to Savona, and afterwards to Fontainebleau, whence he was not permitted to return to Italy till January, 1814. The Congress of Vienna restored the States of the Church to the Pope, who applied himself thenceforth to internal reforms. He, however, re-established the Jesuits and the Inquisition. The character of Pius VII. was such as to win him the esteem and sympathy of men of all churches and sects. D. Aug. 20th, 1823.

PIUS VIII., (*Cardinal Castiglione*), became pope in succession to Leo XII., in 1829. After a short pontificate of one year, he D., 1830.

PIUS IX., (*Giovanni Mario Mastai Ferretti*), B. at Sinigaglia, May 13, 1790, was intended for the army, but resolved to devote himself to the Church. For several years after his ordination he attended to his pastoral duties with exemplary self-devotion, and was nominated by Pius VII. on a mission to the government of Chili, shortly after the recognition of the independence of that republic. The duties of this mission were performed by him with great discretion; and immediately on his return to Rome he was appointed by Leo XII. to one of the most important of the ecclesiastical civil departments of administration. In 1836 he was sent as apostolic nuncio to Naples, while the cholera was raging there, and his name is still revered by the poorer inhabitants of that city, in gratitude for his disinterested efforts to alleviate their sufferings. In 1840 he was created Cardinal-Archbishop of Imola, in the Romagna, where much political dissatisfaction existed; but he devoted himself to the duties of his diocese with so much zeal and self-denial, and displayed such liberality of sentiment, that he soon gained the affections of the people, and restored peace and tranquillity to the district. Pope Gregory XVI. died June 1, 1846, and Cardinal Ferretti was elected to the papacy under the name of Pius IX., June 16. The new Pope at first acquired much popularity by favoring the hopes and wishes of the people for the reform of the abuses of the government; and the enthusiasm, not only of the Romans, but of the whole Italian people, was raised to the highest pitch. But the French Revolution of 1848 gave a much more

powerful impulse to the enthusiasm, not only of the Italian patriots, but of the friends of liberal institu-

tions all over Europe; awakening a demand, not for mere administrative reforms, but for popular systems of representative government. These sweeping changes the Pope was not prepared to support, and from that moment his popularity began to decline. A policy of reaction commenced, which only widened the breach between the Papal government and the people, and gave an impetus to the agitation for organic changes. The popular disaffection was greatly increased on his taking for his minister Count Rossi, one of the most aristocratic and unpopular men in Rome, when, indeed, the fury of the people could with difficulty be restrained. Count Rossi was assassinated Nov. 15, and Pius himself, a few days later, escaped from Rome in disguise, and arrived safely in Gaëta, the first town in the Neapolitan territory, whither he was followed by the members of the Papal court and the diplomatic corps. He sent to Rome an ordinance, Nov. 27, declaring void all the acts of the government, which he superseded by a state commission. This document the Roman chambers treated with contempt, appointed a provisional government, and set about improving the victory they had achieved. The Pope remained nearly a year and a half at Gaëta and Portici, an object of sympathy as the head of the Roman Catholic Church. During his absence, Rome, which was in the possession of the native troops under Garibaldi, was besieged, and at last taken by storm by the French army under Gen. Oudinot, after sustaining some reverses. The Pope left Portici, April 4, 1850, escorted by Neapolitan and French dragoons, and accompanied by the King of Naples and several members of his family. He crossed the frontier at Terracina, April 6, and reentered Rome April 12, amid the thunder of French cannon. His chief ecclesiastical acts are the formal definition of the dogma of the Immaculate Conception, in Dec., 1854; the famous Encyclical of Dec., 1864, which was provoked by the Franco-Italian convention, providing for the withdrawal of the French troops from Rome—an act which was, however, practically annulled by the return of the French forces in 1867, in consequence of an attempt at invasion by Garibaldi;—and the bull summoning the Ecumenical Council of 1869-70, which promulgated the doctrine of Papal infallibility. Died Feb. 7, 1878.

Fig. 2122. — PIUS IX.

Pius X., (*Giuseppe Sarlo*), b. at Riese, in Italy, June 2, 1835, of humble parentage. He was consecrated to the priesthood in 1858 and became a parish priest in 1867. In 1884 he was made Bishop of Mantua and in 1893 was created a Cardinal and appointed Patriarch of Venice, a position which he filled with much dignity and ability. On August 4, 1903, he was elected to the papacy as successor to Pope Leo XIII., assuming the title of Pius X.

Pivot, *n.* [Fr., dim. of *pieu*; It. *pivolo*.] (*Mech.*) The extremity of the axes about which a body revolves.—That on which anything revolves.—A turning point.

(*Mil.*) The officer or soldier who happens to be at the flank on which a company wheels.

—*v. a.* To place on a pivot.

Pivotal, *a.* Relating to a pivot.

Pizarro, *FRANCISCO*, the conqueror of Peru, was the illegitimate son of a gentleman of Truxillo, and being left entirely dependent on his mother, a peasant girl, he received no education, and was, in his early years, employed as a swineherd. Quitting this inglorious occupation, he embarked, in 1510, with some other adventurers, for America; and, in 1524, after having distinguished himself under Nuñez de Balboa on many occasions, he associated at Panama with Diego de Almagro and Hernandez Lucque, a priest, in an enterprise to make fresh discoveries. In this voyage they reached the coast of Peru, but being too few to make any attempt at a settlement, *P.* returned to Spain, where all that he gained was a power from the court to prosecute his object. However, having raised some money, he was enabled again, in 1531, to visit Peru, where a civil war was then raging between Huascar, the legitimate monarch, and his half-brother, Atahualpa, or Atabalipa, as he is variously called, the reigning inca. *P.*, by pretending to take the part of the latter, was permitted to march into the interior, where he made the unsuspecting king his prisoner, while partaking of a friendly banquet to which he had invited him and his whole court; then extorting from him, as it is said, a house full of the precious metals by way of ransom, he had him tried for a pretended conspiracy, and condemned him to be burned, allowing him first to be strangled, as a reward for becoming a Christian. In 1533 the conqueror laid the foundation of Lima; but, in 1537, a contest arose between him and Almagro, who was defeated and exe-

cuted. The son and friends of Almagro, however, avenged his death, and on June 26, 1541, after ruling despotically for six years, *P.* met with the fate he so richly deserved, being assassinated in his palace at Lima.

Pizzica'to, (*Abbreviated pizz.*) [It., twitched.] (*Mus.*) A phrase used to denote that the strings of the violin or violincello, instead of being played, as usual, by the bow, are to be twitched with the fingers, in the manner of a harp or guitar. The ordinary mode of playing is restored by the letters *c. a.* (*col arco*, with the bow).

Pizzighetone, a fortified town of N. Italy, on the Adige, 12 m. W.S.W. of Verona; pop. 4,000.

Pizzle, *n.* [Ger. *pissel*; Du. *pees*.] The male organ in quadrupeds.

Pizzo, (*pid'zo*), a town of Italy, prov. of Calabria Ulteriore II., on the Gulf of Santa Eufemia, 5 m. N.E. of Monteleone. Here Murat was shot in 1815. Pop. 5,600.

Placability, *n.* Quality of being placable or appeasable; susceptibility of being pacified.

Placable, *a.* [Lat. *placabilis*, from *placare*, to quiet, from *placere*, to please.] That may be appeased or pacified; appeasable; willing to forgive.

Placableness, *n.* State or quality of being placable; placability.

Placard, *n.* [Fr., from *plague*, plate, from Gr. *plax*, *plakos*, anything flat and broad.] A written or printed paper, or bill, posted up against a wall, &c.

—*v. a.* To post, as a writing or libel, in a public place.—To notify publicly.

Placate, *v. a.* To appease; to conciliate.

Place, *a.* [Fr.; Sp. *plaza*; Ger. *platz*, from Lat. *platea*, from Gr. *plateia*, a street.] A public square; an open space in a city.—A particular portion of space, of indefinite extent; any portion of space, as distinct from space in general; a locality; site; spot.—Point or degree in order of proceeding; rank; order of priority; dignity or importance.—Residence; mansion; seat; abode.—A city; a town; a village; a collection of dwellings; a fortified town.—A portion or passage of writing, or of a book.—Room or stand, with the sense of substitution.—State of actual operation; effect.

—*v. a.* To put in any place; to put or set in a particular part of the earth, or in something on its surface.—To appoint, set, induct, or establish in an office; to put or set in any particular rank or condition.—To set or fix; to invest; to put out at interest; to lend.—To ascribe; to attribute.

Place'bo, *n.* [Lat., I will please.] (*Med.*) A prescription intended rather to satisfy the patient, than with any expectation of its effecting a cure.

Place'brick, *n.* An inferior kind of brick, which, from being on the outside of a clamp or kiln, is only imperfectly burned.

Place'less, *a.* Without a place.

Place'man, *n.*; *pl.* **PLACEMEN**. A person holding an office or position under the government.

Placenta, *n.*; *pl.* **PLACENTÆ**. [Lat. *placenta*, a cake; Gr. *plakus*, a flat cake, from *plakseis*, flat.] (*Anat.*) The after-birth; a soft, spongy, vascular body, adherent to the uterus, and connected with the fetus by the umbilical cord, and which serves as an organ of respiration and nutrition. It receives the maternal blood from the tortuous uterine or decidual arteries.

(*Bot.*) A projection on the inner wall of the ovary, to which the ovules or rudimentary seeds are attached. The arrangement of the placenta, or *placentation*, is a very important character in distinguishing plants. In the *simple ovary*, the placenta is situated at the ventral suture, or the point which corresponds to the union of the two margins of the capillary leaf; such a *P.* is therefore termed *marginal*, or more commonly *axile*, from its being turned towards the axis of the plant. In *compound ovaries*, the placentation is of three kinds; namely, *axile*, *parietal*, and *free central*. The *axile*, or *central* of some botanists, occurs in all compound, many-celled ovaries; because, in these, each of the component carpels is placed in a similar position to the simple ovary; and hence the placentas situated at their ventral sutures will be arranged in the centre or axis, as in the lily and campanula. The other two kinds of placentation occur in the compound, 1-celled ovary. That termed *parietal* consists in the attachment of ovules to placenta, either placed directly on the wall of the ovary, as in the *mignonette* and cactus, or upon incomplete dissepiments, formed by the partially-enfolded carpels, as in the orchis and poppy. In *parietal placentation*, the number of placentas corresponds to the number of carpels of which the ovary is formed. What is called a *free central P.* is formed when the placentas are not attached to the walls of the ovary, but are situated in the centre of the cavity, and perfectly unconnected with those walls. The pink and primrose families furnish examples of this kind of placentation. It sometimes happens that none of these regular kinds of placentation can be discriminated, the ovules being placed irregularly in the cavity of the ovary.—See **OVARY**, **ORDER**, **PISTIL**.

Placen'tal, *a.* Relating to the placenta.

Placen'tary, *a.* That has reference to the placenta.

Placentation, *n.* (*Bot.*) The manner in which the placenta is developed or placed, or in which the ovules are borne.

Placentia, (*plai-sen'shi-a*), a town of Spain, prov. of Carceres, on the Gerte, 44 m. N.W. of Almaraz. Manuf. Hats, leather, and woollen goods. Pop. 7,000.

Placentia, a seaport-town of Newfoundland, abt. Lat. 47° 11' 30" N., Lon. 53° 55' W. It is situated on a bay of the same name, an inlet of the Atlantic Ocean, and has an active trade. The harbor has 3½ fathoms of water, and the entrance is strongly defended.

Placentiferous, *a.* (*Bot.*) Belonging to the placenta; having a placenta.

Placen'tiform, *a.* (*Bot.*) Shaped as a placenta.

Place of Arms, *n.* (*Fort.*) An enlargement in the covered way, at the reëntering and salient angles of the counterscarp;—hence the term *reëntering places of arms*, and *salient places of arms*.

Place'proud, *a.* Proud of station or rank.

Placer, (*plas'er*), *n.* One who places.

Placer, *n.* [Sp.] That part of a river bank, or bed on a mountain torrent, where gold is found.

Pla'cer, in California, a N. co., adjoining Nevada; area, abt. 1,492 sq. m. *Rivers*. Bear river and Middle Fork of American river. Lake Tahoe forms a portion of the E. boundary. *Surface*, diversified, and in some parts mountainous, being traversed by the Sierra Nevada and Snowy Range. *Min. Gold* in considerable quantities. *Cap. Auburn*. *Pop.* (1897) 16,500.

Placer Mountain, in New Mexico, a range abt. 20 m. S.W. of Santa Fé; Lat. 35° 29' N., Lon. 106° 20' W.

Placer'ville, in California, a town and township, cap. of El Dorado co., abt. 50 m. E. by N. of Sacramento. Much gold has been found in the vicinity, and it is a place of considerable business activity.

Placerville, in Idaho, a post-village of Boise co., abt. 14 m. N.W. of Idaho City.

Pla'cid, *a.* [Lat. *placidus*, pleasing, from *placere*, to please.] Pleasing; gentle; quiet; undisturbed; indicating peace of mind; calm; tranquil.

Placidity, *n.* [Lat. *placiditas*.] State or quality of being placid.

Pla'cidly, *adv.* Mildly; calmly; without disturbance or passion.

Pla'cidness, *n.* Calmness; tranquillity; quietness.

Pla'cita, *n. pl.* [Lat.] (*Hist.*) In the Middle Ages, public courts or assemblies, in which the sovereign presided when a consultation was held upon the affairs of the state.

Placoid, **Placoid'ian**, *a.* [Gr. *plax*, *plakos*, a plate, and *eidōs*, form.] Belonging to the placoids.

Placoids, **Placoid'ians**, *n. pl.* (*Zool.*) An order of fishes in the system of Agassiz, in which the scales have each a spine projecting from them; scales of placoid fishes, as *e. g.* the shark and dogfish exhibit when tessellated together; the material which is used commercially under the name of *shagreen*.

Pla'fond, *n.* [Fr.] The ceiling of a room.

Pla'gal, *a.* [Fr.; from Gr. *plagios*, sideways.] (*Mus.*) Applied to such melodies as have their principle notes lying between the fifth of the key and its octave or twelfth.

Plagiarism, (*jī'ar-izm*), *n.* (See **PLAGIARY**.) The act of purloining another man's literary works, or introducing passages from another man's writings, and passing them off as one's own; literary theft. "Dictionary writers," says that patriarch of encyclopædia writers, Ephraim Chambers, "at least such as meddle with arts and sciences, seem in this case to be exempted from the common laws of *meum* and *tuum*; they do not pretend to act upon their own bottom, nor to treat the reader at their own cost. Their works are supposed, in great measure, compositions of other people; and whatever they take from others they do it avowedly. In fact, their quality gives them a title to appropriate everything that may be for their purpose, wherever they find it, and they do no otherwise than as the bee does for the public service. Their occupation is not pillaging, but collecting contributions; and if you ask them their authority, they will produce you the practice of their predecessors of all ages and nations."

Pla'giarize, *v. a.* To steal or purloin from the writings of another.

—*v. n.* To be guilty of literary theft.

Pla'giary, **Plagiary**, *n.* [Lat. *plagiarius*, from *plagium*, kidnapping, from *plaga*, a snare.] A thief in literature; one who commits plagiarism.

Plagihe'dral, *a.* [Gr. *plagios*, oblique, and *edra*, a base, seat.] (*Crystal.*) That has oblique sides.

Plagionite, *n.* [Gr. *plagios*, oblique, from the form of the crystals.] (*Min.*) A sulphide of lead and antimony found in thick, tabular, four-sided prisms, and also massive and granular, of a dark lead-gray color.

Plague, (*plā'g*), *n.* [From Lat. *plaga*, a blow; Gr. *plēgē*, from *plēsein*, to strike.] (*Med.*) A contagious fever, generally of a very severe kind, rapid in its progress, and accompanied by buboes, carbuncles, and petechiæ. It spreads rapidly by contact, and is usually fatal to two-thirds of those whom it attacks. The first symptoms are headache in the forehead and occiput, sometimes accompanied by violent and short tremors, alternating with heat. The eyes become red, and assume a ferocious aspect, the headache increases, and the pain extends to the spine, to the joints, and to the limbs. Then follow vertigo and delirium, at first mild, but afterwards fierce. The tongue is dry and yellowish, but without thirst. There is nausea, with ineffectual attempts, in most cases, to vomit, or if anything is brought up, it is green bile. The respiration is laborious, with general uneasiness. There is nothing particular in the alvine excretions, although they are sometimes liquid. The urine is often turbid, with an oily aspect. The smell of the patient is occasionally nauseous; but if the disease has lasted a few days, the perspiration has often a sweetish, disagreeable smell. The disease varies in duration from three to seven days; but the patient often dies within a few hours of the attack. Some die at periods from three to four days, without any outward symptoms beyond a peculiar physiognomy, sparkling eyes, and an expression of countenance resembling that of a person under hydrophobia. On dissection, the gall-bladder has been found distended with greenish-black bile, the inside of the intestines and stomach covered with a yellow mucus, and the conglomerate glands indu-

rated; but dissections have not, for obvious reasons, been numerous. The medical treatment of *P.* has hitherto been of an empirical character, no treatment attempted having been proved to be of real use. In the French army, the *P.* is of Egyptian origin; the great plague of Athens, which took place 430 B. C., and which is the first instance on record of its appearance in Europe, having been imported from the borders of that country by a circuitous route through Libya. Its first introduction into modern Europe was by means of the Crusades; and since then it has appeared in various places, and by many different courses, but always imported from some part or other of the Turkish empire. It has frequently appeared in London, where, in 1665, it destroyed, on the smallest calculation, 68,600 inhabitants. Various estimates have been given of the frequency of plague epidemics in the principal towns of Egypt, Syria, and Turkey: but the general opinion appears to be that it recurs in those places, at intervals varying from seven to ten years; and that while it is both endemic and contagious in Lower Egypt, from the marshy lands of which it springs, it is merely contagious in Upper Egypt, as well as in Syria, and all the more distant countries to which it may be conveyed. It is now generally acknowledged that the *P.* is contagious, but is a question how far a person who has received the contagion, but in whom the disease has made no progress, can communicate it; and it appears that the body alone, if washed and shaved, does not readily communicate it, except when actually suffering from the disease, in a febrile state, or in a perspiring one. Some of the most remarkable visitations of the *P.* have been that which occurred in Britain, A. D. 430, and which carried off such multitudes that the living were scarcely sufficient to bury the dead; that which destroyed 200,000 of the inhabitants of Constantinople, A. D. 716. In Germany, 90,000 persons died of it in 1348; in Ireland, great numbers died of *P.* in 1466 and 1470; in 1524 Milan lost 50,000 of its inhabitants, and the sickness extended its ravages to Germany, Norway, Denmark, and France. In London, 30,578 persons perished of plague alone in 1603-4, and 35,417 in 1625. The plague carried from Sardinia to Naples in 1656 (being introduced by a transport with soldiers on board,) raged with such violence as to carry off 400,000 of the inhabitants in six months. In Egypt, more than 800,000 died of plague in 1792, and it committed great ravages in 1813 at Malta, and in 1834 in Egypt.—Hence, any pestilence. See YELLOW FEVER.

—Anything troublesome or vexatious; a state of misery; any great natural evil or calamity.

Plague, *v. a.* To instill with disease, calamity, or natural evil of any kind.—To vex; to tease; to harass; to trouble; to embarrass.

Plagueful, *a.* Abounding with plagues; infected with plagues.

Plagueless, *a.* Free from the plague or plagues.

Plaguer, (*plā'ger*), *n.* One who teases or annoys.

Plague-spot, *n.* The spot or mark of a pestilential disease.

Plaguily, (*plā'gi-ly*), *adv.* Vexatiously; horribly. (Colloq.)

Plaguy, (*plā'gy*), *a.* Vexatious; troublesome. (Colloq.)

Plaice, *n.* [*Fr. plie*.] (*Zoöl.*) See PLEURONECTIDÆ.

Plaid, (*plād*), *n.* [*Gael. plaid*, a blanket.] A striped or variegated cloth much worn by the Highlanders of Scotland, forming a prominent part of the national costume, and indicating, by its pattern and color, the different Scottish clans.

Plaiding, *n.* Plaid cloth.

Plain, *a.* [*Fr.*; *Sp. plano*; *Lat. planus*.] Smooth; level; without elevations or depressions.—Open; clear; flat; unencumbered.—Void of ornament; simple.—Artless; not subtle; without disguise, cunning, or affectation.—Straightforward; sincere; candid; frank.—Mere; bare; without art or embellishment.—Evident; clear; discernible; not obscure; manifest.

—*adv.* In a plain manner.

—*n.* [*Fr. plaine*.] (*Geog.*) The general term for all those parts of the dry land which cannot properly be called mountainous, and which compose by far the greater part of the earth's surface. Plains have different physical appearances according to their geographical position, and the peculiar characteristics of each have procured for them different names; thus we have the *steppes* of Asia, the *deserts* of Africa, the *llanos* and *pampas* of S. America, and the *prairies* or *savannahs* of N. America.

—A field of battle.

—*v. a.* To level; to make even.

Plain, in *Indiana*, a township of Kosciusko county.

Plain, in *Ohio*, a township of Franklin county.—A township of Stark county.—A post-township of Wayne county.—A township of Wood county.

Plain, in *Wis.*, a p. o. of Sauk co.

Plain-chant, *n.* Same as PLAIN-SONG, *q. v.*

Plain-dealer, *n.* One who states his views plainly.

Plain-dealing, *a.* Honest; open; acting without art.—*n.* Management void of art, stratagem, or disguise; sincerity.

Plainfield, in *Connecticut*, a post-village and town-

ship of Windham county, about 16 miles north-east of Norwich.

Plainfield, in *Illinois*, a post-village and township of Will county, about 155 miles north-east by north of Springfield.

Plainfield, in *Indiana*, a post-town of Hendricks co., about 14 m. S.W. of Indianapolis.

Plainfield, in *Massachusetts*, a post-township of Hampshire co.

Plainfield, in *Michigan*, a township of Iosco co.

—A village and township of Kent co., about 10 m. N.N.E. of Grand Rapids.

Plainfield, in *New Hampshire*, a post-township of Sullivan co.

Plainfield, in *New Jersey*, a city of Union co., on the Cent. R. R. of N. J., 24 m. W. S.W. of New York. The attraction as a place of residence has added much to the importance of this city. Its proximity to New York gives it additional advantages. Pop. (1895) 16,329.

Plainfield, in *New York*, a township of Otsego co.

Plainfield, in *Ohio*, a post-village of Coshocton co., abt. 80 m. E.N.E. of Columbus.

Plainfield, in *Pennsylvania*, a post-village of Cumberland co., abt. 7 m. W. by S. of Carlisle.—A township of Northampton co.

Plainfield, in *Vermont*, a post-village and township of Washington co., abt. 8 m. E. of Montpelier.

Plainfield, in *Wisconsin*, a post-township of Wausara co.

Plain-hearted, *a.* Sincere hearted; without art, hypocrisy, or reserve.

Plain-heartedness, *n.* The state or quality of being plain-hearted.

Plainly, *adv.* In a plain manner.

Plainness, *n.* State or quality of being plain.

Plains, in *Pennsylvania*, a township of Luzerne county.

Plainsborough, in *New Jersey*, a post-village of Middlesex co., abt. 14 m. N.E. of Trenton.

Plains-of-Abraham, an elevated plateau or tableland of Lower Canada, immediately S. of Quebec. Memorable as the scene of a desperately fought battle (Sept. 18, 1759), between the French and British forces under Montcalm and Wolfe respectively, in which both generals were killed.

Plains-of-Dura, in *Georgia*, a post-village of Sumpter co., abt. 110 m. S.W. of Milledgeville.

Plain-song, *n.* [*Fr. plain chant*; *It. canto fermo*.] (*Mus.*) A name given by the Church of Rome to the ecclesiastical chant. It is an extremely simple melody, admitting only notes of equal value, rarely extending beyond the compass of an octave, and never exceeding nine notes, the staff on which the notes are placed consisting of only four lines. The clefs are C and F. St. Ambrose is considered to have been the inventor or systematizer of plain-song.

Plain-speaking, *n.* Frankness; plainness of speech.

Plain-spoken, *a.* Speaking with plain, unreserved sincerity.

Plainsville, in *Pennsylvania*, a post-village of Luzerne co., abt. 6 m. N. of Wilkesbarre.

Plaint, *n.* [*Fr. plainte*, from *Lat. plango, planctus*, to strike the breast, to lament.] Audible expression of sorrow or complaint, or representation made of injury or wrong done.—Lamentation; complaint; lament.

(*Law*.) A private memorial tendered to a court in which the person sets forth his cause of action in writing.

Plaintiff, *n.* [*Fr. plaignif*, from *plaindre*, to complain.] (*Law*.) He who complains; he who, in a personal action, seeks a remedy for an injury to his rights.

Plaintive, *a.* Expressive of sorrow; expressing sorrow or grief.—Repining; mournful; sad.

Plaintively, *adv.* In a plaintive manner; in a manner expressive of grief.

Plaintiveness, *n.* The state or quality of being plaintive.

Plaintless, *a.* Without murmuring or repining; without complaint.

Plain View, in *Illinois*, a post-village of Macopin co., abt. 48 m. N. by E. of St. Louis, Missouri.

Plain View, in *Minnesota*, a post-village and township of Wabasha county, about 17 miles S. by W. of Wabasha.

Plainville, in *Connecticut*, a post-town of Hartford co., about 14 m. S.W. of Hartford.

Plainville, in *New Jersey*, a village of Somerset co., abt. 20 m. N.E. of Trenton.

Plainville, in *New York*, a post-village of Onondaga co., abt. 18 m. W.N.W. of Syracuse.

Plainville, in *Ohio*, a post-village of Hamilton co., abt. 10 m. E. by N. of Cincinnati.

Plainville, in *Rhode Island*, a village of Providence co., abt. 20 m. N.W. of Providence.

Plainville, in *Wisconsin*, a post-village of Adams co., abt. 55 m. N.N.W. of Madison.

Plainwell, or **PLAINVILLE**, in *Michigan*, a post-village of Allegan co., abt. 14 m. N. by W. of Kalamazoo.

Plain-work, *n.* Needle-work, as distinguished from embroidery.

Plainton, in *New Hampshire*, a post-village and township of Rockingham county, about 35 miles south-east of the City of Concord.

Plait, *n.* [*Fr. plier*, from *Lat. plico, plicatus*, to fold.] A fold; a doubling, as of cloth.—A braid, as of hair or straw.

—*v. a.* To fold; to double in narrow folds.—To braid; to interweave, as strands; as, to *plait* hair.—To entangle; to involve.

Plaiter, *n.* One who plaits or braids.

Plak'odine, *n.* [*Gr. plakōdēs*, flat.] (*Min.*) A native sub-arsenide of nickel, occurring in tubular, at-

tached, and sometimes intersecting crystals, of a bronze yellow color.

Plan, *n.* [*Lat. planus*, flat.] (*Arch.*) A word applied to the horizontal section of the walls, partitions, staircases, &c., of a building, showing the disposition of the ground plot and of the upper floors—the word *section*, or *elevation*, being applied to the vertical plans. A *geometrical plan* is that in which the solid and vacant parts are represented in their natural proportion. A *perspective plan* is one that is conducted and exhibited by degradations or diminutions, according to the rules of perspective. A *raised plan* is one where the elevation or upright is shown upon the geometrical plan, so as to hide the distributions.

—Anything devised or projected; scheme; project; contrivance.

—*v. a.* To form a draught or representation of any intended work on a plane surface.—To scheme; to devise; to form in design.

Planck, *v. a.* [*Fr. planche*, a board.] To cover with planks or boards.

Planck'ing, *n.* The laying of floors in a building.

Plane, *a.* [*Lat. planus*.] Without elevations or depressions, as the surface of water at rest.

—*n.* (*Geom.*, *Astron.*, &c.) A surface without curvature; or, according to Euclid, it is such a surface that if any two points whatever in it be joined by a straight line, the whole of the straight line will be in the surface.—The term plane is frequently used in astronomy, conic sections, &c., to signify an imaginary surface supposed to cut and pass through all solid bodies; and the whole doctrine of conic sections is based on this foundation. In *Mech.*, planes are either horizontal, that is, parallel to the horizon, or inclined to it. In optics, the planes of reflection and refraction are those drawn through the reflected or refracted rays.

(*Carp.*) A tool used to produce straight, flat, and even surfaces upon wood. There are many modifications in this tool, which can have its cutting-edge and under-surface made to almost any contour, so that mouldings of all kinds may be made. The two commonest are the *jack plane*, or *fore-plane*, for rough work, and the *smoothing-plane*, for finishing off plane surfaces.

—*v. a.* To make smooth; to pare off, as the inequalities of the surface of a board or other piece of wood by the service of a plane; to free from inequalities of surface.

Plane, *n.* [*Gr. platanos*, from *platus*, broad; *Fr. platane*.] (*Bot.*) See PLATANUS.

Plane-irons, *n. pl.* (*Carp.*) Cutting irons, either single or double, to insert in a plane.

Plan'er, *n.* (*Printing*.) A flat piece of wood, used by the compositor for forcing down the type in the form, and making the surface perfectly smooth.

Plan'era, *n.* [After J. S. Planer, a German botanist.] A genus of plants, order *Ulmaceæ*. They are N. American and Asiatic trees, closely related to elms. The timber of *P. richardi*, the Zelkova-tree, is much prized.

Plan'et, *n.* [*Fr. planete*; *Sp. planeta*; *Gr. planetes*, from *planao*, to wander.] (*Astron.*) A name given to eight dark bodies which appear bright by reflecting the light of the sun, and which revolve around the latter as a guiding center. They are divided into two groups of four each, the inner comprising Mercury, Venus, Earth, and Mars; the outer, Jupiter, Saturn, Uranus, and Neptune. Those of the inner group are small and rotate on their axes, as far as known, in about 24 hours. The members of the outer group are mammoth as compared with the inner, and have days, as far as known, of about 10 hours. There is as yet no evidence that a planet exists beyond Neptune.

There is, however, some evidence to show that there are probably several intramercutrial planets; but it will doubtless require several total eclipses of the sun to settle the existence of the four announced in 1878 by Watson and Swift, the actuality of whose discovery has been seriously questioned. The 8 planets are called *major planets*, to distinguish them from the group of minor planets, called *Asteroids* or *Planetoids* (*q. v.*). Following are a few of the elements of the major planets, based on the earth's distance from the sun being 92 $\frac{1}{2}$ million miles (Newcomb). The earth's solar distance is the base-line, the yard-stick that measures the distances and volume of every planet and satellite except the moon. When this yard-stick was assumed to be 95,000,000 miles long, too many miles were measured off for each. Now that we know its true length, we are able to assign to each its true value. The above solar distance of the earth, however, is now known to be too small; the distance from the earth to the sun is very nearly 92 $\frac{1}{2}$ million miles.

Name.	Solar distance in million miles.	Diameter in miles.	Length of Year.	Length of Day.	Satellites.
Mercury, ☿	35 $\frac{3}{4}$	2,992	Days.		
Venus, ♀	66 $\frac{3}{4}$	7,660	87.97	Unknown.	0
Earth, ⊕	92 $\frac{1}{2}$	7,918	224.70	23h 56m 4.9s	1
Mars, ♂	141	4,211	365.26	24h 37m 22.7s	2
Jupiter, ♃	480	86,000	686.98	9h 55m 20s	5
Saturn, ♄	881	70,500	29.46	10h 14m	8
Uranus, ♅	1771	31,700	84.02	Unknown.	4
Neptune, ♆	2775	34,500	164.78	U known.	1

• Mean solar distance of the Asteroids, 275 million miles.

All the planets revolve around the sun from west to east, and, as far as known, rotate in the same direction.

Fig. 1123.

SCOTTISH PLAID.

Saturn is environed in a triple ring, the only ringed world known. Uranus was discovered in 1781 by Sir Wm. Herschel, and Neptune in 1846 by Leverier and Adams. The first asteroid was discovered the first day of the 19th century—Jan. 1, 1801—by Piazzi, and named Ceres. For many years they were discovered by the telescope, but they are now revealed by being impressed on the photographic plate and distinguished from the stars by trails, the camera being lashed to the telescope tube, which for hours is pointed on a star. The stars being points and the asteroids trails, it is easy to select the asteroids, if any, from the stars. On one occasion Barnard found the trail of a comet on the negative plate.

Plane Table, n. (*Survey.*) An instrument by means of which a plan is made on the spot, without any protraction or measurement of angles.

Planeta'ble, n. See PLANE.

Planeta'rium, n. [Lat.; Fr. *planétaire*.] Same as ORRERY, *q. v.*

Plan'etary, a. [Fr. *planétaire*.] Pertaining to the planets; as, *planetary motions*.—Consisting of planets; as, the *planetary system*.—Under the dominion or influence of a planet; as, a *planetary hour*.—Produced by planets; as, *planetary influence*.—Having the nature of a planet; erratic or revolving.

P. d'ays. The days of the week as shared among the 7 planets known to the ancients, each having its day; and hence, in most European languages, the days of the week are still denominated from the planets, as Sunday, Monday, &c.

Plan'eted, a. Pertaining to planets.

Plan'etoid, n. (*Astron.*) Same as ASTEROID, *q. v.*

Plan'etoid'al, a. Pertaining to a planetoid.

Plan'et-stricken, Plan'et-struck, a. Affected by the supposed influence of planets; blasted.

Plan'etule, n. A small planet.

Plan'gent, a. [Lat. *plangens, plangens*, from *plangere*, to beat.] The dashing against or beating, as the waves, (R.)

Planif'olious, a. [Lat. *planus*, and *folium*, leaf.] (*Bot.*) Consisting of plain leaves, in circular rows round the centre.

Planim'eter, n. [From Eng. *plane*, and Gr. *metron*.] An instrument designed to measure, by mechanical means and at once, the area of any plane figure drawn on paper.

Planim'etric, Planim'etrical, a. Pertaining to the measurement of plane surfaces.

Planim'etry, n. [Fr. *planimétrie*.] The mensuration of plane surfaces.

Planing Machine, n. A tool employed for the purpose of giving a perfectly plane face to iron, stone, or wood. Such engines consist, for the most part, of cutters moving horizontally, or with a rotary motion, fixed in a frame carried over the substance to be operated upon.

Planipet'alous, a. (*Bot.*) That has flat petals or leaves.

Plan'ish, v. a. To polish; to smooth, as a metallic surface.

Plan'isher, n. A person or thing that smoothes metallic substances.

Plan'isphere, n. [Fr.; Lat. *planisphærium*.] A sphere projected on a plane.—A map exhibiting the circles of a sphere.

Planispher'ic, a. Relating to a planisphere.

Plank, n. [Lat. *planka*, from Gr. *plax, plakos*, anything flat and broad.] A flat, broad piece of timber, differing from a board only in being thicker.

—*v. a.* To cover or lay with planks.

Plank'ing, n. The act of laying down planks; the material of planks.

Plank'road, n. A road made with planks. (U. S.)

Plank'sheer, n. (*Shipbuilding*.) The covering of thick planks bolted longitudinally on the ribs and floor-timbers. A similar planking is fastened within. Each line of planking is denominated a *strake*; and different parts of the bottom and sides bear different names, as *black-strakes, wales, thick-stuff, bottom-plank*, &c.

Plan'less, a. Without a plan.

Plan'ner, n. One who plans or forms a plan; a projector.

Pla-no-con'cave, a. Plane on one side and concave on the other.

Pla'no-con'ical, a. Level on one side and conical on the other.

Pla'no-con'vex, a. Flat on one side and convex on the other.

Pla'no-horizon'tal, a. Having a horizontal surface or position.

Planor'bis, n. [Lat. *planus*, plane, and *orbis*, a circle.] (*Zool.*) A genus of snails, chiefly inhabiting ponds or the banks of rivers, and deriving their name from the form of the shell (Fig. 2124), which is that of a flattened orb, occasioned by their volutions being coiled on the same plans. The fossil species are numerous.

Plant, n. [A. S. and Du.; Lat. *planta*, a sprout.] An organized, living body, destitute of sensation, and incapable of spontaneous motion, and having the power of propagating itself by seeds. See BOTANY.—A sapling; a young tree.—The sole of the foot. (R.)—The fixtures and tools necessary to carry on any trade or mechanical business.

—*v. a.* To put in the ground and cover, as seeds, bulbs,

&c., for growth.—To set in the ground for growth, as a young tree or a vegetable root.—To engender; to set, as the germ of anything that may increase.—To set firmly, to fix, as a standard or flag.—To settle; to fix, as the first inhabitants; to establish, as a colony.—To furnish with plants; to lay out and prepare with plants.—To set, and direct or point, as cannon.

—*v. n.* To perform the act of planting.

Plant'able, a. That may be planted.

Plantag'enets, n. pl. (*Hist.*) The surname of a

line of English kings, who were of French origin on the paternal side, — Henry II. of England, the first of the line, having been the son of Geoffrey V., duke of Anjou, and of Matilda, daughter of Henry I. The Duke of Anjou was so named because he usually wore a sprig of broom—in Latin *planta genista*, in French *plante genêt*—in his cap. Henry II. ascended the English throne in 1154, and his descendants reigned during 331 years, the last monarch of the line being Richard III., who fell at the battle of Bosworth, in 1485. In the 14th century the line became divided into two great rival factions, that of York and of Lancaster, or the parties of the Red and White Rose.

Plantagin'aceæ, n. pl. [From Lat. *planta*, the sole of the foot;—resemblance in the leaves.] (*Bot.*) An order of plants, genus *Cortusales*.—*DIAG.* Stamens

alternate with the petals, 1 style, and a straight inflorescence.—They are herbaceous plants, generally without stems. Leaves commonly ribbed and radicle; flowers usually spiked and perfect, or rarely solitary, and sometimes unisexual; calyx persistent, 4-partite, imbricate, and corolla dry and membranous, persistent, 4-partite; ovary simple, 2- or 4-celled from the prolongation of processes from the placenta, style 1; capsule membranous, with transverse dehiscence; placenta free, central; seeds 1, 2, or more, with a mucilaginous testa, embryo transverse in fleshy albumen.

These plants abound in cold and temperate climates, but are more or less diffused over the whole globe. There are 3 genera and 120 species. The seeds of *Plantago psyllium, arenaria*, and *cynops*, are demulcent, and have been used like those of flax (linseed) in the preparation of mucilaginous demulcent drinks. The order is unimportant in an economic point of view.

Plantago, n. (*Bot.*) The typical genus of the PLANTAGINACEÆ, *q. v.*

Plant'ain, n. [Fr.; Lat. *plantago*, from *planta*, the sole of the foot.] (*Bot.*) The common name of the genus *Plantago*. (See PLANTAGINACEÆ.)—Also, the name of a species of the genus *Musa*.—See MUSACEÆ.

Plant'ar, a. (*Anat.*) Relating or belonging to the sole of the foot.

Plantat'ion, n. [Lat. *plantatio*, from *planta*, to plant.] The act of planting or setting in the earth for growth. (R.)—The place planted; ground planted

with trees for the purpose of producing timber or ornament, &c.; a large estate appropriated to the production of cotton, sugar, tobacco, &c.—A colony.

Plant'cane, n. The first crop of sugar-canes, raised from cuttings.

Plan'ter, n. One who plants, sets, or cultivates.—One who introduces or establishes in a new and uncultivated country.—The owner of a plantation.

Plant'ership, n. The business of a planter.

Plant'ers, in Arkansas, a township of Phillips county.

Plant'ersville, in Alabama, a post-village of Perry co., abt. 77 m. S. of Tuscaloosa.

Plant'erville, in S. Carolina, a village of Georgetown dist., abt. 20 m. N. by E. of Georgetown.

Plant'icle, (plant'ikl.) n. A young plant.

Plant'igrade, a. [Lat. *planta*; and *gradi*, to walk.] (*Zool.*) Having the distinctive character of the plantigrades.

Plant'igrades, n. pl. (*Zool.*) The name of a tribe of carnivorous mammals, comprehending those which apply the whole, or the greater part, of the sole of the foot to the ground in progressive motion.

Plant'ing, n. Act or operation of planting, or of setting in the ground for propagation, as seeds, trees, and shrubs.—The art of forming plantations of trees.

Plant'less, a. Without plants; destitute of vegetation.

Plant'let, n. A little plant.

Plant'house, n. (*Zool.*) See APHIS.

Plants. (Distribution of.) (*Bot.*) It is a matter of common observation that the localities and soils in which plants grow vary much. Some species grow in the shade, while others thrive best in a full glare of light; some prefer alpine districts, others the plains; some are found in dry, others in marshy places; some are submersed in lakes or in the sea, while others live on muddy banks or on sandy shores. It is equally well known that climate exercises a powerful influence on vegetation, modifying the florae in different regions of the globe. Some plants are fitted to bear the rigor and duration of an arctic winter with a moderate summer heat, others require the heat and light of the torrid zone; and between these two extremes there are all varieties of gradation. Thus does vegetation extend over the whole globe from pole to pole, from the summit of the loftiest peak to the depths of the ocean. Palms, bananas, tree-ferns, and orchideous epiphytes are chiefly confined to the tropics; cruciferous and umbelliferous plants are found in temperate regions; some coniferous and amentaceous plants flourish in more northern countries; while saxifrages and lichens extend to the arctic regions. Schouw divided the globe into 25 botanical regions, in each of which at least one half of the known species, a quarter of the genera, and some individual families, were peculiar to that region, and found nowhere else. These regions are scattered variously over the globe; but, as shown by Meyen, they admit of an arrangement into zones, each zone surrounding the earth, and including regions in which, although the plants are distinct, yet they are more like and more nearly allied to each other than those of other zones. Starting with the equatorial zone, there are on each side of it a tropical, sub-tropical, warm-temperate, cold-temperate, sub-arctic, arctic, and polar zone. Not only are the regions of plants in each of these zones similar to each other, but there is another kind of similarity in those of corresponding zones in the opposite hemisphere, so that the plants may be said to be, although entirely distinct, representative of each other. The evergreen forest-trees, for instance, of the northern warm-temperate zone, are represented by other evergreen forest-trees in the southern warm-temperate zone, each zone still having its distinct regions of plants. Then, if we regard the vertical distribution of plants, and start from the level of the sea in the equatorial zone up the sides of a great mountain-chain, we pass in succession through spaces answering to these zones, finding belts of vegetation as we ascend, either the same as, or representatives of, all the latitudinal zones, till we reach the representative of the polar one at the margin of perpetual snow. Similarly in all other zones, as we ascend from the level of the sea, we pass successively in altitude through the representatives of all the zones that interpose in latitude between the lower one and the pole.

Plantoc'razy, n. A body of planters.

Plant'ule, n. A small plant.

Plank'ty, n. An Irish dance; a jig.

Plaquemine, (plah-meen') in Louisiana, an extreme S.E. parish, bordering on the Gulf of Mexico; area, abt. 900 sq. m. *River*, Mississippi. *Surface*, low and level, a large portion being occupied by marshes; *soil*, in the more elevated parts fertile, producing more rice than any other parish in the State. *County-seat*, Point à la Hache.

—A post-village, cap. of Iberville parish, abt. 112 m. N.W. of New Orleans.

Plaquemine' Bayou, in Louisiana, a stream of Iberville parish, which at high-water connects the Mississippi River with the Atchafalay Bayou.

Plaquemine' Brulee, in Louisiana, a small bayou flowing S.W. into the Mermentau from St. Landry parish.

Plash, n. [Du. *plas*.] A small collection of standing water; a puddle.—A branch partly cut off and bound to other branches.

—*v. n.* [Du. *plassen*, to paddle.] To dabble in water; to splash.

—*v. a.* To lop or cut off.—To interweave branches.

Plash'ing, n. The act of partially cutting and interweaving young trees.

Fig. 2125. — GEOFFREY PLANTAGENET.

Fig. 2126. — GREATER PLANTAIN, (*Plantago major*.)

Fig. 2124. WEST INDIA PLANORBIS, (*P. Guadalupeensis*.)

Plash'oot, n. A hedge of interwoven boughs.

Plash'y, a. Watery; abounding with puddles.

Plasm, n. [Fr. *plasma*; Lat. *plasma*.] A mould or matrix in which anything is cast or formed.

(*Physiol.*) The fluid of the blood in which are suspended the red particles, to which its color is due. It consists of serum, holding fibrin in solution. It is sometimes called *liquor sanguinis*.

Plasma, n. [Gr., an image.] (*Min.*) A slightly translucent chalcedony, used by the ancients as a gem for engraving upon. It is of a grass-green or leek-green color, sprinkled with yellow and whitish specks, and possesses a glistening or waxy lustre. It is found among the ruins of Rome, and is also procured in India and China.
